doesn't support the researchers' conclusion that both floral morph and pollinator genus affect time spent per flower when a flower has been damaged. **Choice D is incorrect**. While this statement is true based on the information in the table, it doesn't provide evidence that supports the researchers' conclusion that the effect of floral damage on time spent per flower varied by both floral morph and the genus of the pollinator because this choice provides information only about how much time one pollinator genus spent on intact flowers.

111 Correct answer **D** Hard ‹ Back to question

D The Ultra-Fast Robot Hand weighs only slightly more than the Yale Model T does.

Choice D is the best answer because it describes data in the graph that support Meng and colleagues' conclusion that the Ultra-Fast Robot Hand has a higher payload capacity than the Yale Model T. According to the text, payload capacity is calculated by using a ratio of a robot's holding force to the robot's weight, and higher ratios indicate a greater payload capacity. The Ultra-Fast Robot Hand has a holding force of 56 newtons, four times greater than that of the Yale Model T. Additionally, the graph shows that the Ultra-Fast Robot Hand has a weight of approximately 500 grams, slightly more than the Yale Model T's weight of approximately 480 grams. Therefore, the Ultra-Fast Robot Hand has a higher ratio of holding force to weight than the Yale Model T. Since higher ratios correspond to greater payload capacity, the information from the graph indicating that the Ultra-Fast Robot Hand weighs only slightly more than the Yale Model T combined with the information in the text ultimately supports the conclusion that the Ultra-Fast Robot Hand has a higher payload capacity than the Yale Model T.

Choice A is incorrect. Although, according to the graph, it's true that both the Ultra-Fast Robot Hand and the Yale Model T weigh more than 450 grams, this statement doesn't support Meng and colleagues' conclusion that the Ultra-Fast Robot Hand has a higher payload capacity than the Yale Model T. This statement emphasizes a similarity, not a distinction, between the two robots. **Choice B is incorrect**. Although, according to the graph, it's true that the Ultra-Fast Robot Hand and the Yale Model T both weigh more than the Permanent Magnet Hand does, this statement doesn't support Meng and colleagues' conclusion that the Ultra-Fast Robot Hand has a higher payload capacity than the Yale Model T. This statement emphasizes a similarity, not a distinction, between the Ultra-Fast Robot Hand and the Yale Model T. Furthermore, the comparison to the Permanent Magnet Hand is irrelevant to the claim about the relative ratios and payload capacities of the Ultra-Fast Robot Hand and the Yale Model T. **Choice C is incorrect**. Although the text states that the Yale Model T has a lower holding force than the Permanent Magnet Hand, the graph provides no information about holding force. Moreover, information about the Permanent Magnet Hand is irrelevant to the conclusion by Meng and colleagues, which only concerns the Ultra-Fast Robot Hand and the Yale Model T.

112 Correct answer **C** Hard ‹ Back to question

C The bite force estimates produced by Bates and Falkingham and by Cost et al. were similar to each other, while the estimates produced by Meers and by Gignac and Erickson each differed substantially from any other estimate.

Choice C is the best answer because it accurately describes data from the table that support Barrett and Rayfield's suggestion about bite force estimates. According to the text, Barrett and Rayfield believe that estimates of dinosaur bite force may be strongly influenced by the methods used to produce them—that is, that different methods may produce significantly different results. The table shows that the studies by Bates and Falkingham and by Cost et al. used the same estimation method (muscular and skeletal modeling) and produced similar bite force estimates (approximately 35,000–57,000 newtons and 35,000–63,000 newtons, respectively). The study by Meers, however, used body-mass scaling and produced a much higher

bite force estimate (183,000–235,000 newtons), while the study by Gignac and Erickson used tooth-bone interaction analysis and produced a much lower bite force estimate (8,000–34,000 newtons). The fact that one method produced similar estimates in two different studies and that two different methods used in other studies produced substantially different estimates supports the idea that dinosaur bite force estimates are significantly influenced by the methodology used to produce them.

Choice A is incorrect because it inaccurately describes data from the table. The table does show that the studies by Meers and by Cost et al. used different estimation methods and produced very different ranges of estimated dinosaur bite force, which would support Barrett and

Rayfield's suggestion that different methodologies may produce significantly different estimates. However, the table doesn't show that the study by Meers produced the lowest estimated maximum bite force while the study by Cost et al. produced the highest. In fact, the study by Meers estimated a maximum bite force of approximately 235,000 newtons, which is the highest of all the estimated maximums. **Choice B is incorrect**. Although the data from Gignac and Ericson's study are accurately described, a single set of findings from one study using only one methodology can't show that different methodologies may produce significantly different dinosaur bite force estimates, as Barrett and Rayfield suggest. **Choice D is incorrect**. Although the table shows that the maximum bite force estimated by Cost et al. was higher than that estimated by Bates and Falkingham, the difference is relatively small; in fact, both teams estimated a minimum bite force of approximately 35,000 newtons and a maximum bite force close to approximately 60,000 newtons. Because these findings demonstrate that a single methodology (muscular and skeletal modeling) produced similar overall results in two studies, the findings don't support Barrett and Rayfield's suggestion that different methodologies may produce significantly different dinosaur bite force estimates.

113 Correct answer **B** Hard ‹ Back to question

B Participants with an ignobility score of 5 or less rated admirable-trait candidates as more likable than ignoble-trait candidates, whereas participants with an ignobility score of 6 or more rated ignoble-trait candidates as equally likable as or even more likable than admirable-trait candidates.

Choice B is the best answer because it describes data from the graph that support the researchers' conclusion that the trend of admirable-trait candidates being rated as more likable than ignoble-trait candidates held true when participants' own personality-trait scores were factored in, except among participants with high ignobility scores. The values on the x-axis represent survey participants grouped by their own ignobility scores, from low ignobility (1) to high ignobility (7), while the values on the y-axis represent the likability scores given to the political candidates. The graph shows that the full range of participants (from least to most ignoble) gave the admirable-trait candidates (represented by the line with triangles) a likability rating of approximately 70 out of 100; that is, regardless of their own level of ignobility, participants generally found admirable-trait candidates quite likable. However, the graph shows that participants varied in their views of ignoble-trait candidates (represented by the line with squares); likability ratings increased as the participants' own ignobility scores increased. Participants with low to medium-high ignobility scores (1 to 5) still rated the ignoble-trait candidates as less likable than the admirable-trait candidates, with all ratings falling below approximately 70, but participants with high ignobility scores (6 and 7) gave ratings equal to or higher than approximately 70. In other words, the previously observed trend of ranking admirable-trait candidates as more likable than ignoble-trait candidates persisted for participants with low to medium-high ignobility but not for participants with high ignobility.

Choice A is incorrect because it describes the opposite of what the graph shows. The graph shows a positive correlation between participants' ignobility scores and ignoble-trait candidates' likability ratings (as participants' ignobility scores increased, so did their ratings for ignoble-trait candidates' likability) and no correlation between ignobility scores and admirable-trait candidates' likability ratings (all participants gave admirable-trait candidates a rating of approximately 70 out of 100). **Choice C is incorrect**. The graph does show that regardless of their own ignobility scores, participants rated admirable-trait candidates as quite likable (a rating of approximately 70 out of 100). However, this doesn't support the researchers' conclusion because the conclusion has to do with how participants rated both types of candidates, not just the admirable-trait ones; moreover, the conclusion is that relative ratings were actually affected by the participants' ignobility scores. **Choice D is incorrect**. The graph does show that only participants with an ignobility score of 6 gave the same likability score to both admirable- and ignoble-trait candidates while participants with other ignobility scores gave a different rating for each candidate, but this doesn't support the researchers' conclusion. The conclusion isn't just that participants gave different ratings to the two types of candidates—it's that participants with low to medium-high ignobility scores specifically gave higher

likability ratings to admirable-trait candidates than to ignoble-trait candidates and that participants with high ignobility scores didn't.

114 Correct answer **A** Hard ‹ Back to question

A The 10% SSA mixture's compressive strength was greater than or approximately equal to that of the control mixture on day 7 and on day 28, but on both days the 20% and 40% SSA mixtures had less compressive strength than the control mixture did.

Choice A is the best answer because it most effectively uses data from the graph to support the researchers' recommendation that Sururu shell aggregate (SSA) substitution be done in relatively small proportions to avoid compromising the compressive strength of mortar mixtures. The text explains that a research team investigated whether SSA can serve as a substitute for sand in mortar mixtures. The graph presents the compressive strength (in megapascals) of mortar mixtures with SSA replacing 0% (control), 10%, 20%, and 40% of the sand on day 7 and day 28 of curing. The graph shows that the compressive strength of the 10% SSA mixture was approximately 25 megapascals on day 7, which is greater than the control mixture's approximately 22 megapascals on the same day. The graph also shows that the 10% SSA mixture's compressive strength was slightly more than 25 megapascals on day 28, which is only slightly less than the control's compressive strength on the same day (about 26 megapascals). Therefore, the graph shows that the compressive strength of the 10% SSA mixture was greater than that of the control on day 7 and roughly equal to that of the control on day 28, suggesting that substituting only 10% of the sand with SSA avoids compromising the mortar's compressive strength. The graph also shows that on day 7, the 20% and 40% SSA mixtures had compressive strengths of about 19 and 13 megapascals, respectively (both lower than the control's), and on day 28, they had compressive strengths of about 22 and 15 megapascals, respectively (once again lower than the control's). Thus, the data support the recommendation by indicating that substituting relatively small proportions of sand with SSA in mortar mixtures doesn't compromise strength compared with the control, whereas substituting larger proportions does.

Choice B is incorrect because the comparison it makes isn't relevant to the researchers' recommendation. Although the graph does show that the bars representing the compressive strength of the 10% SSA mixture on day 7 and day 28 are roughly the same height (suggesting that the mixture's compressive strength changed by only a small amount), and although there are relatively large gaps between the bars showing the compressive strength of the 20% and 40% SSA mixtures on day 7 and day 28 (suggesting that their compressive strength changed over time by a greater amount), this comparison concerns only how each SSA mixture's strength changed over time and doesn't compare the SSA mixtures with the control mixture. Supporting the recommendation that SSA substitution be done in small proportions requires evidence that small substitutions don't compromise strength relative to the control while larger substitutions do. **Choice C is incorrect** because it doesn't accurately represent the data in the graph, nor is the comparison it makes relevant to the researchers' recommendation. While the graph does show that the compressive strength of the 10% SSA mixture was greater than that of the control on day 7 (about 25 megapascals vs. about 22 megapascals) and, moreover, that the compressive strength of the control increased from day 7 to day 28 (from about 22 megapascals to about 26 megapascals), the graph shows that the compressive strength of the 10% SSA mixture increased by a small amount (from about 25 megapascals to slightly more than 25 megapascals), not that it decreased. Moreover, the researchers recommended substituting relatively small proportions (compared with larger proportions) of the mixtures with SSA; comparing the compressive strength of the 10% SSA mixture with that of the control without also considering how the compressive strength of the 10% SSA mixture compared with that of the 20% and 40% SSA mixtures wouldn't support the recommendation. **Choice D is incorrect**. Though the graph indicates that the 10% SSA mixture's compressive strength on day 7 and day 28 (about 25 megapascals and slightly more than 25 megapascals, respectively) didn't surpass the control mixture's compressive strength on day 28 (about 26 megapascals), this observation doesn't support the recommendation. The recommendation concerns the trade-off between SSA proportion and compressive strength; supporting it requires not just evidence about how the 10% SSA mixture compared with the control but also evidence about how the mixtures with larger proportions of SSA (20% and 40%) compared with the 10% SSA mixture and the control.

115 Correct answer **A**

Hard

< Back to question

A Resolution makers between the ages of 50 and 64 are more likely to make resolutions related to personal relationships and less likely to make resolutions related to finances than resolution makers between the ages of 30 and 49 are.

Choice A is the best answer because it presents a conclusion about the habits of New Year's resolution makers that is best supported by information in the text and the table. The table presents percentages of resolution makers who make particular kinds of resolutions, indexed by age bracket. According to the table, 58 percent of resolution makers ages 50 to 64 made resolutions related to personal relationships, compared to 53 percent of resolution makers ages 30 to 49—indicating that the older group is more likely to make such resolutions. The table also shows that 56 percent of resolution makers ages 50 to 64 made resolutions related to finances, compared to 63 percent of resolution makers ages 30 to 49—indicating that the older group is less likely to make financial resolutions. Thus, the data support the conclusion that resolution makers between the ages of 50 and 64 are more likely to make resolutions related to personal relationships and less likely to make resolutions related to finances than resolution makers between the ages of 30 and 49 are.

Choice B is incorrect because according to the table, 79 percent of resolution makers ages 18 to 29 made resolutions about health and exercise, while 80 percent of resolution makers ages 30 to 49 made such resolutions. Therefore, resolution makers ages 18 to 29 are slightly less likely, not more likely, to make resolutions about health and exercise than resolution makers ages 30 to 49 are. **Choice C is incorrect** because neither

the text nor the table provides information about whether resolution makers who make resolutions related to health and exercise also make resolutions in multiple additional categories. The text indicates that half of those who make a resolution make more than one, but it doesn't specify how many or in which categories, and the table presents only the percentages of resolution makers in each age bracket who made particular kinds of resolutions. **Choice D is incorrect** because the table presents data only about people who chose to make resolutions, not about all US adults; the table therefore can't support a conclusion about whether US adults overall become less likely to make resolutions as they age. Furthermore, although percentages of resolution makers generally decline as age bracket increases in some resolution categories, the table shows that the percentage of resolution makers who made health and exercise resolutions remains relatively stable across age brackets; thus, even among resolution makers, there isn't a consistent age-related decline across all types of resolutions.

116 Correct answer **B**

Hard

< Back to question

B If baseline precipitation is somewhat concentrated, water use for irrigation will increase only slightly, whereas it will increase 9.0% for surface water and 7.9% for groundwater if baseline precipitation is evenly distributed.

Choice B is the best answer because it describes data from the table that support Persad and her colleagues' conclusion. The text explains that, according to some climate models, precipitation in the western United States will become concentrated into fewer, more intense rain and snow events. According to the text, Persad and her colleagues concluded that more irrigation will consequently be needed but that the change in irrigation output will be highly sensitive to, or greatly affected by, the baseline concentration of precipitation in an area. This conclusion is supported by data from the researchers' simulations of changes in annual irrigation output in two different scenarios—one in which an area's annual precipitation is already somewhat concentrated and one in which its annual precipitation is evenly distributed. The table shows that if baseline precipitation is somewhat concentrated, water use for irrigation will increase only slightly, whereas if baseline precipitation is evenly distributed, water use for irrigation will increase much more—9.0% for surface water and 7.9% for groundwater. This difference illustrates the researchers' conclusion that the amount of additional water needed for irrigation will vary greatly depending on how concentrated or spread out the annual precipitation in an area already is.

Choice A is incorrect because it compares changes in the amount of water being used for irrigation to changes in the amount of water entering aquifers. Persad and her colleagues' conclusion doesn't focus on changes to the amount of water entering aquifers; rather, the researchers' conclusion focuses on changes to irrigation output relative to how concentrated or spread out the annual precipitation in an area is. **Choice C is incorrect** because it supports only part of Persad and her colleagues' conclusion. According to the text, the researchers concluded that the concentration of precipitation into fewer events will

trigger more irrigation but that this change in irrigation output will be highly sensitive to an area's baseline concentration of annual precipitation. The data in this choice support the idea that more irrigation will be needed, but to support the rest of the researchers' conclusion, additional data from the table are required to show that the increases in water use for irrigation will vary depending on how concentrated or spread out the annual precipitation in an area already is. **Choice D is incorrect** because data in the table indicate no declines in water use for irrigation, showing only increases in the form of positive values.

117 Correct answer **B**

Hard

Back to question

B Tadpoles in the low and medium population density conditions had substantially lower average bufadienolide concentrations but had greater average body masses than those in the high population density condition.

Choice B is the best answer. This data shows that the tadpoles in the high-density pond (meaning those with the most competition) didn't grow as big as the other two groups but produced more bufadienolide.

Choice A is incorrect. This doesn't fully support the conclusion. It doesn't include any data about bufadienolide production. **Choice C is incorrect**. This doesn't fully support the conclusion. It doesn't include any data about growth. **Choice D is incorrect**. This doesn't fully support the conclusion. It doesn't demonstrate that the tadpoles in the high-density pond produced more bufadienolide overall. The fact that they didn't produce more kinds of bufadienolide isn't relevant to the conclusion.

118 Correct answer **A**

Hard

Back to question

A Tanzania has approximately 61 million Swahili speakers, which is much more than the estimated total number of people worldwide for whom Swahili is their first language.

Choice A is the best answer because it most effectively uses data from the table to support the underlined claim. The text indicates that Swahili is the first language of up to 15 million people worldwide. The text goes on to claim, in the underlined portion, that even in countries where nearly everyone speaks Swahili, many of the language's speakers don't have Swahili as their first language. The table indicates that 61 million people in Tanzania, which amounts to 100 percent of the population, speak Swahili. If 61 million people in Tanzania speak Swahili, but only 15 million people worldwide have Swahili as their first language, that means there are many people in Tanzania who speak Swahili as a language other than their first language. This information about Swahili speakers in Tanzania therefore supports the claim that many Swahili speakers in countries where nearly everyone speaks Swahili speak it as a language other than their first language (such as their second, third, or fourth language).

Choice B is incorrect because it doesn't accurately describe information in the table. According to the table, Tanzania has 61 million Swahili speakers, not at most 15 million Swahili speakers. Additionally, the table indicates that 100 percent of Tanzania's population speak Swahili, which means that the number of Swahili speakers in the country and the country's total population should be the same, not that they should differ by such a large amount. **Choice C is incorrect** because there's no information in the table or the text that indicates where people who speak Swahili as their first language live. Although Kenya's total population can be inferred from the table—if Kenya has 55 million Swahili speakers and 100% of Kenya's population speak Swahili, then Kenya must have a population of 55 million people—nothing suggests that all the people who speak Swahili as their first language live in a single country, let alone that they all live in Kenya. **Choice D is incorrect**. Although the table does indicate that 100 percent of Kenya's population and 25 percent of the Democratic Republic of the Congo's population speak Swahili, this comparison is

irrelevant to the claim that Swahili isn't the first language of many of its speakers even in countries where almost everyone speaks Swahili. On its own, a difference in the proportions of the population who speak Swahili cannot reveal whether those Swahili speakers have Swahili as their first language or a subsequent language.

119 Correct answer **C**

Hard

< Back to question

C the students tended to value the concert tickets more highly than did the more age-diverse group recruited online, but both groups tended to choose a higher price when considering the value of the tickets than when considering what they could afford or wanted to pay.

Choice C is the best answer because it most effectively uses data from the graph to complete the text about the effect of messaging on participative pricing. The graph shows mean ticket prices chosen by participants in response to three messages across two studies: Study 1, which the text indicates was conducted with an age-diverse group recruited online, and Study 2, which was conducted with student participants. The graph indicates that in the "pay what you think it's worth" condition, the mean price of the concert tickets in Study 2 was about $74, which is greater than the mean price of about $55 in Study 1. In other words, when participants were asked to consider their valuation of the tickets, the response was heterogeneous, or mixed. Moreover, according to the graph, both Study 1 and Study 2 show higher prices for the tickets under the "pay what you think it's worth" condition than they do under both the "pay what you can" and the "pay what you want" conditions. That is, the data suggest that both groups of participants named higher prices when considering the value of the tickets than when considering either what they could afford or wanted to pay, a finding that supports the idea that sellers can benefit when prompting consumers to consider their own valuations when they choose prices.

Choice A is incorrect because it contradicts information in the graph. Although the graph shows that students in Study 2 assigned a higher value to the tickets than did the age-diverse group in Study 1, which would support the idea that consumer valuations were heterogeneous, the graph shows that in the "pay what you can" (i.e., what you can afford) condition, the students in Study 2 assigned a higher price (about $40), not a lower price, than the age-diverse group in Study 1 did (about $30). Moreover, even if it were true that the students had assigned a lower price in this condition, it wouldn't support the result described in the text, only that the participants across the two studies had different ideas of what they can afford to pay. **Choice B is incorrect**. Although a finding that participants tended to choose prices that were closest to the actual ticket costs in the "pay what you think it's worth" condition would support the idea that sellers benefit by prompting consumers to think about their own valuations (since it's implied that sellers would lose money in the other conditions, where chosen prices were lower than the participants' valuations), neither the text nor the graph addresses how any of the prices chosen by the study participants relate to the tickets' actual market price. **Choice D is incorrect**. Although the wide variation in participant valuations would support the idea that consumer valuations tend to be heterogeneous, neither the text nor the graph provides any information from which to discern the relative levels of variance among the responses from participants in either study.

120 Correct answer **C**

Hard

< Back to question

C Lillian St. Cyr acted in far more than 66 films and Edwin Carewe directed more than 58.

Choice C is the best answer because it uses data from the table to effectively exemplify the idea that the film outputs of the four individuals included in the table should be considered bare minimums—that is, that we should assume that the individuals actually had higher outputs than those recorded. The table presents the years during which the individuals were active and the number of known films the individuals are credited in. The table indicates that Lillian St. Cyr has 66 film credits as an actor and that Edwin Carewe has 58 film credits as a director; it follows that if some films and records for the era were lost, it's possible that Lillian St. Cyr acted in far more than 66 films and that Edwin Carewe directed more than 58 films.

Choice A is incorrect because it doesn't effectively exemplify the idea that the film outputs of the four individuals included in the table should be considered bare minimums. Rather than addressing the idea that the individuals likely had higher outputs than those presented in the table, this choice simply compares data from the table to make the point that Dark Cloud has fewer credited acting roles than Lillian St. Cyr (35 and 66, respectively). **Choice B is incorrect** because it misrepresents data from the table, even though it may exemplify the idea that the film outputs of the four individuals included in the table should be considered bare minimums by implying that Edwin Carewe acted in more than 47 films. The table indicates that Edwin Carewe was active from 1912 to 1934, meaning that his 47 credited acting roles were in films made before or during 1934, not after that time. **Choice D is incorrect** because it doesn't effectively exemplify the idea that the film outputs of the four individuals

included in the table should be considered bare minimums. Instead of addressing the idea that the individuals likely had higher outputs than

those recorded, this choice suggests that James Young Deer actually acted in and directed fewer films than presented in the table (only 33 known films as a director instead of 35, and only 10 known films as an actor instead of 33).

121 Correct answer **D** Hard Back to question

D For each of the three ratings, correlations with velocity are further from 0 than the corresponding correlations with density are.

Choice D is the best answer. The text tells us that the farther the correlation is from 0, the "stronger" it is (doesn't matter if it's negative or positive). The table shows that the correlations with velocity are farther from zero than the correlations with density, which supports the conclusion that the correlations with velocity are stronger.

Choice A is incorrect. This choice doesn't support the conclusion. It makes an "apples to oranges" comparison by comparing density and velocity correlations across features instead of comparing them for each feature. **Choice B is incorrect**. This choice doesn't support the conclusion. It doesn't include the density correlations for comparison. **Choice C is incorrect**. This choice doesn't support the conclusion. The text tells us that the farther the correlation is from 0, the "stronger" it is: it doesn't matter for "strength" whether it's negative or positive.

122 Correct answer **D** Hard Back to question

D In Akumal Bay and Tulum, delta 15-N values fluctuated considerably across the three measurements made from October 2016 to October 2017.

Choice D is the best answer because it describes data from the table that support the underlined conclusion. The text accompanying the table states that delta 15-N values (a measure of the ratio of two nitrogen isotopes) can be used as an indirect means of measuring the ratio of human wastewater to water from uncontaminated sources—the higher the delta 15-N values, the greater the presence of human wastewater. The text goes on to mention an experiment conducted by Camacho-Cruz and colleagues measuring delta 15-N values in seagrass on the Yucatan peninsula at several sites, four of which are presented in the table accompanying the text. Two of the sites noted in the table, Akumal Bay and Tulum, had intermediate tourism development, and two others, Mahahual and Xahuayxol, had low tourism development. It is reasonable to infer that sites with intermediate tourism have a greater human presence than those with low tourism and therefore are subject to greater amounts of wastewater and exhibit higher delta 15-N values in seagrass. However, Camacho-Cruz and colleagues found that the increase in delta 15-N values was not constant. The table supports this conclusion because the two intermediate-tourism sites (Akumal Bay and Tulum) had delta 15-N

values that fluctuated considerably—both had higher delta 15-N values than the two low-tourism sites (Mahahual and Xahuayxol) in October 2016 and October 2017, but in February 2017 the delta 15-N values for the intermediate-tourism sites dropped significantly (in fact, Mahahual, a low-tourism site, had a higher delta 15-N value for that period). The fluctuations in values in Akumal Bay and Tulum support the conclusion that these sites experienced influxes of human wastewater intermittently.

Choice A is incorrect because it inaccurately describes data from the table: in February 2017 the delta 15-N value in Akumal Bay was higher than the delta 15-N value in Xahuayxol, not lower. **Choice B is incorrect** because the absence of data for delta 15-N levels in Akumal Bay in February 2016 would neither prove nor disprove that the presence of human wastewater at Akumal Bay and Tulum was not constant. Despite the unavailable data, there is still enough information to conclude that delta 15-N levels at both sites fluctuated significantly and that influxes of human wastewater therefore happened intermittently. **Choice C is incorrect** because a constancy in delta 15-N values would not indicate that the influx of human wastewater was intermittent, but rather the opposite. Moreover, the two periods selected are not indicative of general trends in the whole table

(for example, the values fluctuated significantly in Akumal Bay between February 2017 and October 2017, and in Tulum between October 2016 and February 2017).

123 Correct answer **C** Hard ‹ Back to question

C In both the second and third test administrations, participants who took 2–4 days of leave had higher average attentiveness scores than did participants who took 1–5 weeks of leave.

Choice C is the best answer because it describes data from the graph that support Jan Packer and colleagues' conclusion about the effect of leave time on the attentiveness of university employees. According to the text, the researchers' study design included a group of employees who took no leave, a group who took 2–4 days of leave, and a group who took 1–5 weeks of leave. The participants who took leave were tested for attentiveness one week before their leave (the first test administration), one week after their return to work (the second test administration), and two weeks after their return (the third test administration). The participants who took no leave were tested three times at random. The graph shows that at one week after their return to work, participants who took only 2–4 days of leave had an average attentiveness score of between 540 and 600, while participants who took 1–5 weeks of leave had an average score of between 480 and 540. At two weeks after their return to work, those who took only 2–4 days of leave had an average score of between 480 and 540, while those who took 1–5 weeks of leave had an average score of approximately 480. In other words, the graph shows that on both post-leave testing dates, participants with longer leave times had lower average attentiveness scores than those with shorter leave times. Since attentiveness is an indicator of cognitive functioning, these data confirm Packer and colleagues' conclusion that longer leave times might not confer a greater cognitive benefit than shorter leave times do.

Choice A is incorrect. The graph does show that in the second test administration, participants who took 2–4 days of leave had higher average attentiveness scores than did those who took no leave and also shows that in the third test administration, those who took no leave had higher average scores than those who took 1–5 weeks of leave. But neither of these findings has a direct bearing on the researchers' conclusion, which concerns a comparison of participants who took 2–4 days of leave with those who took 1–5 weeks, rather than a comparison of either group with participants who took no leave. **Choice B is incorrect**. Although the graph does show that in the first test administration, participants who took 2–4 days of leave had lower average attentiveness scores than did those who took 1–5 weeks of leave and those who took no leave, this test administration occurred before any participants went on leave; therefore, these results have no bearing on the researchers' conclusion about how the amount of leave taken by participants affected their cognitive functioning. **Choice D is incorrect**. Although the graph does show that in the second and third test administrations, participants who took 2–4 days of leave had higher average attentiveness scores than did those who took no leave, the researchers' conclusion is about the effects of short leave compared with the effects of long leave, not the effects of short leave compared with the effects of no leave. These results are therefore irrelevant to the conclusion.

124 Correct answer **C** Hard ‹ Back to question

C The Alaska marmots had shorter torpor bouts and longer arousal episodes than the Arctic ground squirrels did.

Choice C is the best answer because it describes data from the table that support the researcher's hypothesis. According to the text, the researcher hypothesized that Arctic ground squirrels would exhibit longer torpor bouts and shorter arousal episodes than Alaska marmots do—or, put the other way, that the marmots would show shorter torpor bouts and longer arousal episodes than the ground squirrels do. The table shows data about torpor bouts and arousal episodes for the two species from 2008 to 2011. According to the table, the average duration of torpor bouts was 13.81 days for Alaska marmots, shorter than the average of 16.77 days for Arctic ground squirrels, and the average duration of arousal episodes was 21.2 hours for Alaska marmots, longer than the average of 14.2 hours for Arctic ground squirrels. Thus, the table supports the researcher's hypothesis by showing that Alaska marmots had shorter bouts of torpor and longer arousal episodes than Arctic ground squirrels did.

Choice A is incorrect because it inaccurately describes data from the table and doesn't support the researcher's hypothesis. The table shows that the average duration of arousal episodes was less than a day for both Alaska marmots (21.2 hours) and

Arctic ground squirrels (14.2 hours). Additionally, information about arousal episodes for Alaska marmots and Arctic ground squirrels isn't sufficient to support a hypothesis involving comparisons of both arousal episodes and torpor bouts for those animals. **Choice B is incorrect** because it doesn't support the

researcher's hypothesis, which involves comparisons of arousal episodes as well as torpor bouts for Alaska marmots and Arctic ground squirrels. Noting that both animals had torpor bouts lasting several days, on average, doesn't address arousal episodes at all, nor does it reveal how the animals' torpor bouts compared. **Choice D is incorrect** because it doesn't support the researcher's hypothesis. Although the table does show that Alaska marmots had more torpor bouts (12) than arousal episodes (11) and that their arousal episodes were much shorter than their torpor bouts (21.2 hours and 13.81 days, respectively), comparing data across only Alaska marmot behaviors isn't sufficient to support a hypothesis about torpor and arousal behaviors of both Alaska marmots and Arctic ground squirrels.

125 Correct answer **D** Hard ‹ Back to question

D the average $^{87}Sr/^{86}Sr$ ratios in the fossil shark teeth from MFS and PFBV corroborate that both MFS and PFBV fall within Hh4 but suggest that PFBV was likely deposited more recently than MFS.

Choice D is the best answer because it most effectively uses data from the table to complete the statement about the researchers' conclusion about fossil shark teeth. The text states that mammalian fossil evidence has placed both MFS and PFBV within Hh4 (6 Ma to 4.75 Ma) but "a more precise determination of the sites' ages has proved challenging," prompting Killingsworth and colleagues to attempt to date the sites by comparing average $^{87}Sr/^{86}Sr$ ratios for fossil shark teeth from MFS and PFBV to ratios in the global strontium seawater curve. Given that "$^{87}Sr/^{86}Sr$ ratios in seawater correspond to numerical ages," a fossil whose $^{87}Sr/^{86}Sr$ ratio corresponds to the ratio associated with a particular age in the global strontium seawater curve can be inferred to date to that age. According to the table, the $^{87}Sr/^{86}Sr$ ratio of 0.709000 for fossil shark

teeth from MFS corresponds to an age of 5.86 Ma, which falls within Hh4. By contrast, the table shows that the $^{87}Sr/^{86}Sr$ ratio of 0.709028 for fossils from PFBV would fall between 0.709020 (5.40 Ma) and 0.709040 (4.75 Ma), indicating an age that falls within Hh4 but is more recent than MFS's age of 5.86 Ma. The data therefore corroborate the conclusion that both sites fall within Hh4 while suggesting that PFBV was likely deposited more recently than MFS was.

Choice A is incorrect because the table indicates that MFS was deposited closer to the Hh3-Hh4 boundary than PFBV was, not the reverse. The table indicates that PFBV's $^{87}Sr/^{86}Sr$ ratio of 0.709028 corresponds to an age between 4.75 Ma and 5.40 Ma, while MFS's $^{87}Sr/^{86}Sr$ ratio of 0.709000 corresponds to an age of 5.86 Ma. Because the Hh3-Hh4 boundary occurs at 6 Ma, MFS was deposited closer to that boundary than PFBV was. In addition, the text doesn't establish that mammalian fossil evidence offers less dating precision than $^{87}Sr/^{86}Sr$ ratios do; it states only that mammalian fossils have placed both MFS and PFBV in Hh4 and that more precise dating has proved challenging. **Choice B is incorrect** because it mischaracterizes the level of support for the site age estimates established through mammalian fossil evidence. The table indicates that the average $^{87}Sr/^{86}Sr$ ratios from MFS (0.709000) and PFBV (0.709028) both correspond to ages that fall within Hh4 (6 Ma to 4.75 Ma)—5.86 Ma for MFS and an age between 5.40 Ma and 4.75 Ma for PFBV. The $^{87}Sr/^{86}Sr$ ratios therefore fully support, rather than only partially support, the previous mammalian fossil evidence placing both sites within Hh4. **Choice C is incorrect** because the table indicates that the average $^{87}Sr/^{86}Sr$ ratios in fossil shark teeth from MFS (0.709000) and PFBV (0.709028) correspond to different ages—5.86 Ma for MFS and an age between 5.40 Ma and 4.75 Ma for PFBV. Because the ratios point to different ages, they don't support the conclusion that the fossils at the two sites were deposited contemporaneously, or at the same time.

126 Correct answer **D** Hard ‹ Back to question

D Growth with nitrogen under moderate change exceeded growth without nitrogen under the current climate, but the latter exceeded growth with nitrogen under extreme change.

Choice D is the best answer because it describes data from the graph that support Ibáñez and colleagues' conclusion that increasing anthropogenic nitrogen deposition can compensate for the negative effect of climate change on tree growth if that

change is moderate but not if it's extreme. The bar graph shows the growth of sugar maple trees with and without nitrogen fertilization under three different climate-change scenarios: current conditions, a moderate change, and an extreme change. According to the graph, radial growth without nitrogen fertilization is projected to be about 0.16 centimeters (cm) under current conditions, 0.15 cm under a moderate change, and 0.04 cm under an extreme change. The graph also shows that with nitrogen fertilization, growth is projected to be about 0.18 centimeters under a moderate change but only about 0.06 centimeters under an extreme change. Thus, the data in the graph support the researchers' conclusion by showing greater growth for a moderate change using nitrogen fertilization than they do either under current conditions without nitrogen fertilization or under an extreme change with nitrogen fertilization.

Choice A is incorrect. Although it accurately represents the data in the graph, this fact pattern doesn't support Ibáñez and colleagues' conclusion that the decline in radial growth due to climate change will be partly offset by higher levels of anthropogenic nitrogen, but only if change to the climate is moderate and not if it's extreme. To support this would require comparing radial growth without nitrogen fertilization under current climate conditions to the growth with nitrogen fertilization under both moderate and extreme changes. This choice mentions only growth with nitrogen fertilization under current climate conditions and moderate change and growth without nitrogen fertilization under an extreme change, which don't provide a basis to determine whether higher nitrogen in the future will be able to offset reduced growth due to climate change. **Choice B is incorrect**. Although it accurately represents the data in the graph, this fact pattern doesn't support Ibáñez and colleagues' conclusion that the decline in radial growth due to climate change will be partly offset by higher levels of atmospheric nitrogen, but only if change to the climate is moderate and not if it's extreme. The support needed would compare radial growth under current climate conditions without nitrogen fertilization to the growth with nitrogen fertilization under moderate and extreme changes. This choice mentions only growth without nitrogen fertilization under current conditions and moderate change and growth with nitrogen fertilization under extreme change, which don't provide a basis to determine whether higher nitrogen in the future will be able to offset reduced growth due to climate change. **Choice C is incorrect**. Although it accurately represents the data in the graph, this fact pattern doesn't support Ibáñez and colleagues' conclusion that the decline in radial growth due to climate change will be partly offset by higher levels of atmospheric nitrogen, but only if change to the climate is moderate and not if it's extreme. The support needed would compare radial growth without adding nitrogen under current climate conditions to the growth with nitrogen fertilization under moderate and extreme changes. This choice mentions only the growth with and without nitrogen fertilization under moderate climate change and growth without nitrogen fertilization under extreme change, which don't provide a basis to determine whether higher nitrogen in the future will be able to offset reduced growth due to climate change.

127 Correct answer **D** Hard ‹ Back to question

D For each species, the percentage of juvenile plants growing in patches of vegetation was substantially higher than what would be expected if plants were randomly distributed.

Choice D is the best answer because it provides the most direct support from the table for the claim that the plants growing in close proximity to other plants gained an advantage at an early developmental stage. The table shows the total number of juvenile plants from five species that were found growing on bare ground and in patches of vegetation as well as the percentage of the total number of each species that were growing in patches of vegetation. For each of the five species, more than 50% of the juvenile plants were growing in patches of vegetation. The text notes, however, that a random distribution of plants across the landscape should result in only about 15% of the plants being found in patches of vegetation. In other words, for each of the five species, the percentage of juvenile plants found growing in patches of vegetation was substantially higher than could be explained by chance alone. This finding supports the claim in the text: if plants growing in patches are overrepresented among plants that have survived to the juvenile stage, as the data show they are, then it suggests that it's advantageous for plants at an early stage of development to grow in patches of vegetation.

Choice A is incorrect because the statement that less than 75% of juvenile plants were found growing in patches of vegetation, while true, doesn't clearly support the claim that the plants growing in close proximity to other plants gained an advantage at an early developmental stage. Saying that less than 75% of plants were found in patches doesn't indicate how the percentage growing in patches compares with the percentage that would be expected to grow in patches on the basis of chance alone, which is the information necessary to evaluate whether the claim in the text has support in the table. Put another way, if the percentage of plants found growing in patches was 15% or less, it would be true that less than 75% were found in

patches, but the data would in fact weaken the claim in the text, not strengthen it, since the data would show that growing in patches wasn't advantageous. **Choice B is incorrect** because only 12 plants of this species were found growing in patches, which was the lowest number of any species, not the greatest number. Additionally, even if it were true that this species had the greatest number of plants growing in patches, the finding would be irrelevant to the claim that plants of all five species gained an advantage by growing in close proximity to other plants. **Choice C is incorrect** because 59.1% of the plants of these species were found growing in patches, which is a far greater percentage, not a lower percentage, than what would be expected if plants were randomly distributed (around 15%). Additionally, if it were true that the percentage of plants growing in patches was lower for these species than what would be expected from chance alone, that finding would weaken, not strengthen, the claim that growing in patches is advantageous.

128 Correct answer **C** Hard ‹ Back to question

C variable selection contributed substantially less to fungal community assembly than to prokaryote community assembly.

Choice C is the best answer because it most effectively uses data from the graph to complete the statement about the researchers' hypothesis regarding a finding. The text states that the researchers attribute a certain finding about community assembly in fungi and prokaryotes to the fact that fungi have a higher tolerance for environmental pressures than do prokaryotes. This finding, then, would be explained by the fact that fungi better tolerate environmental pressures, which the text defines as including variable and homogeneous selection. According to the graph, the contribution of variable selection to community assembly was nearly 40 percent for fungi but nearly 60 percent for prokaryotes, indicating that variable selection contributed significantly less to fungal community assembly than to prokaryotic community assembly. This finding aligns with the researchers' hypothesis: because fungi tolerate environmental pressures like variable selection better than prokaryotes do, those pressures play a smaller role in shaping fungal communities than in shaping prokaryotic communities.

Choice A is incorrect. Although this comparison is supported by the graph, which shows that homogenizing dispersal's contribution to fungal community assembly was just over 10 percent while variable selection's contribution was just under 40 percent, this comparison doesn't illustrate the hypothesis because it involves two factors affecting fungal community assembly. The researchers' hypothesis specifically concerns a difference between fungi and prokaryotes (namely, fungi's greater tolerance of environmental pressures), so a comparison that is limited to fungal community assembly doesn't represent a finding that aligns with this hypothesis. **Choice B is incorrect** because it mischaracterizes the information in the graph. The graph indicates that the total number of factors that contributed to community assembly was greater for fungi than for prokaryotes: all five factors made nonzero contributions to fungal community assembly, while two factors—homogeneous selection and dispersal limitation—appear not to have contributed to prokaryotic community assembly. In addition, the overall number of factors that influence community assembly isn't directly relevant to the researchers' hypothesis, which addresses the effects of higher tolerance of environmental pressures among fungi in comparison to prokaryotes. **Choice D is incorrect**. Although the graph indicates that homogeneous selection contributed only minimally to fungal community assembly and appears not to have contributed at all to prokaryotic community assembly, this isn't a finding that the researchers' hypothesis would account for. The hypothesis concerns a difference between fungi and prokaryotes that is plausibly attributable to fungi's greater tolerance of environmental pressures, which include homogeneous and variable selection. The finding that one type of environmental pressure contributed negligibly to both groups doesn't differentiate fungi from prokaryotes and therefore doesn't illustrate what the hypothesis is meant to explain.

129 Correct answer **A** Hard ‹ Back to question

A the origins of vocabulary pertaining to the crop vary across languages in the region, with the words for corn in Cherokee and the Muskogean languages showing no demonstrable relationship to Totozoquean vocabulary.

Choice A is the best answer. The table provides evidence that the words for corn in the Cherokee and Muskogean languages appear unrelated to those in Caddo language, which is described as closely related to the Totozoquean language family. This

supports the claim that corn cultivation spread across the Southeast without necessarily spreading Totozoquean vocabulary along with it.

Choice B is incorrect. This choice emphasizes the diversity of Southeastern languages in general, but we're specifically looking for information about words associated with corn. **Choice C is incorrect**. This choice shows how words for corn can change and evolve, but we're looking for an example that shows how some words for corn can be completely unrelated. **Choice D is incorrect**. This choice shows words for corn that share a common root, but we're looking for an example that shows how some words for corn can be unrelated.

130 Correct answer **D** Hard ‹ Back to question

D All the periods of divided Congresses except one were associated with reductions in total outlays, whereas the periods of undivided Congresses were associated with increases in total outlays.

Choice D is the best answer. The claim is that divided Congresses are necessary but insufficient—that is, we need divide Congresses, but they are not enough—to decrease government size, as measured by total federal outlays. This choice accurately expresses the supporting data from the "change in total outlays" part of the graph. Within the data set, divided Congresses sometimes decreased total outlays, but undivided ones never did.

Choice A is incorrect. The claim is only about government size, as measured by total federal outlays—defense and nondefense outlays aren't relevant. **Choice B is incorrect**. The claim is only about government size as measured by total federal outlays—nondefense outlays aren't relevant. **Choice C is incorrect**. The claim is only about government size as measured by total federal outlays—specific information about defense or nondefense outlays isn't relevant.

131 Correct answer **B** Hard ‹ Back to question

B None of the percentages shown for provisioning services are lower than 33%, and the overall percentage shown for provisioning services is 75%.

Choice B is the best answer. The finding that all the regions reported at least some effects on provisioning services supports the first part of the assertion. And the fact that provisioning services comprise 75% of the reported services overall supports the second part of the assertion.

Choice A is incorrect. This choice doesn't fully support the assertion. It doesn't include the finding that all the regions (not just Central and West) reported at least some effects on provisioning services. **Choice C is incorrect**. This choice doesn't fully support the assertion. It doesn't demonstrate that provisioning services represent the majority of the reported services overall. **Choice D is incorrect**. This choice doesn't fully support the assertion. It doesn't demonstrate that provisioning services represent the majority of the reported services overall.

132 Correct answer **C** Hard ‹ Back to question

C *DptB* may have developed as a specific defense against *A. sicerae*.

Choice C is the best answer because it most logically completes the text based on supporting data in the graph. The text indicates that in the fly *D. melanogaster*, *DptA* and *DptB* are genes that encode peptides that both fight pathogens and promote beneficial microbes. Researchers tested *D. melanogaster*'s resistance to *P. rettgeri* and *A. sicerae* bacteria based on which variation of the peptide-encoding gene the flies exhibit: *DptA* silenced (referred to as type A), *DptB* silenced (type B), or both silenced (type AB). The text also indicates that resistance to *P. rettgeri* correlates with *DptA* activity but not with *DptB* activity (which would manifest as type B flies surviving at a higher rate than other fly types when exposed to *P. rettgeri*). The graph shows the post–*A. sicerae* infection results, which indicate that *DptB* activity was most strongly associated with survival, whereas *DptA* activity was not (manifesting in the graph as the type A flies having greater survival rates than the other fly

types). In other words, when *DptA* activity was silenced, the flies showed relatively high survival rates, but when *DptB* activity was silenced, whether on its own or in conjunction with *DptA* activity being silenced, survival rates were low, suggesting that *DptB* may have developed as a specific defense against *A. sicerae*.

Choice A is incorrect. The graph suggests that *DptA* activity is associated with a low rate of survival, not a high one. Furthermore, the graph shows results for flies where *DptA* alone was silenced, *DptB* alone was silenced, and both were silenced and thus does not show any flies with activity in both *DptA* and *DptB*, which would be necessary to determine whether *DptA* conferred defense against *A. sicerae* in the presence of *DptB*. **Choice B is incorrect**. Only two bacteria species were considered in the text: *P. rettgeri* and *A. sicerae*. The text and graph taken together suggest that activity in *DptA* is associated with resistance to *P. rettgeri* while *DptB* activity is not, and that *DptB* activity is associated with resistance to *A. sicerae* while *DptA* is not. There is no further information to suggest one genetic type confers resistance to a greater number of pathogens than the other. **Choice D is incorrect**. The graph does not address flies with activity in both *DptA* and *DptB*. All flies represented in the graph had one or both of *DptA* and *DptB* silenced, or inactive.

133 Correct answer **B** Hard ‹ Back to question

B 6.1 days, and its rotational period is also 6.1 days.

Choice B is the best answer because it correctly uses data from the table to illustrate the relationship between orbital and rotational periods described in the text. For Earth and each of four TRAPPIST-1 exoplanets, the table provides the orbital period and radius (in relation to the radius of Earth). The text explains that for each TRAPPIST-1 exoplanet, gravitational forces cause the rotational period (how long the planet takes to spin once on its axis) to equal the orbital period (how long the planet takes to orbit the star). According to the table, TRAPPIST-1e has an orbital period of 6.1 days. Since the text states that the orbital and rotational periods are equal for these planets, TRAPPIST-1e's rotational period must also be 6.1 days.

Choice A is incorrect because the table shows that TRAPPIST-1e has an orbital period (and thus a rotational period) of 6.1 days, not 1.51 days, which is the orbital period (and thus the rotational period) of TRAPPIST-1b. Furthermore, comparing the length of TRAPPIST-1e's rotational period to those of the other exoplanets would not logically complete the example, which should illustrate how the orbital and rotational periods of a planet in TRAPPIST-1 are the same length. **Choice C is incorrect** because the table shows that TRAPPIST-1e has an orbital period (and thus a rotational period) of 6.1 days, not 9.21 days, which the table shows is the orbital period (and thus rotational period) of TRAPPIST-1f. Additionally, comparing the rotational periods of two exoplanets would not logically complete the example, which should illustrate how the orbital and rotational periods of a planet in TRAPPIST-1 are the same length. **Choice D is incorrect** because although it correctly identifies TRAPPIST-1e's orbital period as 6.1 days, it incorrectly states that its rotational period is 0.92 days. This contradicts the text's statement that the orbital and

rotational periods are equal for TRAPPIST-1 exoplanets. The value 0.92 actually represents TRAPPIST-1e's radius in relation to Earth's radius, not its rotational period.

08 Cross-Text Connections

Comparing two texts

Cross-text gives you two short texts on one subject and asks how they sit together. There are three forms, and the first one has a method of its own.

> These last types are the ones a method cannot carry on its own. There is no rule to apply and no pattern to spot. The steps keep you out of the traps, but the reading is the work.

61 questions | 9 Easy | 25 Medium | 27 Hard

FORM 1 · AGREE
What do both texts agree on? Use the steps: Text 1 alone usually kills two or three choices.

FORM 2 · DIFFERENCE
What is the difference between the two texts? Read both, then name the gap.

FORM 3 · RESPOND
How would Text 2 respond to Text 1, or the other way round? Read both, then name the gap. The response is always built out of it.

THE STEPS

1. Read Text 1, then go straight to the answers.
2. Cross out any answer that is unrelated to Text 1, or that Text 1 contradicts.
3. If one answer is left, choose it. If more than one is left, read Text 2 and decide between them.

WHAT TO TAKE FROM THIS

- Difference and respond are the same question wearing different clothes. Find what Text 2 has that Text 1 does not, and the response writes itself.
- On the agree form, do not read Text 2 first. Text 1 plus the four choices is usually enough, and it is much faster.
- Agreement has to be genuine. A statement only one text supports is out, however true it sounds.
- Watch for choices that use a word from a text but change what it was attached to. They are the commonest trap on this type.

Questions	668
Answers & explanations	700

EASY 9 questions

Text 1

Imagine you and your friend are trying to decide where to eat lunch. When people try to make joint decisions like this, they often don't reveal their true preferences. Instead, they say they would be happy with all options because they think this response will help them appear more easygoing and likable to the other person.

Text 2

Research shows that people who don't state their preferences when making a decision with others aren't more likable in the eyes of others. In fact, stating that you have no preference actually makes the decision more difficult for other people. It can also cause them to feel less happy with their ultimate decision and with you.

ID eb89dcc8

1 Mark for Review Easy Explanation ›

Based on the texts, what response would the author of Text 2 most likely suggest for someone in the situation described in the underlined sentence in Text 1?

(A) Cancel the plan to have lunch together.

(B) Ask where the friend typically likes to eat.

(C) State a preference about where to eat.

(D) Change the subject to talk about something else.

Text 1

Public policy researcher Anthony Fowler studied the history of elections in Australia, a country that requires citizens to vote. Fowler argues that requiring citizens to vote leads to a significant increase in voters who would otherwise not have the time or motivation to vote. Thus, election results in countries that require citizens to vote better reflect the preferences of the country as a whole.

Text 2

Governments in democratic countries function better when more people vote. However, forcing people to vote may have negative consequences. Shane P. Singh and Jason Roy studied what happens when a country requires its citizens to vote. They found that when people feel forced to vote, they tend to spend less time looking for information about their choices when voting. As a result, votes from these voters may not reflect their actual preferences.

ID 02fd3da7

2 Mark for Review Easy Explanation ›

Based on the texts, how would Singh and Roy (Text 2) most likely respond to the research discussed in Text 1?

(A) Only countries of a certain population size should implement mandatory voting.

(B) People who are forced to vote are likely to become politically engaged in other ways, such as volunteering or running for office.

(C) Requiring people to vote does not necessarily lead to election outcomes that better represent the preferences of the country as a whole.

(D) Countries that require voting must also make the process of voting easier for their citizens.

Text 1

Dance choreographer Alvin Ailey's deep admiration for jazz music can most clearly be felt in the rhythms and beats his works were set to. Ailey collaborated with some of the greatest jazz legends, like Charles Mingus, Charlie Parker, and perhaps his favorite, Duke Ellington. With his choice of music, Ailey helped bring jazz to life for his audiences.

Text 2

Jazz is present throughout Ailey's work, but it's most visible in Ailey's approach to choreography. Ailey often incorporated improvisation, a signature characteristic of jazz music, in his work. When managing his dance company, Ailey rarely forced his dancers to an exact set of specific moves. Instead, he encouraged his dancers to let their own skills and experiences shape their performances, as jazz musicians do.

ID 8d802289

3 Mark for Review Easy Explanation ›

Based on the texts, both authors would most likely agree with which statement?

(A) Dancers who worked with Ailey greatly appreciated his supportive approach as a choreographer.

(B) Ailey's work was strongly influenced by jazz.

(C) Audiences were mostly unfamiliar with the jazz music in Ailey's works.

(D) Ailey blended multiple genres of music together when choreographing dance pieces.

Text 1

Flamingos are known for their vibrant pink coloring, but they're actually born with gray feathers. Their pink color comes from eating brine shrimp, but brine shrimp aren't naturally pink either. Animals can't produce carotenoids, the pigments that provide the pink hue. The algae that brine shrimp feed on, however, can produce these pigments. Thus, the pinker the flamingo, the more shrimp it has eaten.

Text 2

Ecologist Juan Amat has found that flamingos apply a kind of makeup to make themselves appear pinker. A gland near their tail contains pigments that come from the food they eat. When the flamingos groom themselves using the pigments, their feathers become pinker. Flamingos may do this to improve their success during mating season, when they would benefit from looking pinker.

ID ed52a093

4 Mark for Review Easy Explanation ›

Based on the texts, how would the ecologist in Text 2 most likely respond to the author's conclusion in Text 1?

(A) By emphasizing that flamingos' tail feathers are pinker than their other feathers are

(B) By claiming that the coloring of flamingos' feathers doesn't change significantly enough for most observers to notice

(C) By pointing out that the amount of shrimp eaten isn't the only thing that influences flamingos' coloring

(D) By arguing that flamingos' diet doesn't include much shrimp except during mating season

Text 1

Today the starchy root cassava is found in many dishes across West Africa, but its rise to popularity was slow. Portuguese traders brought cassava from Brazil to the West African coast in the 1500s. But at this time, people living in the capitals further inland had little contact with coastal communities. Thus, cassava remained relatively unknown to most of the region's inhabitants until the 1800s.

Text 2

Cassava's slow adoption into the diet of West Africans is mainly due to the nature of the crop itself. If not cooked properly, cassava can be toxic. Knowledge of how to properly prepare cassava needed to spread before the food could grow in popularity. The arrival of formerly enslaved people from Brazil in the 1800s, who brought their knowledge of cassava and its preparation with them, thus directly fueled the spread of this crop.

ID c68ceeff

5 Mark for Review Easy Explanation ›

Based on the texts, the author of Text 1 and the author of Text 2 would most likely agree with which statement?

(A) Cassava did not become a significant crop in West Africa until long after it was first introduced.

(B) Several of the most commonly grown crops in West Africa are originally from Brazil.

(C) The climate of the West African coast in the 1500s prevented cassava's spread in the region.

(D) The most commonly used methods to cook cassava today date to the 1500s.

Text 1

On April 26th, 1777, Sybil Ludington rode 40 miles by horse through Putnam County, New York, to gather up local militia. British forces were burning nearby Danbury, Connecticut, and Ludington wanted to rally rebel troops to meet them. Although she was only 16 years old at the time, her brave feat made Ludington one of the heroes of the American Revolution. Since then, Ludington has been widely celebrated, inspiring postage stamps, statues, and even children's TV series.

Text 2

Historian Paula D. Hunt researched the life and legacy of Sybil Ludington but found no evidence for her famous ride. Although many articles and books have been written about Ludington, Hunt believes writers may have been inventing details about Ludington as they retold her story. Ludington is revered by Americans today, but there simply isn't a strong historical record of her heroic ride.

ID 5a4b147c

6 Mark for Review Easy Explanation ›

Based on the texts, both authors would most likely agree with which statement?

(A) Sybil Ludington was crucial to the outcome of the Revolutionary War.

(B) Historians have confirmed which route Sybil Ludington took.

(C) Sybil Ludington was likely not a real person.

(D) Many people have come to admire the story of Sybil Ludington's ride.

Text 1

Most scientists agree that the moon was likely formed after a collision between Earth and a large planet named Theia. This collision likely created a huge debris field, made up of material from both Earth and Theia. Based on models of this event, scientists believe that the moon was formed from this debris over the course of thousands of years.

Text 2

Researchers from NASA's Ames Research Center used a computer to model how the moon could have formed. Although simulations of the moon's formation have been done in the past, the team from NASA ran simulations that were much more detailed. They found that the formation of the moon was likely not a slow process that took many years. Instead, it's probable that the moon's formation happened immediately after impact, taking just a few hours.

ID dc043599

7 Mark for Review Easy Explanation ›

Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view the evidence for the formation of the moon?

(A) The author of Text 1 argues that the formation of the moon occurred much earlier than the author of Text 2 argues.

(B) The author of Text 1 suggests there is more evidence confirming the existence of Theia than the author of Text 2 suggests.

(C) The author of Text 1 claims that the moon's surface is more similar to Earth's surface than the author of Text 2 claims.

(D) The author of Text 1 believes that the moon formed more slowly than the author of Text 2 believes.

Text 1

Although food writing is one of the most widely read genres in the United States, literary scholars have long neglected it. And within this genre, cookbooks attract the least scholarly attention of all, regardless of how well written they may be. This is especially true of works dedicated to regional US cuisines, whose complexity and historical significance are often overlooked.

Text 2

With her 1976 cookbook *The Taste of Country Cooking*, Edna Lewis popularized the refined Southern cooking she had grown up with in Freetown, an all-Black community in Virginia. She also set a new standard for cookbook writing: the recipes and memoir passages interspersing them are written in prose more elegant than that of most novels. Yet despite its inarguable value as a piece of writing, Lewis's masterpiece has received almost no attention from literary scholars.

ID 159ef46d

8 Mark for Review Easy Explanation ›

Based on the two texts, how would the author of Text 1 most likely regard the situation presented in the underlined sentence in Text 2?

(A) As typical, because scholars are dismissive of literary works that achieve popularity with the general public

(B) As unsurprising, because scholars tend to overlook the literary value of food writing in general and of regional cookbooks in particular

(C) As justifiable, because Lewis incorporated memoir into *The Taste of Country Cooking*, thus undermining its status as a cookbook

(D) As inevitable, because *The Taste of Country Cooking* was marketed to readers of food writing and not to readers of other genres

Text 1

Some animal species, like the leopard, can be found in many kinds of areas. On the other hand, tropical mountain bird species tend to be limited in the types of spaces they can call home. This is because many mountain bird species are only able to survive at very specific elevations. Over time, these species have likely become used to living at a specific temperature. Therefore, these species struggle to survive at elevations that are warmer or colder than they are used to.

Text 2

A new study reviewed observations of nearly 3,000 bird species to understand why tropical mountain bird species live at specific elevations. They noted that when a mountain bird species was found in an area with many other bird species, it tended to inhabit much smaller geographic areas. It is thus likely that competition for resources with other species, not temperature, limits where these birds can live.

ID 7b55e895

9 Mark for Review Easy Explanation ›

Based on the texts, both authors would most likely agree with which statement?

(A) Tropical mountain bird species are restricted in where they can live.

(B) Scientists have better tools to observe tropical mountain birds than they did in the past.

(C) Little is known about how tropical mountain birds build their nests.

(D) Tropical mountain bird species that live at high elevations tend to be genetically similar.

MEDIUM 25 questions

Text 1

In 1916, H. Dugdale Sykes disputed claims that *The Two Noble Kinsmen* was coauthored by William Shakespeare and John Fletcher. Sykes felt Fletcher's contributions to the play were obvious—Fletcher had a distinct style in his other plays, so much so that lines with that style were considered sufficient evidence of Fletcher's authorship. But for the lines not deemed to be by Fletcher, Sykes felt that their depiction of women indicated that their author was not Shakespeare but Philip Massinger.

Text 2

Scholars have accepted *The Two Noble Kinsmen* as coauthored by Shakespeare since the 1970s: it appears in all major one-volume editions of Shakespeare's complete works. Though scholars disagree about who wrote what exactly, it is generally held that on the basis of style, Shakespeare wrote all of the first act and most of the last, while John Fletcher authored most of the three middle acts.

ID 97e5bf55

10 Mark for Review Medium Explanation ›

Based on the texts, both Sykes in Text 1 and the scholars in Text 2 would most likely agree with which statement?

(A) John Fletcher's writing has a unique, readily identifiable style.

(B) The women characters in John Fletcher's plays are similar to the women characters in Philip Massinger's plays.

(C) *The Two Noble Kinsmen* belongs in one-volume compilations of Shakespeare's complete plays.

(D) Philip Massinger's style in the first and last acts of *The Two Noble Kinsmen* is an homage to Shakespeare's style.

Text 1

Africa's Sahara region—once a lush ecosystem—began to dry out about 8,000 years ago. A change in Earth's orbit that affected climate has been posited as a cause of desertification, but archaeologist David Wright also attributes the shift to Neolithic peoples. He cites their adoption of pastoralism as a factor in the region drying out: the pastoralists' livestock depleted vegetation, prompting the events that created the Sahara Desert.

Text 2

Research by Chris Brierley et al. challenges the idea that Neolithic peoples contributed to the Sahara's desertification. Using a climate-vegetation model, the team concluded that the end of the region's humid period occurred 500 years earlier than previously assumed. The timing suggests that Neolithic peoples didn't exacerbate aridity in the region but, in fact, may have helped delay environmental changes with practices (e.g., selective grazing) that preserved vegetation.

ID c4737d6a

11 Mark for Review Medium Explanation ›

Based on the texts, how would Chris Brierley (Text 2) most likely respond to the discussion in Text 1?

(A) By pointing out that given the revised timeline for the end of the Sahara's humid period, the Neolithic peoples' mode of subsistence likely didn't cause the region's desertification

(B) By claiming that pastoralism was only one of many behaviors the Neolithic peoples took part in that may have contributed to the Sahara's changing climate

(C) By insisting that pastoralism can have both beneficial and deleterious effects on a region's vegetation and climate

(D) By asserting that more research needs to be conducted into factors that likely contributed to the desertification of the Sahara region

Text 1

Microbes are tiny organisms in the soil, water, and air all around us. They thrive even in very harsh conditions. That's why Noah Fierer and colleagues were surprised when soil samples they collected from an extremely cold, dry area in Antarctica didn't seem to contain any life. The finding doesn't prove that there are no microbes in that area, but the team says it does suggest that the environment severely restricts microbes' survival.

Text 2

Microbes are found in virtually every environment on Earth. So it's unlikely they would be completely absent from Fierer's team's study site, no matter how extreme the environment is. There were probably so few organisms in the samples that current technology couldn't detect them. But since a spoonful of typical soil elsewhere might contain billions of microbes, the presence of so few in the Antarctic soil samples would show how challenging the conditions are.

ID 7bf79a90

12 Mark for Review Medium Explanation ›

Based on the texts, Fierer's team and the author of Text 2 would most likely agree with which statement about microbes?

(A) Most microbes are better able to survive in environments with extremely dry conditions than in environments with harsh temperatures.

(B) A much higher number of microbes would probably be found if another sample of soil were taken from the Antarctic study site.

(C) Microbes are likely difficult to detect in the soil at the Antarctic study site because they tend to be smaller than microbes found in typical soil elsewhere.

(D) Most microbes are probably unable to withstand the soil conditions at the Antarctic study site.

Text 1

Historians studying pre-Inca Peru have looked to ceramic vessels to understand daily life among the Moche people. These mold-made sculptures present plants, animals, and human faces in precise ways—vessels representing human faces are so detailed that scholars have interpreted facial markings to represent scars and other skin irregularities. Some historians have even used these objects to identify potential skin diseases that may have afflicted people at the time.

Text 2

Art historian and archaeologist Lisa Trever has argued that the interpretation of Moche "portrait" vessels as hyper-realistic portrayals of identifiable people may inadvertently disregard the creativity of the objects' creators. Moche ceramic vessels, Trever argues, are artworks in which sculptors could free their imagination, using realistic objects and people around them as inspiration to explore more abstract concepts.

ID 835d1ae6

13 Mark for Review Medium Explanation ›

Based on the texts, what would Lisa Trever (Text 2) most likely say about the interpretation presented in the underlined portion of Text 1?

(A) Depictions of human faces are significantly more realistic than depictions of plants and other animals are.

(B) It is likely that some depictions of human faces with extensive markings are intended to portray the same historical individual.

(C) Some vessels may have been damaged during their excavation and thus provide little insight into Moche culture.

(D) Markings on depictions of human faces are not necessarily intended to portray particular details about the physical appearance of individuals.

Text 1

Italian painters in the 1500s rarely depicted themselves in their work. Even more rare were self-portrait paintings that portrayed the artist as a painter. At the time, painting was not yet respected as a profession, so painters mostly chose to emphasize other qualities in their self-portraits, like their intellect or social status. In the city of Bologna, the first artist to depict themself painting was a man named Annibale Carracci. A painting of his from around 1585 shows Carracci in front of an easel holding a palette.

Text 2

In their self-portraits, Bolognese artists typically avoided referring to the act of painting until the mid-1600s. However, Lavinia Fontana's 1577 painting, *Self-Portrait at the Keyboard*, stands out as the earliest example of such a work by an artist from Bologna. Although the artist is depicted playing music, in the background, one can spot a painting easel by a window.

ID 81da17d3

14 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the underlined claim in Text 1?

(A) Carracci and Fontana were among the most well-respected painters in Bologna at the time.

(B) The depiction of Fontana in *Self-Portrait at the Keyboard* was intended to underscore the artist's creativity.

(C) Fontana likely inspired the reference to an easel and palette in Carracci's painting.

(D) *Self-Portrait at the Keyboard* was painted earlier than Carracci's painting and also refers to the artist's craft.

Text 1

Graphic novels are increasingly popular in bookstores and libraries, but they shouldn't be classified as literature. By definition, literature tells a story or conveys meaning through language only; graphic novels tell stories through illustrations and use language only sparingly, in captions and dialogue. Graphic novels are experienced as series of images and not as language, making them more similar to film than to literature.

Text 2

Graphic novels present their stories through both language and images. Without captions and dialogue, readers would be unable to understand what is depicted in the illustrations: the story results from the interaction of text and image. Moreover, Alison Bechdel's *Fun Home* and many other graphic novels feature text that is as beautifully written as the prose found in many standard novels. Therefore, graphic novels qualify as literary texts.

ID 059f7201

15 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the overall argument presented in Text 1?

(A) By asserting that language plays a more important role in graphic novels than the author of Text 1 recognizes

(B) By acknowledging that the author of Text 1 has identified a flaw that is common to all graphic novels

(C) By suggesting that the story lines of certain graphic novels are more difficult to understand than the author of Text 1 claims

(D) By agreeing with the author of Text 1 that most graphic novels aren't as well crafted as most literary works are

Text 1

In a study of the benefits of having free time, Marissa Sharif found that the reported sense of life satisfaction tended to plateau when participants had two hours of free time per day and actually began to fall when they had five hours of free time per day. After further research, Sharif concluded that this dip in life satisfaction mainly occurred when individuals spent all their free time unproductively, such as by watching TV or playing games.

Text 2

Psychologist James Maddux cautions against suggesting an ideal amount of free time. The human desire for both free time and productivity is universal, but Maddux asserts that individuals have unique needs for life satisfaction. Furthermore, he points out that there is no objective definition for what constitutes productivity; reading a book might be considered a productive activity by some, but idleness by others.

ID e1befb41

16 Mark for Review Medium Explanation ›

Based on the texts, how would Maddux (Text 2) most likely respond to the conclusion Sharif (Text 1) reached after her further research?

(A) By acknowledging that free time is more likely to enhance life satisfaction when it is spent productively than when it is spent unproductively

(B) By challenging the reasoning in Text 1, as it has not been proved that productivity commonly contributes to individuals' life satisfaction

(C) By warning against making an overly broad assumption, as there is no clear consensus in distinguishing between productive and unproductive activities

(D) By claiming that the specific activities named in Text 1 are actually examples of productive activities rather than unproductive ones

Text 1

The live music festival business is growing in event size and genre variety. With so many consumer options, organizers are finding ways to cement festival attendance as a special experience worth sharing. This phenomenon is linked to the growing "experiential economy," where many find it gratifying to purchase lived experiences. To ensure a profitable event, venues need to consider the overall consumer experience, not just the band lineup.

Text 2

Music festival appearances are becoming a more important part of musicians' careers. One factor in this shift is the rising use of streaming services that allow access to huge numbers of songs for a monthly fee, subsequently reducing sales of full-length albums. With this shift in consumer behavior, musicians are increasingly dependent on revenue from live performances.

ID 82c05b34

17 Mark for Review Medium Explanation ›

Based on the texts, both authors would most likely agree with which statement?

(A) Consumers are more interested in paying subscription fees to stream music than in attending music festivals in person.

(B) Consumers' growing interest in purchasing experiences is mostly confined to the music industry.

(C) Changing consumer behaviors are leading to changes in music-related businesses.

(D) The rising consumer demand for live music festivals also generates higher demand for music streaming platforms.

Text 1

For decades, bluegrass musicians have debated whether their genre should exclude influences from mainstream genres such as rock. Many insist that bluegrass is defined by its adherence to the folk music of the US South, out of which bluegrass emerged. Such "purists," as they are known, regard the recordings of Bill Monroe, which established the bluegrass sound in the 1940s, as a standard against which the genre should still be measured.

Text 2

Bluegrass isn't simply an extension of folk traditions into the era of recorded music. In reality, Bill Monroe created the bluegrass sound in the 1940s by combining Southern folk music with commercial genres that had arisen only a few decades before, such as jazz and the blues. Since bluegrass has always been a mixed genre, contemporary bluegrass musicians should not be forbidden from incorporating into it influences from rock and other mainstream genres.

ID 9645f55e

18 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely regard the perspective of bluegrass purists, as described in Text 1?

(A) As inconsistent, since bluegrass purists themselves enjoy other musical genres

(B) As unrealistic, since bluegrass purists have no way of enforcing their musical preferences

(C) As shortsighted, because bluegrass could enlarge its audience by including influences from mainstream genres

(D) As illogical, because the purists overlook crucial aspects of how the bluegrass sound first originated.

Text 1

Stage lighting theorist Adolphe Appia was perhaps the first to argue that light must be considered alongside all the various elements of a stage to create a single, unified performance. Researcher Kelly Bremner, however, has noted that Appia lacked technical expertise in the use of light in the theater. As a result of Appia's inexperience, Bremner argues, Appia's theory of light called for lighting practices that weren't possible until after the advent of electricity around 1881.

Text 2

Adolphe Appia was not an amateur in the practice of lighting. Instead, it is precisely his exposure to lighting techniques at the time that contributed to his theory on the importance of light. When working as an apprentice for a lighting specialist in his youth, Appia observed the use of portable lighting devices that could be operated by hand. This experience developed his understanding of what was possible in the coordination of elements on the stage.

ID f1c9d2c1

19 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the claim about Appia's level of technical expertise made by Bremner in Text 1?

(A) Many lighting technicians dismissed Appia's ideas about light on the stage.

(B) Appia likely gained a level of technical expertise during his time as an apprentice.

(C) Theater practitioners who worked with Appia greatly admired his work.

(D) Appia was unfamiliar with the use of music and sound in theater.

Text 1

In 2021, a team led by Amir Siraj hypothesized that the Chicxulub impactor—the object that struck the Yucatán Peninsula sixty-six million years ago, precipitating the mass extinction of the dinosaurs—was likely a member of the class of long-period comets. As evidence, Siraj cited the carbonaceous chondritic composition of samples from the Chicxulub impact crater as well as of samples obtained from long-period comet Wild 2 in 2006.

Text 2

Although long-period comets contain carbonaceous chondrites, asteroids are similarly rich in these materials. Furthermore, some asteroids are rich in iridium, as Natalia Artemieva points out, whereas long-period comets are not. Given the prevalence of iridium at the crater and, more broadly, in geological layers deposited worldwide following the impact, Artemieva argues that an asteroid is a more plausible candidate for the Chicxulub impactor.

ID eae66bf9

20 Mark for Review Medium Explanation ›

Based on the texts, how would Artemieva likely respond to Siraj's hypothesis, as presented in Text 1?

(A) By insisting that it overestimates how representative Wild 2 is of long-period comets as a class

(B) By arguing that it does not account for the amount of iridium found in geological layers dating to the Chicxulub impact

(C) By praising it for connecting the composition of Chicxulub crater samples to the composition of certain asteroids

(D) By concurring that carbonaceous chondrites are prevalent in soil samples from sites distant from the Chicxulub crater

Text 1

One challenge faced by researchers studying global urbanization is that countries may define urban settlements differently. Many countries define urban settlements based on the number of people living in them. However, countries do not all use the same number; for example, Iceland uses a minimum population of 200, while the Netherlands uses 20,000. Other countries use a combination of population and other factors. This variation makes it difficult for researchers to compare aspects of urbanization in different countries.

Text 2

Recently, a group of six international organizations developed global definitions of common types of settlements. The group developed a new measure called the "degree of urbanization." This new measure establishes global criteria used to define three types of settlements (cities, towns, and rural areas) and allows researchers to better understand global urbanization rates.

ID 9a94eb77

21 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the problem presented in Text 1?

(A) By recommending that a specific institution should further investigate the problem

(B) By suggesting that researchers focus on topics besides urbanization

(C) By supplying additional ways in which urbanization research is difficult

(D) By noting that a possible solution to the problem is available

Text 1

French Impressionist artist Edgar Degas insisted that his paintings be kept in their original frames after they were sold. Like many Impressionist painters, Degas used painted frames that stood in contrast to the gold frames frequently seen at the Paris Salon, a prestigious art exhibition that was sponsored by the French government and promoted traditional painting styles. Impressionist painters likely chose these colorful frames to distinguish themselves from what was considered conventional at the time.

Text 2

Impressionist painters often focused on the interplay of color and light in their works. As such, those Impressionists who placed their works in painted frames instead of the more traditional gold ones did so for aesthetic reasons: a frame's color was likely chosen because it would harmonize with the colors or subjects in a painting. Gold, conversely, could distract from the subtleties in a painted scene.

ID c8a2af72

22 Mark for Review Medium Explanation ›

Based on the texts, both authors would most likely agree with which statement?

(A) Gold frames were considered especially desirable by those who purchased works from Impressionist painters.

(B) The colors in an Impressionist painting were often chosen to complement the colors of the frame it would be placed in.

(C) Many Impressionist painters were intentional about the frames they selected for their works.

(D) Degas's preferred framing style was different from that of most Impressionist painters.

Text 1

When companies in the same industry propose merging with one another, they often claim that the merger will benefit consumers by increasing efficiency and therefore lowering prices. Economist Ying Fan investigated this notion in the context of the United States newspaper market. She modeled a hypothetical merger of Minneapolis-area newspapers and found that subscription prices would rise following a merger.

Text 2

Economists Dario Focarelli and Fabio Panetta have argued that research on the effect of mergers on prices has focused excessively on short-term effects, which tend to be adverse for consumers. Using the case of consumer banking in Italy, they show that over the long term (several years, in their study), the efficiency gains realized by merged companies do result in economic benefits for consumers.

ID f0ae0da3

23 Mark for Review Medium Explanation ›

Based on the texts, how would Focarelli and Panetta (Text 2) most likely respond to Fan's findings (Text 1)?

(A) They would recommend that Fan compare the near-term effect of a merger on subscription prices in the Minneapolis area with the effect of a merger in another newspaper market.

(B) They would argue that over the long term the expenses incurred by the merged newspaper company will also increase.

(C) They would encourage Fan to investigate whether the projected effect on subscription prices persists over an extended period.

(D) They would claim that mergers have a different effect on consumer prices in the newspaper industry than in most other industries.

Text 1

Literary scholars have struggled with the vastness of Nigerian writer Wole Soyinka's collective works of drama (spanning over 20 plays in total). It is best, however, to understand Soyinka's body of work as a dramatist chronologically. Soyinka's progression as a playwright can be considered to fall into three periods, with each one representing a particular thematic and stylistic cohesion: the 1960s, the two decades between 1970 and 1990, and lastly, from roughly 1990 onwards.

Text 2

It is tempting to impose a linear sense of order on the expanse of Wole Soyinka's body of work as a dramatist. However, critics who have considered Soyinka's plays to fit neatly into three phases overlook potential commonalities in Soyinka's work that span across these phases. Additionally, this view may discount significant differences in the styles and content of plays written around the same time.

ID 2c50ed1a

24 Mark for Review Medium Explanation ›

Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view the study of Soyinka's works of drama?

(A) While the author of Text 1 believes that thinking about Soyinka's works of theater in phases is useful, the author of Text 2 views such an approach as limiting.

(B) Although the author of Text 1 claims that Soyinka's style as a dramatist has evolved over time, the author of Text 2 argues that Soyinka's style has remained consistent throughout his career.

(C) The author of Text 1 considers Soyinka's plays to showcase his strongest writing, whereas the author of Text 2 believes that Soyinka's poetry is where he is most skilled.

(D) The author of Text 1 argues that Soyinka's early plays were his most politically charged, whereas the author of Text 2 claims that Soyinka's most recent plays are the most politicized.

Text 1

Digital art, the use of digital technology to create or display images, isn't really art at all. It doesn't require as much skill as creating physical art. "Painting" with a tablet and stylus is much easier than using paint and a brush: the technology is doing most of the work.

Text 2

The painting programs used to create digital art involve more than just pressing a few buttons. In addition to knowing the fundamentals of art, digital artists need to be familiar with sophisticated software. Many artists will start by drawing an image on paper before transforming the piece to a digital format, where they can apply a variety of colors and techniques that would otherwise require many different traditional tools.

ID ab56a107

25 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the claims of the author of Text 1?

(A) By arguing that a piece of art created digitally can still be displayed traditionally

(B) By explaining that it's actually much harder to use a tablet and stylus to create art than to use paint and a brush

(C) By insisting that digital art requires artistic abilities and skill even if it employs less traditional tools

(D) By admitting that most digital artists don't think fundamental drawing skills are important

Text 1

A tiny, unusual fossil in a piece of 99-million-year-old amber is of the extinct species *Oculudentavis khaungraae*. The *O. khaungraae* fossil consists of a rounded skull with a thin snout and a large eye socket. Because these features look like they are avian, or related to birds, researchers initially thought that the fossil might be the smallest avian dinosaur ever found.

Text 2

Paleontologists were excited to discover a second small fossil that is similar to the strange *O. khaungraae* fossil but has part of the lower body along with a birdlike skull. Detailed studies of both fossils revealed several traits that are found in lizards but not in dinosaurs or birds. Therefore, paleontologists think the two creatures were probably unusual lizards, even though the skulls looked avian at first.

ID f653b273

26 Mark for Review Medium Explanation ›

Based on the texts, what would the paleontologists in Text 2 most likely say about the researchers' initial thought in Text 1?

(A) It is understandable because the fossil does look like it could be related to birds, even though *O. khaungraae* is probably a lizard.

(B) It is confusing because it isn't clear what caused the researchers to think that *O. khaungraae* might be related to birds.

(C) It is flawed because the researchers mistakenly assumed that *O. khaungraae* must be a lizard.

(D) It is reasonable because the *O. khaungraae* skull is about the same size as the skull of the second fossil but is shaped differently.

Text 1

It seems clear that emotional contagion (the unintentional transfer of an emotional state from one person to another) requires physical interaction and the observation of body language. After all, research shows that talking to someone who is smiling and expressing positive feelings often causes people to respond in a comparably positive way. Similarly, displays of nervous fidgeting have been found to prompt others to begin behaving more nervously, too.

Text 2

In an experiment using a social networking service, Zeyao Yang and Emilio Ferrara found evidence of emotional contagion in text-based online interactions. The researchers discovered that reading social media posts that expressed a positive outlook led people to make more positive posts themselves, while posts with a negative emotional tone led people to make more negative posts.

ID faee8ec7

27 Mark for Review Medium Explanation ›

Based on the texts, what would the researchers in Text 2 most likely say about the claim underlined in Text 1?

(A) It perpetuates a flawed understanding of emotional contagion, because there isn't enough evidence to suggest that smiling is a sign of emotional contagion.

(B) It reflects an incomplete view of emotional contagion, because this phenomenon can occur even without in-person interaction.

(C) It's fairly persuasive, because studies attempting to identify emotional contagion in situations without in-person interaction have thus far yielded unclear results.

(D) It's mostly accurate, because the social networking study confirmed that emotional contagion primarily occurs in response to negative emotions like nervousness.

Text 1

Little is known about how plate tectonics—wherein slabs of Earth's crust move over, under, away from, and against one another—began. Some researchers contend that tectonic movements began around 3 billion years ago, often noting that computer models of Earth's mantle temperature at the time indicate that the mantle would have been sufficiently molten to enable the plates to move.

Text 2

Ultimately, any plausible claim about the inception of tectonic movement must rest on empirical evidence from the geological record. Researcher Wriju Chowdhury and his team analyzed the geochemistry of zircon crystals to gain insight into the chemical composition of the magma from which the crystals formed and, based on the data, compellingly argue that plate tectonics may have been occurring as early as 4.2 billion years ago.

ID c19b2f77

28 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to what "some researchers contend" as described in Text 1?

(A) By suggesting that the temperature of Earth's mantle 3 billion years ago was likely insufficient to allow for the level of tectonic movement predicted by computer models

(B) By distinguishing between computer models of Earth's mantle temperature that reliably predict the onset of plate tectonics and those that do not

(C) By indicating that computer models of Earth's mantle temperature are still being improved such that new models tend to be much more reliable than their predecessors

(D) By asserting that a more definitive form of evidence than the computer models suggests a different timeline for the onset of plate tectonics on Earth

Text 1

In a study of insect behavior, Samadi Galpayage and colleagues presented bumblebees with small wooden balls and observed many of the bees clinging to, rolling, and dragging the objects. The researchers provided no external rewards (such as food) to encourage these interactions. The bees simply appeared to be playing—and for no other reason than because they were having fun.

Text 2

Insects do not have cortexes or other brain areas associated with emotions in humans. Still, Galpayage and her team have shown that bumblebees may engage in play, possibly experiencing some kind of positive emotional state. Other studies have suggested that bees experience negative emotional states (for example, stress), but as Galpayage and her team have acknowledged, emotions in insects, if they do indeed exist, are likely very rudimentary.

ID 22105871

29 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the underlined portion of Text 1?

(A) By objecting that the bees were actually experiencing a negative feeling akin to stress rather than a positive feeling

(B) By arguing that some insects other than bumblebees may be capable of experiencing complex emotional states

(C) By pointing out that even humans sometimes struggle to have fun while engaging in play

(D) By noting that if the bees were truly playing, any positive feelings they may have experienced were probably quite basic

Text 1

The fossil record suggests that mammoths went extinct around 11 thousand years (kyr) ago. In a 2021 study of environmental DNA (eDNA)—genetic material shed into the environment by organisms—in the Arctic, Yucheng Wang and colleagues found mammoth eDNA in sedimentary layers formed millennia later, around 4 kyr ago. To account for this discrepancy, Joshua H. Miller and Carl Simpson proposed that arctic temperatures could preserve a mammoth carcass on the surface, allowing it to leach DNA into the environment, for several thousand years.

Text 2

Wang and colleagues concede that eDNA contains DNA from both living organisms and carcasses, but for DNA to leach from remains over several millennia requires that the remains be perpetually on the surface. Scavengers and weathering in the Arctic, however, are likely to break down surface remains well before a thousand years have passed.

ID de2c2f57

30 Mark for Review Medium Explanation ›

Which choice best describes how Text 1 and Text 2 relate to each other?

(A) Text 1 discusses two approaches to studying mammoth extinction without advocating for either, whereas Text 2 advocates for one approach over the other.

(B) Text 1 presents findings by Wang and colleagues and gives another research team's attempt to explain those findings, whereas Text 2 provides additional detail that calls that explanation into question.

(C) Text 1 describes Wang and colleagues' study and a critique of their methodology, whereas Text 2 offers additional details showing that methodology to be sound.

(D) Text 1 argues that new research has undermined the standard view of when mammoths went extinct, whereas Text 2 suggests a way to reconcile the standard view with that new research.

Text 1

An excavation in Chiquihuite Cave in central Mexico has upended the belief that approximately 13,000 years ago, a group known as the Clovis people were the first human inhabitants of North America. More than 200 crude stone tools were found embedded in a layer of earth that is up to 33,150 years old, revealing that humans occupied the cave thousands of years before the Clovis people reached the continent.

Text 2

The objects uncovered in Chiquihuite Cave are intriguing, but it is premature to characterize them as tools. The stone pieces are so roughly shaped that they may have simply fractured from rocks during natural geological activity in the cave. Moreover, their unearthing has thus far not been accompanied by discoveries of other signs of human activity or even traces of human DNA from surfaces.

ID 8889d6e2

31 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the underlined claim in Text 1?

(A) By suggesting that it draws a plausible connection between two groups of people but will need to be confirmed with further study

(B) By asserting that it rests on an assumption about the stone pieces that is not sufficiently supported by available evidence

(C) By acknowledging that it will most likely be proved correct when the stone pieces undergo more detailed analysis

(D) By pointing out that it fails to account for evidence that the Clovis people were active on the continent as early as is commonly thought

Text 1

A team led by Bernardo Strassburg has found that rewilding farmland (returning the land to its natural state) could help preserve biodiversity and offset carbon emissions. The amount of farmland that would need to be restored, they found, is remarkably low. Rewilding a mere 15% of the world's current farmland would prevent 60% of expected species extinctions and help absorb nearly 299 gigatons of carbon dioxide—a clear win in the fight against the biodiversity and climate crises.

Text 2

While Strassburg's team's findings certainly offer encouraging insight into the potential benefits of rewilding, it's important to consider potential effects on global food supplies. The researchers suggest that to compensate for the loss of food-producing land, remaining farmland would need to produce even more food. Thus, policies focused on rewilding farmland must also address strategies for higher-yield farming.

ID 88bb0f6f

32 Mark for Review Medium Explanation ›

Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view Strassburg's team's study?

(A) The author of Text 2 approaches the study's findings with some caution, whereas the author of Text 1 is optimistic about the reported potential environmental benefits.

(B) The author of Text 2 claims that the percentage of farmland identified by Strassburg's team is too low for rewilding to achieve meaningful results, whereas the author of Text 1 thinks the percentage is sufficient.

(C) The author of Text 2 believes that the results described by Strassburg's team are achievable in the near future, whereas the author of Text 1 argues that they likely aren't.

(D) The author of Text 2 focuses on rewilding's effect on carbon emissions, whereas the author of Text 1 focuses on its effect on biodiversity.

Text 1

In 1954 George Balanchine choreographed a production of *The Nutcracker*, a ballet by Pyotr Ilyich Tchaikovsky. It has since become a tradition for hundreds of dance companies in North America to stage *The Nutcracker* each year. But the show is stuck in the past, with an old-fashioned story and references, so it should no longer be produced. Ballet needs to create new traditions if it wants to stay relevant to contemporary audiences.

Text 2

The Nutcracker is outdated, but it should be kept because it's a holiday favorite and provides substantial income for some dance companies. Although it can be behind the times, there are creative ways to update the show. For example, Debbie Allen successfully modernized the story. Her show *Hot Chocolate Nutcracker* combines ballet, tap, hip-hop, and other styles, and it has been gaining in popularity since it opened in 2009.

ID f878693b

33 Mark for Review Medium Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the underlined claim in Text 1?

(A) By questioning the idea that the story of *The Nutcracker* is stuck in the past and by rejecting the suggestion that contemporary audiences would enjoy an updated version

(B) By agreeing that contemporary audiences have largely stopped going to see performances of *The Nutcracker* because it's so old-fashioned

(C) By pointing out that most dance companies could increase their incomes by offering modernized versions of *The Nutcracker*

(D) By suggesting that dance companies should consider offering revised versions of *The Nutcracker* instead of completely rejecting the show

Text 1

Polar bears sustain themselves primarily by hunting seals on the Arctic sea ice, but rising ocean temperatures are causing the ice to diminish, raising concerns about polar bear population declines as these large predators' seal-hunting habitats continue to shrink. A 2020 study examining polar bear populations across the Arctic concluded that populations affected by sea-ice loss are at great risk of extinction by the end of the twenty-first century.

Text 2

Monitoring carried out by researchers from the Norwegian Polar Institute shows that the polar bear population on the Arctic archipelago of Svalbard remains stable and well nourished despite rapidly declining sea ice in recent years. The researchers attribute this population's resilience in part to a shift in feeding strategies: in addition to hunting seals, the Svalbard polar bears have begun relying on a diet of reindeer meat and birds' eggs.

ID f52cc78c

34 Mark for Review Medium Explanation ›

Based on the texts, how would the researchers in Text 2 most likely respond to the conclusion presented in the underlined portion of Text 1?

(A) By noting that it neglects the possibility of some polar bear populations adapting to changes in their environment

(B) By suggesting that it is likely incorrect about the rates at which warming ocean temperatures have caused sea ice to melt in the Arctic

(C) By asserting that it overlooks polar bear populations that have not yet been affected by loss of seal-hunting habitats

(D) By arguing that it fails to account for polar bears' reliance on a single seal-hunting strategy

HARD 27 questions

Text 1

Many teleost fish species are protogynous, meaning that fertile females can become fertile males. One model holds that protogyny occurs when body size confers a greater reproductive advantage on males than on females. In teleost fish, body size is irrelevant to female reproduction, but among males (which tend to be larger than females), only individuals comparatively large enough to defend territory reproduce. An individual could thus maximize its lifetime reproductive success by staying female when small and becoming male upon reaching a critical size threshold.

Text 2

Investigating protogyny in teleost fish, Alexander Goikoetxea and colleagues placed captured spotty wrasses of typical size distributions into two mixed-sex tanks. During the breeding season, they removed all males from tank 1 but none from tank 2. They observed that sexual change began in 81 percent of females in tank 1 but in no females in tank 2.

ID 1917ba9a

35 Mark for Review Hard Explanation ›

Based on the texts, which choice best explains the difference in the outcomes of the two tanks in Goikoetxea and colleagues' experiment (Text 2) using the model presented in Text 1?

(A) Once the males were removed from tank 1, territories in the tank were undefended and thus even small females could maximize their reproductive success by becoming male and taking over those territories, whereas only the largest females in tank 2 could successfully take over territories due to the ongoing presence of males in the tank.

(B) With no males left in tank 1, females were potentially large enough to defend territory as males and thus could gain an advantage by becoming male at their current size, whereas females in tank 2 may not have been large enough to outcompete the males in the tank and thus would have greater reproductive success by remaining female.

(C) Differences in body size among the females in tank 1 became irrelevant to reproductive success once the males were removed, thereby eliminating any advantage to becoming male, whereas the ongoing presence of males in tank 2 made differences in body size among the females in that tank relevant to their reproductive success.

(D) Since all males were removed from tank 1, the females in the tank could not reproduce regardless of their size and thus some became male, whereas the presence of males in tank 2 meant that females in that tank could reproduce without first becoming male and thus they remained female.

Text 1

Growth in the use of novel nanohybrids—materials created from the conjugation of multiple distinct nanomaterials, such as iron oxide and gold nanomaterials conjugated for use in magnetic imaging—has outpaced studies of nanohybrids' environmental risks. Unfortunately, risk evaluations based on nanohybrids' constituents are not reliable: conjugation may alter constituents' physiochemical properties such that innocuous nanomaterials form a nanohybrid that is anything but.

Text 2

The potential for enhanced toxicity of nanohybrids relative to the toxicity of constituent nanomaterials has drawn deserved attention, but the effects of nanomaterial conjugation vary by case. For instance, it was recently shown that a nanohybrid of silicon dioxide and zinc oxide preserved the desired optical transparency of zinc oxide nanoparticles while mitigating the nanoparticles' potential to damage DNA.

ID 105ea6de

36 Mark for Review — Hard — Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the assertion in the underlined portion of Text 1?

(A) By concurring that the risk described in Text 1 should be evaluated but emphasizing that the risk is more than offset by the potential benefits of nanomaterial conjugation

(B) By arguing that the situation described in Text 1 may not be representative but conceding that the effects of nanomaterial conjugation are harder to predict than researchers had expected

(C) By denying that the circumstance described in Text 1 is likely to occur but acknowledging that many aspects of nanomaterial conjugation are still poorly understood

(D) By agreeing that the possibility described in Text 1 is a cause for concern but pointing out that nanomaterial conjugation does not inevitably produce that result

Text 1

Soy sauce, made from fermented soybeans, is noted for its umami flavor. Umami—one of the five basic tastes along with sweet, bitter, salty, and sour—was formally classified when its taste receptors were discovered in the 2000s. In 2007, to define the pure umami flavor scientists Rie Ishii and Michael O'Mahony used broths made from shiitake mushrooms and kombu seaweed, and two panels of Japanese and US judges closely agreed on a description of the taste.

Text 2

A 2022 experiment by Manon Jünger et al. led to a greater understanding of soy sauce's flavor profile. The team initially presented a mixture of compounds with low molecular weights to taste testers who found it was not as salty or bitter as real soy sauce. Further analysis of soy sauce identified proteins, including dipeptides, that enhanced umami flavor and also contributed to saltiness. The team then made a mix of 50 chemical compounds that re-created soy sauce's flavor.

ID a87c3925

37 Mark for Review — Hard — Explanation ›

Based on the texts, if Ishii and O'Mahony (Text 1) and Jünger et al. (Text 2) were aware of the findings of both experiments, they would most likely agree with which statement?

(A) On average, the diets of people in the United States tend to have fewer foods that contain certain dipeptides than the diets of people in Japan have.

(B) Chemical compounds that activate both the umami and salty taste receptors tend to have a higher molecular weight than those that only activate umami taste receptors.

(C) Fermentation introduces proteins responsible for the increase of umami flavor in soy sauce, and those proteins also increase the perception of saltiness.

(D) The broths in the 2007 experiment most likely did not have a substantial amount of the dipeptides that played a key part in the 2022 experiment.

Text 1

Astronomer Mark Holland and colleagues examined four white dwarfs—small, dense remnants of past stars—in order to determine the composition of exoplanets that used to orbit those stars. Studying wavelengths of light in the white dwarf atmospheres, the team reported that traces of elements such as lithium and sodium support the presence of exoplanets with continental crusts similar to Earth's.

Text 2

Past studies of white dwarf atmospheres have concluded that certain exoplanets had continental crusts. Geologist Keith Putirka and astronomer Siyi Xu argue that those studies unduly emphasize atmospheric traces of lithium and other individual elements as signifiers of the types of rock found on Earth. The studies don't adequately account for different minerals made up of various ratios of those elements, and the possibility of rock types not found on Earth that contain those minerals.

ID d6c77ae5

38 Mark for Review Hard Explanation ›

Based on the texts, how would Putirka and Xu (Text 2) most likely characterize the conclusion presented in Text 1?

(A) As unexpected, because it was widely believed at the time that white dwarf exoplanets lack continental crusts

(B) As premature, because researchers have only just begun trying to determine what kinds of crusts white dwarf exoplanets had

(C) As questionable, because it rests on an incomplete consideration of potential sources of the elements detected in white dwarf atmospheres

(D) As puzzling, because it's unusual to successfully detect lithium and sodium when analyzing wavelengths of light in white dwarf atmospheres

Text 1

The idea that time moves in only one direction is instinctively understood, yet it puzzles physicists. According to the second law of thermodynamics, at a macroscopic level some processes of heat transfer are irreversible due to the production of entropy—after a transfer we cannot rewind time and place molecules back exactly where they were before, just as we cannot unbreak dropped eggs. But laws of physics at a microscopic or quantum level hold that those processes *should* be reversible.

Text 2

In 2015, physicists Tiago Batalhão et al. performed an experiment in which they confirmed the irreversibility of thermodynamic processes at a quantum level, producing entropy by applying a rapidly oscillating magnetic field to a system of carbon-13 atoms in liquid chloroform. But the experiment "does not pinpoint ... what causes [irreversibility] at the microscopic level," coauthor Mauro Paternostro said.

ID 8de51658

39 Mark for Review Hard Explanation ›

Based on the texts, what would the author of Text 1 most likely say about the experiment described in Text 2?

(A) It would suggest an interesting direction for future research were it not the case that two of the physicists who conducted the experiment disagree on the significance of its findings.

(B) It provides empirical evidence that the current understanding of an aspect of physics at a microscopic level must be incomplete.

(C) It is consistent with the current understanding of physics at a microscopic level but not at a macroscopic level.

(D) It supports a claim about an isolated system of atoms in a laboratory, but that claim should not be extrapolated to a general claim about the universe.

Text 1

What factors influence the abundance of species in a given ecological community? Some theorists have argued that historical diversity is a major driver of how diverse an ecological community eventually becomes: differences in community diversity across otherwise similar habitats, in this view, are strongly affected by the number of species living in those habitats at earlier times.

Text 2

In 2010, a group of researchers including biologist Carla Cáceres created artificial pools in a New York forest. They stocked some pools with a diverse mix of zooplankton species and others with a single zooplankton species and allowed the pool communities to develop naturally thereafter. Over the course of four years, Cáceres and colleagues periodically measured the species diversity of the pools, finding—contrary to their expectations—that by the end of the study there was little to no difference in the pools' species diversity.

ID d72b325e

40 Mark for Review Hard Explanation ›

Based on the texts, how would Cáceres and colleagues (Text 2) most likely describe the view of the theorists presented in Text 1?

