2026 October Predictions Module 1

1.

The following text is adapted from the 1895 poem *Ojistoh* by Emily Pauline Johnson, a Kanienkahagen (Mohawk) writer also known as Tekahionwake.

I am Ojistoh, I am she, the wife
Of him whose name breathes bravery and life
And courage to the tribe who calls him chief.
I am Ojistoh, his white star, and he
Is land, and lake, and sky—and soul to me.

As used in the text, what does the word "breathes" most nearly mean?

A Rejects

B Imparts

C Absorbs

D Acquiesces

2.

The dinosaur displays at museums such as the American Museum of Natural History in New York (which has a mounted *Allosaurus fragilis* skeleton among its holdings) are notable for the _____ of the research behind them—the museum staff consulted numerous sources to ensure the accuracy of the displays.

Which choice completes the text with the most logical and precise word or phrase?

A novelty

B obscurity

C rigor

D shallowness

3.

Both overwatering and underwatering can significantly reduce agricultural yields and waste valuable resources. To avoid these problems, farmers' management of agricultural irrigation systems must be _____. Following the careful consideration of crop requirements, soil conditions, and weather patterns, farmers need to make precise, minute adjustments to water allocations to ensure the best outcomes.

Which choice completes the text with the most logical and precise word or phrase?

A perfunctory

B serendipitous

C resolute

D meticulous

4.

Lima beans were domesticated in South America. Their physical structure is no longer identical to the structure of the wild plant they are descended from. Summer squash also _____ its wild ancestor. That ancestor plant had a hard rind and bitter flesh. Indigenous people in eastern North America carefully bred the crop until it had a soft rind and mild-tasting flesh.

Which choice completes the text with the most logical and precise word or phrase?

A reacts to

B helps with

C varies from

D argues with

5.

Any effort to raise the toll that drivers must pay to use the Fort Madison Toll Bridge, which spans the Mississippi River to connect Iowa and Illinois, should explain why a higher toll is necessary; no amount of justification, however, is likely to persuade some drivers who believe the current toll is _____.

Which choice completes the text with the most logical and precise word or phrase?

A contentious

B exorbitant

C warranted

D equivocal

6.

Technological advances have prompted companies to increasingly rely on automation to streamline production. Armin Granulo and colleagues, however, found that for products with higher symbolic value (those viewed as contributing to individual self-expression), consumers prefer products made by humans rather than by robots, likely because human-made products are more strongly associated with uniqueness. When considering automation, therefore, companies—especially those specializing in products of symbolic value—should weigh trade-offs between efficiency gains and consumer preferences.

Which choice best describes the function of the underlined sentence in the text as a whole?

A It refers to a finding presented in the previous sentence to recommend that companies that value product quality reconsider automating their production processes.

B It emphasizes that a research finding discussed in the text has practical implications that are particularly relevant for businesses making a certain class of product.

C It presents evidence supporting the text's argument that consumers prefer products with high symbolic value over products with low symbolic value.

D It illustrates the need for additional research to evaluate the claim in the previous sentence that automation affects how consumers rate product uniqueness.

7.

Text 1

Isaac Asimov, author of *The Caves of Steel* and *The Stars, Like Dust*, is highly regarded despite his mediocre writing style. His prose is workmanlike; his characters are flat and discuss ideas rather than emotions. That his work is enjoyable despite this is a testament to his prodigious imagination—even if people read his books only for the ideas, they will have plenty to consider.

Text 2

Asimov is critiqued for his style, but it is wrong to fault a writer for failing to do what he never intended to do. For example, although most of his novel *Foundation* consists of people discussing science and politics and we find out little about his characters' lives, Asimov wanted to convey the vast sweep of human history over centuries, and one of his points is that at such a timescale, individuals don't matter. Thus his lack of characterization is central to his thematic aims.

Based on the texts, how would the author of Text 2 most likely respond to the description of Asimov's characters in the underlined portion of Text 1?

A Asimov's characterizations would have been richer if he had possessed a deeper understanding of history.

B The flatness of Asimov's characters is a feature of The Caves of Steel and The Stars, Like Dust but not of Foundation.