(A) It is largely correct, but it requires a minor refinement in light of the research team's results.

(B) It is not compelling as a theory regardless of any experimental data collected by the research team.

(C) It may seem plausible, but it is not supported by the research team's findings.

(D) It probably holds true only in conditions like those in the research team's study.

Text 1

Mycoprotein is a fungal biomass that can be eaten as an alternative to meat. Studies of the environmental impact of its manufacture generally agree it is lower than that of beef and closer to that of chicken or pork. But the expense of producing mycoprotein restricts its availability to a few countries with postindustrial economies. Knowing that cost reductions would expand access to mycoprotein, biochemists are exploring solutions, such as a cheaper substrate to feed the mycoprotein as it grows.

Text 2

Cattle farming is a principal cause of global deforestation, and a study by Florian Humpenöder and his colleagues found that replacing 20% of beef consumption worldwide with consumption of mycoprotein would cut deforestation by half if accomplished over the next thirty years. However, this would likely involve only a small change in agricultural water consumption, since water once dedicated to raising cattle would be diverted to raising crops instead.

ID 4b4ab04e

41 Mark for Review Hard Explanation ›

Based on the texts, how would the author of Text 1 most likely respond to the study findings mentioned in Text 2?

(A) By emphasizing that since agricultural water consumption would remain static in the event of replacing beef consumption with mycoprotein consumption, an effort must be made to substitute mycoprotein for chicken and pork in diets as well

(B) By asserting that the development of a more inexpensive substrate for mycoprotein production would contribute to the goal of decreasing worldwide deforestation over time

(C) By noting that most people would be more likely to use mycoprotein as a substitute for chicken or pork in their diets than as a substitute for beef

(D) By pointing out that some countries are responsible for greater deforestation than others and thus, to have any significant effect on the environment, will have to replace more than 20% of their beef consumption with mycoprotein

Text 1

Fossils of the hominin *Australopithecus africanus* have been found in the Sterkfontein Caves of South Africa, but assigning an age to the fossils is challenging because of the unreliability of dating methods in this context. The geology of Sterkfontein has caused soil layers from different periods to mix, impeding stratigraphic dating, and dates cannot be reliably imputed from those of nearby animal bones since the bones may have been relocated by flooding.

Text 2

Archaeologists used new cosmogenic nuclide dating techniques to reevaluate the ages of *A. africanus* fossils found in the Sterkfontein Caves. This technique involves analyzing the cosmogenic nucleotides in the breccia—the matrix of rock fragments immediately surrounding the fossils. The researchers assert that this approach avoids the potential for misdating associated with assigning ages based on Sterkfontein's soil layers or animal bones.

ID f3c45b4f

42 Mark for Review — Hard — Explanation ›

Based on the texts, how would the researchers in Text 2 most likely respond to the underlined portion in Text 1?

(A) They would emphasize the fact that the *A. africanus* fossils found in the Sterkfontein Caves may have been corrupted in some way over the years.

(B) They would contend that if analyses of surrounding layers and bones in the Sterkfontein Caves were combined, then the dating of the fossils there would be more accurate.

(C) They would argue that their techniques are better suited than other methods to the unique challenges posed by the Sterkfontein Caves.

(D) They would claim that cosmogenic nuclide dating is reliable in the context of the Sterkfontein Caves because it is applied to the fossils directly.

Text 1

Films and television shows commonly include a long list of credits naming the people involved in a production. Credit sequences may not be exciting, but they generally ensure that everyone's contributions are duly acknowledged. Because they are highly standardized, film and television credits are also valuable to anyone researching the careers of pioneering cast and crew members who have worked in the mediums.

Text 2

Video game scholars face a major challenge in the industry's failure to consistently credit the artists, designers, and other contributors involved in making video games. Without a reliable record of which people worked on which games, questions about the medium's development can be difficult to answer, and the accomplishments of all but its best-known innovators can be difficult to trace.

ID f7c02e89

43 Mark for Review — Hard — Explanation ›

Based on the texts, how would the author of Text 1 most likely respond to the discussion in Text 2?

(A) By recommending that the scholars mentioned in Text 2 consider employing the methods regularly used by film and television researchers

(B) By pointing out that credits have a different intended purpose in film and television than in the medium addressed by the scholars mentioned in Text 2

(C) By suggesting that the scholars mentioned in Text 2 rely more heavily on credits as a source of information than film and television researchers do

(D) By observing that a widespread practice in film and television largely prevents the kind of problem faced by the scholars mentioned in Text 2

Text 1

Good art often challenges and disrupts social and aesthetic norms, but the creation of public art—paintings, sculptures, and performance pieces displayed in nonmuseum or nontheatrical public settings—typically requires broad agreement among artists, civic officials, and community members about the works' message and artistic goals. Public art that fails to appease everyone by being sufficiently aesthetically and conceptually bland almost inevitably provokes backlash.

Text 2

Public art is commonly displayed in spaces intended for purposes other than meaningful aesthetic engagement. Some critics of public art therefore note that norm-defying pieces that aren't effectively integrated within their surroundings in a manner that primes passersby to appreciate the pieces' merits (as is often the case) tend to be regarded more unfavorably than similarly provocative art encountered in museums is.

ID 592f94c2

44 Mark for Review Hard Explanation ›

Based on the texts, how would the critics mentioned in Text 2 most likely respond to the underlined claim in Text 1?

(A) By arguing that the reason members of the general public might disagree about a public artwork's merits is unrelated to the unconventionality of its appearance and ideas

(B) By agreeing with the idea that only works of art that are universally appealing are suitable for displaying in public spaces

(C) By disputing the notion that civic leaders and community members are easily placated by art that is intended mainly to reinforce social norms

(D) By contending that the kinds of reactions controversial public artworks often receive aren't exclusively the result of attributes inherent in the works themselves

Text 1

The Cretaceous-Paleogene (K-Pg) mass extinction event is usually attributed solely to an asteroid impact near Chicxulub, Mexico. Some scientists argue that volcanic activity was the true cause, as the K-Pg event occurred relatively early in a long period of eruption of the Deccan Traps range that initially produced huge amounts of climate-altering gases. These dissenters note that other mass extinctions have coincided with large volcanic eruptions, while only the K-Pg event lines up with an asteroid strike.

Text 2

In a 2020 study, Pincelli Hull and her colleagues analyzed ocean core samples and modeled climate changes around the K-Pg event. The team concluded that Deccan Traps gases did affect global conditions prior to the event, but that the climate returned to normal well before the extinctions began—extinctions that instead closely align with the Chicxulub impact.

ID 84dbd633

45 Mark for Review Hard Explanation ›

Based on the texts, how would Hull's team (Text 2) most likely respond to the argument in the underlined portion of Text 1?

(A) By agreeing that the Chicxulub impact changed the climate and that the Deccan Traps eruption caused the K-Pg event

(B) By declaring that the changes in climate caused by the Deccan Traps eruption weren't the main cause of the K-Pg event

(C) By questioning why those scientists assume that the Chicxulub impact caused the Deccan Traps eruption

(D) By asserting that the Deccan Traps eruption had a more significant effect on global conditions than those scientists claim

Text 1

When the 50-second-long film *Arrival of the Train*—which depicts what its title says, a train pulling into a station—was first shown publicly in 1896, spectators, naïve to the new medium of film and seeing a train appearing to come directly at them, leaped from their seats and fled the room. This moment marks a major cultural shift: a new way of representing and seeing the world had arrived with that train, and nothing would ever be the same.

Text 2

The fact that there is no contemporary evidence that the first audience of *Arrival of the Train* was alarmed has not stopped the story from becoming canonical, even among film historians. But that phenomenon itself is highly revealing. Our belief that the coming of film was transformative is so strong that we invented and keep retelling a founding myth that divides cultural history into a (naïve) "before" and (sophisticated) "after."

ID 96f3accc

46 Mark for Review Hard Explanation ›

Based on the texts, the author of Text 2 would most likely agree with which statement about the description of the first showing of *Arrival of the Train* in Text 1?

(A) It is more motivated by a perception of the significance of the invention of film than by facts.

(B) It expresses a view about the transformative nature of film that film historians tend to regard as naïve.

(C) It is not based on evidence and reflects film historians' belief that they are more sophisticated than today's audiences.

(D) It reflects a misconception that is widely believed because it captures early film audiences' sense that the new medium was alarming.

Text 1

Chemically analyzing bulk rock-core samples from Australia's Mount McRae Shale, Ariel Anbar et al. found a transient but significant increase in molybdenum (Mo) at a point corresponding to roughly 2.5 billion years ago (Ga). On Earth, Mo is released mainly through oxidative weathering of minerals; Anbar et al. therefore concluded that atmospheric oxygen briefly increased 2.5 Ga, then returned to its earlier negligible level.

Text 2

Sarah Slotznick et al. reexamined the Mount McRae Shale core. Since chemically analyzing bulk samples can occlude contextual details, Slotznick et al. also employed high-resolution microscopy, which revealed volcanic debris—a known Mo host—around 2.5 Ga and microfractures in the surrounding matrix. The researchers assert that fluid could have reached the debris through the microfractures and initiated oxidative weathering long after debris deposition.

ID 5e4e082c

47 Mark for Review Hard Explanation ›

Based on the texts, Anbar et al. (Text 1) and Slotznick et al. (Text 2) would most likely disagree about the answer to which question about the portion of the Mount McRae Shale rock-core corresponding to 2.5 Ga?

(A) Does the increase in Mo in that portion suggest that atmospheric oxygen levels were not negligible before 2.5 Ga?

(B) Is the increase in Mo in that portion indicative of an increase in atmospheric oxygen dating to the same time?

(C) Is the increase in Mo in that portion attributable to oxidative weathering of the material found in that portion?

(D) Did chemically analyzing bulk samples lead to a false impression that there is an increase in Mo in that portion?

Text 1

Philosopher G.E. Moore's most influential work entails the concept of common sense. He asserts that there are certain beliefs that all people, including philosophers, know instinctively to be true, whether or not they profess otherwise: among them, that they have bodies, or that they exist in a world with other objects that have three dimensions. Moore's careful work on common sense may seem obvious but was in fact groundbreaking.

Text 2

External world skepticism is a philosophical stance supposing that we cannot be sure of the existence of anything outside our own minds. During a lecture, G.E. Moore once offered a proof refuting this stance by holding out his hands and saying, "Here is one hand, and here is another." Many philosophers reflexively reject this proof (Annalisa Coliva called it "an obviously annoying failure") but have found it a challenge to articulate exactly why the proof fails.

ID 03080769

48 Mark for Review Hard Explanation ›

Based on the texts, how would the author of Text 1 most likely respond to proponents of the philosophical stance outlined in Text 2?

(A) By agreeing with those proponents that Moore's treatment of positions that contradict his own is fundamentally unserious

(B) By suggesting that an instinctive distaste for Moore's position is preventing external world skeptics from constructing a sufficiently rigorous refutation of Moore

(C) By arguing that if it is valid to assert that some facts are true based on instinct, it is also valid to assert that some proofs are inadequate based on instinct

(D) By pointing out that Moore would assert that external world skepticism is at odds with other beliefs those proponents must unavoidably hold

Text 1

Like the work of Ralph Ellison before her, Toni Morrison's novels feature scenes in which characters deliver sermons of such length and verbal dexterity that for a time, the text exchanges the formal parameters of fiction for those of oral literature. Given the many other echoes of Ellison in Morrison's novels, both in structure and prose style, <u>these scenes suggest Ellison's direct influence on Morrison.</u>

Text 2

In their destabilizing effect on literary form, the sermons in Morrison's works recall those in Ellison's. Yet literature by Black Americans abounds in moments where interpolated speech erodes the division between oral and written forms that literature in English has traditionally observed. Morrison's use of the sermon is attributable not only to the influence of Ellison but also to a community-wide strategy of resistance to externally imposed literary conventions.

ID e4e2aeb3

49 Mark for Review Hard Explanation ›

Based on the texts, how would the author of Text 2 most likely characterize the underlined claim in Text 1?

(A) As failing to consider Ellison's and Morrison's equivalent uses of the sermon within the wider cultural context in which they wrote

(B) As misunderstanding the function of sermons in novels by Black American writers other than Ellison and Morrison

(C) As disregarding points of structural and stylistic divergence between the works of Ellison and those of Morrison

(D) As being indebted to the tradition of resisting literary conventions that privilege written forms, such as novels, over sermons and other oral forms

Text 1

Virginia Woolf's 1928 novel *Orlando* is an oddity within her body of work. Her other major novels consist mainly of scenes of everyday life and describe their characters' interior states in great detail, whereas *Orlando* propels itself through a series of fantastical events and considers its characters' psychology more superficially. Woolf herself sometimes regarded the novel as a minor work, even admitting once that she "began it as a joke."

Text 2

Like Woolf's other great novels, *Orlando* portrays how people's memories inform their experience of the present. Like those works, it examines how people navigate social interactions shaped by gender and social class. Though it is lighter in tone—more entertaining, even—this literary "joke" nonetheless engages seriously with the themes that motivated the four or five other novels by Woolf that have achieved the status of literary classics.

ID 6a1dc7c5

50 Mark for Review — Hard — Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the assessment of *Orlando* presented in Text 1?

(A) By conceding that Woolf's talents were best suited to serious novels but asserting that the humor in *Orlando* is often effective

(B) By agreeing that *Orlando* is less impressive than certain other novels by Woolf but arguing that it should still be regarded as a classic

(C) By acknowledging that *Orlando* clearly differs from Woolf's other major novels but insisting on its centrality to her body of work nonetheless

(D) By concurring that the reputation of *Orlando* as a minor work has led readers to overlook this novel but maintaining that the reputation is unearned

Text 1

Most animals can regenerate some parts of their bodies, such as skin. But when a three-banded panther worm is cut into three pieces, each piece grows into a new worm. Researchers are investigating this feat partly to learn more about humans' comparatively limited abilities to regenerate, and they're making exciting progress. An especially promising discovery is that both humans and panther worms have a gene for early growth response (EGR) linked to regeneration.

Text 2

When Mansi Srivastava and her team reported that panther worms, like humans, possess a gene for EGR, it caused excitement. However, as the team pointed out, the gene likely functions very differently in humans than it does in panther worms. Srivastava has likened EGR to a switch that activates other genes involved in regeneration in panther worms, but how this switch operates in humans remains unclear.

ID 5e101c70

51 Mark for Review — Hard — Explanation ›

Based on the texts, what would the author of Text 2 most likely say about Text 1's characterization of the discovery involving EGR?

(A) It is reasonable given that Srivastava and her team have identified how EGR functions in both humans and panther worms.

(B) It is overly optimistic given additional observations from Srivastava and her team.

(C) It is unexpected given that Srivastava and her team's findings were generally met with enthusiasm.

(D) It is unfairly dismissive given the progress that Srivastava and her team have reported.

Text 1

Because literacy in Nahuatl script, the writing system of the Aztec Empire, was lost after Spain invaded central Mexico in the 1500s, it is unclear exactly how meaning was encoded in the script's symbols. Although many scholars had assumed that the symbols signified entire words, linguist Alfonso Lacadena theorized in 2008 that they signified units of language smaller than words: individual syllables.

Text 2

The growing consensus among scholars of Nahuatl script is that many of its symbols could signify either words or syllables, depending on syntax and content at any given site within a text. For example, the symbol signifying the word *huipil* (blouse) in some contexts could signify the syllable "pil" in others, as in the place name "Chipiltepec." Thus, for the Aztecs, reading required a determination of how such symbols functioned each time they appeared in a text.

ID 12d81fc1

52 Mark for Review Hard Explanation ›

Based on the texts, how would the author of Text 2 most likely characterize Lacadena's theory, as described in Text 1?

(A) By praising the theory for recognizing that the script's symbols could represent entire words

(B) By arguing that the theory is overly influenced by the work of earlier scholars

(C) By approving of the theory's emphasis on how the script changed over time

(D) By cautioning that the theory overlooks certain important aspects of how the script functioned

Text 1

Despite its beautiful prose, *The Guns of August*, Barbara Tuchman's 1962 analysis of the start of World War I, has certain weaknesses as a work of history. It fails to address events in Eastern Europe just before the outbreak of hostilities, thereby giving the impression that Germany was the war's principal instigator. Had Tuchman consulted secondary works available to her by scholars such as Luigi Albertini, she would not have neglected the influence of events in Eastern Europe on Germany's actions.

Text 2

Barbara Tuchman's *The Guns of August* is an engrossing if dated introduction to World War I. Tuchman's analysis of primary documents is laudable, but her main thesis that European powers committed themselves to a catastrophic outcome by refusing to deviate from military plans developed prior to the conflict is implausibly reductive.

ID 17bf10de

53 Mark for Review Hard Explanation ›

Which choice best describes a difference in how the authors of Text 1 and Text 2 view Barbara Tuchman's *The Guns of August*?

(A) The author of Text 1 argues that Tuchman should have relied more on the work of other historians, while the author of Text 2 implies that Tuchman's most interesting claims result from her original research.

(B) The author of Text 1 believes that the scope of Tuchman's research led her to an incorrect interpretation, while the author of Text 2 believes that Tuchman's central argument is overly simplistic.

(C) The author of Text 1 asserts that the writing style of *The Guns of August* makes it worthwhile to read despite any perceived deficiency in Tuchman's research, while the author of Text 2 focuses exclusively on the weakness of Tuchman's interpretation of events.

(D) The author of Text 1 claims that Tuchman would agree that World War I was largely due to events in Eastern Europe, while the author of Text 2 maintains that Tuchman would say that Eastern European leaders were not committed to military plans in the same way that other leaders were.

Text 1

In 2007, a team led by Alice Storey analyzed a chicken bone found in El Arenal, Chile, dating it to 1321–1407 CE—over a century before Europeans invaded the region, bringing their own chickens. Storey also found that the El Arenal chicken shared a unique genetic mutation with the ancient chicken breeds of the Polynesian Islands in the Pacific. Thus, Polynesian peoples, not later Europeans, probably first introduced chickens to South America.

Text 2

An Australian research team weakened the case for a Polynesian origin for the El Arenal chicken by confirming that the mutation identified by Storey has occurred in breeds from around the world. More recently, though, a team led by Agusto Luzuriaga-Neira found that South American chicken breeds and Polynesian breeds share other genetic markers that European breeds lack. Thus, the preponderance of evidence now favors a Polynesian origin.

ID d0198544

54 Mark for Review — Hard — Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the underlined claim in Text 1?

(A) By broadly agreeing with the claim but objecting that the timeline it presupposes conflicts with the findings of the genetic analysis conducted by Storey's team

(B) By faulting the claim for implying that domestic animals couldn't have been transferred from South America to the Polynesian Islands as well

(C) By critiquing the claim for being based on an assumption that before the European invasion of South America, the chickens of Europe were genetically uniform

(D) By noting that while the claim is persuasive, the findings of Luzuriaga-Neira's team provide stronger evidence for it than the findings of the genetic analysis conducted by Storey do

Text 1

Many studies in psychology have shown that people seek out information even when they know in advance that they have no immediate use for it and that they won't directly benefit from it. Such findings support the consensus view among researchers of curiosity: namely, that curiosity is not instrumental but instead represents a drive to acquire information for its own sake.

Text 2

While acknowledging that acquiring information is a powerful motivator, Rachit Dubey and colleagues ran an experiment to test whether emphasizing the usefulness of scientific information could increase curiosity about it. They found that when research involving rats and fruit flies was presented as having medical applications for humans, participants expressed greater interest in learning about it than when the research was not presented as useful.

ID 27d9bb69

55 Mark for Review — Hard — Explanation ›

Based on the texts, how would Dubey and colleagues (Text 2) most likely respond to the consensus view discussed in Text 1?

(A) By suggesting that curiosity may not be exclusively motivated by the desire to merely acquire information

(B) By conceding that people may seek out information that serves no immediate purpose only because they think they can use it later

(C) By pointing out that it is challenging to determine when information-seeking serves no goal beyond acquiring information

(D) By disputing the idea that curiosity can help explain apparently purposeless information-seeking behaviors

Text 1

Conventional wisdom long held that human social systems evolved in stages, beginning with hunter-gatherers forming small bands of members with roughly equal status. The shift to agriculture about 12,000 years ago sparked population growth that led to the emergence of groups with hierarchical structures: associations of clans first, then chiefdoms, and finally, bureaucratic states.

Text 2

In a 2021 book, anthropologist David Graeber and archaeologist David Wengrow maintain that humans have always been socially flexible, alternately forming systems based on hierarchy and collective ones with decentralized leadership. The authors point to evidence that as far back as 50,000 years ago some hunter-gatherers adjusted their social structures seasonally, at times dispersing in small groups but also assembling into communities that included esteemed individuals.

ID c885c38b

56 Mark for Review — Hard — Explanation ›

Based on the texts, how would Graeber and Wengrow (Text 2) most likely respond to the "conventional wisdom" presented in Text 1?

(A) By conceding the importance of hierarchical systems but asserting the greater significance of decentralized collective societies

(B) By disputing the idea that developments in social structures have followed a linear progression through distinct stages

(C) By acknowledging that hierarchical roles likely weren't a part of social systems before the rise of agriculture

(D) By challenging the assumption that groupings of hunter-gatherers were among the earliest forms of social structure

Text 1

Hycean planets are a class of exoplanets (planets outside our solar system) with oceans of liquid water—critical to supporting life—and atmospheres rich in hydrogen. Computer models have determined that for potential hycean planets, the range of the habitable zone (HZ), the distance from a star that allows a planet to retain liquid water on its surface, begins at about 1 astronomical unit (AU). In 2021, Nikku Madhusudhan et al. identified K2-18 b as a hycean candidate, noting that the planet is located right on the inner edge of the HZ.

Text 2

In a 2023 paper, Shang-Min Tsai et al. claimed that the hydrogen-rich atmospheres of K2-18 b and other hycean candidates admit wavelengths of light that cause elevated surface temperatures and increased water evaporation. Unlike earlier assessments, Tsai et al.'s calculations therefore placed the inner edge for these planets' HZ as far out as 3.85 AU.

ID 3cfbf077

57 Mark for Review — Hard — Explanation ›

Based on the texts, how would Tsai et al. (Text 2) most likely respond to Madhusudhan et al.'s research, as presented in Text 1?

(A) By stating that the chemical composition of the atmosphere of the hycean candidate Madhusudhan et al. identified suggests that this planet's surface is unlikely to harbor liquid water

(B) By maintaining that Madhusudhan et al. relied on a model whose estimates of surface temperatures on hycean candidates are likely too high

(C) By observing that unlike the hycean candidate Madhusudhan et al. discovered, most other types of planets with hydrogen-rich atmospheres are likely located within the HZ

(D) By arguing that K2-18 b and other hycean candidates are unlikely to support life because these planets are located too far from the stars they orbit

Text 1

American sculptor Edmonia Lewis is best known for her sculptures that represent figures from history and mythology, such as *The Death of Cleopatra* and *Hagar*. Although Lewis sculpted other subjects, her career as a sculptor is best represented by the works in which she depicted these historical and mythical themes.

Text 2

Art historians have typically ignored the many portrait busts Edmonia Lewis created. Lewis likely carved these busts (sculptures of a person's head) frequently throughout her long career. She is known for her sculptures that represent historical figures, but Lewis likely supported herself financially by carving portrait busts for acquaintances who paid her to represent their features. Thus, Lewis's portrait busts are a central aspect of her career as a sculptor.

ID c106b9f7

58 Mark for Review Hard Explanation ›

Based on the texts, both authors would most likely agree with which statement?

(A) Lewis's portrait busts have overshadowed her other work.

(B) *The Death of Cleopatra* is Lewis's most famous piece.

(C) Sculpting representations of historical figures was a short-lived trend.

(D) Lewis's works are varied in the subjects they depict.

Text 1

Ecologists have long wondered how thousands of microscopic phytoplankton species can live together near ocean surfaces competing for the same resources. According to conventional wisdom, one species should emerge after outcompeting the rest. So why do so many species remain? Ecologists' many efforts to explain this phenomenon still haven't uncovered a satisfactory explanation.

Text 2

Ecologist Michael Behrenfeld and colleagues have connected phytoplankton's diversity to their microscopic size. Because these organisms are so tiny, they are spaced relatively far apart from each other in ocean water and, moreover, experience that water as a relatively dense substance. This in turn makes it hard for them to move around and interact with one another. Therefore, says Behrenfeld's team, direct competition among phytoplankton probably happens much less than previously thought.

ID 6977d22b

59 Mark for Review Hard Explanation ›

Based on the texts, how would Behrenfeld and colleagues (Text 2) most likely respond to the "conventional wisdom" discussed in Text 1?

(A) By arguing that it is based on a misconception about phytoplankton species competing with one another

(B) By asserting that it fails to recognize that routine replenishment of ocean nutrients prevents competition between phytoplankton species

(C) By suggesting that their own findings help clarify how phytoplankton species are able to compete with larger organisms

(D) By recommending that more ecologists focus their research on how competition among phytoplankton species is increased with water density

Text 1

Dominique Potvin and colleagues captured five Australian magpies (*Gymnorhina tibicen*) to test a new design for attaching tracking devices to birds. As the researchers fitted each magpie with a tracker attached by a small harness, they noticed some magpies without trackers pecking at another magpie's tracker until it broke off. The researchers suggest that this behavior could be evidence of magpies attempting to help another magpie without benefiting themselves.

Text 2

It can be tempting to think that animals are deliberately providing help when we see them removing trackers and other equipment from one another, especially when a species is known to exhibit other cooperative behaviors. At the same time, it can be difficult to exclude the possibility that individuals are simply interested in the equipment because of its novelty, curiously pawing or pecking at it until it detaches.

ID 35e21b06

60 Mark for Review Hard Explanation ›

Based on the texts, how would the author of Text 2 most likely respond to the researchers' perspective in Text 1 on the behavior of the magpies without trackers?

(A) That behavior might have been due to the novelty of the magpies' captive setting rather than to the novelty of the tracker.

(B) That behavior likely indicates that the magpies were deliberately attempting to benefit themselves by obtaining the tracker.

(C) That behavior may not be evidence of selflessness in *Gymnorhina tibicen* because not all the captured magpies demonstrated it.

(D) That behavior might be adequately explained without suggesting that the magpies were attempting to assist the other magpie.

Text 1 is adapted from E.M. Forster's 1910 novel *Howards End*. Text 2 discusses *Howards End*. King's Cross and St. Pancras are adjacent railway terminals in London from which trains travel to the countryside.

Text 1

To Margaret the station of King's Cross had always suggested Infinity. Its very situation—withdrawn a little behind the facile splendours of St. Pancras—implied a comment on the materialism of life. Those two great arches, colourless, indifferent, shouldering between them an unlovely clock, were fit portals for some eternal adventure, whose issue might be prosperous, but would certainly not be expressed in the ordinary language of prosperity.

Text 2

The interplay between opposing ideological positions in *Howards End* is broadly articulated in the novel's organization of geographic space. On the one hand, the modern metropolis of London represents capitalism's emphasis on pragmatism and the accumulation of material wealth; on the other, the English countryside, accessible via King's Cross, fosters an idealism that values tradition, authentic personal connection, and the aesthetic—what the novel calls "the infinite."

ID 9828ab3d

61 Mark for Review Hard Explanation ›

Based on the texts, the author of Text 2 would most likely agree with which statement about King's Cross, as it is depicted in Text 1?

(A) King's Cross has a relatively unassuming appearance whose sharp contrast with the more aesthetically pleasing appearance of St. Pancras suggests to Margaret the ascendancy of the pragmatic capitalistic outlook among London's inhabitants.

(B) Because it is situated at the beginning of Margaret's journey from the city to the country, King's Cross emblematizes the intrusion of the forces of materialism and modernity into the rural spaces that the novel associates with idealism and tradition.

(C) The austerity conveyed by King's Cross's appearance mirrors Margaret's disillusionment with the prospect of having authentic connections with other people in a world that chiefly values more conventional forms of prosperity.

(D) As a point of connection between London and the countryside, King's Cross suggests to Margaret the possibility of experiencing the intangible abundance promised by the kinds of authentic engagements that the novel's rural spaces seem to offer.

Explanations

1 Correct answer **C** — Easy — ‹ Back to question

C State a preference about where to eat.

Choice C is the best answer because it directly applies the research findings described in Text 2 to the situation underlined in Text 1. The underlined sentence in Text 1 describes a common scenario in which two friends are deciding on a lunch location. Text 1 goes on to explain that people often don't reveal their true preferences in such situations, instead claiming they're fine with any option so that they can appear more easygoing and likable. Text 2 presents research that advises against this approach, stating that people who don't express their preferences aren't viewed as more likable and that this behavior actually makes decisions more difficult for others. Since Text 2 specifically argues against the strategy of concealing preferences and indicates negative outcomes from doing so, the author of Text 2 would most likely recommend stating a preference about where to eat.

Choice A is incorrect because nothing in Text 2 suggests that canceling plans is a good solution. The author of Text 2 is addressing how to make joint decisions effectively (through stating your own preference), not advocating for avoiding such decisions entirely. **Choice B is incorrect** because asking where the friend typically likes to eat still avoids stating one's own preference. While this approach might seem considerate, it continues the pattern of not revealing true preferences that Text 2 identifies as problematic. **Choice D is incorrect** because changing the subject would avoid making any decision altogether, which contradicts the implied advice in Text 2. The author of Text 2 presents research suggesting that directly engaging with the decision by stating preferences helps others make decisions and makes you appear more likable.

2 Correct answer **C** — Easy — ‹ Back to question

C Requiring people to vote does not necessarily lead to election outcomes that better represent the preferences of the country as a whole.

Choice C is the best answer. Text 1 claims that mandatory voting results in elections that "better reflect the preferences of the country." Singh and Roy disagree. They claim that more voters doesn't equal more quality votes—instead, they argue that forced voting may lead to less-informed votes that "may not reflect [voters'] actual preferences."

Choice A is incorrect. Neither text mentions the population size of countries that require voting, or how that might affect election outcomes. **Choice B is incorrect**. Neither text discusses the effects of mandatory voting on other forms of political engagement. **Choice D is incorrect**. Neither text discusses the ease or difficulty of the voting process in countries that require voting.

3 Correct answer **B** Easy ‹ Back to question

B Ailey's work was strongly influenced by jazz.

Choice B is the best answer. Author 1 states that Ailey had a "deep admiration for jazz music" and that he "helped bring jazz to life for his audiences." Author 2 states that "Jazz is present throughout Ailey's work." While the authors name different aspects of Ailey's work as the most influenced by jazz, they agree that jazz was a strong influence.

Choice A is incorrect. This isn't something that either text claims. Neither text mentions how Ailey's dancers felt about his approach as a choreographer, so we have no evidence that either author would agree with this. **Choice C is incorrect**. This isn't something that either text claims. Neither text mentions how familiar audiences were with any aspect of Ailey's works, so we have no evidence that either author would agree with this. **Choice D is incorrect**. This isn't something that either text claims. Neither text mentions any genre of music other than jazz, so we have no evidence that either author would agree with this.

4 Correct answer **C** Easy ‹ Back to question

C By pointing out that the amount of shrimp eaten isn't the only thing that influences flamingos' coloring

Choice C is the best answer because it describes how the ecologist in Text 2 would most likely respond to the author's conclusion in Text 1 based on the information provided. The author of Text 1 states that the pink color of flamingo feathers comes from pigments carried by the brine shrimp flamingos consume. The author of Text 1 concludes that this means that a flamingo that is pinker than another flamingo must have eaten more shrimp. However, according to Text 2, ecologist Juan Amat has found that flamingos can also affect how pink they look through grooming, when they move ingested pigments from a gland near the tail to their feathers. This indicates that not all the pigments available from the shrimp a flamingo has eaten automatically end up coloring the flamingo's feathers; some may or may not be applied later. Since grooming is also a factor, the ecologist (Amat) in Text 2 would most likely respond to the conclusion in Text 1 that pinker flamingos have eaten more shrimp by pointing out that the amount of shrimp eaten isn't the only thing that influences flamingos' coloring.

Choice A is incorrect. Although Text 2 states that the ecologist has found that flamingos can move pigments to their feathers from a gland near their tail, there is no indication that their tail feathers are pinker than their other feathers. Moreover, the point that tail feathers are pinker than other feathers wouldn't logically address the idea that the quantity of shrimp eaten is what determines a flamingo's coloring. **Choice B is incorrect** because Text 2 indicates that the ecologist has found that flamingos' feathers do sometimes look pinker and gives no indication that this change in color is particularly subtle. Moreover, the point that most observers wouldn't notice a change wouldn't logically address the idea that the quantity of shrimp eaten is what determines a flamingo's coloring. **Choice D is incorrect** because nothing in Text 2 suggests that the ecologist would argue about flamingos' shrimp consumption. Although Text 2 indicates that the ecologist has found that flamingos may make themselves look pinker during mating season, this is addressed in terms of grooming habits; apart from referring to food as a source of pigments, Text 2 doesn't discuss the diet of flamingos at all.

5 Correct answer **A**

Easy

< Back to question

A Cassava did not become a significant crop in West Africa until long after it was first introduced.

Choice A is the best answer. Text 1 states that cassava's "rise to popularity was slow" in West Africa. Text 2 also describes cassava's "slow adoption into the diet of West Africans." While the two texts identify different causes for this slow adoption, both agree that cassava took a long time to catch on.

Choice B is incorrect. This isn't something that either text claims. Cassava is the only crop discussed in the passages, so we have no basis to draw conclusions about what the authors might say about "several" crops. **Choice C is incorrect**. This isn't something that either text claims. Neither text mentions the "climate of the West African coast," so we have no evidence that either author would agree with this. **Choice D is incorrect**. This isn't something that either text claims. The 1500s were when cassava was brought to West Africa, but neither text describes how cassava is cooked, nor do they make any claims about when cooking methods were developed.

6 Correct answer **D**

Easy

< Back to question

D Many people have come to admire the story of Sybil Ludington's ride.

Choice D is the best answer. Both authors agree that Ludington's story has been widely celebrated and revered by Americans, even if they disagree on its accuracy. Text 1 states that Ludington has inspired postage stamps, statues, and TV series, and Text 2 states that many articles and books have been written about her. Thus, both authors acknowledge the popularity of Ludington's story.

Choice A is incorrect. Neither author claims that Ludington had a significant impact on the war. Text 1 doesn't mention how Ludington's ride affected the war overall, and Text 2 suggests that Ludington's ride may have been exaggerated or invented over time. **Choice B is incorrect**. Neither author claims that Ludington's route has been verified by historians. Text 1 claims she rode 40 miles through Putnam County, but doesn't cite any sources for this information, while Text 2 suggests the ride may not have even happened. **Choice C is incorrect**. This choice misreads text 2. Neither author claims that Ludington was not a real person, only that her ride may not have happened. Both authors seem to treat Ludington as a genuine historical figure.

7 Correct answer **D**

Easy

< Back to question

D The author of Text 1 believes that the moon formed more slowly than the author of Text 2 believes.

Choice D is the best answer. Text 1 states that the moon was formed from the debris "over the course of thousands of years," while Text 2 states that the moon's formation happened "immediately after impact, taking just a few hours." This shows a clear difference in how the authors view the evidence for the speed of the moon's formation.

Choice A is incorrect. While Text 2 suggests that the moon formed over "just a few hours" and Text 1 says it took "thousands of years," neither one mentions when that formation occurred. **Choice B is incorrect**. While Theia isn't mentioned in Text 2, neither text describes or disputes evidence of Theia's existence. **Choice C is incorrect**. Neither text makes any claims about the similarity or difference between the moon's surface and Earth's surface.

8 Correct answer **B**

Easy

< Back to question

B As unsurprising, because scholars tend to overlook the literary value of food writing in general and of regional cookbooks in particular

Choice B is the best answer. Text 1 states that literary scholars ignore regional cookbooks most of all, even when they have historical significance and are well written. So the author of Text 1 wouldn't be surprised that scholars ignored Edna Lewis's cookbook.

Choice A is incorrect. We can't infer that this is how the author of Text 1 would regard the situation. Text 1 never suggests that scholars are dismissive of popular works in general. Instead, Text 1 says that scholars ignore food writing specifically, despite its popularity—and despite the fact that it can be historically significant and complex. **Choice C is incorrect**. We can't infer that this is how the author of Text 1 would regard the situation. Text 1 never suggests that elements of other genres should be kept out of cookbooks. **Choice D is incorrect**. We can't infer that this is how the author of Text 1 would regard the situation. Text 1 never discusses how food writing is or should be marketed.

9 Correct answer **A**

Easy

< Back to question

A Tropical mountain bird species are restricted in where they can live.

Choice A is the best answer. Both texts state that tropical mountain bird species have limited ranges or habitats, although they disagree on the reason for this. Text 1 claims that temperature is the main factor that determines where these birds can live, while Text 2 claims that competition with other species is the main factor. However, both texts agree that these birds are not able to survive in many kinds of areas.

Choice B is incorrect. Neither text mentions the tools or methods that scientists use to observe these birds, either now or in the past. **Choice C is incorrect**. Neither text mentions anything about how these birds build their nests. **Choice D is incorrect**. Neither text provides any information about the genetic similarity of these birds, so we have no evidence that either author would agree with this statement.

10 Correct answer **A**

Medium

< Back to question

A John Fletcher's writing has a unique, readily identifiable style.

Choice A is the best answer. Text 1 states that Sykes felt Fletcher's contributions to the play were obvious because he had a distinct style in his other plays. Text 2 states that scholars generally agree "on the basis of style" that Fletcher wrote most of the three middle acts. Both texts imply that Fletcher's writing has a unique, readily identifiable style that can be used to distinguish his work from others.

Choice B is incorrect. While Text 1 refers to the women in Massinger plays, neither text compares the women of Fletcher's plays to the women of Massinger's plays. Text 2 doesn't mention Massinger at all. **Choice C is incorrect**. Text 1 states that Sykes disputed that Shakespeare coauthored the play, and implied that it was coauthored by Fletcher and Massinger instead. Sykes, therefore, would disagree that *The Two Noble Kinsmen* belongs in a Shakespeare compilation. **Choice D is incorrect**. Text 1 doesn't suggest that Massinger was inspired by Shakespeare, and Text 2 doesn't mention Massinger at all.

11 Correct answer **A**

Medium

Back to question

A By pointing out that given the revised timeline for the end of the Sahara's humid period, the Neolithic peoples' mode of subsistence likely didn't cause the region's desertification

Choice A is the best answer. Brierley et al.'s research directly challenges Wright's claim that pastoralism turned the Sahara into a desert, suggesting that, in a Sahara that turned arid 500 years earlier than previously thought, pastoral practices may have actually "preserved vegetation" rather than depleting it.

Choice B is incorrect. Brierley et al.'s research actually disputes the idea that any Neolithic peoples' behaviors, including pastoralism, could have contributed to the Sahara's changing climate. In fact, their research implies that the Neolithic peoples' practices did not "exacerbate aridity" (i.e., make things worse), but may have slowed environmental changes. **Choice C is incorrect**. Brierley et al.'s research does not acknowledge that pastoralism can have deleterious (i.e., negative) effects on a region's vegetation and climate. It only describes one possible beneficial effect: preserving vegetation through practices like selective grazing. **Choice D is incorrect**. Brierley et al.'s research does not call for more research into factors that likely contributed to the desertification of the Sahara region.

12 Correct answer **D**

Medium

Back to question

D Most microbes are probably unable to withstand the soil conditions at the Antarctic study site.

Choice D is the best answer because it presents a statement about microbes with which Fierer's team (Text 1) and the author of Text 2 would most likely agree. Text 1 states that microbes usually thrive in very harsh conditions, and so Fierer's team was surprised when samples collected from an extremely cold and dry area of Antarctica didn't appear to contain any life. Fierer's team says that though this doesn't conclusively prove there are no microbes in the area, it suggests that microbes would have a notably difficult time surviving in the environment. The author of Text 2 says it's unlikely that there would be no microbes at all in the Antarctic study site from which Fierer's team retrieved soil samples and that there may have been hard-to-detect microbes in the samples. However, the presence of only a few microbes in the Antarctic samples rather than the billions found in a typical soil sample (which would presumably be much easier to detect) would illustrate conditions in the Antarctic soil that make it difficult for microbes to thrive. Since Fierer's team says that the seeming absence of microbes in the Antarctic samples suggests an unusually harsh environment and the author of Text 2 says that even if there are a few undetectable microbes in the samples, the relatively tiny number of microbes would also suggest an unusually harsh environment, then Fierer's team and the author of Text 2 would most likely agree that most microbes are unable to withstand the soil conditions at the Antarctic study site.

Choice A is incorrect. The samples taken by Fierer's team were from an area of Antarctica that is described in part as extremely dry, and these samples didn't appear to have any life. Therefore, even though these samples also came from an extremely cold area, Fierer's team wouldn't

argue based on the evidence available that microbes were better able to survive in dry conditions than in areas with harsh temperatures. Moreover, the author of Text 2 says that microbes are found in virtually every environment on Earth but doesn't compare dry environments and harsh environments. **Choice B is incorrect**. Nothing in Text 1 indicates that another collection of samples from the Antarctic study site might yield different results from the samples already taken by Fierer's team. The author of Text 2 does state that microbes are found in virtually every environment on Earth and suggests that new technology may be better able to detect so few microbes in a soil sample, but the author of Text 2 concludes that the unusual absence of microbes in the Antarctic samples is evidence of the harsh Antarctic environment. Therefore, there is no reason to believe that the author of Text 2 thinks that another sample drawn from that same harsh environment would yield a much higher number of microbes. **Choice C is incorrect**. The author of Text 2 does speculate that there may have been so few microbes in the Antarctic samples that current technology couldn't detect them, but the author doesn't speculate that this is due to the size of the microbes. Moreover, nothing that Fierer's team says suggests that they are speculating that their samples might have microbes that are smaller than microbes in typical soil samples.

13 Correct answer **D** Medium ‹ Back to question

D Markings on depictions of human faces are not necessarily intended to portray particular details about the physical appearance of individuals.

Choice D is the best answer. Trever thinks that the "hyper-realistic portrayal of identifiable people" interpretation ignores the sculptors' imagination and creativity. We can infer that Trevor thinks the facial markings on the sculptures may not have represented real skin blemishes on real people.

Choice A is incorrect. The text gives us no reason to think that Trever would respond to the underlined interpretation in this way. Neither text compares the depictions of human faces to the depictions of plants or animals, so we have no basis to draw this conclusion. **Choice B is incorrect**. The text gives us no reason to think that Trever would respond to the underlined interpretation in this way. There's nothing in either text about multiple depictions representing the same person, so we have no basis to draw this conclusion. **Choice C is incorrect**. The text gives us no reason to think that Trever would respond to the underlined interpretation in this way. Neither text mentions the state of the vessels (damaged or intact), so we have no basis to draw this conclusion.

14 Correct answer **D** Medium ‹ Back to question

D *Self-Portrait at the Keyboard* was painted earlier than Carracci's painting and also refers to the artist's craft.

Choice D is the best answer. The author of Text 2 states that Fontana's painting, which depicts a painting easel in the background, was made in 1577, eight years before Carracci's painting. Therefore, they might argue that Caracci was not "the first artist" to depict themself as a painter.

Choice A is incorrect. The texts don't support this choice. Neither text mentions the reputation or status of either Carracci or Fontana. **Choice B is incorrect**. The author of Text 2 does not comment on the intention or meaning of Fontana's self-depiction in *Self-Portrait at the Keyboard*. This choice also holds little connection to the underlined claim. **Choice C is incorrect**. The texts don't support this choice. The author of Text 2 does not suggest any inspirational relationship between Fontana and Carracci. The author of Text 2 is concerned with showing that Fontana's painting is the earliest example of an artist referring to painting in their self-portrait, but makes no mention of her influence on others.

15 Correct answer **A** Medium ‹ Back to question

A By asserting that language plays a more important role in graphic novels than the author of Text 1 recognizes

Choice A is the best answer because it most accurately states how the author of Text 2 would most likely respond to the argument presented in Text 1. In arguing that graphic novels shouldn't be classified as literature and are more comparable to film, Text 1 claims that language plays a relatively limited role in graphic novels: images, not language, are the primary means by which graphic novels tell their stories, and language is used "only sparingly"—that is, comparatively very little—in the form of captions and dialogue. However, the author of Text 2 asserts that language in graphic novels is as equally vital for conveying meaning as images are, since without captions and dialogue, readers wouldn't be able to make sense of the narrative. Moreover, the author of Text 2 argues that there are many graphic novels that are "beautifully written" and whose use of language is as accomplished as any standard novel. Because Text 1 argues that language is subordinate to images in graphic novels, whereas Text 2 highlights how language is an essential component of a graphic novel's storytelling, it can reasonably be inferred that the author of Text 2 would say that language plays a more important role in graphic novels than the author of Text 1 recognizes.

Choice B is incorrect. Although Text 1 indicates that graphic novels shouldn't be classified as literature based on their limited use of language, there's no indication that the author of Text 1 considers this limited use of language as a flaw, just that it doesn't fit the particular definition of "literature" proposed in the text. Even if Text 1 had suggested that their use of language

was a common flaw of graphic novels, the author of Text 2 emphasizes how many graphic novels are "beautifully written," and would therefore say that their use of language is exemplary, not that it is

flawed. **Choice C is incorrect** because Text 1 doesn't claim that the story lines of graphic novels are generally relatively easy to understand; in addition, Text 2 argues that given their dependence on the interaction of image and text, the stories of graphic novels would be incomprehensible if their captions and dialogue were removed, not that the story lines of some graphic novels are more difficult to understand than Text 1 acknowledges. **Choice D is incorrect** because the author of Text 1 doesn't imply that graphic novels aren't well crafted, only that they use language too sparingly to fit the definition of "literature," and that their use of images to convey stories makes them more comparable to film than to literature. Even if the author of Text 1 had implied that most graphic novels aren't well crafted, Text 2 refers to the fact that many graphic novels are as beautifully written—that is, well crafted—as many standard novels; thus, it wouldn't be accurate to say that the author of Text 2 would agree with the author of Text 1 that most graphic novels aren't well crafted.

16 Correct answer **C** Medium Back to question

C By warning against making an overly broad assumption, as there is no clear consensus in distinguishing between productive and unproductive activities

Choice C is the best answer because it characterizes how Maddux would most likely respond to the conclusion Sharif reached after her research. Text 1 describes Sharif's study of the benefits of free time, saying that the reported sense of satisfaction plateaued at two hours per day and began to decline at five hours per day. Further research led Sharif to conclude that time spent doing tasks she defines as unproductive, such as watching TV or playing games, correlated with a drop in life satisfaction. However, in Text 2 Maddux says that there is no objective definition of what constitutes productive behavior, giving the example that reading a book might be considered productive by some but unproductive by others. It can be inferred that Maddux would also assert that whether watching TV or playing games is productive or unproductive is a matter of subjective judgment. Thus, Maddux would most likely caution against making an overly broad assumption, as there is no clear consensus in distinguishing between productive and unproductive activities.

Choice A is incorrect because Maddux asserts that individuals have unique needs for life satisfaction: some may want to spend that time productively, others unproductively, and what counts as productive is subjective. Therefore, Maddux would likely not consider it universally true that free time is more likely to enhance life satisfaction when it is spent productively. **Choice B is incorrect** because the study described in Text 1 concerns whether free time contributes to life satisfaction, not whether productivity contributes to life satisfaction. The dip in life satisfaction

that Sharif claims to observe in Text 1 happens only after five hours, and mainly if the time is spent unproductively—that is, two hours of free time spent productively might increase life satisfaction just as much as two hours spent unproductively. **Choice D is incorrect** because Maddux holds the opinion that whether an activity is productive or unproductive is subjective and depends on the individual; therefore, he would most likely claim that watching TV or playing games might be productive for some and unproductive for others.

17 Correct answer **C** Medium Back to question

C Changing consumer behaviors are leading to changes in music-related businesses.

Choice C is the best answer because it presents the statement about music consumers that both authors would most likely agree with. The author of Text 1 indicates that because consumers are increasingly interested in purchasing experiences (the "growing 'experiential economy'"), live music festivals are growing in size and variety and are being designed to stand out as special among many consumer options. The author of Text 2 indicates that as streaming service use increases and album sales decrease, live performances and music festival appearances are becoming more important to musicians as a source of revenue. Thus, both authors would most likely agree that changing consumer behaviors (greater interest in purchasing experiences and greater use of streaming services) are leading to changes in music-related businesses (music festivals).

Choice A is incorrect because the author of Text 1 makes no mention of streaming services and the author of Text 2 indicates only that the use of such services is rising, not that consumers prefer paying for streaming music over attending music festivals. **Choice B is incorrect** because the author of Text 1 indicates that the "growing 'experiential economy'" is affecting the music industry but gives no indication that it is largely limited to that industry and the author of Text 2 makes no mention of consumers' growing interest in purchasing experiences (focusing instead on musicians' greater reliance on revenue from festivals and other live performances). **Choice D is incorrect** because the author of Text 1 makes no mention of music streaming platforms and the author of Text 2 suggests not that rising demand for live music festivals is driving demand for music streaming platforms, but rather that as streaming services become more widely used and reduce album sales, musicians become more dependent on festivals and other live performances for revenue.

18 Correct answer **D** Medium Back to question

D As illogical, because the purists overlook crucial aspects of how the bluegrass sound first originated.

Choice D is the best answer. According to Author 1, the "purists" argue that bluegrass should stick to its folk music roots. But Author 2 points out that this isn't how bluegrass emerged: it actually got its sound from a mix of folk, jazz, and blues.

Choice A is incorrect. There's nothing in Text 2 about what other genres the purists enjoy, so this inference about Author 2's views isn't supported. **Choice B is incorrect**. There's nothing in Text 2 about whether or how purists can enforce their preferences, so this inference about Author 2's views isn't supported. **Choice C is incorrect**. There's nothing in Text 2 about the size of bluegrass's audience, so this inference about Author 2's views isn't supported.

19 Correct answer **B** Medium Back to question

B Appia likely gained a level of technical expertise during his time as an apprentice.

Choice B is the best answer. The author of Text 2 directly contradicts Bremner's claim that Appia lacked technical expertise by stating that Appia was "not an amateur in the practice of lighting." His experience as a lighting specialist's apprentice would have, the author of Text 2 argues, allowed Appia to "[develop] his understanding of what was possible" with the elements of theatrical design.

Choice A is incorrect. Neither text describes how other lighting technicians responded to Appia's ideas. Furthermore, this claim isn't relevant to Bremner's evaluation of Appia's technical expertise. **Choice C is incorrect**. Neither text mentions anything about the opinions of theater practitioners who worked with Appia, so this answer choice does not relate to the claim about Appia's level of technical expertise made by Bremner in Text 1. **Choice D is incorrect**. Neither text mentions anything about Appia's familiarity with or ignorance of the use of music and sound in theater. Both focus on his expertise (or lack thereof) in lighting.

20 Correct answer **B** Medium Back to question

B By arguing that it does not account for the amount of iridium found in geological layers dating to the Chicxulub impact

Choice B is the best answer. Siraj's hypothesis is that the Chicxulub impactor was a long-period comet. But Artemieva points to the iridium found in the crater and in "geological layers that were deposited worldwide after the impact" as evidence that it was actually an asteroid, not a long-period comet.

Choice A is incorrect. We can't infer that this is how Artemieva would respond to Siraj's hypothesis. Text 2 never discusses whether Wild 2 is representative of long-period comets in general. Rather, Text 2 presents Artemieva's argument that the Chicxulub impactor was an asteroid, not a long-term comet. **Choice C is incorrect**. We can't infer that this is how Artemieva would respond to Siraj's hypothesis. Siraj's hypothesis doesn't make this connection: rather, Siraj hypothesizes that the

Chicxulub impactor was a long-term comet. **Choice D is incorrect**. We can't infer that this is how Artemieva would respond to Siraj's hypothesis. "Soil samples from sites distant from the Chicxulub crater" is too vague. Only soil samples from sites that are connected to the impact in some way are involved in either hypothesis.

21 Correct answer **D** Medium Back to question

D By noting that a possible solution to the problem is available

Choice D is the best answer because Text 2 presents a possible solution to the problem identified in Text 1—that is, how disparities in the criteria used by different countries to define urban settlements make it "difficult for researchers to compare aspects of urbanization in different countries." Text 2 describes the creation of a shared framework for studying global urbanization: "global definitions of common types of settlements" and a "new measure called the 'degree of urbanization'" that "allows researchers to better understand global urbanization rates."

Choice A is incorrect. Although Text 2 mentions "a group of six international organizations" that developed criteria and a measure related to settlements and urbanization, no organization or institution is singled out to perform further research. **Choice B is incorrect** because both texts are about urbanization research and neither mentions any other fields of study. **Choice C is incorrect**. Text 2 discusses a possible solution to the terminological problem in global urbanization research, not additional areas of difficulty in the field.

22 Correct answer **C** Medium Back to question

C Many Impressionist painters were intentional about the frames they selected for their works.

Choice C is the best answer because it presents the statement about the use of painted frames in Impressionist painting that both authors would be most likely to agree with. Text 1 discusses painter Edgar Degas's insistence that his works remain in their original painted frames, which contrasted with the gold frames that were typical of the Paris art scene at the time. The text then argues that the preference of Degas and other French Impressionist painters for colorful frames can likely be attributed to their desire "to distinguish themselves from what was considered conventional at the time." Text 2 also notes that Impressionist painters "placed their works in painted frames" but argues that they probably did so for a purely aesthetic reason: to ensure that "the frame's color...would harmonize with the colors or subjects in a painting." Though differing on Impressionist painters' rationale for using painted frames, the authors of both texts would agree that many Impressionist painters were intentional about the frames they selected for their works.

Choice A is incorrect because neither text suggests that gold frames were considered desirable by those purchasing Impressionist works. Indeed, it can be inferred from the fact that Impressionist painters used painted frames that those who purchased those works wouldn't have had a strong preference for gold frames. **Choice B is incorrect** because neither text suggests that Impressionist painters chose colors for their paintings based on planned frame colors. Indeed, Text 2 states that frame colors were chosen to "harmonize with the colors or subjects in a painting," implying that the color scheme of paintings predated and took precedence over the choice of the colors of frames. **Choice D is incorrect** because Text 1 presents Degas's preference for painted frames as being typical of Impressionist painters' attitudes toward the framing

of their works. Moreover, although Text 2 doesn't specifically discuss Degas, it concurs with Text 1's assertion that these painters preferred painted frames. Thus, both texts position painted frames as a hallmark of French Impressionist painting, not as a deviation from it.

23 Correct answer **C** Medium Back to question

C They would encourage Fan to investigate whether the projected effect on subscription prices persists over an extended period.

Choice C is the best answer because, based on the information presented in the texts, it represents how Focarelli and Panetta would most likely respond to Fan's findings. Text 1 indicates that Fan found that a newspaper merger would result in a rise in subscription prices. This rise wouldn't benefit customers, who would have to pay more for news after a merger. Text 2 presents Focarelli and Panetta's argument that merger research tends to focus too much on what happens immediately after the merger. Text 2 goes on to describe their finding that mergers can be economically beneficial for consumers over the long term. This suggests that Focarelli and Panetta would encourage Fan to investigate the long-term effect of the hypothetical newspaper merger on subscription prices.

Choice A is incorrect because Text 2 doesn't indicate that Focarelli and Panetta connect the effects of mergers to specific locations. Instead, Focarelli and Panetta focus on the length of time over which the effects of mergers should be evaluated. **Choice B is incorrect** because Text 2 indicates that Focarelli and Panetta found that merged companies experience "efficiency gains" over the long term, meaning that their expenses go down relative to their output, not that their expenses increase. **Choice D is incorrect** because there's no indication in Text 2 that Focarelli and Panetta believe that the newspaper industry is different from any other industry when it comes to the effects of mergers. Although their own research was about consumer banking, Text 2 suggests that they view their conclusions as applicable to mergers in general.

24 Correct answer **A** Medium Back to question

A While the author of Text 1 believes that thinking about Soyinka's works of theater in phases is useful, the author of Text 2 views such an approach as limiting.

Choice A is the best answer. The author of Text 1 states that Soyinka's progression as a playwright can be considered to fall into three periods, implying that this is a helpful way to understand his works. The author of Text 2, on the other hand, challenges this view and says that it overlooks potential commonalities and differences in Soyinka's work across what Text 1 calls distinctive stylistic phases.

Choice B is incorrect. This choice overstates the central claim of Text 2. The author of Text 2 argues against the chronological progression supported in Text 1, but does not go so far as to say that Soyinka's style remained consistent. In fact, Text 2 points out "significant differences in styles and content" among Soyinka's plays. **Choice C is incorrect**. Neither of the texts mention Soyinka's poetry, nor do they rank his dramatic writing relative to his other work. **Choice D is incorrect**. Neither text discusses the political aspects of Soyinka's plays, nor do they make any claims about whether they have changed over time.

25 Correct answer **C** Medium Back to question

C By insisting that digital art requires artistic abilities and skill even if it employs less traditional tools

Choice C is the best answer because it reflects how the author of Text 2 would respond to the claims in Text 1. Both texts address skills needed to produce digital art. Text 1 claims that digital art doesn't require the same amount of skill as creating physical art and that "the technology is doing most of the work." Text 2 states that digital art requires "knowing the fundamentals of art" and that many digital artists begin their work on paper and then transfer it to a digital format using "sophisticated software" and "a variety of colors and techniques." Therefore, the author of Text 2 would most likely insist that digital art requires artistic abilities even if it employs less traditional tools.

Choice A is incorrect because neither text discusses nondigital means of displaying art. **Choice B is incorrect** because the author of Text 2 doesn't address whether it's harder to use a tablet and stylus than it is to use paint and a brush. Text 2 does argue that digital art requires skills that aren't part of the traditional methods for producing art, but the text doesn't address

relative difficulty. **Choice D is incorrect** because the author of Text 2 states that digital artists still need to know "the fundamentals of art" and that many digital artists begin their work by drafting on paper before transferring the work to a digital format.

26 Correct answer **A** Medium Back to question

A It is understandable because the fossil does look like it could be related to birds, even though *O. khaungraae* is probably a lizard.

Choice A is the best answer because it reflects what the paleontologists in Text 2 would most likely say about what the researchers in Text 1 initially thought. Text 1 focuses on the discovery of a strange fossil consisting of the skull of the extinct species *Oculudentavis khaungraae*. According to Text 1, the fossil has features that appear to be avian, or related to birds, which led researchers to initially think that the fossil might be a very small avian dinosaur. Text 2 begins by noting the discovery of a second fossil similar to the one discussed in Text 1, then explains that based on detailed studies of both fossils, paleontologists think that the two creatures were probably unusual lizards, even though the skulls appeared avian at first. This suggests that the paleontologists in Text 2 recognize that the fossils do indeed look like they could be related to birds. For this reason, the paleontologists in Text 2 would most likely say that the initial thought of the researchers in Text 1—that the fossil was avian—is understandable, even if the fossil is probably not avian but rather is from a lizard.

Choice B is incorrect because Text 2 indicates that the fossils initially looked avian, so the paleontologists described in Text 2 wouldn't be confused by the researchers in Text 1 initially thinking that *O. khaungraae* might be related to birds. The paleontologists would find that initial thought understandable, not confusing. **Choice C is incorrect** because Text 1 never mentions lizards, so it wouldn't make sense for the paleontologists in Text 2 to say that the researchers in Text 1 mistakenly assumed that *O. khaungraae* must be a lizard. **Choice D is incorrect**. Although the paleontologists in Text 2 might agree that the initial thought of the researchers in Text 1 was reasonable, nothing in Text 2 suggests that the two skulls were shaped differently.

27 Correct answer **B** Medium Back to question

B It reflects an incomplete view of emotional contagion, because this phenomenon can occur even without in-person interaction.

Choice B is the best answer because it represents how the researchers in Text 2 would most likely respond to the underlined claim in Text 1. Text 1 begins by asserting that the unintended transfer of feelings from one person to another, known as emotional contagion, seems to rely on both people being physically present and able to observe body language. Text 1 then references research that supports this assertion. Text 2 describes an experiment conducted by the researchers Yang and Ferrara in which they found evidence of emotional contagion in the absence of physical interaction, namely through text-based interactions on social media. The researchers in Text 2 wouldn't completely agree with what is asserted in the underlined portion of Text 1 (that emotional contagion seems to require physical proximity), because their study, which used a social media networking service, found that physical interaction isn't the only way that emotional contagion can take place. Thus, the researchers in Text 2 would most likely respond to the underlined claim in Text 1 by stating that it reflects an incomplete view of emotional contagion, because the phenomenon can occur without an in-person interaction.

Choice A is incorrect. Although the researchers in Text 2 would likely agree that the underlined statement in Text 1 perpetuates a flawed conclusion that emotional contagion requires physical interaction, Text 2 doesn't address what the researchers thought about smiling as a sign of emotional contagion. **Choice C is incorrect** because the researchers in Text 2 wouldn't say that the underlined claim in Text 1 is fairly

persuasive. According to Text 2, the researchers conducted a study that found emotional contagion didn't require physical interaction, because they found evidence of it in text-based online interactions. **Choice D is incorrect** because neither of the texts claim that emotional contagion primarily occurs when a person is exposed to negativity. Instead, Text 1 claims that

physical interaction is required for emotional contagion to occur, and Text 2 describes a study that suggests emotional contagion can occur in text-based online interactions.

28 Correct answer **D** Medium Back to question

D By asserting that a more definitive form of evidence than the computer models suggests a different timeline for the onset of plate tectonics on Earth

Choice D is the best answer because it reflects how the author of Text 2 would most likely respond to what the researchers mentioned in Text 1 contend. Text 1 discusses the lack of knowledge of how plate tectonics on Earth began. Text 1 also mentions researchers who contend that movements of tectonic plates began around 3 billion years ago. As support for this assertion, these researchers cite computer models (which are simulations, not empirical evidence) of the temperature in Earth's mantle that show that at that time, the mantle would have been sufficiently molten for plates to move. However, the author of Text 2 asserts that empirical evidence from the geological record is necessary to make plausible claims about when tectonic movement began. Text 2 mentions an analysis performed by Wriju Chowdhury and his team of the geochemistry of zircon crystals (which would constitute empirical evidence). Chowdhury and his team argue, based on this analysis, that tectonic plates may have begun to move as early as 4.2 billion years ago. Therefore, since the author of Text 2 would consider Chowdhury et al.'s empirical evidence to be more conclusive than the computer models cited in Text 1, the author of Text 2 would most likely assert that a more definitive form of evidence than the computer models suggests a different timeline for the onset of plate tectonics on Earth.

Choice A is incorrect because the author of Text 2 makes no claims about the temperature of Earth's mantle and therefore wouldn't argue that the temperature of Earth's mantle 3 billion years ago was insufficient to allow tectonic movement. **Choice B is incorrect** because the author of Text 2 claims that empirical evidence is needed to fix the earliest date of tectonic movement. Computer models are simulations, not empirical evidence, so the author of Text 2 wouldn't distinguish between different kinds of computer models but would instead argue that no computer models can reliably predict the onset of plate tectonics. **Choice C is incorrect** because the author of Text 2 wouldn't consider any computer model to be able to provide evidence to support a plausible claim about tectonic movement, no matter how much such models were improved. The author of Text 2 would only accept empirical evidence.

29 Correct answer **D** Medium Back to question

D By noting that if the bees were truly playing, any positive feelings they may have experienced were probably quite basic

Choice D is the best answer. The author of Text 2 agrees with the author of Text 1 that bumblebees may engage in play and possibly experience some kind of positive emotional state. However, the author of Text 2 also qualifies this claim by stating that emotions in insects, if they do exist, are "likely very rudimentary."

Choice A is incorrect. While Text 2 states that other studies might indicate "negative emotional states" in bees, it does not contradict the findings from the Galpayage study—that the bees might have been having fun. **Choice B is incorrect**. The author of Text 2 does not mention or imply that any insects, including bumblebees, are capable of experiencing complex emotional states. The author of Text 2 states that if insects do feel emotions, those emotions are "likely very rudimentary." **Choice C is incorrect**. The author of Text 2 does not compare or contrast the behavior or emotions of insects and humans, and neither does the author of Text 1.

30 Correct answer **B**

Medium

Back to question

B Text 1 presents findings by Wang and colleagues and gives another research team's attempt to explain those findings, whereas Text 2 provides additional detail that calls that explanation into question.

Choice B is the best answer. Text 1 introduces Wang and colleagues' study and its surprising results, and then mentions Miller and Simpson's hypothesis as a possible way to explain them. Text 2, however, challenges Miller and Simpson's hypothesis by pointing out the difficulties of preserving mammoth carcasses on the surface for thousands of years: "scavengers and weathering" are the additional details that complicate the Miller/Simpson hypothesis.

Choice A is incorrect. Neither text compares two different approaches for studying mammoth extinction. Text 1 describes one study and one hypothesis pertaining to it. Text 2 critiques that hypothesis. **Choice C is incorrect**. Text 1 does not describe a critique of Wang and colleagues' methodology, but rather an interpretation of their results by Miller and Simpson. Text 2 does not offer additional details showing that methodology to be sound, but rather casts doubt on the Miller/Simpson explanation. **Choice D is incorrect**. Both components mentioned here (the new "undermining" research and the theory for reconciling this discovery) are contained in Text 1. Text 2 then shows how the attempt to reconcile the standard view and new research is flawed, and still fails to explain the discrepancy.

31 Correct answer **B**

Medium

Back to question

B By asserting that it rests on an assumption about the stone pieces that is not sufficiently supported by available evidence

Choice B is the best answer because it reflects how the author of Text 2 would most likely respond to the underlined claim about the Clovis people in Text 1. Text 1 explains that the idea that the Clovis people were the first human inhabitants of North America has been overturned by the unearthing of stone tools in Chiquihuite Cave in Mexico. The tools were found in a layer of earth that is over 33,000 years old—much older than the Clovis people's arrival 13,000 years ago. The text ends with the claim that the tools reveal that humans lived in the cave long before the Clovis people reached the continent. Text 2, on the other hand, disputes the idea that the stone pieces are definitely tools. Text 2 states that the pieces are so roughly shaped that they may have simply naturally broken off from rocks and, moreover, that no other signs of human activity have been found in the cave. In other words, Text 2 argues that there is no proof yet that humans made the pieces as tools or were even present in the cave. Therefore, the author of Text 2 would most likely say that the claim that humans occupied Chiquihuite Cave long before the Clovis people reached North America rests on an assumption about the stone pieces—that they are human-made tools—that is not sufficiently supported by available evidence.

Choice A is incorrect because Text 1 doesn't claim that human inhabitants of Chiquihuite Cave and the Clovis people had any connection; the author of Text 1 focuses only on the timing of each group's presence in North America. Further, the author of Text 2 makes no mention of the Clovis people and indicates that it isn't clear yet that any human group did inhabit Chiquihuite Cave. **Choice C is incorrect** because nothing in Text 2 suggests that the author believes the stone pieces probably are human-made tools and will be confirmed as such by further analysis; instead, the author of Text 2 emphasizes the current lack of evidence of human activity in the cave. **Choice D is incorrect** because Text 2 focuses on the issue of characterizing the stone pieces as tools made by humans, not on the timing of any particular group's activity in North America; further,

Text 1 seems to support the common belief that the Clovis people reached North America 13,000 years ago and challenges only the idea that they were the continent's first inhabitants. Therefore, there's no reason to think the author of Text 2 would say that the author of Text 1 overlooks evidence that the Clovis people were active as early as is commonly thought.

32 Correct answer **A** Medium ‹ Back to question

A The author of Text 2 approaches the study's findings with some caution, whereas the author of Text 1 is optimistic about the reported potential environmental benefits.

Choice A is the best answer. Text 1 is extremely positive about Strassburg's team's findings, calling the potential results "a clear win in the fight against the biodiversity and climate crises." Text 2 is not as positive, arguing that while the findings point to "potential benefits," we also need to consider the "potential effects on global food supplies."

Choice B is incorrect. This isn't a difference between the two views. Text 1 does present the 15% number as enough to achieve meaningful results, but that's not what Text 2 takes issue with: rather, Text 2 argues that we need to consider the effect that rewilding this much farmland would have on food supplies. **Choice C is incorrect**. This isn't a difference between the two views. Neither text mentions the timeline for achieving the results described by Strassburg's team. **Choice D is incorrect**. This isn't a difference between the two views. Text 1 focuses on rewilding's effects on both carbon emissions and biodiversity. Text 2 doesn't focus on rewilding's effect on carbon emissions at all. Instead, it focuses on a third factor: global food supplies.

33 Correct answer **D** Medium ‹ Back to question

D By suggesting that dance companies should consider offering revised versions of *The Nutcracker* instead of completely rejecting the show

Choice D is the best answer because it reflects how the author of Text 2 would most likely respond to the underlined claim in Text 1. Text 1 begins by noting the success of *The Nutcracker* but then claims that the ballet is "stuck in the past" and should "no longer be produced." Text 2 begins by conceding that *The Nutcracker* is indeed outdated but argues that it should continue to be performed, states that the show can be updated to include more contemporary dance styles, and provides an example of one such modernized version, *Hot Chocolate Nutcracker*. Hence, the author of Text 2 would most likely respond to the underlined claim in Text 1 by suggesting that dance companies should consider offering revised versions of *The Nutcracker* instead of completely rejecting the show.

Choice A is incorrect because the author of Text 2 advocates for using creative ways to update *The Nutcracker* and therefore wouldn't respond to the underlined claim by rejecting the suggestion that contemporary audiences would enjoy an updated version. **Choice B is incorrect** because although the authors of both texts claim that *The Nutcracker* is outdated, neither text suggests that contemporary audiences have largely stopped attending productions of the show. On the contrary, Text 2 states that *The Nutcracker* is a holiday favorite and generates substantial income for some dance companies. **Choice C is incorrect** because although Text 2 provides an example of a contemporized version of *The Nutcracker*, the text doesn't suggest that offering modernized versions is a way to increase income for most dance companies. Rather, the author of Text 2 suggests that offering modernized versions is a way to make the ballet discussed in Text 1 feel less outdated.

34 Correct answer **A** Medium ‹ Back to question

A By noting that it neglects the possibility of some polar bear populations adapting to changes in their environment

Choice A is the best answer. Text 2 describes how the Svalbard polar bears have adapted to the loss of sea ice by diversifying their diet and feeding on reindeer and seabird eggs, resulting in a "stable and well nourished" population despite environmental challenges. This counters the underlined claim that polar bears facing a loss of sea ice are at "great risk of extinction" by the end of the century.

Choice B is incorrect. Text 2 does not challenge the fact that sea ice is rapidly declining in the Arctic due to warming ocean temperatures. In fact, it states that the Svalbard polar bears have faced "rapidly declining sea ice in recent years." **Choice C is incorrect**. The claim in Text 1 is specific to polar bear populations affected by the loss of seal hunting habitats, so unaffected populations are irrelevant to the claim. Also, Text 2 doesn't mention any polar bear populations that haven't yet been affected

by loss of seal hunting habitats. It focuses on a population that has been affected by sea-ice loss but has managed to survive and thrive nevertheless. **Choice D is incorrect**. Text 2 doesn't imply that polar bears rely on a single seal-hunting strategy. In fact, the researcher in Text 2 would say that Text 1 fails to account for polar bears' ability to develop other hunting strategies and food sources.

35 Correct answer **B** Hard ‹ Back to question

B With no males left in tank 1, females were potentially large enough to defend territory as males and thus could gain an advantage by becoming male at their current size, whereas females in tank 2 may not have been large enough to outcompete the males in the tank and thus would have greater reproductive success by remaining female.

Choice B is the best answer because it correctly applies the model presented in Text 1 to explain the different outcomes in the two tanks described in Text 2. Text 1 begins by explaining that fertile female teleost fish will sometimes become fertile males through protogyny. The model, or explanation, of protogyny advanced in Text 1 holds that among female teleost fish, size doesn't confer any reproductive advantage, but among male teleost fish, "only individuals comparatively large enough to defend territory reproduce"—in other words, there is a direct relationship between relative body size and reproductive success, but only among male fish. Text 1 concludes by saying that, according to this model, individuals can maximize their reproductive success by "staying female when small" (when size has no relevance to reproduction) and only becoming male when they reach a certain size threshold by becoming large enough relative to other male fish to be able to defend territory. In sum, according to the model, whether protogyny is advantageous depends on a female's body size relative to the males currently present. Text 2 describes an experiment in which fish of "typical size distributions" (meaning, size distributions consistent with Text 1's note about the tendency of males to be larger than females) were placed in two tanks. Applying Text 1's model, once the males (that is, the typically larger fish) were removed from tank 1, the remaining females would no longer be at a size disadvantage and could potentially defend territory as males at their current size, making sex change advantageous for some of the fish in tank 1. This would therefore explain the finding that 81 percent of female fish began changing into males. In tank 2, however, the continued presence of larger males meant that on average, females would not be large enough to outcompete the males for territory and would therefore have greater reproductive success by remaining female. In this way, the size-advantage model presented in Text 1 would also account for why no fish changed sex in tank 2.

Choice A is incorrect because it claims that "even small females" could succeed as males once territories were undefended, contradicting Text 1's emphasis on there being a "critical size threshold" for male reproductive success, wherein only male fish who were sufficiently large to defend territory would have a reproductive advantage. Under this model, small females would have more reproductive success by remaining female than by becoming male and being unable to compete with larger fish for territory. Additionally, this choice's claim about tank 2—that "only the largest females" could take over territories—implies either that females defend territory (when the model in Text 1 makes no such claim) or that at least some females were sufficiently large to change sex and compete for territory with fish that began the experiment as males, yet the results show that no females in tank 2 did so. **Choice C is incorrect**. Not only is it based on a flawed understanding of the model presented in Text 1, it flatly contradicts the experimental results summarized in Text 2. While Text 1 clearly states that body size is irrelevant to female reproductive success, choice C states that the presence of males in tank 2 made differences in body size relevant to the females' reproductive success. This choice also claims that the removal of males from tank 1 eliminated any advantage to becoming male, yet the researchers reported that 81 percent of females in tank 1 began changing sex. **Choice D is incorrect** because it doesn't use the model proposed in Text 1 to explain the findings described in Text 2. It is common sense that a certain number of male fish are required for reproduction to occur in tank 1, but the model presented by Text 1 focuses on the individual reproductive benefits of protogyny, not on its potential to benefit the population by maintaining a favorable sex ratio.

36 Correct answer **D**

Hard

< Back to question

D By agreeing that the possibility described in Text 1 is a cause for concern but pointing out that nanomaterial conjugation does not inevitably produce that result

Choice D is the best answer. The author of Text 2 acknowledges that nanohybrids may be more toxic than their constituent parts, but also provides an example of a nanohybrid that has reduced toxicity compared to its components: silicon dioxide and zinc oxide together have all the benefits of zinc oxide nanoparticles without any of the DNA harm zinc oxide has on its own.

Choice A is incorrect. While the author of Text 2 gives an example of a nanohybrid that isn't as toxic as its constituent parts, they don't argue that the benefit outweighs the risk. They merely argue that "the effects of nanomaterial conjugation vary by case." **Choice B is incorrect**. The author of Text 2 states that the effects of nanomaterial conjugation "vary by case," and that the attention that their potential toxicity has drawn is warranted. If the situation in Text 1 weren't representative, then there would be less attention to the potential danger of these materials. Furthermore, neither passage suggests that researchers had expected that they could predict the effects of nanomaterial conjugation. **Choice C is incorrect**. The author of Text 2 agrees that the potential toxicity of nanohybrids "has drawn deserved attention," so they aren't denying the problem.

37 Correct answer **D**

Hard

< Back to question

D The broths in the 2007 experiment most likely did not have a substantial amount of the dipeptides that played a key part in the 2022 experiment.

Choice D is the best answer. Ishii and O'Mahony were trying to isolate the pure umami flavor, while Jünger was trying to recreate soy sauce, which has a mix of flavors that includes umami. Accordingly, the broths from Text 1 are not described as having any soy sauce in them—just "shiitake mushrooms and kombu seaweed." So they probably don't have as much of the dipeptides described in Text 2, which were found to be a key part of soy sauce's umami-ness and its saltiness.

Choice A is incorrect. Neither text supports this. Neither text gets into the diets of people in the United States, nor the diets of people in Japan. **Choice B is incorrect**. Neither text supports this. Text 2 does talk about the molecular weights of chemical compounds, but there isn't enough information provided about molecular weights in Text 1 to make an inference about what the scientists in Text 1 would say. **Choice C is incorrect**. Neither text supports this. Text 1 briefly mentions that soy sauce is "made from fermented soybeans," but it never claims that fermentation is responsible for its flavor in any way. And Text 2 never mentions fermentation at all.

38 Correct answer **C**

Hard

< Back to question

C As questionable, because it rests on an incomplete consideration of potential sources of the elements detected in white dwarf atmospheres

Choice C is the best answer because it reflects how Putirka and Xu (Text 2) would likely characterize the conclusion presented in Text 1. Text 1 discusses a study by Mark Holland and colleagues in which they detected traces of lithium and sodium in the atmospheres of four white dwarf stars. The team claims that this supports the idea that exoplanets with continental crusts like Earth's once orbited these stars. Text 2 introduces Putirka and Xu, who indicate that sodium and lithium are present in several different minerals and that some of those minerals might exist in types of rock that are not found on Earth. Therefore, Putirka and Xu would likely describe the conclusion in Text 1 as questionable because it does not consider that lithium and sodium are also found in rocks that are not like Earth's continental crust.

Choice A is incorrect because the texts do not indicate how widely held any of the viewpoints described are. **Choice B is incorrect** because neither text discusses how new this area of study is. **Choice D is incorrect** because neither text discusses how likely lithium and sodium are to be detected by analyzing wavelengths of light.

39 Correct answer **B**

Hard

Back to question

B It provides empirical evidence that the current understanding of an aspect of physics at a microscopic level must be incomplete.

Choice B is the best answer. Author 1 describes the puzzle that physicists still can't solve: at a microscopic level, the "laws of physics" suggest that we should be able to reverse processes that are not reversible at a macroscopic level (and, maybe, turn back time!). The experiment confirmed that those processes are not reversible even on the microscopic level, but it didn't explain why. This supports Author 1's point that physicists still don't fully understand how things work at a microscopic level—maybe the laws need to be revised.

Choice A is incorrect. We can't infer that the author of Text 1 would respond this way to the experiment. Text 2 does name two of the physicists involved in the experiment, but it never suggests that they disagree on anything. **Choice C is incorrect**. This is the opposite of what the experiment suggests. The experiment confirmed that the macroscopic-level law ("these things can't be reversed—like time") was still true on the microscopic level—meaning it supports the current understanding of physics at a macroscopic level. **Choice D is incorrect**. We can't infer that the author of Text 1 would respond this way to the experiment. Neither text makes this distinction between laboratory findings and the way the universe works in general.

40 Correct answer **C**

Hard

Back to question

C It may seem plausible, but it is not supported by the research team's findings.

Choice C is the best answer. This is how Cáceres and co. would most likely describe the view presented in Text 1. The view in Text 1 is that historical diversity affects how diverse an ecological community eventually becomes. But Cáceres and co. did not get this result: they found no difference in eventual diversity between a zooplankton pool that started out diverse and a zooplankton pool that started out with only a single species.

Choice A is incorrect. Cáceres and co. would probably not describe the view presented in Text 1 this way. The view in Text 1 is that historical diversity affects how diverse an ecological community eventually becomes. Cáceres and co's findings directly undermine this view: they found no difference in eventual diversity between a zooplankton pool that started out diverse and a zooplankton pool that started out with only a single species. **Choice B is incorrect**. Cáceres and co. would probably not describe the view presented in Text 1 this way. Their experiment was designed to test this hypothesis, and their findings were "contrary to their expectations." In other words, before the study, they predicted the theory was correct. **Choice D is incorrect**. Cáceres and co. would not describe the view presented in Text 1 this way. Their research finding directly undermines the view presented in Text 1: so it definitely doesn't hold true in conditions like those in the study.

41 Correct answer **B**

Hard

Back to question

B By asserting that the development of a more inexpensive substrate for mycoprotein production would contribute to the goal of decreasing worldwide deforestation over time

Choice B is the best answer because it reflects how the author of Text 1 would most likely respond to the study findings described in Text 2. The author of Text 2 discusses a study by Florian Humpenöder and his colleagues that found that deforestation would be reduced by half over the next thirty years if 20% of the beef consumed worldwide were replaced with mycoprotein. The author of Text 1 points out that mycoprotein is not widely available because of its high production cost, but goes on to note that this problem could be addressed by the creation of a cheaper substrate to feed mycoprotein. This suggests that the author of Text 1 would assert that the development of a less expensive mycoprotein substrate would contribute to the reduction in deforestation described in the study findings discussed in Text 2: if reducing the cost of mycoprotein increases people's access to it, then mycoprotein may be able to replace beef in more people's diets, thereby reducing the deforestation associated with beef production.

Choice A is incorrect because the author of Text 1 indicates that the environmental impact of mycoprotein production is close to that of chicken or pork production, so there is no reason to think that the author would assert that replacing chicken or pork with mycoprotein would be

environmentally beneficial: such a replacement would not lessen the total environmental impact of food manufacture. Additionally, the specific issue of agricultural water consumption is never mentioned in Text 1, so there is no evidence indicating what the author of Text 1 would say about that issue. **Choice C is incorrect**. Although Text 1 does compare the environmental effects of producing mycoprotein to those of producing chicken or pork, nothing in Text 1 suggests that the author believes that people are more likely to replace chicken or pork with mycoprotein than they are to replace beef with mycoprotein. **Choice D is incorrect** because Text 1 makes no mention of countries' varying contributions to deforestation, so there is no evidence that the author of Text 1 would respond to the finding described in Text 2 by saying that some countries will have to replace more than 20% of their beef consumption with mycoprotein.

42 Correct answer **C** Hard Back to question

C They would argue that their techniques are better suited than other methods to the unique challenges posed by the Sterkfontein Caves.

Choice C is the best answer. Text 2 states that the researchers used cosmogenic nuclide dating to "avoid the potential for misdating" caused by the geology of Sterkfontein, which Text 1 describes as "challenging" and unreliable.

Choice A is incorrect. Neither text suggests that the *A. africanus* fossils have been "corrupted," but only that traditional dating methods are difficult in Sterkfontein because of floods and soil mixing where the fossils were found. Nothing is implied to have compromised the fossils themselves. **Choice B is incorrect**. This choice misreads Text 2. Text 2 agrees that stratigraphy and other methods are prone to error in the context of Sterkfontein: there's a "potential for misdating" when evaluating age based on soil layers and bones. **Choice D is incorrect**. Text 2 does not state that cosmogenic nuclide dating is applied to the fossils directly but rather to the breccia that surrounds them.

43 Correct answer **D** Hard Back to question

D By observing that a widespread practice in film and television largely prevents the kind of problem faced by the scholars mentioned in Text 2

Choice D is the best answer because it reflects how the author of Text 1 would most likely respond to Text 2 based on the information provided. Text 2 discusses how the inconsistent use of credits to identify the contributors to video games can pose an obstacle to scholars of the medium, who rely on such credits to answer questions about the medium's development. Text 1 notes that in film and television, on the other hand, credits are used consistently and are valuable to researchers studying the cast and crew members in these mediums. Since Text 1 asserts how the consistent use of credits benefits scholars of film and television, it can be inferred that this text's author would respond to the discussion in Text 2 by observing that the kind of problem faced by scholars of video games—the inability to know who contributed to a particular production and how—is, in film and television studies, largely prevented by the widespread practice of credits in these mediums.

Choice A is incorrect. Although Text 1 discusses a method used by film and television researchers—namely, relying on credits to research the careers of cast and crew members—the author doesn't explicitly recommend that or any other method. Moreover, Text 1 states that films and television shows themselves, not their researchers, regularly use the method of listing credits. **Choice B is incorrect**. It can be inferred from Text 2 that when video games do feature credits, they have essentially the same function as credits in film and television—namely, to identify the individuals who worked on a particular production. Therefore, it is unlikely that the author of Text 1 would characterize video game credits as

differing in purpose from film and television credits. **Choice C is incorrect** because, as Text 2 explains, credits are not consistently used in video games. Therefore, it is unlikely that the author of Text 1 would argue that scholars of the medium

discussed in this text—video games—rely more heavily on credits than scholars of film and television, two mediums where credits consistently appear.

44 Correct answer **D** Hard Back to question

D By contending that the kinds of reactions controversial public artworks often receive aren't exclusively the result of attributes inherent in the works themselves

Choice D is the best answer because the critics mentioned in Text 2 would argue that negative reactions to controversial public art are not solely the result of the nature of the art itself. The claim in Text 1 suggests that public artworks tend to provoke backlash when they are not "aesthetically and conceptually bland." This implies that the content of public art alone can cause backlash. However, the critics in Text 2 offer a more nuanced explanation. They argue that norm-defying pieces of public art that are not "effectively integrated within their surroundings" are more likely to be judged harshly by the public. They also imply that a museum provides a context that prepares viewers to expect challenging art, while public environments that serve other purposes often do not. This indicates that the critics in Text 2 would contend that factors beyond the attributes of the art, like environment and presentation, play a significant role in how public art is received.

Choice A is incorrect because the critics in Text 2 do not argue that unconventionality is unrelated to public disagreement about a public artwork's merits. Rather, they acknowledge that norm-defying pieces do face unfavorable reactions, but they attribute such reactions to contextual factors like poor integration with the environment rather than dismissing the role of unconventionality entirely. **Choice B is incorrect** because the critics in Text 2 do not advocate for restricting public art to universally appealing works. Instead, they argue that better integration with the surroundings and situating the work in appropriate contexts could help norm-defying art be better received by passersby. Choice C is

incorrect because the critics in Text 2 do not address whether civic leaders and community members are easily satisfied by norm-reinforcing art. The critics in Text 2 instead argue that installation and integration with the surrounding environment factor into how norm-defying art is received by the general public, rather than disputing how people respond to conventional art.

45 Correct answer **B** Hard Back to question

B By declaring that the changes in climate caused by the Deccan Traps eruption weren't the main cause of the K-Pg event

Choice B is the best answer because it describes how Hull's team would most likely respond to the argument in the underlined portion of Text 1, which asserts that volcanic activity in the Deccan Traps range led to changes in the climate and caused the K-Pg mass extinction event. According to Text 2, although Hull's team found that activity in the Deccan Traps did indeed alter the climate before the K-Pg event, the team determined that the climate had returned to normal before mass extinctions began. This finding and the observation that the K-Pg extinctions closely align with the Chicxulub asteroid impact suggest that Hull's team would likely dispute the claim in the underlined portion of Text 1 and say that the climate changes caused by the Deccan Traps activity were not the main cause of the extinctions.

Choice A is incorrect because Text 2 describes how Hull's team found that the climate had recovered from the changes brought about by the Deccan Traps activity before the K-Pg event occurred, which suggests that Hull's team would disagree that the Deccan Traps activity caused the K-Pg event. Additionally, the claim in the underlined portion of Text 1 says nothing about how the Chicxulub impact changed the climate, so while Hull's team might believe that the impact did in fact change the climate, they could not be said to agree with the claim in Text 1 on this point. **Choice C is incorrect** because there is no indication in either text that any scientists assume that the Chicxulub impact caused the Deccan Traps activity, so there is no reason to conclude that Hull's team would question why the scientists referred to in Text 1 make such an assumption. **Choice D is incorrect** because Text 2 describes how Hull's team found that the climate had recovered from the changes brought about by the Deccan Traps activity before the K-Pg event occurred, which suggests that Hull's team would say that the Deccan Traps activity had

a less enduring effect on global conditions than the scientists referenced in Text 1 believe, not that the effect on global conditions was more significant than those scientists claim.

46 Correct answer **A** Hard ‹ Back to question

A It is more motivated by a perception of the significance of the invention of film than by facts.

Choice A is the best answer because it provides a statement about the description of the first showing of *Arrival of the Train* in Text 1 that, based on the texts, the author of Text 2 would most likely agree with. Text 1 indicates that members of the audience, unaccustomed to the new medium of film and believing that they were looking at a real oncoming train, allegedly reacted to the film with alarm. Text 1 then goes on to treat this anecdote as a factual account of the film's first showing, interpreting it as a moment that marked a "major cultural shift." In contrast, the author of Text 2 indicates that though the story of the film's first showing has become "canonical," or widely accepted, there is no contemporary evidence to support the idea that the audience reacted as Text 1 describes. Text 2 goes on to explain that this factually questionable description likely persists because it functions as a "founding myth" that reinforces a widespread belief in the profoundly transformative nature of the invention of film. This indicates that the author of Text 2 would likely see the description in Text 1 as motivated primarily by cultural perceptions about film's significance rather than by documented historical facts.

Choice B is incorrect because the author of Text 2 doesn't suggest that film historians regard the view about film's transformative nature as naïve. On the contrary, Text 2 states that the story of the first showing of *Arrival of the Train* has become "canonical, even among film historians," indicating that historians broadly accept this narrative as a compelling illustration of film's impact, not that they regard either the narrative or the views it conveys about the transformative nature of film as naïve. Text 2 refers to a "(naïve) 'before'" in cultural history, but this is describing how

the myth itself characterizes pre-film audiences, not how historians regard views about the transformative nature of film. **Choice C is incorrect**. While the author of Text 2 does indicate that the story of the audience's reaction to *Arrival of the Train* described in Text 1 is a myth that lacks evidence, the text doesn't suggest that the story reflects the fact that film historians believe themselves to be more sophisticated than modern audiences are. Rather, Text 2 suggests that the story persists because of a collective cultural belief, which historians share, in the profound impact of the invention of film. Moreover, the "naïve" versus "sophisticated" distinction mentioned in Text 2 refers to how the myth characterizes audiences before and after the invention of film; it doesn't characterize modern audiences versus film historians. **Choice D is incorrect**. Although the author of Text 2 would agree that the description of the first showing of *Arrival of the Train* in Text 1 reflects a misconception, the author wouldn't agree that widespread belief in the misconception can be attributed to the fact that it accurately captures early audiences' actual sense of alarm. In fact, the misconception identified by the author of Text 2 concerns the accuracy of the audience's alleged reaction; the author questions whether early audiences were alarmed at all, stating there is "no contemporary evidence" that they reacted in this way. According to Text 2, the description is widely believed not because it accurately captures historical reactions but because it serves as a "founding myth" that supports a belief in film's transformative cultural impact.

47 Correct answer **B** Hard ‹ Back to question

B Is the increase in Mo in that portion indicative of an increase in atmospheric oxygen dating to the same time?

Choice B is the best answer because Anbar et al. and Slotznick et al. would most likely disagree about whether the molybdenum (Mo) increase indicates atmospheric oxygen levels specifically at 2.5 Ga. Anbar et al. conclude that the Mo increase they found "at a point corresponding to roughly 2.5 billion years ago" means that "atmospheric oxygen briefly increased 2.5 Ga, then returned to its earlier negligible level," directly linking the timing of the Mo increase to contemporaneous atmospheric oxygen levels. In contrast, Slotznick et al. discovered volcanic debris and microfractures in the rock core and "assert that fluid could have reached the debris through the microfractures and initiated oxidative weathering long after debris deposition." If, as Slotznick asserts, the Mo detected at the 2.5 Ga portion could have been deposited there much later through weathering processes, then the Mo increase wouldn't necessarily indicate atmospheric oxygen levels at 2.5 Ga specifically.

Thus, Anbar et al. and Slotznick et al. disagree on whether the increase in Mo in the portion of the rock core corresponding to 2.5 Ga is indicative of an increase in atmospheric oxygen dating to the same time.

Choice A is incorrect because neither research team's findings directly address atmospheric oxygen levels before 2.5 Ga. Anbar et al. conclude that oxygen "returned to its earlier negligible level" after 2.5 Ga, implying low pre–2.5 Ga levels, while Slotznick et al. focus on explaining the Mo increase through later weathering processes rather than making claims about earlier atmospheric conditions. **Choice C is incorrect** because both research teams would likely agree that the Mo increase is attributable to oxidative weathering. Anbar et al. state that "Mo is released mainly through oxidative weathering of minerals," and Slotznick et al. also reference "oxidative weathering" as the process that released Mo from the

volcanic debris. Their disagreement concerns the timing of this weathering, not whether oxidative weathering is responsible. **Choice D is incorrect** because Slotznick et al. don't suggest that bulk chemical analysis created a false impression about the presence of increased Mo. They acknowledge that the Mo increase exists but offer a different explanation for its timing and source. They critique bulk analysis for occluding "contextual details" that would require another kind of analysis to uncover, not for producing inaccurate measurements of Mo levels.

48 Correct answer **D** — Hard — Back to question

D By pointing out that Moore would assert that external world skepticism is at odds with other beliefs those proponents must unavoidably hold

Choice D is the best answer. According to the author of Text 1, Moore's definition of common sense—things we instinctively know are true—includes the belief that we all "exist in a world with other objects." The author of Text 1 describes this notion as both "obvious" and "groundbreaking." So it's safe to infer that the author would observe that Moore would respond to external world skeptics by arguing that since everyone instinctively knows that things exist outside of their own minds, then external world skepticism must be wrong.

Choice A is incorrect. We can't infer that the author of Text 1 would respond this way to external world skeptics. If anything, the author of Text 1 seems to agree with Moore. **Choice B is incorrect**. We can't infer that the author of Text 1 would respond this way to external world skeptics. The author of Text 1 never mentions external world skeptics directly, let alone why they have a hard time refuting Moore's position. **Choice C is incorrect**. We can't infer that the author of Text 1 would respond this way to external world skeptics. Text 1's presentation of Moore's concept of common sense only includes the idea that some facts are true based on instinct—it doesn't mention the idea that some proofs are inadequate based on instinct.

49 Correct answer **A** — Hard — Back to question

A As failing to consider Ellison's and Morrison's equivalent uses of the sermon within the wider cultural context in which they wrote

Choice A is the best answer. The author of Text 2 argues that Morrison's use of the sermon is not only influenced by Ellison, but also by a "community-wide strategy of resistance" to literary conventions practiced by Black American authors. Ellison, Text 2 alleges, is only one of many influences on Morrison.

Choice B is incorrect. Neither text specifically mentions sermons in works by authors other than Morrison or Ellison, only a tendency towards eroding "the division between oral and written forms" among Black American writers. **Choice C is incorrect**. Both texts describe similarities between the works of Ellison and Morrison, and neither points out instances of divergence. Text 2 simply suggests that Morrison was influenced by more than just Ellison. **Choice D is incorrect**. While Text 2 does discuss Morrison's resistance to certain literary conventions, it's unclear what it would mean for the underlined claim to be "indebted" to that tradition. This choice recycles language from the text, but not in a way that makes any coherent point.

50 Correct answer **C** — Hard — Back to question

C By acknowledging that *Orlando* clearly differs from Woolf's other major novels but insisting on its centrality to her body of work nonetheless

Choice C is the best answer because it reflects how the author of Text 2 would most likely respond to the assessment of *Orlando* in Text 1. Both authors agree that *Orlando* is unusual for Woolf: Text 1 states that the novel examines its characters' psychologies more superficially than Woolf's other novels do, and Text 2 describes it as being lighter in tone. However, while Text 1 calls *Orlando* an "oddity" and mentions that Woolf "began it as a joke," Text 2 asserts that *Orlando* engages the same themes as Woolf's other great novels. Hence, the author of Text 2 would most likely accept that *Orlando* differs from Woolf's other novels but would also insist on its importance in the context of Woolf's work as a writer.

Choice A is incorrect. Text 2 does suggest that the humor in *Orlando* is effective. However, there's nothing in Text 2 to suggest that the author would agree that Woolf's talents were best suited to serious novels. Rather, the author of Text 2 compares *Orlando* favorably to other novels by Woolf that are implied to be darker in tone. **Choice B is incorrect** because the author of Text 2 does not indicate that *Orlando* is less impressive than Woolf's other novels, but instead points out that it engages the same themes as other novels by Woolf that are considered classics. **Choice D is incorrect** because there's nothing in Text 1 or Text 2 to suggest that readers have generally ignored *Orlando* because of its reputation.

51 Correct answer **B** — Hard — Back to question

B It is overly optimistic given additional observations from Srivastava and her team.

Choice B is the best answer because it reflects how the author of Text 2 would most likely respond to Text 1 based on the information provided. Text 1 discusses the discovery of a regeneration-linked gene, EGR, in both three-banded panther worms (which are capable of full regeneration) and humans (who have relatively limited regeneration abilities). Text 1 characterizes this discovery as "especially promising" and a sign of "exciting progress" in understanding human regeneration. The author of Text 2, on the other hand, focuses on the fact that the team that reported the EGR finding pointed out that while EGR's function in humans isn't yet known, it's likely very different from its function in panther worms. Therefore, the author of Text 2 would most likely say that Text 1's enthusiasm about the EGR discovery is overly optimistic given Srivastava's team's observations about EGR in humans.

Choice A is incorrect because the author of Text 2 explains that Srivastava and her team explicitly reported that they haven't yet identified how EGR functions in humans; therefore, the author of Text 2 wouldn't say that Text 1's excitement is reasonable for the stated reason. Instead, the author of Text 2 would likely characterize Text 1's excitement as premature and overly optimistic. **Choice C is incorrect** because Text 1 does treat Srivastava's team's findings with enthusiasm; it describes the discovery of EGR in both three-banded panther worms and humans as promising and exciting. It would be illogical for the author of Text 2 to say that because most others treat the discovery with enthusiasm, Text 1's enthusiastic characterization of the discovery is unexpected. **Choice D is incorrect** because Text 1 isn't at all dismissive of Srivastava's team's

findings; instead, Text 1 is optimistic about the EGR discovery, characterizing it as promising and exciting. There's nothing in Text 2 to suggest that the author of Text 2 would say that Text 1's praise for the discovery is dismissive, or disdainful.

52 Correct answer **D** — Hard — Back to question

D By cautioning that the theory overlooks certain important aspects of how the script functioned

Choice D is the best answer. Lacadena's theory is that Nahuatl script symbols signified syllables, but the consensus described in Text 2 is that they can signify either symbols or full words, depending on the context. So the author of Text 2 would likely consider Lacadena's theory too simplistic: it's missing the importance of the context in determining the meaning of a symbol.

Choice A is incorrect. This conflicts with Text 1's description of Lacadena's theory. Lacadena's theory is that Nahuatl script symbols signified syllables. **Choice B is incorrect**. This conflicts with Text 1's description of Lacadena's theory. Text 1 states that Lacadena's theory differed from what earlier scholars believed. **Choice C is incorrect**. We can't infer that this is how the author of Text 2 would characterize Lacadena's theory. Neither text mentions how or even if the script changed over time.

53 Correct answer **B** Hard ‹ Back to question

B The author of Text 1 believes that the scope of Tuchman's research led her to an incorrect interpretation, while the author of Text 2 believes that Tuchman's central argument is overly simplistic.

Choice B is the best answer. Both texts are critical of *The Guns of August*, but for different reasons: the author of Text 1 argues that Tuchman missed an important factor leading up to the war because she didn't consult secondary sources, and the author of Text 2 argues that Tuchman's main thesis is "reductive," which is a close synonym for "overly simplistic."

Choice A is incorrect. This doesn't accurately describe the difference. This choice's summary of Text 1 is accurate, but Text 2 never says that Tuchman's most interesting claims result from her original research. **Choice C is incorrect**. This doesn't accurately describe the difference. Text 1 never says that *The Guns of August* is worthwhile to read despite its research weaknesses. Text 2 does call out a weakness of Tuchman's interpretation of events, but it also praises her analysis of primary sources. **Choice D is incorrect**. This doesn't accurately describe the difference. Text 1 actually says that Tuchman "fails to address" the influence of events in Eastern Europe, while Text 2 says that Tuchman's thesis was that European powers (not Eastern European leaders) were committed to military plans.

54 Correct answer **D** Hard ‹ Back to question

D By noting that while the claim is persuasive, the findings of Luzuriaga-Neira's team provide stronger evidence for it than the findings of the genetic analysis conducted by Storey do

Choice D is the best answer because it accurately describes how the author of Text 2 would most likely respond to the underlined claim in Text 1. Text 1 indicates that Storey found a genetic mutation in South American chickens from before the European invasion and in Polynesian chickens, which implies that chickens were first brought to South America by Polynesian people. Text 2 explains that the genetic mutation Storey found is in chickens from all over the world, thus undercutting the mutation as evidence of a Polynesian origin. However, Text 2 goes on to say "[m]ore recently" Luzuriaga-Neira and colleagues found multiple genetic markers shared by South American and Polynesian chickens but "that European breeds lack," which strongly suggests a Polynesian origin for the South American chickens. This indicates that the author of Text 2 believes Luzuriaga-Neira's evidence for a Polynesian origin is compelling while Storey's evidence has been undermined. Thus, the author of Text 2 would most likely agree with the underlined statement and believes Luzuriaga-Neira and colleagues' evidence for the statement is stronger than Storey's evidence is.

Choice A is incorrect because both texts indicate that chickens were introduced to South America before the arrival of Europeans. Text 1 states that the El Arenal chicken bone dates from "1321–1407 CE—over a century before Europeans invaded the region" and concludes that these chickens were likely brought to South America by Polynesians. While Text 2 is not as explicit about the time period as Text 1 is, nothing in Text 2 undermines the timing of events ascribed to Storey's account in Text 1. **Choice B is incorrect** because both texts agree that chickens were first brought to South America by Polynesian peoples (the underlined claim), and nothing in Text 2 suggests that this claim is in any way deficient because the possibility that animals could have been transferred from South America to Polynesia was not explicitly addressed. **Choice C is incorrect** because the criticism that Text 2 raises about the ideas in Text 1 is specifically about whether the single genetic mutation cited by Storey in fact supports the idea of a Polynesian origin for South American chickens. There is nothing in Text 2 to suggest that the underlined sentence (Storey's conclusion) is deficient because it is based on an assumption about the genetic uniformity of European chickens.

55 Correct answer **A** — Hard — Back to question

A By suggesting that curiosity may not be exclusively motivated by the desire to merely acquire information

Choice A is the best answer. The researchers in Text 2 recognize that acquiring information is a powerful motivator, but showed that this motivation can still be affected by other factors, like whether or not the information is expected to be useful or not. This suggests that other desires may play a part in driving people to acquire information.

Choice B is incorrect. The consensus view in Text 1 is that people acquire information regardless of whether they think they can use it later. Dubey and colleagues acknowledge this fact (so they don't claim people seek out information "only" because it might be useful later). **Choice C is incorrect**. This choice misreads the results of Dubey and colleagues' study in Text 2. Neither text discusses the difficulty of determining the motivation for information-seeking. **Choice D is incorrect**. This choice contradicts Text 2, which starts with Dubey and colleagues "acknowledging that acquiring information is a powerful motivator" (i.e., agreeing that curiosity explains the seeking of apparently purposeless information). The research in Text 2 simply suggests that more than just curiosity can motivate information-seeking behavior when the information has a purpose.

56 Correct answer **B** — Hard — Back to question

B By disputing the idea that developments in social structures have followed a linear progression through distinct stages

Choice B is the best answer because it describes the most likely way that Graeber and Wengrow (Text 2) would respond to the "conventional wisdom" presented in Text 1. According to Text 1, the conventional wisdom about human social systems is that they developed through stages, beginning with hunter-gatherer bands, then moving to clan associations, then chiefdoms, and finally arriving at states with bureaucratic structures. Text 2 indicates that Graeber and Wengrow believe that human social systems have been flexible, shifting between different types of structures, including both hierarchical and collective systems, and that these shifts may have even occurred seasonally. This suggests that Graeber and Wengrow would dispute the idea that developments in social structures have followed a linear progression through distinct stages.

Choice A is incorrect because nothing in Text 2 suggests that Graeber and Wengrow believe that decentralized collective societies are more significant than hierarchical systems. Text 2 is focused on Graeber and Wengrow's view that humans have flexibly shifted among various social structures, not on the importance of particular structures relative to others. **Choice C is incorrect** because Text 2 doesn't include any information suggesting that Graeber and Wengrow believe that hierarchies didn't emerge until after the rise of agriculture. In fact, Text 2 indicates that Graeber and Wengrow cite evidence suggesting that some hunter-gatherer groups formed social structures with hierarchical elements ("communities that included esteemed individuals") 50,000 years ago, long before the rise of agriculture, which Text 1 says occurred around 12,000 years ago. **Choice D is incorrect** because there's no information in Text 2 suggesting that Graeber and Wengrow would challenge the assumption that groupings of hunter-gatherers were among the earliest forms of social structure. Although Text 1 does indicate that hunter-gatherer groups are assumed to be the earliest human social system, Text 2 says only that Graeber and Wengrow believe that some hunter-gatherer groups made use of different social structures at different times. Text 2 doesn't imply that Graeber and Wengrow doubt that hunter-gatherer groups preceded most other social structures.

57 Correct answer **A** — Hard — Back to question

A By stating that the chemical composition of the atmosphere of the hycean candidate Madhusudhan et al. identified suggests that this planet's surface is unlikely to harbor liquid water

Choice A is the best answer because it reflects how Tsai et al. would most likely respond to Madhusudhan et al.'s identification of K2-18 b as a hycean candidate. Text 1 establishes that the habitable zone (HZ) for potential hycean planets, which are typified by abundant liquid water and hydrogen-rich atmospheres, represents "the distance from a star that allows a planet to

retain liquid water on its surface" and is estimated to begin at about 1 astronomical unit (AU). Based on this characterization of the HZ, Madhusudhan et al. identified K2-18 b as a hycean candidate whose location falls on the "inner edge" of the HZ—implying that its distance from its star is about 1 AU. However, Text 2 presents Tsai et al.'s claim that the same hydrogen-rich atmospheres that typify K2-18 b and other hycean candidates "admit wavelengths of light that cause elevated surface temperatures and increased water evaporation," phenomena that would be exacerbated by proximity to their host stars. Tsai et al. instead placed the inner edge of the HZ "as far out as 3.85 AU," implying that hycean candidates at lesser distances from their stars would be unlikely to maintain liquid oceans because of elevated surface temperatures and subsequent water evaporation. According to Tsai et al.'s HZ estimate, K2-18 b—at roughly 1 AU—would be too close to its star to retain liquid water. Therefore, based on the details in the texts, Tsai et al. would most likely respond that the very atmospheric composition that defines K2-18 b as a hycean candidate suggests that it is unlikely to harbor liquid water on its surface.

Choice B is incorrect. In contrast to the suggestion that Madhusudhan et al.'s estimates of the surface temperature of hycean candidates are "likely too high," Tsai et al.'s findings suggest the opposite: earlier assessments of the HZ didn't fully account for the warming effect of wavelengths of light admitted by these planets' hydrogen-rich atmospheres, which is why Tsai et al. placed the edge of the HZ farther out. The information in Text 2 therefore suggests that Tsai et al. would view Madhusudhan et al.'s temperature estimates as too low rather than as too high. **Choice C is incorrect** because neither text discusses other types of planets with hydrogen-rich atmospheres or compares them to hycean candidates. It therefore doesn't follow from the information in the texts that Tsai et al. would observe that most other hydrogen-rich planets are likely within the HZ. Text 2 only indicates that the HZ for hycean candidates begins at about 3.85 AU and that K2-18 b therefore isn't likely to be within the HZ, not that other planets with hydrogen-rich atmospheres are mostly located within the HZ. **Choice D is incorrect** because it mischaracterizes Tsai et al.'s findings. Rather than indicating that K2-18 b and other hycean candidates are "too far from the stars they orbit," Tsai et al.'s findings suggest the opposite problem. Because these planets' hydrogen-rich atmospheres admit wavelengths of light that cause elevated temperatures and water evaporation at distances of less than 3.85 AU, Tsai et al. would be more likely to argue that K2-18 b (at a distance of about 1 AU) and planets like it are too close to their stars, not too far from them. Moreover, Text 2 doesn't suggest anything about hycean candidates more generally being unable to support life, only that hycean candidates at distances less than 3.85 AU from their stars, like K2-18 b, likely don't have the liquid water needed to sustain life. Presumably, hycean candidates that are within the HZ described by Tsai et al. could harbor liquid oceans necessary for supporting life.

58 Correct answer **D** Hard ‹ Back to question

D Lewis's works are varied in the subjects they depict.

Choice D is the best answer. Author 1 acknowledges that Lewis sculpted other subjects besides historical and mythical figures, suggesting a variety of subjects depicted. Author 2 mentions that Lewis carved portrait busts as well as historical sculptures, which also implies variation among Lewis's subjects.

Choice A is incorrect. Neither text suggests that Lewis's portrait busts have received more attention or appreciation than her other work. Author 1 briefly mentions her "other works," but mostly focuses on her historical and mythical works. Author 2 states that art historians have typically ignored her portrait busts, which suggests that they haven't overshadowed her other work. **Choice B is incorrect**. Neither text explicitly states that *The Death of Cleopatra* is Lewis's most famous piece. Author 1 mentions it as one example of her historical works, but does not single it out as being more important or influential than *Hagar*. Author 2 does not mention it at all, focusing instead on her portrait busts. **Choice C is incorrect**. This choice isn't supported by the texts. Neither text suggests that sculpting historical figures was a trend that faded quickly.

59 Correct answer **A** Hard ‹ Back to question

A By arguing that it is based on a misconception about phytoplankton species competing with one another

Choice A is the best answer because based on Text 2, it represents how Behrenfeld and colleagues would most likely respond to the "conventional wisdom" discussed in Text 1. The conventional wisdom cited holds the opinion that when there is species

diversity within a phytoplankton population, "one species should emerge after outcompeting the rest"—that is, after being so successful in competing for resources that the other species vanish from the population. However, Text 2 explains that according to Behrenfeld and colleagues, phytoplankton are so small and spaced so far apart in the water that there is "much less" direct competition for resources within phytoplankton populations than scientists had previously thought.

Choice B is incorrect because Text 2 never discusses whether routine replenishment of ocean nutrients affects competition between phytoplankton species. **Choice C is incorrect** because the interspecies competition discussed in both texts is specifically between phytoplankton species, and neither text considers whether phytoplankton compete for resources with larger nonphytoplankton species. **Choice D is incorrect** because according to Text 2, Behrenfeld and colleagues argue that water density decreases, not increases, competition between phytoplankton species.

60 Correct answer **D** Hard Back to question

D That behavior might be adequately explained without suggesting that the magpies were attempting to assist the other magpie.

Choice D is the best answer because it reflects how the author of Text 2 would most likely respond to the researchers' perspective in Text 1 on the behavior of the magpies without trackers. According to Text 1, Dominique Potvin and colleagues observed magpies without trackers pecking at a tracker on another magpie until the device fell off. The researchers suggested that the birds might have been attempting to help the other bird, with no benefit to themselves. Text 2 generally discusses scenarios in which animals have been observed removing trackers from each other. The text cautions that it shouldn't be assumed that these animals are helping one another deliberately, since they might simply be pecking at trackers out of curiosity, causing them to fall off eventually. Therefore, the author of Text 2 would most likely respond to Potvin and colleagues' perspective in Text 1 by saying that the behavior of the magpies without trackers could be adequately explained without suggesting that they were attempting to assist the other magpie.

Choice A is incorrect because Text 2 never discusses the novelty, or the newness and unusual quality, of the captive settings in which animals have been observed to remove trackers from other animals, nor does it suggest that such novelty might account for this behavior. Instead, the text suggests that it's the novelty of the tracking equipment itself that might cause the behavior: interested in the trackers because they're unusual, animals might paw or peck at them until they fall off. **Choice B is incorrect** because Text 2 never suggests that when animals remove trackers from other animals, they do so because they wish to obtain the trackers for themselves. Instead, Text 2 argues that animals paw or peck at trackers because they are merely curious about them. **Choice C is incorrect** because Text 2 doesn't argue that when captured animals are

observed removing trackers from each other, their behavior should be regarded as selfless only if all of them participate in it. Instead, the text argues that the behavior may not be selfless at all and may instead be attributed to animals' curiosity about the new and unusual trackers.

61 Correct answer **D** Hard Back to question

D As a point of connection between London and the countryside, King's Cross suggests to Margaret the possibility of experiencing the intangible abundance promised by the kinds of authentic engagements that the novel's rural spaces seem to offer.

Choice D is the best answer because it presents a statement about King's Cross, as depicted in Text 1, that the author of Text 2 would most likely agree with. In Text 1, Margaret associates King's Cross with "Infinity" and sees its arches as portals for an adventure whose value transcends London's mundane materialism. The author of Text 2 provides an interpretation of the novel's geography that is consistent with Margaret's vision, explaining that London represents capitalist materialism while the countryside—"accessible via King's Cross"—fosters idealism, authentic connection, and the aesthetic ("the infinite"). By characterizing King's Cross as a "point of connection between London and the countryside" that

offers access to the "intangible abundance" promised by "the novel's rural spaces," choice D provides a reading of the railway terminal that aligns with the interpretive framework set up by the author of Text 2.

Choice A is incorrect because Margaret views King's Cross positively—as evoking infinity and eternal adventure—not as a sign of capitalism's dominance. Text 1 characterizes St. Pancras's splendors as "facile," or superficial, so that the contrast elevates King's Cross rather than signaling materialism's ascendancy. **Choice B is incorrect** because the author of Text 2 positions King's Cross as a gateway to the countryside's idealism, not as a vehicle for materialism intruding into rural spaces. Margaret's sense of wonder at the station arises from her sense that it offers access to the countryside's idealism rather than to London's materialism. **Choice C is incorrect** because nothing in Text 1 suggests Margaret is disillusioned; her perception of King's Cross is defined by expansive possibility, not resignation. Moreover, Margaret finds the austerity of King's Cross (relative to St. Pancras) appealing—its unpretentious appearance resonates with her attitude toward the "materialism of life."

09 Specific Detail

What the text says or shows

Specific detail asks you for one fact from the text. The catch is that the questions are never fixed: any detail in the text can be the one, so you cannot revise for it. You can only read well.

> These last types are the ones a method cannot carry on its own. There is no rule to apply and no pattern to spot. The steps keep you out of the traps, but the reading is the work.

76 questions | 24 Easy | 25 Medium | 27 Hard

THE STEPS

1. Read the question and know what it is asking.
2. Read the whole text.
3. Read the answers.

WHAT TO TAKE FROM THIS

- This is the one reading type where the question comes before the text. Knowing what you are hunting for changes how you read the passage.
- Read the whole text anyway. The detail is rarely where you expect it, and the sentence around it usually decides between two close choices.
- The answer is in the text, said in different words. You are matching meaning, not matching words.
- A choice that borrows words from the passage is not safer for it. That is often exactly the trap.
- This type rewards reading carefully once, and nothing else.

Answers & explanations	760

EASY 24 questions

The following text is from Jane Austen's 1811 novel *Sense and Sensibility*. Elinor lives with her younger sisters and her mother, Mrs. Dashwood.

Elinor, this eldest daughter, whose advice was so effectual, possessed a strength of understanding, and coolness of judgment, which qualified her, though only nineteen, to be the counsellor of her mother, and enabled her frequently to counteract, to the advantage of them all, that eagerness of mind in Mrs. Dashwood which must generally have led to imprudence. She had an excellent heart;—her disposition was affectionate, and her feelings were strong; but she knew how to govern them: it was a knowledge which her mother had yet to learn; and which one of her sisters had resolved never to be taught.

ID 3543e6e2

1 Mark for Review Easy Explanation ›

According to the text, what is true about Elinor?

(A) Elinor often argues with her mother but fails to change her mind.

(B) Elinor can be overly sensitive with regard to family matters.

(C) Elinor thinks her mother is a bad role model.

(D) Elinor is remarkably mature for her age.

When fashion designer Lloyd Henri Kiva New opened his store in Scottsdale, Arizona, in 1945, he quickly became known for creating delicately crafted leather goods, like belts and hats. He was perhaps most renowned for his colorful handbags, which he made by hand using a long and painstaking process. As he gained more customers, New began using sewing machines and other tools to help him produce bags more efficiently, though he continued to handcraft the crucial details that made each bag unique.

ID cf956802

2 Mark for Review Easy Explanation ›

Based on the text, what would have been the most likely consequence if New had not begun using sewing machines?

(A) He would have been unable to ensure that each bag included unique, handcrafted details.

(B) He would have struggled to meet the increasing demand for his bags.

(C) He would have had to individually design each bag he produced.

(D) He would not have been able to generate as much interest in his bags.

Scent is tightly interwoven with our daily lives, often evoking significant memories and important social events. This connection is of growing interest to archaeologists who hope to use it to better understand ancient rituals, trade, social hierarchies, and medicine. Although the speed at which odor molecules dissipate makes identifying ancient scents challenging, advancements in biomolecular technologies show promise in unlocking ancient aromas from preserved artifacts. Archaeological studies making use of these advancements may provide new insights into past societies.

ID 8a8236e1

3 Mark for Review — Easy — Explanation ›

According to the text, what is one reason some archaeologists are interested in recovering scents from ancient artifacts?

(A) They are investigating whether people's sense of smell has declined in recent centuries.

(B) They believe the scents could illuminate important aspects of ancient life.

(C) They think that ancient scents would be enjoyable to people today.

(D) They hope to develop new medicines using ancient scent molecules.

Stores often play background music to create a pleasant shopping experience. Based on a survey, Amir Manzoor found that such music was linked to reduced enjoyment among customers. Manzoor thinks that one explanation for this result is that the surveyed customers may have wanted to finish their shopping as quickly as possible. They therefore weren't focused on enjoying the experience. It's possible that background music could improve the experience of other customers whose main goal is to have a good time while they shop.

ID c6d7dc78

4 Mark for Review — Easy — Explanation ›

Based on the text, which research question was Manzoor's study most likely intended to answer?

(A) Does the volume of a store's background music affect how much time customers spend in the store?

(B) How does the use of background music in stores affect customers' shopping experience?

(C) Do customers spend more money when shopping for music in stores or online?

(D) What genres of music do customers prefer to listen to while they are shopping?

The following text is adapted from Edith Nesbit's 1906 novel *The Railway Children*.

Mother did not spend all her time in paying dull [visits] to dull ladies, and sitting dully at home waiting for dull ladies to pay [visits] to her. She was almost always there, ready to play with the children, and read to them, and help them to do their home-lessons. Besides this she used to write stories for them while they were at school, and read them aloud after tea, and she always made up funny pieces of poetry for their birthdays and for other great occasions.

ID c228bd45

5 Mark for Review — Easy — Explanation ›

According to the text, what is true about Mother?

(A) She wishes that more ladies would visit her.

(B) Birthdays are her favorite special occasion.

(C) She creates stories and poems for her children.

(D) Reading to her children is her favorite activity.

The following text is from Laila Lalami's 2019 novel *The Other Americans*. The narrator is a member of her middle school's jazz band.

> One day the jazz band was invited to perform at the Summer Festival in Palm Springs. Walking across the stage to the piano, I did
> what my teacher had advised. Pretend you're only playing for one person. That way you won't be so nervous. I glanced at my
> father, who sat in the front row, leaning his head just so, waiting. Then I closed my eyes, and began to play.

©2019 by Laila Lalami

ID 82d2436a

6 Mark for Review Easy Explanation ›

According to the text, what does the narrator do as she walks across the stage?

(A) She thinks about the differences between playing the piano alone and playing in a band.

(B) She feels excitement about playing in a music festival for the first time.

(C) She remembers how hard she has practiced for the performance.

(D) She follows her teacher's advice about managing her nervousness.

The following text is adapted from Oscar Wilde's 1891 novel *The Picture of Dorian Gray*. Dorian Gray is taking his first look at a portrait that Hallward has painted of him.

Dorian passed listlessly in front of his picture and turned towards it. When he saw it he drew back, and his cheeks flushed for a moment with pleasure. A look of joy came into his eyes, as if he had recognized himself for the first time. He stood there motionless and in wonder, dimly conscious that Hallward was speaking to him, but not catching the meaning of his words. The sense of his own beauty came on him like a revelation. He had never felt it before.

ID baef99a5

7 Mark for Review Easy Explanation ›

According to the text, what is true about Dorian?

(A) He wants to know Hallward's opinion of the portrait.

(B) He is delighted by what he sees in the portrait.

(C) He prefers portraits to other types of paintings.

(D) He is uncertain of Hallward's talent as an artist.

In 2014, Amelia Quon and her team at NASA set out to build a helicopter capable of flying on Mars. Because Mars's atmosphere is only one percent as dense as Earth's, the air of Mars would not provide enough resistance to the rotating blades of a standard helicopter for the aircraft to stay aloft. For five years, Quon's team tested designs in a lab that mimicked Mars's atmospheric conditions. The craft the team ultimately designed can fly on Mars because its blades are longer and rotate faster than those of a helicopter of the same size built for Earth.

ID 78b265b2

8 Mark for Review Easy Explanation ›

According to the text, why would a helicopter built for Earth be unable to fly on Mars?

(A) Because Mars and Earth have different atmospheric conditions

(B) Because the blades of helicopters built for Earth are too large to work on Mars

(C) Because the gravity of Mars is much weaker than the gravity of Earth

(D) Because helicopters built for Earth are too small to handle the conditions on Mars

The following text is adapted from Sylvia Acevedo's 2018 memoir *Path to the Stars: My Journey from Girl Scout to Rocket Scientist.* The narrator is traveling by car with her family to Mexico City. Mario and Laura are her brother and sister.

> Mario and I played games to see how many different license plates we could spot, and Laura liked to look for children in the back seats of the cars we passed. We were used to the forty-five-minute drive to El Paso and familiar with the six-hour ride to Chihuahua, but I wondered what the long journey to Mexico City would be like.

©2018 by Sylvia Acevedo

ID 487a05f8

9 Mark for Review Easy Explanation ›

According to the text, what did the narrator and Mario do while riding in the car?

(A) They read books.
(B) They sang songs.
(C) They went to sleep.
(D) They played games.

The following text is from David Barclay Moore's 2022 novel *Holler of the Fireflies*. The narrator has just arrived at summer camp, which is far away from his home.

> This place was different than I thought it would be. I'd never been somewhere like this before. I did feel scared, but also excited.

©2022 by David Barclay Moore

ID 40630cef

10 Mark for Review Easy Explanation ›

According to the text, how does the narrator feel about being at summer camp?

(A) He feels overjoyed.
(B) He feels peaceful.
(C) He feels both scared and excited.
(D) He feels both angry and jealous.

The average age at which people in the United States start businesses is 35. Economist Andrés Hincapié studied why young adults are relatively less likely to start businesses and whether there are ways to increase entrepreneurship in early adulthood. Hincapié found that one impediment is lack of knowledge about the practical details of how businesses are started; he further found that simply providing young adults with good informational resources on the topic significantly alleviates this problem.

ID b168ce48

11 Mark for Review Easy Explanation ›

Based on the text, what would Hincapié most likely say is a promising way to increase entrepreneurship in early adulthood?

(A) Creating social networks of young adults who are interested in starting a business
(B) Encouraging young adults to brainstorm business ideas
(C) Providing young adults with practical information about how to start a business
(D) Giving young adults training opportunities at a variety of businesses

Artist Justin Favela explained that he wanted to reclaim the importance of the piñata as a symbol in Latinx culture. To do so, he created numerous sculptures from strips of tissue paper, which is similar to the material used to create piñatas. In 2017, Favela created an impressive life-size piñata-like sculpture of the Gypsy Rose lowrider car, which was displayed at the Petersen Automotive Museum in Los Angeles, California. The Gypsy Rose lowrider was famously driven by Jesse Valadez, an early president of the Los Angeles Imperials Car Club.

ID 89961e26

12 Mark for Review Easy Explanation ›

According to the text, which piece of Favela's art was on display in the Petersen Automotive Museum in 2017?

(A) A painting of Los Angeles
(B) A sculpture of a lowrider car
(C) A painting of a piñata
(D) A sculpture of Jesse Valadez

Xin Wang and colleagues have discovered the earliest known example of a flower bud in a 164-million-year-old plant fossil in China. The researchers have named the new species *Florigerminis jurassica.* They believe that the discovery pushes the emergence of flowering plants, or angiosperms, back to the Jurassic period, which occurred between 145 million and 201 million years ago.

ID 04bcb7a9

13 Mark for Review Easy Explanation ›

According to the text, how old was the fossil that Wang and colleagues discovered?

(A) 150 million years old
(B) 145 million years old
(C) 164 million years old
(D) 201 million years old

In 2022, researchers rediscovered ancient indigenous glyphs, or drawings, on the walls of a cave in Alabama. The cave's ceiling was only a few feet high, affording no position from which the glyphs, being as wide as ten feet, could be viewed or photographed in their entirety. However, the researchers used a technique called photogrammetry to assemble numerous photos of the walls into a 3D model. They then worked with representatives of tribes originally from the region, including the Chickasaw Nation, to understand the significance of the animal and humanoid figures adorning the cave.

ID de0a5b4e

14 Mark for Review Easy Explanation ›

According to the text, what challenge did the researchers have to overcome to examine the glyphs?

(A) The cave was so remote that the researchers couldn't easily reach it.
(B) Some of the glyphs were so faint that they couldn't be photographed.
(C) The researchers were unable to create a 3D model of the cave.
(D) The cave's dimensions prevented the researchers from fully viewing the glyphs.

In the 1960s, Chavela Vargas became an unlikely star in ranchera, a style of traditional Mexican music. Most ranchera singers had clear, polished voices and performed with a full band. But Vargas accompanied her raspy voice with just her guitar. Dressed in men's trousers and a poncho, she would perform classic songs that had been written from a male point of view and were usually sung by men. She also altered those songs by performing them much more slowly than other ranchera singers did. The slower tempo allowed her to express the emotional quality of the lyrics more fully.

ID 2287b040

15 Mark for Review Easy Explanation ›

According to the text, what is one way that Vargas differed from other ranchera singers?

(A) She possessed a voice that was clear and polished.

(B) She avoided singing songs written from a male point of view.

(C) She disliked performing classic songs.

(D) She altered classic songs by slowing them down.

The following text is from Shyam Selvadurai's 1994 novel *Funny Boy*. The seven-year-old narrator lives with his family in Sri Lanka. Radha Aunty is the narrator's aunt.

Radha Aunty, who was the youngest in my father's family, had left for America four years ago when I was three, and I could not remember what she looked like. I went into the corridor to look at the family photographs that were hung there. But all the pictures were old ones, taken when Radha Aunty was a baby or young girl. Try as I might, I couldn't get an idea of what she looked like now. My imagination, however, was quick to fill in this void.

©1994 by Shyam Selvadurai.

ID 6675c5c3

16 Mark for Review Easy Explanation ›

According to the text, why does the narrator consult some family photographs?

(A) He wants to use the photographs as inspiration for a story he is writing.

(B) He is curious about how his father dressed a long time ago.

(C) He hopes the photographs will help him recall what his aunt looked like.

(D) He wants to remind his aunt of an event that is shown in an old photograph.

It has long been thought that the original author of the US Pledge of Allegiance was Francis Bellamy, who said that he wrote the pledge one evening in August of 1892. But a historian recently discovered a newspaper article that was published several months before August 1892. The article describes students reciting the same pledge that Bellamy claims he first wrote in August. This means that Bellamy may not have created the pledge after all.

ID 0fd96039

17 Mark for Review Easy Explanation ›

Based on the text, what piece of knowledge about the Pledge of Allegiance has recently become uncertain?

(A) How many changes were made to the pledge in the 1900s

(B) The identity of the person who first wrote the pledge

(C) The name of the newspaper that first published the pledge

(D) Which part of the pledge students liked best in 1892

Archaeologist Veronica Waweru visited the Lewa Wildlife Conservancy in Kenya. While exploring there, Waweru noticed many rows of shallow pits carved into stone. Waweru believed the pits could have been used as game boards to play ancient versions of mancala, a two-person strategy game that is still popular today. Some of the more recent pits were carved on top of older pits. This led Waweru to think that the game was played at the site for a long time.

ID 2edd7ffe

18 Mark for Review Easy Explanation ›

According to the text, why does Waweru think that mancala was played at the site for a long time?

(A) Some of the newer pits were carved on top of the older pits.

(B) She noticed many rows of shallow pits carved into stone.

(C) She discovered the pits at the Lewa Wildlife Conservancy.

(D) Some of the pits were shallow and others were quite deep.

Oluwaseyi Moejoh cofounded U-recycle Initiative Africa when she was only a teenager. Moejoh and her team founded the organization to teach young people how their actions affect the environment and why recycling is important. For example, the organization put on an exhibit of art made using recycled materials.

ID 7921b86b

19 Mark for Review Easy Explanation ›

According to the text, what is one reason Moejoh and others founded U-recycle Initiative Africa?

(A) To bring attention to overlooked African artists

(B) To teach young people why recycling is important

(C) To help adults gain important outdoor skills

(D) To give teenagers advice about starting businesses

Hevea brasiliensis, a tree in the Amazon rainforest, is the world's main source of natural rubber. The tree produces a milky substance called latex that is used to make rubber. The bark of *Hevea brasiliensis* is helpful for the process of making rubber because it has a unique structure that makes it easy to collect latex. A network of tubes in the tree's inner bark helps the latex to flow out easily when people make small cuts into the bark.

ID bbfa2bb6

20 Mark for Review Easy Explanation ›

What feature of *Hevea brasiliensis* does the text say is helpful for the process of making rubber?

(A) Its latex produces rubber of an especially high quality.

(B) Its bark has a unique structure that makes it easy to collect latex.

(C) It is able to grow in a wide variety of climates around the world.

(D) It is one of only two trees in the Amazon that produce latex.

In the 1960s, Gloria Richardson led a movement to promote racial equality. Her involvement in this effort was inspired by her daughter, Donna Richardson. In 1961, Donna joined protests organized by the Student Nonviolent Coordinating Committee in Cambridge, Maryland. Following her daughter, Gloria joined these protests too. Gloria soon became the cochair of the Cambridge Nonviolent Action Committee. She was also the leader of what became known as the Cambridge movement.

ID 706046f7

21 Mark for Review — Easy — Explanation ›

According to the text, what did Gloria Richardson lead?

(A) The Cambridge movement

(B) Her daughter Donna's high school

(C) Protests to support environmental protections

(D) A new business in Cambridge, Maryland

The following text is from Beatrice Harraden's 1894 novel *Ships that Pass in the Night*.

> In an old second-hand bookshop in London, an old man sat reading Gibbon's *History of Rome*. He did not put down his book when the postman brought him a letter. He just glanced indifferently at the letter, and impatiently at the postman. Zerviah Holme did not like to be interrupted when he was reading Gibbon; and as he was always reading Gibbon, an interruption was always regarded by him as an insult.

ID 41d5c33e

22 Mark for Review — Easy — Explanation ›

Based on the text, how did Zerviah Holme most likely feel when the letter was delivered?

(A) He felt relieved because he had been expecting an important letter.

(B) He felt excited because the letter was from a good friend.

(C) He felt sad because the postman did not stop to talk with him before leaving.

(D) He felt annoyed because he was interrupted while reading his favorite author.

In the 1700s and 1800s, European composers experimented with volume in their musical works. They did so by increasing the number of musicians playing in the orchestra. For example, in some of his operas, German composer Richard Wagner added more horns, trombones, and tubas to the orchestra. With more instruments playing at the same time, the orchestra could play extremely loudly at key moments in his operas.

ID 748995b3

23 Mark for Review — Easy — Explanation ›

According to the text, how did Richard Wagner achieve moments of extremely high volume in his operas?

(A) By moving the performances of his operas from outdoor stages to indoor ones

(B) By increasing the number of musicians playing horns, trombones, and tubas in the orchestra

(C) By building a concert hall whose shape would cause sounds to echo

(D) By insisting that the singers undergo special training to sing for extended periods of time

To make her art more widely available, graphic artist Elizabeth Catlett turned to linocuts. In linocut printing, an artist carves an image into a sheet of linoleum to create a stamp that is used to mass-produce prints. In the linocut series *The Black Woman* (1946–1947), Catlett depicts the everyday experiences of Black women alongside the achievements of well-known Black women. This pairing invites the viewer to draw connections among the women. The linocut process enabled Catlett's work to reach a wide audience and supported her aim to unite Black women through her art.

ID a842db60

24 Mark for Review Easy Explanation ›

According to the text, what is significant about Catlett's use of linocut printing?

(A) Linocut printing involved using materials that were readily available to Catlett.

(B) Linocut printing helped Catlett use art to connect people, especially Black women.

(C) Catlett became commercially successful once she started using linocut printing.

(D) Catlett was one of the first Black artists to use linocut printing.

MEDIUM 25 questions

A common assumption among art historians is that the invention of photography in the mid-nineteenth century displaced the painted portrait in the public consciousness. The diminishing popularity of the portrait miniature, which coincided with the rise of photography, seems to support this claim. However, photography's impact on the portrait miniature may be overstated. Although records from art exhibitions in the Netherlands from 1820 to 1892 show a decrease in the number of both full-sized and miniature portraits submitted, this trend was established before the invention of photography.

ID 87aa7bab

25 Mark for Review Medium Explanation ›

Based on the text, what can be concluded about the diminishing popularity of the portrait miniature in the nineteenth century?

(A) Factors other than the rise of photography may be more directly responsible for the portrait miniature's decline.

(B) Although portrait miniatures became less common than photographs, they were widely regarded as having more artistic merit.

(C) The popularity of the portrait miniature likely persisted for longer than art historians have assumed.

(D) As demand for portrait miniatures decreased, portrait artists likely shifted their creative focus to photography.

During the World War II era, some Mexican American women adopted a striking new look called *pachuca* style. They wore altered men's jackets or zoot suits (wide-legged, long-coated suits) and dramatic makeup, and they combed their hair into high, rounded shapes. Some people criticized *pachuca* style, saying it was dangerous and women should dress traditionally. But historians see things differently. They see *pachuca* style as a form of rebellion against the era's rigid social expectations for women. They say that it showed a desire for self-expression and freedom on the part of women who adopted the style.

ID 8c1be131

26 Mark for Review Medium Explanation ›

According to the text, how do historians view *pachuca* style?

(A) They think that *pachuca* style was such a popular trend that it continues to influence fashion in the United States to the present day.

(B) They think that *pachuca* style was a way for some Mexican American women to express themselves and resist strict social expectations.

(C) They think that *pachuca* style was celebrated because it enabled some Mexican American women to show their support for the United States during World War II.

(D) They think that *pachuca* style was similar to other fashion trends that different groups of women adopted in the same period.

Utah is home to Pando, a colony of about 47,000 quaking aspen trees that all share a single root system. Pando is one of the largest single organisms by mass on Earth, but ecologists are worried that its growth is declining in part because of grazing by animals. The ecologists say that strong fences could prevent deer from eating young trees and help Pando start thriving again.

ID 92c2564d

27 Mark for Review Medium Explanation ›

According to the text, why are ecologists worried about Pando?

(A) It isn't growing at the same rate it used to.

(B) It isn't producing young trees anymore.

(C) It can't grow into new areas because it is blocked by fences.

(D) Its root system can't support many more new trees.

In a study by Mika R. Moran, Daniel A. Rodriguez, and colleagues, residents of Quito, Ecuador, and Lima, Peru, were surveyed about parks in their cities. Of the 618 respondents from Quito, 82.9% indicated that they use the city's parks, and of the 663 respondents from Lima, 72.7% indicated using city parks. Given that the percentage of Quito respondents who reported living within a 10-minute walk of a park was much lower than that reported by Lima respondents, greater proximity alone can't explain the difference in park use.

ID 2312021b

28 Mark for Review Medium Explanation ›

The text makes which point about the difference between the proportions of Quito residents and Lima residents using parks?

(A) It was much larger than the researchers conducting the study expected.

(B) It is caused by something other than the parks' proximity to city residents.

(C) It could be due to inaccuracies in the survey results.

(D) It was calculated using sources that predate the survey.

The following text is adapted from Countee Cullen's 1926 poem "Thoughts in a Zoo."

They in their cruel traps, and we in ours,
Survey each other's rage, and pass the hours
Commiserating each the other's woe,
To mitigate his own pain's fiery glow.
Man could but little proffer in exchange
Save that his cages have a larger range.
That lion with his lordly, untamed heart
Has in some man his human counterpart,
Some lofty soul in dreams and visions wrapped,
But in the stifling flesh securely trapped.

ID 2fdfe002

29 Mark for Review — Medium — Explanation

Based on the text, what challenge do humans sometimes experience?

A) They cannot effectively tame certain wild animals because of a lack of compassion.

B) They cannot focus on setting attainable goals because of a lack of motivation.

C) They quickly become frustrated when faced with difficult tasks because of a lack of self-control.

D) They have aspirations that cannot be fulfilled because of certain limitations.

Paleontologist Alan Tennyson and colleagues studied fossil bones found in New Zealand that are more than 55 million years old. The researchers determined that the fossil bones belonged to two previously unknown species of prehistoric penguins. Moreover, they estimated that one of the two penguin species was more than three times the size of the emperor penguin, which is the largest penguin species that exists today.

ID 0d81b7d9

30 Mark for Review — Medium — Explanation

Based on the text, which choice best describes the two previously unknown penguin species?

A) They are frequently studied by paleontologists.

B) They are no longer living species.

C) They were smaller than penguin species that exist today.

D) They spent little of their lives in water.

Historians point to the rule of the Piast dynasty as crucial to the formation of the Polish state. However, some differentiate between members of the dynasty like Mieszko II Lambert, who ruled as king from 1025 to 1031 CE, and less well-documented figures like Siemomysł, who is said to have ruled in the 10th century but whose historical actuality is disputed. Siemomysł appears in the *Gesta principum Polonorum*, a chronicle of medieval Polish history written between 1112 and 1118. However, the chronicle's documentation of Siemomysł relies on oral tradition, unlike its records of later rulers.

ID b38935ab

31 Mark for Review Medium Explanation ›

According to the text, what is a difference between how historians view Siemomysł and how they view Mieszko II Lambert?

(A) Historians agree that Mieszko II Lambert existed, but disagree about whether Siemomysł existed.

(B) Historians believe that the *Gesta principum Polonorum* provides more evidence for Siemomysł's existence than it does for Mieszko II Lambert's existence.

(C) Historians agree that Siemomysł ruled Poland much later than Mieszko II Lambert.

(D) Historians find the orally transmitted stories affirming the existence of Mieszko II Lambert to be more convincing than similar stories about Siemomysł.

Archaeologists have observed similarities in the tools, such as bidirectional blades, uncovered at the Neolithic-period Mesopotamian settlement of Çayönü Tepesi and those uncovered at roughly contemporaneous settlements elsewhere in Southwest Asia, including those in the South Levant, Central Anatolia, and Central Zagros. Although similarities in tools could be attributed to imitative behavior or trade, Nefize Ezgi Altınışık et al. found evidence of genetic affinity among the populations of Çayönü Tepesi, Central Anatolia, the South Levant, and—to a lesser extent—Central Zagros.

ID 640b60c2

32 Mark for Review Medium Explanation ›

Information in the text best supports which statement about the finding made by Altınışık et al.?

(A) It implies that people and tools likely arrived in Çayönü Tepesi from settlements in Central Anatolia and the South Levant at an earlier time than they did from settlements in Central Zagros.

(B) It raises the possibility that similarities in the design of tools found at Neolithic settlements in Southwest Asia emerged due to population blending between those settlements.

(C) It suggests that in the Neolithic period, people in the South Levant and Central Anatolia imitated tool designs originating in Çayönü Tepesi more frequently than people in Central Zagros did.

(D) It helps explain why contemporaneous Neolithic peoples in Southwest Asia had similar tools but lacked other obvious cultural similarities.

Readers sometimes divide the works of twentieth-century English author Evelyn Waugh into two periods: one consisting of his early satirical novels and the other consisting of his later, more serious—even ponderous—books. Critic Seamus Perry, however, challenges that strict division. Perry argues that Waugh's writing didn't change over time as much as some readers have suggested. For instance, Perry contends that some of Waugh's earliest works, notably his biography of artist Dante Gabriel Rossetti, exhibit the earnest romanticism that would characterize Waugh's later fiction.

ID 411739db

33 Mark for Review Medium Explanation ›

Based on the text, which statement about Waugh's works would Perry most likely agree with?

(A) Waugh's works can appropriately be separated into two periods by their subject matter and tone.

(B) Regardless of when they were written, Waugh's works have important similarities that transcend their differences.

(C) The earliest of Waugh's works exhibit a satirical tone, even if that tone is more apparent in Waugh's later works.

(D) Over time, Waugh's works became less humorous and more focused on weightier topics.

Algae living within the tissues of corals play a critical role in keeping corals, and the marine ecosystems they are part of, thriving. Some coral species appear brown in color when healthy due to the algae colonies living in their tissues. In the event of an environmental stressor, the algae can die or be expelled, causing the corals to appear white. To recover the algae, the bleached corals then begin to produce bright colors, which block intense sunlight, encouraging the light-sensitive algae to recolonize the corals.

ID d0fbf1ae

34 Mark for Review Medium Explanation ›

What does the text most strongly suggest about corals that produce bright colors?

(A) These corals have likely been subjected to stressful environmental conditions.

(B) These corals are likely more vulnerable to exposure from intense sunlight than white corals are.

(C) These corals have likely recovered from an environmental event without the assistance of algae colonies.

(D) These corals are more likely to survive without algae colonies than brown corals are.

The following text is from Anton Chekhov's 1898 short story "Ionitch" (translated by Marian Fell in 1915). The text is set in a Russian city referred to as the city of S.

> If newcomers to the little provincial city of S. complained that life there was monotonous and dull, its inhabitants would answer that, on the contrary, S. was a very amusing place, indeed, that it had a library and a club, that balls were given there, and finally, that very pleasant families lived there with whom one might become acquainted. And they always pointed to the Turkins as the most accomplished and most enlightened family of all.

ID d2c2a7ef

35 Mark for Review Medium Explanation ›

What does the text suggest about the Turkins?

(A) They are relative newcomers to the city of S.

(B) They have a unique status in the city of S.

(C) They have long disliked living in the city of S.

(D) They are amused by the other residents of the city of S.

The ancient writing system used in the Maya kingdoms of southern Mexico and Central America had a symbol for the number zero. The earliest known example of the symbol dates to more than 2,000 years ago. At that time, almost none of the writing systems elsewhere in the world possessed a zero symbol. And the use of zero in Mexico and Central America may be even more ancient. Some historians suggest that Maya mathematicians inherited it from the Olmec civilization, which flourished in the region 2,400–3,600 years ago.

ID 9fe7aafa

36 Mark for Review Medium Explanation ›

According to the text, what do some historians suggest about Maya civilization?

(A) Maya civilization acquired the use of zero from the Olmec civilization.

(B) Maya civilization respected its historians more than it respected its mathematicians.

(C) Maya civilization was highly secretive about its intellectual achievements.

(D) Maya civilization tried to introduce its writing system to other civilizations.

Given the immense scope of space, the search for extraterrestrial life is almost necessarily concentrated on the exoplanets deemed to have the most plausible chance of success—typically, atmosphere-bearing terrestrial planets orbiting within a certain range of their stars (termed the habitable zone). Claiming that Earth experienced a long transition from single-lid to plate tectonics that accelerated the emergence and evolution of complex organisms, researchers Robert J. Stern and Taras V. Gerya hold that consideration of tectonics, an often overlooked factor, could help further narrow the search for advanced extraterrestrial species.

ID e65dfc41

37 Mark for Review Medium Explanation ›

Based on the text, what do Stern and Gerya most likely believe about the development of complex life on exoplanets?

(A) It is more likely to occur on habitable zone planets with atmospheres and plate tectonics than on otherwise similar planets that lack plate tectonics.

(B) It is more likely to occur if habitable zone planets with atmospheres transition from single-lid to plate tectonics late in their history than if they transition early in their history.

(C) It is unlikely unless the transition from single-lid to plate tectonics occurs before the acquisition of a lasting atmosphere.

(D) It is probably more dependent on the presence of plate tectonics than on orbital distance from a host star or the presence of an atmosphere.

Since its completion in 2014, Bosco Verticale (Vertical Forest)—a pair of residential towers in Milan, Italy, covered by vegetation—has become a striking symbol of environmental sustainability in architecture. Stefano Boeri intended his design, which features balconies that are home to hundreds of trees, to serve as a model for promoting urban biodiversity. However, the concept has faced skepticism: critics note that although the trees used in Bosco Verticale were specifically cultivated for the project, it's too early to tell if they can thrive in this unusual setting.

ID 64b6427a

38 Mark for Review Medium Explanation ›

According to the text, why are some critics skeptical of the concept behind Bosco Verticale?

(A) Some essential aspects of Bosco Verticale's design are difficult to adapt to locations other than Milan.

(B) The plant life on Bosco Verticale ended up being less varied than Boeri had envisioned it would be.

(C) The construction of Bosco Verticale was no less environmentally damaging than the construction of more conventional buildings is.

(D) It is unclear whether Bosco Verticale can support the plant life included in its design.

Choctaw/Cherokee artist Jeffrey Gibson turns punching bags used by boxers into art by decorating them with beadwork and elements of Native dressmaking. These elements include leather fringe and jingles, the metal cones that cover the dresses worn in the jingle dance, a women's dance of the Ojibwe people. Thus, Gibson combines an object commonly associated with masculinity (a punching bag) with art forms traditionally practiced by women in most Native communities (beadwork and dressmaking). In this way, he rejects the division of male and female gender roles.

ID 66bef967

39 Mark for Review Medium Explanation ›

Which choice best describes Gibson's approach to art, as presented in the text?

(A) He draws from traditional Native art forms to create his original works.

(B) He has been influenced by Native and non-Native artists equally.

(C) He finds inspiration from boxing in designing the dresses he makes.

(D) He rejects expectations about color and pattern when incorporating beadwork.

Using the Stratospheric Observatory for Infrared Astronomy (SOFIA), a team of astronomers mapped out the magnetic field of G47, one of the Milky Way's galactic bones (dense clouds of gas and dust that run through the middle of the arm of a spiral galaxy). Surprisingly, the map revealed a magnetic field with no clear pattern or direction. The researchers had expected the magnetic field to be similar to the more uniform fields seen in galactic bones in other arms of the Milky Way.

ID 3cc7d73b

40 Mark for Review Medium Explanation ›

According to the text, what was surprising about the researchers' mapping of the magnetic field of galactic bone G47?

(A) It showed a weaker magnetic field than expected.

(B) It implied that previous mappings of the magnetic field were inaccurate.

(C) It produced magnetic field measurements similar to those for other galactic bones.

(D) It revealed a magnetic field that wasn't uniform.

The following text is adapted from Robert Louis Stevenson's 1883 novel *Treasure Island*. Bill is a sailor staying at the Admiral Benbow, an inn run by the narrator's parents.

Every day when [Bill] came back from his stroll he would ask if any seafaring men had gone by along the road. At first we thought it was the want of company of his own kind that made him ask this question, but at last we began to see he was desirous to avoid them. When a seaman did [stay] at the Admiral Benbow (as now and then some did) he would look in at him through the curtained door before he entered the parlour; and he was always sure to be as silent as a mouse when any such was present.

ID 659c6c1d

41 Mark for Review Medium Explanation ›

According to the text, why does Bill regularly ask about "seafaring men"?

(A) He's hoping to find an old friend and fellow sailor.

(B) He's trying to secure a job as part of the crew on a new ship.

(C) He isn't sure that other guests at the inn will be welcoming of sailors.

(D) He doesn't want to encounter any other sailor unexpectedly.

The following text is from Mark Haber's 2022 novel *Saint Sebastian's Abyss*. The narrator and Schmidt are both art critics.

> When my first wife admitted to Schmidt over dinner that she didn't find art, painting in particular, especially compelling, Schmidt winced, set down his fork, and sighed dramatically; he then excused himself, explaining an appointment he'd forgotten about had suddenly and inexplicably been remembered, while making it abundantly clear there was no appointment at all.

©2022 by Mark Haber

ID 73caa3ab

42 Mark for Review Medium Explanation ›

Based on the text, what is notable about Schmidt's behavior?

(A) Schmidt is only given to theatrical behavior when in the company of the narrator and his first wife.

(B) Schmidt's absentmindedness regarding his schedule is uncharacteristic of him.

(C) Schmidt's departure is occasioned by the resumption of a previous disagreement with the narrator's first wife about a particular painting.

(D) Schmidt conveys his feelings about one of his dining companions without explicitly stating them.

The following text is from Ezra Pound's 1909 poem "Hymn III," based on the work of Marcantonio Flaminio.

As a fragile and lovely flower unfolds its gleaming
foliage on the breast of the fostering earth, if
the dew and the rain draw it forth;
So doth my tender mind flourish, if it be fed with the
sweet dew of the fostering spirit,
Lacking this, it beginneth straightway to languish,
even as a floweret born upon dry earth, if the
dew and the rain tend it not.

ID b7f79059

43 Mark for Review Medium Explanation ›

Based on the text, in what way is the human mind like a flower?

(A) It becomes increasingly vigorous with the passage of time.

(B) It draws strength from changes in the weather.

(C) It requires proper nourishment in order to thrive.

(D) It perseveres despite challenging circumstances.

Microplastics are tiny pieces of plastic waste. Areas of the ocean with higher concentrations of microplastic particles also have smaller and fewer waves. A study by Yukun Sun and colleagues found that the concentration of microplastic particles cannot be the only reason for this reduced wave activity because the concentration of particles that would have the observed effect is much higher than that found in these areas of the ocean. However, they found that surfactants, chemicals often used to manufacture plastics, are released into the water from microplastics and have a much stronger wave-reducing effect.

ID e47d2524

44 Mark for Review Medium Explanation ›

According to the text, what did Sun and colleagues discover about surfactants?

(A) They have a much stronger effect on wave activity than microplastics alone do.

(B) They are mainly composed of water.

(C) They are helpful for removing microplastics from the ocean.

(D) They can be used to contain microplastics within certain areas of the ocean.

The ice melted on a Norwegian mountain during a particularly warm summer in 2019, revealing a 1,700-year-old sandal to a mountaineer looking for artifacts. The sandal would normally have degraded quickly, but it was instead well preserved for centuries by the surrounding ice. According to archaeologist Espen Finstad and his team, the sandal, like those worn by imperial Romans, wouldn't have offered any protection from the cold in the mountains, so some kind of insulation, like fabric or animal skin, would have needed to be worn on the feet with the sandal.

ID 95146ebb

45 Mark for Review Medium Explanation ›

What does the text indicate about the discovery of the sandal?

(A) Temperatures contributed to both protecting and revealing the sandal.

(B) The discovery revealed that the Roman Empire had more influence on Norway than archaeologists previously assumed.

(C) Archaeologists would have found the sandal eventually without help from the general public.

(D) The sandal would have degraded if it hadn't been removed from the ice.

Recently, scientists looked at data collected by NASA's InSight lander to learn more about seismic activity on Mars, known as marsquakes. The data show that the marsquakes all started from the same location on the planet. This discovery was surprising to scientists, as they expected that the marsquakes would originate from all over the planet because of the cooling of the planet's surface. Now, scientists believe that there could be areas of active magma flows deep beneath the planet's surface that trigger the marsquakes.

ID c188a397

46 Mark for Review Medium Explanation ›

According to the text, what was surprising to scientists studying the seismic activity data from NASA's InSight lander?

(A) The surface temperature of Mars has been rising.

(B) There were different types of seismic waves causing marsquakes.

(C) NASA's InSight lander collected less data than scientists had expected.

(D) All the marsquakes started from the same location on the planet.

In her 1998 book *Blues Legacies and Black Feminism*, Angela Y. Davis bases her analysis in part on recordings of songs sung in the 1920s by Gertrude "Ma" Rainey and Bessie Smith. Davis focuses on how Rainey and Smith improvised the lyrics—replacing the original lines with mischievous jokes and wordplay. Davis's work was particularly labor intensive because in order to transcribe, or write down, the lyrics as Rainey and Smith sang them, Davis had to listen repeatedly to the vinyl recordings, which weren't very clear.

ID f64ff4fb

47 Mark for Review Medium Explanation ›

What does the text most strongly suggest about the songs sung by Rainey and Smith?

(A) The songs have grown in popularity since Rainey and Smith first sang them.

(B) There were more recordings made of Rainey's songs than there were of Smith's.

(C) There were few, if any, reliable transcriptions of Smith's and Rainey's improvised lyrics when Davis began her research.

(D) According to Davis, the songs sung by Rainey were more musically innovative than those sung by Smith typically were.

The following text is adapted from Charles W. Chesnutt's 1901 novel *The Marrow of Tradition*.

Mrs. Ochiltree was a woman of strong individuality, whose comments upon her acquaintance[s], present or absent, were marked by a frankness at times no less than startling. This characteristic caused her to be more or less avoided. Mrs. Ochiltree was aware of this sentiment on the part of her acquaintance[s], and rather exulted in it.

ID 835545cd

48 Mark for Review Medium Explanation ›

Based on the text, what is true about Mrs. Ochiltree's acquaintances?

(A) They try to refrain from discussing topics that would upset Mrs. Ochiltree.

(B) They are unable to spend as much time with Mrs. Ochiltree as she would like.

(C) They are too preoccupied with their own concerns to speak with Mrs. Ochiltree.

(D) They are likely offended by what Mrs. Ochiltree has said about them.

Cats can judge unseen people's positions in space by the sound of their voices and thus react with surprise when the same person calls to them from two different locations in a short span of time. Saho Takagi and colleagues reached this conclusion by measuring cats' levels of surprise based on their ear and head movements while the cats heard recordings of their owners' voices from two speakers spaced far apart. Cats exhibited a low level of surprise when owners' voices were played twice from the same speaker, but they showed a high level of surprise when the voice was played once each from the two different speakers.

ID a66f9b8d

49 Mark for Review Medium Explanation ›

According to the text, how did the researchers determine the level of surprise displayed by the cats in the study?

(A) They watched how each cat moved its ears and head.

(B) They examined how each cat reacted to the voice of a stranger.

(C) They studied how each cat physically interacted with its owner.

(D) They tracked how each cat moved around the room.

HARD 27 questions

The most recent iteration of the immersive theater experience *Sleep No More*, which premiered in New York City in 2011, transforms its performance space—a five-story warehouse—into a 1930s-era hotel. Audience members, who wander through the labyrinthine venue at their own pace and follow the actors as they play out simultaneous, interweaving narrative loops, confront the impossibility of experiencing the production in its entirety. The play's refusal of narrative coherence thus hinges on the sense of spatial fragmentation that the venue's immense and intricate layout generates.

ID ed314256

50 Mark for Review Hard Explanation ›

What does the text most strongly suggest about *Sleep No More*'s use of its performance space?

(A) The choice of a New York City venue likely enabled the play's creators to experiment with the use of theatrical space in a way that venues from earlier productions could not.

(B) Audience members likely find the experience of the play disappointing because they generally cannot make their way through the entire venue.

(C) The production's dependence on a particular performance environment would likely make it difficult to reproduce exactly in a different theatrical space.

(D) Audience members who navigate the space according to a recommended itinerary will likely have a better grasp of the play's narrative than audience members who depart from that itinerary.

To understand how temperature change affects microorganism-mediated cycling of soil nutrients in alpine ecosystems, Eva Kaštovská et al. collected plant-soil cores in the Tatra Mountains at elevations around 2,100 meters and transplanted them to elevations of 1,700–1,800 meters, where the mean air temperature was warmer by 2°C. Microorganism-mediated nutrient cycling was accelerated in the transplanted cores; crucially, microorganism community composition was unchanged, allowing Kaštovská et al. to attribute the acceleration to temperature-induced increases in microorganism activity.

ID 458b4a11

51 Mark for Review Hard Explanation ›

It can most reasonably be inferred from the text that the finding about the microorganism community composition was important for which reason?

(A) It provided preliminary evidence that microorganism-mediated nutrient cycling was accelerated in the transplanted cores.

(B) It suggested that temperature-induced changes in microorganism activity may be occurring at increasingly high elevations.

(C) It ruled out a potential alternative explanation for the acceleration in microorganism-mediated nutrient cycling.

(D) It clarified that microorganism activity levels in the plant-soil cores varied depending on which microorganisms comprised the community.

Paleontologists searching for signs of ancient life have found many fossilized specimens of prehistoric human ancestors, including several from the Pleistocene era discovered in a geological formation in the Minatogawa quarry in Japan. However, to study the emergence of the earliest multicellular organisms to appear on Earth, researchers must turn elsewhere, such as to the Ediacaran geological formation at Mistaken Point in Canada. A UNESCO World Heritage Site, the 146-hectare reserve contains more than 10,000 fossils that together document a critical moment in evolutionary history.

ID 11a9f635

52 Mark for Review — Hard — Explanation ›

What does the text indicate about the geological formation at Mistaken Point?

(A) It holds a greater number of fossils but from a smaller variety of species than the formation in the Minatogawa quarry does.

(B) It has provided evidence that the earliest human species may have emerged before the Pleistocene era.

(C) It is widely considered by paleontologists to be the most valuable source of information about prehistoric life forms.

(D) It contains specimens from an older time period than those found in the formation in the Minatogawa quarry.

The following text is adapted from María Cristina Mena's 1914 short story "The Vine-Leaf."

> It is a saying in the capital of Mexico that Dr. Malsufrido carries more family secrets under his hat than any archbishop.
>
> The doctor's hat is, appropriately enough, uncommonly capacious, rising very high, and sinking so low that it seems to be supported by his ears and eyebrows, and it has a furry look, as if it had been brushed the wrong way, which is perhaps what happens to it if it is ever brushed at all. When the doctor takes it off, the family secrets do not fly out like a flock of parrots, but remain nicely bottled up beneath a dome of old and highly polished ivory.

ID 1a2b29c9

53 Mark for Review — Hard — Explanation ›

Based on the text, how do people in the capital of Mexico most likely regard Dr. Malsufrido?

(A) Many have come to tolerate him despite his disheveled appearance.

(B) Few feel concerned that he will divulge their confidences.

(C) Some dislike how freely he discusses his own family.

(D) Most would be unimpressed by him were it not for his professional expertise.

In superfluorescence, electrical charges known as dipoles emit light in synchronized bursts so intense that they are visible to the eye. Until recently, this phenomenon has only been observed at extremely cold temperatures because dipoles cannot synchronize at higher temperatures. But in a study, Melike Biliroglu and colleagues observed superfluorescence at room temperature in thin films made of perovskite and other similarly crystalline materials; the researchers propose that the formation of shock-absorbing quasiparticles called polarons in the material protects dipoles from thermal interference.

ID 701126bc

54 Mark for Review — Hard — Explanation ›

Based on the text, how are polarons believed to be involved in the superfluorescence observed in Biliroglu and colleagues' study?

(A) Polarons enable superfluorescent bursts to cross from one crystalline material to another.

(B) Polarons allow for the dipoles to synchronize despite higher temperatures.

(C) Polarons accelerate the dipoles' release of superfluorescent bursts.

(D) Polarons decrease the intensity of the superfluorescent burst.

Paleontologist Lucas E. Fiorelli and colleagues have reported the discovery at a mine in Brazil of several egg clutches, partially preserved single eggs, and egg shells from the Late Cretaceous period. The researchers have concluded that the area was once a nesting and breeding site for titanosaurs, a group of sauropod dinosaurs. The finding is significant given the previous lack of known nesting sites in northern regions of South America, which led many paleontologists to assume that titanosaurs migrated south to lay eggs.

ID 9731a22b

55 Mark for Review — Hard — Explanation ›

What does the text most strongly suggest about the site discovered by the researchers?

(A) It is the earliest known example of a titanosaur nesting and breeding site.

(B) It was very difficult to excavate given that it was discovered in a mine.

(C) It may have been occupied by other sauropods in addition to titanosaurs.

(D) It is farther north than any other nesting site discovered in South America.

Within higher education, studying philosophy requires that students be conversant with the field's foundational texts and historical figures. By contrast, *doing* philosophy within or beyond the academy demands the creative, self-directed application of acquired expertise to enduring questions about the nature of existence and knowledge. While both approaches engage with influential figures, those who do philosophy treat such figures as vital interlocutors who facilitate new insights rather than as ossified authorities who, though relevant to the present, primarily represent the discipline's past.

ID 2b252bbd

56 Mark for Review — Hard — Explanation ›

Based on the text, which choice best describes the relationship between doing philosophy and studying philosophy?

(A) Doing philosophy helps students formulate concrete solutions to practical issues, whereas studying philosophy prioritizes engagement with historical arguments in the field.

(B) Doing philosophy involves developing novel ideas through imagined dialogue with past philosophers based on knowledge of those philosophers' views acquired by studying philosophy.

(C) Doing philosophy requires students to challenge the ideas articulated by past philosophers, especially when these ideas are broadly accepted by other people studying philosophy.

(D) Doing philosophy represents a departure from the norms that govern scholarly inquiry, whereas studying philosophy requires conforming to these norms.

In episodes of high heat, corals expel symbiotic zooxanthellae from their tissues, leading to coral bleaching and heightened coral mortality. Some researchers have proposed a mitigation strategy of identifying, rearing, and disseminating corals that have evolved strong resistance to heat, but as Nia S. Walker et al. note, if genes conferring such resistance were exclusively advantageous, they should have already propagated through coral populations. Indeed, Walker et al. show that strongly heat-resistant corals display much less growth after heat stress than do moderately heat-resistant corals.

ID c5cba39c

57 Mark for Review — Hard — Explanation ›

Based on the text, Walker et al. would most likely agree with which statement about the strategy some researchers have proposed?

(A) It would involve promoting a trait that protects corals against high heat but that is associated with reduced thriving after episodes of high heat.

(B) It would favor a trait that is advantageous now but would be disadvantageous if episodes of high heat become as infrequent as has been predicted.

(C) It would benefit corals that are frequently exposed to episodes of high heat but would harm corals that are frequently exposed to episodes of moderate heat.

(D) It would require manipulating a trait that is poorly understood and that may be linked to increased coral mortality during episodes of high heat.

Poetry in Classical Nahuatl, the language of the Aztec Empire, relies on *difrasismo*, or a parallel noun construction that conventionally operates as a single metaphor. For example, the common difrasismo *in cuauhtli in ocelotl* (literally, "the eagle, the jaguar") signifies "warrior." The device's function is both formal—providing structure to lines of verse—and ritual: semantic relations among the two nouns and the concept they signify can be tenuous, as in the previous example, such that difrasismos are often only intelligible according to the conceptual associations observed in Aztec ceremonial culture.

ID aa0968dd

58 Mark for Review — Hard — Explanation ›

Which statement about the difrasismo *in cuauhtli in ocelotl* is most strongly supported by the text?

(A) Its metaphorical significance derives from the semantic equivalence of the two nouns constituting the difrasismo.

(B) Its unintelligibility may cause its formal function within a line of verse to go unnoticed by present-day readers.

(C) Its apparent obscurity can be resolved when considered in the proper cultural context.

(D) Its frequency in Classical Nahuatl poetry confirms its intelligibility to the Aztec audience.

For many years, the only existing fossil evidence of mixopterid eurypterids—an extinct family of large aquatic arthropods known as sea scorpions and related to modern arachnids and horseshoe crabs—came from four species living on the paleocontinent of Laurussia. In a discovery that expands our understanding of the geographical distribution of mixopterids, paleontologist Bo Wang and others have identified fossilized remains of a new mixopterid species, *Terropterus xiushanensis*, that lived over 400 million years ago on the paleocontinent of Gondwana.

ID 1c69ff20

59 Mark for Review — Hard — Explanation ›

According to the text, why was Wang and his team's discovery of the *Terropterus xiushanensis* fossil significant?

(A) The fossil constitutes the first evidence found by scientists that mixopterids lived more than 400 million years ago.

(B) The fossil helps establish that mixopterids are more closely related to modern arachnids and horseshoe crabs than previously thought.

(C) The fossil helps establish a more accurate timeline of the evolution of mixopterids on the paleocontinents of Laurussia and Gondwana.

(D) The fossil constitutes the first evidence found by scientists that mixopterids existed outside the paleocontinent of Laurussia.

The following text is from Thomas Mann's 1924 novel *The Magic Mountain*, translated by John E. Woods in 1995.

> The story of Hans Castorp that we intend to tell here—not for his sake (for the reader will come to know him as a perfectly ordinary, if engaging young man), but for the sake of the story itself, which seems to us to be very much worth telling (although in Hans Castorp's favor it should be noted that it is *his* story, and that not every story happens to everybody)—is a story that took place long ago, and is, so to speak, covered with the patina of history and must necessarily be told with verbs whose tense is that of the deepest past.

©1995 by Alfred A. Knopf, Inc.

ID 36e2868f

60 Mark for Review — Hard — Explanation ›

What does the text most strongly suggest about the story of Hans Castorp?

(A) Though it is true that stories of even the most uninteresting people are themselves interesting because all people are unique, the reason this story is interesting is nonetheless difficult to understand because of the passage of time.

(B) Even though it is a story of a person of no particular importance, its age and the manner in which it therefore must be told are both indicators that the story itself is important.

(C) Like all stories about the lives of inconsequential people, this story must necessarily be related in a particular way if the reason the story is consequential is to be made evident to the audience.

(D) It is a remarkable story that happened to an unremarkable person, though one could plausibly argue that because the story is valuable, some of its value accrues to the person at its center.

The following text is from Mick Herron's 2023 novel *The Secret Hours*. The narrator is describing members of a government committee.

> Finally, and adding much-needed gravitas, was Sir Winston Day, whose features seemed moulded to adorn a bust, or possibly a stamp, and whose forehead was so evidently bulging with grey matter that it would have been impertinent to inquire too closely into the actual achievements his half century of public service had produced. His recently published memoirs possibly cast light on this enigma, but given that such details were not provided until after the thirty-page mark, they might as well have remained state secrets.

©2023 by Mick Herron

ID dcca0dfc

61 Mark for Review — Hard — Explanation ›

Based on the text, which choice best describes Sir Winston Day?

(A) He has the appearance of a distinguished figure, but it is uncertain whether he has accomplished anything to earn distinction.

(B) He looks like a person worthy of respect, but his memoirs reveal that some of his actions were dishonorable.

(C) He would be a celebrated public figure if his achievements did not have to be kept secret.

(D) He has maintained a modest profile even though he has served the public capably for many years.

In a paper about p-i-n planar perovskite solar cells (one of several perovskite cell architectures designed to collect and store solar power), Lyndsey McMillon-Brown et al. describe a method for fabricating the cell's electronic transport layer (ETL) using a spray coating. Conventional ETL fabrication is accomplished using a solution of nanoparticles. The process can result in a loss of up to 80% of the solution, increasing the cost of manufacturing at scale—an issue that may be obviated by spray coating fabrication, which the researchers describe as "highly reproducible, concise, and practical."

ID 4d3e3c52

62 Mark for Review — Hard — Explanation ›

What does the text most strongly suggest about conventional ETL fabrication?

(A) It is less suitable for manufacturing large volumes of planar p-i-n perovskite solar cells than an alternative fabrication method may be.

(B) It is more expensive when manufacturing at scale than are processes for fabricating ETLs used in other perovskite solar cell architectures.

(C) It typically entails a greater loss of nanoparticle solution than do other established approaches for ETL fabrication.

(D) It is somewhat imprecise and therefore limits the potential effectiveness of p-i-n planar perovskite solar cells at capturing and storing solar power.

Disco remains one of the most ridiculed popular music genres of the late twentieth century. But as scholars have argued, the genre is far less superficial than many people believe. Take the case of disco icon Donna Summer: she may have been associated with popular songs about love and heartbreak (subjects hardly unique to disco, by the way), but like many Black women singers before her, much of her music also reflects concerns about community and identity. These concerns are present in many of the genre's greatest songs, and they generally don't require much digging to reveal.

ID d1b8a9ad

63 Mark for Review — Hard — Explanation ›

What does the text most strongly suggest about the disco genre?

(A) It has been unjustly ignored by most scholars despite the importance of the themes addressed by many of the genre's songs.

(B) It evolved over time from a superficial genre focused on romance to a genre focused on more serious concerns.

(C) It has been unfairly dismissed for the inclusion of subject matter that is also found in other musical genres.

(D) It gave rise to a Black women's musical tradition that has endured even though the genre itself faded in the late twentieth century.

The following text is adapted from William Shakespeare's 1598 play *Henry IV, Part 1*. King Henry is addressing several noblemen who are rumored to have been disloyal to him.

> KING HENRY: My blood hath been too cold and temperate,
> Unapt to stir at these indignities,
> And you have found me, for accordingly
> You tread upon my patience; but be sure
> I will from henceforth rather be myself,
> Mighty and to be fear'd, than my [disposition],
> Which hath been smooth as oil, soft as young down,
> And therefore lost that title of respect
> Which the proud soul ne'er pays but to the proud.

ID 8c39592a

64 Mark for Review — Hard — Explanation ›

Which statement best describes how King Henry presents himself in the text?

(A) He declares that he has judged the noblemen's conduct in an impartial manner, and that despite their attempts to regain his trust through professions of submissiveness, they have irrevocably lost his respect.

(B) He acknowledges to the noblemen that his tolerance of their conduct has undermined their respect for him, and he resolves to display his genuine nature, which is more forceful and compels deference.

(C) He defends his calm disposition, which he sees as fundamental to his personality, and vows to maintain his tranquil demeanor even if it causes him to lose the respect of overly proud noblemen.

(D) He concedes that he has treated the noblemen with indifference, which in part explains why they have defied him, but he asserts that their disrespectful behavior is primarily driven by their excessive pride.

Some astronomers searching for extraterrestrial life have proposed that atmospheric NH_3 (ammonia) can serve as a biosignature gas—an indication that a planet harbors life. Jingcheng Huang, Sara Seager, and colleagues evaluated this possibility, finding that on rocky planets, atmospheric NH_3 likely couldn't reach detectably high levels in the absence of biological activity. But the team also found that on so-called mini-Neptunes—gas planets smaller than Neptune but with atmospheres similar to Neptune's—atmospheric pressure and temperature can be high enough to produce atmospheric NH_3.

ID 8f3a200e

65 Mark for Review — Hard — Explanation ›

Based on the text, Huang, Seager, and colleagues would most likely agree with which statement about atmospheric NH_3?

(A) Its presence is more likely to indicate that a planet is a mini-Neptune than that the planet is a rocky planet that could support life.

(B) Its absence from a planet that's not a mini-Neptune indicates that the planet probably doesn't have life.

(C) It should be treated as a biosignature gas if detected in the atmosphere of a rocky planet but not if detected in the atmosphere of a mini-Neptune.

(D) It doesn't reliably reach high enough concentrations in the atmospheres of rocky planets or mini-Neptunes to be treated as a biosignature gas.

In 2019, 20 previously unknown moons were confirmed to be orbiting Saturn. Three of the moons have prograde orbits (orbiting in the direction the planet spins), and the other 17 have retrograde orbits (orbiting in the opposite direction of the planet's spin). All but one of the 20 moons are thought to be remnants of bodies that orbited Saturn until they broke apart in collisions. Although the one exceptional moon orbits in the same direction as the planet's spin, its orbit is highly eccentric compared to the rest, which may suggest that it has a different origin than the other 19 moons.

ID db2da2bf

66 Mark for Review — Hard — Explanation ›

Based on the text, which choice best describes the moon with the eccentric orbit?

(A) It doesn't have a retrograde orbit, but it likely has the same origin as the moons with retrograde orbits.

(B) Its orbit is so tilted with respect to the other moons' orbits that it's neither prograde nor retrograde.

(C) It has a prograde orbit that is likely the result of having collided with another body orbiting Saturn.

(D) It has a prograde orbit and may not be a remnant of an earlier body that orbited Saturn.

Jürgen Kocka and other historians of capitalism rarely discuss domestic capitalism in Africa before the period of European colonization, implicitly presenting capitalism as external to and imposed on Africa. Crislayne Alfagali and other Africanist scholars have shown, however, that in parts of Africa, returns-focused investment, the establishment of open markets for wage labor, and other features of capitalism predated colonization. One reason for this discrepancy is that historians of capitalism tend to focus on longitudinal economic data drawn from archival records, which do not exist for much of precolonial Africa.

ID 34c2e387

67 Mark for Review — Hard — Explanation ›

Which statement about Alfagali and other Africanist scholars is best supported by information in the text?

(A) They likely make use of different types of evidence than historians of capitalism typically rely on.

(B) They likely differ from historians of capitalism in the methods they use to derive longitudinal economic data from archival records.

(C) They likely have a different view about which activities should be considered capitalist in nature than historians of capitalism do.

(D) They likely view capitalism as having been more beneficial for Africa than historians of capitalism do.

The fynbos shrubland is a diverse habitat found only in South Africa. It is adjacent to the Afro-temperate forest, with almost no transition space between the two distinct habitats. Plants in the fynbos have uniquely thin and long root systems that spread out over large distances to absorb nutrients from the soil. Ecologists transplanted tree seedlings from the forest into plots in the fynbos. Seedlings in plots isolated from the roots of fynbos plants exhibited a growth rate five times greater than that of the seedlings in plots in close proximity to the roots of fynbos plants.

ID 7812801f

68 Mark for Review — Hard — Explanation ›

Based on the text, what role do fynbos roots most likely have in maintaining the border between the fynbos shrubland and the Afro-temperate forest habitats?

(A) Fynbos roots damage the root systems of forest plants, leaving those plants unable to acquire sufficient nutrients.

(B) Fynbos roots extend close enough to the forest plants' roots that they constitute a physical barrier that forest plants' roots cannot pass.

(C) The root systems of fynbos plants allow the plants to take in so many soil nutrients that forest plants are prevented from flourishing in the fynbos.

(D) The root systems of fynbos plants enhance the soil immediately surrounding the plants, allowing them to thrive in an otherwise harsh habitat.

The following text is from Maggie Pogue Johnson's 1910 poem "Poet of Our Race." In this poem, the speaker is addressing Paul Laurence Dunbar, a Black author.

Thou, with stroke of mighty pen,
Hast told of joy and mirth,
And read the hearts and souls of men
As cradled from their birth.

The language of the flowers,
Thou hast read them all,
And e'en the little brook
Responded to thy call.

ID 5eda42a3

69 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) To praise a certain writer for being especially perceptive regarding people and nature

(B) To establish that a certain writer has read extensively about a variety of topics

(C) To call attention to a certain writer's careful and elaborately detailed writing process

(D) To recount fond memories of an afternoon spent in nature with a certain writer

In a study of perceptions of listening ability, participants explained their position on a sociopolitical issue and then received a listener's written summary that expressed agreement or disagreement. Within selected summaries, researchers embedded markers of attentive listening (e.g., references to specific details), hypothesizing that such indications would positively influence perceptions of listening skill even in the context of disagreement. Instead, participants consistently rated listeners who expressed disagreement as less skilled, regardless of the other traits of the listeners' summaries.

ID 4a5bda7a

70 Mark for Review — Hard — Explanation ›

What does the text most strongly imply about how participants responded to expressions of disagreement?

(A) When participants felt personally invested in the topics they discussed, they were less likely to perceive listeners who expressed disagreement as attentive, regardless of evidence to the contrary in these listeners' summaries.

(B) When participants encountered summaries from listeners who expressed disagreement with their views, participants tended to disregard evidence that the listeners had in fact been attentive.

(C) Although participants maintained their positions regardless of a summary's level of detail, they tended to regard listeners who expressed disagreement as more attentive when these listeners provided more detailed summaries.

(D) Although participants were critical of expressions of disagreement, they gave higher ratings to listeners whose summaries included markers of attentiveness than to listeners whose summaries did not include these markers.

The following text is from William Shakespeare's play *The Tempest*, first performed in 1611. Miranda has lived on an island with her father, Prospero, since she was three years old. Prospero has stated that Miranda likely does not remember anything other than her life on the island.

MIRANDA: 'Tis far off,

And rather like a dream than an assurance

That my remembrance warrants. Had I not

Four or five women once that tended me?

PROSPERO: Thou hadst, and more, Miranda. But how is it

That this lives in thy mind? What seest thou else

In the dark backward and abysm of time?

If thou remember'st ought ere thou camest here,

How thou camest here thou mayst.

ID a12a83ce

71 Mark for Review — Hard — Explanation ›

In the text, which point does Prospero most directly make about Miranda and her memories?

(A) Miranda's reminiscences about her early childhood have a melancholy quality that betrays her discontented view of her current circumstances.

(B) Miranda's doubts about the accuracy of one recollection of a place other than the island are clouding her judgment and seem to be making her reluctant to explore her recollection of traveling to the island.

(C) Miranda's ability to summon details of an experience she had before arriving on the island suggests that she may also be able to summon details of her arrival on the island.

(D) Miranda's impression of a scene is vague because she is remembering a scenario she had daydreamed about as a child rather than a scenario that had occurred in reality.

In 2018, scientists discovered an immense aggregation of *Muusoctopus robustus* (pearl octopuses) along a hydrothermal vent 3,200 meters beneath the ocean's surface. Water temperatures at this site—named the Octopus Garden—climb as high as 11°C, much warmer than the ambient 1.6°C typical at this depth. Based on observations made over three years, scientists concluded that temperatures at the site likely confer reproductive benefits and that the site is used exclusively for reproduction—6,000 *M. robustus* adults, hatchlings, and eggs were observed at the garden, but no juveniles were present.

ID 16ce90d9

72 Mark for Review — Hard — Explanation ›

Which statement about *M. robustus* and the Octopus Garden is best supported by the text?

(A) *M. robustus* leave the Octopus Garden upon reaching an intermediary stage of development.

(B) The *M. robustus* population at the Octopus Garden remains stable despite variations in water temperature.

(C) *M. robustus* nests in the Octopus Garden contain on average fewer but larger eggs than nests at similar ocean depths.

(D) The Octopus Garden provides an ideal feeding ground for *M. robustus* hatchlings.

Hypothesizing that reliance on smartphones for information retrieval will lead a person to incorrectly remember instances of phone-assisted retrieval as instances of retrieval from memory, researchers asked participants general-knowledge trivia questions, instructing them to answer certain questions using only their smartphone and other questions using only their memory. When surveyed a week later, participants exhibited higher levels of misattribution for answers retrieved in the smartphone condition than for those retrieved in the memory condition, a finding that the researchers claimed supported their hypothesis.

ID 5869a196

73 Mark for Review — Hard — Explanation ›

Which question would be most useful to answer in determining the validity of the researchers' claim as it is presented in the text?

(A) Were participants as likely to remember the source of their information when asked a week later as they would have been if asked immediately after answering the trivia questions?

(B) Were participants less confident about the accuracy of information they were instructed to retrieve from a smartphone than they were of that retrieved from their own memory?

(C) How likely were participants to answer all the trivia questions correctly in both the smartphone and the memory conditions?

(D) How did participants attribute information they were instructed to retrieve from a smartphone in instances when they already knew that information independently of their phone?

The following text is adapted from Fanny Burney's 1778 novel *Evelina*. The text is an excerpt from a letter by Lady Howard to Evelina's guardian, Reverend Villars, in which Lady Howard discusses an upcoming trip to London planned by her daughter Mrs. Mirvan's family.

> It is very earnestly [the Mirvans'] wish to enlarge and enliven their party by the addition of your amiable ward, who would share, equally with her own daughter, the care and attention of Mrs. Mirvan. Do not start at this proposal; it is time that [Evelina] should see something of the world. When young people are too rigidly sequestered from it, their lively and romantic imaginations paint it to them as a paradise of which they have been beguiled; but when they are shown it properly, and in due time, they see it such as it really is, equally shared by pain and pleasure, hope and disappointment.

ID daa90829

74 Mark for Review — Hard — Explanation ›

Based on the text, Lady Howard would most likely agree with which statement about Reverend Villars?

(A) Although the manner in which he has raised Evelina is in many ways exemplary, he has been misguided in shielding her from the influence of other young people.

(B) He has imparted to Evelina his own idealistic view of the world, which results in her being unprepared to face inevitable disappointments.

(C) Although his desire to guard Evelina from unscrupulous people is commendable, his general mistrust has led him to be unduly wary of the Mirvans.

(D) He is overly protective of Evelina, who would likely benefit from a greater variety of experiences than she has had thus far.

Optical tweezers are specialized scientific tools—particularly useful in biology and medicine—that use high-powered beams of light to trap and manipulate minuscule particles for study. Use of the tool has led to several scientific and medical breakthroughs over the last few decades, but the particles are often under prolonged exposure to the intense heat of the light beams. To overcome the risk of overheating, and thereby damage, researchers sometimes attach nano-sized glass beads to particles, allowing the light to focus on the beads instead of the particles.

ID 7c9a65bb

75 Mark for Review — Hard — Explanation ›

Based on the text, what is one advantage of attaching glass beads to particles when using optical tweezers?

(A) It decreases the time it takes for the optical tweezers to locate and capture the particles.

(B) It facilitates the maneuvering of particles without directly heating the particles themselves.

(C) It allows researchers to use weaker light beams to manipulate particles.

(D) It adds a material to which particles can transfer any heat absorbed from the optical tweezers' light beam.

The following text is adapted from Lewis Carroll's 1889 satirical novel *Sylvie and Bruno*. A crowd has gathered outside a room belonging to the Warden, an official who reports to the Lord Chancellor.

One man, who was more excited than the rest, flung his hat high into the air, and shouted (as well as I could make out) "Who roar for the Sub-Warden?" Everybody roared, but whether it was for the Sub-Warden, or not, did not clearly appear: some were shouting "Bread!" and some "Taxes!", but no one seemed to know what it was they really wanted.

All this I saw from the open window of the Warden's breakfast-saloon, looking across the shoulder of the Lord Chancellor.

"What can it all mean?" he kept repeating to himself. "I never heard such shouting before—and at this time of the morning, too! And with such unanimity!"

ID 303537cf

76 Mark for Review Hard Explanation ›

Based on the text, how does the Lord Chancellor respond to the crowd?

(A) He asks about the meaning of the crowd's shouting, even though he claims to know what the crowd wants.

(B) He indicates a desire to speak to the crowd, even though the crowd has asked to speak to the Sub-Warden.

(C) He expresses sympathy for the crowd's demands, even though the crowd's shouting annoys him.

(D) He describes the crowd as being united, even though the crowd clearly appears otherwise.

Explanations

1 Correct answer **D** — Easy — Back to question

D Elinor is remarkably mature for her age.

Choice D is the best answer because it provides a detail about Elinor that is established in the text. The text indicates that although Elinor is "only nineteen," she gives good advice and exhibits such a high level of understanding and judgment that she serves as "the counsellor of her mother." Thus, Elinor is mature beyond her years.

Choice A is incorrect because it isn't supported by the text: although the text says that Elinor advises her mother and often counteracts her mother's impulses, there's no mention of Elinor arguing with her mother or failing to change her mother's mind. **Choice B is incorrect** because it isn't supported by the text: although the text mentions that Elinor has strong feelings, it doesn't indicate that she's excessively sensitive when it comes to family issues. **Choice C is incorrect** because it isn't supported by the text: there's no mention of what Elinor thinks about her mother and no suggestion that she thinks her mother is a bad role model. Because she's described as having "an excellent heart," Elinor likely doesn't think ill of her mother.

2 Correct answer **B** — Easy — Back to question

B He would have struggled to meet the increasing demand for his bags.

Choice B is the best answer because it presents the most likely consequence if New had not begun using sewing machines. The text states that New gained new customers and that sewing machines allowed him to make bags more efficiently, or in less time than he could when sewing by hand. It's reasonable to conclude that if New hadn't reduced the time it took to make each bag by starting to use sewing machines, it would have been hard for him to keep up with the increased demand.

Choice A is incorrect because the text indicates that New added unique, handcrafted details to his bags before he started using sewing machines and continued to do so after he started using them. **Choice C is incorrect** because the text doesn't suggest that individually designing each bag would have been a consequence of not using sewing machines, since New was already designing unique details for each bag before he started using sewing machines and continued to do so after he started using them. **Choice D is incorrect** because the text indicates that people were already interested in New's bags before he

started using sewing machines. Rather than allowing New to generate more interest in his bags, sewing machines helped New keep up with the interest that had already grown.

3 Correct answer **B** Easy ‹ Back to question

B They believe the scents could illuminate important aspects of ancient life.

Choice B is the best answer. The text states that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine," all of which are important aspects of ancient life.

Choice A is incorrect. The text doesn't say anything about investigating if people's sense of smell has declined in recent centuries. It says that scents fade over time—not that people have gotten worse at smelling scents. **Choice C is incorrect**. The text says that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine," but it doesn't say anything about ancient scents being enjoyable to people today. **Choice D is incorrect**. The text doesn't say anything about developing new medicines. Rather, it says that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine."

4 Correct answer **B** Easy ‹ Back to question

B How does the use of background music in stores affect customers' shopping experience?

Choice B is the best answer because it presents a research question that is clearly addressed by Manzoor's study as described in the text. The text indicates that Manzoor surveyed customers and found that background music was linked to reduced enjoyment while shopping. Manzoor then explains this result in terms of the music interfering with customers' main goal (finishing their shopping as quickly as possible), speculating that background music might improve the experience of customers with different shopping goals. Throughout the text, the focus is on the relationship between background music and customers' shopping experience, suggesting that Manzoor's study was designed to answer how background music affects that experience.

Choice A is incorrect because the text doesn't mention the volume of background music or how much time customers spend in a store. Instead, the text focuses on whether background music is linked to customer enjoyment of the shopping experience. **Choice C is incorrect** because the text doesn't address how much money customers spend or compare in-store and online purchasing. Rather, the text discusses background music played during shopping, not music as a product to be purchased. **Choice D is incorrect** because the text doesn't discuss different genres of music or customers' preferences for particular genres. Instead, the text addresses background music in general and its link to customer enjoyment.

5 Correct answer **C** Easy ‹ Back to question

C She creates stories and poems for her children.

Choice C is the best answer because it describes something that is true of Mother, as presented in the text. The text indicates that in addition to other activities, Mother writes stories for her children while they are at school and makes up "funny pieces of poetry" for certain occasions.

Choice A is incorrect because the text suggests that Mother prefers to spend her time with her children and doesn't sit at home hoping that ladies will visit her. **Choice B is incorrect** because the text says only that Mother makes up poetry for the children's birthdays, not that she likes birthdays more than other special occasions. **Choice D is incorrect** because the text doesn't suggest that Mother prefers reading to her children over the other activities she does with them, such as playing with them and writing stories and poems for them.

6 Correct answer **D**

Easy

< Back to question

D She follows her teacher's advice about managing her nervousness.

Choice D is the best answer because it presents a statement about what the narrator is doing that is directly supported by the text. According to the text, as the narrator walks across the stage to her piano, she recalls her teacher's advice to pretend that she is playing for only one person. The text indicates that this advice was intended to help manage any nerves related to performing. Moreover, the text implies that the narrator follows this advice by deciding to focus on her father sitting in the audience. Thus, the text supports the idea that as she walks across the stage, the narrator follows her teacher's advice about managing her nervousness.

Choice A is incorrect because the text doesn't indicate that the narrator is thinking about how playing the piano alone is different from playing the piano in a band. Rather, the narrator thinks about her teacher's advice to pretend that she is playing the piano for only one person to help ease her nervousness about performing. **Choice B is incorrect** because the text provides no indication that this is the first music festival that the narrator has performed in. Furthermore, the text indicates that the narrator is nervous, not excited, to play the piano at the festival. **Choice C is incorrect** because the text doesn't suggest that the narrator is remembering how hard she practiced for the performance. Rather, she is thinking about what her teacher told her to do to help ease her nerves about playing the piano in front of an audience.

7 Correct answer **B**

Easy

< Back to question

B He is delighted by what he sees in the portrait.

Choice B is the best answer because it presents a statement about Dorian that is directly supported by the text. The narrator of the text says that when Dorian sees his portrait, "his cheeks flushed for a moment with pleasure" and "a look of joy came into his eyes." The narrator goes on to say that Dorian looked at the portrait "in wonder" and presents him as being so entranced by the portrait that he doesn't notice what Hallward is saying to him. All these details support the description of Dorian as being delighted by what he sees in the portrait.

Choice A is incorrect because Dorian isn't depicted as interested in Hallward's opinion of the portrait but rather as so enraptured by the painting that he's hardly even aware of Hallward. **Choice C is incorrect** because the portrait of Dorian is the only painting that is mentioned in the text, so there's no evidence that Dorian prefers portraits to other types of paintings. Although Dorian is depicted as delighted with this particular portrait, there's no way of knowing from the text whether he likes portraits better than other kinds of paintings. **Choice D is incorrect** because nothing in the text suggests that Dorian is uncertain about Hallward's talent. Instead, the text is focused on Dorian's delight with the portrait.

8 Correct answer **A**

Easy

< Back to question

A Because Mars and Earth have different atmospheric conditions

Choice A is the best answer because it presents an explanation about a helicopter that is directly supported by the text. The text states that Mars's atmosphere is much less dense than Earth's, and as a result, the air on Mars doesn't provide the resistance required to support the blades of a helicopter built for Earth and to keep the helicopter aloft. In other words, a helicopter built for Earth can't fly on Mars because of the differences in the two planets' atmospheres.

Choice B is incorrect because instead of stating that the blades of helicopters built for Earth are too large to work on Mars, the text indicates that the helicopter built to fly on Mars actually has even longer blades than a helicopter built for Earth. **Choice C is incorrect** because the text never addresses the role of gravity on Mars or on Earth; instead, it focuses on atmospheric conditions. **Choice D is incorrect** because the text doesn't indicate that helicopters built for Earth are too small to operate in

the conditions on Mars. In fact, the text states that the size of the helicopter built to fly on Mars is the same size as a helicopter built for Earth, even though it has longer blades that rotate faster.

9 Correct answer **D** Easy Back to question

D They played games.

Choice D is the best answer because it most accurately describes what the narrator and Mario did while riding in the car. The text describes a car trip that the narrator is taking with her family. The text states that during the car ride, the narrator and Mario "played games" to see how many different license plates they could spot.

Choice A is incorrect because the text doesn't mention the narrator and Mario reading during the car ride and instead describes them playing games. **Choice B is incorrect** because the text doesn't mention the narrator and Mario singing songs during the car ride and instead describes them playing games. **Choice C is incorrect** because the text doesn't mention the narrator and Mario sleeping during the car ride and instead describes them playing games.

10 Correct answer **C** Easy Back to question

C He feels both scared and excited.

Choice C is the best answer because it most accurately states how the narrator feels about being at summer camp. In the text, the narrator states that after arriving at the camp, he found it to be different than he'd expected and that as a result, he felt "scared, but also excited."

Choice A is incorrect. In the text, the narrator describes himself as "excited." Although excitement is a positive emotion, it isn't as intensely positive as feeling overjoyed is. Moreover, the narrator also notes that he felt "scared." In other words, his excitement (a positive emotion) is balanced with fear (a negative emotion). Given this mixture of positive and negative emotions, it would be inaccurate to characterize the narrator as overjoyed. **Choice B is incorrect** because in the text, the narrator describes himself as having felt both fear and excitement. Neither of these emotions can be thought of as peaceful and, in fact, are almost the opposite of a sense of peace. **Choice D is incorrect** because in the text, the narrator describes himself as both "scared" and "excited," not angry and jealous.

11 Correct answer **C** Easy Back to question

C Providing young adults with practical information about how to start a business

Choice C is the best answer because it presents a conclusion about increasing entrepreneurship in early adulthood that can be reasonably inferred from the text. The text explains that Andrés Hincapié investigated why young adults are less likely than older adults to start businesses and found that lack of knowledge of practical aspects of starting a business is a barrier. The text then states that Hincapié found that providing relevant informational resources greatly helps address that problem. Offering young adults practical information about how to start a business would be an example of providing relevant informational resources, so Hincapié would most likely say it is a promising way to increase early adult entrepreneurship.

Choice A is incorrect because creating social networks of young adults interested (but presumably inexperienced) in starting a business wouldn't involve a clear source of practical information for those young adults, and the text indicates that Hincapié identified offering relevant informational resources about starting a business as a way to significantly reduce the problem of young adults' low participation in entrepreneurship. **Choice B is incorrect** because encouraging young people to brainstorm business ideas wouldn't involve a clear source of practical information for those young adults, and the text indicates that Hincapié identified offering relevant informational resources about starting a business as a way to significantly reduce the problem of young adults' low participation in entrepreneurship. **Choice D is incorrect** because providing young adults with training opportunities at existing businesses would give those young people exposure to businesses that already exist but not

necessarily information about how to start a business, and the text indicates that Hincapié identified offering relevant informational resources about starting a business as a way to significantly reduce the problem of young adults' low participation in entrepreneurship.