C The flatness of Asimov's characters should not necessarily be considered a flaw in his writing.

D Asimov's characterizations would have been more believable if his writing had discussed fewer ideas.

8.

The following text is from Jerome K. Jerome's 1889 novel *Three Men in a Boat (To Say Nothing of the Dog)*. The narrator and two friends are taking a boat down the River Thames in England.

"In a boat, I have always noticed that it is the fixed idea of each member of the crew that he is doing everything. Harris's notion was, that it was he alone who had been working, and that both George and I had been imposing upon him. George, on the other hand, ridiculed the idea of Harris's having done anything more than eat and sleep, and had a cast-iron opinion that it was he—George himself—who had done all the labour worth speaking of."

Based on the text, how would the narrator most likely describe Harris's and George's attitudes?

A As typical, because people working on boats usually believe that the other crew members aren't contributing

B As understandable, because there's usually more work to be done on a boat than the crew can easily handle

C As perplexing, because the narrator is much more eager than either Harris or George to complete his own tasks

D As irritating, because Harris and George spend too much time eating and sleeping

9.

In what is now Washington state, the Tulalip Tribes operate the Hibulb Cultural Center. Relying on traditional knowledge to guide the design of exhibits, this institution presents Tulalip history and culture to the tribes' citizens. The Turtle Mountain Band of Chippewa, a tribe in North Dakota, employs a similar strategy in its own cultural center. Both centers contrast with museums that aren't Indigenous-led; when displaying Indigenous artifacts, such museums tend to anticipate mainly non-Indigenous audiences and rely on Euro-centric strategies for designing exhibits.

Which choice best states the main idea of the text?

A When staging Indigenous exhibits, non-Indigenous institutions should follow the example of the cultural centers operated by the Tulalip Tribes and the Turtle Mountain Band of Chippewa.

B The cultural centers operated by the Tulalip Tribes and the Turtle Mountain Band of Chippewa differ in strategy from non-Indigenous museums that stage Indigenous exhibits.

C Whereas non-Indigenous institutions stage exhibits on a wide array of subjects, the cultural centers operated by the Tulalip Tribes and the Turtle Mountain Band of Chippewa serve primarily to present Indigenous history and cultures.

D The strategy used by the Tulalip Tribes to present history and culture to tribal citizens differs only slightly from the strategy used by the Turtle Mountain Band of Chippewa.

10.

Predating the European colonization of Canada, the Tahltan bear dog vanished due to interbreeding with dogs brought from Europe. In contrast, the Inuit dog persists as a distinct breed, and DNA testing confirms its descent from precolonial North American dogs. It also has genetic markers found in the dogs of East Asia but absent in those of Europe. That finding supports the theory that the precolonial breeds developed by Indigenous peoples descend from dogs that migrated from Asia in the last ice age. The Carolina dog, a yellow-coated breed native to rural pockets of the Southeastern United States, likely has such an origin too.

Which finding, if true, would most directly support the underlined claim?

A The Carolina dog carries a genetic marker that is not found in the dog populations of Europe but is present in the dog populations of East Asia.

B Identical genetic markers are identified in remains of both the Tahltan bear dog and a dog population it interbred with.

C Dogs in feral populations in the Southeastern United States have a set of genes also found in East Asian breeds imported in recent decades.

D Additional DNA testing confirms that the Inuit dog and the Carolina dog share a rare set of genes not found in any East Asian breeds.

11.

The following text is adapted from Daniel Defoe's 1704 nonfiction book *The Storm*.

If I judge right, 'tis the duty of an historian to set everything in its own light, and to convey matter of fact upon its legitimate authority, and no other: I mean thus, (for I would be as explicit as I can) that where a story is vouched to him with sufficient authority, he ought to give the world the special testimonial of its proper voucher, or else he is not just to the story: and where it comes without such sufficient authority, he ought to say so; otherwise he is not just to himself.

Which choice best states the main idea of the text?

A Because no memories can be trusted, all historians are forced to admit that some records of events may be, in part, false.