12 Correct answer **B** Easy Back to question

B A sculpture of a lowrider car

Choice B is the best answer. The text describes Favela's approach to sculpture, and then describes the lowrider car that he depicted in 2017.

Choice A is incorrect. This isn't what the text says. The Petersen Automotive Museum is located in Los Angeles, but Favela's artwork isn't a painting, and it doesn't depict L.A. **Choice C is incorrect**. This isn't what the text says. Favela makes sculptures similar to piñatas, not paintings of them. **Choice D is incorrect**. This isn't what the text says. Jesse Valadez owned the lowrider car that Favela depicted in sculpture.

13 Correct answer **C** Easy Back to question

C 164 million years old

Choice C is the best answer because it gives the age for the fossil discovered by Wang and colleagues that is directly supported by the text. According to the text, Xin Wang and colleagues discovered a 164-million-year-old plant fossil. This plant fossil included a flower bud, which the researchers believe provides evidence that flowering plants emerged in the Jurassic period, which falls between 145 million and 201 million years ago.

Choice A is incorrect because the text states that Wang and colleagues discovered a 164-million-year-old flowering plant fossil in China, not one that is 150 million years old. Although 150 million years ago would fall within the Jurassic period, according to the text it isn't the age of the discovered fossil. **Choice B is incorrect** because the text states that Wang and colleagues discovered a 164-million-year-old flowering plant fossil in China, not one that is 145 million years old. Although 145 million years ago would fall at the end of the Jurassic period, according to the text it isn't the age of the discovered fossil. **Choice D is incorrect** because the text states that Wang and colleagues discovered a 164-million-year-old flowering plant fossil in China, not one that is 201 million years old. Although 201 million years ago would fall at the beginning of the Jurassic period, according to the text it isn't the age of the discovered fossil.

14 Correct answer **D** Easy Back to question

D The cave's dimensions prevented the researchers from fully viewing the glyphs.

Choice D is the best answer. The text describes the very low ceiling of the cave, making it impossible to photograph the very wide glyphs all at once.

Choice A is incorrect. The text doesn't say this. It never suggests that the cave was remote or difficult to access, just that the cave itself was difficult to photograph well. **Choice B is incorrect**. The text doesn't say this. The glyphs were so wide that they couldn't be photographed completely. **Choice C is incorrect**. The text states the opposite of this. The researchers "used a technique called photogrammetry to assemble numerous photos of the walls into a 3D model."

15 Correct answer **D**

Easy

< Back to question

D She altered classic songs by slowing them down.

Choice D is the best answer because it accurately describes an aspect of Chavela Vargas that the text indicates is unusual among ranchera artists. According to the text, Vargas differed from other ranchera singers by slowing the tempo of classic songs, which allowed her to express the emotional quality of the lyrics more fully.

Choice A is incorrect because the text states that Vargas possessed an unusually raspy voice for a ranchera singer, not a clear and polished voice. **Choice B is incorrect** because the text indicates that Vargas was known to perform songs written from a male point of view, not that she avoided such songs. **Choice C is incorrect** because nothing in the text suggests that Vargas disliked performing classic songs. Rather, it suggests that she found innovative ways of performing them to emphasize their emotional content, which seems to suggest an affinity for such songs, not dislike.

16 Correct answer **C**

Easy

< Back to question

C He hopes the photographs will help him recall what his aunt looked like.

Choice C is the best answer. The text states that the narrator couldn't remember what his Radha Aunty looked like, so he went to look at the family photographs she was in.

Choice A is incorrect. There's no mention of any story that the narrator is writing. Rather, we're told that the narrator couldn't remember what his aunt looked like, so he went to look at the family photographs she was in. **Choice B is incorrect**. The text doesn't mention how the narrator's father dressed. Rather, we're told that the narrator couldn't remember what his aunt looked like, so he went to look at the family photographs she was in. **Choice D is incorrect**. The text doesn't mention any events shown in the photographs. Rather, we're told that the narrator couldn't remember what his aunt looked like, so he went to look at the family photographs she was in.

17 Correct answer **B**

Easy

< Back to question

B The identity of the person who first wrote the pledge

Choice B is the best answer because it presents a supposed fact about the Pledge of Allegiance that, as the text explains, has recently become uncertain. The text begins by explaining the long-held belief that the original author of the US Pledge of Allegiance was Francis Bellamy, who claimed to have written it in August 1892. The text then describes a historian's recent discovery of a newspaper article published several months before August 1892 that mentions students reciting the same pledge. The text concludes that this discovery suggests Bellamy may not have created the pledge after all. Thus, what has recently become uncertain is the identity of the person who first wrote the pledge.

Choice A is incorrect because the text doesn't address any changes made to the Pledge of Allegiance in the 1900s. The text focuses solely on the question of who originally authored the pledge in or before 1892 and doesn't mention any subsequent modifications to its wording. **Choice C is incorrect**. While the text does mention a historian's discovery of a newspaper article that described students reciting the pledge, it doesn't suggest that the pledge was published in its entirety within that article. Moreover, the text doesn't identify the newspaper by name or suggest the possibility of an earlier mention of the pledge in a different newspaper. **Choice D is incorrect** because the text doesn't mention which parts of the Pledge of Allegiance students preferred in 1892 or at any other time. The text only states that a newspaper article described students reciting the pledge, without providing any information about their preferences regarding different portions of it.

18 Correct answer **A**

Easy

< Back to question

A Some of the newer pits were carved on top of the older pits.

Choice A is the best answer because it presents a statement about Veronica Waweru's thinking that is supported by the text. The text begins by discussing Waweru's discovery of evidence that ancient versions of the board game mancala had been played at a site in the Lewa Wildlife Conservancy. The evidence consisted of many rows of shallow pits carved into stone. The text goes on to state that some newer pits were carved on top of older pits, suggesting that people may have continued to play the game there over multiple generations, creating new pits over time. The text then explicitly states that the presence of newer pits carved on top of older pits was precisely what caused Waweru to think that mancala had been played at the site for a long time.

Choice B is incorrect. While the text does state that Waweru "noticed many rows of shallow pits carved into stone," this observation led her to believe that the pits could have been used as game boards for ancient versions of mancala but did not specifically suggest to her that the game had been played at the site for a long time. The multiple rows of pits merely suggest that these pits functioned as part of a game board; they don't necessarily indicate how long the site had been used for that purpose. Rather, it was the fact that there appeared to be newer pits carved on top of older pits that led Waweru to think that mancala had been played at the site for a long time. **Choice C is incorrect**. Although the text states that Waweru found the pits at the Lewa Wildlife Conservancy, this isn't the reason the text gives for why she thought that mancala had been played at the site for a long time. The location of the discovery only provides information about where the game was played, not how long the game had been played there. **Choice D is incorrect** because the text doesn't mention any variation in the depth of the pits. The text only describes the pits collectively as shallow and doesn't indicate that the depth of the pits factored into Waweru's thinking about how long the site had been used for playing mancala.

19 Correct answer **B**

Easy

< Back to question

B To teach young people why recycling is important

Choice B is the best answer because it describes a reason that Moejoh and team founded U-recycle Initiative Africa. The text mentions two reasons the initiative was founded: to teach young people about how they affect the environment and to teach them "why recycling is important." Thus, teaching the importance of recycling to young people accurately describes a motivation that the text cites as a reason for the initiative's founding.

Choice A is incorrect. Although art is mentioned in the text, there are no details about artists or whether they are being overlooked. **Choice C is incorrect** because the text is explicitly about young people and their relationship to the environment and recycling. There is no mention of adults or outdoor skills. **Choice D is incorrect**. Although the text discusses young people, which likely includes teenagers, there is no mention of starting businesses.

20 Correct answer **B**

Easy

< Back to question

B Its bark has a unique structure that makes it easy to collect latex.

Choice B is the best answer because it most accurately states what feature of *Hevea brasiliensis* is helpful for the process of making rubber. According to the text, this tree species produces latex, which is used to make rubber, and its inner bark contains a "network of tubes" that, when cut, enables the latex to flow out. The text explicitly states that this feature of *Hevea brasiliensis* is "helpful for the process of making rubber."

Choice A is incorrect because the text doesn't mention the quality of the rubber produced from the latex of *Hevea brasiliensis* or compare its quality to that of rubber produced from other sources. **Choice C is incorrect** because the text never discusses the climates in which *Hevea brasiliensis* grows. Moreover, the text mentions only one region where this tree is found: the Amazon rainforest. **Choice D is incorrect**. Because the text states that *Hevea brasiliensis* is the world's "main source of natural

rubber," it can be inferred that there is at least one other source. However, the text doesn't specify whether that other source is also a tree species and, if so, whether that species grows in the Amazon rainforest.

21 Correct answer **A** Easy Back to question

A The Cambridge movement

Choice A is the best answer because it presents information about Gloria Richardson that is supported by the text. The text provides a number of details about Gloria's involvement in efforts to promote racial equality, including that she was the leader of what became known as the Cambridge movement.

Choice B is incorrect because the text never indicates that Gloria Richardson led her daughter Donna's high school. The text says only that Gloria was inspired by her daughter to become involved in efforts to promote racial equality. **Choice C is incorrect** because the text doesn't mention protests related to environmental protections. Rather, the text discusses Gloria Richardson's involvement in efforts to promote racial equality. **Choice D is incorrect** because the text doesn't indicate that Gloria Richardson led a new business in Cambridge, Maryland. Rather, the text states that she led what became known as the Cambridge movement.

22 Correct answer **D** Easy Back to question

D He felt annoyed because he was interrupted while reading his favorite author.

Choice D is the best answer because it presents a description of how Zerviah Holme felt that is directly supported by the text. The text states that Holme "did not like to be interrupted" while reading Gibbon and that he considered interruptions to be "an insult." Furthermore, the text suggests that Gibbon is Holme's favorite author because, as the text states, "he was always reading Gibbon." Thus, Holme would have felt annoyed at having been interrupted when the letter was delivered.

Choice A is incorrect because the text doesn't suggest that Holme is relieved to receive the letter. Instead, the text states that Holme "just glanced indifferently at the letter," suggesting that the letter wasn't important to him. **Choice B is incorrect** because the text doesn't suggest that Holme is excited to receive the letter. Instead, the text states that Holme didn't put down his book to receive the letter and that he looked at the letter "indifferently" and at the postman "impatiently." This suggests that Holme isn't excited. Also, there is no mention that Holme knows who sent the letter. **Choice C is incorrect** because the text doesn't indicate that Holme is sad or that he wants to speak with the postman. Instead, the text describes Holme as looking "impatiently at the postman," which suggests that he wants the postman to leave.

23 Correct answer **B** Easy Back to question

B By increasing the number of musicians playing horns, trombones, and tubas in the orchestra

Choice B is the best answer because it presents a statement about how Richard Wagner achieved moments of extremely high volume in his operas that is supported by the text. The text states that European composers experimented with volume in their works by increasing the number of musicians in the orchestra and provides the example of Wagner, who "added more horns, trombones, and tubas to the orchestra." The text explains that by having more of these instruments playing at the same time, the overall volume of the orchestra could be dramatically increased at key moments in Wagner's operas.

Choice A is incorrect because the text never indicates that Wagner moved his operas indoors to achieve moments of extremely high volume, nor does it indicate that his operas were previously performed outdoors. The only technique discussed in the text for achieving extremely high volume is Wagner's addition of more instruments to create a bigger, louder orchestra. **Choice C is incorrect** because the text never says that Wagner built or used a specially designed concert hall to increase volume through echoes. The only technique discussed in the text is Wagner's addition of more instruments to create a bigger, louder orchestra. **Choice D is incorrect** because the text never mentions any special training for singers related to volume or

singing for extended periods. The text's focus is entirely on the orchestra and how Wagner and other European composers used instruments to experiment with volume in their musical works.

24 Correct answer **B** Easy ‹ Back to question

B Linocut printing helped Catlett use art to connect people, especially Black women.

Choice B is the best answer. The last sentence states that the linocut process "supported her [Catlett's] aim to unite Black women through her art."

Choice A is incorrect. The text briefly describes the linocut printing process but doesn't discuss the availability of the materials used in the process. **Choice C is incorrect**. The text says that the linocut process "enabled Catlett's work to reach a wide audience," but that doesn't mean that linocuts made her "commercially successful." In other words, we don't know how much money she made off her linocuts—we only know that more people were able to see her work. **Choice D is incorrect**. The text says that Catlett depicted Black women in her linocuts, but not that she was one of the first Black artists to use linocut printing.

25 Correct answer **A** Medium ‹ Back to question

A Factors other than the rise of photography may be more directly responsible for the portrait miniature's decline.

Choice A is the best answer. The text says that the impact of photography on the portrait miniature might be "overstated," as some records show a decrease in the number of portrait miniatures *before* the invention of photography. From this, we can conclude that factors *other* than the rise of photography may be more directly responsible for the portrait miniature's decline.

Choice B is incorrect. The text never discusses the "artistic merit" of either art form. **Choice C is incorrect**. The text never suggests that the portrait miniature was popular for longer than historians thought—if anything, it suggests that the portrait miniature started losing its popularity *earlier* than historians thought. **Choice D is incorrect**. The text never suggests that portrait painters shifted to become photographers.

26 Correct answer **B** Medium ‹ Back to question

B They think that *pachuca* style was a way for some Mexican American women to express themselves and resist strict social expectations.

Choice B is the best answer because it presents a statement about how historians view *pachuca* style that is supported by the text. The text first describes the distinctive *pachuca* style of dress adopted by some Mexican American women during World War II, saying that some criticized it and asserted that women should dress traditionally. The text then goes on to contrast this position with that of historians, who "see things differently": according to these historians, the *pachuca* style showed a wish for freedom and self-expression, and it acted as a kind of rebellion against what society expected of women at the time. Therefore, according to the text, historians think that the *pachuca* style was a way for Mexican women to express themselves and resist strict social expectations.

Choice A is incorrect because the text explicitly describes the *pachuca* style as a distinctive look adopted during the World War II era. It does not indicate that the *pachuca* style influences fashion in the United States in the present day. **Choice C is incorrect** because the text does not indicate that Mexican American women wore the *pachuca* style to show support for the United States during World War II; rather, the style was a means of self-expression and rebellion against social expectations. **Choice D is incorrect** because the text does not compare the *pachuca* style to other fashion trends: the *pachuca* style is the only style mentioned.

27 Correct answer **A** Medium Back to question

A It isn't growing at the same rate it used to.

Choice A is the best answer because it presents an explanation that is directly stated in the text for why ecologists are worried about Pando. The text states that Pando is a colony of about 47,000 quaking aspen trees that represents one of the largest organisms on Earth. According to the text, ecologists are worried that Pando's growth is declining, partly because animals are feeding on the trees. In other words, the ecologists are worried that Pando isn't growing at the same rate it used to.

Choice B is incorrect. Rather than indicating that Pando isn't producing young trees anymore, the text reveals that Pando is indeed producing young trees, stating that those trees can be protected from grazing deer by strong fences. **Choice C is incorrect** because the text states that fences can be used to prevent deer from eating Pando's young trees, not that Pando itself can't grow in new areas because it's blocked by fences. **Choice D is incorrect** because the text offers no evidence that Pando's root system is incapable of supporting new trees or is otherwise a cause of worry for ecologists.

28 Correct answer **B** Medium Back to question

B It is caused by something other than the parks' proximity to city residents.

Choice B is the best answer because it presents a statement about the difference between the proportions of Quito residents and Lima residents using parks that is supported by the text. The text states that 82.9% of surveyed Quito residents and 72.7% of surveyed Lima residents reported using their city's parks. The text then notes that compared to Lima respondents, a much smaller percentage of Quito respondents said they live within a 10-minute walk of a park. The text concludes that because a greater proportion of Quito respondents used parks despite generally living farther from them than Lima respondents did, "greater proximity"—being closer to a park—"can't explain the difference in park use." That is, the text makes the point that the difference between the proportions of Quito residents and Lima residents using parks is caused by something other than the distance of the parks from city residents.

Choice A is incorrect because the text doesn't address whether the researchers had expected a particular result and doesn't indicate that they were surprised by the difference in park usage between the two cities' residents. The text simply presents the survey findings without stating the researchers' expectations. **Choice C is incorrect** because the text gives no indication that there might be inaccuracies in the survey results; the text presents the findings as factual information and uses them as the basis for a conclusion that a certain factor doesn't explain differences in park usage between Quito and Lima residents. **Choice D is incorrect** because the text doesn't mention any sources that predate the survey or suggest that the difference in proportions was calculated using such sources. According to the text, the information about park usage came directly from the survey of residents in Quito and Lima.

29 Correct answer **D** Medium Back to question

D They have aspirations that cannot be fulfilled because of certain limitations.

Choice D is the best answer. The text metaphorically likens humans to animals in a zoo, suggesting that humans have dreams that they cannot fulfill because they are trapped.

Choice A is incorrect. The speaker says that the lion has an "untamed heart," but the speaker doesn't actually mention anything about humans taming wild animals or a lack of compassion. **Choice B is incorrect**. The speaker doesn't suggest that humans lack motivation. Rather, the speaker thinks that humans are "trapped" and prevented from achieving their dreams. **Choice C is incorrect**. The speaker doesn't mention anything about humans becoming frustrated or lacking self-control. Rather, the speaker thinks that humans are "trapped" and prevented from achieving their dreams.

30 Correct answer **B** Medium ‹ Back to question

B They are no longer living species.

Choice B is the best answer because it presents a statement about the two previously unknown penguin species that is supported by the text. According to the text, Alan Tennyson and colleagues studied fossil bones belonging to two previously unknown penguin species that are described as prehistoric, or ancient. The text goes on to say that one of the two species was considerably larger than the emperor penguin, which is currently the largest penguin in existence. Thus, the text indicates that the other species aren't in existence today, or that the two previously unknown penguin species are no longer living species.

Choice A is incorrect. Although the text states that Alan Tennyson is a paleontologist who studied the fossils of two previously unknown penguin species, it doesn't say whether these penguins are frequently studied by paleontologists. **Choice C is incorrect** because the text says that one of the two previously unknown penguin species was three times larger than the emperor penguin (a penguin alive today), not that they were both smaller than penguin species that exist today. **Choice D is incorrect** because the text doesn't discuss whether the two previously unknown penguin species spent any time in water.

31 Correct answer **A** Medium ‹ Back to question

A Historians agree that Mieszko II Lambert existed, but disagree about whether Siemomysł existed.

Choice A is the best answer because it presents a statement about how historians view Siemomysł and Mieszko II Lambert that is supported by the text. The text states that the Piast dynasty had a number of different members. The text refers to two of the rulers in the Piast dynasty by name: Mieszko II Lambert, whose rule was known to have occurred from 1025 to 1031 CE, and Siemomysł ("whose historical actuality is disputed"), for whom less is known and who therefore is the subject of debate among historians. The text further casts doubt about Siemomysł by stating that he is "said to have ruled" during the 10th century, or the 900s, which suggests the possibility that he didn't rule. The text also mentions that the chronicle's documentation of Siemomysł relies on oral tradition, unlike its records of later rulers, including Mieszko II Lambert. This indicates that historians agree that Mieszko II Lambert was an actual historical figure, but they disagree about whether Siemomysł existed.

Choice B is incorrect because the text states that the *Gesta principum Polonorum*'s documentation of Siemomysł comes from oral tradition—spoken rather than written documentation—unlike its records of rulers who came after Siemomysł. This suggests that the chronicle provides less reliable evidence rather than more evidence for Siemomysł's existence in the 900s (or the 10th century) than it does for later rulers like Mieszko II Lambert, who ruled from 1025 to 1031 CE. **Choice C is incorrect** because the text indicates the opposite: Siemomysł supposedly ruled earlier in the 10th century, while Mieszko II Lambert ruled from 1025 to 1031 CE. The 10th century spans the years from 901 to 1000 CE, so Siemomysł is believed to have ruled earlier than Mieszko II Lambert did, not later as this choice states. **Choice D is incorrect**. Although the text mentions that information in the written chronicle *Gesta principum Polonorum* draws its information about Siemomysł from the oral tradition, it doesn't mention orally transmitted stories about Mieszko II Lambert. Instead, it states that the chronicle's documentation of Siemomysł relies on oral tradition unlike the records of later rulers do, which suggests that the documentation of later rulers such as Mieszko II Lambert did not rely on oral tradition. Thus, no comparison can be made about how convincing the orally transmitted stories of each ruler are to historians.

32 Correct answer **B** Medium ‹ Back to question

B It raises the possibility that similarities in the design of tools found at Neolithic settlements in Southwest Asia emerged due to population blending between those settlements.

Choice B is the best answer because it presents a statement about Altınışık et al.'s finding that is supported by the text. The text notes that tool similarities across Neolithic settlements could be attributed to imitative behavior or trade. However, Altınışık

et al. found evidence of genetic affinity (that is, genetic relatedness) among the populations of these settlements. Genetic relatedness among populations with similar tools raises an alternative possibility: the tool similarities may have emerged through population blending rather than through imitation or trade alone. Thus, the finding raises the possibility that tool design similarities resulted from population blending.

Choice A is incorrect because the text doesn't address the timing or direction of migration between settlements. Although lesser genetic affinity with Central Zagros could reflect various historical patterns, the text presents genetic relatedness as evidence of population intermixing, not as evidence about when people or tools arrived at particular locations. **Choice C is incorrect** because the text doesn't indicate that tools originated specifically at Çayönü Tepesi or that other settlements imitated its designs. Although the text notes that genetic affinity with Central Zagros was found "to a lesser extent," this describes degrees of genetic relatedness, not the frequency of tool imitation. Instead, the text presents tool similarities as a shared phenomenon across settlements. **Choice D is incorrect** because the text doesn't discuss a lack of cultural similarities among Neolithic peoples in Southwest Asia. Rather, the text focuses solely on tool similarities and genetic affinity without addressing other cultural parallels or differences.

33 Correct answer **B** Medium ‹ Back to question

B Regardless of when they were written, Waugh's works have important similarities that transcend their differences.

Choice B is the best answer because it presents a statement that is consistent with Perry's position as described in the text. The text explains that although Waugh's works are sometimes divided into an early period typified by satirical novels and a later period consisting of "more serious" works, Perry "challenges that strict division" and argues that Waugh's writing "didn't change over time as much as some readers have suggested." As evidence, Perry notes that Waugh's biography of Dante Gabriel Rossetti and other early works show the "earnest romanticism" associated with Waugh's later fiction, suggesting continuity across the two periods and also across genres. It is therefore likely that Perry would agree that Waugh's works have important similarities that transcend their differences, regardless of when they were written.

Choice A is incorrect because the text states that Perry challenges the "strict division" of Waugh's works into two periods typified by their subject matter and tone. Perry therefore would likely disagree that such separation is appropriate; instead, he argues that Waugh's writing shows more continuity across time than this division suggests. **Choice C is incorrect** because it mischaracterizes the similarity that Perry notes in Waugh's earlier and later works. Perry contends that Waugh's early works exhibit the "earnest romanticism" of his later fiction, not that the early works' satirical tone appears more prominently later. Although the text mentions that Waugh's earlier works are often satirical, Perry's argument doesn't emphasize this trait or trace its development over time. **Choice D is incorrect** because it reflects the periodization of Waugh's works that Perry is challenging. The text indicates that Perry argues against the idea that Waugh's writing changed dramatically over the course of his career, and Perry specifically emphasizes a point of similarity between Waugh's earlier and later works. Given this stance, it's unlikely that Perry would agree that Waugh's works became less humorous and more serious over time.

34 Correct answer **A** Medium ‹ Back to question

A These corals have likely been subjected to stressful environmental conditions.

Choice A is the best answer. The text says that corals produce bright colors to block sunlight and encourage algae to recolonize after "an environmental stressor." From this, we can infer that corals that produce bright colors have probably been subjected to an environmental stressor.

Choice B is incorrect. The text says that corals produce bright colors to block intense sunlight, which protects the light-sensitive algae that keep the coral healthy. In other words, bright colors make the coral's health less vulnerable to intense sunlight. **Choice C is incorrect**. The text says that corals produce bright colors to encourage algae to recolonize, not that they have recovered without the assistance of algae colonies. **Choice D is incorrect**. The text never compares the likelihood of differently colored corals surviving without algae colonies.

35 Correct answer **B**

Medium

Back to question

B They have a unique status in the city of S.

Choice B is the best answer because it presents a statement about the Turkins that is suggested by the text. The text explains that while many pleasant families live in the city of S., inhabitants of the city consider the Turkins to be "the most accomplished and most enlightened family of all." Thus, by indicating that they are seen as more accomplished and more enlightened than all the other families in the city of S., the text suggests that the Turkins have a unique status there.

Choice A is incorrect because the text doesn't indicate that the Turkins have recently moved to the city of S.; it provides no information about when the Turkins arrived. **Choice C is incorrect** because the text explains how the Turkins are viewed by others in the city of S. but gives no indication of how the Turkins feel about living there. **Choice D is incorrect** because the text explains how the Turkins are viewed by other residents of the city of S. but gives no indication of how the Turkins view the other residents.

36 Correct answer **A**

Medium

Back to question

A Maya civilization acquired the use of zero from the Olmec civilization.

Choice A is the best answer because it presents information about Maya civilization that is supported by the text. The text states that the writing system used in the Maya kingdoms had a symbol for the number zero. It goes on to say that at the time of the zero symbol's earliest example, more than 2,000 years ago, almost no other writing systems in the world featured such a symbol. The text also points out that some historians suggest that Maya mathematicians inherited the use of zero from the Olmec civilization, which existed in the same area as the Maya civilization at an earlier date. Thus, according to the text, some historians suggest that the Maya civilization acquired the use of zero from the Olmec civilization.

Choice B is incorrect because although the text mentions present-day historians and Maya mathematicians, it does not say anything about how much the Maya civilization respected its historians and mathematicians. **Choice C is incorrect** because the text does not indicate that the Maya civilization treated its use of the zero symbol, or any other intellectual achievements, as secrets to be kept from other civilizations. **Choice D is incorrect** because although the text mentions historians who suggest that the writing system of the Maya civilization inherited some features from the earlier Olmec civilization, the text does not describe any attempts of Maya civilization to introduce its writing system to other civilizations.

37 Correct answer **A**

Medium

Back to question

A It is more likely to occur on habitable zone planets with atmospheres and plate tectonics than on otherwise similar planets that lack plate tectonics.

Choice A is the best answer because it most accurately describes what Stern and Gerya most likely believe about the development of complex life on exoplanets. The text indicates that the search for extraterrestrial life already focuses on atmosphere-bearing planets in the habitable zone because their conditions are best suited for complex organisms. Stern and Gerya claim that plate tectonics on Earth accelerated the emergence of complex organisms, and they therefore hold that tectonics could "help further narrow the search." This phrase implies that plate tectonics should be added to the existing criteria. In other words, the text implies that among habitable zone planets with atmospheres, those that also have plate tectonics would be more likely to enable the development of complex life than otherwise similar planets lacking plate tectonics.

Choice B is incorrect because the text doesn't address whether the timing of the transition to plate tectonics—early versus late in a planet's history—affects the likelihood of complex life. Although the text mentions that plate tectonics emerged on Earth after a "long transition" and that this process accelerated the development of complex life, it presents these details as context for why plate tectonics matter, not as a claim about when the transition would have needed to occur within the planet's history. **Choice C is incorrect** because the text doesn't discuss the timing of the acquisition of an atmosphere in relation to that of the

transition to plate tectonics or explain why this would be relevant to the development of complex life. Rather, the text presents these as independent factors relevant to the search for extraterrestrial life. **Choice D is incorrect** because the text presents plate tectonics as an additional factor to consider alongside orbital distance from a host star and atmosphere, not as a more important one. Stern and Gerya propose that tectonics could "help further narrow the search," which implies supplementing, rather than superseding, the existing criteria.

38 Correct answer **D** Medium ‹ Back to question

D It is unclear whether Bosco Verticale can support the plant life included in its design.

Choice D is the best answer because it presents a statement about critics' skepticism of Bosco Verticale that is supported by the text. The text states that Boeri's design for Bosco Verticale features hundreds of trees on balconies and is intended to serve as a model for promoting urban biodiversity. But the text goes on to state that some critics believe that it is too early to determine if the trees planted on Bosco Verticale can thrive there. Therefore, according to the text, critics are skeptical of the concept behind Bosco Verticale because it is unclear whether Bosco Verticale can support the plant life included in its design.

Choice A is incorrect. Although the text states that one of Boeri's goals was for Bosco Verticale to serve as a model for promoting biodiversity in architecture, which suggests that Boeri would likely support the idea of reproducing the same concept in other locations, the text does not discuss whether it is feasible to adapt the design to locations other than Milan. Instead, the text describes critics' concerns that the plant life that currently exists on Bosco Verticale might not thrive in its current setting. **Choice B is incorrect**. Although the text states that one of Boeri's goals in creating Bosco Verticale was to promote biodiversity, which implies a goal of including varied plant life in the design, it does not mention whether the hundreds of trees that were planted on its balconies failed to meet this goal. Rather, the text states that some critics are concerned that the trees on Bosco Verticale's balconies may not thrive in this setting. **Choice C is incorrect** because the text does not mention how Bosco Verticale was constructed, let alone how environmentally destructive its construction may have been relative to the construction of more conventional buildings.

39 Correct answer **A** Medium ‹ Back to question

A He draws from traditional Native art forms to create his original works.

Choice A is the best answer because it most accurately describes Gibson's approach to art. As the text explains, Gibson, who is Cherokee and Choctaw, transforms punching bags into art pieces by applying (or attaching) to them beadwork and elements of Native dressmaking, including leather fringe and the jingles of the jingle dress. The text goes on to say that in most Native communities, the art forms of beadwork and dressmaking are traditionally practiced by women. Therefore, Gibson's approach to art consists of creating original works by drawing from traditional Native art forms.

Choice B is incorrect. Because Gibson incorporates Native art forms into his own original artwork, it can be inferred that he has been influenced by other Native artists, but the text never suggests that non-Native artists have influenced him. **Choice C is incorrect** because the text doesn't indicate that Gibson designs dresses influenced by boxing but instead that he turns punching bags, which are used in boxing, into works of art by applying elements of Native dressmaking to them. **Choice D is incorrect**. Although Gibson does incorporate beadwork into his art, the text never mentions the colors or patterns that he uses or suggests that his art defies the expectations that people might have about color and pattern in beadwork.

40 Correct answer **D** Medium ‹ Back to question

D It revealed a magnetic field that wasn't uniform.

Choice D is the best answer because it presents the point about the magnetic field mapping that the text describes as surprising. The text indicates that a team of astronomers mapped the magnetic field of G47, a galactic bone in the Milky Way,

and that the mapping "surprisingly" revealed "no clear pattern or direction" in the magnetic field. The text then adds that the researchers had thought the magnetic field would be as uniform as the magnetic fields of other galactic bones in the Milky Way are. In other words, the researchers were surprised that the mapping revealed a magnetic field that wasn't uniform.

Choice A is incorrect because the text doesn't indicate that the mapping surprisingly showed a weaker magnetic field than the researchers had expected. The text makes no mention of the magnetic field's strength, only its lack of a clear pattern or direction. **Choice B is incorrect** because the text doesn't indicate that the magnetic field mapping suggested to researchers that previous mappings were inaccurate. Although the text states that the mapping didn't show what researchers had expected based on their knowledge of other magnetic fields, there's no indication that G47's magnetic field had ever been mapped before. **Choice C is incorrect** because the text indicates that the researchers were surprised that the magnetic field was different from, not similar to, the magnetic fields of other galactic bones; the text states that because other galactic bones in the Milky Way are more uniform, the researchers had expected the magnetic field of G47 to be more uniform than it turned out to be.

41 Correct answer **D** Medium ‹ Back to question

D He doesn't want to encounter any other sailor unexpectedly.

Choice D is the best answer. The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill actually wanted to avoid them.

Choice A is incorrect. This isn't the reason the text gives for why Bill regularly asks about "seafaring men." The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill wanted to avoid them. **Choice B is incorrect**. This isn't the reason the text gives for why Bill regularly asks about "seafaring men." The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill wanted to avoid them. **Choice C is incorrect**. This isn't the reason the text gives for why Bill regularly asks about "seafaring men." The narrator says that, at first, they thought Bill asked regularly about other seafarers because he wanted their company, but eventually they realized that Bill wanted to avoid them.

42 Correct answer **D** Medium ‹ Back to question

D Schmidt conveys his feelings about one of his dining companions without explicitly stating them.

Choice D is the best answer because it most accurately describes what is notable about Schmidt's behavior. According to the text, when the narrator's first wife admits she doesn't find art particularly compelling, Schmidt responds by wincing, sighing dramatically, and abruptly leaving dinner with an obviously false excuse about a remembered appointment. The narrator makes it clear that there is no actual appointment and that the excuse is merely a pretense. Through these actions—the physical reactions of wincing and sighing, followed by the transparent excuse to leave—Schmidt clearly communicates his disapproval of the wife without directly stating his feelings about her.

Choice A is incorrect because the text provides no evidence that Schmidt's theatrical behavior—wincing, sighing dramatically, and abruptly leaving dinner—is unique to situations involving the narrator and his first wife. The text describes only one interaction involving Schmidt, so there's no basis for determining whether his dramatic reactions are typical of him in all situations or limited to this particular social context. **Choice B is incorrect** because nothing in the text suggests that Schmidt is typically mindful of his schedule or that forgetting appointments would be uncharacteristic of him. Rather, the text makes it clear that Schmidt hasn't actually forgotten an appointment at all—the narrator indicates that Schmidt's reason for leaving is an obvious fabrication, not a genuine instance of absentmindedness. **Choice C is incorrect** because the text doesn't mention any previous disagreement between Schmidt and the narrator's first wife about a particular painting or any other topic. The text presents what appears to be a spontaneous reaction by Schmidt to the wife's statement about not finding art compelling, not the continuation of an earlier conversation or dispute.

43 Correct answer **C** Medium Back to question

C It requires proper nourishment in order to thrive.

Choice C is the best answer because it presents a description of how the human mind is like a flower that is directly supported by the text. The text compares the needs of a "fragile and lovely flower" to those of the speaker's "tender mind": both need to be fed if they're going to survive. Without such feeding, they'll "beginneth straightway to languish," or weaken. Thus, the text suggests that the human mind is like a flower in that they both need proper nourishment in order to thrive.

Choice A is incorrect because the text doesn't address the passage of time or describe either the human mind or a flower as becoming increasingly vigorous. **Choice B is incorrect** because the text doesn't suggest that human minds or flowers draw strength from changes in weather. The references to rain in the text pertain to a flower's need for water rather than the general effects of changing weather. **Choice D is incorrect** because the text doesn't suggest that the human mind or a flower will persist regardless of challenging circumstances. In fact, the text indicates that they'll both languish right away if not given what they need.

44 Correct answer **A** Medium Back to question

A They have a much stronger effect on wave activity than microplastics alone do.

Choice A is the best answer because it presents a statement about surfactants that is supported by the text. The text indicates that higher concentrations of microplastics have been associated with waves that are relatively small and few. According to the text, however, a study by Sun and colleagues found that concentrations of microplastic particles can't be the only reason for the reduced wave activity because a much higher concentration of particles is needed to produce that observed effect. Instead, the text indicates that Sun and colleagues found that surfactants are released from microplastics into the ocean and have a much stronger wave-reducing effect than microplastics alone do.

Choice B is incorrect because the text doesn't discuss what surfactants are made of. Instead, it indicates that surfactants are frequently used to manufacture microplastics and that Sun and colleagues discovered that surfactants are released from microplastics into the ocean. **Choice C is incorrect** because the text doesn't discuss how microplastics can be removed from the ocean. Instead, the text indicates that Sun and colleagues discovered that surfactants are released into the ocean from microplastics and have a much stronger wave-reducing effect than microplastics alone do. **Choice D is incorrect** because the text doesn't indicate that surfactants can be used to contain microplastics within certain areas of the ocean. Instead, the text indicates that Sun and colleagues discovered that surfactants are released from microplastics into the ocean and have a much stronger wave-reducing effect than microplastics alone do.

45 Correct answer **A** Medium Back to question

A Temperatures contributed to both protecting and revealing the sandal.

Choice A is the best answer. A "particularly warm summer" revealed the sandal, and centuries of ice kept it "well preserved."

Choice B is incorrect. This choice doesn't reflect the information in the text. The sandal is similar to Roman sandals, but there is no indication that it was a result of Roman influence. **Choice C is incorrect**. The text doesn't support this choice. We don't have enough information to know whether or not archaeologists would have found the sandal without people like the treasure-hunting mountaineer. **Choice D is incorrect**. The text says the opposite of this choice. The sandal was preserved by the ice for centuries.

46 Correct answer **D** Medium < Back to question

D All the marsquakes started from the same location on the planet.

Choice D is the best answer because it presents a statement about what surprised the scientists that is supported by the text. The text states that the marsquakes described in the data from NASA's InSight lander originated from the same location on Mars. The text goes on to say that because they had expected the opposite (that marsquakes would originate from all over the planet) this discovery surprised the scientists.

Choice A is incorrect because the text doesn't say that the data from NASA's InSight lander revealed any surprising information about the planet's surface temperature. Instead, the text mentions the cooling of Mars's surface as a reason the scientists expected that marsquakes had multiple origins. In addition, cooling would indicate that the temperature has been falling rather than rising. **Choice B is incorrect**. Although the text indicates that by studying seismic activity scientists found a possible explanation for what causes marsquakes, the text doesn't say that they discovered that marsquakes are caused by different types of seismic waves. Rather, the text states that based on the data from NASA's InSight lander, scientists now believe that this seismic activity happens because of areas of active magma that flow below the planet's surface. **Choice C is incorrect** because the text doesn't discuss the amount of data NASA's InSight lander collected or whether scientists who studied the data found the amount to be as expected. Instead, the text focuses on what the data revealed about where on Mars the marsquakes originated.

47 Correct answer **C** Medium < Back to question

C There were few, if any, reliable transcriptions of Smith's and Rainey's improvised lyrics when Davis began her research.

Choice C is the best answer because it describes the songs sung by Gertrude "Ma" Rainey and Bessie Smith in a way the text implies is accurate. The text describes Angela Y. Davis's research on Rainey and Smith for her book *Blues Legacies and Black Feminism*, focusing on her efforts to transcribe the improvised lyrics in Rainey's and Smith's songs. The text calls Davis's transcription process "labor intensive" since the lack of clarity in the recordings required her to listen to each repeatedly to verify the accuracy of her transcripts. The fact that Davis undertook a painstaking transcription process using only fairly low-fidelity recordings suggests that reliable transcriptions were otherwise unavailable to her.

Choice A is incorrect. The text doesn't discuss the popularity of Rainey's and Smith's songs either in the 1920s or after. Although it is plausible that the music of Rainey and Smith is more widely enjoyed than it was in the 1920s, this isn't supported by the text. **Choice B is incorrect**. The text doesn't discuss which of Rainey and Smith was the more prolific recording artist and so provides no support for such a claim. **Choice D is incorrect**. The text discusses the creativity of both Rainey and Smith, but it does so only to note similarities between them in terms of improvisation and wit, not to emphasize differences between them or Davis's relative views of the artists' inventiveness.

48 Correct answer **D** Medium < Back to question

D They are likely offended by what Mrs. Ochiltree has said about them.

Choice D is the best answer because it presents a statement about Mrs. Ochiltree's acquaintances that is supported by the text. The text indicates that Mrs. Ochiltree makes comments about her acquaintances that are frank, or direct and blunt, and sometimes startling. It also states that because of this behavior, the acquaintances tend to avoid Mrs. Ochiltree. Together, these details suggest that the acquaintances choose not to be around Mrs. Ochiltree because they are offended by the things she has said about them.

Choice A is incorrect because the text doesn't suggest that Mrs. Ochiltree's acquaintances avoid discussing topics that would upset Mrs. Ochiltree; instead, it states that they avoid being around Mrs. Ochiltree at all. **Choice B is incorrect** because the text

makes it clear that Mrs. Ochiltree knows her acquaintances often avoid her and is pleased about it (she "rather exulted in it"), not that she wants to spend more time with them. **Choice C is incorrect** because the text doesn't suggest that Mrs. Ochiltree's acquaintances don't speak with Mrs. Ochiltree because they are too focused on their own concerns, but rather because they don't like the frank comments she makes.

49 Correct answer **A** Medium Back to question

A They watched how each cat moved its ears and head.

Choice A is the best answer because it explains how the researchers determined the level of surprise displayed by the cats in the study. The text states that Saho Takagi and colleagues played recordings of the voice of each cat's owner and measured how surprised the cat was by the recording based on how it moved its ears and head.

Choice B is incorrect because, as the text explains, the recordings played for each cat in the study were of the voice of the cat's owner, not a stranger's voice. **Choice C is incorrect** because the text explains that during the study, the cats didn't interact directly with their owners; instead, the cats listened to recordings of their owners' voices. **Choice D is incorrect** because the text doesn't indicate that the researchers monitored the cats' movement around the room in which the study was conducted.

50 Correct answer **C** Hard Back to question

C The production's dependence on a particular performance environment would likely make it difficult to reproduce exactly in a different theatrical space.

Choice C is the best answer. The text says that the production's use of its large, winding space has a very specific effect on the audience. Given that the space itself is so important to creating this effect, it would be difficult to reproduce the production in a different space.

Choice A is incorrect. The fact that the venue is in New York City isn't connected to the experimental nature of the performance. It's the size of the venue, not its location in New York, that affects the theatrical experience. **Choice B is incorrect**. The text never suggests that audience members are disappointed because they can't see the entire production. In fact, it suggests that that's an important part of the experience. **Choice D is incorrect**. The text doesn't mention a recommended itinerary for audience members.

51 Correct answer **C** Hard Back to question

C It ruled out a potential alternative explanation for the acceleration in microorganism-mediated nutrient cycling.

Choice C is the best answer because it accurately describes why the finding about the microorganism community composition was important. The text describes an experiment by Eva Kaštovská and her team in which they collected plant-soil cores at one elevation and transplanted them to sites at a lower elevation, where the mean air temperature was warmer. Kaštovská and her team observed that microorganism-mediated nutrient cycling was accelerated in the transplanted cores and that "crucially, microorganism community composition was unchanged," which allowed the team to attribute the acceleration to changes in microorganism activity brought about by the difference in temperature. This strongly implies that the team wouldn't have been able to make that attribution otherwise, meaning that a change in microorganism composition represented another possible explanation for the acceleration that had to be ruled out.

Choice A is incorrect. Although the text says microorganism-mediated cycling of soil nutrients increased in the transplanted cores, this is unrelated to what's important about the finding that the microorganism composition didn't change—that it allowed the team to attribute the change in activity solely to the change in temperature. **Choice B is incorrect**. Although the text compares activity in one core at two different elevations, the text doesn't address changes in activity at various elevations over

time. **Choice D is incorrect**. Although different microorganisms likely exhibit different levels of activity, the text indicates that there was no change in microorganism composition, and there is nothing in the text about different microorganisms having different activity levels.

52 Correct answer **D** Hard Back to question

D It contains specimens from an older time period than those found in the formation in the Minatogawa quarry.

Choice D is the best answer. The text says that the formation at Mistaken Point contains fossils of "the earliest multicellular organisms," which implies that these fossils are from an older time period than the fossils of "prehistoric human ancestors" found in the Minatogawa quarry.

Choice A is incorrect. The text says that the formation at Mistake Point contains "more than 10,000 fossils," but it doesn't compare this number to the number of fossils in the Minatogawa quarry. It also doesn't say anything about the variety of species in either formation. **Choice B is incorrect**. The text says that the formation at Mistaken Point contains fossils of "the earliest multicellular organisms," but it never says that the site contains early human fossils too. Rather, the early human fossils mentioned in the text were found in the formation at Minatogawa quarry. **Choice C is incorrect**. The text says that the fossils at Mistaken Point "document a critical moment in evolutionary history," but it never says that Mistaken Point is the most valuable source of information about prehistoric life forms.

53 Correct answer **B** Hard Back to question

B Few feel concerned that he will divulge their confidences.

Choice B is the best answer. The text describes a saying in the capital that Malsufrido keeps more secrets than an archbishop. It also says that when he takes off his hat, "the family secrets do not fly out... but remain nicely bottled up," suggesting that he will not betray his confidences.

Choice A is incorrect. This choice doesn't reflect the text. While his hat is large and appears to have been brushed in the wrong direction, Dr. Malsufrido does not seem to be regarded as ill-dressed or disheveled. **Choice C is incorrect**. This choice is the opposite of what the text says. The secrets of families (his and others') remain "bottled up" in his head. **Choice D is incorrect**. This choice isn't supported by the text. His professional expertise is not discussed in the passage.

54 Correct answer **B** Hard Back to question

B Polarons allow for the dipoles to synchronize despite higher temperatures.

Choice B is the best answer because it most accurately describes Biliroglu and colleagues' claim about how the polarons function in relation to superfluorescence. The text indicates that "until recently," superfluorescence (intense, synchronized bursts of light emitted by dipoles) has solely been observed at very cold temperatures. However, it also states that, recently, Biliroglu and colleagues report observing the phenomenon at room temperature. They achieved this using "thin films made of perovskite and other similarly crystalline materials," which the researchers claim allows for the formation of polarons. They also suggest that these polarons might absorb the thermal shocks that typically disrupt dipole synchronization at warmer temperatures. Thus, based on the text, Biliroglu and colleagues believe that polarons help dipoles synchronize at temperatures well above those at which superfluorescence had previously been observed.

Choice A is incorrect because the text doesn't address the prospect of a superfluorescent burst moving between crystalline materials or any other mediums. **Choice C is incorrect** because the text's discussion of polarons is about how they might enable superfluorescence at higher temperatures than those at which it had previously been observed. Rather than suggesting that polarons speed up superfluorescent bursts, the text suggests that no superfluorescence can occur at room temperature in the absence of polarons. Thus, the text indicates that polarons make superfluorescent bursts more likely to occur at higher

temperatures than those at which it had previously been observed, not that polarons accelerate the bursts. **Choice D is incorrect** because the text's discussion of polarons is about how they might enable superfluorescence at higher temperatures than those at which it had previously been observed. In the absence of polarons, the text suggests there would be no superfluorescence at room temperature. Thus, rather than decrease the intensity of superfluorescent bursts, polarons make them more likely to occur under certain circumstances.

55 Correct answer **D** Hard ‹ Back to question

D It is farther north than any other nesting site discovered in South America.

Choice D is the best answer because it presents a statement about the site discovered by the researchers that is supported by the text. The text discusses Fiorelli and colleagues' discovery of egg clutches, single eggs, and eggshells in a Brazilian mine. According to the text, the presence of these eggs, which are from the Late Cretaceous period, led the researchers to conclude that the location was once a nesting and breeding site for titanosaurs. The text then explains that the finding is important because of the "previous lack of known nesting sites in northern regions of South America." If there haven't been any other discoveries of a nesting site in South America's northern regions and the site in the Brazilian mine is the first, then the text strongly suggests that the site is farther north than other nesting sites that have been discovered in South America.

Choice A is incorrect because the text doesn't suggest that the site discovered by Fiorelli and colleagues is the earliest titanosaur nesting and breeding site known to paleontologists but rather that it's the first nesting site found in northern regions of South America. Moreover, the text doesn't suggest how the timeline of the newly discovered site compares with that of other titanosaur nesting and breeding sites. **Choice B is incorrect** because there is no mention in the text about any difficulties that Fiorelli and colleagues faced when they were excavating the nesting and breeding site in the Brazilian mine. **Choice C is incorrect** because the text doesn't support the idea that the nesting and breeding site in the Brazilian mine was occupied by sauropods other than titanosaurs. The text simply mentions that titanosaurs are sauropod dinosaurs and presents the researchers' conclusion that the site they discovered was for titanosaurs.

56 Correct answer **B** Hard ‹ Back to question

B Doing philosophy involves developing novel ideas through imagined dialogue with past philosophers based on knowledge of those philosophers' views acquired by studying philosophy.

Choice B is the best answer because it most accurately describes the relationship between doing philosophy and studying philosophy as presented in the text. According to the text, studying philosophy requires being familiar with foundational texts and historical figures, while doing philosophy demands "the creative, self-directed application of acquired expertise"—a phrase implying that doing philosophy builds on knowledge gained through study. The text adds that those who do philosophy treat influential figures as "vital interlocutors who facilitate new insights" (that is, as dialogue partners whose ideas help generate new thinking). In other words, doing philosophy involves developing novel ideas through engagement with the ideas of past philosophers, knowledge of which can be acquired only by studying philosophy.

Choice A is incorrect. While the text does state that studying philosophy requires engagement with historical texts and figures, the text describes doing philosophy as addressing "enduring questions about the nature of existence and knowledge," which are abstract philosophical questions, not practical issues. Rather than formulating concrete solutions, doing philosophy involves the creative application of expertise to these broad, enduring questions. **Choice C is incorrect** because the text doesn't characterize doing philosophy as requiring students to challenge past philosophers' ideas. Instead, the text suggests that those who do philosophy engage creatively with historical figures, which can, but doesn't necessarily entail, opposition. Additionally, the text doesn't claim that the ideas of past philosophers are broadly accepted by those studying philosophy. **Choice D is incorrect** because the text doesn't discuss norms of scholarly inquiry or characterize either approach in terms of conforming to or departing from such norms. Rather, the text notes that doing philosophy can occur "within or beyond the academy," which suggests compatibility with scholarly settings rather than an inevitable departure from them.

57 Correct answer **A**

Hard

< Back to question

A It would involve promoting a trait that protects corals against high heat but that is associated with reduced thriving after episodes of high heat.

Choice A is the best answer because it presents a statement about the proposed strategy that is consistent with Walker et al.'s position. The strategy involves identifying and disseminating corals with strong heat resistance as a means of mitigating coral mortality during episodes of high heat. According to the text, Walker et al. note that if this trait were "exclusively advantageous," it would have already spread throughout coral populations—implying that the trait carries some evolutionary cost. The text then provides evidence of this cost: Walker et al. have found that strongly heat-resistant corals display much less growth after heat stress (indicative of reduced thriving) than do moderately heat-resistant corals. Given the apparent trade-off between strong heat resistance and growth after heat stress, Walker et al. would be likely to agree that the strategy entails promoting a trait that protects against high heat but is associated with reduced thriving afterward.

Choice B is incorrect because the text doesn't suggest that episodes of high heat are predicted to become infrequent. Also, the text establishes that Walker et al. found that the trait of high heat tolerance is associated with a significant trade-off—reduced growth after heat stress. Given the cost that accompanies strong heat resistance, Walker et al. wouldn't be likely to agree that the trait is advantageous now. **Choice C is incorrect** because the text doesn't discuss the effects of moderate heat on corals or distinguish between corals that are exposed to different levels of heat. The text also doesn't address the frequency of corals' exposure to heat. Therefore, there is no basis for concluding that Walker et al. would agree that the strategy benefits corals that are frequently exposed to high heat but harms those that are frequently exposed to moderate heat. **Choice D is incorrect** because the text doesn't indicate that heat resistance in corals is poorly understood. On the contrary, Walker et al. present a specific finding about this trait, linking reduced growth after heat stress to strong heat resistance. In addition, the text indicates that strong heat resistance protects corals during episodes of high heat; while their research shows that heat resistance is linked to reduced growth after such episodes, Walker et al. likely wouldn't agree that it is linked to increased coral mortality during such episodes.

58 Correct answer **C**

Hard

< Back to question

C Its apparent obscurity can be resolved when considered in the proper cultural context.

Choice C is the best answer because it presents a statement about the difrasismo *in cuauhtli in ocelotl* that is directly supported by the text. The text begins by describing difrasismo, a device used in Classical Nahuatl poetry. The text then mentions the device's two functions: a formal one (giving structure to lines of verse) and a ritualistic one. The text indicates that the relation between the words in a difrasismo may appear tenuous without the additional information supplied by Aztec ceremonial culture but that the meaning becomes intelligible in the context of that information. Therefore, the difrasismo's apparent obscurity can be resolved when considered in the proper cultural context.

Choice A is incorrect because the text doesn't indicate that the two nouns used in a difrasismo are semantically equivalent; instead, the text indicates that the two nouns used in a difrasismo make up a single metaphor whose meaning is often intelligible only in the context of information supplied by Aztec ceremonial culture. **Choice B is incorrect** because the text doesn't indicate that there's a relationship between the formal function of the difrasismo and the difrasismo's intelligibility. Additionally, the text suggests that present-day readers who are familiar with Aztec ceremonial culture wouldn't find the difrasismo to be unintelligible. **Choice D is incorrect** because the text doesn't indicate that the frequency of difrasismo's use in Classical Nahuatl is a necessary feature of intelligibility: the text indicates that an infrequently used difrasismo would presumably also be intelligible to members of an Aztec audience who are sufficiently familiar with Aztec ceremonial culture.

59 Correct answer **D**

Hard

< Back to question

D The fossil constitutes the first evidence found by scientists that mixopterids existed outside the paleocontinent of Laurussia.

Choice D is the best answer because it states why Wang and his team's discovery of the *Terropterus xiushanensis* fossil was significant. The text explains that up until Wang and his team's discovery, the only fossil evidence of mixopterids came from the paleocontinent of Laurussia. Wang and his team, however, identified fossil remains of a mixopterid species from the paleocontinent Gondwana. Therefore, the team's discovery was significant because the fossil remains of a mixopterid species were outside of the paleocontinent Laurussia.

Choice A is incorrect. Although the text states that Wang and his team identified fossilized remains of a mixopterid species that lived more than 400 million years ago, it doesn't indicate that mixopterid fossils previously found by scientists dated to a more recent period than that. **Choice B is incorrect**. Although the text states that mixopterids are related to modern arachnids and horseshoe crabs, it doesn't suggest that the fossil discovered by Wang and his team confirmed that this relationship is closer than scientists had previously thought. **Choice C is incorrect** because the team's fossil established the presence of mixopterids on Gondwana, not on Laurussia. Moreover, the text only discusses the fossil in relation to the geographical distribution of mixopterids, not in relation to their evolution.

60 Correct answer **D**

Hard

< Back to question

D It is a remarkable story that happened to an unremarkable person, though one could plausibly argue that because the story is valuable, some of its value accrues to the person at its center.

Choice D is the best answer because it presents a statement about Hans Castorp's story that is suggested by the text. The narrator of the text indicates that the story about Hans Castorp will be told not because there is something particularly notable about him, since he is pleasant but "perfectly ordinary," but because the story itself is remarkable ("very much worth telling"). The narrator then notes that there is a benefit in being at the heart of the story—that it is "in Hans Castorp's favor" that the story is his, and maybe uniquely so ("not every story happens to everybody"). Thus, the text suggests both that the story that will be told is a remarkable one that happened to an unremarkable person and that it is reasonable to argue that the person at the center of a valuable story takes on some of the story's value.

Choice A is incorrect. Although the narrator of the text makes the point that "not every story happens to everybody," the narrator doesn't state that stories are interesting simply because the people they are about are unique. Rather, the narrator suggests that one particular story is "very much worth telling" on its own and that Hans Castorp benefits from the fact that the story is remarkable and may be unique to him. Further, the narrator never suggests that the story will be hard to understand even though it is old. **Choice B is incorrect**. Although the narrator of the text suggests that Hans Castorp is of no particular importance, since he is a "perfectly ordinary" person, the narrator never reveals what makes the story of Castorp important, just that "the story itself" is "very much worth telling." The narrator states that the story "took place long ago," is "covered with the patina of history," and can be told only "with verbs whose tense is that of the deepest past," but the story's age and the way it must be told aren't presented as reasons the story is important; the narrator is simply providing details about how the story will be told. **Choice C is incorrect** because the narrator of the text doesn't suggest that all stories about people who are "perfectly ordinary" (like Hans Castorp) must be told in particular ways to make it clear why those stories are consequential. Further, the narrator suggests that Hans Castorp's story must be told "with

verbs whose tense is that of the deepest past" because it took place so long ago, not because telling it that way will convey the story's importance.

61 Correct answer **A**

Hard

< Back to question

A He has the appearance of a distinguished figure, but it is uncertain whether he has accomplished anything to earn distinction.

Choice A is the best answer because it accurately describes Sir Winston Day as he is portrayed in the text. The text indicates that Sir Winston's "features seemed moulded to adorn a bust, or possibly a stamp," suggesting that he appeared distinguished. But the text also indicates that his "actual achievements" during his long public service constitute an "enigma," or mystery, highlighting the point with a joke about Sir Winston's uninteresting memoirs (any information about his achievements past the first thirty pages "might as well have remained state secrets" since, it's implied, no one bothered to read that far). Thus, the text suggests that Sir Winston appears distinguished even though his known accomplishments, if any, are relatively few.

Choice B is incorrect because nothing in the text indicates that Sir Winston behaved dishonorably. Rather, the text indicates that his "actual achievements" during his long public service constitute an enigma, or mystery, suggesting that he may have done very little, not that what he has done was disreputable. **Choice C is incorrect**. Although the text says that Sir Winston's achievements that appear "after the thirty-page mark" in his memoirs "might as well have remained state secrets," this is a joke about the public's lack of interest in the memoirs, not a sincere claim that secrecy was intended. **Choice D is incorrect** because the text does not associate Sir Winston with modesty, nor does it suggest that he was a capable public servant. Rather, by indicating that Sir Winston's "features seemed moulded to adorn a bust, or possibly a stamp," the text suggests that Sir Winston's appearance communicated importance, not modesty. The text further indicates that his "actual achievements" during his long public service constitute an enigma, or mystery, suggesting that he may have done very little, not that he was particularly capable.

62 Correct answer **A**

Hard

< Back to question

A It is less suitable for manufacturing large volumes of planar p-i-n perovskite solar cells than an alternative fabrication method may be.

Choice A is the best answer. Conventional solar cell fabrication increases "the cost of manufacturing at scale," but spray coating might get rid of that problem.

Choice B is incorrect. This is not completely supported by the text. While it's true that conventional ETL fabrication is expensive at scale, there's nothing in the text that mentions other perovskite solar cell architectures. **Choice C is incorrect**. This choice does not match the text. Only one conventional method of ETL fabrication is described, so we can't compare the solution loss in this method to that of other conventional methods. **Choice D is incorrect**. This choice isn't supported by the text. The text never suggests that the effectiveness of solar cells changes based on their method of fabrication.

63 Correct answer **C**

Hard

< Back to question

C It has been unfairly dismissed for the inclusion of subject matter that is also found in other musical genres.

Choice C is the best answer. The text argues that disco is "far less superficial" than its popular perception might indicate, and that love and heartbreak are "subjects hardly unique to disco."

Choice A is incorrect. This choice conflicts with the text, which says that scholars argue that disco "is far less superficial than many people believe." **Choice B is incorrect**. This choice says the opposite of what the text suggests. The writer argues that the genre is not as superficial as commonly believed, but that it always reflected "concerns about community and identity." **Choice D is incorrect**. The text doesn't support this choice. There's nothing in the text about disco giving rise to an enduring Black women's musical tradition.

64 Correct answer **B**

Hard

< Back to question

B He acknowledges to the noblemen that his tolerance of their conduct has undermined their respect for him, and he resolves to display his genuine nature, which is more forceful and compels deference.

Choice B is the best answer because it most accurately describes King Henry's self-presentation in the text. Henry states that his temperament has been "too cold and temperate, / Unapt to stir at these indignities" (that is, too calm and slow to react to insults), and he asserts that the noblemen have taken advantage of this: "accordingly / You tread upon my patience." He then resolves to change, declaring he will "from henceforth rather be myself, / Mighty and to be fear'd," since being lenient ("smooth as oil, soft as young down") has caused him to lose "that title of respect / Which the proud soul ne'er pays but to the proud." In other words, Henry recognizes that proud people like the noblemen respect only strength and resolves to show his more forceful, true nature.

Choice A is incorrect because the text doesn't describe Henry as having judged the noblemen impartially, nor does it mention any attempts by the noblemen to regain his trust through submissiveness. Rather, Henry describes the noblemen as taking advantage of his patience and declares he will adopt a more commanding demeanor in the future. **Choice C is incorrect**. Although Henry concedes that he has perhaps been too calm and mild, Henry does not defend or vow to maintain his calm disposition. On the contrary, he explicitly states he will "from henceforth rather be myself, / Mighty and to be fear'd," resolving to abandon the mild manner that has cost him the respect of the noblemen. **Choice D is incorrect** because Henry characterizes his manner as patient and mild—"smooth as oil, soft as young down"—not indifferent. Indifference implies

a lack of concern, whereas Henry describes himself as being overly lenient. Additionally, although the final lines mention "the proud soul," the focus is not on the noblemen's excessive pride but rather on how Henry's apparent *lack* of pride has caused him to lose the noblemen's respect.

65 Correct answer **C**

Hard

< Back to question

C It should be treated as a biosignature gas if detected in the atmosphere of a rocky planet but not if detected in the atmosphere of a mini-Neptune.

Choice C is the best answer because it states a conclusion the researchers likely agree with, given the details in the text. The text explains that a biosignature gas is a gas that can be used as an indicator that a planet harbors some form of life and some astronomers have proposed that NH_3 could serve as a biosignature gas. The researchers evaluating this claim found that the atmosphere of rocky planets would be unlikely to reach "detectably high levels" of NH_3 without biological activity, which would support the proposal of NH_3 serving as a biosignature gas. However, the text also states that mini-Neptune planets can produce NH_3 in the absence of biological activity. Thus, the text is structured to lead to the conclusion that detectable levels of NH_3 in the atmospheres of rocky planets could constitute a biosignature, but that is not the case for detectable levels of the gas in the atmospheres of mini-Neptune planets.

Choice A is incorrect because the text indicates that biological activity likely accounts for detectable levels of NH_3 in the atmospheres of rocky planets but mini-Neptune planets can have detectable levels of NH_3 in their atmospheres in the absence of biological activity. Therefore, both rocky planets and mini-Neptune planets can have detectable levels of atmospheric NH_3. **Choice B is incorrect** because the text states that for NH_3 to reach detectable levels in the atmospheres of rocky planets likely means they harbor biological activity, meaning that rocky planets with detectable NH_3 usually harbor biological activity. However, that does not entail that every rocky planet with biological activity will have detectable levels of NH_3 in their atmospheres. **Choice D is incorrect** because the text claims only that some astronomers have proposed using NH_3 as a biosignature gas without mentioning a minimum concentration of atmospheric NH_3 that must be met for it to function as a biosignature gas.

66 Correct answer **D**

Hard

‹ Back to question

D It has a prograde orbit and may not be a remnant of an earlier body that orbited Saturn.

Choice D is the best answer because it most accurately describes the moon with the eccentric orbit. The text indicates that three of the 20 newly discovered moons have prograde orbits, meaning that they orbit Saturn in the same direction as the planet's spin, while the other 17 moons have retrograde orbits, meaning that they orbit Saturn in the opposite direction of the planet's spin. The text then states that 19 of the 20 moons appear to be the remains of earlier bodies that orbited Saturn but were broken apart in collisions. The one exception is a moon that orbits Saturn in the same direction as the planet's spin, meaning that the exceptional moon's orbit is prograde. The text goes on to state that the exceptional moon's orbit is so eccentric that the moon may have formed through a different process than the other 19 moons. The moon with the eccentric orbit, therefore, has a prograde orbit and may not be a remnant of an earlier body that orbited Saturn.

Choice A is incorrect because nothing in the text supports the idea that the moon with the eccentric orbit likely has the same origin as the moons with retrograde orbits. Although it's true that the moon has a prograde orbit (and thus doesn't have a retrograde orbit), the only information the text provides about the moon's origin is that it may be different than the origin of the other 19 moons. **Choice B is incorrect** because the text states that the moon in question orbits Saturn in the same direction as the planet's spin, meaning that the moon's orbit is prograde, not that its orbit is neither prograde nor retrograde. **Choice C is incorrect** because the text merely notes that the moon in question has a prograde orbit without giving any indication of what likely caused that orbit.

67 Correct answer **A**

Hard

‹ Back to question

A They likely make use of different types of evidence than historians of capitalism typically rely on.

Choice A is the best answer because it presents a statement about Alfagali and other Africanist scholars that is supported by the text. The last sentence of the text explains that historians of capitalism generally rely on a type of data that requires "archival records, which do not exist for much of precolonial Africa." Nevertheless, Alfagali and other Africanist scholars have demonstrated that features of capitalism including "returns-focused investment,...open markets for wage labor, and other features of capitalism" existed in parts of Africa before colonization. Because archival records typically used by historians of capitalism aren't available for precolonial Africa, Alfagali and other Africanist scholars of precolonial capitalism in Africa likely used atypical sources for their studies.

Choice B is incorrect because the text states that archival records containing longitudinal economic data "do not exist for much of precolonial Africa." If these records don't exist for precolonial Africa, then Alfagali and other Africanist scholars couldn't derive data from them by any method. **Choice C is incorrect** because the text doesn't suggest that Alfagali and other Africanist scholars define capitalism differently than other historians of capitalism do. On the contrary, the text simply asserts that specific features they found, such as "returns-focused investment [and] open markets for wage labor," are "features of capitalism," which implies scholarly agreement that these activities are capitalist in nature. **Choice D is incorrect** because the text doesn't indicate any effects of capitalism in Africa, positive or negative. Rather, the text explains why precolonial Africa has been omitted from mainstream histories of capitalism and presents work by Alfagali and other Africanist scholars that challenges and corrects the historical record of precolonial capitalism.

68 Correct answer **C**

Hard

‹ Back to question

C The root systems of fynbos plants allow the plants to take in so many soil nutrients that forest plants are prevented from flourishing in the fynbos.

Choice C is the best answer because it presents a conclusion about the role of fynbos roots in maintaining the border with the Afro-temperate forest that can be reasonably inferred from the text. The text states that plants in the fynbos have "uniquely thin and long root systems that spread out over large distances to absorb nutrients from the soil." The text then describes an

experiment where forest tree seedlings grown in plots isolated from fynbos roots grew at a rate five times greater than seedlings in areas near fynbos roots. This strongly suggests that fynbos roots are depleting soil nutrients to such an extent that forest plants can't get enough nutrients from that soil to flourish, thereby hindering the formation of any significant "transition space" between the habitats and helping keep the border between them sharp.

Choice A is incorrect because there is no evidence in the text that fynbos roots physically damage the root systems of forest plants. Instead, the text explicitly describes fynbos plants as having "uniquely thin and long root systems that spread out over large distances to absorb nutrients from the soil." This description establishes that fynbos roots are specialized for efficient nutrient absorption. The experiment then confirms this function of the roots by showing that forest seedlings "isolated from the roots of fynbos plants exhibited a growth rate five times greater" than those near fynbos roots. This result demonstrates that when forest seedlings don't have to compete with the nutrient-absorbing fynbos roots, they grow much better. **Choice B is incorrect**. Although the text does indicate that the fynbos and the Afro-temperate forest are distinct from, and adjacent to, each other and that there is "almost no transition space" (area of mixed fynbos and forest plants), the experiment shows that forest plants can grow in soil occupied by fynbos roots, just not very well. So, the idea that the fynbos roots physically obstruct forest plants is unsupported by the text. **Choice D is incorrect** because it directly contradicts the text's claim that fynbos roots absorb nutrients from, and therefore deplete, the soil they're in, and furthermore, nothing in the text suggests that the habitat of the fynbos is harsh in general.

69 Correct answer **A** — Hard — ‹ Back to question

A To praise a certain writer for being especially perceptive regarding people and nature

Choice A is the best answer because it most accurately states the main purpose of the text. In the first part of the text, the speaker addresses Paul Laurence Dunbar's ability to understand people (he has "read the hearts and souls of men" and written of their "joy and mirth"). In the second part of the text, the speaker describes Dunbar's thorough understanding of the natural world (he has read "the language of the flowers" and engaged with "the little brook"). Thus, the text mainly praises Dunbar for being especially perceptive about people and nature.

Choice B is incorrect because the speaker describes Dunbar as having read the "hearts and souls of men" and the "language of flowers" to convey Dunbar's ability to comprehend people and nature, not to suggest that Dunbar has literally read any of these things or has read a great deal about them. **Choice C is incorrect** because the text notes how well Dunbar has made sense of the topics he's written about but doesn't address any specific parts of Dunbar's writing process beyond the suggestion that he used a pen. **Choice D is incorrect** because the text focuses on Dunbar's understanding of people and nature as expressed in his writing. Nothing in the text suggests that the speaker is recalling a particular afternoon actually spent in nature with Dunbar; even if there had been a shared experience, the text isn't focused on reminiscing.

70 Correct answer **B** — Hard — ‹ Back to question

B When participants encountered summaries from listeners who expressed disagreement with their views, participants tended to disregard evidence that the listeners had in fact been attentive.

Choice B is the best answer because it most accurately describes what the text implies about participants' responses to disagreement. The text describes a study in which participants were asked to explain their position on an issue to a listener, who then provided a written summary of that position that also expressed their level of agreement. The participants were then asked, based on these summaries, to rate listeners' listening skill. The text indicates that researchers embedded markers of attentive listening, such as references to details, in some of the summaries, expecting that these markers would improve the participants' perceptions of listening skill even when the listeners disagreed. Instead, participants rated disagreeing listeners as less skilled, or attentive, "regardless of the other traits of the listeners' summaries." This means that even when summaries contained evidence of attentive listening, participants still judged disagreeing listeners as less skilled—in effect, disregarding evidence that those listeners had been attentive.

Choice A is incorrect. Although the text does suggest that participants tended to disregard evidence of attentiveness when listeners disagreed with their position on the topic they discussed, it doesn't address participants' level of personal investment in these topics; therefore, the text can't support any conclusions about how personal investment in a topic affected participants' perceptions of the listening skill of disagreeing listeners. **Choice C is incorrect** because it directly contradicts the text. The text states that participants rated disagreeing listeners as less skilled regardless of the other traits of the listeners' summaries, which means markers of attentiveness (specific details) didn't lead participants to regard disagreeing listeners as more attentive. Instead, disagreement alone determined the participants' lower ratings. Moreover, the text doesn't address whether participants maintained their positions based on the listeners' summaries. The text focuses on factors affecting participants' perceptions of listeners' attentiveness, not on how features of listeners' summaries influenced the participants' views of the sociopolitical issue they discussed. **Choice D is incorrect** because the text indicates the opposite: participants didn't give higher ratings to disagreeing listeners whose summaries included markers of attentiveness than to disagreeing listeners whose summaries didn't include these markers. Rather, the text states that participants rated disagreeing listeners as less skilled than agreeing listeners regardless of the other traits of the summaries, meaning attentiveness markers had no positive effect when listeners' summaries expressed disagreement.

71 Correct answer **C** — Hard — ‹ Back to question

C Miranda's ability to summon details of an experience she had before arriving on the island suggests that she may also be able to summon details of her arrival on the island.

Choice C is the best answer because it presents a point that Prospero makes about Miranda. The text begins with Miranda responding to Prospero's claim that she probably doesn't remember her life before the island. She describes a distant memory, asking if she had "four or five women" caring for her. Prospero confirms this ("thou hadst") and then asks what else she can recall, stating that because she remembers one thing from the time before she lived on the island ("ought ere thou camest here"), she might also remember arriving on the island ("how thou camest here"). That is, Prospero indicates that Miranda's ability to summon details of an experience from before her arrival on the island suggests that she may also be able to summon details of her arrival.

Choice A is incorrect because Prospero doesn't say anything about how Miranda presents her early childhood memory of having several people care for her—he indicates only his surprise that she remembers something from so long ago ("the dark backward and abysm of time") and his thought that she may also be able to recall another childhood event: her arrival on the island. Further, Prospero doesn't suggest that he believes Miranda is discontent in her current circumstances. **Choice B is incorrect**. Although Miranda suggests some doubt about her recollection of a place other than the island, in that she describes it as "like a dream" she can't be certain of, Prospero doesn't mention her uncertainty—though he himself wonders how it is possible that she correctly recalls something from so long ago ("abysm of time"). Rather than indicating that doubt is making Miranda reluctant, Prospero simply states that Miranda may have the ability to remember traveling to the island. **Choice D is incorrect**. Although Miranda describes a vague impression of several people who cared for her as a young child and states that it is "rather like a dream" instead of something she is certain is real, Prospero doesn't indicate that Miranda is remembering a childhood daydream. Instead, he confirms that what Miranda remembers actually happened, answering her question about having had caregivers with "thou hadst," and asks her what else she can remember from long ago.

72 Correct answer **A** — Hard — ‹ Back to question

A *M. robustus* leave the Octopus Garden upon reaching an intermediary stage of development.

Choice A is the best answer because it most logically completes the text's discussion of the *M. robustus* population at the Octopus Garden. The text states that the scientists concluded that the site is likely used only for reproduction because over three years they saw many adults, freshly hatched octopuses, and eggs but didn't see any juveniles. This suggests that the *M. robustus* octopuses that hatch at the Octopus Garden leave the site when they reach an intermediary state of development, returning only as adults for reproductive purposes.

Choice B is incorrect because the text never discusses the stability of the *M. robustus* population at the site, only that the scientists observed 6,000 adults, hatchlings, and eggs there. Further, the text presents the site's temperatures as likely beneficial. **Choice C is incorrect** because the text doesn't provide any details about the eggs at the site and makes no mention of nests; it indicates only that eggs are present along with hatchlings and adults. **Choice D is incorrect** because the text makes no mention of the hatchlings feeding at the Octopus Garden, indicating only that the temperatures at the site are probably beneficial and that the site is likely used for reproduction.

73 Correct answer **D** Hard Back to question

D How did participants attribute information they were instructed to retrieve from a smartphone in instances when they already knew that information independently of their phone?

Choice D is the best answer because it identifies a question that directly addresses a potential confounding factor in the research. The text discusses a study investigating source misattribution for information retrieved with the assistance of a smartphone—that is, how well people remember whether they used a smartphone to look up information or retrieved the information from their memory. The researchers hypothesized that smartphone reliance causes people to mistakenly think that they retrieved the information from their memory when they in fact used a smartphone. To test this hypothesis, the researchers instructed participants to look up answers to some trivia questions on smartphones and to answer some questions using only their memory. The text then indicates that a week later, participants were more likely to misremember smartphone-assisted answers as coming from memory than to misremember memory-based answers as coming from smartphones. The researchers claimed that the higher misattribution rates for the smartphone-retrieval condition supported their hypothesis. However, the text doesn't specify whether the study design accounted for the possibility that some participants might have known many—perhaps even all—of the trivia answers beforehand. If participants already knew some answers they were instructed to look up on their phones, their later attribution of those answers to memory might be accurate rather than a misattribution. Knowing how participants attributed information in such cases would help determine whether the observed effect reflects smartphone-induced misattribution or simply participants' recall of prior knowledge. Thus, in evaluating the validity of the researchers' claim, it would be most useful to know how participants attributed information they were instructed to retrieve from a phone in instances where they already knew the information.

Choice A is incorrect. Although survey timing is a methodological consideration, it doesn't help distinguish between genuine misattribution caused by smartphone reliance and other explanations for the observed effect. Though it's plausible that participants' recollections of their information source may have been more accurate immediately after answering the trivia questions than they would have been a week later, the one-week delay would affect both conditions equally and doesn't specifically challenge the researchers' claim about smartphone-induced misattribution. **Choice B is incorrect** because confidence in the accuracy of retrieved information doesn't directly pertain to source misattribution. The researchers' claim concerns whether participants believed information came from their smartphone or their memory, not how confident they were in its correctness. Instead, a useful question would need to address the source-attribution process itself. Choice C is

incorrect because the accuracy of the participants' answers doesn't bear on the researchers' claim about source misattribution. The claim concerns the remembered origin of answers, not their correctness. Instead, the relevant issue is whether participants who looked up answers they already knew might have attributed those answers to memory regardless of which of the two experimental conditions they answered those questions under.

74 Correct answer **D** Hard Back to question

D He is overly protective of Evelina, who would likely benefit from a greater variety of experiences than she has had thus far.

Choice D is the best answer because it presents a statement about Reverend Villars that Lady Howard would most likely agree with based on the text. In the text, Lady Howard urges Reverend Villars to allow his ward, Evelina, to join the Mirvans on a trip to London. Her first words after describing the Mirvans' wish—"Do not start at this proposal"—suggest that she believes Villars will be alarmed by the idea, and she goes on to assure him that this alarm is unwarranted because Evelina will benefit from

visiting London. Lady Howard supports her claim by arguing that excessive isolation from the world leads young people to entertain unrealistic, idealized views of it. On the other hand, she suggests, giving young people appropriate access to the world when they, like Evelina, are ready can help them develop a more balanced view of the world and its moral complexities. These words indicate that Lady Howard believes Evelina risks becoming too sheltered because of her guardian's protectiveness and that she would benefit from exposure to a wider range of experiences than she has had thus far.

Choice A is incorrect because while the text does suggest that Lady Howard believes Reverend Villars has sheltered Evelina too much, it doesn't specifically mention shielding her from the influence of other young people. Lady Howard refers more broadly to getting more exposure to the world and doesn't focus on peer relationships. Additionally, the text doesn't indicate whether Lady Howard finds other aspects of how Villars has raised Evelina to be exemplary. **Choice B is incorrect** because the text doesn't suggest that Lady Howard believes Reverend Villars's view of the world is idealistic or that he has imparted an idealistic view of the world to Evelina. While Lady Howard does warn that young people who are too sheltered may develop romantic, idealized views of the world, she presents this as a general principle about sheltered youth, not as a specific criticism of Villars for having transmitted a naïve outlook to Evelina. **Choice C is incorrect** because the text doesn't mention Reverend Villars being specifically concerned about protecting Evelina from unscrupulous people or suggest that he is exceptionally wary of the Mirvans. While Lady Howard's words certainly anticipate some resistance from Villars, the text doesn't specify the nature of his concerns beyond the general desire to protect Evelina from the world.

75 Correct answer **B** — Hard — Back to question

B It facilitates the maneuvering of particles without directly heating the particles themselves.

Choice B is the best answer. The text says that the glass beads get the "focus" of the light beams so that the particles don't overheat. From this, we can infer that the beads allow the particles to be manipulated without being directly heated by the light beams.

Choice A is incorrect. The text never says that attaching the glass beads saves time in any way. **Choice C is incorrect**. The text never says that attaching the glass beads allows researchers to use weaker light beams. **Choice D is incorrect**. The text doesn't say that the particles can transfer heat to the glass beads—rather, it says the heat from the light focuses on the glass beads instead of the particles.

76 Correct answer **D** — Hard — Back to question

D He describes the crowd as being united, even though the crowd clearly appears otherwise.

Choice D is the best answer because it presents a statement about how the Lord Chancellor responds to the crowd that is supported by the text. The text indicates that the people in the crowd are roaring and shouting "Bread!" or "Taxes!" and presents them as not knowing what they really want. The Lord Chancellor's response is to ask what their shouting means but also to observe that they're shouting with "unanimity," or total agreement. Clearly, this isn't the case, which supports the statement that the Lord Chancellor describes the crowd as being united even though it's not.

Choice A is incorrect because it isn't supported by the text. Although the text indicates that the Lord Chancellor asks about the meaning of the crowd's shouting, it doesn't suggest that he knows what the crowd really wants. **Choice B is incorrect** because the text doesn't suggest that the Lord Chancellor wants to speak to the crowd. Furthermore, the text doesn't indicate that the crowd wants to hear from the Sub-Warden. Although the crowd roars when asked "Who roar for the Sub-Warden?" it's unclear what the roaring means. **Choice C is incorrect** because the text doesn't suggest that the Lord Chancellor knows of or sympathizes with the crowd's demands. In addition, the text doesn't indicate that the crowd's shouting annoys the Lord Chancellor, just that it causes him to keep repeating "What can it all mean?"

10 Inference

The most logical conclusion

Inference gives you a text that stops at a blank and asks you to finish it. The answer is never stated in the text. It is the thing the text leaves you no choice but to conclude.

> These last types are the ones a method cannot carry on its own. There is no rule to apply and no pattern to spot. The steps keep you out of the traps, but the reading is the work.

140 questions | **20** Easy | **48** Medium | **72** Hard

THE STEPS

1. Read the text on the surface, without hunting for detail.
2. Do not predict.
3. Go to the answers and work out why each one is wrong.

WHAT TO TAKE FROM THIS

- This is the one type where you do not predict. Your own ending is almost always narrower than the real one, and once you have written it you start forcing a choice to match it.
- Treat it as four statements to be disproved. Three of them say something the text has not earned. Find that thing.
- The right answer usually feels like it says too little. That is because it says exactly what follows and nothing more.
- Words like *must*, *always*, *never* and *only* are usually fatal in a choice. The text rarely earns them.
- If a choice adds a new subject the text never measured, it is out, no matter how sensible it sounds.

Questions	790
Answers & explanations	850

EASY 20 questions

Arthur Conan Doyle's stories about detective Sherlock Holmes were published between 1887 and 1927. They have inspired countless successful adaptations, including comic strips, movies, and a television series *Sherlock Hound*, directed by Hayao Miyazaki, who is celebrated for his animated movies. Until 2014, these stories were copyrighted. The right to adapt was only available to those who could afford the copyright fee and gain approval from the strict copyright holders of Doyle's estate. Some journalists predict that the number of Sherlock Holmes adaptations is likely to increase since the end of copyright means that _____

ID 20000f5f

1 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) Doyle's original stories will become hard to find.

(B) people will become more interested in detective stories than they were in the 1800s.

(C) producing adaptations will become easier and less expensive.

(D) the former copyright holders of Doyle's estate will return fees they collected.

One aspect of in-person shopping that online shopping can't replicate is the opportunity to touch a product before buying it. Does this difference matter? In an experiment, researchers asked one group of participants to touch a mug and a toy, while another group was prohibited from touching the two items. The participants were then asked how much money they'd pay for the items. People who got to touch the items were willing to pay much more money for them than were people who weren't allowed to touch the items. This finding suggests that _____

ID 6bc0e595

2 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) people who mainly shop online probably spend more money every month than people who mainly shop in person do.

(B) in-person shopping may make products seem more valuable than they seem if only viewed online.

(C) retailers with in-person and online stores should charge the same price for a given product in both places.

(D) online retailers may be able to raise the prices they charge for products that are only available online.

In Switzerland, the white fuzzy mountain flowers known as edelweiss are widely treated as a symbol of strength and courage. Although edelweiss can thrive in extreme conditions, they aren't notably tougher or harder to reach than other mountain flowers growing in the Swiss Alps. Historian Tobias Scheidegger has shown that the popular view of the flowers originated in the mid-1800s when mountain climbing became popular in Switzerland. Mountain climbers spread the idea that the flowers grew only in steep, icy terrains that were dangerous to climb to. Scheidegger says that these claims were self-interested. He suggests that mountain climbers presented edelweiss in this way in order to _____

ID c9708e7d

3 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) make themselves appear brave and strong for being able to climb to difficult places where edelweiss supposedly grew.

(B) encourage more flower enthusiasts to explore the Swiss Alps.

(C) share their observations about the unusual characteristics of edelweiss with scientists.

(D) prove that edelweiss were more common in the Swiss Alps than in other mountain regions in Europe.

Off-off-Broadway theaters emerged in the late 1950s as a rebellion against mainstream Broadway theaters in New York, freeing artists to create productions that were more experimental than typical Broadway shows. One such artist was playwright María Irene Fornés. Working with off-off Broadway theaters enabled Fornés not only to direct her own plays but also to direct them exactly as she intended them to be staged, regardless of how strange the results might have seemed to audiences accustomed to Broadway shows. In this way, Fornés _____

ID dbbbc5dd

4 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) wrote plays that would have been too expensive to produce if someone else had directed the production.

(B) recognized that staging an off-off-Broadway play was more complicated than staging a Broadway play.

(C) would have been more famous if she had created plays that were mainstream instead of experimental.

(D) illustrates the artistic opportunity offered by off-off Broadway theaters.

North American gray wolves usually have mixed gray and white fur, but some members of the species have a version of a gene, or gene variant, that gives them a mostly black coat instead. Sarah Cubaynes and her team studied twelve populations of North American gray wolves. They found that the black-furred wolves are more common in areas where outbreaks of distemper virus happen regularly. The team also discovered that the black-furred wolves are more likely to be immune to distemper than the gray-furred wolves are. Taken together, these findings suggest that _____

ID 8a3ecac6

5 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) North American gray wolves experience more outbreaks of distemper virus than other wolf species do.

(B) the gene variant that results in black fur may be linked to immunity to the distemper virus.

(C) the average life span of gray wolves is likely to increase over time because of a particular gene variant.

(D) gray-furred wolves will soon replace black-furred wolves across North America.

In the 1950s and ’60s, plant breeders created shorter varieties of wheat and rice plants with improved yields. Kelly Gillespie, Rex Bernardo, and other plant specialists are building on that work by exploring the development of shorter corn varieties. Greater height can allow individual plants to produce more ears of corn. However, greater height also makes the stalks more likely to snap or be uprooted in strong winds before the corn can be harvested. Because of this trade-off, some plant specialists suggest that shorter corn varieties will actually _____

ID 4025e00c

6 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) help improve yields of harvested corn by being more likely to survive in severe winds.

(B) be more likely to be uprooted due to the weight of the corn on the stalks.

(C) require more land for planting than short varieties of wheat and rice typically do.

(D) begin developing more ears of corn on each plant than the tallest variety of corn currently does.

Archaeologist Christiana Kohler and her team excavated the Egyptian tomb of Queen Merneith, the wife of a First Dynasty pharaoh. Some scholars claim that she also ruled Egypt on her own and was actually the first female pharaoh. The team found a tablet in Merneith’s tomb with writing suggesting that she was in charge of the country’s treasury and other central offices. Whether Merneith was a pharaoh or not, this discovery supports the idea that Merneith likely _____

ID fc1259dd

7 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) had an important role in Egypt’s government.

(B) lived after rather than before the First Dynasty of Egypt.

(C) traveled beyond Egypt’s borders often.

(D) created a new form of writing in Egypt.

The Nacional tree is a rare variety of cacao. Nacionals were thought to have gone extinct by the twentieth century due to a fungus. This fungus can spread from tree to nearby tree through the air and causes disease. But around 2013, cacao expert Servio Pachard located some of these Nacional trees. The trees were in the Piedra de Plata coastal forest, within a hard-to-reach valley in Ecuador. Conservationists inferred that the Nacional trees in Piedra de Plata might have avoided the diseases that wiped out the other Nacionals because _____

ID fcae209f

8 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) early twentieth-century scientists did not know why so many Nacionals were becoming infected.

(B) the ability of the fungus to travel through the air was only recently discovered.

(C) they were too far from the other Nacional trees infected by the fungus to become infected themselves.

(D) the chocolate made from their pods was highly valued.

Researchers Eugeni Vidal-Tortosa and Robin Lovelace looked at the relationship between street lighting in a city and people's willingness to ride a bicycle. Their results suggest that poor street lighting can deter new or inexperienced cyclists from riding in a city but has little effect on experienced cyclists. Therefore, increasing the number of streetlights in a city could potentially _____

ID 72cbdbc6

9 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) decrease the number of new or inexperienced cyclists riding in the city.

(B) increase the number of experienced cyclists riding in the city.

(C) decrease the number of experienced cyclists riding in the city.

(D) increase the number of new or inexperienced cyclists riding in the city.

Individuals with visual impairments who want to experience a solar eclipse may be able to make use of a device that converts light into sound. The device is made up of a microcontroller board and a light sensor that measures the brightness of light shining onto the device. It also has a component called a MIDI, which allows the device to play different sounds. The device plays a high-pitched flute sound in bright light, a neutral-pitched clarinet sound in mid-range light, and a soft clicking sound in low light. After a solar eclipse starts, the sun becomes more covered and the amount of light slowly reduces. Therefore, during a solar eclipse the device will _____

ID 6abe5e3c

10 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) play a flute sound, then a clarinet sound, and then a clicking sound.

(B) play a clicking sound, then a flute sound, and then a clarinet sound.

(C) start with fast clarinet sounds that become steadily slower.

(D) start with a soft flute sound that becomes steadily louder.

In many cultures, a handshake can create trust between people. Engineer João Avelino and his team are designing a robot to shake hands with a human in order to improve human-robot interactions. The robot hand adjusts its movements and pressure to better imitate the feel of a human hand. The researchers want the robot's handshake to feel realistic because _____

ID 25893fc7

11 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) lifelike handshakes may make people more comfortable interacting with robots.

(B) it's easier to program a robot to perform handshakes than it is to program a robot to perform some other types of greetings.

(C) people are less likely to interact with robots that don't look like humans.

(D) the robot in the researchers' study may have uses other than interacting with humans.

In the South Pacific, New Caledonian crows use two different kinds of stick tools. One tool is complex. The crows shape a stick from a rare plant into a hook. The other tool is basic. The crows find a stick without a hook on the ground. The hooked tool is harder to get but is much better than the basic tool at removing prey from holes. When studying New Caledonian crows, ecologist Barbara Klump found that they hold the hooked tools in their claws when not using them, or they carefully put them in a safe place. The crows don't do the same with the basic tools. This suggests to Klump that the _____

ID 493c46bc

12 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) hooked stick tools are more valuable to the crows than the stick tools without hooks.

(B) hooked stick tools are easier for most of the crows to hold than the stick tools without hooks.

(C) crows prefer to share their hooked stick tools but don't share the stick tools without hooks.

(D) crows realize that both kinds of stick tools are less effective than their claws are at removing prey from holes.

Georgia Douglas Johnson wrote many plays in the 1920s and 1930s. At the time, professional theater companies rarely put on plays by Black women, so few of Johnson's plays made it to the stage. Only a small number of her plays were published in her lifetime. But that doesn't mean that Johnson never learned what other people thought of her plays. Johnson hosted weekly get-togethers for fellow Black writers and artists in her Washington, DC, home. Attendees would read and discuss one another's work, including Johnson's own. These gatherings could therefore serve as _____

ID 7a895def

13 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) an occasion for professional theater companies to put on plays.

(B) an opportunity for Johnson to get feedback on her plays.

(C) a way for Johnson to learn about plays that were produced in other cities.

(D) subject matter for future plays by Johnson.

If an animal has been extinct for a long time, how can scientists learn what color it was? One group of scientists came up with a possible answer. When the scientists examined the fossilized feather of an extinct bird, they found melanosomes in it. Melanosomes produce pigment, or grains of color, inside cells. Because melanosomes are shaped differently depending on which colors they produce, the scientists hypothesized that they could _____

ID eca09a92

14 Mark for Review — Easy — Explanation ›

Which choice most logically completes the text?

(A) show how melanosomes can be found in fossils belonging to animals from other extinct species.

(B) determine the colors of the bird based on the appearance of the melanosomes in the feather.

(C) explain why the melanosomes in the feather were so well preserved.

(D) identify the colors of extinct animals whose fossils lack melanosomes.

A typical string quartet consists of two violin players, a viola player, and a cello player. When a string quartet performs, one violinist and the cellist usually sit facing the audience. The violist and the other violinist usually sit facing each other. This seating arrangement causes the viola's carved sound openings, or f-holes, to be angled away from the audience. Therefore, if the viola player has a musical solo and wants to make sure that the audience can hear it clearly, the violist typically _____

ID ead0fd9b

15 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) instructs the other members of the quartet to play louder.

(B) plays at the same volume as the cellist.

(C) shifts position in order to face outwards toward the audience.

(D) looks at the sheet music instead of looking at the audience.

To create the poems in her 2017 collection *One Last Word*, poet Nikki Grimes used a writing method called the golden shovel. This method often involves choosing a line from an existing poem and then using each word from that line as the last word of each line in a new poem. Grimes wanted the poems in *One Last Word* to honor important Black poets of the past, so she chose lines by poets such as Langston Hughes and Georgia Douglas Johnson. Writing in this way can be challenging and might seem as though it would produce awkward poems. However, reviewers praised *One Last Word* as a beautiful and powerful tribute to the poets who inspired it. This reaction suggests that _____

ID 1d0b5bf4

16 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) most reviewers didn't understand Grimes's goal for *One Last Word*.

(B) Grimes successfully used the golden shovel method to achieve her goal for *One Last Word*.

(C) Langston Hughes and Georgia Douglas Johnson are two of Grimes's favorite poets.

(D) Grimes inspired many other writers to create poems using the golden shovel method.

Researchers wanted to study how consumers' reactions to an ad may be affected by other ads. The researchers began by showing study participants an ad for a product, with some seeing a less detailed ad and others seeing a more detailed one. Then, all participants viewed the same second ad for a store and shared their opinion of the store based on this second ad. Participants who had first seen an ad less detailed than the second ad had a higher opinion of the store than the participants who had first seen a more detailed ad. The researchers concluded that reactions to an ad may be affected by _____

ID 5b4829d2

17 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) the number of people who viewed the ad.

(B) the length of time viewing previous ads.

(C) the amount of detail viewed in previous ads.

(D) the time of day that the ad is viewed.

The musical *Hadestown* was produced off-Broadway in New York in 2016. A revised version of the musical premiered on Broadway in 2019, in a larger production. In a review of the Broadway production, theater critic Jesse Green enthusiastically praised the musical's storytelling. However, Green also explained that he had seen the earlier version of *Hadestown* in 2016 and had found the storytelling to be very confusing. This suggests that in Green's view, _____

ID b4da6aaf

18 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) the 2016 version of *Hadestown* had fewer storytelling problems than the 2019 version did.

(B) *Hadestown* should have had a larger production in 2019 than it actually did.

(C) the 2019 version of *Hadestown* was less enjoyable than the 2016 version.

(D) *Hadestown* improved greatly between 2016 and its premiere on Broadway.

Over 600 languages are spoken in New York City in addition to English—one can find Amharic spoken in the neighborhood of Norwood, or Ilocano in Woodside. Most speakers of Chinese languages reside in the neighborhood of Flushing (part of New York City's borough of Queens) and in Chinatown, in the borough of Manhattan. New immigrants from north China, where Mandarin is the primary first language, tend to settle in Queens, while new immigrants from south China, where many people speak Cantonese or Fuzhounese as a first language, tend to settle in Manhattan. It can therefore be inferred that _____

ID 7afdcca2

19 Mark for Review Easy Explanation ›

Which choice most logically completes the text?

(A) languages tend to change more rapidly in areas where many languages are spoken than in areas where few languages are spoken.

(B) languages spoken by immigrant peoples can differ significantly in vocabulary and pronunciation from those same languages in their country of origin.

(C) there is a positive correlation between the physical size of a country and the number of languages spoken in that country.

(D) correlations in a country between languages and regions where they are spoken can replicate themselves in a new country to which the original country's citizens emigrate.

A main goal of the Association for the Advancement of Creative Musicians (AACM), an arts organization founded in 1965, is to advance new works by Black musicians. The AACM achieves this goal in part by focusing on young artists. By having established musicians and composers serve as mentors, the AACM gives young artists the benefits of expert technical training and creative guidance. Numerous organizations offer similar kinds of support to new generations of painters, writers, and other artists, suggesting that _____

ID 93cad661

20 Mark for Review Easy Explanation >

Which choice most logically completes the text?

(A) artists of all ages benefit more from technical training than from creative guidance.

(B) many arts organizations recognize the importance of providing opportunities for young artists to learn from experienced mentors.

(C) most established artists could become even better artists by serving as mentors.

(D) finding a mentor is more important for musicians than it is for painters, writers, and other types of artists.

MEDIUM 48 questions

In her 2021 article "Throwaway History: Towards a Historiography of Ephemera," scholar Anne Garner discusses John Johnson (1882–1956), a devoted collector of items intended to be discarded, including bus tickets and campaign pamphlets. Johnson recognized that scholarly institutions considered his expansive collection of ephemera to be worthless—indeed, it wasn't until 1968, after Johnson's death, that Oxford University's Bodleian Library acquired the collection, having grasped the items' potential value to historians and other researchers. Hence, the example of Johnson serves to _____

ID d748c3fd

21 Mark for Review Medium Explanation >

Which choice most logically completes the text?

(A) demonstrate the difficulties faced by contemporary historians in conducting research at the Bodleian Library without access to ephemera.

(B) represent the challenge of incorporating examples of ephemera into the collections of libraries and other scholarly institutions.

(C) lend support to arguments by historians and other researchers who continue to assert that ephemera holds no value for scholars.

(D) illustrate both the relatively low scholarly regard in which ephemera was once held and the later recognition of ephemera's possible utility.

The practice of logging (cutting down trees for commercial and other uses) is often thought to be at odds with forest conservation (the work of preserving forests). However, a massive study in forest management and preservation spanning 700,000 hectares in Oregon's Malheur National Forest calls that view into question. So far, results of the study suggest that forest plots that have undergone limited logging (the careful removal of a controlled number of trees) may be more robust than plots that haven't been logged at all. These results, in turn, suggest that _____

ID ca5a3fb4

22 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) logging may be useful for maintaining healthy forests, provided it is limited.

(B) other forest management strategies are more effective than limited logging.

(C) as time passes, it will be difficult to know whether limited logging has any benefits.

(D) the best way to support forest health may be to leave large forests entirely untouched.

Some businesses believe that when employees are interrupted while doing their work, they experience a decrease in energy and productivity. However, a team led by Harshad Puranik, who studies management, has found that interruptions by colleagues can have a social component that increases employees' sense of belonging, resulting in greater job satisfaction that benefits employees and employers. Therefore, businesses should recognize that _____

ID 3190835d

23 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) the interpersonal benefits of some interruptions in the workplace may offset the perceived negative effects.

(B) in order to maximize productivity, employers should be willing to interrupt employees frequently throughout the day.

(C) most employees avoid interrupting colleagues because they don't appreciate being interrupted themselves.

(D) in order to cultivate an ideal workplace environment, interruptions of work should be discouraged.

Microbes that live in shallow lakes and ponds produce methane, a harmful greenhouse gas. Ecologist Ralf Aben and his team wanted to see how different types of shallow-water plants might affect the amount of methane that escapes into the atmosphere. Aben's team set up some water tanks with soil and microbes from local ponds. Some tanks had a type of underwater plant that grows in the soil called watermilfoil. Other tanks had either duckweed, a type of plant that floats on the water's surface, or algae. Aben and his team found that tanks with duckweed and algae released higher levels of methane than tanks with watermilfoil did. This finding suggests that _____

ID 01989d77

24 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) the presence of some kinds of underwater plants like watermilfoil helps prevent methane from escaping shallow lakes and ponds.

(B) shallow lakes and ponds release more methane than deeper bodies of water because shallow bodies of water usually have more plants than deep bodies of water do.

(C) shallow lakes and ponds are more likely to contain algae than to contain either watermilfoil or duckweed.

(D) having a mix of algae, underwater plants, and floating plants is the best way to reduce the amount of methane in shallow lakes and ponds.

Scholars have noted that F. Scott Fitzgerald's writings were likely influenced in part by his marriage to Zelda Fitzgerald, but many don't recognize Zelda as a writer in her own right. Indeed, Zelda authored several works herself, such as the novel *Save Me the Waltz* and numerous short stories. Thus, those who primarily view Zelda as an inspiration for F. Scott's writings _____

ID 7c1e5880

25 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) overlook the many other factors that motivated F. Scott to write.

(B) risk misrepresenting the full range of Zelda's contributions to literature.

(C) may draw inaccurate conclusions about how F. Scott and Zelda viewed each other's works.

(D) tend to read the works of F. Scott and Zelda in an overly autobiographical light.

In their book *Smart Pricing*, Jagmohan Raju and Z. John Zhang consider musicians' use of the nontraditional "pay as you wish" pricing model. This model generally offers listeners the choice to pay more or less than a suggested price for a song or album—or even to pay nothing at all. As the authors note, that's the option most listeners chose for an album by the band Harvey Danger. Only about 1% opted to pay for the album, resulting in earnings below the band's expectations. But the authors also discuss musician Jane Siberry, who saw significant earnings from her "pay as you wish" online music store as a result of many listeners choosing to pay more than the store's suggested prices. Hence, the "pay as you wish" model may _____

ID 4603d1f7

26 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) prove financially successful for some musicians but disappointing for others.

(B) hold greater financial appeal for bands than for individual musicians.

(C) cause most musicians who use the model to lower the suggested prices of their songs and albums over time.

(D) more strongly reflect differences in certain musicians' popularity than traditional pricing models do.

Songbirds learn to respond to and imitate their species' songs from an early age. With each generation, small differences are introduced that result in distinct variations—called dialects—among geographically isolated populations of the same species. A research study examined whether twelve-day-old *Ficedula hypoleuca* (pied flycatcher) nestlings prefer local dialects over the unfamiliar dialects of nonlocal *F. hypoleuca* populations: the more begging calls the nestlings made in response to a song, the stronger their preference. The researchers found that nestlings produced more begging calls in response to their own dialect than to nonlocal dialects. Since song preference plays a role in songbird mate selection, the finding suggests that _____

ID db876fd5

27 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) *F. hypoleuca* nestlings' preference for their own dialect likely disappears as they mature to promote socialization between different *F. hypoleuca* populations.

(B) *F. hypoleuca* nestlings who show an early preference for their own dialect are likely to receive more food from their caretakers than nestlings who show no preferences among any *F. hypoleuca* dialects.

(C) *F. hypoleuca* nestlings' preference for their own dialect likely drives them when they mature to reproduce with other *F. hypoleuca* from local rather than nonlocal populations.

(D) *F. hypoleuca* nestlings show a preference for both local *F. hypoleuca* dialects and the songs of other local songbirds over the songs of nonlocal birds of any species.

In a study of the mechanisms underlying associative memory—or the ability to learn and remember connections between inherently unrelated things—neuroscientists Kei Igarashi, Jasmine Chavez, and others presented mice with memory tests. The team discovered that fan cells, a type of cell found in the medial temporal lobe of the brain, are necessary for the acquisition of new associative memories. They also found that fan cell activity requires dopamine, a chemical the brain produces in response to pleasure and rewards. Consequently, receiving a reward should likely help to _____

ID 3cc2eacc

28 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) decrease an individual's capacity to utilize dopamine.

(B) increase an individual's capacity to recognize differences between unrelated things.

(C) increase an individual's capacity to form associative memories.

(D) decrease an individual's capacity to create fan cells.

Pablo Picasso famously subverted the norms of traditional painting: in his cubist paintings he refused to let his expression be constrained, fragmenting objects and figures to present multiple perspectives simultaneously. Though less widely known, Picasso—who once lamented that writers of his time had "limited themselves to moving around words somewhat while respecting the syntax"—also wrote poetry that defied conventional grammar, semantic relationships, and text structure. Thus, the paintings and poems are linked in that _____

ID 5bcee487

29 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) the poems present many of the same subjects as the paintings but with different thematic approaches.

(B) the poems are intended to be understood as explanations of the artistic inclinations reflected in the paintings.

(C) both types of work are characterized by the simultaneous representation of multiple points of view that Picasso is known for.

(D) both exhibit Picasso's prioritization of creative expression over the standard rules of the art forms.

Although military veterans make up a small proportion of the total population of the United States, they occupy a significantly higher proportion of the jobs in the civilian government. One possible explanation for this disproportionate representation is that military service familiarizes people with certain organizational structures that are also reflected in the civilian government bureaucracy, and this familiarity thus _____

ID 54057e3f

30 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) makes civilian government jobs especially appealing to military veterans.

(B) alters the typical relationship between military service and subsequent career preferences.

(C) encourages nonveterans applying for civilian government jobs to consider military service instead.

(D) increases the number of civilian government jobs that require some amount of military experience to perform.

Archaeologists have been debating the origin of a rare form of lead found in Shang dynasty (1766–1046 BCE) bronze artifacts since its presence was discovered in China in the 1990s. Different researchers have proposed theories on which regions of the world would have had the raw materials containing the specific lead in these artifacts, but no conclusive evidence has been presented. What is intriguing is that bronze artifacts from China dated after the Shang dynasty do not contain this form of lead, suggesting that _____

ID c4d43991

31 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) Shang dynasty bronze pieces are rare and therefore more valuable than those from other time periods.

(B) the source of some of the raw materials used to make bronze was exploited only until the end of the Shang dynasty.

(C) bronze was used for a short time during the Shang dynasty before different metals were used to make artifacts.

(D) methods used to analyze bronze artifacts are not useful on pieces that are dated after the Shang dynasty.

Herbivorous sauropod dinosaurs could grow more than 100 feet long and weigh up to 80 tons, and some researchers have attributed the evolution of sauropods to such massive sizes to increased plant production resulting from high levels of atmospheric carbon dioxide during the Mesozoic era. However, there is no evidence of significant spikes in carbon dioxide levels coinciding with relevant periods in sauropod evolution, such as when the first large sauropods appeared, when several sauropod lineages underwent further evolution toward gigantism, or when sauropods reached their maximum known sizes, suggesting that _____

ID 123bd312

32 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) fluctuations in atmospheric carbon dioxide affected different sauropod lineages differently.

(B) the evolution of larger body sizes in sauropods did not depend on increased atmospheric carbon dioxide.

(C) atmospheric carbon dioxide was higher when the largest known sauropods lived than it was when the first sauropods appeared.

(D) sauropods probably would not have evolved to such immense sizes if atmospheric carbon dioxide had been even slightly higher.

The Cretaceous pterosaur *Tupandactylus navigans* is known for having an anomalously oversized head crest. Until an almost complete fossil skeleton was found in Brazil, paleontologists had been able to study only skull specimens from *T. navigans*, though it was presumed that, like other pterosaurs, the species's primary form of locomotion was powered flight. Examining the fuller skeleton in 2016, Victor Beccari and his team determined that *T. navigans* had long hind legs, short wings, and an unusually long neck—characteristics that, combined with the creature's large-crested head, would have made sustained flight difficult and walking upright relatively comfortable. Based on these findings the team suggests that *T. navigans* likely _____

ID e1504a2a

33 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) flew for longer distances than did other pterosaur species that had oversized head crests.

(B) had longer wings than other pterosaur species considered to have been comfortable walking.

(C) had a smaller head than researchers expected based on the earlier *T. navigans* skull specimens.

(D) flew for shorter distances and spent more time walking than researchers previously thought.

Colonized by Spain in the 1600s, New Mexico is home to a dialect of Spanish that differs significantly from dialects spoken in Spain's other former colonies in the Americas. Most notably, the New Mexican dialect retains older features of the language that other dialects lost in later centuries. But why would it have done so? New Mexico was so distant from population centers in Spain's other colonies that it attracted few colonists after its initial colonization. Geographical isolation in turn would have limited the exposure of New Mexican colonists to changes occurring to Spanish grammar and vocabulary elsewhere in the empire. Thus, the present-day uniqueness of the New Mexican dialect suggests the extent to which _____

ID c95995bc

34 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) a language can protect itself from being influenced by other languages.

(B) the grammar and vocabulary of any given language change from one generation to the next.

(C) geographical isolation can influence how a language develops.

(D) speakers of one dialect of a language can understand speakers of another dialect of that language.

The Household, Income and Labour Dynamics in Australia Survey (HILDA) examines trends in economic well-being among 25,000 people in Australia unfolding over many years. As is true of most longitudinal studies, this need for years of data collection results in high costs. By contrast, a relatively straightforward fitness study, such as one that is merely trying to identify the percentage of regular exercisers in a city who do weight training, may not need a large budget because _____

ID 6409016a

35 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) longitudinal methods are probably suitable for the fitness study.

(B) it would be easy for HILDA researchers to add questions to their economic well-being study.

(C) 25,000 people is more than enough for HILDA to find trends in economic well-being.

(D) the fitness study can be done well without years of data collection.

When the Vinland Map, a map of the world purported to date to the mid-1400s, surfaced in 1957, some scholars believed it demonstrated that European knowledge of the eastern coast of present-day North America predated Christopher Columbus's 1492 arrival. In 2021, a team including conservators Marie-France Lemay and Paula Zyats and materials scientist Anikó Bezur performed an extensive analysis of the map and the ink used. They found that the ink contains titanium dioxide, a compound that was first introduced in ink manufacturing in the early 1900s. Therefore, the team concluded that _____

ID 8fbed1cb

36 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) mid-1400s Europeans could not have known about the eastern coast of present-day North America.

(B) the Vinland Map could not have been drawn by mid-1400s mapmakers.

(C) mapmakers must have used titanium compounds in their ink in the 1400s.

(D) there isn't enough information to determine when the ink was created.

It's common for jazz musicians and fans to refer to certain songs as having "swing," indicating that the songs provoke a strong feeling, like the impulse to tap one's foot or dance. The exact acoustic properties that give a song swing, however, have long been thought to be undefinable. To investigate swing, a team led by physicist Corentin Nelias delayed the downbeats and synchronized the offbeats in jazz piano solos and asked jazz musicians to compare the intensity of swing in each modified piece with the intensity of swing in the original piece. They found that participants were more than seven times likelier to characterize the modified songs as having swing than to characterize the original versions as having swing, suggesting that _____

ID 5432d1de

37 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) synchronized offbeats tend to give a song swing regardless of whether downbeats are delayed.

(B) the acoustic properties that give a song swing are not easy for jazz musicians to manipulate.

(C) jazz songs that feature the piano are more likely to have swing than are jazz songs that do not feature the piano.

(D) the timing of downbeats and offbeats may play a crucial role in giving a song swing.

The Indus River valley civilization flourished in South Asia from 3300 BCE to 1300 BCE. Many examples of the civilization's writing system exist, but researchers haven't yet deciphered it or identified which ancient language it represents. Nevertheless, archaeologists have found historical artifacts, such as clay figures and jewelry, that provide information about the civilization's customs and how its communities were organized. The archaeologists' findings therefore suggest that _____

ID 4e9afd7a

38 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) investigating an ancient civilization is easier without knowledge of the civilization's language.

(B) knowing an ancient civilization's language isn't necessary in order to learn details about the civilization.

(C) archaeological research should focus on finding additional artifacts rather than deciphering ancient languages.

(D) examining the civilization's historical artifacts has resolved the debate about this civilization's language.

In 2016 biological anthropologist Heather F. Smith and her team investigated the evolution of the appendix, an intestinal organ that is present in some mammals, including humans, but is generally thought to have no function. Studying 533 mammal species, the team found that the appendix has emerged independently across multiple lineages in separate instances and, significantly, hasn't disappeared after emerging in specific lineages. Moreover, the team determined that species with the organ tend to have higher concentrations of lymphoid tissue, which supports immune responses, in the cecum, the organ the appendix is attached to. Therefore, the team hypothesized that the appendix likely _____

ID 420b82e2

39 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) was once present in many nonmammal species but has since disappeared from those lineages.

(B) has been preserved in certain mammal species because it benefits their immune systems.

(C) will emerge in a greater number of mammal species because it may serve a necessary function in the immune system.

(D) produced higher concentrations of lymphoid tissue in mammals in the past than it does currently.

Laura Mulvey has theorized that in narrative film, shots issuing from a protagonist's point of view compel viewers to identify with the character. Such identification is heightened by "invisible editing," or editing so inconspicuous that it renders cuts between shots almost unnoticeable. Conversely, Mulvey proposes that conspicuous editing or an absence of point-of-view shots would induce a more critical stance toward a protagonist. Consider, for example, the attic scene in Alfred Hitchcock's *The Birds*, a conspicuously edited sequence of tens of shots, few of which correspond to the protagonist's point of view. According to Mulvey's logic, this scene should affect viewers by _____

ID 95dbdf51

40 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) obscuring their awareness of the high degree of artifice involved in constructing the montage.

(B) lessening their identification with the protagonist, if not alienating them from the character altogether.

(C) compelling them to identify with the film's director, whose proxy is the camera, and not with the protagonist.

(D) diverting their attention away from the film's content and toward its stylistic attributes.

Scholars are increasingly exploring the communication and preservation of ecological knowledge through Indigenous songs (e.g., Sakha songs about local ecosystems and those of the Kaluli people about rainforest sounds). In one study, ethnobiologist Dana Lepofsky et al. received insight from Kwaxsistalla Wathl'thla, a song keeper for the Kwakwaka'wakw people in Canada, into songs referencing the people's use of terraced gardens in intertidal zones along the Pacific Northwest coast for the cultivation of clams for consumption. Archaeological evidence of significant increases in clam size and abundance in that area concurrent with the documented past implementation of the method described in the songs supports the conclusion that _____

ID 7ae8065c

41 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) the practice used by ancestors of modern Kwakwaka'wakw people not only effectively maintained a food source but also promoted its robustness.

(B) non-Indigenous people around the Pacific Northwest coast adopted the practice developed by the Kwakwaka'wakw people after observing its efficacy.

(C) there is greater corroboration in the archaeological record of ecological practices described in Kwakwaka'wakw songs than of those described in Sakha and Kaluli songs.

(D) although contemporary Kwakwaka'wakw people have a deep understanding of and appreciation for the fishing and farming practices used by their ancestors, they no longer implement those methods.

Even with the widespread adoption of personal computers, many authors still choose to write and revise their novels by hand and only then transcribe the final version on a computer. It may be tempting to speculate about how a novel written this way would be affected if it had been exclusively typed instead, but each novel is a unique entity resulting from a specific set of circumstances. Therefore, _____

ID 28dfc05a

42 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) in order to increase their efficiency, authors who currently write their novels largely by hand should instead work only on a computer.

(B) authors who do most of their drafting and revising by hand likely have more success than those who work entirely on a computer.

(C) novels written by hand take less time to produce, on average, than novels written on a computer do.

(D) there is no way to reasonably evaluate how a work would be different if it had been written by other means.

The Haitian Declaration of Independence was issued in 1804, bringing to an end the revolution against colonial France that began in 1791. Written in French, which was not the first language of most Haitians but which was used throughout Europe as the language of international diplomacy, the declaration notes that Haiti will not bring rebellion to other Caribbean nations, promises to respect the sovereignty of its neighbors—widely understood as a reassurance to the United States—and sets up Haiti as an example for future struggles against colonizers (an implicit reference to the many colonies then found in the Americas). So even though the declaration is explicitly addressed to the Haitian people, it's reasonable to conclude that _____

ID 350e2336

43 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) aspects of the declaration were modeled on similar documents from other countries.

(B) the French government may have been surprised by the declaration.

(C) many Haitian people opposed the revolution and the declaration.

(D) the declaration actually had several intended audiences.

Researchers Suchithra Rajendran and Maximilian Popfinger modeled varying levels of passenger redistribution from short-haul flights (flights of 50 to 210 minutes, from takeoff to landing) to high-speed rail trips. Planes travel faster than trains, but air travel typically requires 3 hours of lead time for security, baggage handling, and boarding that rail travel doesn't, so short-haul routes take similar amounts of time by air and by rail. However, the model suggests that as rail passenger volumes approach current capacity limits, long lead times emerge. Therefore, for rail to remain a viable alternative to short-haul flights, _____

ID f942646f

44 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) rail systems should offer fewer long-haul routes and airlines should offer more long-haul routes.

(B) rail systems may need to schedule additional trains for these routes.

(C) security, baggage handling, and boarding procedures used by airlines may need to be implemented for rail systems.

(D) passengers who travel by rail for these routes will need to accept that lead times will be similar to those for air travel.

Euphorbia esula (leafy spurge) is a Eurasian plant that has become invasive in North America, where it displaces native vegetation and sickens cattle. *E. esula* can be controlled with chemical herbicides, but that approach can also kill harmless plants nearby. Recent research on introducing engineered DNA into plant species to inhibit their reproduction may offer a path toward exclusively targeting *E. esula*, consequently _____

ID 4a85fea6

45 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) making individual *E. esula* plants more susceptible to existing chemical herbicides.

(B) enhancing the ecological benefits of *E. esula* in North America.

(C) enabling cattle to consume *E. esula* without becoming sick.

(D) reducing invasive *E. esula* numbers without harming other organisms.

Parthenogenesis is a form of reproduction in which a female reproduces without mating. She produces an egg containing a single offspring whose DNA, or genetic material, comes entirely from its mother. Among birds, parthenogenesis has been found in a handful of species, including pigeons and turkeys. When scientists at the San Diego Zoo analyzed the DNA of the zoo's California condors (a species of vulture), they discovered that two individuals weren't genetically similar enough to any of the males in the condor enclosure to be their offspring. However, both had hatched from eggs laid by females in the enclosure. Thus, the scientists concluded that _____

ID 3d505895

46 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) at least one of those individuals' mothers was born as a result of parthenogenesis.

(B) California condors may reproduce through parthenogenesis in zoos but not in the wild.

(C) the mothers of the two individuals probably reproduced through parthenogenesis.

(D) California condors reproduce through parthenogenesis only if females lack sufficient access to males.

A heliograph is a semaphore device used for sending optical communications—usually in the form of Morse code—by reflecting flashes of sunlight off a mirror. Heliographs were used for rapid communication across expansive distances for military, surveying, and forestry purposes during the late nineteenth and early twentieth centuries, but they were largely effective only during the daytime, and the range of the device depended on factors such as the opacity of the air and line of sight. Therefore, heliographs were eventually replaced by technology that _____

ID 61228830

47 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) worked on similar principles but was easier to produce and maintain.

(B) was not so constrained by environmental circumstances.

(C) could be used for more than military, surveying, or forestry purposes.

(D) enabled communication that didn't require knowledge of Morse code.

Martin Dančák, Wewin Tjiasmanto, and colleagues have identified a new carnivorous plant species (*Nepenthes pudica*) in Indonesia. Like other carnivorous plants, *N. pudica* has pitfall traps, or pitchers, that capture prey, but unlike others, the pitchers of *N. pudica* are located underground. The researchers unearthed the new species on fairly dry ridges with surfaces that host few other plants and animals. Therefore, the researchers hypothesize that the *N. pudica* species likely _____

ID 787729be

48 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) represents one of many undiscovered carnivorous plant species in the region.

(B) formed pitchers early in development to absorb more moisture.

(C) is buried by nearby animals as they forage along the ridges for food.

(D) evolved to have underground traps to access more prey than would surface traps.

By running computer simulations of the development of our solar system, André Izidoro, Rajdeep Dasgupta, and colleagues concluded that the Sun may have been surrounded by three giant dust rings before the planets started to form. The researchers suggest that the materials in the innermost ring became the four planets closest to the Sun, the materials in the middle ring produced the rest of the planets, and the materials in the outermost ring created the asteroids and other small bodies in the region beyond Neptune. In one simulation, the researchers delayed the initial formation of the middle ring, causing oversized super-Earths to begin developing from the innermost ring. The researchers therefore hypothesize that _____

ID 575e67df

49 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) the middle ring formed earlier in the solar system's development than the initial simulations suggested.

(B) the timing of the initial formation of the middle ring played an important role in determining the eventual size of Earth.

(C) if the formation of the outermost ring had occurred earlier in a simulation, all the planets would have become super-Earths.

(D) the innermost ring actually formed into all the planets in our solar system, not just the four closest to the Sun.

The Younger Dryas was a period of extreme cooling from 11,700 to 12,900 years ago in the Northern Hemisphere. Some scientists argue that a comet fragment hitting Earth brought about the cooling. Others disagree, partly because there is no known crater from such an impact that dates to the beginning of the period. In 2015, a team led by Kurt Kjær detected a 19-mile-wide crater beneath a glacier in Greenland. The scientists who believe an impact caused the Younger Dryas claim that this discovery supports their view. However, Kjær's team hasn't yet been able to determine the age of the crater. Therefore, the team suggests that _____

ID a0b58ef0

50 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) it can't be concluded that the impact that made the crater was connected to the beginning of the Younger Dryas.

(B) it can't be determined whether a comet fragment could make a crater as large as 19 miles wide.

(C) scientists have ignored the possibility that something other than a comet fragment could have made the crater.

(D) the scientists who believe an impact caused the Younger Dryas have made incorrect assumptions about when the period began.

In documents called judicial opinions, judges explain the reasoning behind their legal rulings, and in those explanations they sometimes cite and discuss historical and contemporary philosophers. Legal scholar and philosopher Anita L. Allen argues that while judges are naturally inclined to mention philosophers whose views align with their own positions, the strongest judicial opinions consider and rebut potential objections; discussing philosophers whose views conflict with judges' views could therefore _____

ID 3ae2638c

51 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) allow judges to craft judicial opinions without needing to consult philosophical works.

(B) help judges improve the arguments they put forward in their judicial opinions.

(C) make judicial opinions more comprehensible to readers without legal or philosophical training.

(D) bring judicial opinions in line with views that are broadly held among philosophers.

Many mosquito repellents contain natural components that work by activating multiple odor receptors on mosquitoes' antennae. As the insects develop resistance, new repellents are needed. Ke Dong and her team found that EBF, a molecular component of a chrysanthemum-flower extract, can repel mosquitoes by activating just one odor receptor—and this receptor, Or31, is present in all mosquito species known to carry diseases. Therefore, the researchers suggest that in developing new repellents, it would be most useful to _____

ID f3f444bc

52 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) identify molecular components similar to EBF that target the activation of Or31 receptors.

(B) investigate alternative methods for extracting EBF molecules from chrysanthemums.

(C) verify the precise locations of Or31 and other odor receptors on mosquitoes' antennae.

(D) determine the maximum number of different odor receptors that can be activated by a single molecule.

Marine archaeologists have found much of the wooden hull of a sixteenth-century ship in a flooded quarry in southeast England. When it is exposed to air and water, wood rots quickly unless it is protected by sediment that shields it from oxygen. Therefore, the discovered ship was likely _____

ID 25fc2534

53 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) covered by a protective sediment layer in the quarry.

(B) one of several other ships buried in the same quarry.

(C) a confirmation of previous theories about the type of wood that was used in sixteenth-century ships.

(D) first constructed much earlier than previously thought.

Pigments give paints and dyes their color. Ocher is a mineral-based pigment used to make several colors, including red. Red ocher gets its color from iron oxide. Pigments can also be plant-based; plant-based pigments contain a high level of carbon. In a 2023 study, archaeologists tested the red pigment on decorated beads made by members of the Natufian culture approximately 15,000 years ago. The test showed that the pigment found on several beads contained no iron but had a high level of carbon. This finding led the researchers to conclude that _____

ID 2d2983b3

54 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) the Natufian beads examined in the study are the oldest surviving examples of the use of plant-based pigments for decorating beads.

(B) the Natufian beadmakers used plant-based pigments rather than ocher to decorate some of the beads examined in the study.

(C) the Natufian beadmakers preferred to use plant-based pigments because they are much brighter than mineral-based pigments are.

(D) the pigments used by the Natufian beadmakers likely came from plants because ocher was difficult to find.

Alice Guy-Blaché directed hundreds of films between 1896 and 1920. She wanted audiences to feel like they were watching real people on screen. She would encourage actors in her films to behave naturally. Guy-Blaché even hung a large sign reading “Be Natural” in the studio where she made her films. At the time, films lacked sound, so actors needed to rely solely on their bodies and facial expressions to convey emotions. As a result, actors tended to highly exaggerate their actions and expressions. The style of acting in Guy-Blaché’s films was therefore _____

ID 9077be25

55 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) copied by many of Guy-Blaché’s peers.

(B) familiar to actors who had worked on other directors’ films.

(C) very unusual for the period.

(D) better than film acting today.

Zines are small-scale, self-printed magazines. They have been around since the Black literary zine *Fire!!* was created in the 1920s. Since then, zines have appealed to creators looking for an inexpensive form of expression to share with a select audience. Zine creators often mix art with social commentary and challenge mainstream culture. At first, the internet appeared to replace the zine, but this old form persists. Today, there are enough zines in the United States to support annual zine festivals. This suggests that _____

ID df654a2b

56 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) creators can reach a larger audience by posting online.

(B) zines are still a meaningful form of expression.

(C) creators can continue to explore new art forms.

(D) zines are good sources of mainstream culture.

Astronomers investigated the Arabia Terra region of Mars because it appears to contain irregularly shaped craters that may have been caused by massive volcanic explosions. In their investigations of Arabia Terra, the researchers found remnants of ash deposits in an amount and thickness that would result from a massive volcanic eruption. However, erosion and past resurfacing events could have modified the surface of the planet. Therefore, _____

ID 485962a6

57 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) the current makeup of the Arabia Terra region might not accurately reflect the volcanic activity of Mars's past.

(B) eruptions from Mars's volcanoes were likely not as massive as astronomers previously believed.

(C) ash was most likely expelled from multiple different volcanoes on Mars's surface.

(D) the craters found in the Arabia Terra region were necessarily created by events other than volcanic eruptions.

The ancient Sumerian civilization formed around 4000 BCE between two large rivers in an area that is now Iraq and Syria. The extremely hot and sunny weather in that area helped crops grow very quickly, but it also made it hard to keep the crops from drying up and dying. So, the Sumerians used water from the rivers in their farming. That method worked so well that they often could harvest even more crops than they needed in a season. As a result, the Sumerians _____

ID bcbcc43f

58 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) harvested crops only on the hottest days of each season.

(B) found ways to shield their crops from the sun.

(C) did not begin farming until long after 4000 BCE.

(D) were able to store extra crops for later use.

Red velvet cake has been a favorite dessert of many for years, but the recipe's origins are unclear. A bakery in Dallas, Texas, argued that it created the first recipe for the cake when the bakery opened in the 1860s. The Adams Extract Co., which sells baking products, claims to have created the recipe in the 1930s to help market their red dye. A US hotel and a Canadian department store also publicly stated that the red velvet cake sold in each of their establishments in the 1930s was an original creation, each alleging that it was the recipe author. No clear evidence has emerged to favor one of these claims over the others, however. It thus seems that _____

ID d8b78a2b

59 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) red velvet cake was first baked sometime before the 1860s.

(B) we cannot say at present who actually baked the first red velvet cake.

(C) none of the supposed inventors of red velvet cake are likely to have invented it.

(D) the bakery in Dallas, Texas, probably invented red velvet cake.

Narwhals are shy whales that live in the remote Arctic Ocean. Some of them have a long tusk, like a unicorn horn, with sensitive nerves. Narwhals are known for this tusk, but many actually don't have one and its purpose is unknown. One group of scientists came up with a possible purpose in 2014. The scientists suggested that the tusk may help narwhals determine when water around them is likely to start freezing and become dangerous for them. Marine biologist Kristin Laidre disagrees with that idea, though. She reasons that if the narwhal's tusk serves such an important purpose, then it's most likely that _____

ID d047abca

60 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) some narwhals would seek a new habitat.

(B) fewer marine animals would also have tusks.

(C) more narwhals would have a tusk.

(D) narwhals would become less shy over time.

In dialects of English spoken in Scotland, the "r" sound is strongly emphasized when it appears at the end of syllables (as in "car") or before other consonant sounds (as in "bird"). English dialects of the Upland South, a region stretching from Oklahoma to western Virginia, place similar emphasis on "r" at the ends of syllables and before other consonant sounds. Historical records show that the Upland South was colonized largely by people whose ancestors came from Scotland. Thus, linguists have concluded that _____

ID fc57d569

61 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) the English dialects spoken in the Upland South acquired their emphasis on the "r" sound from dialects spoken in Scotland.

(B) emphasis on the "r" sound will eventually spread from English dialects spoken in the Upland South to dialects spoken elsewhere.

(C) the English dialects spoken in Scotland were influenced by dialects spoken in the Upland South.

(D) people from Scotland abandoned their emphasis on the "r" sound after relocating to the Upland South.

Many linguists have claimed that the lyricism of Alexander Pushkin's Russian novel in verse *Eugene Onegin* makes the work incapable of being faithfully translated, especially into English. The original work is written much like a long poem, featuring linguistic patterns and flourishes specific to the Russian language. Rather than striving to portray each scene of the novel literally, John Cranko, in his ballet adaptation of *Eugene Onegin*, opted to let the essence of the work's emotions inspire the passion of the dancers. Critic Emma Golden writes that Cranko's "choreography uses the poetry of the human body to summon the parts of Pushkin's novel that were deemed untranslatable—its commitments to rhythm, cadence, symmetry." It seems, then, that

_____

ID 6ca4f991

62 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) Cranko's loose adaptation of *Eugene Onegin* into a different medium may have preserved fundamental elements of the source material better than a strictly literal written translation of the text would have.

(B) though written works are frequently adapted into other formats, ballets are rarely considered to be faithful adaptations of texts.

(C) English is a particularly difficult language into which to translate poetic works, as its rhythms differ from those of many other languages.

(D) most critics believe that, like other English translations of *Eugene Onegin*, Cranko's ballet adaptation fails to capture the essence of the original's meaning.

Several artworks found among the ruins of the ancient Roman city of Pompeii depict a female figure fishing with a cupid nearby. Some scholars have asserted that the figure is the goddess Venus, since she is known to have been linked with cupids in Roman culture, but University of Leicester archaeologist Carla Brain suggests that cupids may have also been associated with fishing generally. The fact that a cupid is shown near the female figure, therefore, _____

ID 5105ca38

63 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) is not conclusive evidence that the figure is Venus.

(B) suggests that Venus was often depicted fishing.

(C) eliminates the possibility that the figure is Venus.

(D) would be difficult to account for if the figure is not Venus.

During the Bourbon Restoration in France (1814–1830), the right to vote required in part that a person paid at least 300 francs in direct taxes to the government. The four most common taxes (the *quatre vieilles*) were levied on real estate (both land and buildings); the doors and windows in taxpayer homes; the rental values of homes; and the businesses of artisans and merchants. (Foreign investments were either exempt from taxation or taxed lightly.) Although relatively few people paid the tax on real estate, it was the main means of voter qualification and accounted for over two-thirds of government receipts during this period, suggesting that during the Bourbon Restoration

_____

ID 22b3da87

64 Mark for Review — Medium — Explanation ›

Which choice most logically completes the text?

(A) those people who had the right to vote most likely had substantial holdings of French real estate.

(B) the voting habits of French artisans and merchants were effective in reducing tax burdens on businesses.

(C) the number of doors and windows in French residences was kept to a minimum but increased after 1830.

(D) French people with significant foreign investments were unlikely to have the right to vote.

Ana Castillo's 1986 novel *The Mixquiahuala Letters* is a story told entirely through expressive letters from the narrator to her friend—letters that Castillo suggests could be read in several different orders. As they began reading it in class, some students remarked that they found the novel's letter format daunting and its treatment of gender relations old-fashioned. The professor, however, pointed out that the novel is written in modern-sounding language and addresses issues that still matter today, suggesting that *The Mixquiahuala Letters* _____

ID bcf2f169

65 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) has more to say about gender relations than other novels from the same period.

(B) is more relevant to contemporary audiences than it may seem at first.

(C) is easier to read than many contemporary novels that focus on friendship.

(D) is best understood after multiple readings in different orders.

Zooarchaeologist Ophélie Lebrasseur and her team examined a fox skeleton discovered in 1991 at an archaeological site alongside artifacts of human habitation (like spear points) in central Argentina. Lebrasseur et al. determined that the fox was *Dusicyon avus*, an extinct species resembling a jackal, and radiocarbon dating placed the fox at the site at the same time as human inhabitants. (Indeed, the inhabitants may have deliberately buried the fox.) In addition, while wild foxes have a diet entirely made of meat, isotopic signatures of the skeleton's teeth indicated that the fox's diet, like that of the humans, was partly composed of plant material. Lebrasseur et al. therefore concluded that _____

ID f9884b7a

66 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) the humans who were alive at the same time as the fox most likely ate more meat than the fox did.

(B) the fox may have been a companion animal of the humans who inhabited the site at the same time.

(C) the fox had a diet more similar to that of jackals than to that of wild foxes.

(D) the humans who were alive at the same time as the fox hunted using the spears whose points were also found at the site.

To better understand the burrowing habits of *Alpheus bellulus* (the tiger pistol shrimp), some studies have used resin casting to obtain precise measurements of the shrimps' burrows. Resin casting involves completely filling an empty burrow with a liquid plastic that hardens to create a three-dimensional model; however, recovering the model inevitably requires destroying the burrow. In their 2022 study, Miyu Umehara and colleagues discovered that an x-ray computed tomography (CT) scanner can accurately record a burrow's measurements both at a moment in time and throughout the entire burrow-building process, something that's impossible with resin casting because _____

ID 03701ef3

67 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) it can only be used on burrows below a certain size.

(B) it does not allow for multiple castings of the same burrow over time.

(C) the casting process takes more time than *A. bellulus* takes to construct a burrow.

(D) the process of recovering the model distorts the resin's shape.

Violins made by Antonio Stradivari and other craftspeople in the sixteenth to eighteenth centuries in Cremona, Italy, produce a sound that is considered superior to that of modern stringed instruments. Some experts have claimed that the type of wood used to create Cremonese violins is responsible for their prized sound, but modern and Cremonese violins are made of the same kinds of wood: maple and spruce. New analysis, however, has revealed unique indications that the wood in the older violins was chemically treated by the makers, leading researchers to suggest that _____

ID b1fab3e1

68 Mark for Review Medium Explanation ›

Which choice most logically completes the text?

(A) Cremonese violins probably were not considered superior to other instruments at the time they were made.

(B) the sound quality of Cremonese violins results in part from a method the craftspeople used to alter the wood.

(C) if modern violins were made of a wood other than maple or spruce, they likely would sound as good as Cremonese violins.

(D) the current process of making violins is the same process that was used centuries ago by Cremonese craftspeople.

HARD 72 questions

Marta Coll and colleagues' 2010 Mediterranean Sea biodiversity census reported approximately 17,000 species, nearly double the number reported in Carlo Bianchi and Carla Morri's 2000 census—a difference only partly attributable to the description of new invertebrate species in the interim. Another factor is that the morphological variability of microorganisms is poorly understood compared to that of vertebrates, invertebrates, plants, and algae, creating uncertainty about how to evaluate microorganisms as species. Researchers' decisions on such matters therefore can be highly consequential. Indeed, the two censuses reported similar counts of vertebrate, plant, and algal species, suggesting that _____

ID f1bfbed3

69 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) Coll and colleagues reported a much higher number of species than Bianchi and Morri did largely due to the inclusion of invertebrate species that had not been described at the time of Bianchi and Morri's census.

(B) some differences observed in microorganisms may have been treated as variations within species by Bianchi and Morri but treated as indicative of distinct species by Coll and colleagues.

(C) Bianchi and Morri may have been less sensitive to the degree of morphological variation displayed within a typical species of microorganism than Coll and colleagues were.

(D) the absence of clarity regarding how to differentiate among species of microorganisms may have resulted in Coll and colleagues underestimating the number of microorganism species.

One recognized social norm of gift giving is that the time spent obtaining a gift will be viewed as a reflection of the gift's thoughtfulness. Marketing experts Farnoush Reshadi, Julian Givi, and Gopal Das addressed this view in their studies of norms specifically surrounding the giving of gift cards, noting that while recipients tend to view digital gift cards (which can be purchased online from anywhere and often can be redeemed online as well) as superior to physical gift cards (which sometimes must be purchased in person and may only be redeemable in person) in terms of usage, 94.8 percent of participants surveyed indicated that it is more socially acceptable to give a physical gift card to a recipient. This finding suggests that _____

ID 6b8a7c74

70 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) gift givers likely overestimate the amount of effort required to use digital gift cards and thus mistakenly assume gift recipients will view them as less desirable than physical gift cards.

(B) physical gift cards are likely preferred by gift recipients because the tangible nature of those cards offers a greater psychological sense of ownership than digital gift cards do.

(C) physical gift cards are likely less desirable to gift recipients than digital gift cards are because of the perception that physical gift cards require unnecessary effort to obtain.

(D) gift givers likely perceive digital gift cards as requiring relatively low effort to obtain and thus wrongly assume gift recipients will appreciate them less than they do physical gift cards.

Researchers recently found that disruptions to an enjoyable experience, like a short series of advertisements during a television show, often increase viewers' reported enjoyment. Suspecting that disruptions to an unpleasant experience would have the opposite effect, the researchers had participants listen to construction noise for 30 minutes and anticipated that those whose listening experience was frequently interrupted with short breaks of silence would thus _____

ID ce4448b7

71 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) find the disruptions more irritating as time went on.

(B) rate the listening experience as more negative than those whose listening experience was uninterrupted.

(C) rate the experience of listening to construction noise as lasting for less time than it actually lasted.

(D) perceive the volume of the construction noise as growing softer over time.

Many of William Shakespeare's tragedies address broad themes that still appeal to today's audiences. For instance, *Romeo and Juliet*, which is set in the Italy of Shakespeare's time, tackles the themes of parents versus children and love versus hate, and the play continues to be read and produced widely around the world. But understanding Shakespeare's so-called history plays can require a knowledge of several centuries of English history. Consequently, _____

ID a68fd3e7

72 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) many theatergoers and readers today are likely to find Shakespeare's history plays less engaging than the tragedies.

(B) some of Shakespeare's tragedies are more relevant to today's audiences than twentieth-century plays.

(C) *Romeo and Juliet* is the most thematically accessible of all Shakespeare's tragedies.

(D) experts in English history tend to prefer Shakespeare's history plays to his other works.

The *Mammillaria* cactus *M. boolii* occurs naturally only in the state of Sonora in Mexico, and the smallness of its range makes it especially vulnerable to extinction. The traditional single-species approach to conservation emphasizes the need to focus on individual species most at risk, like *M. boolii*, but recently, conservationists have argued that an ecosystem-based approach that incorporates the many interactions between the climate, terrain, and various species of a given geographical area may lead to better outcomes for all the species in a given location. If this view is correct, the single-species approach to the conservation of *M. boolii* could thus _____

ID 4b3d6062

73 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) lead to a better understanding of how the distribution of *Mammillaria* species throughout Mexico has affected their survival.

(B) allow conservationists to better consider how climatic changes affecting Sonora may reduce the number of species competing with *M. boolii*.

(C) erroneously shift the focus of conservation efforts away from *M. boolii* itself.

(D) fail to consider the ways in which the survival of *M. boolii* may be influenced by changes in the populations of other species that inhabit Sonora.

In the early nineteenth century, some Euro-American farmers in the northeastern United States used agricultural techniques developed by the Haudenosaunee (Iroquois) people centuries earlier, but it seems that few of those farmers had actually seen Haudenosaunee farms firsthand. Barring the possibility of several farmers of the same era independently developing techniques that the Haudenosaunee people had already invented, these facts most strongly suggest that _____

ID 58e9e497

74 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) those farmers learned the techniques from other people who were more directly influenced by Haudenosaunee practices.

(B) the crops typically cultivated by Euro-American farmers in the northeastern United States were not well suited to Haudenosaunee farming techniques.

(C) Haudenosaunee farming techniques were widely used in regions outside the northeastern United States.

(D) Euro-American farmers only began to recognize the benefits of Haudenosaunee farming techniques late in the nineteenth century.

Some geologists have proposed designating the period from 1950 to the present as a new geological epoch (the Anthropocene) characterized by human impact on Earth, but they have struggled to identify reliable stratigraphic markers of the epoch's onset. Inta Dimante-Deimantovica and a research team investigated whether the initial appearance of primary microplastics—invented and mass-produced for industrial and other purposes, beginning around the middle of the twentieth century—in sedimentary layers could serve this role. The researchers analyzed European lake sediment profiles from the late eighteenth century to the present. Microplastics were present in all layers, likely because certain microplastic shapes enabled rapid downward migration. The researchers therefore concluded that _____

ID 58817765

75 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) the lowest sedimentary layer in which microplastics are found cannot be treated as indicative of the chronological beginning of the Anthropocene.

(B) the presence of microplastics in sediment dating to the late eighteenth century casts doubt on the appropriateness of designating 1950 as the onset of the Anthropocene.

(C) microplastics are not prevalent enough in sediment to serve as a reliable sign of the human impact characteristic of the Anthropocene.

(D) using the earliest presence of microplastics as a stratigraphic marker of the beginning of the Anthropocene is likely to be viable in some locations but is not viable in Europe.

Like many other genera of wild bees, bumblebees have in recent decades experienced population collapse caused by, among other factors, habitat destruction and climate variation. Bumblebees are also one of the most researched bee genera, second only to honeybees. As a result, ecologists have gained much of their insight about wild-bee declines from bumblebees. In a 2021 paper, zoologist Guillaume Ghisbain notes that bumblebees are among the relatively few wild-bee genera that display social behaviors and dietary generalism (ability to obtain nectar and pollen from a diversity of plant species), two traits that are associated with increased resilience to some specific environmental changes. Ghisbain therefore contends that _____

ID 1755eaf0

76 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) although bumblebees and many other wild bees have experienced similar population declines in the past, compared with other wild bees, bumblebees are likely at greater risk of being harmed by climate variation than by habitat destruction.

(B) although bumblebees have been more extensively studied than most wild bees, researchers should not use bumblebees to draw conclusions about the decline of other wild bees, even ones with feeding patterns and levels of sociability that are similar to those of bumblebees.

(C) because bumblebees and other bees with generalist diets are less negatively affected by environmental stress than bees with specialized diets are, they are less likely to experience major population changes in the future than bees with specialized diets are.

(D) because the responses of bumblebees and other wild bees to environmental threats are not always comparable, researchers need to exercise caution when extrapolating information about wild-bee population declines from bumblebees.

The domestic sweet potato (*Ipomoea batatas*) descends from a wild plant native to South America. It also populates the Polynesian Islands, where evidence confirms that Native Hawaiians and other Indigenous peoples were cultivating the plant centuries before seafaring first occurred over the thousands of miles of ocean separating them from South America. To explain how the sweet potato was first introduced in Polynesia, botanist Pablo Muñoz-Rodríguez and colleagues analyzed the DNA of numerous varieties of the plant, concluding that Polynesian varieties diverged from South American ones over 100,000 years ago. Given that Polynesia was peopled only in the last three thousand years, the team concluded that _____

ID ac285054

77 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) the cultivation of the sweet potato in Polynesia likely predates its cultivation in South America.

(B) Polynesian peoples likely acquired the sweet potato from South American peoples only within the last three thousand years.

(C) human activity likely played no role in the introduction of the sweet potato in Polynesia.

(D) Polynesian sweet potato varieties likely descend from a single South American variety that was domesticated, not wild.

Duckweed is a small freshwater plant that is often exposed to zinc pollution. Sofia Vámos and colleagues collected samples of four duckweed ecotypes (genetically and geographically distinct populations within a species), along with water from each ecotype's habitat. Hypothesizing that each ecotype is adapted to its local conditions in ways that bolster its growth and resistance to pollutants, the researchers grew each ecotype in all four water samples and with three levels of zinc (none, low, high). (The researchers did not replicate local differences in light or temperature.) They found that the ecotypes grew equally well in all four water samples and that adding zinc consistently enhanced growth, regardless of concentration, suggesting that _____

ID 8e6a96f5

78 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) while the ecotypes are genetically and geographically distinct, those differences do not represent adaptations to local environmental conditions.

(B) there may not be significant differences in the water that each ecotype inhabits, but there are significant differences in each ecotype's resistance to zinc pollution.

(C) if each ecotype is indeed locally adapted as the researchers hypothesized, those adaptations are to other environmental conditions than the water each ecotype inhabits.

(D) although the researchers' hypothesis does not appear to be supported, this may be because the levels of zinc exposure the plants in the experiment received did not match their exposure in their natural environments.

The morphological novelty of echinoderms—marine invertebrates with radial symmetry, usually starlike, around a central point—impedes comparisons with most other animals, in which bilateral symmetry on an anterior-posterior (head to tail) axis through a trunk is typical. Particularly puzzling are sea stars, thought to have evolved a headless layout from a known bilateral origin. Applying genomic knowledge of *Saccoglossus kowalevskii* acorn worms (close relatives of sea stars, and thus expected to have similar markers for corresponding anatomical regions) to the body patterning genes of *Patiria miniata* sea stars, Laurent Formery et al. observed activity only in anterior genes across *P. miniata*'s entire body and some posterior genes limited to the edges, suggesting that _____

ID 086dd8cc

79 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) despite the greater prevalence of anterior genes in sea stars' genetic makeup, posterior genes active at the body's perimeter are primarily responsible for the starlike layout that distinguishes sea stars' radial symmetry from that of other echinoderms.

(B) contrary to the belief that they evolved from early ancestors with the bilateral form typical of many other animals, sea stars instead originated with an atypical body layout that was neither bilaterally nor radially symmetrical.

(C) although the two species are closely related, there is only minimal correspondence in the genetic markers for head, tail, and trunk region development in *P. miniata* sea stars and *S. kowalevskii* acorn worms.

(D) rather than undergoing changes resulting in the eventual elimination of a head region in their radial body plan, as previously assumed, sea stars' morphology evolved to completely lack a trunk and consist primarily of a head region.

One theory behind human bipedalism speculates that it originated in a mostly ground-based ancestor that practiced four-legged "knuckle-walking," like chimpanzees and gorillas do today, and eventually evolved into moving upright on two legs. But recently, researchers observed orangutans, another relative of humans, standing on two legs on tree branches and using their arms for balance while they reached for fruits. These observations may suggest that _____

ID e185a21f

80 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) bipedalism evolved because it was advantageous to a tree-dwelling ancestor of humans.

(B) bipedalism must have evolved simultaneously with knuckle-walking and tree-climbing.

(C) moving between the ground and the trees would have been difficult without bipedalism.

(D) a knuckle-walking human ancestor could have easily moved bipedally in trees.

One challenge when researching whether holding elected office changes a person's behavior is the problem of ensuring that the experiment has an appropriate control group. To reveal the effect of holding office, researchers must compare people who hold elected office with people who do not hold office but who are otherwise similar to the office-holders. Since researchers are unable to control which politicians win elections, they therefore _____

ID f39507a3

81 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) struggle to find valid data about the behavior of politicians who do not currently hold office.

(B) can only conduct valid studies with people who have previously held office rather than people who presently hold office.

(C) should select a control group of people who differ from office-holders in several significant ways.

(D) will find it difficult to identify a group of people who can function as an appropriate control group for their studies.

A social species, chickens will cry out to one another in warning if they sense a hawk or other predator nearby. But if alone, a chicken will remain silent so as not to attract the predator's attention. Sonja Hillemacher decided to use this behavior to determine whether individual chickens possess a capacity to recognize themselves visually when reflected in a mirror (a common standard for animal intelligence). In the first condition of her study, the subject could see its reflection, but no other chickens were present. In a second condition, another chicken was visible to the subject. Hillemacher presented an image of a hawk to the subject in both conditions, reasoning that if chickens lacked a capacity for visual self-recognition, then _____

ID 09d942c6

82 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) neither study condition would elicit an audible response from the subject.

(B) the subject likely would cry out a warning in both study conditions.

(C) only the first study condition would elicit an audible response from the subject.

(D) the subject would fail to distinguish its reflection from the image of the hawk.

German theater practitioner Bertolt Brecht (1898–1956) believed that theater should elicit an intellectual rather than an emotional response from audiences, provoking them to consider social and political realities that extend beyond the characters and events depicted onstage. Brecht's influence can be seen in English playwright Caryl Churchill's 1979 play *Cloud 9*: although the play sometimes invites empathetic reactions, it primarily works to engage audiences in an interrogation of patriarchy and colonialism, which it does by placing audiences at a distance, thereby encouraging them to _____

ID f9bd4e61

83 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) focus on the characters' beliefs about social and political issues as revealed by the characters' actions.

(B) reflect on social and political phenomena not directly related to patriarchy and colonialism.

(C) recognize pertinent social and political parallels between Germany during Brecht's time and England at the time when Churchill was writing *Cloud 9*.

(D) be dispassionate as they think critically about the social and political questions raised by the play.

Archaeologists and historians used to believe that the Maya civilization during its Classic period (roughly 250–900) lacked agricultural marketplaces. One reason for this belief was that these scholars misunderstood the ecology of the regions the Maya inhabited. Marketplaces typically emerge because different individuals or groups want to trade resources they control for resources they don't control. Scholars seriously underestimated the ecological diversity of the Maya landscape and thus assumed that _____

ID 4889580c

84 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) marketplaces likely would not have attracted many traders from outside the regions controlled by the Maya.

(B) farming practices would have been largely the same throughout Maya lands even if the crops people produced varied significantly.

(C) marketplaces would not have enabled Maya people to acquire many products different from those they already produced.

(D) farmers would trade agricultural products only if they had already produced enough to meet their own needs.

The alpaca was domesticated by Indigenous peoples in the Andes about 7,000 years ago. But which wild species did it descend from, the vicuña or guanaco? A research team led by Ruiwen Fan may have solved the mystery, concluding that the alpaca is the domesticated form of the vicuña but that the modern alpaca gets only 64 percent of its genetic material from its wild ancestor. The rest comes from the domesticated llama. The llama, meanwhile, gets 95.5 percent of its genetic material from its own wild ancestor, the guanaco, and the rest from the alpaca. The llama and alpaca apparently interbred widely for only a handful of generations between 400 and 600 years ago. Assuming that the findings of Fan's team are valid, it can be inferred that _____

ID 4ba0695d

85 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) modern llama populations have a greater degree of genetic diversity, on average, than modern alpaca populations do.

(B) the domestication process of the alpaca may have involved some introduction of genetic material from the llama.

(C) the period of interbreeding resulted in a greater genetic difference between alpacas and their wild ancestors than between llamas and their wild ancestors.

(D) if they were subjected to genetic testing, modern populations of guanacos and vicuñas would likely show traces of ancient interbreeding as well.

The ratio of methane to other atmospheric constituents—represented by a measure called the methane mole fraction—influences a variety of meteorological phenomena, notably precipitation and humidity. For Titan, Saturn's largest moon, the observational data that exist are too sparse and discrepant to fully constrain the range of the methane mole fraction at various atmospheric levels. Juan Lora and colleagues point out that outputs of the IPSL atmospheric model of Titan, which track closely to observations in some respects, reflect how the model's developers responded to this challenge: by prescribing a uniform methane mole fraction for the lowest level of the atmosphere. It is therefore important to note that _____

ID d95a0bb8

86 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) some disagreements between the model's simulations of Titan's precipitation and humidity and the moon's actual precipitation and humidity are to be expected.

(B) further observations of Titan may clarify the moon's methane mole fraction sufficiently for the model to employ a single value rather than a range.

(C) even though the model's outputs sometimes agree with observational data, Titan's real methane mole fraction is likely higher than the methane mole fraction used in the model.

(D) inconsistencies across the model's simulations of Titan's precipitation and humidity could be attributable to variations in the moon's methane mole fraction.

Scientists studying Mars long thought the history of its crust was relatively simple. One reason for this is that geologic and climate data collected by a spacecraft showed that the crust was largely composed of basalt, likely as a result of intense volcanic activity that brought about a magma ocean, which then cooled to form the planet's surface. A study led by Valerie Payré focused on additional information—further analysis of data collected by the spacecraft and infrared wavelengths detected from Mars's surface—that revealed the presence of surprisingly high concentrations of silica in certain regions on Mars. Since a planetary surface that formed in a mostly basaltic environment would be unlikely to contain large amounts of silica, Payré concluded that _____

ID aaddd60f

87 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) the information about silica concentrations collected by the spacecraft is likely more reliable than the silica information gleaned from infrared wavelengths detected from Mars's surface.

(B) high silica concentrations on Mars likely formed from a different process than that which formed the crusts of other planets.

(C) having a clearer understanding of the composition of Mars's crust and the processes by which it formed will provide more insight into how Earth's crust formed.

(D) Mars's crust likely formed as a result of other major geological events in addition to the cooling of a magma ocean.

In classical Greek and Roman mythology, female characters are typically cast as either villains lacking in psychological depth or passive victims who are marginal to these stories, which usually focus on the exploits of male characters. Recently, a subgenre has emerged in which writers reimagine these stories from the perspectives of their female characters, giving them agency and complex motivations. Purists argue that such efforts represent a distinctively modern tendency to impose our own values on past civilizations, obscuring those civilizations' beliefs. Defenders of the subgenre counter that reimaginings of the myths for new cultural contexts are almost as old as the myths themselves, suggesting that _____

ID 5f16d809

88 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) bringing female perspectives to the forefront is not indicative of a novel attitude regarding fidelity to Greek and Roman myths' ideologies.

(B) modern writers' foregrounding of female characters is chiefly motivated by a desire to counterbalance the primacy of male perspectives among earlier adaptations of Greek and Roman myths.

(C) purists are overlooking a long tradition of adapting Greek and Roman myths to focus on female characters.

(D) the complex motivations given to female characters in modern retellings of Greek and Roman myths reflect a recent shift toward psychological depth in fictional representation.

The Hubble Space Telescope (HST) is projected to maintain operation until at least 2030, but it has already revolutionized high-resolution imaging of solar-system bodies in visible and ultraviolet (UV) light wavelengths, notwithstanding that only about 6% of the bodies imaged by the HST are within the solar system. NASA researcher Cindy L. Young and colleagues assert that a new space telescope dedicated exclusively to solar-system observations would permit an extensive survey of minor solar-system bodies and long-term UV observation to discern how solar-system bodies change over time. Young and colleagues' recommendation therefore implies that the HST _____

ID 08395130

89 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) will likely continue to be used primarily to observe objects outside the solar system.

(B) will no longer be used to observe solar system objects if the telescope recommended by Young and colleagues is deployed.

(C) can be modified to observe the features of solar system objects that are of interest to Young and colleagues.

(D) lacks the sensors to observe the wavelengths of light needed to discern how solar system bodies change over time.

In 2022, Crystal Reeck and colleagues studied whether the decision-making modes that guide consumers influence their choice between nonenvironmentally friendly standard electricity plans and environmentally friendly green plans that cap electricity usage. Study participants who self-reported using either an Affect Mode or Role Mode—which prioritize choices that have a stronger positive emotional or social impact, respectively—were more likely to select a green plan. Conversely, participants using a Calculation Mode—which aims to minimize both financial cost and personal inconvenience—were more likely to select a standard plan, even when the green option was cheaper. This finding suggests that participants using a Calculation Mode _____

ID 26f5c4ba

90 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) were equally unlikely to factor the financial savings of the green plan into their decision-making as were participants using either the Affect or Role Modes.

(B) may have been less strongly motivated to appear socially responsible with their choice of plan than they realized.

(C) may have determined that the green plan imposed additional burdens on them that were not sufficiently offset by the potential financial savings.

(D) were less likely to believe that the green plan was truly cost-effective than were participants using either the Affect or Role Modes.

Geoglyphs are large-scale designs of lines or shapes created in a natural landscape. The Nazca Lines were created in the Nazca Desert in Peru by several Indigenous civilizations over a period of many centuries. Peruvian archaeologist Johny Isla specializes in these geoglyphs. At a German exhibit about the Nazca Lines, he saw an old photograph of a large geoglyph of a whalelike figure and was surprised that he didn't recognize it. Isla returned to Peru and used a drone to search a wide area, looking for the figure from the air. This approach suggests that Isla thought that if he hadn't already seen it, the whalelike geoglyph _____

ID cef77aa7

91 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) must represent a species of whale that went extinct before there were any people in Peru.

(B) is actually located in Germany, not Peru, and isn't part of the Nazca Lines at all.

(C) is probably in a location Isla hadn't ever come across while on the ground.

(D) was almost certainly created a long time after the other Nazca Lines geoglyphs were created.

Some *Astyanax mexicanus*, a river-dwelling fish found in northeast Mexico, have colonized caves in the region. Although there is little genetic difference between river and cave *A. mexicanus* and all members of the species can emit the same sounds, biologist Carole Hyacinthe and colleagues found that the context and significance of those sounds vary by location—e.g., the click that river-dwelling *A. mexicanus* use to signal aggression is used by cave dwellers when foraging—and the acoustic properties of cave fish sounds show some cave-specific variations as well. Hyacinthe and colleagues note that differences in sonic communication could accumulate to the point of inhibiting interbreeding among fish from different locations, suggesting that _____

ID 9c591ff7

92 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) although *A. mexicanus* living in rivers are genetically similar to those living in caves, river fish rely on sonic communication less than cave fish do.

(B) although *A. mexicanus* is a single species at present, it could be in the process of splitting into distinct populations with different characteristics.

(C) although all *A. mexicanus* emit sounds, the fish living in rivers produce some sounds that the fish living in caves do not, and vice versa.

(D) although *A. mexicanus* from different locations can interbreed currently, river fish and cave fish are sufficiently genetically distinct that they can be considered separate species.

To address the susceptibility of materials used in components of high-performance machinery, such as aircraft engines, to creep (deformation that is induced by persistent mechanical stress and that often occurs at elevated temperatures), materials researchers have developed silicon carbide (SiC) fibers for producing aerospace composites. Testing the thermomechanical properties of several commercially available SiC fibers, Ramakrishna T. Bhatt et al. found that in comparison with two polymer-derived SiC fibers, a nitrogen-treated SiC fiber exhibited a lower minimum creep rate, a measure of the rate at which a stress-exposed material deforms at a constant temperature and uniaxial load. The finding suggests that _____

ID fd1095d7

93 Mark for Review — Hard — Explanation >

Which choice most logically completes the text?

(A) unlike the two polymer-derived SiC fibers, the nitrogen-treated SiC fiber can substantially inhibit creep, provided that temperatures and loads are consistent.

(B) the two polymer-derived SiC fibers likely hold similar potential for reducing the creep resistance of materials exposed to stress and elevated temperatures, thus prolonging the life span of aerospace machinery.

(C) composites based on the two polymer-derived SiC fibers have chemical properties that may improve the mechanical and thermal stability of aerospace equipment to a greater extent than do composites based on the nitrogen-treated SiC fiber.

(D) aerospace composites containing the nitrogen-treated SiC fiber may have the ability to withstand mechanical stress for a longer period of time than can aerospace composites containing either of the two polymer-derived SiC fibers.

For its 1974 work *Instant Mural*, the Chicano art collective Asco taped members Patssi Valdez and Humberto Sandoval to an outdoor wall in East Los Angeles. The work is manifestly a commentary on constraint, but many critics focus on Valdez and the social constraints women faced at the time, which is understandable but leaves the presence of Valdez's male collaborator Sandoval unexplained. We should instead consider that in 1974, the art establishment's recognition of Chicano artists was (and had long been) restricted to sociohistorical muralists, leaving nonmuralist Chicano artists—like Asco's members—struggling to even exhibit their work; attending to this context opens an interpretation that accounts for all the evidence, allowing us to conclude that _____

ID 4b8eda0a

94 Mark for Review — Hard — Explanation >

Which choice most logically completes the text?

(A) while Valdez's presence in *Instant Mural* represents the social constraints placed on women at the time, Sandoval's presence represents Chicano muralists' frustration at their lack of recognition by the art establishment.

(B) the main subject of *Instant Mural* is female Chicano artists' experience of being doubly constrained by gender-role expectations and the marginalization of certain types of art.

(C) *Instant Mural* is a reflection on the constraining aesthetic expectations placed on Chicano artists in general rather than on the social constraints placed on women specifically.

(D) *Instant Mural* is best understood not as a critique of the social constraints placed on women but rather as a critique of sociohistorical muralists' depictions of Chicano culture.

Dutch painters in the sixteenth and seventeenth centuries often showed tables filled with large wheels of cheese or carved shards of butter. Some art historians, noting that dairy products were a major component of the Dutch diet, interpret these depictions as reflections of everyday Dutch eating habits. However, a group of researchers recently reviewed hundreds of food-related paintings and found that lemons—which could only be acquired in the Netherlands at great cost, since they had to be imported from warmer climates—feature in Dutch paintings of the period more than three times as frequently as dairy products do, thereby casting doubt on the idea that _____

ID 55688b3c

95 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) dairy products were a more significant component of the Dutch diet of the period than lemons were.

(B) food was a more popular subject among Dutch painters than it was among painters from other countries at the time.

(C) depictions of food in Dutch paintings of the period should be taken as realistic representations of Dutch eating habits.

(D) Dutch painters of the period may have depicted foods for symbolic reasons rather than to show what Dutch people typically ate.

In a three-year study of parasitic infections by *Anomotaenia brevis* tapeworms in *Temnothorax nylanderi* ants, entomologist Susanne Foitzik and colleagues found something unexpected: rather than reducing its host's fitness, as is typical of parasites, *A. brevis* greatly extends the lifespan of a *T. nylanderi* worker ant and seems to halt the effects of aging. Furthermore, those infected receive special treatment, ceasing their share of labor to sustain the colony and remaining in the nest as uninfected workers feed, groom, and transport them. By contrast, the researchers observed that uninfected workers in parasitized colonies have shortened lifespans, most likely because the _____

ID 1bf2173e

96 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) uninfected workers are at high risk for direct exposure to *A. brevis* in the course of providing social care to the infected workers in the nest.

(B) need to compensate for reduced contributions within the colony while also caring for infected workers is burdensome to the uninfected workers.

(C) high level of activity maintained by the uninfected workers makes them better able than infected workers to quickly disperse when the nest is attacked by a predator.

(D) average lifespan of *T. nylanderi* worker ants in colonies without parasitic activity typically falls well below three years, the range covered by the study.

Sir Gawain and the Green Knight is a circa 1400 poem written in Middle English—an archaic form of the English spoken today. Over the last several centuries, the English language has undergone such transformations in vocabulary, spelling, and grammar that most readers now rely on translations to read *Sir Gawain*. In the introduction to his 2007 translation, Simon Armitage remarks that the sonic patterns of the poem, which was written in alliterative verse (a verse form featuring extensive repetition of initial consonant sounds), are essential to its structure. Because many Modern English words begin with different sounds than their Middle English equivalents do, a strictly literal translation of *Sir Gawain* would therefore likely _____

ID 7bdf094b

97 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) preserve much of the original text's meaning at the expense of other qualities that are also integral to the experience of reading the poem.

(B) appeal more to modern readers than would translations like Armitage's that instead prioritize the original text's sonic and structural qualities.

(C) be more faithful to the original intentions of the poem than most strictly literal translations of alliterative Middle English poems are to their originals.

(D) be preferable to modern readers who are primarily interested in learning what the poem reveals about historical conditions during the time it was originally written.

If some artifacts recovered from excavations of the settlement of Kuulo Kataa, in modern Ghana, date from the thirteenth century CE, that may lend credence to claims that the settlement was founded before or around that time. There is other evidence, however, strongly supporting a fourteenth century CE founding date for Kuulo Kataa. If both the artifact dates and the fourteenth century CE founding date are correct, that would imply that _____

ID 9391b7cc

98 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) artifacts from the fourteenth century CE are more commonly recovered than are artifacts from the thirteenth century CE.

(B) the artifacts originated elsewhere and eventually reached Kuulo Kataa through trade or migration.

(C) Kuulo Kataa was founded by people from a different region than had previously been assumed.

(D) excavations at Kuulo Kataa may have inadvertently damaged some artifacts dating to the fourteenth century CE.

Indigenous cultures possess unique knowledge of the medicinal uses of plants. According to a 2021 study, 73 percent of the medicinal uses of plants native to North America are reflected in the vocabulary of a single Indigenous language. However, as more and more Indigenous people exclusively speak a globally dominant language, such as English, their ancestral languages fade from daily use. These facts lend added importance to tribal nations' efforts to preserve their languages. By ensuring the continued use of Cherokee, Ojibwe, and the hundreds of other Indigenous languages in what is now the United States, tribal nations are also _____

ID 2a075bd1

99 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) increasing the number of medicinal plants represented in the vocabularies of Indigenous languages.

(B) transmitting terms for medicinal plants from Indigenous languages to globally dominant languages.

(C) preserving knowledge about the medicinal value of plants native to the tribal nations' lands.

(D) ensuring that citizens of tribal nations have physical access to medicinal plants.

Whistler waves are low-frequency plasma waves that on Earth are typically generated by lightning. Numerous recordings of whistler waves on Venus have led many scientists to suggest that the planet's atmosphere is host to extensive amounts of lightning, and, in fact, Venusian whistler waves have similar energy signatures to those of whistler waves generated by lightning on Earth. The majority of Venusian whistler wave data come from two spacecraft missions—the Pioneer Venus Orbiter (PVO) and the Venus Express (VEX)—which have included few observations of other phenomena consistent with lightning occurrences (such as flashes of light), leading other scientists to suggest that _____

ID db57afa3

100 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) similarities in the energy signatures of Venusian and Earth whistler waves may reflect imprecisions in the PVO and VEX data.

(B) the purported Venusian whistler waves must actually be some other type of atmospheric activity than whistler waves.

(C) Venusian lightning has properties that make it unlikely to generate whistler waves.

(D) there are geophysical characteristics of Venus not shared with Earth that promote the generation of whistler waves.

Across brown bears—omnivores with high dietary plasticity—there is wide variety in dietary mix, which may reflect genetics, local resource availability, or social learning (cubs stay with their mothers for two years or more). Evaluating these possibilities, Anne Hertel et al. analyzed 30 years of data on trophic position (indicative of dietary mix) for female brown bears. After separation, daughters, who tended to settle near their mothers, occupied the same trophic positions as their mothers for two years, but the correlation disappeared by year five. Trophic correlation with unrelated individuals in similar habitats was modest, while habitat-independent correlation with nonmaternal relatives (e.g., cousins) was no different than with unrelated individuals. These findings suggest that _____

ID 8209f485

101 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) growing dissimilarity between mothers and their daughters with regard to dietary mix may reflect changes in the resources available in maternal habitats, though social learning could also contribute to the trend.

(B) dietary mix among females may reflect a social learning effect that eventually diminishes, though environmental constraints cannot be ruled out as a contributing factor.

(C) female dietary mix is best understood as changeable and contingent on fluctuating environmental conditions rather than as the result of social learning or genetic factors.

(D) social learning and resource fluctuations may both play a role in dietary mix among females, at least temporarily, though genetic factors appear to make a significant contribution as well.

To investigate the history of plate subduction—when one of Earth's tectonic plates slides beneath another—Sarah M. Aarons and colleagues compared ancient rocks from the Acasta Gneiss Complex in Canada to modern rocks. Using isotope analysis, the researchers found that Acasta rocks dating to about 4.02 billion years ago (bya) most strongly resemble modern rocks formed in a plume setting (an area in which hot rocks from Earth's mantle flow upward into the crust). By contrast, they found that Acasta rocks dating to about 3.75 bya and 3.6 bya have an isotope composition that is similar to that of modern rocks formed in a subduction setting. Aarons's team therefore concluded that _____

ID 3882ddf6

102 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) subduction-like processes began occurring in some locations no later than 3.75 bya.

(B) subduction replaced mantle plume formation as the most common geological process by about 4.02 bya.

(C) the majority of the rocks in the Acasta Gneiss Complex formed through subduction.

(D) the rocks in the Acasta Gneiss Complex are of a more recent origin than scientists previously thought.

Ratified by more than 90 countries, the Nagoya Protocol is an international agreement ensuring that Indigenous communities are compensated when their agricultural resources and knowledge of wild plants and animals are utilized by agricultural corporations. However, the protocol has shortcomings. For example, it allows corporations to insist that their agreements with communities to conduct research on the commercial uses of the communities' resources and knowledge remain confidential. Therefore, some Indigenous advocates express concern that the protocol may have the unintended effect of _____

ID 3f236877

103 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) diminishing the monetary reward that corporations might derive from their agreements with Indigenous communities.

(B) limiting the research that corporations conduct on the resources of the Indigenous communities with which they have signed agreements.

(C) preventing independent observers from determining whether the agreements guarantee equitable compensation for Indigenous communities.

(D) discouraging Indigenous communities from learning new methods for harvesting plants and animals from their corporate partners.

The increased integration of digital technologies throughout the process of book creation in the late 20th and early 21st centuries lowered the costs of book production, but those decreased costs have been most significant in the manufacturing and distribution process, which occurs after the authoring, editing, and design of the book are complete. This suggests that in the late 20th and early 21st centuries, _____

ID 0dba14e6

104 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) digital technologies made it easier than it had been previously for authors to write very long works and get them published.

(B) customers generally expected the cost of books to decline relative to the cost of other consumer goods.

(C) publishers increased the variety of their offerings by printing more unique titles but also printed fewer copies of each title.

(D) the costs of writing, editing, and designing a book were less affected by the technologies used than were the costs of manufacturing and distributing a book.

Some ethicists hold that the moral goodness of an individual's actions depends solely on whether the actions themselves are good, irrespective of the context in which they are carried out. Philosopher L. Sebastian Purcell has shown that surviving works of Aztec (Nahua) philosophy express a very different view. Purcell reveals that these works posit an ethical system in which an individual's actions are judged in light of how well they accord with the individual's role in society and how well they contribute to the community. To the extent that these works are representative of Aztec thought, Purcell's analysis suggests that _____

ID a44c7bd4

105 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) the Aztecs would have disputed the idea that the morality of an individual's actions can be assessed by appealing to standards of behavior that are independent of the individual's social circumstances.

(B) the Aztecs would not have accepted the notion that the morality of an individual's actions can be fairly evaluated by people who do not live in the same society as that individual.

(C) actions by members of Aztec society who contributed a great deal to their community could be judged as morally good even if those actions were inconsistent with behaviors the Aztecs regarded as good in all contexts.

(D) similar actions performed by people in different social roles in Aztec society would have been regarded as morally equivalent unless those actions led to different outcomes for the community.

Many animals, including humans, must sleep, and sleep is known to have a role in everything from healing injuries to encoding information in long-term memory. But some scientists claim that, from an evolutionary standpoint, deep sleep for hours at a time leaves an animal so vulnerable that the known benefits of sleeping seem insufficient to explain why it became so widespread in the animal kingdom. These scientists therefore imply that _____

ID a13c1c66

106 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) prolonged deep sleep is likely advantageous in ways that have yet to be discovered.

(B) most traits perform functions that are hard to understand from an evolutionary standpoint.

(C) it is more important to understand how widespread prolonged deep sleep is than to understand its function.

(D) many traits that provide significant benefits for an animal also likely pose risks to that animal.

An analysis by Alain Elayi and colleagues of coins minted in Sidon in the fifth and fourth centuries BCE reveals a change in their composition over time: while a coin from circa 450 BCE contains about 98% silver and 1% copper, a coin from 367 BCE (the end of Ba'ališillem II's reign) contains 74.2% silver and 24.7% copper, giving it a relatively yellowish appearance that traders would have noticed. Because coins with a silver content below 80% were widely considered unsuitable for trade, Elayi et al. speculate that a crisis in confidence in the currency occurred in Sidon around 367 BCE, which was likely relieved—despite Sidon's persistent oppressive financial obligations—as a result of Ba'ališillem II's successor Abd'aštart I's decision to _____

ID 1ffd60ce

107 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) proclaim that the percentage of silver in coins suitable for trade would be raised to a threshold higher than 80%.

(B) keep the amount of silver in Sidonian coins consistent with that in coins minted in 367 BCE but decrease their weight.

(C) begin minting heavier coins with a proportion of silver to copper similar to that in coins minted in 367 BCE.

(D) fund the mining of some copper deposits that were not available to Ba'ališillem II.

Overgrazing by purple sea urchins has caused many kelp forests along North America's west coast to be replaced by urchin barrens—areas stripped of vegetation and covered in purple sea urchins. Urchins in barrens persist in a state of starvation that lessens their nutritional value—and thus their appeal—to many predators. Sarah Gravem and colleagues placed sunflower sea stars, a once-abundant predator species suffering massive population declines in recent years, in aquariums that each contained a nutritionally poor and a nutritionally rich purple sea urchin. The researchers found that the sea stars selected the nutritionally rich urchin in 42.7% of trials and the nutritionally poor urchin in 37.5% of trials, suggesting that _____

ID e6e6be2d

108 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) sunflower sea stars are willing to hunt sea urchins, but if given a choice, they will prey on other more nutritious marine animals instead.

(B) sunflower sea stars are reluctant to feed on both nutritionally poor and nutritionally rich sea urchins and are therefore unlikely to thrive in kelp forests.

(C) sunflower sea stars are less likely to consume sea urchins in barrens than other species of sea stars are, putting sunflower sea stars at a high risk of extinction.

(D) sunflower sea stars do not always avoid foraging on nutritionally poor sea urchins, making sunflower sea star population recovery a potentially important tool for controlling urchin barrens.

Henry Ossawa Tanner's 1893 painting *The Banjo Lesson*, which depicts an elderly man teaching a boy to play the banjo, is regarded as a landmark in the history of works by Black artists in the United States. Scholars should be cautious when ascribing political or ideological values to the painting, however: beliefs and assumptions that are commonly held now may have been unfamiliar to Tanner and his contemporaries, and vice versa. Scholars who forget this fact when discussing *The Banjo Lesson* therefore _____

ID 0dccbf17

109 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) risk judging Tanner's painting by standards that may not be historically appropriate.

(B) tend to conflate Tanner's political views with those of his contemporaries.

(C) forgo analyzing Tanner's painting in favor of analyzing his political activity.

(D) wrongly assume that Tanner's painting was intended as a critique of his fellow artists.

In a study of the cognitive abilities of white-faced capuchin monkeys (*Cebus imitator*), researchers neglected to control for the physical difficulty of the tasks they used to evaluate the monkeys. The cognitive abilities of monkeys given problems requiring little dexterity, such as sliding a panel to retrieve food, were judged by the same criteria as were those of monkeys given physically demanding problems, such as unscrewing a bottle and inserting a straw. The results of the study, therefore, _____

ID 5632ffb4

110 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) could suggest that there are differences in cognitive ability among the monkeys even though such differences may not actually exist.

(B) are useful for identifying tasks that the monkeys lack the cognitive capacity to perform but not for identifying tasks that the monkeys can perform.

(C) should not be taken as indicative of the cognitive abilities of any monkey species other than *C. imitator*.

(D) reveal more about the monkeys' cognitive abilities when solving artificial problems than when solving problems encountered in the wild.

A team of biologists led by Jae-Hoon Jung, Antonio D. Barbosa, and Stephanie Hutin investigated the mechanism that allows *Arabidopsis thaliana* (thale cress) plants to accelerate flowering at high temperatures. They replaced the protein ELF3 in the plants with a similar protein found in another species (stiff brome) that, unlike *A. thaliana*, displays no acceleration in flowering with increased temperature. A comparison of unmodified *A. thaliana* plants with the altered plants showed no difference in flowering at 22° Celsius, but at 27° Celsius, the unmodified plants exhibited accelerated flowering while the altered ones did not, which suggests that _____

ID 1b9b29f1

111 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) temperature-sensitive accelerated flowering is unique to *A. thaliana*.

(B) *A. thaliana* increases ELF3 production as temperatures rise.

(C) ELF3 enables *A. thaliana* to respond to increased temperatures.

(D) temperatures of at least 22° Celsius are required for *A. thaliana* to flower.

Belonging to neither the minimalist nor the abstract art movements but heavily influencing both, Constantin Brâncuşi spent his sculpting career returning to the same few themes—a kiss, a sleeping head, and a bird in flight—each rendered in pristine, simple, almost abstract forms. Perhaps the most famous example is *Bird in Space* (1923), a tall, slender bronze sculpture that arcs upward in a manner suggestive of flight but that otherwise lacks any identifiable characteristics of a bird. Despite the seeming simplicity of his works, the exacting standards to which Brâncuşi held his work meant that he produced relatively few pieces over his career. There is thus something of a disparity between _____

ID 71c2cea9

112 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) the nature of much of Brâncuşi's work and the abstraction of *Bird in Space*.

(B) Brâncuşi's relatively limited productivity and the diversity of his sculptures.

(C) the themes Brâncuşi explored and the themes favored by artists he inspired.

(D) Brâncuşi's importance to the history of art and his total artistic output.

The widespread use of social media enables linguists to study changes in language usage in real time. A notable recent example is the proliferation of the affix *meng-* among speakers of Bahasa Indonesia, the official language of Indonesia. Linguists observed *meng-* originate as an onomatopoetic tag that social-media users applied to images of cats they posted; over time, users increasingly applied it as a prefix to existing words (e.g., *mengsedih* affixes *meng-* to the word for *sad*) in text that they posted. From there, it has begun to move into spoken Bahasa Indonesia. Linguists have noted many similar examples of this phenomenon occurring in other languages, suggesting that social media _____

ID 75208874

113 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) is more useful for studying informal language than for studying formal or official language.

(B) appears to be exerting an exceptionally strong influence on the evolution of Bahasa Indonesia.

(C) may give linguists a somewhat misleading sense of how languages are changing.

(D) does not merely register changes in language usage but can facilitate such changes.

Outi Tervo and team studied the effect of human-caused noise on narwhals (*Monodon monoceros*), arctic marine mammals that are sensitive to acoustic changes in their environment. Hypothesizing that elevated sound levels affect foraging among narwhals, Tervo's team compared narwhal diving behaviors in natural sound conditions with those behaviors in two human-caused sound exposure conditions—ship sounds and ship sounds coupled with sonic pulses. Both exposure conditions resulted in significant decreases in the number and target depth of deep dives (associated with foraging) relative to natural conditions. However, differences between diving behaviors in the two exposure types were negligible, a finding that could be attributed to the fact that _____

ID 45c03837

114 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) sonic pulses can be heard at significantly greater ocean depths than ship sounds can.

(B) ship sounds contribute so much to the overall sound level that the addition of sonic pulses has little effect on the narwhals' auditory environment.

(C) narwhals forage at shallower depths in the presence of ship sounds alone than in the presence of ship sounds coupled with sonic pulses.

(D) the narwhals weren't as sensitive to human-caused sounds as the researchers had predicted.

The Uto-Aztecan language family is divided into a northern branch, which includes the Shoshone language of present-day Idaho and Utah, and a southern one, whose best-known representative is Nahuatl, the language of the Aztec Empire in Mexico. Lexical similarities across the family, including of botanical terms, confirm descent from a single language spoken millennia ago, and the family's geographical distribution suggests an origin in what is now the US Southwest. However, vocabulary pertaining to maize isn't shared between northern and southern branches, despite the crop's universal cultivation among Uto-Aztecan tribes. Given archaeological evidence that maize originated in Mexico and diffused northward into what became the US Southwest, some linguists reason that _____

ID e9521fd1

115 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) northern Uto-Aztecan tribes likely obtained the crop directly from a southern Uto-Aztecan tribe rather than from a non-Uto-Aztecan tribe.

(B) variation in maize-related vocabulary within each branch of the Uto-Aztecan family likely reflects regionally specific methods for cultivating the crop.

(C) southern Uto-Aztecan tribes likely acquired maize at roughly the same time as northern Uto-Aztecan tribes did, though from different sources.

(D) the family's division into northern and southern branches likely preceded the acquisition of the crop by the Uto-Aztecan tribes.

Tatiana R. Feuerborn and colleagues analyzed the genomes of more than a hundred domesticated dogs from sites in Siberia dating from 11,000 years ago to the present. They found that the dogs constituted a genetically isolated population of Arctic breeds until approximately 2,000 years ago, at which point there was substantial interbreeding with Near Eastern dog breeds. Furthermore, beginning around 2,000 years ago, some sites contain artifacts consistent with a Near East origin, like glass beads, but the people show no evidence of having traveled extensively outside Siberia. From this, Feuerborn and colleagues concluded that around 2,000 years ago _____

ID 96d1c1fe

116 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) dogs and artifacts like glass beads began to be transported from the Near East to Siberia.

(B) people from Siberia began to reach the Near East, where they acquired dogs and artifacts such as glass beads.

(C) glass beads and other artifacts from the Near East began to be exchanged for dogs from Siberia.

(D) dogs from the Near East began to be exchanged for glass beads and other artifacts from Siberia.

Ancestral Puebloans, the civilization from which present-day Pueblo tribes descended, emerged as early as 1500 B.C.E. in an area of what is now the southwestern United States and dispersed suddenly in the late 1200s C.E., abandoning established villages with systems for farming crops and turkeys. Recent analysis comparing turkey remains at Mesa Verde, one such village in southern Colorado, to samples from modern turkey populations in the Rio Grande Valley of north central New Mexico determined that the latter birds descended in part from turkeys cultivated at Mesa Verde, with shared genetic markers appearing only after 1280. Thus, researchers concluded that _____

ID b5e9f3c2

117 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) conditions of the terrains in the Rio Grande Valley and Mesa Verde had greater similarities in the past than they do today.

(B) some Ancestral Puebloans migrated to the Rio Grande Valley in the late 1200s and carried farming practices with them.

(C) Indigenous peoples living in the Rio Grande Valley primarily planted crops and did not cultivate turkeys before 1280.

(D) the Ancestral Puebloans of Mesa Verde likely adopted the farming practices of Indigenous peoples living in other regions.

Birds of many species ingest foods containing carotenoids, pigmented molecules that are converted into feather coloration. Coloration tends to be especially saturated in male birds' feathers, and because carotenoids also confer health benefits, the deeply saturated colors generally serve to communicate what is known as an honest signal of a bird's overall fitness to potential mates. However, ornithologist Allison J. Shultz and others have found that males in several species of the tanager genus *Ramphocelus* use microstructures in their feathers to manipulate light, creating the appearance of deeper saturation without the birds necessarily having to maintain a carotenoid-rich diet. These findings suggest that _____

ID 4f9f8ea6

118 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) individual male tanagers can engage in honest signaling without relying on carotenoid consumption.

(B) feather microstructures may be less effective than deeply saturated feathers for signaling overall fitness.

(C) scientists have yet to determine why tanagers have a preference for mates with colorful appearances.

(D) a male tanager's appearance may function as a dishonest signal of the individual's overall fitness.

Microbial fuel cells (MFCs) capitalize on the ability of some species of bacteria to oxidize organic matter and transfer electrons extracellularly. The bacteria form a dense biofilm on the surface of an electron-collecting anode, but moving the electrons from the bacterial cytoplasm to an external electrode requires that the electrons pass through a series of inefficient oxidation-reduction (redox) reactions. Accordingly, MFC power output rarely exceeds a density of 0.30 milliwatts per square centimeter (mW/cm^2). In an experiment, researchers added silver nanoparticles to carbon paper covering the anode in an MFC. The resulting power density was 0.66 mW/cm^2. Since metals such as silver exhibit high electrical conductivity, the researchers hypothesized that _____

ID b603f00b

119 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) silver nanoparticles may allow electrons to bypass the series of redox reactions and transfer directly to the electrode.

(B) electrons may be conducted directly to the electrode before the silver nanoparticles catalyze the redox reactions.

(C) silver nanoparticles may increase the metabolic processes of the bacteria, thereby increasing the number of free electrons available to transfer to the electrode.

(D) as the density of the biofilm increases, the series of redox reactions may accelerate independent of the presence of the silver nanoparticles.

Among social animals that care for their young, such as chickens, macaque monkeys, and humans, newborns appear to show an innate attraction to faces and face-like stimuli. Elisabetta Versace and her colleagues used an image of three black dots arranged in the shape of eyes and a nose or mouth to test whether this trait also occurs in *Testudo* tortoises, which live alone and do not engage in parental care. They found that tortoise hatchlings showed a significant preference for the image, suggesting that _____

ID f2250478

120 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) face-like stimuli are likely perceived as harmless by newborns of social species that practice parental care but as threatening by newborns of solitary species without parental care.

(B) researchers should not assume that an innate attraction to face-like stimuli is necessarily an adaptation related to social interaction or parental care.

(C) researchers can assume that the attraction to face-like stimuli that is seen in social species that practice parental care is learned rather than innate.

(D) newly hatched *Testudo* tortoises show a stronger preference for face-like stimuli than adult *Testudo* tortoises do.

Aerogels are highly porous foams consisting mainly of tiny air pockets within a solidified gel. These lightweight materials are often applied to spacecraft and other equipment required to withstand extreme conditions, as they provide excellent insulation despite typically being brittle and eventually fracturing due to degradation from repeated exposure to high heat. Now, Xiangfeng Duan of the University of California, Los Angeles, and colleagues have developed an aerogel with uniquely flexible properties. Unlike earlier aerogels, Duan's team's material contracts rather than expands when heated and fully recovers after compressing to just 5% of its original volume, suggesting that _____

ID 6e0e0de1

121 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) the aerogel's remarkable flexibility results from its higher proportion of air pockets to solidified gel as compared to other aerogels.

(B) the aerogel's overall strength is greater than that of other insulators but its ability to withstand exposure to intense heat is lower.

(C) the aerogel will be more effective as an insulator for uses that involve gradual temperature shifts than for those that involve rapid heat increases.

(D) the aerogel will be less prone to the structural weakness that ultimately causes most other aerogels to break down with use.

During their larval phase, numerous species of coral reef fish are drawn toward areas where light is present. To better understand how artificial light at night (ALAN) might affect some coral reef fish, researchers explored the effect of exposure to low levels of ALAN on the reproductive success of the common clownfish (*Amphiprion ocellaris*). While exposure to low levels of ALAN had no significant effect on spawning frequency and egg fertilization in *A. ocellaris*, incubation in the presence of ALAN completely inhibited hatching. These findings suggest that _____

ID 5cd55c77

122 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) *A. ocellaris* that settle in areas with low levels of ALAN have significantly higher rates of successful egg fertilization than *A. ocellaris* that settle in areas without ALAN do.

(B) the reproductive success of *A. ocellaris* would be at risk if they were to selectively settle in regions that are regularly exposed to low levels of ALAN.

(C) the reproductive success of *A. ocellaris* is more greatly affected by the presence of low levels of ALAN during incubation than the reproductive success of other species of coral reef fish is.

(D) the spawning frequency of *A. ocellaris* was more strongly affected by the presence of low levels of ALAN than egg fertilization was, though both were less affected than incubation.

Silicon-based photovoltaic cells account for 95% of the cells used in solar panels worldwide despite converting an average of only 18–22% of the sunlight that reaches them. In a study addressing this relative inefficiency, a team led by Laura Miranda-Pérez demonstrated that the addition of a thin layer of the mineral perovskite—which captures the blue range of light in the solar spectrum, whereas silicon captures the red range—allows the cells to convert 29.5% or more of the Sun's energy into usable electricity. Cells made with only perovskite, however, are no more efficient than silicon-based ones. It's reasonable to conclude, then, that _____

ID f495b554

123 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) photovoltaic cells with both silicon and perovskite are more efficient because they make use of more of the solar spectrum.

(B) photovoltaic cells with only perovskite and no silicon would likely convert more than 29.5% of the Sun's energy.

(C) solar power will remain elusive until photovoltaic cells are replaced with a more practical technology.

(D) researchers need to evaluate whether other minerals like perovskite are as effective as perovskite seems to be.

Volunteering, or giving time for a community service for free, is a valuable form of civic engagement because helping in a community is also good for society as a whole. In a survey of youths in the United States, most young people said that they believe volunteering is a way to help people on an individual level. Meanwhile, only 6% of the youths said that they think volunteering is a way to help fix problems in society overall. These replies suggest that _____

ID f27559d4

124 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) many young people think they can volunteer only within their own communities.

(B) volunteering may be even more helpful than many young people think it is.

(C) volunteering can help society overall more than it can help individual people.

(D) many young people may not know how to find ways to volunteer their time.

Tides can deposit large quantities of dead vegetation within a salt marsh, smothering healthy plants and leaving a salt panne—a depression devoid of plants that tends to trap standing water—in the marsh's interior. Ecologist Kathryn Beheshti and colleagues found that burrowing crabs living within these pannes improve drainage by loosening the soil, leading the pannes to shrink as marsh plants move back in. At salt marsh edges, however, crab-induced soil loosening can promote marsh loss by accelerating erosion, suggesting that the burrowing action of crabs _____

ID d1539546

125 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) can be beneficial to marshes with small pannes but can be harmful to marshes with large pannes.

(B) may promote increases in marsh plants or decreases in marsh plants, depending on the crabs' location.

(C) tends to be more heavily concentrated in areas of marsh interiors with standing water than at marsh edges.

(D) varies in intensity depending on the size of the panne relative to the size of the surrounding marsh.

Compiled in the late 1500s largely through the efforts of Indigenous scribes, *Cantares Mexicanos* is the most important collection of poetry in Classical Nahuatl, the principal language of the Aztec Empire. The poems portray Aztec society before the occupation of the empire by the army of Spain, and marginal notes in *Cantares Mexicanos* indicate that much of the collection's content predates the initial invasion. Nonetheless, some of the poems contain inarguable references to beliefs and customs common in Spain during this era. Thus, some scholars have concluded that _____

ID cf3acc50

126 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) while its content largely predates the invasion, *Cantares Mexicanos* also contains additions made after the invasion.

(B) although those who compiled *Cantares Mexicanos* were fluent in Nahuatl, they had limited knowledge of the Spanish language.

(C) before the invasion by Spain, the poets of the Aztec Empire borrowed from the literary traditions of other societies.

(D) the references to beliefs and customs in Spain should be attributed to a coincidental resemblance between the societies of Spain and the Aztec Empire.

Aptamers—synthetic DNA or RNA molecules that bind to target molecules—can be used to test for foodborne bacterial pathogens, though their specificity (the probability of returning a negative result in the absence of the focal pathogen) in real-world foods has been unclear. Sandeep Somvanshi et al. fabricated test paper incorporating aptamers targeting strain O157:H7 of the bacteria *Escherichia coli*; the paper shifts from pink to purple as the aptamers bind to target molecules. Somvanshi et al. tested the paper in store-bought pear juice they treated with *E. coli* O157:H7, other strains of *E. coli*, or other bacteria species. Following exposure, the paper from the O157:H7 test was purple while papers from the other tests were pink, suggesting that _____

ID 4802f6a5

127 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) aptamer-based tests in real-world foods are more likely to show a high degree of specificity if the focal pathogen is *E. coli* O157:H7 than if the focal pathogen is another strain of *E. coli* or another species.

(B) uncertainty about the specificity of aptamer-based tests for pathogens in real-world foods may be due to the similarity between *E. coli* O157:H7 and other *E. coli* strains.

(C) the specificity of the tests in a real-world food was unaffected by the aptamers' tendency to bind to different strains of *E. coli*.

(D) the aptamers successfully bound to *E. coli* O157:H7 and the tests displayed a high degree of specificity in a real-world food.

"Gestures" in painting are typically thought of as bold, expressive brushstrokes. In the 1970s, American painter Jack Whitten built a 12-foot (3.7-meter) tool he named the "developer" to apply paint to an entire canvas in one motion, resulting in his series of "slab" paintings from that decade. Whitten described this process as making an entire painting in "one gesture," signaling a clear departure from the prevalence of gestures in his work from the 1960s. Some art historians claim this shift represents "removing gesture" from the process. Therefore, regardless of whether using the developer constitutes a gesture, both Whitten and these art historians likely agree that _____

ID 9abc3ba5

128 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) any tool that a painter uses to create an artwork is capable of creating gestures.

(B) Whitten's work from the 1960s exhibits many more gestures than his work from the 1970s does.

(C) Whitten became less interested in exploring the role of gesture in his work as his career progressed.

(D) Whitten's work from the 1960s is much more realistic than his work from the 1970s is.

Studies conducted in individual Western societies have demonstrated associations between personality traits and five musical factors (mellowness, unpretentiousness, sophistication, intensity, and contemporariness) underlying individual preferences for styles of Western music. To investigate these associations across cultures, David M. Greenberg et al. collected music-preference assessments for Western genres and self-reported personality traits from participants in fifty-three countries across six continents. The study confirmed that the five-factor framework accurately captured participants' tastes in Western music, and, moreover, the study found similar correlations between patterns of these factors and of personality traits, suggesting that _____

ID 38facbad

129 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) across cultural contexts, people who share similar profiles of personality traits tend to prefer listening to similar types of Western music.

(B) the five-factor framework can likely be used to predict preferences for non-Western music styles based on personality traits even if the characteristics of those styles substantially differ from characteristics of Western music styles.

(C) the strength of the relationship between personality traits and musical preferences varies less across cultures than researchers had previously assumed.

(D) people with a relatively high degree of familiarity with Western music styles are likely to express stronger preferences for those styles than people with a relatively low degree of familiarity with those styles are.

Arthurian legends (tales related to the character of King Arthur) derive from many sources, such as *Vita Sancti Cadoci*, composed in the 11th century, and *Culhwch and Olwen* from the second half of the 12th century. One of the most significant sources, Geoffrey of Monmouth's *History of the Kings of Britain*, was written in the 1130s; some material from it was later adapted by the Norman poet Wace into the *Roman de Brut* in 1155. But Wace didn't merely adapt *History*, he added to it as well, introducing the famous Round Table at which Arthur's knights assembled, which suggests that _____

ID 5c7e0d62

130 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) *Roman de Brut* is more historically accurate than *History*, because *Culhwch and Olwen* had not been written when Geoffrey of Monmouth was writing his work.

(B) Geoffrey of Monmouth was unaware of stories of the Round Table when composing his *History*, though historians know that works containing such stories were available to him.

(C) Geoffrey of Monmouth's accounts of Arthurian legends in his *History* are more similar overall in content to the accounts in *Culhwch and Olwen* than they are to the accounts in *Roman de Brut*.

(D) the Arthurian legends that the author of *Vita Sancti Cadoci* drew on would not have featured the Round Table.