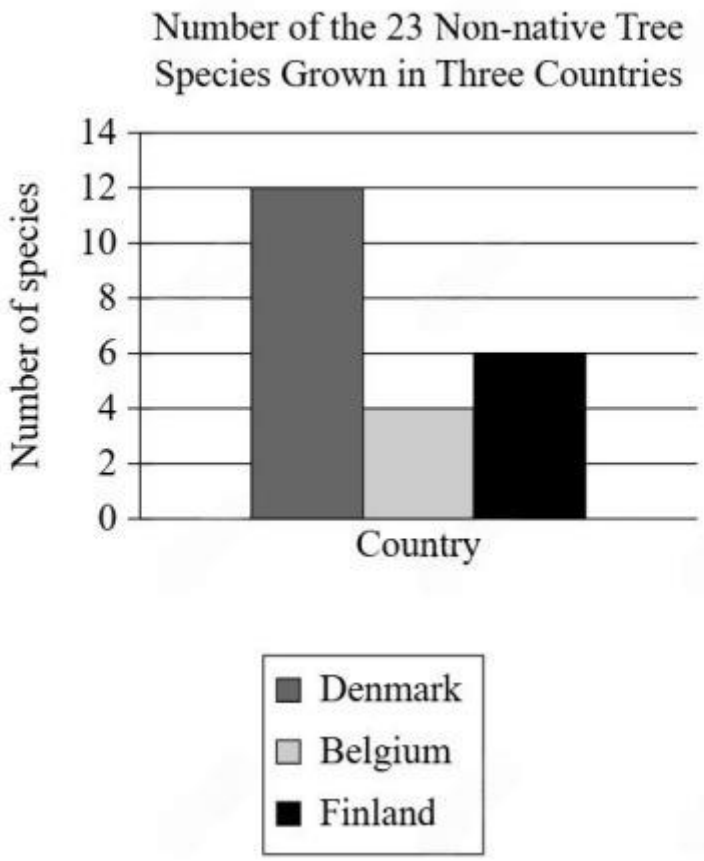

B The only figures that a historian should quote are those who are widely viewed as credible.

C Historians should clearly indicate the extent to which each of their sources is trustworthy.

D It is difficult for historians to be completely accurate, and eventually they will feel remorse for some of their work.

12.

Elisabeth Pötzelsberger and colleagues gathered data on 23 non-native tree species grown in Europe. They analyzed reports from Denmark, Finland, and Belgium about the number of these species grown by the timber industries in those countries. The researchers concluded that none of these countries' timber industries grow all 23 species.

Which choice best describes data from the graph that support Pötzelsberger and colleagues' conclusion?

A Some of the species that Finland reported are not among the 23 tree species that Pötzelsberger and colleagues were evaluating.

B There are species other than those reported by Belgium that are important to its timber industry, but they're native to the country.

C Denmark, Finland, and Belgium each reported at least 4 of the 23 species.

D Denmark, which reported more of the 23 species than either Finland or Belgium did, reported fewer than 15 of the species.

13.

The Clouds is a 423 BCE play by Aristophanes, originally written in ancient Greek. At the time, professional intellectuals called sophists taught paying customers a variety of subjects and sometimes engaged in what would now be described as research. Aristophanes satirizes sophists' practices and views as foolish, as seen when the character _____.

Which choice most effectively uses a quotation from a translation of The Clouds to illustrate the claim?

A Strepsiades, after taking lessons from a sophist, says to his son, "Approach, that you may know more; and I will tell you a thing, by learning which you will be a man. But see that you do not teach this to any one."

B Socrates, a sophist, explains why he studies astronomy while sitting in a basket hanging a few feet off the ground, saying, "I should not have rightly discovered things celestial if I had not suspended the intellect, and mixed the thought in a subtle form with its kindred air."

C Socrates, a sophist, says to a potential customer, "Is the power of speaking, pray, implanted in your nature?"

D Strepsiades encourages his son to learn to be a sophist, saying, "Reform your habits as quickly as possible, and go and learn what I advise."

14.

Rafael Núñez and colleagues studied how members of the Yupno, an Indigenous group in Papua New Guinea, conceptualize time in both spoken language and gestures. The researchers recorded Yupno speakers explaining certain temporal words and phrases, such as *kalip bishap*, a past-oriented expression that translates to "past times," and coded each speaker's manual gestures. Previous research has found a tendency in many cultures to make temporal distinctions along imagined linear axes: for instance, Spanish speakers often refer to the left/right axis to describe events in time. Some researchers believe this tendency is universal, but Núñez and colleagues claim this is not the case.

Which finding, if true, would most directly support Núñez and colleagues' claim?

A Yupno speakers typically use their left hand to make temporal gestures regardless of whether the gestures are past oriented or future oriented.

B Some Yupno grammatical structures used when talking about time are also used in Spanish.

C Future-oriented gestures used by Yupno speakers do not, on average, point in the opposite linear direction of past-oriented gestures.

D Yupno speakers were observed making temporal gestures both indoors and outdoors, though with greater frequency when indoors.

15.

Last-mile delivery refers to the final step in delivering packages to customers—and this final step can be very difficult. Delivery companies are contending with the increasing popularity of next-day delivery and with the increasing congestion of roadways, resulting in a growing bottleneck of packages in the last-mile delivery stage. These companies have been experimenting with innovative solutions in last-mile delivery, including drones (autonomous flying vehicles that can deliver small packages). Unfortunately, many of these innovations create new obstacles (e.g., the limited flight range of drones means that parcel depots must be in close proximity to delivery sites) and are not ready for full-scale implementation. As a result, delivery companies will likely _____.

Which choice most logically completes the text?

A have little incentive to find a solution to last-mile delivery challenges.

B encourage consumers to expect next-day delivery only for products that are widely available.

C be able to meet consumer's expectations for next-day delivery in many areas but not in all regions.

D continue to struggle with last-mile delivery operations until viable solutions become available.

16.

Accurately measuring the sizes of marine fish populations is challenging because predation, reproduction, and fishing are constantly affecting those populations' numbers. To avoid overfishing, many commercial fishers rely on complex computer models that estimate current and historical fish population sizes. These models incorporate various biological factors, such as fish size, age distribution, and reproductive rates. Recently, a team of researchers examined decades of modeled predictions for 230 major commercially fished species. They discovered that the models often overestimated fish population sizes. And contrary to their expectations, the researchers found that accuracy did not improve as the data grew over time. The team's discovery most directly suggests that _____.

Which choice most logically completes the text?

A it is important to incorporate more diverse data sources, including commercial fishers' observations, into population size models.

B researchers should be cautious when considering findings about commercially fished populations that predate the development of the models.

C some commercial fishers have likely been unknowingly overfishing and may need to decrease their catches going forward.

D environmental factors, rather than commercial fishing practices, may be the primary drivers of changes in fish population sizes.

17.

An emulsifier is a type of compound that serves to stabilize an emulsion—a mixture of two or more liquids that otherwise would not easily blend together, like oil and water. Though modern chemists commonly use emulsifiers like poloxamer 407 in their formulations, emulsifiers that have been employed for millennia, such as beeswax and egg yolk, _____ used to this day by chemists as well.

Which choice completes the text so that it conforms to the conventions of Standard English?

A are

B would have been

C were being

D were

18.

With an average summer temperature of 69 degrees Fahrenheit, Odessa is one European _____ many travelers recommend, especially from June to September.

Which choice completes the text so that it conforms to the conventions of Standard English?

A city in which,

B city that

C city, which

D city, that

19.

In her *Silueta* sculpture series, the Cuban American artist Ana _____ to access what she called an "omnipresent female force," utilized a variety of natural materials to create outlines—or silhouettes—of her own body.

Which choice completes the text so that it conforms to the conventions of Standard English?

A Mendieta was hoping

B Mendieta hoped

C Mendieta had hoped

D Mendieta, hoping

20.

Fluid impedes sound considerably more than air _____ the process by which the human ear reconciles the discrepancy between the outer ear and the fluid-filled inner ear, recruits the tympanic membrane and the lever action of the ear bones to increase pressure such that sound can pass through the inner ear unimpeded.

Which choice completes the text so that it conforms to the conventions of Standard English?