As the name suggests, dramaturges originated in theater, where they continue to serve a variety of functions: conducting historical research for directors, compiling character biographies for actors, and perhaps most importantly, helping writers of plays and musicals to hone the works' stories and characters. Performance scholar Susan Manning observes that many choreographers, like playwrights and musical theater writers, are concerned with storytelling and characterization. In fact, some choreographers describe the dances they create as expressions of narrative through movement; it is therefore unsurprising that _____

ID 299c5303

131 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) dramaturges can have a profound impact on the artistic direction of plays and musicals.

(B) choreographers developing dances with narrative elements frequently engage dramaturges to assist in refining those elements.

(C) dances by choreographers who incorporate narrative elements are more accessible to audiences than dances by choreographers who do not.

(D) some directors and actors rely too heavily on dramaturges to complete certain research tasks.

Biologist Natacha Bodenhausen and colleagues analyzed the naturally occurring bacterial communities associated with leaves and roots of wild *Arabidopsis thaliana*, a small flowering plant. The researchers found many of the same bacterial genera in both the plants' leaves and roots. To explain this, the researchers pointed to the general proximity of *A. thaliana* leaves to the ground and noted that rain splashing off soil could bring soil-based bacteria into contact with the leaves. Alternatively, the researchers noted that wind, which may be a source of bacteria in the aboveground portion of plants, could also bring bacteria to the soil and roots. Either explanation suggests that _____

ID cac82f9b

132 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) bacteria carried by wind are typically less beneficial to *A. thaliana* than soil-based bacteria are.

(B) some bacteria in *A. thaliana* leaves and roots may share a common source.

(C) many bacteria in *A. thaliana* leaves may have been deposited by means other than rain.

(D) *A. thaliana* leaves and roots are especially vulnerable to harmful bacteria.

The single origin hypothesis of iron metallurgy posits that the craft originated in Anatolia (West Asia) circa 2200–2000 BCE before diffusing to other parts of the world, including Africa. Some proponents of the hypothesis argue that iron production technologies first arrived in North Africa through Carthage, where the earliest evidence of ironworking dates to approximately 800–600 BCE, before these technologies spread to sub-Saharan Africa over the following centuries. However, excavation of multiple sites on the Adamawa plateau in Central Africa conducted by Étienne Zangato and Augustin Holl uncovered evidence of iron workshops that may have been in operation as late as 900–750 BCE in Gbabari and as early as 2300–1900 BCE in Ôboui and Gbatoro. These findings suggest that _____

ID b9a3941b

133 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) iron production may have developed independently and relatively simultaneously in Anatolia and parts of Central Africa.

(B) iron production technologies found in Gbabari likely derived directly from technologies transmitted from Anatolia, but those found in Ôboui and Gbatoro did not.

(C) iron production technologies were likely transmitted from Anatolia to Central Africa via an alternate route than the one suggested by some proponents of the single origin hypothesis.

(D) iron production may have originated in Anatolia much earlier than the available evidence currently indicates.

While mammals collectively exhibit the highest ratio of brain size to body size among vertebrates, a team led by paleontologist Ornella Bertrand demonstrates that for ten million years following the extinction of dinosaurs, that ratio in fact shrank for mammals as they evolved to fill newly vacated ecological niches and their bodies increased in size more rapidly than their brains. Competition for resources tends to favor intelligence and thus large, complex brains, but during this period, the abundance of resources relative to mammalian population numbers likely moderated competition and facilitated an increase in body size. Bertrand and her team reason that as population numbers swelled, competition intensified, creating conditions that _____

ID 45f66433

134 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) heightened the advantage that large body size conferred on mammals in certain ecological niches.

(B) restricted resources so drastically that mammals struggled to secure enough food to maintain large brain sizes.

(C) favored an evolutionary increase in brain size relative to body size among mammals.

(D) encouraged mammals with large brain sizes to adapt to a range of ecological niches.

With the ongoing expansion of e-commerce, consumers are expecting faster and faster delivery of goods, but delivery companies continue to struggle with last-mile logistics (the final step in delivery to consumers) due to challenges such as complex and inefficient delivery routes. Innovations to mitigate these challenges have been emerging—the use of aerial drones, for example—but these innovations tend to engender their own complications (e.g., regulations on the use of drones in residential airspace), leading researchers to conclude that _____

ID e503ae04

135 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) consumers' expectations for reduced delivery times may be outstripping what is viable for delivery companies to provide.

(B) a better understanding of consumers' expectations for delivery is needed so that companies can better plan for fluctuations in delivery volume.

(C) rapid delivery is a leading factor in consumer satisfaction, and therefore delivery companies would benefit from investing resources in reducing delivery times.

(D) there may not be sufficient incentive for delivery companies to attempt to solve the problems associated with last-mile logistics.

Conventional theories of rhetoric hold that presenting information as coming from credentialed experts increases that information's credibility. When communications researcher Sungkyoung Lee and her colleagues tested messages seeking volunteers for clinical trials, however, they found that participants in their study judged recruitment messages from former trial volunteers as significantly more credible than messages from doctors (i.e., credentialed experts). One reason for this may be that the doctors' status as credentialed experts wasn't ignored but rather was outweighed by participants' views of the experiential relevance of the two types of messengers; that is, participants may have reacted the way they did because _____

ID 5d20f560

136 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) messages from former trial volunteers depicted clinical trials as being more positive experiences than did messages from doctors.

(B) participants did not have enough experience to evaluate the credibility of the doctors' messages but did have enough experience to evaluate the credibility of former trial volunteers' messages.

(C) the fact that former trial volunteers went through the same experience that participants were contemplating while doctors did not was more important to participants than the doctors' status as credentialed experts was.

(D) participants regarded the experiences of both the doctors and former trial volunteers as relevant to the subject of clinical trials but were skeptical of the doctors' status as credentialed experts.

Mosses can struggle in harsh desert conditions because these plants require enough sunlight for photosynthesis but not so much that they risk drying out. Researchers Jenna Ekwealor and Kirsten M. Fisher found several species of *Syntrichia caninervis*, a type of desert moss, growing under quartz crystals in California's Mojave Desert. To evaluate whether these semitransparent rocks benefited the moss, the researchers compared the shoot tissue, a measure of plant growth, of *S. caninervis* when growing on the soil surface versus when the moss was growing under the quartz rocks. They found that the shoot tissue was 62% longer for moss growing under the quartz as compared to moss on the soil surface, suggesting that _____

ID cae97f58

137 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) *S. caninervis* is one of the few types of moss that can survive under semitransparent rocks.

(B) quartz crystals do not transmit the necessary sunlight for photosynthesis in *S. caninervis*.

(C) *S. caninervis* growing under quartz crystals experience lower light intensity and are thus able to retain more moisture.

(D) quartz crystals are capable of supporting *S. caninervis* growth if the crystals are not too thin.

In a 2017 article, historian Jasmine Kilburn-Toppin explains that in early modern London, members of the city's guilds (trade and artisanal associations) were participants in a civic culture in which gift giving both signaled and conferred social status. Research on this phenomenon has tended to focus on philanthropic gifting by London's largest guilds; for her part, Kilburn-Toppin focuses on the gifting of handmade objects and fixtures (such as decorative paneling or plasterwork) within the craft guilds, which were "composed of highly discerning producers and consumers of material cultures." Given this characterization, it can reasonably be inferred that the gifting of such objects may have _____

ID 65502c46

138 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) ensured that knowledge of the materials and techniques used by members of the craft guilds stayed within the craft guilds.

(B) emphasized ostentatious offerings in the case of the largest guilds and prosaic objects in the case of the craft guilds.

(C) functioned as a way for craft guild members to maintain and enhance their professional reputations among their peers.

(D) conferred greater social status when the recipient belonged to one of London's largest guilds than when the recipient belonged to a craft guild.

Data collected by the Mars rover *Curiosity* at the Gale Crater's Murray Formation are suggestive of hydrological deposition of sediment in the distant past. To characterize the nature of the depositional environment, Frances Rivera-Hernández et al. analyzed the grain size of Murray Formation sediment, finding that although there are intervals of coarse grains, most of the sediment consists of fine grains that show signs of cracking due to episodic desiccation. Rivera-Hernández et al. concluded that the coarse grains are sandstone, which tends to be deposited by flowing water, whereas the fine grains are mudstone, which is slowly deposited by settling out of suspension in low-flow water, leading the researchers to posit that

_____

ID 9869c261

139 Mark for Review — Hard — Explanation ›

Which choice most logically completes the text?

(A) although the area of the Murray Formation experienced a prolonged period of dryness that prevented a lake from forming, water flowing from a distant source was present.

(B) a lake existed at the Murray Formation for a prolonged period, though the lake occasionally experienced drying and there were periods in which one or more streams were present.

(C) one or more streams existed at the Murray Formation for an extended period until being replaced by a lake that persisted for only a brief period before permanently drying.

(D) a stream-fed lake was present at the Murray Formation for an extended period, and although the streams experienced occasional drying, the lake did not.

As juveniles, all white-necked jacobin hummingbirds display vibrantly blue head plumage; when they enter adulthood, males retain these blue feathers and most females molt to a drab green hue. However, 28% of adult female jacobins remain identical in coloration to juveniles and adult males. Based on field observations in Panama, a team of researchers reports that while adult males show a clear preference in mate selection for adult females with drab green feathers, they also engage in more antagonistic behavior toward those adult females than toward blue-feathered adult females when competing for resources. Therefore, the team hypothesizes that _____

ID 27ea642e

140 Mark for Review Hard Explanation ›

Which choice most logically completes the text?

(A) adult male jacobins do not act antagonistically toward juvenile jacobins with blue head plumage when competing for resources.

(B) the percentage of blue-feathered females will increase until fewer than half of adult female jacobins are green-feathered.

(C) the occurrence of blue head plumage in adult female jacobins is driven by one or more factors not associated with mate attraction.

(D) coloration prevents green-feathered adult female jacobins from distinguishing between adult males and blue-feathered adult females.

Explanations

1 Correct answer **C** — Easy — Back to question

C producing adaptations will become easier and less expensive.

Choice C is the best answer. The text tells us that because of the copyright, adapting Sherlock Holmes stories used to be expensive and difficult. This suggests that after the copyright ends, it will be less expensive and less difficult to adapt these stories.

Choice A is incorrect. This inference isn't supported. The text never suggests that the copyright ending will make Sherlock Holmes stories harder to find. Instead, it suggests that adaptations of these stories will be easier and less expensive to make. **Choice B is incorrect**. This inference isn't supported. The text never discusses people's interest in detective stories, so there is no basis to make this inference. **Choice D is incorrect**. This inference isn't supported. The text never suggests that copyright fees from the past are returned after a copyright ends, so there is no basis to make this inference.

2 Correct answer **B** — Easy — Back to question

B in-person shopping may make products seem more valuable than they seem if only viewed online.

Choice B is the best answer. The text tells us that "people who got to touch the items were willing to pay much more money for them than people who weren't allowed to touch" them. This suggests that being able to interact with a product in person

may make it seem more valuable to a shopper.

Choice A is incorrect. The text doesn't discuss how much people spend each month, so there's not much basis for this claim. Furthermore, since being able to touch a product tends to make people "willing to pay much more money" for it, we might predict that an online shopper would be willing to spend less on the same purchases as an in-person shopper. **Choice C is incorrect**. The text doesn't discuss what retailers "should charge," so there's not much basis for this claim. Furthermore, the study in the text suggests that in-person stores may actually be able to charge more for a given product, since shoppers can touch it. **Choice D is incorrect**. The text doesn't discuss products that are only available online, so there's not much basis for this claim. Furthermore, products only available online would still have the problem of shoppers not being able to touch them, and the study suggests that this lowers the prices shoppers are willing to pay.

3 Correct answer **A** Easy Back to question

A make themselves appear brave and strong for being able to climb to difficult places where edelweiss supposedly grew.

Choice A is the best answer because it most logically completes the text's discussion of mountain climbers' motivations for exaggerating the difficulty of reaching edelweiss. The text establishes that edelweiss became symbols of strength and courage in Switzerland in the mid-1800s. The text goes on to state that mountain climbing became popular around the same time and that climbers spread the false idea that the flowers grew only in dangerous, hard-to-reach locations. According to the text, historian Tobias Scheidegger argues that these claims were "self-interested," meaning they served the climbers' own purposes. The text therefore implies that by claiming that edelweiss could be found only in perilous locations, mountain climbers could enhance their own reputations: climbers who encountered edelweiss would appear to have undertaken a dangerous journey, thereby making themselves seem brave and strong.

Choice B is incorrect because making edelweiss seem more dangerous to reach than other mountain flowers are would likely discourage flower enthusiasts from trying to reach edelweiss rather than encourage them to explore the Swiss Alps. The text suggests that climbers' self-interested motivation for exaggerating the difficulty of climbing to areas where edelweiss grew was to enhance their own reputations for being especially brave, not to promote tourism in the Swiss Alps. **Choice C is incorrect** because the text states that according to Scheidegger, mountain climbers exaggerated the difficulty of reaching edelweiss for self-interested reasons, not because they wanted to report genuine scientific observations about the flower's unique characteristics. The text provides no indication that the climbers sincerely believed that their claims about the especially challenging terrain in which edelweiss grew were accurate, much less that they wanted to share this information with scientists. **Choice D is incorrect** because the text doesn't suggest that mountain climbers were trying to prove that edelweiss were more common in Switzerland than elsewhere. The text's focus is on the supposed difficulty and danger of reaching the flowers, not on their relative abundance in the Swiss Alps compared to other regions. In fact, the text implies that mountain climbers exaggerated how difficult edelweiss were to reach; it therefore wouldn't make sense to say that they exaggerated this difficulty to demonstrate that edelweiss were relatively common.

4 Correct answer **D** Easy Back to question

D illustrates the artistic opportunity offered by off-off Broadway theaters.

Choice D is the best answer. The text says that off-off-Broadway theaters allowed artists to create more experimental shows, and then discusses how Fornés was free to direct her own "strange" plays however she wanted. This suggests that Fornés exemplifies the artistic freedom of off-off Broadway theaters.

Choice A is incorrect. This inference isn't supported. The text never discusses the costs of production, so we can't logically make this claim. **Choice B is incorrect**. This inference isn't supported. The text never discusses the complexity of staging plays either on Broadway or off-off Broadway, so there's no basis to make this inference. **Choice C is incorrect**. This inference isn't supported. The text never discusses fame at all, so there's no basis to make this inference.

5 Correct answer **B**

Easy

‹ Back to question

B the gene variant that results in black fur may be linked to immunity to the distemper virus.

Choice B is the best answer. The text tells us that the black-furred wolves are more common in areas with regular outbreaks of distemper virus and are more likely to be immune to distemper than the gray-furred wolves. This suggests that the gene variant that results in black fur may be linked to immunity to the distemper virus.

Choice A is incorrect. The text never compares North American gray wolves to other wolf species—in fact, it never discusses other wolf species at all, so there's no basis for this inference. **Choice C is incorrect**. The life span of gray wolves is never mentioned in this text, so we have no basis for this inference. **Choice D is incorrect**. This is too extreme. The text says that "black-furred wolves are more likely to be immune to distemper than the gray-furred wolves," but that alone doesn't mean that black-furred wolves will replace gray-furred wolves across North America.

6 Correct answer **A**

Easy

‹ Back to question

A help improve yields of harvested corn by being more likely to survive in severe winds.

Choice A is the best answer because it presents the conclusion that most logically completes the text's discussion about a trade-off in growing shorter varieties of corn. The text explains that plant specialists are working to develop shorter corn varieties in an effort to improve yields. The text points out that although greater height in corn plants can lead to more ears of corn per plant, it also makes the stalks more likely to be damaged by strong winds before there is a chance to harvest the corn. This presents a clear trade-off between potential yield (taller plants producing more ears per plant) and harvest reliability (shorter plants surviving until harvest time). Given this information, it is reasonable to infer that shorter corn varieties, while possibly producing fewer ears per plant, would be more likely to survive until harvest time. This survival advantage would result in improved yields of harvested corn because more plants would remain intact, thus offsetting the potential reduction in ears per shorter plant.

Choice B is incorrect. According to the text, greater height makes cornstalks vulnerable to snapping or being uprooted in strong winds, implying that taller plants—not shorter ones—have greater stability problems. The text provides no basis for inferring that shorter corn varieties would be more likely to be uprooted due to corn weight; in fact, the text suggests the opposite relationship between height and stability. **Choice C is incorrect** because the text doesn't provide information about the land requirements of either shorter corn varieties or shorter wheat and rice varieties, much less make any comparisons. The text mentions that plant breeders in the 1950s and '60s created shorter varieties of wheat and rice with improved yields and that researchers are now exploring shorter corn varieties, but it doesn't compare land-use requirements of these crops. **Choice D is incorrect** because the idea that shorter cornstalks would yield more ears of corn would contradict the relationship between height and corn production described in the text. The text explicitly states that greater height allows individual plants to produce more ears of corn, which suggests that shorter varieties would produce fewer ears per plant, not more. The text therefore provides no basis for concluding that shorter varieties would begin developing more ears than the taller varieties currently do.

7 Correct answer **A**

Easy

‹ Back to question

A had an important role in Egypt's government.

Choice A is the best answer because it most logically completes the text's discussion of the evidence found in Queen Merneith's tomb. The text begins by mentioning archaeologists' efforts to excavate the tomb of Queen Merneith, the wife of a pharaoh who some scholars think was actually the first female pharaoh. The text states that a tablet discovered in her tomb suggests she "was in charge of the country's treasury and other central offices," which supports the idea that she had an important role in Egypt's government.

Choice B is incorrect because since the text explicitly states that Merneith's husband was a First Dynasty pharaoh, it can be inferred that she lived during the First Dynasty, not after it. **Choice C is incorrect** because the text does not provide any evidence that Merneith traveled beyond Egypt's borders often. The text is focused on the archaeological discovery in her tomb and the implications about her potential role as a ruler in Egypt but does not mention anything about her traveling habits. **Choice D is incorrect** because the text does not mention anything about Merneith creating a new form of writing in Egypt. The text discusses the discovery of a tablet with writing suggesting her governmental role but does not imply that this writing represented a new form created by Merneith.

8 Correct answer **C** Easy Back to question

C they were too far from the other Nacional trees infected by the fungus to become infected themselves.

Choice C is the best answer because it most logically completes the text's discussion of the Nacional trees' survival in Piedra de Plata. The text states that the fungus that caused Nacional trees elsewhere to become diseased spreads from tree to nearby tree through the air. The text also mentions that the surviving Nacional trees were found in a hard-to-reach valley in Ecuador. Given this information, it's logical to conclude that these trees might have avoided infection because they were geographically isolated from infected Nacional trees, which prevented the airborne fungus from reaching them.

Choice A is incorrect because early twentieth-century scientists' lack of knowledge about the infection that affected many Nacionals doesn't explain how the trees in the Piedra de Plata coastal forest survived. The text is concerned with the physical factors that allowed certain trees to avoid infection, not with scientists' understanding of the disease. **Choice B is incorrect**. Although the text mentions that the fungus spreads through the air, it doesn't indicate when this ability was discovered. Moreover, even if the ability to move through the air was recently discovered, that wouldn't explain how the trees in Piedra de Plata avoided infection in the past. **Choice D is incorrect** because the value of the chocolate made from Nacional pods doesn't explain how the trees in the Piedra de Plata coastal forest avoided disease. The text focuses on the physical spread of the fungus that caused most Nacionals to become diseased, not on economic factors related to the trees' products.

9 Correct answer **D** Easy Back to question

D increase the number of new or inexperienced cyclists riding in the city.

Choice D is the best answer because it most logically completes the text's discussion of the relationship between street lighting and people's cycling behavior. According to the text, Eugeni Vidal-Tortosa and Robin Lovelace found that poor street lighting deters new or inexperienced cyclists from riding their bikes in a city but has little effect on experienced cyclists. This finding establishes a causal relationship between street lighting and the willingness of new or inexperienced cyclists to ride a bicycle in the city: if poor lighting discourages new or inexperienced cyclists from riding, then improving lighting conditions by increasing the number of streetlights would logically remove this deterrent, potentially leading to an increase in the number of new or inexperienced cyclists willing to ride in the city.

Choice A is incorrect because it contradicts the logical relationship established in the text. If poor street lighting deters new or inexperienced cyclists from riding in the city, then increasing the number of streetlights (improving lighting conditions) would be expected to encourage more of these cyclists to ride, not decrease their numbers. **Choice B is incorrect** because the text explicitly states that street lighting didn't have an effect on experienced cyclists. If lighting conditions don't significantly influence experienced cyclists' decisions to ride, then increasing the number of streetlights wouldn't necessarily increase the number of experienced cyclists riding in the city. **Choice C is incorrect**. The text indicates that street lighting didn't affect experienced cyclists, so increasing the number of streetlights wouldn't decrease the participation of these cyclists. Instead, their numbers would be expected to remain about the same.

10 Correct answer **A**

Easy

‹ Back to question

A play a flute sound, then a clarinet sound, and then a clicking sound.

Choice A is the best answer because it most logically completes the text's discussion of a device that converts light into sound during a solar eclipse. The text states that the device plays different sounds based on the amount of light shining on it, producing a high-pitched flute sound in bright light, a neutral-pitched clarinet sound in mid-range light, and a soft clicking sound in low light. The text also indicates that during a solar eclipse, the sun becomes more covered and the amount of light slowly reduces from full brightness. Thus, because the eclipse begins with full sunlight that progressively decreases, the device would first play a flute sound (bright light), then a clarinet sound (mid-range light), and then a clicking sound (low light).

Choice B is incorrect. Based on the text's description of the sounds the device makes, if the device played clicking sounds, then a flute sound, and then a clarinet sound, the light would have to be going from low to bright to mid-range. But the text indicates that when a solar eclipse starts, the light is bright and then slowly reduces, meaning it would go from bright to mid-range light and then to low light. And even as the sun begins to be less covered again, which isn't discussed in the text, there's no reason to think the light would jump from low to bright and then back to mid-range. **Choice C is incorrect** because the text indicates only that the device plays a distinct sound (flute, clarinet, or clicking) for each of the three levels of brightness, not that it varies the speed of any of those sounds. **Choice D is incorrect** because the text indicates only that the device plays a distinct sound (flute, clarinet, or clicking) for each of the three levels of brightness, not that it varies the volume of any of those sounds.

11 Correct answer **A**

Easy

‹ Back to question

A lifelike handshakes may make people more comfortable interacting with robots.

Choice A is the best answer. The text says that handshakes create trust, and that the engineers' goal is to "improve human-robot interactions." This suggests that they want the robot's handshake to feel real because they want humans to trust the robot.

Choice B is incorrect. This inference isn't supported. The text never discusses any other types of greetings, so there is no basis to make this inference. **Choice C is incorrect**. This inference isn't supported. The text never discusses the appearance of this robot or any other robots, so there is no basis to make this inference. **Choice D is incorrect**. This inference isn't supported. The text never discusses any uses for the robot other than interacting with humans, so there is no basis to make this inference.

12 Correct answer **A**

Easy

‹ Back to question

A hooked stick tools are more valuable to the crows than the stick tools without hooks.

Choice A is the best answer because it most logically completes the text's discussion of the two types of stick tools used by New Caledonian crows. The text indicates that the more effective type of tool has a hook that the crows make themselves, while the other type of tool is simply a stick without a hook that the crows find and don't shape in any way. According to the text, Klump found that the crows keep hooked tools—but not the tools without hooks—in their grasp or in safe places when they aren't using the tools. If the hooked tools are more effective than the tools without hooks are and the crows are more protective of the hooked tools than they are of the tools without hooks, it's reasonable to conclude that the hooked tools are more valuable to the crows than the tools without hooks are.

Choice B is incorrect because the text gives no indication of how easy it is for the crows to hold either the hooked tools or the tools without hooks. The text does state that crows hold the hooked tools and not the tools without hooks when the tools aren't in use. However, the text also indicates that the hooked tools require work from the crows to make and are more useful for helping the crows catch prey than the tools without hooks are. This context suggests that the crows hold the hooked tools because they're more valuable to the crows than the tools without hooks are, not because the hooked tools are easier to hold.

Choice C is incorrect because the text makes no mention of the crows sharing tools. Additionally, the text indicates that when the crows aren't using the hooked tools, they either grasp the tools or store them safely, which suggests that the crows try to maintain possession of the hooked tools, not that crows prefer to share those tools. **Choice D is incorrect** because the text says nothing about the crows using their claws to remove prey from holes, so there's no evidence that the crows perceive the stick tools to be less effective than their claws are.

13 Correct answer **B** Easy Back to question

B an opportunity for Johnson to get feedback on her plays.

Choice B is the best answer because it most logically completes the text's discussion of Georgia Douglas Johnson. The text explains that Johnson wrote many plays, but few of her plays were staged or published. Although this may suggest that Johnson was therefore prevented from learning what others thought of her work, the text goes on to explain that she regularly met with other Black writers and artists to discuss their work, including her own. Thus, these get-togethers could have served as a chance for Johnson to get feedback on her work.

Choice A is incorrect because the text doesn't indicate that professional theater companies put on plays at Johnson's get-togethers. Instead, the text explains that the gatherings were an opportunity for Black writers and artists to discuss their own work at Johnson's home. In addition, the text indicates that during the 1920s and 1930s, professional theater companies rarely put on plays by Black women. **Choice C is incorrect** because the text doesn't mention plays produced in other cities and instead only states that the writers and artists attending her get-togethers were meeting in Washington, DC, to discuss their own work. The text doesn't indicate what kinds of work the attendees were sharing or where those works had been produced. **Choice D is incorrect**. Although some of the discussions held during the gatherings at Johnson's home may have inspired her writing, there's nothing in the text to support that this occurred. Instead, the text characterizes the gatherings as an opportunity to read and discuss one another's work, which would have given Johnson the chance to get feedback on her plays.

14 Correct answer **B** Easy Back to question

B determine the colors of the bird based on the appearance of the melanosomes in the feather.

Choice B is the best answer because it most logically completes the text's discussion of a hypothesis by one group of scientists about how to determine the colors of a long-extinct animal. The text explains that the scientists found melanosomes in the fossilized feather of an extinct bird and that melanosomes are responsible for producing color inside cells. The text also explains that melanosomes have different shapes depending on the colors they produce. Given this information, it follows that the scientists hypothesized that they could determine the colors of the extinct bird by examining the shapes of the melanosomes in the feather.

Choice A is incorrect because the text never suggests that the scientists were seeking to show how melanosomes can be found in fossils belonging to animals from other extinct species. Rather, the text indicates that the scientists were seeking to identify an extinct bird's colors, and the text strongly suggests that the scientists hypothesized that they could achieve their goal by examining the shapes of the melanosomes in the bird's fossilized feather. **Choice C is incorrect** because the text never suggests that the scientists were seeking to explain why the melanosomes in the feather were so well preserved. Rather, the text indicates that the scientists were seeking to identify an extinct bird's colors, and the text strongly suggests that the scientists hypothesized that they could achieve their goal by examining the shapes of the melanosomes in the bird's fossilized feather. **Choice D is incorrect** because the text suggests only one method of identifying the colors of extinct animals: by examining the shapes of melanosomes found in fossils. The text doesn't discuss other methods for learning the colors of extinct animals and therefore provides no support for the idea that the scientists could identify the colors of extinct animals whose fossils lack melanosomes.

15 Correct answer **C** Easy ‹ Back to question

C shifts position in order to face outwards toward the audience.

Choice C is the best answer because it most logically completes the text's discussion of how a violist in a string quartet might behave to ensure their instrument can be heard clearly by the audience during a solo. According to the text, such quartets consist of two violins, a viola, and a cello, configured as follows: the cellist and one of the violinists both face the audience, while the other violinist and the violist face each other. In other words, the viola and its f-holes, or sound openings, are "angled away from the audience," just as the musician playing the instrument is. As the text implies, the f-holes are crucial for projecting sound, so this positioning reduces the volume of the viola as perceived by the audience and in turn presents a dilemma during a solo, in which the viola should be heard clearly above the other instruments in the quartet. Therefore, during a viola solo, the violist would most logically adjust their position and face the audience directly, thereby projecting the sound emerging from the instrument's f-holes toward listeners. This adjustment would maximize the viola's sound for the benefit of the audience for the duration of the solo.

Choice A is incorrect because the text's discussion is about how a violist in a string quartet behaves to ensure that their instrument can be heard clearly by the audience during a solo, given the orientation of this instrument in a typical string quartet configuration, and a soloist would want the viola to be more prominent relative to the other instruments in this context, not less prominent. Therefore, it wouldn't be sensible for the violist to instruct the other members of the quartet to play louder during the solo. **Choice B is incorrect** because the text's discussion is about how a violist behaves to ensure that their instrument can be heard clearly by the audience during a solo, given the orientation of this instrument in a typical string quartet configuration, and a violist would want the viola to be more prominent and therefore louder relative to all the other instruments. Therefore, it wouldn't be sensible for the violist to play at the same volume as the cellist during a solo. **Choice D is incorrect**. While a violist might very well look at the sheet music during a solo to ensure they are playing the piece correctly, the direction that a musician looks in doesn't determine how effectively the sound of their instrument is projected to the audience. If, as the text stipulates, a violist wants to ensure that their instrument can be heard clearly, given the orientation of the viola in the typical seating configuration of a string quartet, then the violist would likely change their physical orientation, facing toward the audience and therefore angling the viola's f-holes in that direction during the solo.

16 Correct answer **B** Easy ‹ Back to question

B Grimes successfully used the golden shovel method to achieve her goal for *One Last Word*.

Choice B is the best answer because it most logically completes the text's discussion of Nikki Grimes's poetry collection *One Last Word*. The text explains that Grimes used a writing method called the golden shovel to create the poems in her book. According to the text, the method involves basing a new poem on a line from an existing poem. The text then mentions Langston Hughes and Georgia Douglas Johnson as examples of important Black poets whose lines of poetry form the basis of Grimes's poems. The text goes on to say that this writing method is difficult and that the resulting poems can be awkward, but reviewers have positively reviewed Grimes's book. If the reviewers of *One Last Word* specifically note that the work is a "beautiful and powerful tribute to the poets who inspired it," then they must have appreciated how Grimes used the golden shovel method to pay tribute to other poets. This suggests that Grimes was successful in using the golden shovel method to achieve her goal of honoring Black poets in her book.

Choice A is incorrect because the reaction suggests that most reviewers did understand Grimes's goal for her book. According to the text, the reviewers noted that the poems in her book were a "beautiful and powerful tribute to the poets who inspired it." Earlier, the text claims that Grimes intended the poems "to honor important Black poets of the past," so in their praise of her book, the reviewers clearly indicated that they understood Grimes's goal. **Choice C is incorrect**. Although it's likely that Grimes sought to honor Hughes and Johnson in her book of poetry because they're among her favorite poets, this fact isn't suggested by the reviewers' positive reaction to her book. Instead, the reaction suggests that Grimes was successful in her use of the golden shovel method. **Choice D is incorrect** because the text doesn't discuss whether other writers were inspired by Grimes to use the golden shovel method in their poetry. The text mentions the poets Hughes and Johnson as examples of poets

honored in Grimes's book and describes reviewers' positive reception of her book, but it doesn't detail Grimes's impact on other writers.

17 Correct answer **C** Easy ‹ Back to question

C the amount of detail viewed in previous ads.

Choice C is the best answer. The passage tells us that participants who had seen a less detailed ad for a product beforehand had a higher opinion of the store than those who had seen a more detailed ad. This suggests that reactions to an ad may be affected by the amount of detail viewed in previous ads.

Choice A is incorrect. The passage doesn't mention the number of people who viewed the ad, so there's no basis for this inference. **Choice B is incorrect**. The passage doesn't mention the length of time viewing previous ads, so there's no basis for this inference. **Choice D is incorrect**. The passage doesn't mention the time of day that the ad is viewed, so there's no basis for this inference.

18 Correct answer **D** Easy ‹ Back to question

D *Hadestown* improved greatly between 2016 and its premiere on Broadway.

Choice D is the best answer because it most logically completes the text's discussion of critic Jesse Green's review of the 2016 and 2019 productions of *Hadestown*. The text states that Green found the storytelling in the 2016 off-Broadway version to be "very confusing" but that he "enthusiastically praised" the storytelling in the revised 2019 Broadway version. This stark contrast in Green's opinions suggests that he believed the musical had significantly improved between 2016 and its 2019 Broadway premiere.

Choice A is incorrect because it contradicts the information in the text. The text indicates that Green found the storytelling in the 2016 version to be "very confusing," while he "enthusiastically praised" the storytelling in the 2019 version. This suggests that the 2019 version had fewer, not more, storytelling problems. **Choice B is incorrect** because the text doesn't provide any information about Green's opinion on the size of the 2019 Broadway production. While it mentions that the 2019 production was larger than the 2016 production, there's no indication in the text that Green thought the 2019 production should have been even larger than it was. **Choice C is incorrect** because it contradicts the information in the text. The text's description of Green's enthusiastic praise for the 2019 production suggests that he found this version more enjoyable, not less enjoyable, than the 2016 version, which he described as "very confusing."

19 Correct answer **D** Easy ‹ Back to question

D correlations in a country between languages and regions where they are spoken can replicate themselves in a new country to which the original country's citizens emigrate.

Choice D is the best answer because it logically completes the text's discussion of patterns of linguistic distribution in New York City. The text explains how Chinese immigrants in New York City tend to settle in different boroughs based on their region of origin in China: those from north China (Mandarin speakers) typically settle in Queens, while those from south China (Cantonese or Fuzhounese speakers) typically settle in Manhattan. This pattern demonstrates that the regional language distribution in China (north versus south) has reproduced itself in New York City (Queens versus Manhattan). Therefore, it can be reasonably inferred that correlations between languages and regions in one country can replicate themselves when citizens of that country emigrate to a new country.

Choice A is incorrect because the text doesn't discuss rates of language change. The text indicates that many languages are spoken in New York City, but it doesn't provide any information about how quickly these languages might be changing, either in relation to each other or compared to areas where fewer languages are spoken. **Choice B is incorrect** because the text

provides no information about changes in vocabulary or pronunciation of immigrant languages compared to their original forms. The text only discusses where different groups of language speakers tend to settle, not how their languages might have evolved after immigration. **Choice C is incorrect** because the text doesn't provide any information about a relationship between a country's physical size and the number of languages spoken there. While the text mentions that over 600 languages are spoken in New York City, it doesn't relate this to the physical size of New York or the United States, nor does it suggest that large countries like China have more languages than geographically smaller countries.

20 Correct answer **B** Easy Back to question

B many arts organizations recognize the importance of providing opportunities for young artists to learn from experienced mentors.

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of the relationship between the AACM's use of mentors to support young Black musicians and similar support that other organizations offer their young artists. According to the text, in service of AACM's goal to support new works by Black musicians, AACM mentors provide beneficial training and guidance to young artists. The text goes on to say that many other art organizations support new artists in similar ways, suggesting that these organizations recognize the importance of providing opportunities for young artists to learn from mentors who are established in their field.

Choice A is incorrect because the text gives no indication that technical training is more beneficial than creative guidance. The text states that AACM mentors offer both technical training and creative guidance to young artists and that other arts organizations offer similar kinds of support; however, nothing in the text suggests that young artists, or artists of any age, benefit more from technical training. **Choice C is incorrect** because the text is mainly concerned with the fact that established artists are mentoring young artists through AACM and other arts organizations. The text states that young musicians benefit from AACM mentors but does not address what mentors gain from the relationship, so there is no reason to conclude that most established artists could improve as artists by serving as mentors. **Choice D is incorrect**. Although the text indicates that mentors are beneficial to young musicians and that young people pursuing other kinds of art (including painting and writing) can also find mentors through arts organizations, the text gives no indication that mentors are more important for musicians than for other types of artists.

21 Correct answer **D** Medium Back to question

D illustrate both the relatively low scholarly regard in which ephemera was once held and the later recognition of ephemera's possible utility.

Choice D is the best answer. Johnson collected "ephemera," or things that are meant to be thrown away. Scholars thought his collection was worthless to them, then later realized that it was potentially valuable. This suggests that scholars went from disregarding ephemera to recognizing their usefulness.

Choice A is incorrect. This inference isn't supported. The text tells us that the Bodleian Library acquired Johnson's large collection of ephemera back in 1968, so we can assume that contemporary historians conducting research there do have access to that collection. **Choice B is incorrect**. This inference isn't supported. The text tells us that "Oxford University's Bodleian Library acquired the collection," but it never suggests that it was a challenge to do so. **Choice C is incorrect**. This inference isn't supported. The text actually suggests the opposite: the example of Johnson's collection lends support to arguments that ephemera does hold value for scholars.

22 Correct answer **A** Medium Back to question

A logging may be useful for maintaining healthy forests, provided it is limited.

Choice A is the best answer because it most logically completes the text's discussion of the potential effects of logging on forest conservation. The text begins by stating that logging practices are often thought of as being contrary to forest conservation efforts. Then, the text presents the results of a research study examining the effect of limited logging practices on specific forest plots, finding that the plots with limited logging may be "more robust" (healthier) than the plots that hadn't been logged at all. Given these results, it follows that logging may be a useful practice for maintaining healthy forests if it is practiced in a limited way.

Choice B is incorrect because the study referenced in the text only provides information on limited logging as a potential forest management strategy. There is no information in the text about how other forest management strategies support forest conservation efforts. Therefore, the text does not support the assertion that other forest management strategies are more successful than limited logging. **Choice C is incorrect** because the text presents a research study with findings that specific plots of forest with limited logging may be more robust than the forest plots that were not logged. Rather than suggesting that it is hard to know whether limited logging might be beneficial, the text suggests that the practice could be useful in forest conservation efforts. **Choice D is incorrect**. The text discusses the results of a research study that compares the health of forest plots with limited logging to forest plots that were not logged. It does not take a position on the best way to support forest health but rather presents a research study with findings that question conventionally held thoughts regarding the practice of logging.

23 Correct answer **A** Medium Back to question

A the interpersonal benefits of some interruptions in the workplace may offset the perceived negative effects.

Choice A is the best answer because it most logically completes the text's discussion of potential benefits of interruptions in the workplace. The text indicates that a common belief in business is that interruptions to working employees decrease energy and productivity levels. However, the text goes on to explain that a research team led by Harshad Puranik has found that there could be a social benefit to these interruptions. Since the team found that workplace interruptions can increase employees' sense of belonging and job satisfaction, it follows that the interpersonal benefits of some interruptions can offset the perceived negative effects.

Choice B is incorrect. Although the text presents research findings that suggest some workplace interruptions can have a positive effect on employee job satisfaction, no further information is presented to suggest at what frequency these interruptions are ideal. Furthermore, the text doesn't tie workplace interruptions to increased productivity, but rather links it to social benefits such as sense of belonging. **Choice C is incorrect** because the text doesn't address employees' motives for choosing not to interrupt their colleagues. The text presents research findings that suggest that there are some positive interpersonal effects of workplace interruptions that can increase employee job satisfaction. **Choice D is incorrect** because asking businesses to discourage workplace interruptions doesn't follow from the team's research about the benefits of workplace interruptions, nor does the text describe an ideal work environment. Instead, the text presents research suggesting that there may be positive aspects to workplace interruptions that haven't previously been considered.

24 Correct answer **A** Medium Back to question

A the presence of some kinds of underwater plants like watermilfoil helps prevent methane from escaping shallow lakes and ponds.

Choice A is the best answer. The passage tells us that "tanks with duckweed (a floating plant) and algae released higher levels of methane than tanks with watermilfoil (an underwater plant) did." This suggests that the presence of some kinds of underwater plants like watermilfoil may help prevent methane from escaping shallow lakes and ponds.

Choice B is incorrect. The passage doesn't mention deeper bodies of water at all, so there's no basis for this inference. **Choice C is incorrect**. The passage doesn't compare the likelihood of shallow lakes and ponds containing algae, watermilfoil, or duckweed. **Choice D is incorrect**. The study didn't include any tanks with a mix of plants, so there's no basis for this inference.

25 Correct answer **B** Medium Back to question

B risk misrepresenting the full range of Zelda's contributions to literature.

Choice B is the best answer because it most logically completes the text's discussion of Zelda Fitzgerald's contributions to literature. The text begins by saying that many scholars view Zelda mainly in terms of her marriage to F. Scott Fitzgerald and "don't recognize Zelda as a writer in her own right." The text then mentions a novel and "numerous short stories" that she wrote and that such scholars tend to ignore. Therefore, those scholars who focus on Zelda only as an inspiration for F. Scott's writings risk misrepresenting the full range of Zelda's contributions to literature.

Choice A is incorrect. Although the text does mention that Zelda Fitzgerald "likely influenced" her husband's literary work, its focus is on Zelda's own writing, not on her husband's writing or factors that might have influenced it. **Choice C is incorrect** because the text does not discuss F. Scott and Zelda Fitzgerald's opinions of each other's works. **Choice D is incorrect**. Although the text does suggest that F. Scott Fitzgerald's works were "likely influenced in part" by his marriage to Zelda, it does not discuss autobiographical interpretations of the works of either F. Scott or Zelda.

26 Correct answer **A** Medium Back to question

A prove financially successful for some musicians but disappointing for others.

Choice A is the best answer. In one example, musicians made less money than expected by using the "pay as you wish" model. In the other example, a musician made more money than expected. This suggests that some musicians may have more success than others using the "pay as you wish" model.

Choice B is incorrect. This inference isn't supported. In the examples provided, the individual musician was more successful with the "pay as you wish" model than the band was. **Choice C is incorrect**. This inference isn't supported. The passage provides no instances in which musicians changed the suggested prices of their songs or albums, nor does it mention this as a possibility. **Choice D is incorrect**. This inference isn't supported. The text never discusses the differences in popularity of different musicians, so there is no basis to make this inference.

27 Correct answer **C** Medium Back to question

C *F. hypoleuca* nestlings' preference for their own dialect likely drives them when they mature to reproduce with other *F. hypoleuca* from local rather than nonlocal populations.

Choice C is the best answer. Because "song preference plays a role in songbird mate selection," and because *F. hypoleuca* nestlings display a preference for local dialects, we can infer that they will be more likely to choose mates from local populations.

Choice A is incorrect. We don't have any information suggesting that this preference disappears, so there's no basis for this inference. **Choice B is incorrect**. Although the passage discusses the number of begging calls made in response to various *F. hypoleuca* dialects, no mention is made about the amount of food received based on dialect preference. Therefore, there's no basis for this inference. **Choice D is incorrect**. There's no mention in the passage of methods of other types of local songbirds, so there's no basis for this inference.

28 Correct answer **C**

Medium

‹ Back to question

C increase an individual's capacity to form associative memories.

Choice C is the best answer because it most logically completes the text's discussion of the mechanisms underlying associative memory. The text explains that fan cells—a type of brain cell—are necessary for the acquisition of new associative memories, and that activity among these cells requires a chemical known as dopamine, which the brain produces in response to rewards. Since the brain cells that enable the formation of associative memories require dopamine in order to function, and since the brain produces dopamine in response to rewards, it can be inferred that receiving a reward should likely help to increase an individual's capacity to form associative memories.

Choice A is incorrect because the relationship between rewards and dopamine sketched by the text is that rewards result in the production of dopamine, not that they cause an individual's capacity to utilize dopamine to decrease. **Choice B is incorrect**. The text suggests that receiving a reward would produce dopamine and thereby assist with associative memory formation. However, the text never suggests that associative memory involves the capacity to recognize differences between unrelated things, indicating only that associative memory involves remembering what connects those things. **Choice D is incorrect** because the text never discusses how fan cells are initially created and therefore provides no evidence for a conclusion about how receiving a reward would affect their creation.

29 Correct answer **D**

Medium

‹ Back to question

D both exhibit Picasso's prioritization of creative expression over the standard rules of the art forms.

Choice D is the best answer because it most logically completes the text's discussion of the link between Picasso's cubist paintings and his poetry. The text states that Picasso subverted, or intentionally went against, the norms of traditional painting; rather than following conventional rules about how paintings should look, he fragmented objects and figures to present multiple perspectives at the same time. The text explains that similarly, Picasso wrote poetry that defied conventions of grammar, semantics, and structure. Because Picasso subverted the conventions of both painting and written language in favor of unconstrained expression, it is reasonable to conclude that his paintings and poems are linked by their demonstration of his prioritization of creative expression over the standard rules of the art forms.

Choice A is incorrect because the text doesn't give any information about the subjects or themes of either Picasso's paintings or his poems; it indicates only that Picasso didn't adhere to the norms of either art form. **Choice B is incorrect**. Although the text explains that the forms of Picasso's paintings and his poems demonstrate his inclination to not be constrained by convention, it doesn't discuss any of the ideas expressed in his poems; there's no indication that Picasso intended his poems to be understood as explanations of anything reflected in his paintings. **Choice C is incorrect**. The text mentions the simultaneous representation of multiple points of view as a characteristic of Picasso's cubist paintings but doesn't indicate that his poems had the same characteristic; the text doesn't address perspective in Picasso's poems at all.

30 Correct answer **A**

Medium

‹ Back to question

A makes civilian government jobs especially appealing to military veterans.

Choice A is the best answer because it presents the conclusion that most logically follows from the text's discussion of military veterans working in civilian government jobs in the United States. The text indicates that the proportion of military veterans working in civilian government jobs is considerably higher than the proportion of military veterans in the population as a whole. The text also notes that the unusually high representation of military veterans in these jobs may be a result of the organizational structures shared by civilian government entities and the military. Hence, it's reasonable to infer that it's the familiarity of the structures of civilian government that makes jobs there particularly attractive to military veterans.

Choice B is incorrect because the text doesn't address what a typical relationship between military service and later career preferences would be, and there's no indication that it's atypical for veterans to work in civilian government jobs after they've left the military. On the contrary, the text suggests that many military veterans are drawn to such jobs. **Choice C is incorrect** because the text is focused on the high representation of military veterans in civilian government jobs and doesn't address nonveterans or their possible interest in military service. **Choice D is incorrect** because the text conveys that military veterans may be particularly interested in civilian government jobs due to the familiarity of organizational structures that are already in place, but there's no reason to think that this interest would mean that more civilian government jobs will start to require military experience.

31 Correct answer **B** Medium Back to question

B the source of some of the raw materials used to make bronze was exploited only until the end of the Shang dynasty.

Choice B is the best answer. The passage tells us that Shang dynasty bronze artifacts contained "a rare form of lead," but that bronze artifacts after this time did not contain that lead. Although we don't know where that specific type of bronze came from, we can conclude that that source was not used after the end of the Shang dynasty—otherwise, post-Shang dynasty pieces would also contain that rare form of lead.

Choice A is incorrect. Despite these pieces containing "a rare form of lead," there is no direct claim in the passage that Shang dynasty bronze is itself more rare or valuable than bronze pieces from other periods. Therefore, there's no basis for this inference. **Choice C is incorrect**. Although the passage mentions that the nature of the bronze in Chinese artifacts changed after the Shang dynasty, bronze was still used to create artifacts after this time. The passage in fact explicitly states "bronze artifacts from China dated after the Shang dynasty...," indicating that bronze was still used in China after the Shang dynasty. **Choice D is incorrect**. There's no mention in the passage of methods used to analyze bronze artifacts, so there's no basis for this inference.

32 Correct answer **B** Medium Back to question

B the evolution of larger body sizes in sauropods did not depend on increased atmospheric carbon dioxide.

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of the relationship between atmospheric carbon dioxide and sauropod body size. The text establishes that sauropods evolved to reach enormous sizes, and it notes that some scientists have asserted that the cause of this phenomenon was increased plant production that resulted from increased atmospheric carbon dioxide. The text goes on to state, however, that atmospheric carbon dioxide levels didn't increase around the time of important periods in sauropods' evolution of larger body sizes. If significant periods of sauropod evolution toward larger sizes occurred without increased atmospheric carbon dioxide levels, that suggests that the evolution of larger sizes didn't depend on increased carbon dioxide in the atmosphere.

Choice A is incorrect because the text doesn't describe any fluctuations in atmospheric carbon dioxide, so there's no evidence in the text to support the conclusion that such fluctuations had different effects on different sauropod lineages. All that the text says about atmospheric carbon dioxide levels is that there weren't increases at particular points that correspond with key moments in sauropod evolution. **Choice C is incorrect** because the text indicates that there weren't significant increases in atmospheric carbon dioxide around the time of important periods in sauropods' evolution toward larger body sizes, not that atmospheric carbon dioxide was higher when the largest sauropods lived than when sauropods first appeared. **Choice D is incorrect** because the text indicates that atmospheric carbon dioxide levels didn't increase at important periods in sauropod evolution, not that higher levels would have affected that evolution. The text provides no information about how higher levels of atmospheric carbon dioxide might have affected sauropods.

33 Correct answer **D**

Medium

Back to question

D flew for shorter distances and spent more time walking than researchers previously thought.

Choice D is the best answer because it most logically completes the text's discussion of the Cretaceous pterosaur *Tupandactylus navigans*. The text first describes what paleontologists initially speculated to be true of *T. navigans* based on observing only fossilized skulls of the pterosaur rather than complete skeletons—namely, that *T. navigans* had an oversized head crest and that, like other pterosaurs, its main mode of movement must have been flight. The text goes on to describe what researcher Victor Beccari and his team concluded based on studying a nearly complete fossilized skeleton of *T. navigans*, which provided additional information that fossilized skulls alone could not. Beccari and colleagues determined that *T. navigans* had long hind legs, short wings, and an unusually long neck, in addition to the oversized head crest previously observed by paleontologists. Taken together, these characteristics would have made sustained flight difficult and upright walking comfortable, which would make *T. navigans* different from other pterosaurs that moved mainly through flight. Thus, Beccari and colleagues suggest that previously held speculations of paleontologists are inaccurate: that instead of moving mainly through powered flight, *T. navigans* likely flew for shorter distances and spent more time walking than researchers previously thought.

Choice A is incorrect because Beccari and his team determined, based on their examination of a nearly complete skeleton, that *T. navigans* would have found "sustained flight difficult," which would differentiate it from most other pterosaurs that moved mainly through flight. Therefore, Beccari's team would not suggest that *T. navigans* flew for longer distances than did other pterosaur species with large head crests. **Choice B is incorrect** because the fossilized skeleton studied by Beccari and colleagues was notable for its short wings, and because no indication in the text is made that other pterosaurs were thought by paleontologists to be comfortable walking. Therefore, Beccari's team would not suggest that *T. navigans* had longer wings than other pterosaur species considered to have been comfortable walking. **Choice C is incorrect** because the text indicates that Beccari and his team agree with the paleontologists mentioned earlier in the text that *T. navigans* had a large-crested head. Therefore, Beccari's team would not suggest that *T. navigans* had a smaller head than researchers previously expected.

34 Correct answer **C**

Medium

Back to question

C geographical isolation can influence how a language develops.

Choice C is the best answer because it is the choice that most logically completes the text. The text mentions a dialect of Spanish spoken in New Mexico, which was colonized by Spain in the 1600s. The text then states that the New Mexican dialect differs greatly from other Spanish dialects in that it still has characteristics of an older Spanish that other dialects eventually lost. After asking why this might be, the text points out that the New Mexico colony was distant from Spain's other colonies, making it less attractive to colonists after the initial colonization. This geographic isolation limited the colony's exposure to other Spanish colonists who would have otherwise introduced the changes to the Spanish language that occurred in their respective colonies. It can therefore be inferred that this isolation is a reason why the New Mexican dialect still has characteristics of an older Spanish, while the Spanish dialects spoken in less isolated areas that have more interaction with speakers of other dialects would lose those characteristics over time. Thus, the most logical completion of the text is that geographical isolation can influence how a language develops.

Choice A is incorrect because the text discusses different dialects of Spanish, not different languages altogether. **Choice B is incorrect** because the text focuses on how the New Mexican dialect has stayed the same over time in some ways, not on how it has changed from one generation to the next. **Choice D is incorrect** because though the text discusses how the New Mexican dialect of Spanish is different from others, it does not discuss how speakers of different dialects are able to understand each other.

35 Correct answer D

Medium

Back to question

D the fitness study can be done well without years of data collection.

Choice D is the best answer because it most logically completes the text's discussion of the costs of studies. The text indicates that HILDA is a longitudinal study—it involves repeated observations over a long time—and that the "need for years of data collection" is what causes it and most other longitudinal studies to have high costs. The text then contrasts such studies with more straightforward studies, using the example of a fitness study that wants only to find out how many regular exercisers in a particular location do weight training, that may not demand a large budget. The contrast emphasized in the text most directly suggests that the fitness study may cost less than a study like HILDA because the fitness study aims only to determine a current percentage and thus can be completed well without extending data collection over years.

Choice A is incorrect because the text explicitly introduces the idea of a less expensive, straightforward fitness study as a contrast to many longitudinal studies that, like HILDA, have high costs because they require data collection over many years. The fitness study is described as trying merely to gather information about a current behavior (how many regular exercisers do weight training) rather than track trends over time, which suggests that costs could remain low because expensive longitudinal methods would not be needed, not because they would be suitable. **Choice B is incorrect** because the idea that HILDA researchers could easily add questions to their study might be relevant to the costs of that survey but would be completely irrelevant as an explanation for why an unrelated fitness study may not need a large budget; the studies have no direct bearing on each other. **Choice C is incorrect** because the idea that HILDA involves more people than necessary would be relevant to the costs of that survey but would be completely irrelevant as an explanation for why an unrelated fitness study may not need a large budget; the studies have no direct bearing on each other.

36 Correct answer B

Medium

Back to question

B the Vinland Map could not have been drawn by mid-1400s mapmakers.

Choice B is the best answer because it most logically completes the text's discussion of Lemay, Zyats, and Bezur's 2021 analysis of the Vinland Map. The text indicates that while some scholars have believed that the map was drawn in the mid-1400s, the 2021 analysis showed the presence of the compound titanium dioxide in the ink used to draw the map. The text goes on to say that titanium dioxide wasn't used to manufacture ink until the early 1900s, which means that ink containing this compound couldn't have been available to mapmakers in the 1400s. Since mapmakers in the mid-1400s couldn't have used ink with titanium dioxide, it follows that the Vinland Map couldn't have been drawn by mid-1400s mapmakers.

Choice A is incorrect because the 2021 finding that the ink used to draw the Vinland Map wasn't available until the early 1900s doesn't imply that Europeans in the mid-1400s couldn't have known about the eastern coast of North America. While this finding suggests that the map couldn't have been created in the mid-1400s, it doesn't preclude the possibility that Europeans nevertheless had knowledge—and perhaps even drew other maps that are no longer in existence or are yet to be discovered by researchers—of the eastern coast of present-day North America as early as the mid-1400s. **Choice C is incorrect** because there's nothing in the text that suggests that the 2021 discovery of the presence of titanium dioxide in the ink used to draw the Vinland Map caused Lemay, Zyats, and Bezur to question or reach a new conclusion about when mapmakers began using ink containing titanium compounds. Instead, the text indicates that titanium dioxide wasn't used in ink before the early 1900s. This knowledge led the team to conclude that the map, which was drawn with ink containing titanium dioxide, couldn't have been created in the mid-1400s. **Choice D is incorrect** because although the text doesn't indicate that Lemay, Zyats, and Bezur established an exact date for the creation of the ink that was used to draw the Vinland Map, the text does say that titanium dioxide was introduced in ink manufacturing in the early 1900s. This fact provides enough information to determine that the ink that was used to draw the map was created no earlier than the early 1900s. This finding, in turn, led the team to conclude that the Vinland Map couldn't have been drawn in the mid-1400s.

37 Correct answer **D**

Medium

‹ Back to question

D the timing of downbeats and offbeats may play a crucial role in giving a song swing.

Choice D is the best answer. The passage tells us that participants were "more than seven times likelier to characterize the modified songs as having swing than to characterize the original versions as having swing." Because the modified songs had been changed by altering the timing of the downbeats and offbeats, this suggests that the timing of downbeats and offbeats may play a crucial role in giving a song swing.

Choice A is incorrect. Although the passage mentions that the researchers "synchronized the offbeats" in the modified songs, they also "delayed the downbeats" in those songs. Because we can't disentangle whether it was the synchronized offbeats, the delayed downbeats, or the combination of both that increased the song's swing, we don't have enough information to make this inference. **Choice B is incorrect**. The passage doesn't mention whether or not it's difficult for a jazz musician to give a song swing, so there's no basis for this inference. **Choice C is incorrect**. The passage doesn't compare jazz songs that feature piano to those that don't, so there's no basis for this inference.

38 Correct answer **B**

Medium

‹ Back to question

B knowing an ancient civilization's language isn't necessary in order to learn details about the civilization.

Choice B is the best answer because it most logically completes the text's discussion of the Indus River valley civilization. The text establishes that archaeologists haven't been able to interpret the Indus River valley civilization's writing system but have nevertheless acquired information about the civilization through historical artifacts. The fact that archaeologists have been able to learn about the Indus River valley civilization's customs and community organization from historical artifacts suggests that it isn't necessary to understand an ancient civilization's language to learn about the civilization.

Choice A is incorrect because the text doesn't discuss how easy it is to investigate ancient civilizations with or without knowledge of the civilization's language; rather, it states that even though researchers have not yet deciphered the language of the Indus River valley civilization, they are still able to learn about it through historical artifacts. **Choice C is incorrect** because the text doesn't make any claims as to what the focus of archaeological research should be. Rather, the text discusses how archaeologists have been able to learn about an ancient civilization through historical artifacts despite not understanding the civilization's language. **Choice D is incorrect** because the text states that the civilization's language has not yet been interpreted; it makes no mention of a debate about the language. Instead, the text suggests that examination of the historical artifacts has allowed archaeologists to learn about the civilization but has not aided thus far in deciphering its language.

39 Correct answer **B**

Medium

‹ Back to question

B has been preserved in certain mammal species because it benefits their immune systems.

Choice B is the best answer because it most logically completes the text's discussion of Smith and colleagues' investigation of the evolution and biological role of the appendix. The text indicates that the team found several instances of the appendix emerging and not disappearing in the lineages of various mammal species the team examined. Furthermore, the text states that species that possess an appendix also tend to have relatively high amounts of lymphoid tissue—a type of tissue that supports immune system function. Taken together, these details strongly support the hypothesis that the appendix has persisted in some species because it has a function that contributes to effective immune responses in those species.

Choice A is incorrect because the text doesn't address any nonmammalian species. **Choice C is incorrect** because the text doesn't make predictions about the evolutionary future of the species Smith and colleagues examined, and although the implication of the text is that the appendix likely does serve a function for the immune system, nothing in the text indicates that the appendix will become more widespread in the future. **Choice D is incorrect**. Although the text does suggest an association

between having an appendix and relatively high concentrations of lymphoid tissue, it doesn't claim that the appendix causes the tissue to grow, nor does it address the relative production of the tissue at different periods of time.

40 Correct answer **B** Medium Back to question

B lessening their identification with the protagonist, if not alienating them from the character altogether.

Choice B is the best answer. We're told that point-of-view shots and "invisible editing" make audiences identify with a character. We're also told that obvious editing and a lack of point-of-view shots have the opposite effect. Since the sequence in *The Birds* falls into this second category, it should have the effect of reducing the audience's connection with the protagonist.

Choice A is incorrect. The passage doesn't mention viewers' awareness of artifice (i.e., camera trickery) in films, so there's no basis for this inference. **Choice C is incorrect**. The passage doesn't mention the director at all, so there's no basis for this inference. **Choice D is incorrect**. The passage doesn't discuss whether a film's "stylistic attributes" may distract viewers from the film's story, so there's no basis for this inference.

41 Correct answer **A** Medium Back to question

A the practice used by ancestors of modern Kwakwaka'wakw people not only effectively maintained a food source but also promoted its robustness.

Choice A is the best answer because it most logically completes the text's discussion of the use of songs by the Kwakwaka'wakw people to record and communicate ecological knowledge. The text indicates that some songs of the Kwakwaka'wakw people of Canada's Pacific Northwest region document how the people used terraced gardens in intertidal zones to cultivate clams for food. The text also explains that archaeological evidence shows increases in "clam size and abundance" that occurred along with the implementation of this cultivation method, suggesting the method's efficacy in not just supporting clam yields but also improving them. It follows, then, that the use of intertidal terraced gardens, as described in the songs, allowed the ancestors of modern Kwakwaka'wakw people to maintain clams as a food source and to cultivate larger and more numerous clams.

Choice B is incorrect because the text doesn't mention anything about cultivation practices among non-Indigenous people in the Pacific Northwest coastal region. Though the text conveys that archaeological evidence suggests that the clam cultivation practice mentioned in Kwakwaka'wakw people's songs was efficacious when implemented, it gives no indication that people other than the Kwakwaka'wakw adopted that practice. **Choice C is incorrect** because the text provides no information about the archaeological record as it pertains to Sakha and Kaluli songs and doesn't suggest that there is less corroboration of practices described in those songs than there is of the clam cultivation practice described in Kwakwaka'wakw songs. The Sakha and Kaluli songs are mentioned early in the text only as examples of Indigenous songs that contain ecological knowledge. **Choice D is incorrect** because archaeological evidence that clam size and abundance both increased when Kwakwaka'wakw ancestors implemented intertidal terraced gardens provides information only about the past use of that method and doesn't suggest anything about present practices. The text indicates that knowledge of a past clam cultivation method is maintained in Kwakwaka'wakw songs but doesn't indicate whether modern Kwakwaka'wakw people use that or other fishing and farming practices used by their ancestors.

42 Correct answer **D** Medium Back to question

D there is no way to reasonably evaluate how a work would be different if it had been written by other means.

Choice D is the best answer because it presents the conclusion that most logically follows from the text's discussion of the means authors use to write and revise their novels. After stating that many authors still choose to draft novels by hand even

though computers are now widely used, the text acknowledges the speculation that the opposite choice—using only a computer—would have had an effect on such novels. However, the text then points out that every novel is the singular result of a combination of the particular conditions surrounding its creation. This suggests that it isn't possible to determine the effect of any single condition (such as the means of writing) on its own; thus, there would be no way to reasonably evaluate how a novel would have turned out differently if it had been written by other means.

Choice A is incorrect because the text doesn't suggest that it's more efficient to write a novel on a computer than to write it by hand; it doesn't address efficiency at all. Therefore, it isn't logical to conclude that authors who currently choose to write novels largely by hand should instead work only on a computer to increase their efficiency. **Choice B is incorrect** because the text doesn't suggest anything about how successful authors are, regardless of the means by which they choose to write; therefore, it isn't logical to conclude that authors who write largely by hand are likely to be more successful than those who work only on a computer. **Choice C is incorrect** because the text makes no mention of the time it takes to produce a novel, regardless of the means by which it's written; therefore, it isn't logical to conclude that novels written by hand take less time on average to produce than those written on a computer do.

43 Correct answer **D** Medium Back to question

D the declaration actually had several intended audiences.

Choice D is the best answer because it presents the conclusion that most logically follows from the text's discussion of the Haitian Declaration of Independence. According to the text, the declaration was written in French (a language important to European diplomacy but not to most Haitians) and brought an end to the revolution against colonial France. The text goes on to note that the declaration contained several assurances that Haiti would "respect the sovereignty of its neighbors" and characterizes this as a form of reassurance to the United States. The text also points out that the declaration describes Haiti as an example for future struggles against colonizers, including those still in the Americas at the time. These examples illustrate that the declaration had widespread implications and was likely intended for several audiences, including the United States and nearby colonies.

Choice A is incorrect because the Haitian Declaration of Independence is the only document discussed in the text. Although it's possible that the declaration was modeled on similar documents from other countries, there's no information in the text about other documents that would support this conclusion. **Choice B is incorrect**. Although there's an implicit reference to European governments when the text discusses how the declaration was written in French, "the language of international diplomacy," the text doesn't discuss the French government's response to the declaration; instead, the text focuses on the contents of the declaration and its possible audiences. **Choice C is incorrect** because the text focuses on the contents of the Haitian Declaration of Independence and its possible audiences. There is no information in the text to support a conclusion about how the Haitian people felt about the declaration or the revolution.

44 Correct answer **B** Medium Back to question

B rail systems may need to schedule additional trains for these routes.

Choice B is the best answer. Air travel usually requires much more "lead time" than train travel, so short flights end up taking the same amount of time as a train trip to the same destination. But train travel starts to need more "lead time" when the trains approach their capacity limits. This suggests that train companies should add more trains for these routes if they want to encourage travelers to take a train instead of a plane.

Choice A is incorrect. This inference isn't supported. The text never discusses "long-haul routes" for either air travel or rail travel, so there is no basis to make this inference. **Choice C is incorrect**. This inference isn't supported. The text only mentions these procedures to explain why the "lead time" is so long for air travel. It never suggests that trains need to start implementing these procedures too. **Choice D is incorrect**. This inference isn't supported. The goal is to make sure that trains "remain a viable alternative" to short flights, which suggests that anything that makes train travel take longer should be avoided.

45 Correct answer **D** Medium ‹ Back to question

D reducing invasive *E. esula* numbers without harming other organisms.

Choice D is the best answer because it presents the conclusion that most logically follows from the text's discussion of leafy spurge and engineered DNA. The text establishes that using chemical herbicides to control leafy spurge in North America can also harm other plants nearby. The text then indicates that it might be possible to use engineered DNA to prevent plants from reproducing, which would be useful for "exclusively targeting" leafy spurge. If it's possible to exclusively target leafy spurge with engineered DNA—meaning that only leafy spurge is affected by the engineered DNA—and prevent the plant from reproducing, then leafy spurge numbers could be reduced "without harming other organisms."

Choice A is incorrect because the text raises the possibility of using engineered DNA to prevent leafy spurge from reproducing, not to make individual leafy spurge plants more vulnerable to chemical herbicides that already exist. **Choice B is incorrect** because the text doesn't describe any ecological benefits of leafy spurge in North America; instead, the text is focused on using engineered DNA to prevent leafy spurge from reproducing and thereby reduce its numbers. The only ecological effects of leafy spurge in North America that are described in the text are harmful. **Choice C is incorrect** because the text describes the possibility of using engineered DNA to prevent leafy spurge from reproducing; it doesn't offer a way to enable cattle to eat leafy spurge without becoming sick.

46 Correct answer **C** Medium ‹ Back to question

C the mothers of the two individuals probably reproduced through parthenogenesis.

Choice C is the best answer because it most logically completes the text's discussion of parthenogenesis as it relates to two California condors at the San Diego Zoo. The text explains that parthenogenesis is a form of reproduction in which a female reproduces without mating, producing an egg containing an offspring with DNA that comes entirely from its mother. After noting examples of parthenogenesis among birds, the text then reports on a discovery at the San Diego Zoo. According to the text, scientists at the zoo found that two of the zoo's California condors weren't similar enough to any of the zoo's male condors to be their offspring. Given that parthenogenesis occurs without mating and results in an offspring with DNA entirely from its mother, it can reasonably be inferred that the scientists concluded that the mothers of the two condors probably didn't mate with any of the male condors at the zoo, reproducing through parthenogenesis instead.

Choice A is incorrect because the text never suggests that at least one of the condors' mothers was born as a result of parthenogenesis. Rather, the text suggests that the two condors were themselves both probably born as a result of parthenogenesis, which would account for their lack of strong genetic resemblance to any of the male condors in the zoo's condor enclosure. **Choice B is incorrect** because the text never discusses wild California condors, only California condors living at the San Diego Zoo. For this reason, the text doesn't support a conclusion that distinguishes between how California condors reproduce in zoos and how they reproduce in the wild. **Choice D is incorrect** because the text never suggests that the zoo's female condors lacked sufficient access to males or that this would be a cause of parthenogenesis, indicating only that the condor enclosure included males.

47 Correct answer **B** Medium ‹ Back to question

B was not so constrained by environmental circumstances.

Choice B is the best answer. The passage explains that heliographs "were largely effective only during the daytime" and that "the range of the device depended on factors such as the opacity of the air and line of sight." These constraints would have greatly limited the use of the heliograph, so we can infer that this would have been a reason to replace it with new technology.

Choice A is incorrect. The passage doesn't discuss the production and maintenance of heliographs, so there's no basis for this inference. **Choice C is incorrect**. The passage doesn't mention any "other purposes" that a heliograph wouldn't work for, so

there's no basis for this inference. **Choice D is incorrect**. The passage doesn't mention knowledge of Morse code as a particular problem with the use of heliographs, so there's no basis for this inference.

48 Correct answer **D** Medium Back to question

D evolved to have underground traps to access more prey than would surface traps.

Choice D is the best answer. The text says that *N.pudica*'s prey-catching pitchers are underground. It also says that the ridges where *N. pudica* lives don't have many plants and animals on the surface. This suggests that *N. pudica* evolved underground pitchers in order to catch more prey.

Choice A is incorrect. This inference isn't supported. The text never mentions the possibility of other undiscovered carnivorous plant species in Indonesia, so there's no basis to make this inference. **Choice B is incorrect**. This inference isn't supported. The text does say that the ridges where *N. pudica* lives are dry, but it also says that the purpose of carnivorous plant pitchers is to capture prey. It never suggests that these pitchers also absorb moisture, so there's no basis to make this inference. **Choice C is incorrect**. This inference isn't supported. The text never suggests that *N. pudica*'s underground pitcher can catch animals on the surface, so there's no basis to make this inference.

49 Correct answer **B** Medium Back to question

B the timing of the initial formation of the middle ring played an important role in determining the eventual size of Earth.

Choice B is the best answer because it most logically follows from the text's discussion of André Izidoro, Rajdeep Dasgupta, and colleagues' computer simulations of our solar system's development. The text begins by stating that the simulations led the researchers to conclude that the solar system likely formed from three giant dust rings that encircled the Sun. The text explains that the four inner planets, including Earth, formed from the innermost ring and that the remaining planets formed from the middle ring. It then explains that in one simulation, the researchers delayed the formation of the middle ring—that is, they tested to see what would happen if the middle ring had formed later than it actually did. They found that doing so affected the size of the innermost planets, resulting in oversized super-Earths, planets that are much larger than Earth. Since the delayed timing had the effect of changing the size of Earth in the simulation relative to Earth's real size, it's reasonable to conclude that the timing of the middle ring's formation was important in determining Earth's eventual size.

Choice A is incorrect. Although the text explains that when the researchers delayed the formation of the middle ring in one simulation, the size of the innermost planets was affected (which suggests that the middle ring likely formed earlier than it did in this simulation), the text doesn't indicate that this was an initial simulation—that is, a simulation that was conducted before other simulations. Moreover, the text makes no reference to the specific results of any other simulations; therefore, there is no basis for comparing any conclusions based on the simulation in which the middle ring's formation was delayed with conclusions based on other simulations. **Choice C is incorrect** because the text discusses how altering the timing of the formation of the middle ring, not the outermost ring, affected the four innermost planets' eventual size in the researchers' simulation; therefore, the simulation offers no basis for a conclusion about how the outermost ring's formation affected the size of the planets. **Choice D is incorrect** because there is nothing in the text to suggest that the innermost ring produced all the solar system's planets. Rather, the text states that the simulations showed that the innermost planets formed from the innermost ring and that the remaining planets formed from the middle ring.

50 Correct answer **A**

Medium

‹ Back to question

A it can't be concluded that the impact that made the crater was connected to the beginning of the Younger Dryas.

Choice A is the best answer because it most logically completes the text's discussion of a crater's connection to the start of the Younger Dryas. According to the text, some scientists believe that a comet fragment hitting Earth caused the cooling of the Younger Dryas period to come about. The text then indicates that a team of scientists found a crater in Greenland, which some believe supports the theory of a comet fragment hitting Earth to initiate the Younger Dryas. However, the text also notes that the team was unable to determine the age of the crater. If the age of the crater can't be determined, then its connection to the Younger Dryas period of time can't be confirmed either. Thus, it can't be concluded that the impact that made the crater was connected to the beginning of the Younger Dryas.

Choice B is incorrect because though the text suggests that the age of the comet crater found by a team of scientists is uncertain, it doesn't address whether a comet fragment can make a crater as large as 19 miles wide. The text doesn't consider the size of comet fragments and how they relate to the size of craters they might make. **Choice C is incorrect** because the debate in the text centers on the age of the crater found, not the cause of the crater. The text doesn't indicate uncertainty about what caused the discovered crater. **Choice D is incorrect** because the text suggests that the age of the crater found by the team of scientists is uncertain, not that the dates of the Younger Dryas are uncertain or incorrect. The text states that "the Younger Dryas was a period of extreme cooling from 11,700 to 12,900 years ago" but doesn't indicate any debate about the timing of the period.

51 Correct answer **B**

Medium

‹ Back to question

B help judges improve the arguments they put forward in their judicial opinions.

Choice B is the best answer because it most logically completes the text's discussion of Anita Allen's argument about judges citing philosophers in their judicial opinions. The text indicates that judges sometimes cite philosophers when writing their judicial opinions and that, according to Allen, judges tend to cite philosophers whose views are in agreement with those of the judges themselves. Allen claims, however, that the best judicial opinions consider potential objections and rebut them, which suggests that judges may be able to strengthen their opinions by including discussions of philosophers with views contrary to their own.

Choice A is incorrect because Allen's claim is that judges could improve their judicial opinions by citing philosophers who disagree with the views expressed in the opinions, which would necessarily require judges to consult philosophical works. **Choice C is incorrect** because there's no discussion in the text about making judicial opinions more easily understood by any particular group of readers. The focus of the text is on Allen's claim that judicial opinions could be strengthened by the inclusion of discussions of philosophers whose views disagree with those of the judges authoring the opinions. **Choice D is incorrect** because the text presents Allen's argument that discussing philosophers whose views judges disagree with could strengthen judicial opinions, not that doing so could bring those opinions into line with views that are popular among philosophers.

52 Correct answer **A**

Medium

‹ Back to question

A identify molecular components similar to EBF that target the activation of Or31 receptors.

Choice A is the best answer because it most logically completes the text's discussion of mosquito repellents. The text begins by explaining that many repellents work by using natural components to activate multiple odor receptors on mosquitoes' antennae, and that new repellents must be created whenever mosquitoes become resistant to older ones. The text then highlights a research team's discovery that EBF, a molecular component of a chrysanthemum-flower extract, can repel mosquitoes by activating a single odor receptor, Or31, that is shared by all species of mosquitoes known to carry diseases. The text suggests that compared to the repellents mentioned earlier, a repellent that acts on the Or31 receptor would be more

effective: by noting that all mosquito species known to carry diseases share the Or31 receptor, the text suggests that the Or31 receptor may be unique in this respect, meaning that a repellent such as EBF that acts on it would be more effective since it works on a single receptor shared by all mosquito species that carry diseases, rather than a combination of receptors that is not shared by all species. Once mosquitoes become resistant to EBF, it would therefore make sense for researchers to look for other molecular components similar to EBF that target the activation of Or31 receptors, since a single such component could also repel all disease-carrying mosquitoes.

Choice B is incorrect because nothing in the text suggests that EBF molecules are difficult to extract from chrysanthemums and that investigating alternative extraction methods would therefore be useful for developing efficient and effective mosquito repellents. Rather, the text suggests that researchers developing new mosquito repellents should aim to identify molecular components similar to EBF, since that component targets the Or31 odor receptor shared by all species of mosquitoes known to carry diseases. **Choice C is incorrect** because nothing in the text suggests that researchers are unaware of the precise location of Or31 and other odor receptors in mosquitoes' antennae or that knowing this information would be useful for developing efficient and effective mosquito repellents. Rather, the text suggests that researchers developing new mosquito repellents should aim to identify molecular components similar to EBF, which targets the Or31 odor receptor. **Choice D is incorrect** because it doesn't logically follow that the discovery of one odor receptor shared by all disease-bearing mosquitoes should lead to further research into which repellents might activate the greatest number of odor receptors. Rather, the text suggests that researchers developing new mosquito repellents should instead search for additional molecular components that, like EBF, activate the one odor receptor that is known to be shared by all disease-bearing mosquitoes.

53 Correct answer **A** Medium Back to question

A covered by a protective sediment layer in the quarry.

Choice A is the best answer because it most logically completes the text's discussion of the discovered ship. The text states that much of the ship's wooden hull was found in a quarry. The text also states that wood rots quickly unless it is protected by sediment, which shields the wood from exposure to oxygen. It is therefore reasonable to infer that the surviving portion of the ship's hull was covered by an oxygen-shielding layer of sediment.

Choice B is incorrect because nothing in the text suggests other ships have been or are likely to be found in the same quarry. The fact that much of this ship's wood survived for centuries in the quarry does raise the possibility that there might be other preserved ships, but the text provides no support for such a conclusion. **Choice C is incorrect** because the text does not address the type of wood used in sixteenth-century ships or any theories pertaining to wood choice in ships. **Choice D is incorrect** because the text states only that the ship is from the sixteenth century, with no other dates offered for its construction, and thus there is no basis to consider alternative ages for the ship. Additionally, even if the ship was constructed earlier, it is not logically connected to the text's discussion of how it was preserved.

54 Correct answer **B** Medium Back to question

B the Natufian beadmakers used plant-based pigments rather than ocher to decorate some of the beads examined in the study.

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of the chemical content of pigments. The text begins by differentiating between two kinds of pigments: mineral-based pigments such as red ocher, which get their color from iron oxide, and plant-based pigments, which have a high level of carbon. The text then goes on to describe an analysis by archaeologists of the pigment of decorated beads made by members of the Natufian culture around 15,000 years ago. The archaeologists found that the red pigment on some of the beads contained no iron but had a high level of carbon. Since red ocher gets its color from iron oxide, while plant-based pigments have a high level of carbon, the researchers concluded that the Natufian beadmakers used plant-based pigments to decorate some of the beads examined in the study.

Choice A is incorrect because the text does not indicate that the Natufians were the first to use plant-based pigments, so it cannot be concluded that the beads in the study were the oldest surviving examples of the use of plant-based pigments for decorating beads. **Choice C is incorrect** because the text does not compare the brightness of plant-based and mineral-based pigments. **Choice D is incorrect**. While it can be concluded that the Natufian beadmakers used plant-based pigments because the pigment found on several beads had a high level of carbon, the text offers no evidence that ocher was difficult to find.

55 Correct answer **C** Medium ‹ Back to question

C very unusual for the period.

Choice C is the best answer. The text tells us that "actors tended to highly exaggerate their actions and expressions" in films produced from 1896 to 1920. This suggests that the natural style of acting in Guy-Blaché's films was very unusual for the time.

Choice A is incorrect. The text never discusses any other directors copying the style of acting found in Guy-Blaché's films, and in fact suggests the opposite—that it was unusual for directors to suggest this style of acting at the time. **Choice B is incorrect**. The text never discusses actors' familiarity with the style of acting found in Guy-Blaché's films, so there isn't much basis for this inference. But since the text tells us that other films of the period used a highly exaggerated form of acting, we might predict that the natural style in Guy-Blachés films would have been unfamiliar to these actors. **Choice D is incorrect**. The text never discusses film acting today, so there's no basis for this inference.

56 Correct answer **B** Medium ‹ Back to question

B zines are still a meaningful form of expression.

Choice B is the best answer because it most logically follows from the text's point about zines today. The text describes zines as a form of expression that goes back to the 1920s and asserts that "this old form persists." The text then indicates that multiple zines exist in the US today and that they are popular enough to support annual festivals, a point that suggests that people continue to view zines as a meaningful form of expression.

Choice A is incorrect because the text's point about current interest in zines in the US doesn't logically suggest that zine creators can reach a larger audience by posting online. The text indicates that zines have long had an audience, and there's no indication that online posts have caused that audience to grow; there's no mention of zine creators' use of the internet at all. **Choice C is incorrect** because the idea that zine creators can explore new art forms—while objectively true—isn't logically connected to the text's discussion of zines as an existing form of expression (one that often includes art) or the point that zines are still popular enough in the US to support annual festivals. **Choice D is incorrect** because the point that zines are popular enough in the US today to support annual festivals doesn't logically suggest that zines present mainstream culture (or are themselves mainstream); moreover, the text states that zine creators often "challenge mainstream culture."

57 Correct answer **A** Medium ‹ Back to question

A the current makeup of the Arabia Terra region might not accurately reflect the volcanic activity of Mars's past.

Choice A is the best answer because it presents the conclusion that most logically follows from the text's discussion of the Arabia Terra region of Mars. According to the text, there are craters in Arabia Terra that could be the result of volcanic activity, and researchers have found evidence of ash deposits consistent with a large eruption. The text goes on to note, however, that erosion and other events could have altered the surface of Mars. This observation suggests that current conditions on Mars's surface are not necessarily a reliable guide to past events—some signs of past events could have been transformed or erased entirely—and thus the current makeup of Arabia Terra may not accurately reflect past volcanic activity.

Choice B is incorrect because the text suggests only that past events could have changed Mars's surface such that its current appearance isn't a reliable guide to past activity, not that it's likely that past eruptions were not as massive as astronomers

previously believed. Nothing in the text supports a conclusion about the likely size of past eruptions. **Choice C is incorrect** because the observation that resurfacing events could have changed the appearance of Mars doesn't imply that the ash discussed in the text likely came from multiple volcanoes. Although it's possible that the ash came from different volcanoes, there's no information in the text supporting a conclusion about how likely that possibility is. **Choice D is incorrect** because nothing in the text suggests that the Arabia Terra craters had to have been created by something other than volcanic eruptions. Although the text does suggest that the evidence consistent with volcanic eruptions shouldn't be taken as definitive proof of past eruptions, that doesn't mean that the craters couldn't have been created by eruptions, only that we can't be certain they were.

58 Correct answer **D** Medium Back to question

D were able to store extra crops for later use.

Choice D is the best answer because it presents the conclusion that most logically completes the text's discussion of Sumerian civilization and crop growth. The text mentions the hot, sunny weather in the area where the Sumerians lived, which made crops grow quickly but also made it difficult to keep them alive. The Sumerians solved this problem by using river water for their farming—as a result, they often harvested more crops than were needed in a season. It follows that the Sumerians must have needed to find something to do with the surplus crops—that is, they stored the extra crops for later use.

Choice A is incorrect because it doesn't logically follow that a surplus in crops would lead the Sumerians to choose only certain days of the season to harvest. Nor is there any indication in the text that the Sumerians improved their farming methods with the goal of reducing the time spent farming. **Choice B is incorrect** because the text doesn't suggest that the Sumerians tried to shield their crops from the sun: in fact, the text indicates that the sunny weather helped crops grow very quickly and that the Sumerians used river water to allow crops to be exposed to the sun without dying. **Choice C is incorrect**. Having a surplus of crops wouldn't have caused the Sumerians to begin farming until long after 4000 BCE: in fact, since the text indicates that the Sumerian civilization formed around 4000 BCE and farming was a part of that civilization, the statement that Sumerians only began farming long after 4000 BCE isn't supported by the text.

59 Correct answer **B** Medium Back to question

B we cannot say at present who actually baked the first red velvet cake.

Choice B is the best answer because it presents the conclusion that most logically completes the text's discussion of competing claims about the origins of red velvet cake. The text states that the origins of the recipe for red velvet cake "are unclear." The text then presents four different entities that claim to have created the first red velvet cake recipe: a Dallas bakery (1860s), the Adams Extract Co. (1930s), a US hotel (1930s), and a Canadian department store (1930s). Lastly, the text states that "no clear evidence has emerged to favor one of these claims over the others." Given this information, it most logically follows that it's not possible to determine who baked the first red velvet cake, as there is insufficient evidence to determine which claim, if any, is correct.

Choice A is incorrect because the text doesn't provide information indicating that red velvet cake existed before the 1860s. According to the text, the earliest claim for creating red velvet cake comes from a bakery in Dallas, Texas, that asserted it developed the first recipe for the cake at the time of the bakery's opening in the 1860s. There's no textual support for the conclusion that the cake existed before this earliest claimed date, since the text presents only competing claims starting from the 1860s and extending to the 1930s without evidence of earlier origins. **Choice C is incorrect** because the text doesn't support the conclusion that none of the supposed inventors of red velvet cake likely invented the cake. The text states that multiple entities claim to have invented the recipe and that "no clear evidence has emerged to favor one of these claims over the others." This lack of decisive evidence doesn't logically lead to the conclusion that all the claims are false; it merely indicates that the cake's true origins can't be determined with the available evidence. The text leaves open the possibility that one of the claimants could indeed be the actual inventor. **Choice D is incorrect** because the text provides no basis for concluding that the Dallas bakery is "probably" the inventor of red velvet cake. While the text mentions that this bakery claims

to have created the recipe in the 1860s (making it the earliest claim), the text explicitly states that there's no definitive evidence supporting any of the claims about the cake's origins over the others. The text presents all claims as equally lacking in definitive supporting evidence.

60 Correct answer **C** Medium Back to question

C more narwhals would have a tusk.

Choice C is the best answer because it most logically completes the text's discussion of Kristin Laidre's reasoning about the purpose of the tusk that many, but not all, narwhals have. The text explains that one group of scientists thinks the tusk may help narwhals detect the threat of freezing water and that Laidre disagrees with that idea, given the importance of avoiding a dangerous situation. It's logical to suggest that if the tusk serves such an important purpose for narwhals, the trait would be more common among them—specifically, that more narwhals would have a tusk.

Choice A is incorrect because there's no reason to think Laidre would say that if the tusk has the important function of helping narwhals detect when the water around them is about to freeze (meaning that it isn't always freezing), some narwhals would choose a different habitat altogether. Indeed, if it's true that the tusk helps narwhals avoid areas with dangerous conditions when they occur in their Arctic Ocean habitat, the tusk would likely enable the narwhals to continue living in that habitat rather than drive them elsewhere entirely. **Choice B is incorrect** because the text focuses only on narwhals and makes no mention of other marine animals or how having a tusk might affect them. And if anything, it would be more logical to expect a very important trait to be more widespread, not less common, among other similar types of animals. **Choice D is incorrect**. Although the text describes narwhals as shy, it doesn't indicate that the scientists' conclusion has anything to do with shyness. And because shyness and detection of the threat of freezing water aren't logically connected, there's no reason to think that Laidre would expect narwhals to become less shy over time if the tusk serves that important purpose.

61 Correct answer **A** Medium Back to question

A the English dialects spoken in the Upland South acquired their emphasis on the "r" sound from dialects spoken in Scotland.

Choice A is the best answer because it most logically completes the text's discussion of English dialects spoken in Scotland and the Upland South. The text indicates that these dialects share a feature: putting emphasis on the "r" sound when it appears in certain positions in words. The text goes on to state that records indicate the Upland South was colonized largely by people of Scottish ancestry. It is reasonable to assume that the English dialects spoken by these colonizers were influenced by the English dialects spoken by their ancestors in Scotland. It follows, then, that the emphasis on the "r" sound in the dialects in Scotland carried over into the Upland South dialects as they developed—that is, that the Upland South dialects likely acquired it from dialects spoken in Scotland.

Choice B is incorrect because the text suggests that Scottish ancestry explains the origin of the emphasis on the "r" sound in English dialects spoken in the Upland South, since that linguistic feature is also found in dialects spoken in Scotland; the text doesn't address any other dialects or suggest that the feature will spread elsewhere. **Choice C is incorrect** because the text indicates that many Upland South colonizers were the descendants of Scottish people, suggesting that the English dialects spoken by these colonizers had been influenced by the English dialects spoken by the colonizers' ancestors in Scotland and had acquired their emphasis on the "r" sound from those ancestors' dialects—not the other way around. **Choice D is incorrect** because the text indicates that the emphasis on the "r" sound is part of English dialects spoken in the Upland South today, which almost certainly wouldn't be the case if people from Scotland, who were the main colonizers of the Upland South, had eliminated that linguistic feature from their dialects.

62 Correct answer **A** Medium ‹ Back to question

A Cranko's loose adaptation of *Eugene Onegin* into a different medium may have preserved fundamental elements of the source material better than a strictly literal written translation of the text would have.

Choice A is the best answer because it most logically completes the text's discussion of John Cranko's ballet adaptation of Pushkin's Russian novel in verse, *Eugene Onegin*. According to the text, the novel's lyricism—specifically its reliance on linguistic patterns and flourishes that are unique to the Russian language—renders a faithful translation, especially one into English, impossible. The text then discusses Cranko's adaptation of *Eugene Onegin* into a ballet whose choreography, according to one critic, evokes aspects of the novel that were deemed untranslatable: "its commitments to rhythm, cadence, symmetry." Given the claim that the ballet captures what would seem untranslatable, it can be inferred that Cranko's loose adaptation of the novel into a different medium—namely, dance—may have preserved fundamental elements of the source material better than a strictly literal written translation into English or another language would have.

Choice B is incorrect because the text discusses one specific ballet adaptation of *Eugene Onegin* and one critic's assessment of it. The text makes no general claims about the adaptation of written works into other formats or about whether ballets are typically considered faithful adaptations of such works. **Choice C is incorrect** because the text discusses the difficulty of translating only one poetic work—Pushkin's Russian-language novel *Eugene Onegin*—into English and doesn't consider whether English generally poses challenges for translators of poetic works of various languages. Moreover, the text focuses on the challenge presented by the Russian language's unique patterns and flourishes, not a difficulty inherent to the English language. **Choice D is incorrect** because the text gives no indication of what most critics believe about Cranko's adaptation of *Eugene Onegin* and instead presents the reaction of only one critic: Golden's praise of Cranko's ballet for capturing essential elements of the novel that have been "deemed untranslatable." Nothing in the text suggests that most other critics would disagree with Golden's positive view.

63 Correct answer **A** Medium ‹ Back to question

A is not conclusive evidence that the figure is Venus.

Choice A is the best answer because it presents the conclusion that most logically completes the text's discussion about the significance of the cupid found at Pompeii. The text indicates that the cupid is near a statue of a female figure who is fishing, and it goes on to indicate that because Venus is associated with cupids, some scholars believe the female figure to be the goddess Venus. But the text then says that, according to archaeologist Carla Brain, cupids may have also been associated with the activity of fishing, which, if true, would suggest that the mere appearance of a cupid near a female figure engaged in fishing does not indicate with certainty that the figure is Venus (that is, the cupid might be associated with fishing, and the figure might be anyone at all).

Choice B is incorrect because the text says nothing about how often Venus was depicted fishing in Roman art: it only implies that in certain instances a female figure may or may not be Venus. **Choice C is incorrect** because Carla Brain's proposed explanation for the presence of the cupids makes no reference to the female figure, and so the possibility that the figure in the artworks is in fact Venus cannot be definitively eliminated. **Choice D is incorrect** because there is nothing in the text to suggest that the only reasonable way to interpret the figure is as Venus.

64 Correct answer **A** Medium ‹ Back to question

A those people who had the right to vote most likely had substantial holdings of French real estate.

Choice A is the best answer. We're told that people needed to pay "at least 300 francs in direct taxes" to be able to vote. We're also told that, while "relatively few people paid the tax on real estate," real estate taxes were both the main way people qualified to vote and the main source of revenue for the government. Based on this, we can infer that those who did qualify to vote likely had significant French real estate holdings.

Choice B is incorrect. The passage doesn't mention the voting habits of artisans and merchants nor any reduction in tax burdens on businesses, so there's no basis for this inference. **Choice C is incorrect**. Although we know that doors and windows were taxed during the Bourbon Restoration, we don't have enough information to infer if doors and windows increased after this time. **Choice D is incorrect**. Although we know that foreign investments were only minimally taxed, we don't have enough information to determine if those with significant foreign investments were unlikely to have voting rights. For example, it's possible that those with significant foreign investments were likely to also be people with significant domestic investments which they did pay taxes on, so we don't have the information necessary to make this inference.

65 Correct answer **B** Medium Back to question

B is more relevant to contemporary audiences than it may seem at first.

Choice B is the best answer because it most logically completes the text's discussion of Ana Castillo's 1986 novel *The Mixquiahuala Letters*. The text states that the novel consists entirely of letters from the narrator to her friend—a format that some students reading the novel in a class found intimidating. According to the text, those students also found the novel's treatment of gender to be old-fashioned. In response to the students' concerns, their professor emphasized the novel's relevance: it's written in modern-sounding language and addresses issues that still matter. This, in turn, suggests that *The Mixquiahuala Letters* is more relevant to contemporary audiences than it may initially seem.

Choice A is incorrect because the professor's response to the students only mentions *The Mixquiahuala Letters*: it doesn't compare the novel to others from the same period. **Choice C is incorrect** because nothing in the professor's response to the students compares *The Mixquiahuala Letters* to contemporary novels about friendship. **Choice D is incorrect** because the professor's response to the students doesn't address the idea of reading the novel's letters multiple times and in different orders.

66 Correct answer **B** Medium Back to question

B the fox may have been a companion animal of the humans who inhabited the site at the same time.

Choice B is the best answer because it most logically completes the text's discussion of Lebrasseur et al.'s examination of a fox skeleton found at an archaeological site in central Argentina. The text explains that the fox was found next to artifacts of human habitation, that radiocarbon dating indicated that it was at the site at the same time as human inhabitants, that humans at the site may have deliberately buried the fox, and that analysis indicated that the fox's diet included meat and plant material, as the humans' diet did, even though wild foxes eat only meat. The diet similarity, along with the fox's location, the radiocarbon dating of its remains, and its possibly deliberate burial, suggests the fox was closely associated with the site's human inhabitants—making it reasonable to conclude that the fox may have been a companion animal of those humans.

Choice A is incorrect. The text indicates that both the fox and the human inhabitants at the site had a diet that included both meat and plant material, but the text gives no information about the relative proportions of meat in the fox's and the humans' respective diets. **Choice C is incorrect**. The text states that *Dusicyon avus* is an extinct species that resembled a jackal, but this description refers to the fox's physical appearance, not its diet, and no information is given about what jackals eat. **Choice D is incorrect**. The last two sentences of the text focus on the possibility that the human inhabitants of the site may have given the fox a burial and that they and the fox may have eaten a similarly omnivorous diet—details pointing to the conclusion that the fox may have been a companion animal of the inhabitants. Thus, a conclusion about the hunting technology used by the inhabitants wouldn't follow from the text.

67 Correct answer **B**

Medium

‹ Back to question

B it does not allow for multiple castings of the same burrow over time.

Choice B is the best answer. Since resin casting "inevitably requires destroying the burrow," it would be impossible to make multiple castings of the same burrow over time.

Choice A is incorrect. The passage doesn't discuss size requirements for completing resin casting, so there's no basis for this inference. **Choice C is incorrect**. The passage never mentions how long the casting process takes nor how long *A. bellulus* takes to construct a borrow, so there's no basis for this inference. **Choice D is incorrect**. The passage never states that recovering the model distorts the resin's shape, only that it destroys the burrow. Therefore, there's no basis for this inference.

68 Correct answer **B**

Medium

‹ Back to question

B the sound quality of Cremonese violins results in part from a method the craftspeople used to alter the wood.

Choice B is the best answer because it most logically completes the text's discussion of the sound quality of Cremonese and modern violins. The text states that violins made in Cremona in the sixteenth to eighteenth centuries sound superior to modern violins. It then indicates that some experts attribute the difference to different woods being used to make these violins, but both Cremonese and modern violins are made of the same woods (maple and spruce); thus this cannot account for the difference. The text then says that recent analysis suggests the wood in Cremonese violins was chemically treated by the craftspeople who made them, thereby providing an alternate explanation for the sound differences: the chemical alteration that is present in the Cremonese violins but absent from the modern ones.

Choice A is incorrect because the text does not discuss how the sound quality of Cremonese violins compares with the sound quality of other instruments made during the sixteenth to eighteenth centuries. Instead it focuses on how the sound of the Cremonese violins compares with that of modern violins. **Choice C is incorrect**. The text states that there are differences in sound quality between the Cremonese and modern violins, and that both types of violin are made with maple or spruce. Thus the type of wood alone does not determine a violin's sound quality. Furthermore, even if the type of wood alone could account for differences in sound quality, the text makes no mention of other woods, so there is no basis to judge how modern violins would sound if they were made using woods besides maple and spruce. **Choice D is incorrect** because the text states that there is evidence that Cremonese craftspeople chemically treated the wood used in Cremonese violins. This evidence is attributed to "new analysis," which strongly suggests that this process was unknown to modern violin makers before that analysis. If the chemical treatment was unknown until recently, the manufacturing process for modern violins must differ with respect to the previously unknown practice of chemically treating the wood.