A does. Impedance matching,

B does. Impedance matching—which is

C does, impedance matching,

D does. Impedance matching is

21.

A bias toward studying diversity at a local rather than a continental scale was one of the many shortcomings researcher Sonia Llorente-Culebras and her team _____ analyzing nearly 400 biodiversity studies from around the globe.

Which choice completes the text so that it conforms to the conventions of Standard English?

A discovered: while

B discovered, while

C discovered while

D discovered. While

22.

In the Southeast Asian country of Indonesia, the percentage of the population living in cities rose from 53.3% to 56.6% between 2015 and 2020. _____ urbanization rates climbed across Southeast Asia as a whole, rising 2.8 percentage points in that five-year period.

Which choice completes the text with the most logical transition?

A In other words,

B Eventually,

C For example,

D Concurrently,

23.

Early in the morning, when the temperature is still low, the spiny lizard will sit in sunny areas for warmth. _____ as the temperature rises, the spiny lizard will hide in shady spots and under rocks to keep from getting too hot.

Which choice completes the text with the most logical transition?

A First,

B For example,

C Previously,

D Later,

24.

Karel Čapek's 1920 play *R.U.R. (Rossum's Universal Robots)*, in which artificial workers overthrow their masters, left an indelible mark on the science fiction genre, and the English language, by introducing the term "robot" (derived from the Czech word *robota*, meaning "indentured labor" or "drudgery"). _____ Čapek's play also contributed to a venerable literary and mythological tradition: using artificial beings as mirrors and foils for humanity.

Which choice completes the text with the most logical transition?

A By achieving such a lofty goal,

B Beyond the simple coining of a term,

C Despite its creation of such an iconic trope,

D Ultimately limited in its lasting influence,

25.

- Peggy Whitson is a US astronaut.
- Whitson has completed 10 spacewalks.
- In a spacewalk, an astronaut leaves the spacecraft to perform tasks.
- Spacewalks are also known as extravehicular activities, or EVAs.

The student wants to specify how many spacewalks Whitson has completed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A Whitson is among 10 US astronauts who have completed spacewalks.

B EVAs take place outside a spacecraft.

C Whitson, a US astronaut, has completed 10 EVAs.

D Astronauts such as Whitson have completed EVAs.

26.

- *Letters from a Peruvian Woman* (1747) is an epistolary novel by French author Françoise de Graffigny.
- Epistolary novels are novels written primarily as a series of fictional documents.
- These documents can be letters, journal entries, newspaper clippings, and more.
- *Letters from a Peruvian Woman* consists primarily of letters.
- The letters are sent between a captured Incan princess and her fiancé.

The student wants to define the term "epistolary novel." Which choice most effectively uses relevant information from the notes to accomplish this goal?

A Published in 1747, *Letters from a Peruvian Woman* is an epistolary novel by French author Françoise de Graffigny.

B Françoise de Graffigny's novel *Letters from a Peruvian Woman* was published in 1747 and consists primarily of letters sent between a captured Incan princess and her fiancé.

C Consisting primarily of letters sent between a captured Incan princess and her fiancé, Françoise de Graffigny's *Letters from a Peruvian Woman* is an epistolary novel.

D An epistolary novel is a novel written primarily as a series of fictional documents, such as letters, journal entries, or newspaper clippings.

27.

While researching a topic, a student has taken the following notes:

- A supercontinent is a single landmass made up of most or all of Earth's continents.
- Over time, continents merge together to form supercontinents, which then break apart.
- This process is believed to take hundreds of millions of years and is known as the supercontinent cycle.
- Ur was a supercontinent that formed about 3.1 billion years ago.
- Gondwana was a supercontinent that formed about 510 million years ago.

The student wants to emphasize the order in which the supercontinents were formed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

A The supercontinent Gondwana formed long after the supercontinent Ur.

B Ur formed about 3.1 billion years ago but eventually broke apart.

C Forming and breaking apart over hundreds of millions of years, supercontinents are made up of most or all of Earth's continents.

D Ur and Gondwana were both supercontinents, single landmasses made up of most or all of Earth's continents.