69 Correct answer **B**

Hard

‹ Back to question

B some differences observed in microorganisms may have been treated as variations within species by Bianchi and Morri but treated as indicative of distinct species by Coll and colleagues.

Choice B is the best answer because it presents the conclusion that most logically completes the text's discussion of the different counts of species in the Mediterranean Sea. The text states that Coll and colleagues reported almost double the number of species that Bianchi and Morri reported in their study ten years earlier. According to the text, this difference can only be partly attributed to new invertebrate species being described in the years between the two studies, which means there must be an additional factor that made Coll and colleagues' count so much higher than Bianchi and Morri's count. The text goes on to explain that factor: researchers have a relatively poor understanding of microorganisms' morphological variability, or the differences in microorganisms' structure and form. This poor understanding makes it hard to classify microorganisms by species and means that researchers' decisions about classifying microorganisms can have a large effect on the overall species counts that researchers report. Additionally, the text says that the two censuses reported similar numbers of vertebrate, plant, and algal species, which means that the difference in overall species did not come from differences in those categories. Given

all this information, it most logically follows that Coll and colleagues may have treated some of the differences among microorganisms as indicative of the microorganisms being different species, whereas Bianchi and Morri treated those differences as variations within species, resulting in Coll and colleagues reporting many more species than Bianchi and Morri did.

Choice A is incorrect because the text explicitly addresses this issue by stating that the description of new invertebrate species in the years between the two studies can explain only part of the difference in the number of species reported by the studies. The focus of the text is on explaining the difference between Coll and colleagues' count and Bianchi and Morri's count that cannot be accounted for by the inclusion of invertebrate species that had not been described at the time of Bianchi and Morri's study. **Choice C is incorrect** because nothing in the text suggests that Bianchi and Morri may have been less sensitive to how much the form and structure of microorganisms vary within the same species than Coll and colleagues were. If Bianchi and Morri had been less sensitive to within-species variation than Coll and colleagues were, Bianchi and Morri would likely have reported more species than Coll and colleagues did, since less sensitivity to within-species variation would

lead researchers to classify as different species microorganisms that more sensitive researchers would classify as variations within the same species. The text indicates, however, that Bianchi and Morri reported far fewer species than Coll and colleagues did; since the text also excludes other explanations for this difference, it suggests that in fact Bianchi and Morri were more sensitive to within-species variation than Coll and colleagues were, leading Bianchi and Morri to report fewer overall species. **Choice D is incorrect** because the text is focused on explaining why Coll and colleagues reported many more species than Bianchi and Morri did, and an underestimate of the number of microorganism species by Coll and colleagues would not explain that difference—it would suggest, in fact, that the difference in the number of species should have been even larger.

70 Correct answer **D** Hard < Back to question

D gift givers likely perceive digital gift cards as requiring relatively low effort to obtain and thus wrongly assume gift recipients will appreciate them less than they do physical gift cards.

Choice D is the best answer because it most logically completes the text's discussion of perceptions of digital versus physical gift cards. The text begins by explaining that the perception of "the time spent obtaining a gift...as a reflection of the gift's thoughtfulness" is a social norm of gift giving. The text then explains that although those who receive digital gift cards view them as easier to use than physical gift cards, a marketing study nonetheless showed that 94.8% of participants found physical gift cards more "socially acceptable" to give. The text specifically contrasts the ease with which digital gift cards "can be purchased online from anywhere" with the fact that physical gift cards "sometimes must be purchased in person"—suggesting the greater difficulty of obtaining physical cards. Given the text's initial premise that gift-giving norms equate the thoughtfulness of a gift with the effort involved in acquiring that gift, it is reasonable to infer that people perceive digital gift cards as requiring less effort to obtain and thus assume recipients will appreciate them less, even though recipients actually prefer gift cards in the more usable digital format.

Choice A is incorrect. Although the text does discuss recipients' preference of digital versus physical gift cards and the relative ease with which the two formats can be used, it doesn't consider the misconceptions that gift givers may have of these factors. Moreover, the text establishes that recipients regard digital gift cards as easier to use and therefore preferable to physical gift cards. **Choice B is incorrect** because the text doesn't consider whether recipients of gift cards feel a sense of ownership toward them, nor does the text touch on the greater tangibility of physical versus digital gift cards. Instead, the text contrasts the two formats of gift cards in terms of their respective usability and the difficulty involved in acquiring them and discusses how those factors influence people's perceptions of the two formats. **Choice C is incorrect** because it contradicts the text, which explains that recipients regard digital gift cards as superior to physical ones because they are easier to use than physical cards, not because physical gift cards require greater effort to obtain than digital gift cards do. Moreover, the text doesn't characterize the effort required to obtain physical gift cards as "unnecessary."

71 Correct answer **B**

Hard

< Back to question

B rate the listening experience as more negative than those whose listening experience was uninterrupted.

Choice B is the best answer. It most logically completes the text. The text tells us that disruptions to an enjoyable experience increase viewers' enjoyment. It also says that researchers suspect the opposite is true for disruptions to an unpleasant experience. Thus, we can infer that the researchers expect to find that the interrupted unpleasant experience was worse for listeners than the uninterrupted unpleasant experience.

Choice A is incorrect. It doesn't logically complete the text. The text never makes any claims about how irritating the disruptions themselves are perceived to be. Rather, the text says that pleasant experiences are perceived as more enjoyable with interruptions, and that the opposite is suspected to be true of unpleasant experiences. **Choice C is incorrect**. It doesn't logically complete the text. The text never makes any claims about how long any experience is perceived to be. Rather, the text says that pleasant experiences are perceived as more enjoyable with interruptions, and that the opposite is suspected to be true of unpleasant experiences. **Choice D is incorrect**. It doesn't logically complete the text. The text never makes any claims about how interruptions affect the perceived volume of the unpleasant or pleasant experience. Rather, the text says that pleasant experiences are perceived as more enjoyable with interruptions, and that the opposite is suspected to be true of unpleasant experiences.

72 Correct answer **A**

Hard

< Back to question

A many theatergoers and readers today are likely to find Shakespeare's history plays less engaging than the tragedies.

Choice A is the best answer because it most logically completes the text's discussion of the relative appeal of different kinds of plays by Shakespeare to today's audiences. According to the text, Shakespeare's tragedies address broad themes that continue to appeal to today's audiences. Indeed, the text suggests that these themes are timeless, as illustrated by the example of *Romeo and Juliet*, which the text states is still read and widely performed despite being set in the Italy of Shakespeare's time. In contrast, the text indicates that audiences and readers may need to be familiar with several centuries of English history in order to understand Shakespeare's history plays. Because many theatergoers and readers are unlikely to possess such extensive historical knowledge, it follows that they are likely to find Shakespeare's history plays less engaging than his more accessible tragedies.

Choice B is incorrect because the text never introduces a comparison between Shakespeare's tragedies and twentieth-century plays, only between Shakespeare's tragedies and his history plays. Since twentieth-century plays aren't mentioned, there's no basis in the text for the idea that some of Shakespeare's tragedies are more relevant than twentieth-century plays to today's audiences. **Choice C is incorrect**. Although the text indicates that *Romeo and Juliet* is thematically accessible to today's audiences, it doesn't suggest that *Romeo and Juliet* is more accessible than Shakespeare's other tragedies. Rather, the text presents *Romeo and Juliet* as an example to support the idea that Shakespeare's tragedies hold continued appeal for today's readers and theatergoers. **Choice D is incorrect**. Although experts in English history would likely possess the knowledge needed to understand Shakespeare's history plays, the text never mentions such experts or suggests that they would enjoy the history plays more than Shakespeare's other works.

73 Correct answer **D**

Hard

< Back to question

D fail to consider the ways in which the survival of *M. boolii* may be influenced by changes in the populations of other species that inhabit Sonora.

Choice D is the best answer because it most logically completes the text's discussion of conservation approaches for the *Mammillaria* cactus *M. boolii*. The text establishes that *M. boolii* only grows naturally in the state of Sonora in Mexico, which makes it particularly vulnerable to extinction. The text then contrasts two approaches to conservation: the traditional single-

species approach that individually focuses on at-risk species and a newer ecosystem-based approach that considers the interactions between climate, terrain, and various species in a geographical area. According to the text, conservationists have recently argued that this ecosystem-based approach may lead to better outcomes for all species in a location. If this ecosystem view is correct, then the single-species approach to conserving *M. boolii* would likely fail to consider how the cactus's survival depends on its interactions with other species in Sonora's ecosystem.

Choice A is incorrect because the text doesn't address the distribution of *Mammillaria* species besides *M. boolii* throughout Mexico or discuss how that distribution affects survival. The text focuses specifically on *M. boolii* in Sonora and different approaches to its conservation. **Choice B is incorrect** because the text doesn't suggest that climatic changes in Sonora would reduce competition for *M. boolii* or that conservation efforts are focused on understanding this specific dynamic. In fact, the text implies that an ecosystem-based approach would consider climate among many other factors but doesn't specify how climatic changes might affect competition between species. **Choice C is incorrect** because the text doesn't suggest that the single-species approach would shift the focus of conservation efforts away from *M. boolii* itself—rather, it suggests that this approach might be too narrowly focused on *M. boolii* alone without considering the broader ecosystem-related factors that affect its survival.

74 Correct answer **A** Hard ‹ Back to question

A those farmers learned the techniques from other people who were more directly influenced by Haudenosaunee practices.

Choice A is the best answer because it most logically completes the text's discussion of Euro-American farmers' use of Haudenosaunee agricultural techniques. According to the text, some Euro-American farmers were using these techniques in the early nineteenth century despite few of the farmers having seen Haudenosaunee farms. One explanation for these facts might be that the farmers developed techniques on their own that already had been invented centuries earlier by the Haudenosaunee people, but the text explicitly bars, or rules out, this explanation. If Euro-American farmers didn't learn these techniques from direct observation of Haudenosaunee practices and didn't invent the techniques independently, then the most logical explanation is that they learned the techniques from other people who were more directly influenced by Haudenosaunee practices than the farmers themselves were. Once they learned about Haudenosaunee agricultural practices, Euro-American farmers could then apply those practices to their own farming.

Choice B is incorrect because the fact that some Euro-American farmers in the northeastern United States were using Haudenosaunee techniques suggests that the techniques were likely useful for the crops the farmers raised, not that the crops typically cultivated by the farmers were not well suited to Haudenosaunee farming techniques. If the farmers' crops were ill suited to the techniques, it's unlikely that the farmers would have used those techniques. **Choice C is incorrect** because the text indicates only that Haudenosaunee agricultural techniques were used by Euro-American farmers in the northeastern United States, not that these techniques were widely used outside this region. **Choice D is incorrect** because the text states that some Euro-American farmers were using Haudenosaunee farming techniques early in the nineteenth century. This suggests that some Euro-American farmers were beginning to recognize the benefits of these techniques near the start of the century, not that such farmers only began to recognize the benefits of the techniques much later.

75 Correct answer **A** Hard ‹ Back to question

A the lowest sedimentary layer in which microplastics are found cannot be treated as indicative of the chronological beginning of the Anthropocene.

Choice A is the best answer because it most logically completes the text's discussion of microplastics as a proposed stratigraphic marker for the onset of the Anthropocene. The text indicates that although primary microplastics (used for industrial and other purposes) were invented and mass-produced beginning only around the mid-twentieth century, researchers found microplastics throughout European lake sediment profiles dating from the late eighteenth century to the present. According to the text, microplastics were in all layers of sediment likely because microplastics of certain shapes can rapidly migrate downward—that is, they can move into sedimentary layers that predate their manufacture. Since it can't be

assumed that the date of a layer in which microplastics are found indicates when the microplastics were first deposited, it follows that the lowest sedimentary layer containing microplastics can't be treated as indicative of the chronological beginning of the Anthropocene.

Choice B is incorrect. The text explains that microplastics appeared in layers of sediment long predating 1950 likely because certain shapes allowed them to rapidly migrate downward—that is, the particles physically moved into older layers. This finding doesn't cast doubt on the appropriateness of considering 1950 as the onset of the Anthropocene; it doesn't suggest a flaw in thinking that humans' impact on Earth shifted around 1950 but simply suggests that the position of microplastics in sediment isn't useful as an indicator of such a shift. **Choice C is incorrect** because the issue presented in the text isn't a lack of prevalence of microplastics (and though no quantity is indicated, microplastics were found across all the layers) but rather the inability to determine when microplastics were originally deposited, since the particles can migrate rapidly into older sediment layers. **Choice D is incorrect** because the text indicates that the likely cause of microplastics being present in all layers of the sediment profiles is a property of microplastic particles themselves (certain shapes allowing them to rapidly move downward into older layers), not a characteristic of European lake sediment or anything else specific to Europe. There's no reason to think the issue of particle migration wouldn't occur in other locations.

76 Correct answer **D** — Hard — ‹ Back to question

D because the responses of bumblebees and other wild bees to environmental threats are not always comparable, researchers need to exercise caution when extrapolating information about wild-bee population declines from bumblebees.

Choice D is the best answer because it most logically completes the text's discussion of wild-bee declines. The text establishes that bumblebees and other wild bees have been experiencing population collapse as a result of habitat destruction, climate variation, and other factors. The text then indicates that because bumblebees are very extensively researched, ecologists rely heavily on findings about them to understand wild-bee declines in general. However, the text then introduces Ghisbain's observation that unlike most other wild-bee genera, bumblebees have certain traits (social behaviors and dietary generalism) linked to increased resilience to certain environmental changes. In other words, bumblebees aren't necessarily representative of wild bees as a whole because they are likely more tolerant of some pressures. Therefore, it logically follows that Ghisbain would urge researchers to exercise caution when using bumblebee data to draw conclusions about other wild-bee population declines, since bumblebees and other wild bees don't always respond comparably to environmental threats.

Choice A is incorrect because the text doesn't indicate that climate variation is more of a threat to bumblebees than habitat destruction is or that it is a bigger threat to bumblebees than it is to other wild bees. The text simply indicates that climate variation and habitat destruction are among the factors that have caused population collapses for bumblebees and other wild-bee genera. **Choice B is incorrect**. As it is presented in the text, Ghisbain notes that bumblebees may respond to environmental changes differently than many other wild-bee genera do; this suggests that bumblebees shouldn't be treated as representative of all wild bees, but there's no reason to think that Ghisbain would go so far as to assert that bumblebee data shouldn't be used to draw conclusions about other wild-bee genera that are similar to bumblebees in their dietary and social traits, even if there are relatively few. The text suggests caution in extrapolation, not a complete rejection of using bumblebee research. **Choice C is incorrect**. Although the text indicates that dietary generalism is linked to increased resilience to specific environmental changes (that is, to some but not all environmental stresses), it doesn't suggest that bumblebees and other bees with this trait are less likely than bees with specialized diets to experience major population changes. In fact, the text makes it clear that like many other wild-bee genera—most of which don't display dietary generalism—bumblebees are already experiencing population collapse.

77 Correct answer **C** — Hard — ‹ Back to question

C human activity likely played no role in the introduction of the sweet potato in Polynesia.

Choice C is the best answer because it most logically completes the text's discussion of the sweet potato in Polynesia. The text indicates that the sweet potato is found in Polynesia but originated in South America, and that the sweet potato was being

cultivated by Native Hawaiians and other Indigenous peoples in Polynesia long before sea voyages between South America and Polynesia began. The text goes on to note that research by Muñoz-Rodríguez and colleagues has established that the Polynesian varieties of sweet potato split from South American varieties more than 100,000 years ago, which is thousands of years before humans settled in Polynesia. If Polynesian peoples were cultivating the sweet potato before sea voyages between Polynesia and South America began, and if Polynesian varieties of sweet potato diverged from South American varieties well before people were in Polynesia, it can reasonably be concluded that humans didn't play a role in bringing the sweet potato to Polynesia.

Choice A is incorrect. The text doesn't provide any information about when the sweet potato began to be cultivated in South America, so there's no support for the conclusion that cultivation began in Polynesia before it began in South America. **Choice B is incorrect** because the text indicates that the sweet potato was being cultivated in Polynesia long before sea journeys between Polynesia and South America began. Therefore, it wouldn't be reasonable to conclude that Polynesian peoples acquired the sweet potato from South American peoples. Additionally, the text indicates that the Polynesian varieties of sweet potato diverged from the South American varieties thousands of years before people settled in Polynesia, which suggests that the sweet potato was already present in Polynesia when people arrived. **Choice D is incorrect** because the text states that the domestic sweet potato, which is found in Polynesia, descends from a wild South American plant, not from a domesticated South American plant. The only people that the text describes as cultivating the sweet potato are Native Hawaiians and other Indigenous peoples of Polynesia.

78 Correct answer **C** — Hard — Back to question

C if each ecotype is indeed locally adapted as the researchers hypothesized, those adaptations are to other environmental conditions than the water each ecotype inhabits.

Choice C is the best answer because it most logically completes the text's discussion of Vámos and colleagues' experiment with four duckweed ecotypes. According to the text, the researchers hypothesized that each ecotype is adapted to its local habitat in ways that help it grow more effectively and better tolerate pollutants. To test this, they grew each ecotype in water collected from all four habitats and exposed them to three different zinc levels. If the hypothesis were correct, each ecotype would be expected to thrive more in water from its own habitat than in the other waters and to respond to zinc levels differently depending on the level of zinc pollution in its home environment. However, the results showed that every ecotype grew just as well in every water sample, and that zinc boosted growth the same way across all ecotypes no matter the concentration. In other words, the experiment found no evidence that these ecotypes have specifically adapted to their local water or their local zinc exposure. It follows, then, that if each ecotype is actually locally adapted, it is adapted not to the water conditions in its habitat but to other environmental factors—such as local light or temperature levels, which the text notes the researchers didn't account for in their experiment.

Choice A is incorrect because the findings presented in the text suggest only that the ecotypes' genetic and geographic differences don't represent adaptations to local water conditions and zinc levels, not that the differences don't represent adaptations to *any* local environmental conditions. Indeed, the text notes that the researchers didn't account for light or temperature levels in each habitat, suggesting the possibility that the ecotypes are adapted to those or other local environmental factors. **Choice B is incorrect** because it contradicts the findings presented in the text. The text states that zinc consistently enhanced growth regardless of concentration, meaning the ecotypes all responded similarly to zinc. This uniform response indicates there *aren't* significant differences in their resistance to zinc pollution. **Choice D is incorrect** because the findings presented in the text don't demonstrate that the researchers' hypothesis of local adaptation isn't supported. That the ecotypes grew equally well in all of the water samples and equally benefited from added zinc at all levels, regardless of zinc levels in their natural environments, suggests only that the ecotypes aren't adapted to their local water conditions and zinc levels; these findings don't rule out the possibility that the ecotypes are adapted to other local factors in their habitats, such as light or temperature (which the text notes the researchers didn't examine).

79 Correct answer **D**

Hard

< Back to question

D rather than undergoing changes resulting in the eventual elimination of a head region in their radial body plan, as previously assumed, sea stars' morphology evolved to completely lack a trunk and consist primarily of a head region.

Choice D is the best answer because it most logically completes the text's discussion of the morphology (form and structure) of sea stars, a type of echinoderm. The text indicates that echinoderms have radially symmetrical body plans (symmetrical around a central point, usually in the form of a star), whereas most animals have bilaterally symmetrical body plans (symmetrical along an axis running from head to tail through a trunk). According to the text, sea stars are unusual echinoderms because, despite their radial body plan, they descended from known bilateral ancestors. This shift in body plan was thought to be a process of losing the genetic markers associated with the head region. The text explains that by comparing the genes of one sea star species (*P. miniata*) to those of a close relative, the acorn worm, researchers determined that instead, anterior (head) genes are active across the sea star's entire body, posterior (tail) genes are active in limited, peripheral locations of the body, and no trunk-related genes are active. This finding strongly suggests that, rather than becoming "headless" as they evolved from a bilateral ancestor, sea stars developed a body plan consisting almost entirely of a head region with a minimal tail region and no trunk region present.

Choice A is incorrect because the text doesn't identify how any particular region of sea stars' bodies influences the layout of sea stars' radial symmetry. Moreover, the text indicates that the radial symmetry of echinoderms is "usually starlike," not that a starlike layout distinguishes sea stars from other echinoderms. **Choice B is incorrect** because the text doesn't suggest that the idea that sea stars evolved from an ancestor with bilateral symmetry is incorrect (describing the bilateral origin as "known") and doesn't address any body plans other than those with radial or bilateral symmetry. The text strongly suggests that rather than revealing something about sea stars' origin, Formery et al.'s findings contradict the assumption that the current body plan of sea stars is "headless." **Choice C is incorrect** because the text suggests that Formery et al. were able to make determinations about *P. miniata* sea stars' body plan based on the comparability of genetic markers between *P. miniata* and *S. kowalevskii* acorn worms. The text indicates only that little or no activity was observed in certain types of genes associated with body development in *P. miniata*, not that those genes turned out to largely differ from body-development genes in *S. kowalevskii*.

80 Correct answer **A**

Hard

< Back to question

A bipedalism evolved because it was advantageous to a tree-dwelling ancestor of humans.

Choice A is the best answer because it most logically completes the text's discussion of the evolution of bipedalism in humans. According to the text, one potential explanation for humans walking upright on two legs is that the behavior evolved from an ancestor that mostly stayed on the ground and walked on four limbs, as modern chimpanzees and gorillas do. However, the finding that orangutans, also a relative of humans, sometimes stand on two legs in trees while using their arms to balance and reach for fruits suggests another possible explanation: perhaps a tree-dwelling ancestor of humans began moving on two legs because it offered an advantage, such as access to certain foods.

Choice B is incorrect because the finding that modern orangutans (a relative of humans) sometimes stand on two legs in trees doesn't offer any insight into when either bipedalism or tree-climbing behavior emerged in human ancestors. Additionally, the text indicates that one theory is that bipedalism evolved from a mostly ground-based ancestor that was already practicing knuckle-walking, not that bipedalism and knuckle-walking developed at the same time. **Choice C is incorrect** because the finding that orangutans (a relative of humans) sometimes stand on two legs in trees doesn't offer any insight into how difficult it would've been to move between the ground and the trees without bipedalism; there's no suggestion that climbing or moving in trees depends on the ability to walk on two legs rather than four, even if that ability might be helpful in certain circumstances. **Choice D is incorrect** because the finding that orangutans (a relative of humans) sometimes stand on two legs in trees doesn't suggest that a knuckle-walking human ancestor could've easily moved on two legs in trees. Although the text indicates that

bipedalism may have evolved from a human ancestor that mostly stayed on the ground and walked on four limbs, it gives no indication of how easy it would've been for such an ancestor to move bipedally in trees.

81 Correct answer **D** Hard Back to question

D will find it difficult to identify a group of people who can function as an appropriate control group for their studies.

Choice D is the best answer because it presents the conclusion that most logically follows from the text's discussion of the challenge researchers face when studying the effects of holding elected office on a person's behavior. The text explains that it's hard for researchers to test for the effects that elected office has on people because finding people to serve as a control group is difficult. The text indicates that a control group needs to be made up of people who share characteristics of the group being tested but don't have the variable being tested (in this case, holding elected office). Because researchers aren't able to influence who wins elections, they're also unable to determine who would serve as an appropriately similar member of a control group. Thus, it logically follows that researchers will find it difficult to identify a group of people who can function as an appropriate control group for their studies.

Choice A is incorrect because the text focuses on the struggle to put together a control group for experiments; it doesn't suggest that finding information about politicians' behavior is difficult. **Choice B is incorrect** because the experiments mentioned in the text are testing the effects of holding elected office on a person's behavior. Studying people who have already held elected office wouldn't provide an opportunity to note any behavioral changes that the position might cause. **Choice C is incorrect** because the text defines people in a control group as those "who are otherwise similar to the office-holders"; selecting people who differ from the office-holders wouldn't fit the criteria for an appropriate control group.

82 Correct answer **B** Hard Back to question

B the subject likely would cry out a warning in both study conditions.

Choice B is the best answer because it most logically completes the text's discussion of Hillemacher's study of visual self-recognition in chickens. According to the text, when a predator is nearby, chickens cry out in warning if another chicken is present but remain silent if alone to avoid attracting the predator's attention. The text explains that Hillemacher set up one condition in which a subject was alone and could see its reflection in a mirror and another condition in which the subject could see another chicken, and then presented an image of a hawk (a predator). It follows that if chickens aren't capable of recognizing themselves visually in a mirror, the subject likely would cry out a warning in both conditions; in the first condition because it would perceive its reflection as another chicken—that is, it would think another chicken is present—and in the second condition because it would see that another chicken is actually present.

Choice A is incorrect because the text suggests that regardless of chickens' ability to visually recognize themselves in mirrors, the subject in the second condition would cry out a warning because another chicken is actually present. Further, if chickens do lack visual self-recognition, the subject in the first condition likely would also cry out because it would think its reflection is another chicken. **Choice C is incorrect**. The text does suggest that if chickens lack the ability to visually recognize themselves in mirrors, the subject would cry out a warning in the first condition because it would think its reflection is another chicken. However, the text also indicates that regardless of their capacity of self-recognition, chickens cry out a warning when other chickens are present, and another chicken is present in the second condition. Therefore, both conditions—not just the first one—likely would elicit an audible response from the subject. **Choice D is incorrect** because the text indicates that the study was focused on determining whether chickens recognize themselves visually in a mirror or instead perceive their reflections as other chickens; there's no suggestion that a lack of self-recognition would cause a chicken to confuse its reflection with the image of a hawk.

83 Correct answer **D**

Hard

< Back to question

D be dispassionate as they think critically about the social and political questions raised by the play.

Choice D is the best answer. Churchill's play was influenced by Brecht's belief that theater should elicit an intellectual rather than an emotional response from audiences, making them think about social and political issues that also exist outside of the play. Therefore, it makes sense that Churchill would strive to have audiences think dispassionately (i.e., without emotion) and critically about the social and political questions raised by the play.

Choice A is incorrect. The passage mentions that Churchill was influenced by Brecht's belief that plays should provoke audience members "to consider social and political realities that extend beyond the characters and events depicted onstage," so there's no basis for an inference about audience members deeply engaging with characters' beliefs and actions. **Choice B is incorrect**. Reflecting on things that aren't related to patriarchy and colonialism wouldn't "engage audiences in an interrogation of patriarchy and colonialism." That creates a confusing contradiction. **Choice C is incorrect**. No mention is made of social and political issues in Germany during Brecht's time, so there's no basis for this inference.

84 Correct answer **C**

Hard

< Back to question

C marketplaces would not have enabled Maya people to acquire many products different from those they already produced.

Choice C is the best answer because it presents the conclusion that most logically follows from the text's discussion of scholars' understanding of Maya ecology and agricultural marketplaces. The text indicates that scholars used to believe that during the Classic period, the Maya civilization didn't have agricultural marketplaces. According to the text, scholars held this view because they misunderstood the ecology of areas where the Maya lived. The text points out that people tend to create marketplaces in order to acquire resources they don't otherwise control. Agricultural marketplaces would have allowed farmers who produced one type of crop to trade that crop for other types of crops that they didn't produce. The text goes on to say, however, that scholars underestimated the ecological diversity of the Maya areas, meaning that scholars thought that the Maya landscape produced a smaller range of resources than it actually produced. Taken together, then, this information suggests that scholars assumed that marketplaces wouldn't have allowed Maya people to acquire products different from the products they already produced: that is, if everyone produced the same array of crops, as scholars mistakenly believed, then there wouldn't have been any need for marketplaces where people could trade those crops.

Choice A is incorrect because the text doesn't say anything about trade between the Maya and people from outside the regions controlled by the Maya. Although scholars' mistaken belief that the Maya lands weren't very ecologically diverse would give those scholars a reason to think that the Maya didn't have marketplaces, it wouldn't lead scholars to assume that traders from outside Maya lands were uninterested in acquiring resources produced by the Maya. Even if the Maya actually did produce only a small array of resources throughout their lands, there is no reason to believe from the text that people outside Maya lands also produced these same resources and thus would have no need to trade with the Maya people. **Choice B is incorrect** because the text indicates that scholars underestimated the ecological diversity of the Maya lands, which suggests that they mistakenly believed that the Maya produced a relatively small array of resources throughout their territory, not that the crops the Maya produced varied significantly throughout the Maya lands. Although the scholars might have assumed that a lack of ecological diversity suggests that Maya farming practices were largely the same everywhere, the text does not support that they also assumed there was a lot of variation in the crops that Maya people produced. In fact, the text states that marketplaces emerge when people want to obtain resources they don't already control. If it were the case that scholars assumed that the crops Maya people produced varied significantly, this would have led them to conclude that Maya people likely established marketplaces so they could trade for resources they didn't already possess, not that the Maya civilization lacked marketplaces. **Choice D is incorrect** because nothing in the text suggests that scholars assumed that farmers wouldn't trade their agricultural products unless they had already met their own needs with those products. Instead, the text says that scholars thought that the Maya lands produced a smaller array of resources than they actually did, which the text suggests led scholars to assume that the Maya

didn't have any need for marketplaces. The scholars' mistaken belief has no bearing on the issue of whether farmers met their own needs before trading their products.

85 Correct answer **C** Hard Back to question

C the period of interbreeding resulted in a greater genetic difference between alpacas and their wild ancestors than between llamas and their wild ancestors.

Choice C is the best answer because it presents the inference that most logically follows from the text's discussion of the genetic material of alpacas. The text states that modern alpacas get only 64 percent of their genetic material from their wild ancestor (the vicuña), while llamas get 95.5 percent of their genetic material from their wild ancestor (the guanaco). These data imply that relative to llamas, alpacas have experienced a much greater genetic shift away from their wild ancestors (36 percent of their genetic material derives from another source, compared to 4.5 percent of llamas' genetic material). Moreover, the text establishes that the remainder of alpacas' genetic material derives from llamas, and the remainder of llamas' genetic material derives from alpacas, reflecting a period of interbreeding. Taken together, these details support the inference that the period of interbreeding had a more significant impact on the genetic material of alpacas than on that of llamas, thereby reducing the percentage of alpacas' genetic material that derives from wild ancestors and placing alpacas at a greater remove from these ancestors.

Choice A is incorrect because the text doesn't provide information about genetic diversity within modern llama and alpaca populations. While the text discusses the percentage of genetic material each domesticated species inherited from its wild ancestor and from interbreeding, it does not address the level of genetic variation within each species. Therefore, it isn't logical to infer that modern llama populations have a greater degree of genetic diversity than modern alpaca populations do. **Choice B is incorrect** because it contradicts the chronology presented in the text. The text states that alpacas were domesticated about 7,000 years ago, but the interbreeding with llamas occurred "between 400 and 600 years ago." The genetic mixing happened thousands of years after domestication, not during it; in addition, the text does not provide details about what the process of domestication might entail. Therefore, it isn't logical to infer that llama genetic material was introduced during the domestication process of alpacas. **Choice D is incorrect** because though the text notes that guanacos and vicuñas contributed to the genetic material of alpacas and llamas, it only discusses alpacas' and llamas' genetic composition. Therefore, the text does not support the inference that modern populations of guanacos and vicuñas would likely show traces of ancient interbreeding.

86 Correct answer **A** Hard Back to question

A some disagreements between the model's simulations of Titan's precipitation and humidity and the moon's actual precipitation and humidity are to be expected.

Choice A is the best answer because it most logically completes the text's discussion of modeling the atmosphere of Titan. The text establishes that the methane mole fraction (the ratio of methane to other atmospheric components) influences precipitation, humidity, and other meteorological phenomena and that observational data for Titan are too lacking ("too sparse and discrepant") to fully determine the range of this measure across the moon's various atmospheric levels. The text indicates that because of this limitation, researchers developed an atmospheric model (IPSL) that uses a simplified approach: it applies a uniform methane mole fraction for the lowest atmospheric level. Since it is very unlikely that the actual methane distribution across atmospheric levels on Titan is uniform, and since the methane mole fraction directly affects precipitation and humidity, it logically follows that the model's simplified treatment of the methane mole fraction would lead to some disagreements between the model's simulations and Titan's actual precipitation and humidity.

Choice B is incorrect because the text makes it clear that the model *already* uses a single value for Titan's methane mole fraction instead of a range. Further, the text suggests that the single value is a simplification of what is likely a more complex reality, so there's no reason to assume that a single value would be more desirable than a range. **Choice C is incorrect**. The text strongly suggests that Titan's actual methane mole fraction differs from the uniform value used in the model, even though some of the model's outputs align closely with observations, but nothing in the text indicates how the actual value would differ.

There's no reason to assume that the actual methane mole fraction is higher than what the model uses. The "lowest level" mentioned in the text refers to the atmosphere and not Titan's methane mole fraction. **Choice D is incorrect** because the text makes it clear that the model *doesn't* reflect the actual variations in the methane mole fraction across Titan's atmospheric levels, since observational data are too limited. Because the model uniformly applies a set methane mole fraction, no inconsistencies in the simulations would be attributable to actual variations in the moon's methane mole fraction.

87 Correct answer **D** Hard Back to question

D Mars's crust likely formed as a result of other major geological events in addition to the cooling of a magma ocean.

Choice D is the best answer. Cooling magma would create basalt, but "a planetary surface that formed in a mostly basaltic environment would be unlikely to contain large amounts of silica." Since Mars's crust does contain large amounts of silica, it is unlikely that Mars's crust was formed exclusively by cooling magma. Therefore, there were likely other major geological events that created the high silica concentrations.

Choice A is incorrect. Although the passage discusses these two methods of collecting data about Mars's crust, it never compares their reliability, so there's no basis for this inference. **Choice B is incorrect**. The passage never mentions anything about the crusts of other planets, so there's no basis for this inference. **Choice C is incorrect**. The passage never mentions Earth's crust, so there's no basis for this inference.

88 Correct answer **A** Hard Back to question

A bringing female perspectives to the forefront is not indicative of a novel attitude regarding fidelity to Greek and Roman myths' ideologies.

Choice A is the best answer because it most logically completes the text's discussion of a literary subgenre that reimagines Greek and Roman myths in a more modern cultural context—namely, the greater visibility and psychological depth of female characters. According to the text, purists object that this subgenre imposes modern values on past civilizations, while the subgenre's defenders argue that reimagining old myths for new cultural contexts is "almost as old as the myths themselves." If this argument in defense of the subgenre is accurate, then bringing female perspectives to the forefront of myth is reflective of a long-established attitude regarding writers' freedom to recontextualize the ideologies of Greek and Roman myths instead of remaining absolutely faithful to them.

Choice B is incorrect because the text suggests that modern writers who foreground female characters in their adaptations of Greek and Roman myths are motivated by a desire to counterbalance the primacy of male perspectives in the myths themselves, not in earlier adaptations of those myths. The text doesn't indicate that the modern writers are responding to earlier adaptations and only discusses those adaptations in the context of the argument that recontextualizing Greek and Roman myths is a very old practice. **Choice C is incorrect** because the defenders' claim concerns the general practice of reimagining myths for new cultural contexts, not specifically a tradition of focusing on female characters. The text doesn't indicate that earlier reimaginings centered on female characters, so it wouldn't be logical to conclude that purists are overlooking a long tradition of adapting myths to focus on female characters specifically. **Choice D is incorrect**. While the text supports the claim that the modern retellings of Greek and Roman myths have given complex motivations to the female characters, it doesn't associate this development with a trend toward the portrayal of greater psychological depth in fiction more broadly or claim that such a trend exists. Moreover, the claim that there is an association wouldn't follow logically from the last sentence of the text, which asserts that reimagining myths in new cultural contexts is an established practice.

89 Correct answer **A**

Hard

‹ Back to question

A will likely continue to be used primarily to observe objects outside the solar system.

Choice A is the best answer. The HST will operate until at least 2030, but it's only observing stuff inside our solar system 6% of the time. If we could get a different telescope to observe stuff inside our solar system 100% of the time and take more extensive images of certain things, then the HST could continue to be used mainly for observing stuff outside the solar system.

Choice B is incorrect. This inference is too strong to be supported by the text. Even if the new telescope is deployed, the HST might still be used as it's being used now. Based on the text, the new telescope would just be used for more extensive and long-term imaging of solar system bodies, which doesn't necessarily overlap with the HST. **Choice C is incorrect**. This inference isn't supported. The text never mentions the possibility of modifying the HST, so there is no basis to make this inference. Rather, the researchers suggest using a different telescope to more closely observe certain objects. **Choice D is incorrect**. This inference is too strong to be supported. The text doesn't give us enough info to assume that the HST lacks any particular sensors.

90 Correct answer **C**

Hard

‹ Back to question

C may have determined that the green plan imposed additional burdens on them that were not sufficiently offset by the potential financial savings.

Choice C is the best answer because it most logically completes the text's discussion of the influence of decision-making modes on consumers' choices of different electricity plans. The Affect Mode describes choices based on the decision-maker's preferred emotional outcome, the Role Mode describes choices based on the decision-maker's social motivations, and the Calculation Mode describes choices based on minimizing financial costs and maximizing the decision-maker's convenience. Thus, if those using a Calculation Mode disfavor the green plan, it would be due to some financial or convenience burden the green plan imposes that the other doesn't. The text indicates that the green plan had a lower financial cost but was nonetheless rejected by participants using the Calculation Mode. It therefore follows that the green plan likely imposed a convenience burden that outweighed potential financial savings for these participants.

Choice A is incorrect. According to the text, the Affect Mode involves the decision-maker's preferred emotional outcome, the Role Mode involves social motivations, and the Calculation Mode is oriented toward minimizing financial costs and maximizing the decision-maker's convenience. Thus, unlike the Affect or Role Modes, the Calculation Mode would almost certainly involve taking price differences into account. **Choice B is incorrect**. According to the text, the Affect Mode involves the decision-maker's preferred emotional outcome, the Role Mode involves social motivations, and the Calculation Mode is oriented toward minimizing financial costs and maximizing the decision-maker's convenience. Thus, there is no reason to think that participants using the Calculation Mode at any point took social responsibility into account, let alone think that they discovered a disparity between their expectations and reality. **Choice D is incorrect**. According to the text, the Affect Mode involves the decision-maker's preferred emotional outcome, the Role Mode involves social motivations, and the Calculation Mode is oriented toward minimizing financial costs and maximizing the decision-maker's convenience. Thus, the text doesn't indicate that cost-effectiveness is a factor for participants using the Affect or Role Modes, and there is no basis to compare their beliefs in the truthfulness of the green-plan description with those of the Calculation Mode users.

91 Correct answer **C**

Hard

‹ Back to question

C is probably in a location Isla hadn't ever come across while on the ground.

Choice C is the best answer because it most logically completes the text's discussion of Johny Isla and the whalelike geoglyph. The text indicates that the German exhibit about the Nazca Lines included a photograph showing a whalelike geoglyph that Isla hadn't known about before attending the exhibit, even though Isla "specializes in" Nazca Lines geoglyphs. Given his expertise, and his surprise at being unfamiliar with the whale glyph, the text strongly suggests that Isla believed he

would have noticed the glyph if he had been to its location. Thus, the text implies that the whalelike geoglyph is likely in a location Isla had not previously been to.

Choice A is incorrect because the text doesn't address either the species of whale that the geoglyph is meant to represent or its relationship to the earliest humans in the area that is now Peru. **Choice B is incorrect**. Although the text indicates that the photograph of the whalelike geoglyph was on display at a "German exhibit," that exhibit was specifically "about the Nazca Lines," which the text indicates are located in Peru. **Choice D is incorrect**. Although the text does indicate that the glyphs were created "over a period of many centuries," the text doesn't address when in that period of time any particular glyphs were created.

92 Correct answer **B** Hard ‹ Back to question

B although *A. mexicanus* is a single species at present, it could be in the process of splitting into distinct populations with different characteristics.

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of *A. mexicanus*. According to the text, *A. mexicanus*, a river-dwelling fish species, has colonized caves. The fish that live in rivers and those that live in caves show no significant genetic differences and are all capable of making the same sounds. The text indicates, however, that Hyacinthe and colleagues found that sounds that the river fish use in a particular context and for a particular purpose are used in a different context and for a different purpose by the cave fish. Additionally, the sounds made by cave fish show some differences depending on the specific cave the fish inhabit. The text goes on to state that Hyacinthe and colleagues have noted that differences in how the fish use sound to communicate could eventually become so great that they prevent fish from different locations from interbreeding. In other words, the river fish might eventually only breed with other river fish (with whom they share characteristics regarding sonic communication that they do not share with cave fish), while the cave fish might only breed with other cave fish for a similar reason. In context, this observation suggests that even though the fish are a single species right now, they could be in the process of splitting into distinct populations with different characteristics.

Choice A is incorrect because there is no information in the text suggesting that the river fish are less reliant on sonic communication than the cave fish are. Although the text does indicate that the river fish and cave fish are genetically similar, the text describes both groups as using sonic communication and says nothing to indicate that one group depends on that communication more than the other group does. **Choice C is incorrect**. The text states that all members of the species can emit the same sounds but that the function and context of sounds differ depending on whether the fish live in rivers or caves, but it does not indicate that river fish produce sounds that cave fish do not or vice versa. **Choice D is incorrect** because it contradicts the text. The text says that there is little genetic difference between the river fish and the cave fish, not that the river fish and cave fish are so genetically distinct that they can be considered separate species.

93 Correct answer **D** Hard ‹ Back to question

D aerospace composites containing the nitrogen-treated SiC fiber may have the ability to withstand mechanical stress for a longer period of time than can aerospace composites containing either of the two polymer-derived SiC fibers.

Choice D is the best answer because it most logically completes the text's discussion of silicon carbide (SiC) fibers and creep, or deformation related to ongoing mechanical stress and elevated temperatures. The text states that Bhatt et al. found that a nitrogen-treated SiC fiber had a lower minimum creep rate than two polymer-derived SiC fibers did. Because having a lower creep rate means that the material is slower to deform with exposure to stress, as the text explains, this finding suggests that aerospace composites made with the nitrogen-treated SiC fiber may be able to withstand mechanical stress for a longer period than those made with the other two polymer-derived SiC fibers can.

Choice A is incorrect because it overstates the implications of the study's findings, which have to do with the rate of a material's deformation under stress, not the absolute degree of deformation. The text states that Bhatt et al. observed that a

nitrogen-treated SiC fiber had a lower minimum creep rate than two polymer-derived SiC fibers did, meaning only that it deformed more slowly over time under constant stress, not that it underwent less deformation overall. **Choice B is incorrect** because the text doesn't establish any similarity between the two polymer-derived SiC fibers other than that both had a higher creep rate than the nitrogen-treated SiC fiber did in Bhatt et al.'s study. Moreover, reducing a material's resistance to creep would mean that the material becomes *more* susceptible to deformation with exposure to stress and elevated temperatures, which would be expected to shorten rather than prolong the lifespan of machinery made with that material. **Choice C is incorrect** because the text suggests that the stability of aerospace equipment may be better improved by composites containing nitrogen-treated SiC fiber than by composites containing the two polymer-derived SiC fibers, not the other way around. The text indicates that Bhatt et al. observed that the nitrogen-treated SiC fiber had a lower minimum creep rate than the other two fibers did, meaning that it was slower to degrade under exposure to mechanical stress and elevated temperatures—suggesting that it may remain stable for longer periods.

94 Correct answer **C** Hard Back to question

C *Instant Mural* is a reflection on the constraining aesthetic expectations placed on Chicano artists in general rather than on the social constraints placed on women specifically.

Choice C is the best answer because it most logically completes the text's discussion of *Instant Mural*. According to the text, the 1974 work *Instant Mural* involved taping two Asco members (Patssi Valdez and Humberto Sandoval) to an outdoor wall as a direct commentary on constraint (limitation or restriction). The text suggests that instead of focusing on Valdez's role in the work and on social limitations women faced at the time—an approach that fails to explain the role of Sandoval, a man—people should consider that in 1974 (and long before) the art establishment limited recognition of Chicano artists to those who created murals with social and historical subjects, making it challenging for nonmuralist Chicano artists (such as Asco's members) to show their work. The text suggests that considering the situation with the art establishment leads to a conclusion that accounts for the fact that *Instant Mural* is explicitly about constraint and features both a woman and a man taped to the wall: *Instant Mural* isn't a reflection of the social constraints placed on women specifically but instead is a reflection on the constraining aesthetic expectations placed on Chicano artists in general (that is, the limits resulting from the lack of recognition of Chicano artists of any gender who did not create sociohistorical murals).

Choice A is incorrect. The text indicates that the art establishment in 1974 (and earlier) did recognize Chicano muralists to the exclusion of other Chicano artists, so there's no reason to assume Asco's work *Instant Mural* was intended to represent Chicano muralists' frustration; it's far more likely that Asco's members—described as Chicano nonmuralists—were representing their own frustration at being unrecognized by the art establishment. **Choice B is incorrect**. The text emphasizes that while a common approach to *Instant Mural* focuses on Valdez and the social limitations women faced in 1974 but fails to account for the presence of a man in the work, there is a conclusion that explains Sandoval's role. But concluding that *Instant Mural* represents a double constraint experienced specifically by female Chicano artists would still fail to account for the inclusion of a man in the work. **Choice D is incorrect**. Although the text suggests that *Instant Mural* can be understood as something other than a commentary on social constraints women faced in 1974, it doesn't suggest that the work is best understood as a critique of the content of any other artworks. The text doesn't address how Chicano culture is depicted in sociohistorical murals; it discusses such murals only to make

the point that in 1974 (and earlier) the art establishment recognized Chicano artists who produced them to the exclusion of Chicano nonmuralists, indicating a constraint all of Asco's members faced, regardless of gender.

95 Correct answer **C** Hard Back to question

C depictions of food in Dutch paintings of the period should be taken as realistic representations of Dutch eating habits.

Choice C is the best answer. The text tells us that lemons—an expensive imported product—feature in Dutch paintings of the period more frequently than dairy products do. Since it's unlikely lemons were eaten more often than dairy, this fact casts doubt on the theory that these paintings realistically depicted Dutch diets.

Choice A is incorrect. In fact, the text suggests the opposite: it says that dairy products were a "major component of the Dutch diet," while lemons were an expensive import item, so we can infer that lemons were eaten much more rarely than dairy products. **Choice B is incorrect**. The passage doesn't mention painters from other countries, so there's no basis to make this inference. **Choice D is incorrect**. In fact, the text suggests that Dutch painters do have reasons for depicting foods other than to show what Dutch people typically ate. For example, lemons in a painting could indicate wealth or prosperity.

96 Correct answer **B** Hard ‹ Back to question

B need to compensate for reduced contributions within the colony while also caring for infected workers is burdensome to the uninfected workers.

Choice B is the best answer. The text describes a study examining the relationship between a species of parasitic tapeworm, *A. brevis*, and its host insect, the *T. nylanderi* ant. According to the text, researchers were surprised to find that the tapeworm extends the life of its ant host, rather than reducing it. The text goes on to state that the infected ants end up doing less work to sustain the colony and that as a result, the uninfected ants take on the infected ants' share of labor in addition to caring for them in their infected state. The study's researchers also observed that the uninfected ants have shorter lifespans than expected. If the infected ants, who are doing less work in the colony, have longer lifespans, it can be inferred that the less an ant works, the longer it will live. The opposite of this statement can also be inferred: the more an ant works, the shorter its life. So, since the workload within the colony is being redistributed so that the infected ants work less while the uninfected ants work more (as they take on the neglected duties of the infected ants and also care for those ants), then it can be inferred that the lifespans of the uninfected ants are shortened because the need to compensate for reduced contributions within the colony while also caring for infected workers is burdensome to the uninfected workers.

Choice A is incorrect because the text does not indicate how *A. brevis* is transmitted to the ants or assert that uninfected ants are more likely to be directly exposed to *A. brevis* while caring for infected ants. **Choice C is incorrect** because the text makes no mention of the relative abilities of infected and uninfected ants to escape predators: in fact, predators are not mentioned in the text at all. **Choice D is incorrect** because the text does not supply any information about the average lifespans of the ants in colonies without parasitic activity; the text only indicates factors that lengthen and shorten the lifespans of ants in parasitized colonies.

97 Correct answer **A** Hard ‹ Back to question

A preserve much of the original text's meaning at the expense of other qualities that are also integral to the experience of reading the poem.

Choice A is the best answer because it most logically completes the text's discussion of translating *Sir Gawain and the Green Knight*. The text states that the poem was written in alliterative verse, a form that features extensive repetition of initial consonant sounds, and that, according to Armitage, the patterns of sound in the poem are essential to the poem's structure. The text also notes that many Modern English words begin with different sounds than their Middle English equivalents (that is, the words with the same meanings) do. This means that if a translator were to render the poem's Middle English words into their direct Modern English equivalents, the initial consonant sounds of many words would change and the original alliterative patterns wouldn't hold. It follows, then, that a strictly literal (word for word) translation would preserve much of the original text's meaning at the expense of sonic and structural qualities that are also integral to the experience of reading the poem.

Choice B is incorrect because the text doesn't address modern readers' preferences among translation approaches. Although the text implies that Armitage may have prioritized the sonic patterns and structure of the original poem in his translation, it doesn't give any indication that this approach would be less appealing to modern readers than an approach that directly translates the words but loses the original patterns of sounds in the poem. **Choice C is incorrect**. The text actually suggests that a strictly literal Modern English translation of *Sir Gawain and the Green Knight* wouldn't be especially faithful to the original intentions of the poem because the Modern English words would change the sonic patterns Armitage notes are essential to the alliterative poem's structure—that is, such a translation would change patterns of sound that are a fundamental part of the original poem's composition. Moreover, there's no reason to think that a strictly literal translation of that poem would be more

faithful to the original intentions than literal translations of other alliterative Middle English poems would be, since they would presumably all face the issue of a change in the patterns of sounds. **Choice D is incorrect** because the end of the text makes a point about sounds, not meaning. Modern readers interested in gathering historical information from the poem might prefer a strictly literal translation (one that directly translates the words without making additional changes), but that idea doesn't logically follow from the fact that many Modern English words start with different sounds than their Middle English counterparts; a change in the sounds wouldn't have any effect on the information the poem conveys.

98 Correct answer **B** Hard Back to question

B the artifacts originated elsewhere and eventually reached Kuulo Kataa through trade or migration.

Choice B is the best answer because it most logically completes the text's discussion of artifacts and Kuulo Kataa's founding date. If it were true both that Kuulo Kataa was founded in the fourteenth century CE and that artifacts found in excavations of the settlement are from the thirteenth century CE, it would be reasonable to conclude that the artifacts weren't created in the Kuulo Kataa settlement. That would suggest, then, that the artifacts originated somewhere else and eventually reached the settlement through trading or as people migrated.

Choice A is incorrect because the existence of thirteenth-century CE artifacts recovered during excavations of a settlement founded in the fourteenth century CE isn't logically connected to artifacts from one century being more commonly recovered than artifacts from another century. Rather than suggesting anything about how frequently artifacts from different times are found, the existence of artifacts confirmed as predating the settlement's founding suggests that those items arrived in Kuulo Kataa during or after its establishment. **Choice C is incorrect** because the text focuses on time periods and says nothing about which region the founders of Kuulo Kataa have been thought to come from; similarly, the text doesn't suggest anything about where the thirteenth-century CE artifacts originated other than not from Kuulo Kataa. Therefore, it isn't logical to conclude that the mere existence of artifacts confirmed as predating the Kuulo Kataa settlement suggests that the founders of the settlement came from a particular region other than one previously assumed. **Choice D is incorrect** because the existence of artifacts from the thirteenth century CE at a site dated to the fourteenth century CE doesn't imply that fourteenth-century objects were damaged during excavations. There's nothing in the text to suggest that any objects were damaged; rather, the existence of artifacts confirmed as predating the settlement's founding suggests that those items were brought to Kuulo Kataa during or after its establishment.

99 Correct answer **C** Hard Back to question

C preserving knowledge about the medicinal value of plants native to the tribal nations' lands.

Choice C is the best answer because it most logically completes the text's discussion of the relationship between Indigenous languages and knowledge of the medicinal uses of plants. The text states that Indigenous cultures possess special knowledge of the medicinal uses of plants, which is reflected in their vocabulary. The text then discusses how tribal nations are working to preserve their languages, whose daily use is declining as globally dominant languages become increasingly dominant in Indigenous communities. Given that the languages of tribal nations in what is now the United States function as repositories of knowledge about plants' medicinal uses, it logically follows that continued use of those languages will assist with passing on knowledge about the medicinal value of plants native to the tribal nations' lands.

Choice A is incorrect because the text states that preserving Indigenous languages will increase the knowledge, not the number, of medicinal plants. **Choice B is incorrect** because the text is concerned with how vocabulary about the medicinal value of plants can be preserved through the continued daily use of Indigenous languages, not with how such vocabulary can be incorporated into globally dominant, non-Indigenous languages. Moreover, the text explains that the exclusive use of globally dominant languages in Indigenous communities comes at an expense to the continued daily use of those communities' languages. Given this relationship, it is unlikely globally dominant languages would borrow Indigenous vocabulary pertaining to plants' medicinal uses. **Choice D is incorrect** because the text doesn't discuss physical access to medicinal plants, instead focusing on Indigenous knowledge and language surrounding the medicinal uses of plants.

100 Correct answer **D**

Hard

Back to question

D there are geophysical characteristics of Venus not shared with Earth that promote the generation of whistler waves.

Choice D is the best answer because it most logically completes the text's discussion of whistler waves on Venus and the question of their origin. The text explains that whistler waves are plasma waves and that on Earth they are generated by lightning. The text goes on to state that numerous recordings of whistler waves on Venus have led many scientists to suggest Venus hosts lightning. However, the text goes on to explain that data from the PVO and VEX missions have included little evidence of the other phenomena that would be expected if lightning were occurring in Venus's atmosphere. Because there is a lack of additional evidence of lightning, it is reasonable to conclude that some scientists would be skeptical that lightning is the source of the whistler waves on Venus and would suggest unique geophysical characteristics of Venus as an alternative explanation for the waves' generation.

Choice A is incorrect because the text indicates that the other scientists are responding to the PVO and VEX data simply not showing additional evidence of lightning on Venus, not to flaws in the data. The text presents the similar energy signatures of Venusian and Earth whistler waves as an established observation and doesn't suggest the PVO and VEX data are imprecise. **Choice B is incorrect** because the text presents the similar energy signatures of Venusian and Earth whistler waves as an established observation. The text indicates that the other scientists are concerned with the lack of corroborating evidence of lightning on Venus, suggesting not that they doubt that the waves are whistler waves but rather that they doubt that the waves are generated by lightning. **Choice C is incorrect** because the text indicates that the other scientists are responding to the data providing little corroborating evidence of lightning on Venus. This suggests that instead of making a suggestion about properties of Venusian lightning, the other scientists likely would suggest that there may not even be lightning on Venus.

101 Correct answer **B**

Hard

Back to question

B dietary mix among females may reflect a social learning effect that eventually diminishes, though environmental constraints cannot be ruled out as a contributing factor.

Choice B is the best answer because it most logically completes the text's discussion of Hertel et al.'s study of dietary mix variation among female brown bears. According to the text, the researchers evaluated genetics, local resource availability, and social learning as factors in female brown bears' trophic position, or position in the food web. According to the text, daughters tended to settle near their mothers after separating and held the same trophic positions as the mothers for two years, but no longer did by the fifth year—a temporary similarity that may reflect a socially learned behavior that faded over time after separation. Additionally, the text states that the degree of similarity in trophic position between nonmaternal relatives (e.g., cousins) was the same as that between unrelated individuals, suggesting that genetics don't significantly influence dietary mix, and the text also states that there was modest similarity in the trophic positions of unrelated individuals in similar habitats, suggesting that environmental conditions (which would include resource availability) may have some influence on dietary mix. Taken together, the findings suggest that while environmental constraints can't be ruled out as a contributing factor, dietary mix among female brown bears may reflect a social learning effect that eventually diminishes.

Choice A is incorrect because the text notes that daughters tended to settle near their mothers after separating—that is, that they often didn't leave the maternal habitat. Therefore, changes in resource availability in the mothers' habitats would likely have affected the daughters similarly instead of causing their dietary mix to differ from that of their mothers. Further, the form of social learning addressed by the text is that between mothers and daughters; although the daughters no longer held the same trophic position as their mothers five years after separating from them, the text doesn't address the possibility that the daughters' divergence from the dietary behaviors of their mothers is the result of learning from other bears or suggest that the daughters even interacted with other adult bears in a substantive way. **Choice C is incorrect**. Instead of suggesting that environmental conditions are the most important factor in dietary mix variation and that social learning isn't a factor, the findings discussed in the text suggest that environmental conditions may have some effect (since there was modest similarity in dietary mix between unrelated bears in similar habitats, or similar environmental conditions) and that social learning may be a factor (since daughters held the same

trophic positions as their mothers for two years after separating but not for five years, which may reflect daughters maintaining dietary behaviors they learned from their mothers but changing their behaviors over time). **Choice D is incorrect** because the findings presented in the text argue against, not for, genetics as a significant factor in variation in dietary mix. The text indicates that independent of their habitats, the degree of similarity in dietary mix between nonmaternal relatives, like cousins, was the same as that between unrelated individuals. This means that genetic relatedness didn't have a detectable effect on dietary mix independent of shared habitat.

102 Correct answer **A** Hard Back to question

A subduction-like processes began occurring in some locations no later than 3.75 bya.

Choice A is the best answer. Because researchers found "Acasta rocks dating to about 3.75 bya" were similar to "modern rocks formed in a subduction setting," we can infer that subduction-like processes must have begun occurring in the Acasta Gneiss Complex by this time.

Choice B is incorrect. We only know about geological processes at the Acasta Gneiss Complex, so we do not have information to make inferences about geological processes in general. Also, notice that the rocks dated to 4.02 bya were found to still be formed in a plume setting, so the transition must have happened after this time. **Choice C is incorrect**. There's no mention in the passage of what proportion of the rocks within Acasta Gneiss Complex were formed through subduction, so there's no basis for this inference. **Choice D is incorrect**. The passage discusses various rocks in the Acasta Gneiss Complex that are dated to different periods of time, but nothing in the passage suggests that these dates are or were wrong.

103 Correct answer **C** Hard Back to question

C preventing independent observers from determining whether the agreements guarantee equitable compensation for Indigenous communities.

Choice C is the best answer because it most logically completes the argument about an unintended effect of the Nagoya Protocol. The text explains that the Nagoya Protocol is an agreement ensuring that Indigenous communities are compensated when their agricultural resources and knowledge are used by corporations. The text then states that the protocol allows corporations to keep their agreements with Indigenous communities confidential, about which some Indigenous advocates express concern. Choice C, when inserted into the blank, gives a good justification for the advocates' concern: such secrecy could mean that the public is unable to determine whether participating Indigenous communities were properly compensated under these agreements.

Choice A is incorrect. The text suggests that because corporations can keep their agreements with Indigenous communities confidential, Indigenous communities, not corporations, might not be compensated fairly. **Choice B is incorrect** because the text doesn't suggest that the ability of corporations to keep their agreements with Indigenous communities confidential would place limits on how much research corporations can undertake. **Choice D is incorrect** because the text doesn't indicate that Indigenous communities aim to learn new harvesting methods from their corporate partners. Rather, the text suggests that corporations use the knowledge of Indigenous communities for their research.

104 Correct answer **D** Hard Back to question

D the costs of writing, editing, and designing a book were less affected by the technologies used than were the costs of manufacturing and distributing a book.

Choice D is the best answer because it presents the conclusion that most logically follows from the text's discussion of how digital technologies affected the process of book creation. The text explains that in the late 20th and early 21st centuries digital technologies lowered book production costs most significantly in manufacturing and distribution. The text goes on to point out

that authoring, editing, and book design are distinct steps in the process that occur before manufacturing and distribution. Because the savings connected to digital technologies have been most significant in manufacturing and distribution, it's reasonable to infer that those technologies had less of an effect on writing, editing, and designing books.

Choice A is incorrect because the text focuses on lowered book production costs that occur after authoring has taken place; there's no indication in the text whether digital technologies made writing and publishing lengthy books easier. **Choice B is incorrect**. Although it's logical to conclude that customers would expect the cost of books to decline if production costs have declined, the text doesn't address customer expectations for the cost of books or any other consumer goods. **Choice C is incorrect** because the text focuses broadly on how digital technologies have affected the cost of the publishing process; it doesn't address the kinds of books being published or how many copies are printed.

105 Correct answer **A** Hard ‹ Back to question

A the Aztecs would have disputed the idea that the morality of an individual's actions can be assessed by appealing to standards of behavior that are independent of the individual's social circumstances.

Choice A is the best answer because it most logically completes the text's discussion about Aztec (Nahua) ethics. The text indicates that, according to Purcell's interpretation of available Aztec philosophical works, the Aztec ethical system views an individual's actions in relation to that individual's societal role and how the actions affect the community. The text contrasts this view with another held by some ethicists, namely that actions are morally good or bad regardless of the context in which they occur. Thus, Purcell's analysis suggests that the Aztecs would have asserted that the morality of an individual's actions are rooted in that person's position in the community and the actions' effects and therefore cannot be determined in the absence of that context.

Choice B is incorrect. Although the text indicates that morally judging an action according to Aztec ethics requires an understanding of the action's effects and the individual's social circumstances, it does not specify that only members of that society can acquire this information. **Choice C is incorrect** because it implies that the Aztecs considered some actions good or bad regardless of the surrounding context, which contradicts the text's claim that the Aztecs believed that the morality of an individual's action is dependent on the action's effects on the community and the person's specific circumstances. **Choice D is incorrect**. Although the text indicates that in Aztec ethics the morality of an action depends in part on how it affects the community, this is only one of the two factors—the other being the person's societal role—that need to be considered. Therefore, it is possible that two actions with the same effect on the community could be considered morally distinct if they are performed by individuals in different social roles.

106 Correct answer **A** Hard ‹ Back to question

A prolonged deep sleep is likely advantageous in ways that have yet to be discovered.

Choice A is the best answer. It most logically completes the text. The text says that some scientists can't explain why prolonged deep sleep is so widespread, given that the known benefits of sleep don't seem to make up for how vulnerable it leaves an animal. This suggests that prolonged deep sleep probably has unknown evolutionary benefits that make up for the vulnerability.

Choice B is incorrect. It doesn't logically complete the text. The text only discusses the benefits and risks of one trait: sleep. So there's no basis for an inference about "most traits." **Choice C is incorrect**. It doesn't logically complete the text. The text says that it is already known that prolonged deep sleep is widespread in the animal kingdom. Rather, what some scientists can't explain is WHY prolonged deep sleep is so widespread, given that the known benefits of sleep don't seem to make up for how vulnerable it leaves an animal. **Choice D is incorrect**. It doesn't logically complete the text. The text only discusses the benefits and risks of one trait: sleep. So there's no basis for an inference about "many traits."

107 Correct answer **B**

Hard

< Back to question

B keep the amount of silver in Sidonian coins consistent with that in coins minted in 367 BCE but decrease their weight.

Choice B is the best answer because it most logically completes the text's discussion of Sidonian coins. As the text explains, researchers determined that Sidonian coins were made of silver and copper and that from 450 BCE to 367 BCE, the percentage of silver in each coin decreased from 98% to 74.2% while the percentage of copper increased from 1% to 24.7%. The text indicates that because the coins containing less than 80% silver weren't considered suitable for trade (suggesting that copper was less valuable than silver) and looked different from coins containing more silver, the researchers suspect there was a serious loss in confidence in the currency in Sidon in 367 BCE when the copper content was high. It's reasonable to assume that it wasn't possible to boost confidence simply by devoting a greater amount of valuable silver to the currency, since Sidon was under significant and ongoing financial pressure; however, keeping the total amount of silver the same and reducing the amount of copper in the coins would have resulted in smaller coins with a higher percentage of silver. Therefore, it makes sense to suggest that Abd'aštart I (the ruler after 367 BCE) likely restored confidence in the currency by deciding to keep the amount of silver in Sidonian coins consistent with that in coins minted in 367 BCE but to decrease the coins' weight.

Choice A is incorrect because the text conveys that a crisis in confidence in the currency of Sidon likely occurred around 367 BCE because the percentage of silver in coins had fallen below 80% (presumably because Sidon's financial pressures meant that less silver was available for currency), making the coins unsuitable for trade. Thus, announcing that the threshold for the percentage of silver in coins would be raised—that is, that coins would need to contain even more than 80% silver to be suitable for trade—likely would have worsened the crisis rather than relieved it. **Choice C is incorrect** because the text strongly suggests that a crisis in confidence in the currency of Sidon was caused by the proportion of silver to copper in the coins in 367 BCE, with 74.2% being too little silver for the coins to be considered suitable for trade; therefore, it's unlikely that minting coins with a similar proportion of silver to copper (that is, still around 74.2% silver) would have restored confidence, even if the coins were heavier. **Choice D is incorrect** because the text gives no indication that funding the mining of more copper would have relieved a crisis in confidence in the currency of Sidon. The text establishes that Sidonian coins that visibly contained copper weren't considered suitable for trade, so Abd'aštart I wouldn't have wanted to add even more copper to them, and it's unclear how else copper mining would affect views of the currency.

108 Correct answer **D**

Hard

< Back to question

D sunflower sea stars do not always avoid foraging on nutritionally poor sea urchins, making sunflower sea star population recovery a potentially important tool for controlling urchin barrens.

Choice D is the best answer because it presents the conclusion that most logically follows from the text's discussion of the researchers' findings about purple sea urchins and sunflower sea stars. The text explains that urchin barrens are areas that used to be kelp forests but are now covered by purple sea urchins. The text suggests that because there is no more vegetation to be consumed in those areas, the urchins exist in a state of starvation that makes them less nutritional for many predators. The text goes on to explain that in a study with a choice between two purple sea urchins, sunflower sea stars (a predator species that has been substantially declining) consumed a nutritionally rich urchin 42.7% of the time and a nutritionally poor urchin 37.5% of the time. Because the sunflower sea stars didn't always avoid consuming nutritionally poor urchins, even when nutritionally rich ones were available, it follows that helping sunflower sea star populations to grow could help control urchin barrens by increasing the number of sea stars that may consume and thus remove nutritionally poor purple sea urchins from barrens.

Choice A is incorrect because the text indicates only that when presented with purple sea urchins, the sunflower sea stars in the study consumed both nutritionally rich and nutritionally poor ones. It doesn't suggest that sunflower sea stars generally prefer other marine animals that are more nutritious; there's no mention of other marine animals. **Choice B is incorrect** because the text doesn't suggest that sunflower sea stars are generally reluctant to feed on sea urchins. In fact, the text indicates that the sunflower sea stars in the study did consume sea urchins, feeding on both nutritionally poor and nutritionally rich ones.

Choice C is incorrect because the text addresses only the willingness of sunflower sea stars to consume the type of sea urchins found in barrens (nutritionally poor sea urchins), not how likely other species of sea stars are to consume them.

109 Correct answer **A** Hard Back to question

A risk judging Tanner's painting by standards that may not be historically appropriate.

Choice A is the best answer. It most logically completes the text. The text argues that Tanner and his contemporaries may have been unfamiliar with modern beliefs and values. This suggests that scholars who attribute those modern values to Tanner's painting are risking judging the painting by standards that are not historically accurate.

Choice B is incorrect. It doesn't logically complete the text. The text argues that Tanner AND his contemporaries may have been unfamiliar with modern views. It never suggests that Tanner's views were different from his contemporaries' views. **Choice C is incorrect**. It doesn't logically complete the text. The text never suggests that scholars should analyze Tanner's political activity instead of his painting. Rather, the text argues that Tanner and his contemporaries may have been unfamiliar with modern beliefs and values. **Choice D is incorrect**. It doesn't logically complete the text. The text never suggests that Tanner wanted to critique his contemporaries with his painting. Rather, the text argues that Tanner AND his contemporaries may have been unfamiliar with modern beliefs and values.

110 Correct answer **A** Hard Back to question

A could suggest that there are differences in cognitive ability among the monkeys even though such differences may not actually exist.

Choice A is the best answer because it presents the conclusion that most logically follows from the text's discussion of the study of capuchin monkeys' cognitive abilities. The text explains that the study failed to distinguish between outcomes for the tasks performed by the capuchin monkeys, such that simpler tasks requiring less dexterity, or skill, were judged by the same criteria as tasks that demanded more dexterity. Because the study didn't account for this discrepancy, the researchers might have assumed that observed differences in performance were due to the abilities of the monkeys rather than the complexity of the tasks. In other words, the results may suggest cognitive differences among the monkeys even though such differences may not really exist.

Choice B is incorrect because the text focuses on the fact that the tasks assigned to the capuchin monkeys in the study varied in difficulty and that the variety wasn't taken into consideration. The text doesn't suggest that the capuchin monkeys couldn't perform certain tasks, just that some tasks were more difficult to do. **Choice C is incorrect** because the text doesn't suggest that the study's results are indicative of the abilities of capuchin monkeys but not of other monkey species; in fact, the text suggests that the results may not even be an accurate reflection of capuchin monkeys' abilities. **Choice D is incorrect** because the text doesn't indicate that the researchers compared results for artificial tasks with those for tasks encountered in the wild, although the tasks described in the text—sliding a panel and putting a straw in a bottle—are presumably artificial.

111 Correct answer **C** Hard Back to question

C ELF3 enables *A. thaliana* to respond to increased temperatures.

Choice C is the best answer because it most logically completes the text's discussion of accelerated flowering in *A. thaliana* plants. The text indicates that *A. thaliana* plants show accelerated flowering at high temperatures. To investigate the mechanism for this accelerated flowering, biologists replaced the ELF3 protein in one group of *A. thaliana* plants with a similar protein found in another plant species that doesn't show accelerated flowering. The team then compared these modified plants to *A. thaliana* plants that retained their original ELF3 protein. The text states that the two samples of plants showed no difference in flowering at 22° Celsius, but at 27° Celsius the unaltered plants with ELF3 showed accelerated flowering while the

plants without ELF3 didn't. If accelerated flowering at the higher temperature occurred in the *A. thaliana* plants with ELF3 but not in the plants without the protein, then ELF3 likely enables *A. thaliana* to respond to increased temperatures.

Choice A is incorrect because the text doesn't mention whether any plants other than *A. thaliana* and stiff brome show temperature-sensitive flowering, so there is no support for the idea that this type of flowering is unique to *A. thaliana*. **Choice B is incorrect** because the text discusses the effects of ELF3 and not the production of it. There's nothing in the text to suggest that the amount of ELF3 in *A. thaliana* varies with temperature. **Choice D is incorrect**. While the text states that there was no difference in the flowering of modified and unmodified *A. thaliana* plants at 22° Celsius, there's no suggestion that *A. thaliana* only begins to flower at 22° Celsius; the text doesn't mention a specific temperature threshold required for *A. thaliana* flowering.

112 Correct answer **D** — Hard — Back to question

D Brâncuşi's importance to the history of art and his total artistic output.

Choice D is the best answer because it most logically completes the text's discussion of the sculptor Constantin Brâncuşi. The text establishes Brâncuşi's significance by noting that although he belonged to neither the minimalist nor the abstract art movements, he heavily influenced both —a detail that signals his importance to the history of art. At the same time, the text notes that the exacting standards to which Brâncuşi held his work meant that he produced relatively few pieces over his career. Because the text presents both Brâncuşi's major artistic influence and his limited output, it is reasonable to infer that the disparity the text identifies is between his importance to the history of art and his total artistic output.

Choice A is incorrect because the text explicitly identifies Brâncuşi's *Bird in Space* as "a famous example" of how the artist conveyed his preferred themes—in this case, a bird in flight—through simplicity bordering on abstraction. Thus, this particular sculpture is consistent with the nature of much of Brâncuşi's work instead of showing a disparity, or marked difference, with it. **Choice B is incorrect** because the text indicates that Brâncuşi returned to the same few themes, suggesting limited thematic diversity. Since his productivity and his thematic diversity were both limited, these two aspects of Brâncuşi's work are consistent with each other instead of showing a disparity, or a marked difference. **Choice C is incorrect** because although the text mentions that Brâncuşi heavily influenced both the minimalist and abstract art movements, it doesn't discuss the specific themes favored by artists in those movements. There is therefore no basis for identifying a disparity between Brâncuşi's themes and those of artists he inspired.

113 Correct answer **D** — Hard — Back to question

D does not merely register changes in language usage but can facilitate such changes.

Choice D is the best answer because it most logically completes the text's discussion of linguists using social media to study changes in language usage in real time, providing the specific example of the affix *meng-* in Bahasa Indonesia. The text states that linguists first observed *meng-* being used as an onomatopoeic tag on social media, which then spread to being affixed to existing words in text posted on social media; from there, it has begun to move into spoken Bahasa Indonesia. As presented in the text, this progression from online usage to spoken language suggests that social media does more than just register or reflect changes in language—it can actively drive such changes. In the case of *meng-*, the text suggests, social media facilitated the movement of the affix from an online tag to part of spoken Bahasa Indonesia.

Choice A is incorrect because the text doesn't differentiate between social media's usefulness for studying informal versus formal or official language; it merely notes that Bahasa Indonesia is an official language. **Choice B is incorrect** because while the example given in the text focuses on changes in Bahasa Indonesia, the text doesn't provide any evidence that social media is exerting an exceptionally strong influence on the evolution of this particular language compared to others. In fact, the text states that "linguists have noted many similar examples of this phenomenon occurring in other languages," suggesting that social media's influence is evident across multiple languages and not unique to Bahasa Indonesia. **Choice C is incorrect** because the text never suggests that social media provides a somewhat misleading sense of how languages are changing.

Rather, the text suggests that by allowing linguists to directly observe linguistic changes, social media offers a clear window into language evolution.

114 Correct answer **B** Hard ‹ Back to question

B ship sounds contribute so much to the overall sound level that the addition of sonic pulses has little effect on the narwhals' auditory environment.

Choice B is the best answer because it most logically completes the text's discussion of human-caused noise and narwhal behavior. The text establishes that Outi Tervo and team found that while both ship sounds alone and ship sounds coupled with sonic pulses significantly affected narwhal foraging behaviors compared to natural conditions, there were negligible differences between the narwhals' responses to the two sound exposure types (a somewhat surprising finding because one might expect that adding sonic pulses would have an even greater impact). It logically follows that if ship sounds are already so loud that adding sonic pulses to them doesn't substantially increase the level of human-caused sound exposure, the two conditions would produce essentially the same behavioral responses because the additional sonic pulses are essentially irrelevant.

Choice A is incorrect because the fact that sonic pulses are audible at greater depths than are ship sounds would be more likely to help explain a difference—not a similarity—in how the narwhals responded to the two types of sound exposure. If at some points during the study the narwhals were at depths where only sonic pulses (but not ship sounds) could be heard, then they might be expected to alter their diving behavior more dramatically in response to those pulses. But since the text reports negligible differences between diving behaviors in the two exposure types, the fact that sonic pulses reach greater depths than do ship sounds has little explanatory power in this context. **Choice C is incorrect** because the idea that the narwhals foraged at shallower depths in one of the two exposure conditions directly contradicts the information given in the text. The text states that there were negligible differences in the narwhals' diving behaviors between the two conditions, meaning that the behaviors were essentially the same. **Choice D is incorrect**. Although the text states that two conditions with human-caused sounds (ship sounds alone and ship sounds coupled with sonic pulses) had essentially the same effect on narwhals' deep dives, this indicates only that sonic pulses didn't meaningfully change the effect of ship sounds, not that the narwhals were less sensitive to human-caused sounds than predicted. Indeed, the text makes it clear that the sounds significantly altered the narwhals' behavior.

115 Correct answer **D** Hard ‹ Back to question

D the family's division into northern and southern branches likely preceded the acquisition of the crop by the Uto-Aztecan tribes.

Choice D is the best answer because it most logically completes the discussion of Uto-Aztecan languages. The text explains that the northern and southern branches of the Uto-Aztecan language family descended from a single language (believed to have originated in what is now the US Southwest), resulting in similarities across the family's languages; however, the branches don't have similar vocabulary for maize, even though maize has been cultivated by all Uto-Aztecan tribes. The text also indicates that maize originated in Mexico and spread northward into what is now the US Southwest—the area where the Uto-Aztecan language family originated. It follows, then, that the language family had already divided into northern and southern branches before maize reached that area; if maize had been present before the division occurred, the family's origin language would have had terminology for it that likely would have been reflected in the branches, meaning they would have had similar vocabulary for maize. If maize arrived after the division occurred, however, the tribes in the two regions likely would have developed vocabulary pertaining to maize separately, at the times when they acquired the crop.

Choice A is incorrect because the text focuses on vocabulary pertaining to maize in the branches of the Uto-Aztecan language family, and referring only to how some Uto-Aztecan tribes obtained maize wouldn't directly address the role of language. Moreover, if northern Uto-Aztecan tribes had acquired maize from a southern Uto-Aztecan tribe, it's reasonable to assume that the northern tribes might have also picked up southern Uto-Aztecan terminology for maize in that exchange. **Choice B is incorrect** because the text discusses the fact that the northern and southern branches of the Uto-Aztecan

language family don't have shared vocabulary pertaining to maize, not the idea that there are variations in such vocabulary within each branch—that is, the text focuses on differences between the two branches, not on differences between languages within a branch. **Choice C is incorrect** because the text focuses on vocabulary pertaining to maize in the branches of the Uto-Aztecan language family, and referring only to the timing and source of maize acquisition wouldn't directly address the role of language. Furthermore, the text implies that southern Uto-Aztecan tribes probably acquired maize before the northern tribes did, given the evidence that maize originated in Mexico—the location of the best-known representative of the southern branch of the Uto-Aztecan language family—before spreading to the north.

116 Correct answer **A** Hard ‹ Back to question

A dogs and artifacts like glass beads began to be transported from the Near East to Siberia.

Choice A is the best answer because it presents the conclusion that most logically follows from the text's discussion of Feuerborn and colleagues' findings about sites in Siberia. The text states that genomic analysis of many domesticated dogs from Siberian sites dating from the last 11,000 years revealed that the dogs represented a genetically isolated population of breeds (that is, they didn't reproduce with dogs of any outside breeds) until about 2,000 years ago, when there is evidence that the dogs began interbreeding with breeds from the Near East. The text also indicates that around the same time, the sites began to contain glass beads and other artifacts seeming to be from the Near East, even though there is no evidence that the people of those sites traveled widely outside Siberia. Because there is evidence of Near East dog breeds and Near East artifacts at Siberian sites beginning about 2,000 years ago but no evidence of the people's travel to the Near East around that time, it's reasonable to infer that Feuerborn and colleagues concluded that dogs and artifacts like glass beads were transported to Siberia from the Near East, starting around 2,000 years ago.

Choice B is incorrect because the text explicitly states that there is no evidence that the people of the Siberian sites 2,000 years ago traveled extensively beyond Siberia, which they would've had to do to reach the Near East; therefore, it wouldn't make sense to conclude that the presence of Near East dog breeds and artifacts like glass beads suggests that people from Siberia began arriving in the Near East around 2,000 years ago. **Choice C is incorrect** because the text addresses the presence of Near East dog breeds (and evidence of interbreeding with Siberian dogs) and artifacts like glass beads at Siberian sites starting about 2,000 years ago, suggesting only that the dogs and artifacts started to arrive in Siberia around that time. The text doesn't suggest the purpose of the arrival of the Near East dogs and artifacts or give any indication of Siberian dog breeds being transported elsewhere through trade. **Choice D is incorrect** because the text addresses the presence of Near East dog breeds and artifacts like glass beads at Siberian sites starting about 2,000 years ago, suggesting only that the dogs and artifacts started to arrive in Siberia around that time; it doesn't suggest the purpose of this arrival and makes no mention of Siberian glass beads or other artifacts of Siberian origin.

117 Correct answer **B** Hard ‹ Back to question

B some Ancestral Puebloans migrated to the Rio Grande Valley in the late 1200s and carried farming practices with them.

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of Ancestral Puebloans' migration to the Rio Grande Valley. The text states that in the late 1200s C.E., the Ancestral Puebloan civilization abandoned villages in its original homeland, which included the Mesa Verde site. The text goes on to say that recent genetic analysis has demonstrated that the modern turkey population in the Rio Grande Valley descends partly from the ancient turkeys raised at Mesa Verde, and that the genetic markers shared by the two turkey populations first appeared at Mesa Verde only after 1280 C.E. Therefore, it can reasonably be concluded that some Ancestral Puebloans migrated to the Rio Grande Valley in the late 1200s and carried their agricultural practices—including the farming of turkeys—to their new home.

Choice A is incorrect because the text never compares the condition of the Rio Grande Valley's terrain to that of Mesa Verde's terrain, either in the present or in the past. **Choice C is incorrect**. Although genetic analysis has demonstrated that the modern turkey population in the Rio Grande valley descended in part from the turkey population raised by the Ancestral Puebloans of Mesa Verde before their migration to the valley in 1280, this finding doesn't eliminate the possibility that Indigenous peoples

living in the valley before 1280 might also have farmed turkeys. **Choice D is incorrect**. The text doesn't consider the possibility that before their migration to the Rio Grande Valley after 1280, the Ancestral Puebloans of Mesa Verde might have adopted turkey farming from an outside Indigenous civilization in another region; instead, the text provides evidence suggesting that the Ancestral Puebloans brought turkey farming to another region—the Rio Grande Valley—after 1280.

118 Correct answer **D** Hard ‹ Back to question

D a male tanager's appearance may function as a dishonest signal of the individual's overall fitness.

Choice D is the best answer because it most logically completes the text's discussion of Shultz's finding about male tanagers. The text explains that because carotenoids both contribute to deeply saturated feathers and offer health benefits, having deeply saturated feathers is usually "an honest signal" (a true indication) that a bird is generally fit. However, Shultz and others have found that certain male tanagers can appear to have deeply saturated feathers even if they haven't consumed a diet rich in carotenoids, thanks to microstructures in their feathers that manipulate light. If those birds aren't necessarily eating carotenoid-rich diets, they may actually be less fit than other birds that appear to have similarly saturated feathers; this suggests that a male tanager's appearance may function as a dishonest signal, or a false indication, of the bird's overall fitness.

Choice A is incorrect because Shultz's finding suggests that some tanagers can signal fitness without consuming the carotenoids that contribute to fitness, thereby making those signals dishonest, not that tanagers can give honest signals of their fitness without consuming carotenoids. **Choice B is incorrect** because Shultz's finding suggests that the microstructures in certain tanagers' feathers can give a dishonest signal of fitness, not that the microstructures are less effective than actual pigmentation for signaling fitness. Whether the signal of fitness is honest or dishonest has no bearing on how effective the signal is: a signal is effective if potential mates behave as though it's true, regardless of whether it's actually true. Since there's no information in the text about how potential mates respond to the dishonest signals of some tanagers, there's no support for the idea that the dishonest signals are less effective than the honest signals. **Choice C is incorrect** because Shultz's finding suggests that certain male tanagers may appear to be fitter than they actually are, not that scientists haven't determined why tanagers prefer mates with colorful appearances.

119 Correct answer **A** Hard ‹ Back to question

A silver nanoparticles may allow electrons to bypass the series of redox reactions and transfer directly to the electrode.

Choice A is the best answer because it most logically completes the text's discussion of microbial fuel cells (MFCs) and the effect of silver nanoparticles on power output. The text explains that in MFCs, electrons are transferred from the bacterial cytoplasm to an external electrode through a series of inefficient redox reactions, which typically prevent power output from exceeding 0.30 mW/cm^2. When researchers added silver nanoparticles to carbon paper covering the anode, power density more than doubled to 0.66 mW/cm^2. Critically, the text notes that metals such as silver exhibit high electrical conductivity. Given that the inefficiency of the redox reactions accounted for the limited power output of MFCs and that the addition of a highly conductive material dramatically increased that output, it is reasonable to hypothesize that the silver nanoparticles allowed electrons to bypass the redox reactions and transfer directly to the electrode.

Choice B is incorrect because the researchers' hypothesis, as set up by the last sentence of the text, is specifically grounded in the high electrical conductivity of metals such as silver. Nothing in the text supports the idea that the silver nanoparticles function as catalysts for the redox reactions, nor does the text suggest that electrons are being conducted to the electrode independently of any role played by the silver nanoparticles. The text points to the conductivity of silver as the explanation for the increased power density, not to any catalytic effect of the nanoparticles on the existing redox reactions. **Choice C is incorrect** because the text never discusses the metabolic processes of the bacteria in the biofilm coating the electron-collecting anodes, nor is there any suggestion that the high conductivity of silver nanoparticles would interact with the bacteria's metabolism in any way. **Choice D is incorrect** because the text never suggests that in the experiment, the biofilm on the electron-collecting anodes varied in density. Moreover, the hypothetical statement begun in the last sentence of the text concerns the high electrical conductivity of metals such as silver. Thus, proposing that redox reactions—which, as the text

establishes, conduct electricity—accelerated independently of a conductive metallic material (the silver nanoparticles) wouldn't logically complete that hypothesis.

120 Correct answer **B** Hard Back to question

B researchers should not assume that an innate attraction to face-like stimuli is necessarily an adaptation related to social interaction or parental care.

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of the study by Versace and colleagues. The text indicates that newborn animals of some species are attracted to faces and to stimuli that resemble faces. These species, the text says, share two characteristics: they're social and they practice parental care, meaning that parents care for their young. The text goes on to describe Versace and colleagues' experiment, which showed that *Testudo* tortoises, which aren't social and don't practice parental care, were attracted to a stimulus that resembles a face. Since Versace and colleagues have shown that a species that isn't social and doesn't practice parental care nevertheless has the innate characteristic of being attracted to face-like stimuli, it follows that this characteristic shouldn't be assumed to be an adaptation related to social interaction or parental care.

Choice A is incorrect because the text indicates that the tortoise hatchlings, which are solitary and don't practice parental care, were attracted to the face-like stimuli, not that they perceived the stimuli as threatening. **Choice C is incorrect** because the phenomenon discussed in the text is an attraction to faces and face-like stimuli on the part of newborn animals, which can't show any learned characteristics since they were just born. Additionally, the text tells us that the tortoises Versace and colleagues studied aren't social and don't practice parental care, so any findings about those tortoises wouldn't be relevant to the question of whether an attraction to faces in social species that practice parental care is innate or learned. **Choice D is incorrect** because the text gives no indication that adult tortoises were tested on face-like stimuli and, if adults were in fact tested, no information about how they responded is provided. Since no information about adult tortoises' responses is provided, no conclusion comparing those responses to the responses of newly hatched tortoises can be supported.

121 Correct answer **D** Hard Back to question

D the aerogel will be less prone to the structural weakness that ultimately causes most other aerogels to break down with use.

Choice D is the best answer because it most logically completes the text's discussion of aerogels. The text states that aerogels—highly porous foams—offer "excellent insulation" but typically break down after prolonged exposure to high heat. However, according to the text, Duan and colleagues developed an aerogel that "contracts rather than expands when heated" and recovers its original volume after this contraction. Thus, it is logical to conclude that Duan's team's aerogel material will be less prone to the structural weakness that caused earlier aerogels to break down.

Choice A is incorrect. Although the text indicates that aerogels consist "mainly of tiny air pockets within a solidified gel," it doesn't mention the number or proportion of air pockets to solidified gel in typical aerogels or in the aerogel developed by Duan's team. **Choice B is incorrect** because the text suggests that the aerogel developed by Duan's team has a higher, not a lower, ability to withstand exposure to intense heat due to its contraction and subsequent recovery. **Choice C is incorrect**. Although the text discusses temperature tolerances of aerogels and says that they offer "excellent insulation despite typically being brittle and eventually fracturing," it doesn't discuss how different rates of temperature change can affect aerogels.

122 Correct answer **B**

Hard

< Back to question

B the reproductive success of *A. ocellaris* would be at risk if they were to selectively settle in regions that are regularly exposed to low levels of ALAN.

Choice B is the best answer because it most logically completes the text's discussion of artificial light at night (ALAN) and the common clownfish (*A. ocellaris*). The text indicates that researchers found that when *A. ocellaris* is exposed to low levels of ALAN, spawning frequency and egg fertilization aren't significantly affected but hatching is completely inhibited—that is, the eggs never hatch. Therefore, if *A. ocellaris* were to settle only in regions where the fish would be regularly exposed to low levels of ALAN, their eggs would stop hatching and their reproductive success would be at risk.

Choice A is incorrect because the text indicates that exposure to low levels of ALAN had no significant effect on egg fertilization for *A. ocellaris*, so there's no reason to expect there would be any significant difference in rates of successful egg fertilization between areas with low levels of ALAN and areas without ALAN. **Choice C is incorrect** because the text doesn't discuss the particular effects of low levels of ALAN on any species of coral reef fish besides *A. ocellaris*. For this reason, there's no support in the text for the idea that the reproductive success of *A. ocellaris* is more greatly affected by the presence of low levels of ALAN than the reproductive success of other species of coral reef fish is. **Choice D is incorrect**. The text does indicate that *A. ocellaris* incubation was most strongly affected by low levels of ALAN, but it doesn't indicate that there was a greater effect on spawning frequency than on egg fertilization; in fact, the text states that there was no significant effect on either.

123 Correct answer **A**

Hard

< Back to question

A photovoltaic cells with both silicon and perovskite are more efficient because they make use of more of the solar spectrum.

Choice A is the best answer because it presents the conclusion that most logically completes the text's discussion of the efficiency of various photovoltaic cells. The text indicates that Miranda-Pérez and her team found that adding a layer of perovskite to silicon-based cells increased the percentage of sunlight converted to usable electricity relative to the percentage converted to electricity by silicon-based cells. Using cells with only perovskite and no silicon, however, resulted in no improvement in efficiency over silicon-based cells. The text also states that perovskite captures light in the blue range of the solar spectrum and silicon captures light in the red range of the spectrum. If perovskite and silicon capture different parts of the solar spectrum and the combination of perovskite and silicon results in greater efficiency than the use of either perovskite or silicon alone does, then it is reasonable to infer that the improved efficiency of perovskite-silicon cells could be attributable to their making use of more of the solar spectrum than perovskite-based or silicon-based cells do.

Choice B is incorrect because it is directly contradicted by the text, which says that silicon-based cells convert 18%–22% of the sunlight that reaches them to electricity and that cells with only perovskite are no more efficient than silicon-based cells are. Perovskite-only cells thus must convert 22% or less—not more than 29.5%—of the sunlight that reaches them to electricity. **Choice C is incorrect** because the text focuses on a possible improvement to photovoltaic cells and makes no mention of any alternatives to those cells, so there is no reason to conclude that photovoltaic cells must be replaced with some other technology. Additionally, the text presents solar power as something that currently exists, so it wouldn't make sense to conclude that solar power will remain elusive. **Choice D is incorrect** because nothing in the text suggests that there is a need to evaluate the effectiveness of other minerals than perovskite. In fact, the text gives no indication that it is even possible to use other minerals than silicon and perovskite in photovoltaic cells. Instead, the text is focused on the effect of combining perovskite and silicon and the different parts of the solar spectrum that perovskite and silicon capture.

124 Correct answer **B**

Hard

‹ Back to question

B volunteering may be even more helpful than many young people think it is.

Choice B is the best answer because it most logically completes the text's discussion of volunteering. The text asserts that volunteering benefits both the community in which one volunteers and society as a whole. It then states that in a survey of young people, a majority of respondents said that volunteering helps individuals, but only 6% of respondents said that volunteering helps society as a whole. If volunteering does in fact help society as a whole, as the text says, but only 6% of young people believe it does, then it's reasonable to conclude that volunteering is more helpful than many young people think it is.

Choice A is incorrect because the text discusses young people's beliefs about the benefits of volunteering, not where young people believe they are able to volunteer. Nothing in the text suggests that many young people believe they are only able to volunteer in their own communities. **Choice C is incorrect**. Although the text indicates that volunteering is beneficial for society as a whole, nothing in the text suggests that volunteering can benefit society more than it can benefit individual people. The text doesn't compare the benefits to society with the benefits to individuals. **Choice D is incorrect** because the text discusses young people's beliefs about the benefits of volunteering, not how to find volunteering opportunities. There's nothing in the text to suggest that many young people don't know how to volunteer.

125 Correct answer **B**

Hard

‹ Back to question

B may promote increases in marsh plants or decreases in marsh plants, depending on the crabs' location.

Choice B is the best answer. The text says that crab burrowing in the pannes enables plants to grow there again. It also says that crab burrowing at the edges of the marsh speeds up marsh loss. This suggests that burrowing crabs can either help or hurt marshes, depending on where they're located.

Choice A is incorrect. This inference isn't supported. The text never discusses pannes of different sizes. **Choice C is incorrect**. This inference isn't supported. The text never suggests that crabs do more burrowing in the pannes (the areas with standing water) than they do at the edges. Rather, the text says that the burrowing that happens in the pannes is beneficial, while the burrowing that happens at the edges is harmful. **Choice D is incorrect**. This inference isn't supported. The text never discusses the intensity of crab burrowing, nor does it discuss the size of the panne relative to the size of the marsh.

126 Correct answer **A**

Hard

‹ Back to question

A while its content largely predates the invasion, *Cantares Mexicanos* also contains additions made after the invasion.

Choice A is the best answer because it most logically completes the text. The text explains that the *Cantares Mexicanos* contains poems about the Aztec Empire from before the Spanish invasion. Furthermore, it indicates that notes in the collection attest that some of these poems predate the Spanish invasion, while some customs depicted are likely Spanish in origin. The implication is that some poems were composed before the invasion but the references to Spanish customs could have come about only after the invasion, and thus that the collection includes content that predates the invasion and also content from after the invasion.

Choice B is incorrect because the text clearly indicates that the collection is in Nahuatl, not Spanish, so the compilers' unfamiliarity with Spanish is irrelevant to whether the collection contains material composed after the Spanish invasion. **Choice C is incorrect** because the text mentions only the Aztec Empire and Spain: there is no information about the relationship of Aztec literature to any traditions other than its own or Spain's. **Choice D is incorrect** because the text states that some of the

poems make "inarguable references" to common Spanish customs, which conflicts with the idea that these references can reasonably be attributed to mere coincidence.

127 Correct answer **D** Hard ‹ Back to question

D the aptamers successfully bound to *E. coli* O157:H7 and the tests displayed a high degree of specificity in a real-world food.

Choice D is the best answer because it most logically completes the text's discussion of aptamers' capacity to test for pathogens in food. The text explains that although synthetic aptamer molecules can be used to test for foodborne bacterial pathogens because they bind to target molecules, it hasn't been clear how likely it is that they will indicate a negative result when a target pathogen is absent in real-world foods. The text then indicates that Somvanshi et al. created test paper that changes from pink to purple when aptamers in it bind to a particular strain of *E. coli* bacteria, O157:H7, and tested it with store-bought pear juice (that is, a real-world food); the paper changed to purple when exposed to juice to which the target pathogen *E. coli* O157:H7 had been added, but it remained pink when exposed to juice treated with other *E. coli* strains or other bacteria species. Based on this result, it seems the aptamers in the paper successfully bound to the target (O157:H7) and the tests had a high degree of specificity (providing negative results for samples where the target was absent even though other bacteria were present) when applied to a real-world food.

Choice A is incorrect because nothing in the text suggests that *E. coli* O157:H7 differs from other pathogens in a way that makes it more suitable for aptamer-based testing of any kind and that specificity is likely to be lower when aptamer-based tests target other bacteria; the text simply indicates that Somvanshi et al. used O157:H7 as the target for aptamer-based test paper in their study and suggests that the paper had a high degree of specificity. **Choice B is incorrect** because the text indicates that the specificity of aptamer-based tests in real-world foods is uncertain for pathogens broadly, not just for *E. coli*, and similarity between strains (of *E. coli* or of other pathogens) isn't mentioned. Moreover, the results presented in the text suggest that aptamers are actually capable of distinguishing between strains of *E. coli*, since Somvanshi et al.'s paper turned purple when exposed to *E. coli* O157:H7 and remained pink when exposed to other strains. **Choice C is incorrect** because the text suggests that the aptamers in the test papers didn't bind to different strains of *E. coli*. The text explains that the test papers turn purple when the aptamers bind to the targeted pathogen and that in the pear juice tests, the test papers turned purple when exposed to samples with the targeted strain of *E. coli* (O157:H7) but remained pink when exposed to samples with other strains of *E. coli*. In other words, the aptamers bound only to the targeted strain, not to the other strains. Further, specificity would be affected if the aptamers had bound to multiple strains and not just the targeted one; that result would cause the specificity to be low.

128 Correct answer **B** Hard ‹ Back to question

B Whitten's work from the 1960s exhibits many more gestures than his work from the 1970s does.

Choice B is the best answer.

Whitten thinks the tool made "one gesture" paintings, while historians think the tool "removed gesture" from the process completely. But putting that debate aside, both Whitten and the historians would agree that the paintings he made with the tool in the '70s have way fewer gestures than his paintings from the '60s, in which gestures are "prevalent," meaning widely and extensively present.

Choice A is incorrect. This inference isn't supported. The text only discusses the "developer"—it never mentions other tools. **Choice C is incorrect**. This inference isn't supported. If anything, the text suggests the opposite: that Whitten became more interested in exploring the role of gesture in his work as his career progressed, as his earlier paintings had many gestures, and his '70s paintings only had "one gesture." **Choice D is incorrect**. This inference isn't supported. The text never discusses the "realism" of Whitten's art.

129 Correct answer **A**

Hard

Back to question

A across cultural contexts, people who share similar profiles of personality traits tend to prefer listening to similar types of Western music.

Choice A is the best answer because it most logically completes the text's discussion of the cross-cultural study on personality traits and music preferences. The text first explains that previous studies in individual Western societies had found links between personality traits and five musical factors that shape individual preferences for Western music styles. This finding suggests that people in those societies who have similar personality traits likely prefer listening to similar types of Western music. The text goes on to state that Greenberg et al. conducted a study that expanded this research to a broader, cross-cultural context (fifty-three countries across six continents). This study validated that the five-factor framework accurately represented participants' preferences for Western music and that the study found patterns linking those preferences to personality traits. It follows, then, that people with similar profiles of personality traits tend to prefer similar types of Western music across cultural contexts.

Choice B is incorrect because Greenberg et al.'s study examined only preferences for Western music styles, so the text provides no basis for inferring that the five-factor framework could predict preferences for non-Western music styles. The study was specifically limited to Western musical styles, and extending the study's findings to non-Western music would go beyond what the study investigated or supports. **Choice C is incorrect** because the text doesn't mention what researchers had previously assumed about cultural variation in the strength of the relationship between personality traits and musical preferences. The text presents the cross-cultural consistency of the association between musical preferences and personality traits as a new finding but doesn't mention previous expectations or assumptions about this association. **Choice D is incorrect** because the text doesn't address familiarity with Western music styles or suggest that familiarity influences preference strength for those styles. Greenberg et al.'s study focused on the relationship between personality traits and musical preferences across cultural contexts, not on how exposure or familiarity might affect those preferences.

130 Correct answer **D**

Hard

Back to question

D the Arthurian legends that the author of *Vita Sancti Cadoci* drew on would not have featured the Round Table.

Choice D is the best answer because it most logically completes the discussion about the genealogy of Arthurian legends. The text establishes a chronology of Arthurian sources, with *Vita Sancti Cadoci* composed in the 11th century (the 1000s), Geoffrey of Monmouth's *History* written in the 1130s, Wace's *Roman de Brut* in 1155, and *Culhwch and Olwen* in the second half of the 12th century (1150–1200). Importantly, the text indicates that along with adapting Geoffrey's *History*, Wace added "the famous Round Table" to it. If Wace introduced the idea of the Round Table in 1155, it logically follows that this element was not present in earlier works. This suggests that the Arthurian legends that informed *Vita Sancti Cadoci*, which was written before both Geoffrey's and Wace's works, would not have featured the Round Table.

Choice A is incorrect because the text discusses several works that include legends about a character, King Arthur, but doesn't address the historical accuracy of the stories in those works or suggest that the creation of *Culhwch and Olwen* was relevant to any other works' accuracy. **Choice B is incorrect** because the text doesn't suggest that works containing stories of the Round Table were available to Geoffrey of Monmouth when he composed his *History* in the 1130s, whether he was aware of them or not; it instead suggests that the idea of the Round Table wasn't introduced until more than a decade later, when Wace added it to Geoffrey's *History*. **Choice C is incorrect**. Although the text indicates that the Arthurian legends in Geoffrey of Monmouth's *History* differ from those in Wace's *Roman de Brut* in that Wace added the idea of the Round Table, the text doesn't compare the overall content of the Arthurian legends in the two works and doesn't indicate anything about the overall content of the legends in *Culhwch and Olwen*.

131 Correct answer **B**

Hard

‹ Back to question

B choreographers developing dances with narrative elements frequently engage dramaturges to assist in refining those elements.

Choice B is the best answer. Dramaturges help playwrights with storytelling and characterization. Choreographers often tell stories through dance, so they are also concerned with storytelling and characterization. This suggests that the fact that choreographers seek the help of dramaturges with the storytelling aspects of their dances should be "unsurprising."

Choice A is incorrect. This inference isn't supported. The beginning of the text does imply that this is true, but the end is leading to a conclusion about how choreographers use dramaturges. **Choice C is incorrect**. This inference isn't supported. The text never mentions dances by choreographers who don't incorporate narrative elements. **Choice D is incorrect**. This inference isn't supported. The text mentions in passing that directors use dramaturges to conduct research, but it never suggests that directors and actors are too reliant on them. Also, the text is leading to a conclusion about how choreographers use dramaturges.

132 Correct answer **B**

Hard

‹ Back to question

B some bacteria in *A. thaliana* leaves and roots may share a common source.

Choice B is the best answer. Both explanations suggest that the bacteria come from the same place: either they come from the ground and make their way to the leaves, or they come from above the ground and make their way to the roots.

Choice A is incorrect. This inference isn't supported. The text never discusses any benefits of any kind of bacteria. **Choice C is incorrect**. This conflicts with the text. One of the theories is that the bacteria in the leaves were deposited by rain splashing off soil. **Choice D is incorrect**. This inference isn't supported. The text only discusses "naturally occurring" bacteria. It never mentions either the harms or benefits of these bacteria.

133 Correct answer **A**

Hard

‹ Back to question

A iron production may have developed independently and relatively simultaneously in Anatolia and parts of Central Africa.

Choice A is the best answer because it most logically completes the text's discussion of the origin of iron metallurgy in Africa. The text explains that the single origin hypothesis suggests that iron metallurgy originated in Anatolia in West Asia circa 2200–2000 BCE and then spread to other parts of the world, with some advocates of this hypothesis arguing that the technology reached sub-Saharan Africa through the North African site of Carthage, where evidence of ironworking dates as far back as approximately 800–600 BCE. However, according to the text, researchers uncovered evidence of iron workshops at one Central African site, Gbabari, dating to circa 900–750 BCE—slightly before ironworking in Carthage —and at two other sites in Central Africa, Ôboui and Gbatoro, dating to as early as 2300–1900 BCE—significantly before ironworking spread to Carthage and roughly contemporaneous with its emergence in Anatolia. If iron metallurgy's presence in Central Africa preceded its presence in North Africa, then this technology likely didn't diffuse from Carthage to Central Africa. Moreover, this technology's presence in Central Africa at roughly the same period when it originated in Anatolia would require its virtually immediate diffusion across the vast distances between the two regions—a development that would have been unlikely in the ancient world. Therefore, the researchers' findings suggest that iron production may have developed independently and relatively simultaneously in Anatolia and parts of Central Africa.

Choice B is incorrect. The findings presented in the text indicate that iron metallurgy may have been occurring in Ôboui and Gbatoro as early as 2300 BCE, which is earlier than it is thought to have emerged in Anatolia, and may have been occurring in Gbabari as early as 900 BCE, which is earlier than it is thought to have arrived in Carthage as it began diffusing into Africa. These earlier instances suggest that instead of diffusing from Anatolia to Central Africa, this technology independently

emerged in Central Africa instead, spreading from the earlier iron production sites in the region to the later site. Moreover, the text doesn't indicate any differences in the iron technologies used at the two earlier sites in Central Africa and the technology used at the later site that might suggest separate origins for iron metallurgy within the region. **Choice C is incorrect** because the text discusses findings that iron metallurgy may have been occurring in Central Africa at nearly the same time as or even slightly before it emerged in Anatolia, without time for it to have spread there from Anatolia—suggesting that the technology may have independently developed in parts of Central Africa. Thus, instead of suggesting an alternate route for the diffusion of iron production into Central Africa, the findings suggest that the technology didn't arrive there by diffusion through an intermediate geographical region at all. **Choice D is incorrect**

because, as the text explains, researchers found that iron metallurgy may have been practiced at a Central African site as early as 2300–1900 BCE—a chronological range that not only predates the technology's spread from Anatolia to Carthage in North Africa circa 800–600 BCE but also overlaps with, and slightly precedes, the range assigned to its invention in Anatolia, 2200–2000 BCE. This finding suggests that instead of diffusing from Anatolia to Central Africa over a vast distance and a great expanse of time, this technology may have been independently invented by Central African civilizations at the same time as it was invented in Anatolia, if not slightly before then. Nothing in the text necessarily suggests that technology arose "much earlier" in Anatolia than the evidence there currently indicates.

134 Correct answer **C** Hard ‹ Back to question

C favored an evolutionary increase in brain size relative to body size among mammals.

Choice C is the best answer because it most logically completes the text's discussion of the evolution of mammalian brain-to-body size ratios. As the text explains, mammals evolved to fill ecological niches left vacant by the dinosaurs' extinction, and for the next ten million years, brain-to-body size ratios among mammals shrank as their bodies grew more rapidly than their brains. This decline was a natural outcome of resource abundance since increased competition for resources tends to favor intelligence and large brains, while decreased competition conversely favors large body size. Later, mammalian population sizes "swelled," resulting in intensified competition—that is, a decrease in the abundance of resources relative to population sizes. Given the relationship established between resource availability and the ratio of brain size to body size, it can be inferred that around ten million years after the dinosaurs' extinction, ecological conditions favored an evolutionary increase in brain size relative to body size among mammals—a reversal of the previous trend.

Choice A is incorrect because, as the text explains, competition for resources tends to favor intelligence and large brains, not large body size. Thus, when mammalian population sizes swelled and competition among mammals intensified, the result would have been a decrease, not an increase, in the advantage that large body size conferred on mammals in certain ecological niches. **Choice B is incorrect** because the text frames competition for resources as a selective pressure favoring intelligence and brain size relative to body size. Thus, even if competition among mammals resulted in resource deprivation, these conditions would have favored adaptation toward larger brain-to-body size and consequently greater intelligence to compete more effectively for decreased resources. **Choice D is incorrect**. The period when mammals adapted to a range of ecological niches that is under discussion in the text is the ten million years immediately following the dinosaurs' extinction, when competition for resources was low. Moreover, the text explains that increased competition tends to favor brain size, while decreased competition tends to favor body size. Thus, when competition increased, the logical outcome would have been an increase in brain size relative to body size among mammals, not a dispersal of large-brained mammals into new ecological niches, which the text states had already occurred under the very different conditions of low competition.

135 Correct answer **A** Hard ‹ Back to question

A consumers' expectations for reduced delivery times may be outstripping what is viable for delivery companies to provide.

Choice A is the best answer because it most logically completes the text's discussion of consumer expectations and the struggles delivery companies face. The text states that while consumers expect ever-faster delivery of goods, delivery companies "continue to struggle with last-mile logistics." The text further explains that innovations aimed at addressing this

challenge have a tendency to cause complications of their own. Because escalating consumer demands for speed are paired with persistent, complex delivery obstacles and new problems arising from attempted solutions, it logically follows that consumer expectations for delivery times may be exceeding what companies can feasibly provide.

Choice B is incorrect because the text doesn't address the idea of delivery volumes at all and makes it clear that companies are already aware of and trying to address consumers' expectations for delivery. Further, the challenge presented at the end of the text relates to new problems that tend to arise with solutions for logistical problems, not to a lack of understanding of what consumers want or how delivery volumes fluctuate. **Choice C is incorrect**. The text does suggest that rapid delivery is important for customer satisfaction and thus is a beneficial investment for companies, but that idea is already presented in the beginning of the text and doesn't logically follow as a conclusion from the information about innovations companies are exploring to solve last-mile logistics problems; the idea that the potential solutions tend to introduce new issues points to the feasibility of meeting consumer expectations, not to the general fact that it would be beneficial to reduce delivery times. **Choice D is incorrect** because the text doesn't suggest that there may be insufficient incentive for delivery companies to try to solve last-mile logistics problems—on the contrary, the text directly indicates that delivery companies are already actively pursuing innovations to try to address those problems, citing the example of the use of aerial drones, even though the innovations can introduce new complications.

136 Correct answer **C** Hard ‹ Back to question

C the fact that former trial volunteers went through the same experience that participants were contemplating while doctors did not was more important to participants than the doctors' status as credentialed experts was.

Choice C is the best answer because it presents the conclusion that most logically follows from the text's discussion of how participants considered messages from former trial volunteers and doctors. The text first establishes that information coming from credentialed experts typically increases the credibility of that information. However, the text goes on to describe a situation that goes against this expectation: the messages from previous trial volunteers were judged as more credible than the messages from licensed doctors when recruiting clinic trial participants. The text then goes on to speculate as to why this may have been the case, stating that participants likely considered the messages from the former trial volunteers to be more convincing than the messages from the doctors because the former trial volunteers were perceived as having undergone the same experience that the participants were considering. It is reasonable to infer, then, that participants regarded the former trial volunteers' direct experience as more important to their decision-making than the doctors' status as credentialed experts.

Choice A is incorrect because the text does not provide any indication as to the content or the tone of the messages provided by either the doctors or the former trial volunteers regarding the clinical trials. **Choice B is incorrect**. Since the study participants had not themselves participated in the clinical trial, they could not rely on their experience to evaluate the credibility of either the former trial volunteers or the doctors. **Choice D is incorrect**. While the text does establish that the participants likely considered the messages from both the doctors and the former trial volunteers, it does not suggest that the participants doubted the doctors' credentials. Rather, the text speculates that participants may have given the experiences of the former trial volunteers more importance than the doctors' credentials when considering the recruitment messages.

137 Correct answer **C** Hard ‹ Back to question

C *S. caninervis* growing under quartz crystals experience lower light intensity and are thus able to retain more moisture.

Choice C is the best answer because it most logically completes the text. The text explains that while desert moss species need sufficient sunlight for photosynthesis, exposure to sunlight can also affect the plants negatively by drying them out. Ekwealor and Fisher's team found specimens of *S. caninervis* moss growing under quartz crystals that were semitransparent, allowing some but not all sunlight to pass through them, and the shoot tissue of these specimens was longer than that of *S. caninervis* specimens found growing on the surface that were unprotected by such crystals. Since, as the text explains, the length of shoot tissue is an indicator of plant growth, and since greater exposure to sunlight results in greater loss of moisture,

it can be inferred that *S. caninervis* growing under quartz crystals experience lower light intensity and are thus able to retain more moisture.

Choice A is incorrect because the text doesn't mention another moss species besides *S. caninervis* or discuss whether other such species are able to grow under transparent crystals, as *S. caninervis* is. **Choice B is incorrect** because, as the text explains, specimens of *S. caninervis* were found growing under quartz crystals and exhibited more plant growth than specimens growing on the soil surface. This wouldn't have been the case if the crystals transmitted insufficient light for the moss's photosynthesis. **Choice D is incorrect**. The text contrasts the growth of *S. caninervis* specimens found beneath semitransparent quartz crystals with that of specimens found on the soil surface absent such crystals, but it doesn't make a comparison among specimens growing beneath crystals of different degrees of thickness or consider how the relative thickness of the crystals affects the growth of the moss.

138 Correct answer **C** Hard ‹ Back to question

C functioned as a way for craft guild members to maintain and enhance their professional reputations among their peers.

Choice C is the best answer because it logically completes the text's discussion of the role of gift giving among members of guilds in early modern London. According to the text, members of these guilds participated in a culture where giving gifts "both signaled and conferred social status"—that is, it indicated people's social standing and also gave them social standing—and occurred in the forms of both philanthropic gifting (donations for humanitarian purposes) by large guilds, which much research has focused on, and the gifting of handmade items between craft guild members, which Kilburn-Toppin focuses on. The text indicates that Kilburn-Toppin characterizes craft guild members as people who made and consumed items and were "highly discerning," or were careful judges of quality. Because gift giving benefited one's status and if craft guild members were particularly attentive to quality, it follows that gifting handmade items within the guilds—between people who had high standards for items they made and for items they received—may have been a way for members to maintain and enhance their professional reputations, or their professional statuses, among their peers.

Choice A is incorrect because the text emphasizes the idea that members of guilds participated in gift giving both to display and receive social status, suggesting that the gifting of handmade items between the "highly discerning" members of craft guilds had to do with the members' interest in quality and status; nothing in the text suggests that the practice of gifting those items within the craft guilds was intended to limit knowledge of materials and techniques to the members of those guilds. **Choice B is incorrect** because the text doesn't distinguish between "ostentatious," or very showy, and "prosaic," or ordinary, gifts and because the characterization at the end of the text pertains specifically to the gifting of handmade items indicative of great taste, not prosaic items, between members of craft guilds. And while the text indicates that London's largest guilds gave philanthropic gifts (donations for humanitarian purposes), it doesn't indicate whether these gifts would have been considered ostentatious. **Choice D is incorrect** because the characterization presented at the end of the text pertains specifically to the "highly discerning" members of craft guilds giving their handmade items as gifts to one another within the craft guilds; the text doesn't suggest anything about gifting those items to members of London's largest guilds or how that might affect status differently from giving them to other craft guild members.

139 Correct answer **B** Hard ‹ Back to question

B a lake existed at the Murray Formation for a prolonged period, though the lake occasionally experienced drying and there were periods in which one or more streams were present.

Choice B is the best answer because it most logically completes the text's discussion of the sediments found at the Gale Crater's Murray Formation on Mars. The text states that data gathered by the *Curiosity* rover suggest that bodies of water deposited sediment on Mars's surface long ago. The text goes on to say that studying the sediment, Rivera-Hernández et al. found some coarse grains they believe are sandstone, which tends to be left by flowing water, and many more fine grains they believe are mudstone, which tends to slowly sink in low-flow water. The text further indicates that the researchers noted cracks in the fine grains that suggest there were cycles of desiccation, or drying, at the site. Taken together, this information

suggests that a lake (a body of low-flow water) existed at the site for a prolonged period but occasionally experienced drying and that there were periods in which one or more streams (flowing water) were present, since the extended existence of a lake would account for the abundance of fine grains, periods of drying would account for the cracks in the fine grains, and periods with streams would account for the sections of coarse grains.

Choice A is incorrect because the text indicates that an abundance of fine grains of sediment was found at the Murray Formation site, which suggests that a low-flow water source (such as a lake) *was* present. Further, the text makes no mention of where the water at the site may have originated from. **Choice C is incorrect** because the evidence described in the text doesn't support the idea that there were streams at the Murray Formation for an extended period and a lake for just a short time. The abundance of fine grains suggests that a lake (a body of low-flow water) was present for an extended time, not just a short time, and the sections of coarse grains suggest that one or more streams (bodies of flowing water) were intermittently present while the lake existed, not at a separate time. **Choice D is incorrect**. Although the text suggests that both a low-flow body of water (such as a lake) and flowing water (such as streams) existed at the Murray Formation site, meaning that there could have been a stream-fed lake, the text explains that the fine grains that signify the presence of a lake exhibit cracking that indicates periods of desiccation, or drying, which suggests that a lake was present but *did* occasionally dry out.

140 Correct answer **C** — Hard — ‹ Back to question

C the occurrence of blue head plumage in adult female jacobins is driven by one or more factors not associated with mate attraction.

Choice C is the best answer because it most logically completes the text's discussion of researchers' observations of white-necked jacobin hummingbird females that retain blue head plumage into adulthood. The text indicates that even though adult males show a clear preference in mate selection for adult females with drab green feathers, a significant percentage of adult females (28%) retain blue head plumage. Critically, the text also notes that the mating advantage conferred on adult females by green head plumage is offset by the fact that when competing for resources, adult males behave more antagonistically toward green-feathered adult females than toward blue-feathered ones. Given this discrepancy in the males' behavior, it is reasonable to hypothesize that the occurrence of blue head plumage in adult females is driven by factors not associated with mate attraction—specifically, reduced antagonism during resource competition.

Choice A is incorrect because the antagonistic behavior discussed in the text is that displayed by adult male jacobins toward blue-feathered and green-feathered adult females, not toward juveniles. The text doesn't discuss the behavior of adult males toward juveniles. **Choice B is incorrect**. Although the text cites the current percentage (28%) of female white-necked jacobin hummingbirds that retain blue plumage into adulthood, it doesn't make predictions about future changes in the proportion of blue to green plumage in this species or provide information supporting such a prediction. **Choice D is incorrect** because the text doesn't discuss the perceptual abilities of green-feathered adult females or whether they can distinguish between adult males and blue-feathered adult females. Instead, the text focuses on adult male behavior—namely, mate selection and antagonism toward adult females.

13	Notes	204 questions	1312

THE ONE RULE

Grammar has one rule that matters more than any other, and it is repeated before every grammar practice set:

You only need to read the sentence with the blank.

11 Grammar

Standard English conventions

Grammar follows rules, so you can get all of it right. It covers sentence structure, commas, other punctuation, the important rules and the common writing mistakes. The full toolkit follows this page.

421 questions | 160 Easy | 103 Medium | 158 Hard

THE ONE RULE *You only need to read the sentence with the blank.*

THE FIVE HABITS

1. Read to the full stop before you look at the choices.
2. Cross out everything between the subject and the verb, then read those two words side by side.
3. Cover the blank and read each side on its own. Two whole sentences need more than a comma.
4. After an opening description, check the very first noun that follows the comma.
5. Before any apostrophe, ask whether something is owned and by how many.

WHAT TO TAKE FROM THIS

- None of the habits is a rule. All of them are things you do with your eyes and your pencil.
- Nothing on that list is about how a sentence sounds. The moment a question feels hard, the ear is the first thing to switch off.
- A hard question does not use a new rule. It uses the rules you already know and hides them behind something that makes you answer the wrong way.

Grammar Toolkit	**914**

Grammar Toolkit

Every rule from the grammar chapters of *Reading Writing Professor*, in one place.

THE ONE RULE *You only need to read the sentence with the blank.*

Sentence Structure

Clause or phrase

A clause has a subject and a verb. A phrase does not: it is missing the subject, or the verb, or both.

An independent clause can stand alone as a sentence. A dependent clause cannot. Put *although* · *after* · *because* · *before* · *if* · *since* · *unless* · *until* · *when* · *while* · *whereas* in front of an independent clause and it can no longer stand alone.

The five joins

independent **.** independent — The museum extended its hours. Attendance doubled.

independent **,** **and** independent — The museum extended its hours, and attendance doubled.

independent **;** independent — The museum extended its hours; attendance doubled.

dependent **,** independent — After the museum extended its hours, attendance doubled.

independent dependent (no comma) — Attendance doubled after the museum extended its hours.

FANBOYS

For · And · Nor · But · Or · Yet · So. These seven are the only words a comma may pair with to join two independent clauses. Memorise them.

A semicolon does the same work as a period, so the SAT never asks you to choose between them. If you see both offered, the answer is somewhere else.

Why the comma splice catches people

A comma splice reads smoothly; your ear approves it. Do not test these by ear. Cover the comma and read each side alone. If both sides can stand as sentences, a comma alone is not enough.

Commas

The four uses

1. Comma plus FANBOYS to join two independent clauses. The comma goes before the FANBOYS word, never after it.

2. Dependent clause first, then a comma. Reverse the order and the comma disappears.

3. Unnecessary information: commas at both ends, unless it sits at the very end of the sentence.

4. Listing: items in a list of more than two, including before the final *and*; and two or more adjectives that modify the same noun.

The crossing-out test

Cross the information out and read what is left. If it is still a whole sentence and still means the same thing, the commas are right.

× The bookshelf, leaning against the wall blocked the door.

✓ The bookshelf, leaning against the wall, blocked the door.

Which and that

If the words tell you *which one*, they are doing real work: no commas. Every sentence with *which* has commas; every sentence with *that* has none.

✓ The shirts that need ironing are on the chair.

✓ Our dogs, which bark all night, are hopeless guards.

Names

How many people could the words in front of the name describe? More than one and the name stays bare. Exactly one and the name gets commas around it.

✓ Novelist Zadie Smith teaches writing in New York.

✓ Her best friend, Amara, organised the whole party.

Places

A two-part place name takes a comma between the parts and another after the second part. The one after is the one students forget.

✓ She grew up in Boise, Idaho, before moving east.

Words dropped into a sentence

However, therefore, instead, as a result, for example are extra, so they take commas. But if there is a full sentence on each side of the word, one side has to take a semicolon.

✓ The budget was approved in March; however, the work has not started.

Remember

Anything opening the sentence gets a comma after it. Anything in the middle or at the end gets commas only if the sentence still works once you cross it out.

Other Punctuation

Semicolons

A semicolon is a period. Swap it for a full stop: if both halves stand on their own as sentences, the semicolon is right.

The one exception is a list whose items already contain commas. Then semicolons separate the items. A semicolon just before *and* or *or* in a choice almost always means a list question.

Colons

A colon introduces something: a list, a single item, an example, an explanation or a definition.

Rule 1 · What comes before it must be a sentence. × The shop sells: bread, cheese and olives.

Rule 2 · Nothing new after it. The sentence cannot move on to a new subject.

Rule 3 · Never with *including*, *such as* or *for example*. Use a comma instead.

A colon can join two complete sentences when the second explains or defines the first.

Dashes

A pair of dashes is a pair of commas. Whatever you open with, you must close with: never one of each.

One dash is a colon, and what comes before it must be a whole sentence.

Apostrophes

One owner: add **'s**. Several owners, word already ends in s: put the apostrophe after the s. Several owners, word does not end in s: **'s**.

Before you put an apostrophe anywhere, check whether the next word is actually something being owned.

its · hers · yours · ours · theirs · whose never take an apostrophe. *it's* = it is, *they're* = they are, *who's* = who is.

Quotation and question marks

Spoken words take a comma between the speaking and the quote. Quoted words that nobody is saying take nothing.

When some choices end in a question mark, decide whether anybody is being asked something. *Wondered*, *asked herself* and *was unsure* almost always mean no.

Important Rules

Hidden independent clauses

Long sentences often hide a second complete sentence at the very end. A comma late in the sentence with a full sentence after it is already doing a job, so the blank cannot be a comma too. Read to the full stop.

Comma plus FANBOYS needs a complete sentence on both sides; a dependent clause followed by an independent one counts. When the choices split the sentence at different points, ask which half the middle phrase makes sense with, attach it there, then punctuate what is left.

Finding the subject

The subject is never inside extra information, and never inside a phrase that starts with a preposition. Cross those out and the subject is what is left.

Group words are singular: class, committee, team, jury, herd, group, staff. After *There*, *Here* or an opening -ing/-ed phrase, the subject comes after the verb.

Two tricks: plug in a pronoun (it / they), and look for the odd one out when the choices differ only in number.

Verb tense

Read the sentences around it: the paragraph sets the tense. Keep it simple: never choose a complicated tense when a simple one does the job. Two times in one sentence need has, have or had. Find the time word first.

Pronouns

A pronoun has to match whatever it stands in for. Find that word first, then match the number. *Each, every, either, neither, anyone, everyone, nobody* are all singular.

Modifiers

A describing phrase has to sit next door to the thing it describes. At the front of a sentence, whatever comes first after the comma is what the phrase describes.

× Consistently erupting, Jack loves photographing Old Faithful.

✓ Consistently erupting, Old Faithful is Jack's favourite subject.

Parallel structure and matched pairs

Whenever you see a list, check the shapes. Lists of two are the trap. *neither ... nor, either ... or, not only ... but also, both ... and*: whatever shape follows the first half must follow the second half too.

Comparisons

Compare like with like. A comparison word (more, less, better, than, unlike) or *that of / those of* in a choice means a comparison question, and *that of / those of* is usually the repair.

The Eight Common Mistakes

1 · Answering by ear

A pause feels like a comma. Fix: cover the blank and read each side on its own.

2 · Grabbing the nearest noun

The verb gets matched to the word beside it. Fix: cross out everything between the subject and the verb.

3 · An apostrophe because a word ends in s

Fix: ask two questions in order. Is anything owned? How many owners?

4 · Checking whether it is true, not what it describes

After an opening describing phrase, every choice is usually true. Fix: the thing doing the describing must come first after the comma.

5 · Picking the smoothest-sounding choice

Three choices say the same thing in different shapes. Fix: check who is doing the action and put them right after the comma.

6 · Choosing a fancier verb form

Fix: read the two verbs back to back. Same shape, same subject. Nothing more elaborate is needed.

7 · Letting a nearby plural steal the pronoun

Fix: point at the exact word the pronoun replaces, then expand *it's* to *it is* and test it.

8 · Treating a small word as if it needed only commas

Rather, however, therefore. Fix: cross the word out. Two whole sentences means one side needs a semicolon.

416 Mark for Review Hard Explanation ›

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) are
(B) is
(C) were
(D) have been

In 1453, English King Henry VI became unfit to rule after falling gravely ill. As a result, Parliament appointed Richard, Third Duke of York, who had a strong claim to the English throne, to rule as Lord Protector. Upon recovering two years later, _____ forcing an angered Richard from the royal court and precipitating a series of battles later known as the Wars of the Roses.

ID dfbf5d33

417 Mark for Review Hard Explanation ›

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) Henry resumed his reign,
(B) the reign of Henry resumed,
(C) Henry's reign resumed,
(D) it was Henry who resumed his reign,

A model created by biologist Luis Valente predicts that the rate of speciation—the rate at which new species form—on an isolated island located approximately 5,000 kilometers from the nearest mainland _____ triple the rate of speciation on an island only 500 kilometers from the mainland.

ID 3daf126e

418 Mark for Review Hard Explanation ›

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) being
(B) to be
(C) to have been
(D) will be

Instead of sleeping on soft pillows, ancient Egyptians slept on hard, elevated headrests, their design _____ airflow, protection from insects, and hairstyle maintenance over comfort.

ID 81f09e07

419 Mark for Review Hard Explanation ›

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) had prioritized
(B) was prioritizing
(C) prioritized
(D) prioritizing

A species of *Byropsis* algae produces toxins to avoid being eaten by predators. However, in some cases, the toxins the organism uses to protect itself from predation actually _____ its attractiveness to predators. The Hawaiian sea slug, for example, not only tolerates *Byropsis* toxins but actually uses them for protection in the same way the algae does.

Explanations

A Boundaries (Punctuation)

213 questions

1 Correct answer **A** — Easy — Back to question

A writers

Choice A is the best answer. The convention being tested is punctuation between a subject and a verb. When, as in this case, a subject (“Generations of mystery and horror writers”) is immediately followed by a verb (“have been influenced”), no punctuation is needed.

Choice B is incorrect because no punctuation is needed between the subject and the verb. **Choice C is incorrect** because no punctuation is needed between the subject and the verb. **Choice D is incorrect** because no punctuation is needed between the subject and the verb.

2 Correct answer **C** — Easy — Back to question

C where sound is made.

Choice C is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence ("the reed of a wind instrument is the mouthpiece") that ends with a prepositional phrase ("where sound is made").

Choice A is incorrect. It’s unconventional to use a question mark to punctuate a declarative sentence. **Choice B is incorrect**. The structure requires that the sentence continue as a declarative clause, not end with an interrogative clause. **Choice D is**

incorrect. The structure requires that the sentence continue as a declarative clause and end with a period, not end with an interrogative clause and a question mark.

3 Correct answer **D** Easy Back to question

D people perceive acts of kindness.

Choice D is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence that asks an indirect question ("Researchers Amit Kumar and Nicholas Epley investigated how people perceive acts of kindness").

Choice A is incorrect. The structure of the sentence requires a declarative clause at the end of the sentence that states what Kumar and Epley did, not an interrogative clause that asks a direct question, such as "how do people perceive acts of kindness." **Choice B is incorrect**. The structure of the sentence requires a declarative clause at the end of the sentence that states what Kumar and Epley did, not an interrogative clause that asks a direct question, such as "how do people perceive acts of kindness?" **Choice C is incorrect**. It's unconventional to use a question mark in this way to punctuate a declarative sentence that asks an indirect question, such as "Researchers...kindness."

4 Correct answer **D** Easy Back to question

D fibers, but

Choice D is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "but" to join the first main clause ("Human-made...fibers") and the second main clause ("the manufacture...water").

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice B is incorrect** because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice C is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

5 Correct answer **B** Easy Back to question

B time, but

Choice B is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "but" to join the first main clause ("Scientists...time") and the second main clause ("the Lund...otherwise").

Choice A is incorrect because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice D is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

6 Correct answer **D**

Easy

‹ Back to question

D are they able to move so fast?

Choice D is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the interrogative sentence “how are they able to move so fast?” The interrogative sentence asks a direct question, and the next sentence answers it.

Choice A is incorrect because the context requires an interrogative sentence. The exclamative sentence “how they are able to move so fast!” emphasizes the penguin’s high rate of speed, but it doesn’t set up the next sentence’s explanation of how the penguins achieve such speeds. **Choice B is incorrect** because a period can’t be used in this way to punctuate an interrogative sentence. **Choice C is incorrect** because the context requires an interrogative sentence. The exclamative sentence “how they are able to move so fast” emphasizes the penguin’s high rate of speed, but it doesn’t set up the next sentence’s explanation of how the penguins achieve such speeds.

7 Correct answer **B**

Easy

‹ Back to question

B their use could be better regulated.

Choice B is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence that asks an indirect question ("The toxic nature of some of these materials recently led a team from the University of Sheffield to investigate how their use could be better regulated").

Choice A is incorrect because the structure requires a period and a declarative clause at the end of the sentence that states what the team investigated, not an interrogative clause that asks a direct question, such as "how could their use be better regulated?" **Choice C is incorrect** because it’s unconventional to use a question mark in this way to punctuate a declarative sentence. **Choice D is incorrect** because the structure requires a declarative clause at the end of the sentence that states what the team investigated, not an interrogative clause that asks a direct question, such as "how could their use be better regulated?"

8 Correct answer **D**

Easy

‹ Back to question

D life,

Choice D is the best answer. Notice that "the sanctity of animal life" is the first item in a list of three things. We must use a comma to separate the first two items in the list, just as a comma is used to separate "the just treatment of the elderly" and "the abolition of the slave trade."

Choice A is incorrect. This choice creates a punctuation error. Notice that "the sanctity of animal life" is the first item in a list of three things. To appropriately format the list, we need punctuation to separate each item. **Choice B is incorrect**. This choice creates a punctuation error. Notice that "the sanctity of animal life" is the first item in a list of three things. While semicolons are sometimes used to separate list items, this list uses commas to separate the other list items, and lists must use the same punctuation throughout. **Choice C is incorrect**. This choice creates a punctuation error. Notice that "the sanctity of animal life" is the first item in a list of three things. While colons can be used to introduce lists, they can’t be used to separate items within a list.

9 Correct answer **D** Easy ‹ Back to question

D during

Choice D is the best answer. The convention being tested is punctuation use between a preposition and its complement. No punctuation is needed between the preposition "during" and its complement "the Late Cretaceous." The complement completes the meaning of the preposition in the phrase "deposited during the Late Cretaceous," and any punctuation between the two results in an ungrammatical sentence.

Choice A is incorrect because no punctuation is needed between the preposition and its complement. **Choice B is incorrect** because no punctuation is needed between the preposition and its complement. **Choice C is incorrect** because no punctuation is needed between the preposition and its complement.

10 Correct answer **B** Easy ‹ Back to question

B of

Choice B is the best answer. "Themes of childhood" is one noun phrase, with "themes of" implicitly carrying over to the other items on the list ("themes of childhood, [themes of] womanhood, and [themes of] Chinese American identity").

Choice A is incorrect. This choice inappropriately breaks up the introduction of a list. Also, "In her book...themes of" is not an independent clause, thanks to the dangling "of" at the end, so it can't precede a colon. **Choice C is incorrect**. This choice inappropriately breaks up the introduction of a list. Also, "In her book...themes of" is not an independent clause, thanks to the dangling "of" at the end, so it can't precede a single dash. **Choice D is incorrect**. This choice inappropriately breaks up the introduction of a list. "Themes of" implicitly carries over to each item on the list ("themes of childhood, [themes of] womanhood, and [themes of] Chinese American identity"), so we don't want to use a comma to separate it.

11 Correct answer **B** Easy ‹ Back to question

B content,

Choice B is the best answer. The convention being tested is punctuation between a subordinate clause and a main clause. This choice correctly uses a comma to mark the boundary between the subordinate clause ("Because...content") and the main clause ("scientists...settlements").

Choice A is incorrect. Joining the subordinate clause ("Because...content") and the clause that follows ("scientists...settlements") with the conjunction "and" results in an ungrammatical sentence that lacks a main clause. **Choice C is incorrect** because it fails to mark the boundary between the subordinate clause and the main clause with appropriate punctuation. **Choice D is incorrect**. Joining the subordinate clause ("Because...content") and the clause that follows ("scientists...settlements") with a comma and the conjunction "and" results in an ungrammatical sentence that lacks a main clause.

12 Correct answer **D** Easy ‹ Back to question

D *Stars*, an

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to mark the boundary between the main clause ("The short...*Stars*") and the supplementary element ("an anthology...descent") that provides additional information about what *Reclaim the Stars* is.

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with "an anthology." **Choice B is incorrect**. Joining the main clause and the following supplementary element with the conjunction "while" results in a confusing and ungrammatical sentence. **Choice C is incorrect** because it fails to mark the boundary between the main clause and the supplementary element with appropriate punctuation.

13 Correct answer **D** Easy Back to question

D most people prefer in a diet drink.

Choice D is the best answer. This sentence is a statement: “Moskowitz was hired by a soda company to determine how much artificial sweetener most people prefer in a diet drink.” So a period is the most appropriate punctuation mark.

Choice A is incorrect. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This sentence is not a question—it’s a statement. So a question mark is not the appropriate punctuation. **Choice B is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. We already have the verbs “was hired…to determine” in this sentence. The verb “do” is not needed and results in a confusing, ungrammatical sentence. **Choice C is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This sentence is not a question—it’s a statement. So a question mark is not the appropriate punctuation.

14 Correct answer **C** Easy Back to question

C cricket, but

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma before the coordinating conjunction "but" to join the first main clause ("This bat-and-ball game was derived from cricket") and the second main clause ("kilikiti differs from cricket in a few key ways").

Choice A is incorrect. When coordinating two main clauses such as these, it’s not conventional to use a colon in this way after the coordinating conjunction. **Choice B is incorrect**. When coordinating two main clauses such as these, it’s not conventional to use a comma in this way after the coordinating conjunction. **Choice D is incorrect**. When coordinating two main clauses such as these, it’s not conventional to use a comma in this way after the coordinating conjunction.

15 Correct answer **A** Easy Back to question

A value, but

Choice A is the best answer. The convention being tested is the coordination of independent clauses within a sentence. An independent clause is a phrase containing a subject and a verb that can stand on its own as a sentence. This choice uses a comma and the coordinating conjunction “but” to join the first independent clause (“underlines…lower a book’s value”) and the second independent clause (“such markings…can be a gold mine to scholars”) to create a compound sentence.

Choice B is incorrect because it results in a run-on sentence. The two independent clauses are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it results in a comma splice. A comma can’t be used in this way to mark the boundary between two independent clauses. **Choice D is incorrect** because a comma is needed to mark the boundary between two coordinated independent clauses.

16 Correct answer **C** Easy ‹ Back to question

C percent. Such

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after “percent” is used correctly to mark the boundary between one sentence (“After...percent”) and another (“Such...up”).

Choice A is incorrect because it results in a comma splice. A comma can’t be used in this way to mark the boundary between sentences. **Choice B is incorrect**. Without a comma preceding it, the conjunction “and” can’t be used in this way to join sentences. **Choice D is incorrect** because it results in a run-on sentence. The sentences (“After...percent” and “Such...up”) are fused without punctuation and/or a conjunction.

17 Correct answer **A** Easy ‹ Back to question

A of

Choice A is the best answer. The convention being tested is punctuation between a preposition and its complement. No punctuation is needed between the preposition “of” and its complement, the noun phrase “healing, self-discovery, and memory.”

Choice B is incorrect because no punctuation is needed between a preposition and its complement. **Choice C is incorrect** because no punctuation is needed between a preposition and its complement. **Choice D is incorrect** because no punctuation is needed between a preposition and its complement.

18 Correct answer **B** Easy ‹ Back to question

B called

Choice B is the best answer. The convention being tested is punctuation use between a verb and its complement. No punctuation is needed between the verb “is called” and its complement “the chromophore.” The complement helps complete the idea of the verb—in this case, it explains what the part of a compound that determines the compound’s color is called—and any punctuation between the two results in an ungrammatical sentence.

Choice A is incorrect because no punctuation is needed between the verb and its complement. **Choice C is incorrect** because no punctuation is needed between the verb and its complement. **Choice D is incorrect** because no punctuation is needed between the verb and its complement.

19 Correct answer **B** Easy ‹ Back to question

B asteroids, several

Choice B is the best answer. This choice uses a comma to correctly separate the dependent clause "although...asteroids" from the independent clause "several hundred have been...Mars."

Choice A is incorrect. This choice results in a sentence fragment. "Although...asteroids" is a dependent clause. It can’t stand on its own as a sentence, which means it can’t end in a period. **Choice C is incorrect**. This choice results in a punctuation error. "Although...asteroids" is a dependent clause and can’t be joined to the independent clause "several hundred have been...Mars" with a semicolon. A semicolon can only join two independent clauses. **Choice D is incorrect**. This choice creates a punctuation error. A colon can only come after an independent clause, but "although...asteroids" is a dependent clause.

20 Correct answer **C**

Easy

‹ Back to question

C that,

Choice C is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The comma after “that” pairs with the comma after “roles” to separate the supplementary element “among their many roles” from the rest of the sentence. This supplementary element functions to clarify that polyphenols have many roles, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a dash can’t be paired with a comma to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because a semicolon can’t be paired with a comma to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because a colon can’t be paired with a comma to separate the supplementary element from the rest of the sentence.

21 Correct answer **C**

Easy

‹ Back to question

C from

Choice C is the best answer. The convention being tested is punctuation use within a sentence. No punctuation is needed between the preposition “from” and the noun phrase beginning with “a collection.” The word “from” introduces a prepositional phrase that modifies the noun “pages” and provides essential information about the pages’ origin.

Choice A is incorrect. No punctuation is needed within the prepositional phrase beginning with “from.” **Choice B is incorrect**. No punctuation is needed within the prepositional phrase beginning with “from.” **Choice D is incorrect**. No punctuation is needed within the prepositional phrase beginning with “from.”

22 Correct answer **C**

Easy

‹ Back to question

C century, but

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and a coordinating conjunction ("but") to join the first main clause ("Leibniz...century") and the second main clause ("these ingenious...calculators").

Choice A is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. **Choice D is incorrect** because joining the two main clauses in this way with the subordinating conjunction "that" results in an ungrammatical and illogical sentence.

23 Correct answer **B**

Easy

‹ Back to question

B Swentzell,

Choice B is the best answer. The phrase “according to Swentzell” is an aside that interrupts the flow of the sentence, so it needs to be separated from the sentence with a pair of matching punctuation marks: two commas, two dashes, or a pair of parentheses. We already have a comma before “according,” so we must add a comma after “Swentzell.” .

Choice A is incorrect. This choice creates a punctuation error. The phrase “according to Swentzell” is an aside that interrupts the flow of the sentence, so it needs to be separated from the sentence with a pair of matching punctuation marks: one before and one after the phrase. **Choice C is incorrect**. This choice creates a punctuation error. “The arrangement of the figures,

according to Swentzell" is not an independent clause, so it can't come before a colon. **Choice D is incorrect**. This choice creates a punctuation error. The phrase "according to Swentzell" is an aside that interrupts the flow of the sentence, so it needs to be separated from the sentence with a pair of matching punctuation marks. We already have a comma at the beginning, so we have to use another comma here to match. We can't just switch to a dash! .

24 Correct answer **A** Easy Back to question

A offense. According

Choice A is the best answer. "Nine months...offense" and "according to...system" are both independent clauses. Separating them with a period and turning them into their own sentences is the only grammatically correct choice among the provided options.

Choice B is incorrect. This choice results in a comma splice error, which is a punctuation error that occurs when two independent clauses are joined by only a comma. "Nine months...offense" and "according to...system" are both independent clauses, so they need to be either joined by a semicolon, joined by a comma and a coordinating conjunction, or separated by a period. **Choice C is incorrect**. This choice results in a run-on sentence, which occurs when two independent clauses are joined without punctuation. "Nine months...offense" and "according to...system" are both independent clauses, so they need to be either joined by a semicolon, joined by a comma and a coordinating conjunction, or separated by a period. **Choice D is incorrect**. This choice results in a run-on sentence, which occurs when two independent clauses are joined without punctuation. "Nine months...offense" and "according to...system" are independent clauses, so we would need to put a comma before the coordinating conjunction "and" to join them properly.

25 Correct answer **D** Easy Back to question

D decade, while

Choice D is the best answer. The convention being tested is punctuation between a main clause and a subordinate clause. This choice correctly uses a comma to mark the boundary between the main clause ("the colorful...decade") and the subordinate clause ("while...centuries") that provides contrasting information about the life span of rougheye rockfish.

Choice A is incorrect because a colon can't be used in this way to join a main clause and a subordinate clause. **Choice B is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "while." **Choice C is incorrect** because a semicolon can't be used in this way to join a main clause and a subordinate clause.

26 Correct answer **B** Easy Back to question

B do consumers actually prefer this simpler style?

Choice B is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the interrogative clause "do consumers actually prefer this simpler style," which asks a direct question at the end of the sentence. This is the question that the researchers in the next sentence were trying to investigate.

Choice A is incorrect because the context requires an interrogative clause. The declarative clause "consumers actually do prefer this simpler style" incorrectly indicates the consumers' preference was already known, whereas the researchers had yet to find this out. **Choice C is incorrect** because a period can't be used in this way to punctuate an interrogative clause at the end of a sentence. **Choice D is incorrect** because a question mark can't be used in this way to punctuate a declarative clause, such as "consumers actually do prefer this simpler style," at the end of a sentence.

27 Correct answer **A** Easy ‹ Back to question

A configurations. TMAO

Choice A is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after “configurations” is used correctly to mark the boundary between one sentence (“The intense...configurations”) and another (“TMAO...fish”). The supplementary phrase (“ensuring...configurations”) modifies the main clause of the first sentence (“The chemical...effect”), and “TMAO” is the subject of the second sentence.

Choice B is incorrect because it results in a run-on sentence. The sentences (“The intense...configurations” and “TMAO...fish”) are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it results in a comma splice. A comma can’t be used in this way to mark the boundary between sentences. **Choice D is incorrect**. Without a comma preceding it, the conjunction “and” can’t be used in this way to join sentences.

28 Correct answer **B** Easy ‹ Back to question

B movement, which

Choice B is the best answer. This choice correctly uses commas to set off the nonessential relative clause "which is known as Brownian motion" that provides extra information about the "random, continuous movement" that isn’t necessary for the function of the sentence.

Choice A is incorrect. This choice results in a punctuation error. The relative clause "which is known as Brownian motion" is a nonessential supplement. Nonessential supplements need to be set apart from the rest of the sentence with a pair of commas, dashes, or parentheses, so we can’t use a colon here. Also, notice that colons can only come after an independent clause, which isn’t the case here. **Choice C is incorrect**. This choice results in a punctuation error. The relative clause "which is known as Brownian motion" is a nonessential supplement, so it should be separated from the rest of the sentence by a pair of matching punctuation marks. We already have a comma after "motion," so we need to add a comma before "which." This choice is missing that comma. **Choice D is incorrect**. This choice results in a sentence fragment. "This type of random, continuous movement" is not an independent clause and can’t stand alone as a full sentence, so we can’t put a period here.

29 Correct answer **D** Easy ‹ Back to question

D libraries, train

Choice D is the best answer. The convention being tested is the punctuation of items in a simple series. The comma after "libraries" is used conventionally to separate the first and second items ("libraries" and "train stations") in the series.

Choice A is incorrect because it fails to separate the first two items ("libraries" and "train stations") in the series. **Choice B is incorrect** because a colon can’t be used in this way to separate items in a simple series. **Choice C is incorrect** because a dash can’t be used in this way to separate items in a simple series.

30 Correct answer **B** Easy ‹ Back to question

B skeptical, but

Choice B is the best answer. There are two independent clauses in the sentence, each with a subject and a verb: "many...were skeptical" and "historians have determined...." These clauses can be grammatically joined by a comma and the coordinating conjunction "but."

Choice A is incorrect. This choice results in a run-on sentence, which occurs when two independent clauses are joined without punctuation. Two independent clauses can't be joined by just the coordinating conjunction "but." A comma would also be required. **Choice C is incorrect**. This choice creates a punctuation error called a comma splice. This sentence contains two independent clauses ("Many...were skeptical" and "historians have determined..."). A comma alone can't join two independent clauses. That requires a comma and a coordinating conjunction. **Choice D is incorrect**. This choice results in a run-on sentence, which occurs when two independent clauses are joined without punctuation. This sentence contains two independent clauses ("Many...were skeptical" and "historians have determined..."), which need to be either joined by a semicolon, joined by a comma and a coordinating conjunction, or separated by a period.

31 Correct answer **B** Easy < Back to question

B themselves,

Choice B is the best answer. The convention being tested is the punctuation of items in a series. The comma after "themselves" is used conventionally to separate the first item ("they can clone themselves") and the second item ("enter a dormant state in times of drought") in the series of things mosses can do.

Choice A is incorrect because a semicolon can't be used in this way to separate items in a simple series such as this. **Choice C is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "And enter." **Choice D is incorrect** because it fails to use appropriate punctuation to separate the first and second items in the series.

32 Correct answer **D** Easy < Back to question

D blend with

Choice D is the best answer. The convention being tested is punctuation between a verb and a prepositional phrase. No punctuation is needed between the verb "blend" and the prepositional phrase "with Charlie Adams's delightfully catchy vocal melodies." The prepositional phrase completes the idea of the sentence, explaining with what Koperqualuk's guitar riffs blend.

Choice A is incorrect because no punctuation is needed between the verb and the prepositional phrase. **Choice B is incorrect** because no punctuation is needed between the verb and the prepositional phrase. **Choice C is incorrect** because no punctuation is needed between the verb and the prepositional phrase.

33 Correct answer **B** Easy < Back to question

B company that

Choice B is the best answer. The convention being tested is the use and punctuation of an integrated relative clause. This choice correctly uses the relative pronoun "that" and no punctuation to create an integrated relative clause that provides essential information about the noun phrase ("a book packaging company") that it modifies.

Choice A is incorrect because it doesn't use a relative pronoun to link the verb phrase beginning with "specializes" to the noun phrase that it modifies ("a book packaging company"). **Choice C is incorrect** because it doesn't use a relative pronoun to link the verb phrase beginning with "specializes" to the noun phrase that it modifies ("a book packaging company"). **Choice D is incorrect** because no punctuation is needed between the integrated relative clause beginning with "that specializes" and the noun phrase that it modifies ("a book packaging company").

34 Correct answer **D**

Easy

‹ Back to question

D settings. She

Choice D is the best answer. It appropriately uses a period to mark the end of one independent clause ("In 2000...settings") and the start of another ("She founded...professionals").

Choice A is incorrect. This choice results in a run-on sentence error. Both the clause before the blank ("In 2000...settings") and the clause after the blank ("she...professionals") are independent clauses, so they need to be separated by punctuation. **Choice B is incorrect**. This choice results in a comma splice error. It incorrectly joins two independent clauses with just a comma. Linking two independent clauses with a comma also requires the use of a coordinating conjunction (like *for*, *and*, *nor*, *but*, *or*, *yet*, or *so*). **Choice C is incorrect**. This choice results in a run-on sentence, an error caused when two independent clauses are joined without punctuation or appropriate conjunctions. Since both the clause before the blank ("In 2000... settings") and the clause after the blank ("she...professionals") are independent, a comma would be required in addition to the coordinating conjunction "and."

35 Correct answer **D**

Easy

‹ Back to question

D village, tells

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "village" pairs with the comma after *"Under Nushagak Bluff"* to separate the supplementary relative clause ("which...village") from the rest of the sentence. This supplementary relative clause functions to provide additional information about the setting of Heavener's novel, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it results in two rhetorically unacceptable sentence fragments, one beginning with "Mia" and the other beginning with "tells." **Choice B is incorrect** because it fails to use appropriate punctuation to separate the supplementary relative clause ("which...village") from the rest of the sentence. **Choice C is incorrect** because a colon can't be paired with a comma in this way to separate the supplementary relative clause ("which...village") from the rest of the sentence. A colon can be used between two main clauses or a main clause and supplement, but here there is no main clause on either side of the colon.

36 Correct answer **B**

Easy

‹ Back to question

B Soto would see in her neighborhood.

Choice B is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence ("For example...neighborhood").

Choice A is incorrect. It's unconventional to use a question mark in this way to punctuate a declarative sentence. **Choice C is incorrect**. The structure requires a declarative clause at the end of the sentence that states where Soto saw the steel panels, not an incomplete interrogative clause that asks a direct question, such as "would Soto see in her neighborhood." **Choice D is incorrect**. The structure requires a period and a declarative clause at the end of the sentence that states where Soto saw the steel panels, not an incomplete interrogative clause asking a direct question, such as "would Soto see in her neighborhood?"

37 Correct answer **C**

Easy

‹ Back to question

C (1981), *El Norte* (1983),

Choice C is the best answer. The convention being tested is the punctuation of items in a series. The comma after "(1981)" is used conventionally to separate the first and second items in the series, and the comma after "(1983)" is used conventionally to separate the second and third items in the series.

Choice A is incorrect because it fails to use appropriate punctuation to separate the first and second items in the series. **Choice B is incorrect** because dashes can't be used in this way to separate items in a simple series. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the items in the series.

38 Correct answer **B**

Easy

‹ Back to question

B variables, travel to greater depths,

Choice B is the best answer. The convention being tested is the punctuation of items in a series. The comma after "variables" is used conventionally to separate the first and second items in the series, and the comma after "depths" is used conventionally to separate the second and third items.

Choice A is incorrect because a colon can't be used in this way to separate items in a simple series. **Choice C is incorrect** because a comma is needed after "variables" to separate the first and second items in the series. **Choice D is incorrect** because a semicolon can't be used in this way to separate items in a simple series.

39 Correct answer **A**

Easy

‹ Back to question

A created

Choice A is the best answer. The convention being tested is punctuation use between a verb and its object. No punctuation is needed between the verb "created" and its object "floating farms called 'chinampas.'" The object helps complete the idea of the verb—in this case, it explains what the Aztec people created—and any punctuation between the two results in an ungrammatical sentence.

Choice B is incorrect because no punctuation is needed between the verb and its object. **Choice C is incorrect** because no punctuation is needed between the verb and its object. **Choice D is incorrect** because no punctuation is needed between the verb and its object.

40 Correct answer **A**

Easy

‹ Back to question

A appreciate the

Choice A is the best answer. The convention being tested here is punctuation between a verb and object. No punctuation is needed between the verb ("appreciate") and its object ("the multiple references..."). The object helps complete the idea of the verb—in this case, it explains what fans of science fiction will appreciate—and any punctuation between the two results in an ungrammatical sentence.

Choice B is incorrect because no punctuation is needed between the verb and its object. **Choice C is incorrect** because no punctuation is needed between the verb and its object. **Choice D is incorrect** because no punctuation is needed between the verb and its object.

41 Correct answer **D** Easy ‹ Back to question

D could the blueberries thrive?

Choice D is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the interrogative clause "could the blueberries thrive," which asks a direct question at the end of the sentence.

Choice A is incorrect because a period can't be used in this way to punctuate an interrogative clause, such as "could the blueberries thrive," at the end of a sentence. **Choice B is incorrect** because the context requires an interrogative clause. The declarative clause "the blueberries could thrive" incorrectly indicates that it was known that the blueberries could thrive in alkaline soil, whereas Michel had yet to find this out. **Choice C is incorrect** because a question mark can't be used in this way to punctuate a declarative clause, such as "the blueberries could thrive," at the end of a sentence.

42 Correct answer **B** Easy ‹ Back to question

B (1947),

Choice B is the best answer. The convention being tested is punctuation between a supplementary element and a main clause. This choice correctly uses a comma to mark the boundary between the supplementary phrase ("While...1947"), which indicates when the action occurred, and the main clause ("Howe had a handheld camera operator wear roller skates").

Choice A is incorrect because a comma paired with the conjunction "and" can't be used in this way to mark the boundary between the supplementary element ("While...1947") and the main clause ("Howe...skates"). **Choice C is incorrect** because the conjunction "and" can't be used in this way to join the supplementary element ("While...1947") and the main clause ("Howe... skates"). **Choice D is incorrect** because it fails to mark the boundary between the supplementary element and the main clause with appropriate punctuation.

43 Correct answer **D** Easy ‹ Back to question

D you should choose.

Choice D is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence that ends with an indirect question ("which link you should choose.")

Choice A is incorrect. The structure requires a declarative clause that presents an indirect question about what is evaluated in click restraint, not an interrogative clause that presents a direct question, such as "which link should you choose." **Choice B is incorrect**. It's unconventional to use a question mark in this way to punctuate a declarative clause that presents an indirect question, such as "which link you should choose." **Choice C is incorrect**. The structure requires a declarative clause that presents an indirect question about what is evaluated in click restraint, not an interrogative clause that presents a direct question, such as "which link should you choose."

44 Correct answer **A** Easy ‹ Back to question

A Act, which

Choice A is the best answer. The convention being tested is the use of punctuation between a main clause and a supplementary element. In this choice, the comma is used correctly to mark the boundary between the main clause ("This...Act") and the supplementary relative clause ("which...designs") that provides additional information about the Engravers' Copyright Act.

Choice B is incorrect because a semicolon can't be used in this way to mark the boundary between a main clause and a supplementary relative clause. A semicolon is conventionally used to join two main clauses, and "which...designs" isn't a main clause. **Choice C is incorrect** because it results in a rhetorically unacceptable sentence fragment. **Choice D is incorrect**. Joining the main clause and the additional information about the Engravers' Copyright Act ("gave...designs") without the comma and relative pronoun "which" results in a confusing and ungrammatical sentence.

45 Correct answer **C** Easy Back to question

C Erie, the

Choice C is the best answer. The convention being tested is punctuation between a supplementary phrase and a main clause. This choice correctly uses a comma to mark the boundary between the introductory supplementary phrase ("By linking the Hudson River to Lake Erie"), which identifies how the canal reduced transport time, and the main clause ("the canal reduced transport time to nine days and cut costs to six dollars per ton").

Choice A is incorrect because a semicolon can't be used in this way to mark the boundary between a supplementary phrase ("By...Erie") and the main clause ("the canal...ton"). **Choice B is incorrect** because an open parenthesis can't be used in this way to mark the boundary between a supplementary phrase ("By...Erie") and the main clause ("the canal...ton"). **Choice D is incorrect** because a colon can't be used in this way to mark the boundary between an introductory supplementary phrase ("By...Erie") and the main clause ("the canal...ton").

46 Correct answer **D** Easy Back to question

D world, but

Choice D is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "but" to join the first main clause ("At...world") and the second main clause ("the...longer").

Choice A is incorrect because when coordinating two main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice B is incorrect** because a comma isn't needed after the conjunction "but." **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses.

47 Correct answer **B** Easy Back to question

B instrument

Choice B is the best answer. The convention being tested is punctuation use between a subject and a verb. When, as in this case, a subject ("the strings inside the instrument") is immediately followed by a main verb ("are plucked"), no punctuation is needed.

Choice A is incorrect because no punctuation is needed between the subject and the verb. **Choice C is incorrect** because no punctuation is needed between the subject and the verb. **Choice D is incorrect** because no punctuation is needed between the subject and the verb.

48 Correct answer **C** Easy Back to question

C did the word “chortle” come from?

Choice C is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the interrogative sentence "where did the word ‘chortle’ come from," which asks a direct question.

Choice A is incorrect because a period can’t be used in this way to punctuate an interrogative sentence, such as "where did the word ‘chortle’ come from." **Choice B is incorrect** because "where the word ‘chortle’ did come from" does not follow the conventional structure of a direct question in Standard English. It’s conventional in Standard English to follow the interrogative word "where" with an auxiliary verb (such as "did") when asking a direct question. **Choice D is incorrect** because "where the word ‘chortle’ come from" does not follow the conventional structure of a direct question in Standard English. It’s conventional in Standard English to follow the interrogative word "where" with an auxiliary verb (such as "did") when asking a direct question. Furthermore, a period can’t be used in this way to punctuate an interrogative sentence.

49 Correct answer **C** Easy Back to question

C popularized

Choice C is the best answer. The convention being tested is punctuation use between a verb and an object. No punctuation is needed between the verb "popularized" and its object "the use of Jamaican Creole." The object helps complete the idea of the verb—in this case, it explains what Louise Bennett popularized—and any punctuation between the two results in an ungrammatical sentence.

Choice A is incorrect because no punctuation is needed between the verb and its object. **Choice B is incorrect** because no punctuation is needed between the verb and its object. **Choice D is incorrect** because no punctuation is needed between the verb and its object.

50 Correct answer **B** Easy Back to question

B ganga has been used as a communication method.

Choice B is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence ending with a relative clause that presents an indirect question (“why ganga has been used as a communication method.”)

Choice A is incorrect. It’s unconventional to use a question mark to punctuate a declarative sentence that presents an indirect question. **Choice C is incorrect**. The structure requires a declarative clause at the end of the sentence, not an interrogative clause that asks a direct question, such as “has ganga been used as a communication method.” **Choice D is incorrect**. The structure requires a declarative clause at the end of the sentence, not an interrogative clause that asks a direct question, such as “has ganga been used as a communication method.”

51 Correct answer **D** Easy Back to question

D will Umuofia’s traditions be affected?

Choice D is the best answer. The clause before the colon tells us that the novel “asks a question,” so the clause after the colon should be in the conventional form of a question: with the verb before the subject, and a question mark at the end.

Choice A is incorrect. This choice ends the sentence with a period, which isn't right. The clause before the colon tells us that the novel "asks a question," so the clause after the colon should be that question. **Choice B is incorrect**. This choice ends the sentence with a period, which isn't right. The clause before the colon tells us that the novel "asks a question," so the clause after the colon should be that question. In Standard English, questions place the verb before the subject and end with a question mark. **Choice C is incorrect**. This choice doesn't conform to the conventions of Standard English. In Standard English, questions place the verb before the subject.

52 Correct answer **C** Easy Back to question

C to

Choice C is the best answer. The convention being tested is punctuation use between a preposition and its complement. No punctuation is needed between the preposition "to" and its complement "the largest island of them all." The complement completes the meaning of the preposition in the phrase "home to the largest island of them all," and any punctuation within it results in an ungrammatical sentence.

Choice A is incorrect because no punctuation is needed between the preposition and its complement. **Choice B is incorrect** because no punctuation is needed between the preposition and its complement. **Choice D is incorrect** because no punctuation is needed between the preposition and its complement.

53 Correct answer **C** Easy Back to question

C do they affect our weather?

Choice C is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the coordinated interrogative clauses "What are atmospheric rivers" and "how do they affect our weather," both of which ask direct questions.

Choice A is incorrect because a period can't be used in this way to punctuate an interrogative clause, such as "how do they affect our weather," at the end of a sentence. **Choice B is incorrect** because the structure requires an interrogative clause and a question mark at the end of the sentence. **Choice D is incorrect** because the structure requires an interrogative clause at the end of the sentence.

54 Correct answer **A** Easy Back to question

A of

Choice A is the best answer. The convention being tested is punctuation use between a preposition and its complement. No punctuation is needed between the preposition "of" and its complement "all the elements on the periodic table." The complement completes the meaning of the preposition in the phrase "the highest melting point of all the elements on the periodic table," and using punctuation to separate the complement from the preposition results in an ungrammatical sentence.

Choice B is incorrect because no punctuation is needed between the preposition and its complement. **Choice C is incorrect** because no punctuation is needed between the preposition and its complement. **Choice D is incorrect** because no punctuation is needed between the preposition and its complement.

55 Correct answer **A** Easy ‹ Back to question

A Bahrain—a

Choice A is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The dash after “Bahrain” pairs with the dash after “Asia” to separate the supplementary element “a country in Western Asia” from the rest of the sentence.

Choice B is incorrect because a comma can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because a colon can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence.

56 Correct answer **D** Easy ‹ Back to question

D by

Choice D is the best answer. The convention being tested is punctuation use between a preposition and its complement. No punctuation is needed between the preposition "by" and its complement "Native Hawaiians." The complement completes the meaning of the preposition in the phrase "proudly embodied by Native Hawaiians," and any punctuation within it results in an ungrammatical sentence.

Choice A is incorrect because no punctuation is needed between the preposition and its complement. **Choice B is incorrect** because no punctuation is needed between the preposition and its complement. **Choice C is incorrect** because no punctuation is needed between the preposition and its complement.

57 Correct answer **C** Easy ‹ Back to question

C lifelike,

Choice C is the best answer. The convention being tested is punctuation between a subordinate clause and a main clause. This choice correctly uses a comma to mark the boundary between the subordinate clause (“While…lifelike”) and the main clause (“others look to the past”).

Choice A is incorrect because it results in an incomplete sentence with no main clause. **Choice B is incorrect** because it fails to mark the boundary between the subordinate clause (“While…lifelike”) and the main clause (“others…past”). **Choice D is incorrect** because it results in an incomplete sentence with no main clause.

58 Correct answer **C** Easy ‹ Back to question

C pieces

Choice C is the best answer. The convention being tested is punctuation use between a noun and a prepositional phrase. No punctuation is needed between the noun "pieces" and the prepositional phrase "of pottery." The prepositional phrase provides essential information about what kind of pieces were found, so it shouldn’t be separated from the rest of the noun phrase ("some of the oldest pieces") with punctuation.

Choice A is incorrect because no punctuation is needed between the noun phrase "some of the oldest pieces" and the prepositional phrase "of pottery." **Choice B is incorrect** because no punctuation is needed between the noun phrase "some of

the oldest pieces" and the prepositional phrase "of pottery." **Choice D is incorrect** because no punctuation is needed between the noun phrase "some of the oldest pieces" and the prepositional phrase "of pottery."

59 Correct answer **B** Easy ‹ Back to question

B out, but

Choice B is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction “but” to join the first main clause (“the Alvarez...out”) and the second main clause (“it left...extinctions”).

Choice A is incorrect because when coordinating two longer main clauses such as these, it’s conventional to use a comma before the coordinating conjunction. **Choice C is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses.

60 Correct answer **B** Easy ‹ Back to question

B preferred the

Choice B is the best answer. The convention being tested is punctuation use between a verb and its object. No punctuation is needed between the verb "preferred" and its object "the sound of a bent bell over that of a straight one." The object helps complete the idea of the verb—in this case, it explains what type of sound Gillespie preferred—and any punctuation between the two results in an ungrammatical sentence.

Choice A is incorrect because no punctuation is needed between the verb and its object. **Choice C is incorrect** because no punctuation is needed between the verb and its object. **Choice D is incorrect** because no punctuation is needed between the verb and its object.

61 Correct answer **C** Easy ‹ Back to question

C classroom,

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to mark the boundary between the introductory participial phrase ("Hoping...classroom") and the main clause ("Huerta...farmworkers").

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with "hoping." **Choice B is incorrect** because a semicolon can’t be used in this way to mark the boundary between the participial phrase ("Hoping... classroom") and the main clause ("Huerta... farmworkers"). **Choice D is incorrect** because it fails to mark the boundary between the participial phrase ("Hoping...classroom") and the main clause ("Huerta...farmworkers").

62 Correct answer **B** Medium ‹ Back to question

B periods: the

Choice B is the best answer. The convention being tested is punctuation use between a main clause and an enumerated series. In this choice, a colon is correctly used after the main clause (“Since...periods”) to introduce the series identifying the three primary periods of ancient Egyptian history.

Choice A is incorrect because placing a period after "periods" results in a rhetorically unacceptable sentence fragment beginning with "the Old Kingdom." **Choice C is incorrect** because a semicolon can't be used in this way to introduce a series. A semicolon is conventionally used to join two main clauses or to separate items in a complex series, neither of which is the case here. **Choice D is incorrect** because a comma is not conventionally used to mark the boundary between the main clause ("Since...periods") and an enumerated series ("the Old Kingdom...(1550–1100 BCE)") that contains internal commas. Using a comma in this way creates ambiguity about which commas separate elements in the series and which mark other boundaries in the sentence, making the colon the best choice.

63 Correct answer **C** Medium Back to question

C parks;

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice uses a semicolon to correctly join the first main clause ("The Mission...parks") and the second main clause that begins with "it."

Choice A is incorrect. When coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice B is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses.

64 Correct answer **D** Medium Back to question

D chloroplasts—

Choice D is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The dash after "chloroplasts" pairs with the dash after "from light" to separate the supplementary element "the cellular organs that generate energy from light" from the rest of the sentence. This supplementary element functions to define the term "chloroplasts," and the pair of dashes indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because a semicolon can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a comma can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence.

65 Correct answer **D** Medium Back to question

D carbon-13 (^{13}C),

Choice D is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The comma after "(13C)" pairs with the comma after "isotope" to separate the supplementary element "carbon-13 (13C)" from the rest of the sentence. This supplementary element defines the "rare carbon isotope," and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it fails to use appropriate punctuation to separate the supplementary element "carbon-13 (13C)" from the rest of the sentence. **Choice B is incorrect** because it fails to use appropriate punctuation to separate the supplementary element "carbon-13 (13C)" from the rest of the sentence. **Choice C is incorrect** because it fails to use appropriate punctuation to separate the supplementary element "carbon-13 (13C)" from the rest of the sentence. The comma after "carbon-13" isn't necessary because the parentheses around "13C" already separate this element from the rest of the sentence.

66 Correct answer **C** Medium Back to question

C not, aerobic

Choice C is the best answer. A comma is the appropriate way to link the dependent clause "While...not" and the independent clause that follows.

Choice A is incorrect. This choice creates a run-on sentence error. "While...not" is a dependent clause, which must be separated from the independent clause that follows with some sort of punctuation. **Choice B is incorrect**. This choice creates a sentence fragment. "While one requires oxygen and one does not" isn't an independent clause, so it can't stand alone as a complete sentence. **Choice D is incorrect**. This choice creates a punctuation error. "While one requires oxygen and one does not" isn't an independent clause, so it can't be linked to the clause that follows with a semicolon.

67 Correct answer **C** Medium Back to question

C nutrients,

Choice C is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The comma after "nutrients" pairs with the comma after "photosynthesis" to separate the supplementary element "the mechanism by which plants use sunlight to turn carbon dioxide and water into nutrients" from the rest of the sentence. This supplementary element functions to define the term "photosynthesis," and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because a conjunction can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because a dash can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence.

68 Correct answer **D** Medium Back to question

D ran—fast. During

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("Defying...fast") and another sentence that begins with a supplementary phrase ("During...Olympics").

Choice A is incorrect. When a dash is present in a sentence ("ran—fast"), it's not conventional to use another dash ("fast—during") to mark the boundary between sentences because it creates a potentially confusing sentence. In this context, a period, semicolon, or colon would be clear and more conventional. **Choice B is incorrect** because it results in a run-on sentence. The sentences ("Defying...fast") and ("during...Olympics") are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences.

69 Correct answer **B** Medium Back to question

B newts, for

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "newts" pairs with the comma after "instance" to separate the supplementary element "for instance" from the rest of the sentence. The supplementary element appears between the prepositional phrase ("In...newts") and the main clause of the

sentence ("you...*orientalis*") and signals that the sentence is presenting an example of how keys and values function in JSON files.

Choice A is incorrect because it results in a sentence fragment ("In a JSON file storing data about fire belly newts"). **Choice C is incorrect** because a colon can't be paired with a comma in this way to separate the supplementary element "for instance" from the rest of the sentence. **Choice D is incorrect** because a semicolon can't be paired with a comma in this way to separate the supplementary element "for instance" from the rest of the sentence.

70 Correct answer **C** Medium Back to question

C return;

Choice C is the best answer. The convention being tested is the punctuation of elements in a complex series. It's conventional to use a semicolon to separate items in a complex series with internal punctuation, and in this choice, the semicolon after "return" is conventionally used to separate the first item ("*The Siege of Thebes*...return") and the second item ("*The Tale of Beryn*...tourists") in the series of tales. Moreover, the semicolon after "return" matches the semicolon used later to separate the second item and the third item ("and *The Ploughman's Tale*...work") in the series.

Choice A is incorrect because placing a period after "return" results in a rhetorically unacceptable sentence fragment beginning with "*The Tale of Beryn*." **Choice B is incorrect** because it fails to use appropriate punctuation to separate the first item and the second item in the complex series. **Choice D is incorrect** because a comma after "return" doesn't match the semicolon used later to separate the second and third items in the series.

71 Correct answer **D** Medium Back to question

D fungi, producing

Choice D is the best answer. The convention being tested is punctuation use between two supplementary phrases following the coordinate clause ("but she...mycology"). This choice correctly uses a comma to mark the boundary between the supplementary noun phrase ("the study of fungi") that defines the term "mycology" and the supplementary participial phrase ("producing...London") that provides additional information about the extent to which Potter dedicated herself to mycology.

Choice A is incorrect because a semicolon can't be used in this way to join two supplementary phrases following a coordinate clause. **Choice B is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "producing." **Choice C is incorrect**. The lack of punctuation results in a sentence that illogically suggests that the study of fungi is producing more than 350 paintings.

72 Correct answer **C** Medium Back to question

C (BEC);

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a semicolon to join the first main clause ("One...(BEC)") and the second main clause ("Dutch...halt").

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice B is incorrect** because it results in a run-on sentence. Without a comma preceding it, a conjunction can't be used in this way to join two main clauses. **Choice D is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

73 Correct answer **B** Medium Back to question

B taxation,

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "taxation" pairs with the comma after "that" to separate the supplementary element "through trade and centralized taxation" from the rest of the sentence. This supplementary element functions to identify the funding source of the Mauryan economy, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a colon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a dash can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence.

74 Correct answer **A** Medium Back to question

A estimates)

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly completes the parenthetical element "as many as 200,000, by some estimates" with a closing parenthesis, pairing with the opening parenthesis that appears earlier in the sentence. This parenthetical element functions to specify the number of residents, and the use of parentheses indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice B is incorrect. While this choice completes the parenthetical element with a closing parenthesis, no comma is needed before the prepositional phrases ("in…size") that provide essential information about where the residents were housed. **Choice C is incorrect** because a dash can't be paired with an opening parenthesis in this way to separate the parenthetical element from the rest of the sentence. **Choice D is incorrect** because it doesn't close the parenthetical element that was opened earlier in the sentence.

75 Correct answer **D** Medium Back to question

D added whenever

Choice D is the best answer. The convention being tested is punctuation between a verb and a preposition. When, as in this case, a verb ("is added") is immediately followed by a preposition ("whenever"), no punctuation is needed.

Choice A is incorrect because no punctuation is needed between the verb and the preposition. **Choice B is incorrect** because no punctuation is needed between the verb and the preposition. **Choice C is incorrect** because no punctuation is needed between the verb and the preposition.

76 Correct answer **C** Medium Back to question

C sisters,

Choice C is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The comma after "sisters" pairs with the comma after "*Butterflies*" to separate the supplementary element "a fictionalized account of the lives of the Mirabal sisters" from the rest of the sentence. This supplementary element functions to describe the

novel *In the Time of the Butterflies*, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a comma and conjunction can't be used in this way to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence.

77 Correct answer **D** Medium Back to question

D 1680, and

Choice D is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "and" to join the first main clause ("He...1680") and the second main clause ("as...time").

Choice A is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice B is incorrect** because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses.

78 Correct answer **D** Medium Back to question

D waterways and the fact that

Choice D is the best answer. The convention being tested is punctuation within two coordinated noun phrases. When, as in this case, a noun phrase ("the country's millions of miles of waterways") is coordinated with another noun phrase ("the fact") followed by an integrated relative clause ("that the volume...time"), no punctuation is needed.

Choice A is incorrect because no punctuation is needed. **Choice B is incorrect** because no punctuation is needed. **Choice C is incorrect** because no punctuation is needed.

79 Correct answer **D** Medium Back to question

D California

Choice D is the best answer. No punctuation should separate the subject of the sentence ("the Huntington Library in California") from its verb ("received").

Choice A is incorrect. No punctuation should separate the subject of the sentence ("the Huntington Library in California") from its verb ("received"). **Choice B is incorrect**. No punctuation should separate the subject of the sentence ("the Huntington Library in California") from its verb ("received"). **Choice C is incorrect**. No punctuation should separate the subject of the sentence ("the Huntington Library in California") from its verb ("received").

80 Correct answer **A** Medium Back to question

A 1950s, and

Choice A is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "and" to join the first main clause ("Featuring...1950s") and the

second main clause ("given...successful").

Choice B is incorrect because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice C is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses.

81 Correct answer **C** Medium Back to question

C CE, making

Choice C is the best answer. The phrase "making...at the time" provides additional information about Cahokia that's not required for the sentence to make sense or function grammatically. As a nonessential supplement, this phrase should be separated from the rest of the sentence with a comma.

Choice A is incorrect. This choice results in a run-on sentence. The nonessential descriptive aside "making...at the time" needs to be separated from the rest of the sentence with a comma. **Choice B is incorrect**. This choice results in a sentence fragment. "Making...at the time" doesn't have a subject and can't stand on its own as a sentence. Thus, it can't be separated from the rest of the sentence with a period. **Choice D is incorrect**. This choice results in a punctuation error. "Making...at the time" doesn't have a subject and can't stand on its own as an independent clause. Since a semicolon can only link two independent clauses, using one here creates an error.

82 Correct answer **B** Medium Back to question

B scribbles that

Choice B is the best answer. The convention being tested is the use and punctuation of a relative clause. This choice correctly uses the relative pronoun "that" and no punctuation to create an integrated relative clause that provides essential information about the noun phrase ("graffiti-like scribbles") that it modifies.

Choice A is incorrect because no punctuation is needed between the integrated relative clause beginning with "that often" and the noun phrase that it modifies ("graffiti-like scribbles"). **Choice C is incorrect** because no punctuation is needed between the integrated relative clause beginning with "that often" and the noun phrase that it modifies ("graffiti-like scribbles"). **Choice D is incorrect** because no punctuation is needed between the integrated relative clause beginning with "that often" and the noun phrase that it modifies ("graffiti-like scribbles").

83 Correct answer **D** Medium Back to question

D cephalopods—ocean dwellers that include the squid, the octopus, and the cuttlefish—

Choice D is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. In this choice, the dash after "cephalopods" pairs with the dash after "cuttlefish" to clearly separate the supplementary element "ocean dwellers that include the squid, the octopus, and the cuttlefish" from the rest of the sentence. This supplementary element functions to explain what cephalopods are, and the pair of dashes indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it fails to use appropriate punctuation to separate the supplementary element that explains what cephalopods are from the rest of the sentence. **Choice B is incorrect** because it fails to use appropriate punctuation to separate the supplementary element that explains what cephalopods are from the rest of the sentence. **Choice C is incorrect**

because it fails to use appropriate punctuation to separate the supplementary element that explains what cephalopods are from the rest of the sentence.

84 Correct answer **B** Medium Back to question

B apiary, and

Choice B is the best answer. Both clauses in this sentence could stand alone as complete sentences, which means they are both independent clauses. This choice uses a comma plus a coordinating conjunction to link them together, which is one of the correct ways to link two independent clauses.

Choice A is incorrect. This choice results in a run-on sentence error. Both clauses in this sentence could stand alone as complete sentences, which means they are both independent clauses. A comma by itself is not enough punctuation to link two independent clauses. **Choice C is incorrect**. This choice results in a run-on sentence error. Both clauses in this sentence could stand alone as complete sentences, which means they are both independent clauses. Independent clauses can only be linked in a few ways, including with a comma plus a coordinating conjunction. This choice uses the coordinating conjunction "and," but it is missing the comma beforehand. **Choice D is incorrect**. This choice results in a run-on sentence error. Both clauses in this sentence could stand alone as complete sentences, which means they are both independent clauses. Independent clauses need to have certain kinds of punctuation marks between them. This choice doesn't use any punctuation between the two clauses.

85 Correct answer **B** Medium Back to question

B 1804,

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "1804" pairs with the comma after "amendment" to separate the supplementary element "ratified in 1804" from the rest of the sentence. This supplementary element functions to provide additional information on the term "12th amendment," and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a dash can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a colon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the supplemental element from the rest of the sentence.

86 Correct answer **C** Medium Back to question

C researchers Roberto Scandone and Christopher Kilburn

Choice C is the best answer. The convention being tested is the punctuation of a restrictive coordinated noun phrase. No punctuation is needed within or around the coordinated noun phrase "researchers Roberto Scandone and Christopher Kilburn" because it would create an illogical separation between the noun "researchers" and the coordinated noun phrase "Roberto Scandone and Christopher Kilburn."

Choice A is incorrect because no punctuation is needed. Placing a pair of commas around the coordinated noun phrase "Roberto Scandone and Christopher Kilburn" creates an illogical separation between the noun "researchers" and the aforementioned coordinated noun phrase. In this case, it illogically suggests that researchers in general bear the specific names Roberto Scandone and Christopher Kilburn. **Choice B is incorrect** because no punctuation is needed between the noun "researchers" and the coordinated noun phrase "Roberto Scandone and Christopher Kilburn." **Choice D is incorrect** because no punctuation is needed within the coordinated noun phrase "Roberto Scandone and Christopher Kilburn."

87 Correct answer **C** Medium ‹ Back to question

C adjustments. Prior

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between the first sentence ("The…adjustments") and the second sentence ("Prior…days"). Because the adverbial phrase beginning with "prior" indicates when changing a spreadsheet required redoing the sheet by hand, that phrase belongs with the second sentence.

Choice A is incorrect because it results in a run-on sentence. Two sentences are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join the sentences.

88 Correct answer **C** Medium ‹ Back to question

C ones; even so,

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("It is…ones") and the second main clause ("even so… needs"). Furthermore, the placement of the semicolon after "ones" indicates that the supplementary phrase "even so" modifies the following clause ("the reawakening…needs"), resulting in the most logical and grammatically complete sentence. With this punctuation, the sentence logically indicates that the recent interest in an old technology like steam engines is despite the fact that technological change typically seeks out new technologies.

Choice A is incorrect because it results in a confusing and illogical sentence. Placing the semicolon after "so" indicates that the supplementary element "even so" modifies the first clause of the sentence, which doesn't make sense in this context. **Choice B is incorrect** because it results in a run-on sentence. It fails to mark the boundary between the two main clauses with appropriate punctuation. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join the two main clauses of the sentence.

89 Correct answer **D** Medium ‹ Back to question

D *Nutcracker*. According

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("In 2017…*Nutcracker*") and another ("According…culture"). The supplementary element "according to reviewers" modifies the main clause of the second sentence ("the Toledos'…culture").

Choice A is incorrect because it results in a run-on sentence. The sentences are fused without punctuation and/or a conjunction. Furthermore, no punctuation is needed within the supplementary element "according to reviewers." **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice C is incorrect** because it results in a run-on sentence. The sentences are fused without punctuation and/or a conjunction.

90 Correct answer **B** Medium ‹ Back to question

B sampler;

Choice B is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice uses a semicolon in a conventional way to join the first main clause (“In 2004...sampler”) and the second main clause (“in 2014...pillars”).

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. The word “later” is an adverb and cannot be used to join two main clauses unless it is preceded by a conjunction. **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. The word “later” is an adverb and cannot be used to join two main clauses unless it is preceded by a conjunction.

91 Correct answer **A** Medium ‹ Back to question

A stratigraphy—the

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. The dash after "stratigraphy" pairs with the dash after "(strata)" to separate the supplementary element "the analysis of Earth’s sediment layers (strata)" from the rest of the sentence. This supplementary element functions to define the term "stratigraphy," and the pair of dashes indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice B is incorrect because a parenthesis can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a colon can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because a comma can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence.

92 Correct answer **C** Medium ‹ Back to question

C area. After

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used to correctly mark the boundary between one sentence ("Before...area") and another ("After...area"). The phrase "After construction" modifies the next sentence to indicate that the temperature was cooler after construction.

Choice A is incorrect because it results in a run-on sentence that fuses the two sentences ("Before...area" and "after...area") without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a run-on sentence that connects the two sentences ("Before...area" and "after...area") without punctuation and/or a conjunction. Additionally, no punctuation is needed between "after" and "construction." **Choice D is incorrect** because it results in a comma splice. A comma can’t be used in this way to mark the boundary between the two sentences ("Before...area" and "after...area").

93 Correct answer **A** Medium ‹ Back to question

A vapor. With

Choice A is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("What...vapor") and another ("With...point").

Choice B is incorrect because it results in a run-on sentence. The sentences ("What...vapor" and "with...point") are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join sentences.

94 Correct answer **D** Medium Back to question

D (Ru), but

Choice D is the best answer. The convention being tested is the coordination of main clauses. This choice correctly uses a comma and the coordinating conjunction "but" to join the first main clause ("Materials...Ru") and the second main clause ("the alloy...NiCoCr").

Choice A is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice B is incorrect** because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses.

95 Correct answer **C** Medium Back to question

C Springs—to

Choice C is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The dash after "Springs" pairs with the dash after "earth" to separate the supplementary element "in this case, the porous rocks of the hills around Hot Springs" from the rest of the sentence.

Choice A is incorrect because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because a colon can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because a comma can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence.

96 Correct answer **D** Medium Back to question

D movie, such

Choice D is the best answer. The comma appropriately separates the nonessential descriptive aside "such as...scene" from the independent clause "Theaters were...movie." Since the descriptive example of roses isn't necessary for the sentence to function, it needs to be set off with punctuation.

Choice A is incorrect. This choice results in a run-on sentence. Since the example of roses isn't necessary for the sentence to function, the descriptive aside "such as...scene" needs to be separated from the preceding independent clause with some sort of punctuation. **Choice B is incorrect**. This choice creates a punctuation error. A semicolon can only be used to separate two independent clauses, but "such...scene" is not an independent clause and couldn't stand on its own as a sentence. **Choice C is incorrect**. This choice results in a sentence fragment. The descriptive aside "Such...scene" is not an independent clause and can't stand on its own as a sentence.

97 Correct answer **D** Medium ‹ Back to question

D walls. With

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after “walls” is used correctly to mark the boundary between the first sentence (“In...walls”) and the second sentence (“With...techniques”), which starts with a supplementary phrase.

Choice A is incorrect because it results in a comma splice. A comma can’t be used in this way to mark the boundary between sentences. **Choice B is incorrect** because it results in a run-on sentence. The sentences (“In...walls” and “with...paintings”) are fused without punctuation and/or a conjunction. **Choice C is incorrect**. Without a comma preceding it, the conjunction “so” can’t be used in this way to join sentences.

98 Correct answer **D** Medium ‹ Back to question

D falling

Choice D is the best answer. The word “falling” occurs in the middle of a clause and isn’t part of a supplement, so we don’t need any punctuation after it. We can see this more clearly if we simplify the rest of the sentence: “The reason seeds appear to float while falling is that their plumes enhance drag.” .

Choice A is incorrect. This doesn’t complete the text in a way that conforms to the conventions of Standard English. The word “falling” occurs in the middle of a clause and isn’t part of a supplement, so we don’t need any punctuation after it. We can see this more clearly if we simplify the sentence: “The reason seeds appear to float while falling is that their plumes enhance drag.” . **Choice B is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. The word “falling” occurs in the middle of a clause and isn’t part of a supplement, so we don’t need any punctuation after it. We can see this more clearly if we simplify the sentence: “The reason seeds appear to float while falling is that their plumes enhance drag.” . **Choice C is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. The word “falling” occurs in the middle of a clause and isn’t part of a supplement, so we don’t need any punctuation after it. We can see this more clearly if we simplify the sentence: “The reason seeds appear to float while falling is that their plumes enhance drag.” .

99 Correct answer **C** Medium ‹ Back to question

C work. That

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("For...work") and another ("That...parchment").

Choice A is incorrect because it results in a comma splice. A comma can’t be used in this way to mark the boundary between sentences. **Choice B is incorrect** because it results in a run-on sentence. The sentences ("For...work" and "that...parchment") are fused without punctuation and/or a conjunction. **Choice D is incorrect**. Without a comma preceding it, the conjunction "and" can’t be used in this way to join sentences.

100 Correct answer **C** Medium ‹ Back to question

C Smith

Choice C is the best answer. The convention being tested is punctuation use between a subject and a verb. No punctuation is needed when, as in this case, a subject ("Her portrait of novelist Zadie Smith") is immediately followed by a main verb ("is

displayed").

Choice A is incorrect because no punctuation is needed between the subject and the verb. **Choice B is incorrect** because no punctuation is needed between the subject and the verb. **Choice D is incorrect** because no punctuation is needed between the subject and the verb.

101 Correct answer **D** Medium Back to question

D world,

Choice D is the best answer. The convention being tested is punctuation between a supplementary phrase and a main clause. This choice correctly uses a comma to mark the boundary between the supplementary phrase ("A conceptual artist...world"), which describes Mary Ping, and the main clause ("Mary...America").

Choice A is incorrect because it fails to mark the boundary between the supplementary phrase ("A conceptual artist...world") and the main clause ("Mary...America") with appropriate punctuation. **Choice B is incorrect** because a colon can't be used in this way to join the supplementary phrase ("A conceptual artist...world") and the main clause ("Mary...America"). In this context, the colon incorrectly suggests that the information in the supplementary phrase is an explanation or amplification of the information in the main clause (Mary Ping being chosen to curate the exhibition), which isn't the case. **Choice C is incorrect** because a semicolon can't be used in this way to join the supplementary phrase ("A conceptual artist... world") and the main clause ("Mary...America"). Semicolons are conventionally used to separate two main clauses or to separate items in a complex series.

102 Correct answer **D** Medium Back to question

D prose—

Choice D is the best answer. "A combination of fiction and memoir, poetry and prose" is a nonessential supplement, so it needs to be set off from the rest of the sentence with a pair of matching punctuation marks. We already have a dash at the beginning of the supplement, so we need to add a dash at the end of the supplement to match.

Choice A is incorrect. This doesn't complete the text in a way that conforms to the conventions of Standard English. "A combination of fiction and memoir, poetry and prose" is a nonessential supplement, so it needs to be set off from the rest of the sentence with a pair of matching punctuation marks. We already have a dash at the beginning of the supplement, so we need to add a dash at the end of the supplement to match. **Choice B is incorrect**. This doesn't complete the text in a way that conforms to the conventions of Standard English. "A combination of fiction and memoir, poetry and prose" is a nonessential supplement, so it needs to be set off from the rest of the sentence with a pair of matching punctuation marks. We already have a dash at the beginning of the supplement, so we need to add a dash at the end of the supplement to match. **Choice C is incorrect**. This doesn't complete the text in a way that conforms to the conventions of Standard English. "A combination of fiction and memoir, poetry and prose" is a nonessential supplement, so it needs to be set off from the rest of the sentence with a pair of matching punctuation marks. We already have a dash at the beginning of the supplement, so we need to add a dash at the end of the supplement to match.

103 Correct answer **C** Medium Back to question

C method, called

Choice C is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The comma after "method" pairs with the comma after the closing parenthesis to separate the supplementary element "called ELISA (enzyme-linked immunosorbent assay)" from the rest of the sentence. This supplementary element functions to identify

the name of Engvall and Perlmann's method, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because an opening parenthesis can't be paired with a comma to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because a dash can't be paired with a comma to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence.

104 Correct answer **D** Medium Back to question

D greenery;

Choice D is the best answer. The convention being tested is punctuation between two main clauses. "Aibonito is well known for its lush greenery" and "this distinction has earned it the fitting nickname..." are both complete main clauses; a semicolon correctly joins them while signaling a close logical connection.

Choice A is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice C is incorrect**. When coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction.

105 Correct answer **D** Medium Back to question

D unearthed

Choice D is the best answer. No punctuation should separate the verb "unearthed" and its objects (i.e, what was "unearthed"): "knives, horseshoes, wool tunics, and thousands of other artifacts."

Choice A is incorrect. This choice creates a punctuation error, separating the verb "unearthed" from its objects (i.e, what was "unearthed") with a colon. **Choice B is incorrect**. This choice creates a punctuation error, separating the verb "unearthed" from its objects (i.e, what was "unearthed") with a comma. **Choice C is incorrect**. This choice creates a punctuation error, separating the verb "unearthed" from its objects (i.e, what was "unearthed") with a dash.

106 Correct answer **B** Medium Back to question

B cooperation—this

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a dash after "cooperation" to pair with the dash after "that" to separate the supplementary element "assuming solar panel installers' cooperation" from the rest of the sentence.

Choice A is incorrect because a comma can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a colon can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the supplemental element from the rest of the sentence.

107 Correct answer **C** Medium ‹ Back to question

C dance, showcasing

Choice C is the best answer. The conventions being tested are the use of punctuation and verb forms within a sentence. This choice correctly uses a comma to mark the boundary between the main clause (“This...dance”) and the supplementary element (“showcasing...world”) that provides additional information about what the collaboration accomplished. Moreover, the nonfinite present participle “showcasing” is used correctly to form a supplementary element that modifies the main clause (“this...dance”), describing what the collaboration demonstrated about stylistic diversity and creative innovation in the dance world.

Choice A is incorrect because it results in a comma splice. Adding the subject “it” and the finite verb “showcased” results in a second main clause (“it...world”), and a comma can’t be used in this way to join two main clauses. **Choice B is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with “which.” **Choice D is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with “showcasing.”

108 Correct answer **D** Medium ‹ Back to question

D prey; rather,

Choice D is the best answer. The convention being tested is the coordination of main clauses within a sentence. The semicolon is correctly used to join the first main clause (“To humans...prey”) and the second main clause (“rather...approach”). Further, the comma after the adverb “rather” is correctly used to separate the adverb from the main clause (“the brightly... approach”) it modifies, logically indicating that the information in this clause (how the spider’s behavior appears to humans) is contrary to the information in the previous clause (how the spider’s behavior does not appear to humans).

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. **Choice B is incorrect** because it results in a run-on sentence. The two main clauses are fused without appropriate punctuation and/or a conjunction. **Choice C is incorrect**. Placing the comma between the first main clause “To humans...prey” and the adverb “rather” illogically indicates that the information in the first main clause is contrary to what came before, which doesn’t make sense in this context.

109 Correct answer **C** Medium ‹ Back to question

C moved; for example,

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("The measurement...moved") and the second main clause ("for example...second").

Choice A is incorrect because it results in a comma splice. Without a coordinating conjunction, a comma can’t be used in this way to join the two main clauses ("The measurement...moved" and "for example...second"). **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join the two main clauses ("The measurement...moved" and "one unit...second"). **Choice D is incorrect** because it results in a run-on sentence. The two main clauses ("The measurement...moved" and "one unit...second") are fused without punctuation and/or a conjunction.

110 Correct answer **D** — Medium — Back to question

D Rawles

Choice D is the best answer. The convention being tested is punctuation between a subject and a verb. When, as in this case, a subject (“Calida Garcia Rawles”) is immediately followed by a verb (“was”), no punctuation is needed.

Choice A is incorrect because no punctuation is needed between the subject and the verb. **Choice B is incorrect** because no punctuation is needed between the subject and the verb. **Choice C is incorrect** because no punctuation is needed between the subject and the verb.

111 Correct answer **A** — Medium — Back to question

A threefold: to

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. In this choice, the colon correctly introduces the series of goals held by the 1919 Inter-Allied Women’s Conference.

Choice B is incorrect because placing a period after "threefold" results in a rhetorically unacceptable sentence fragment beginning with "To." **Choice C is incorrect** because it results in a run-on sentence. The main clause ("The conference’s goals were threefold") and the series supplement ("to…rights") are fused without punctuation. **Choice D is incorrect** because a semicolon can’t be used in this way to introduce a series. A semicolon is conventionally used to join two main clauses, whereas a colon is conventionally used to introduce a series, making the colon the better choice in this context.

112 Correct answer **C** — Medium — Back to question

C energy collected by solar panels during the day,

Choice C is the best answer. The convention being tested is punctuation between a supplementary phrase and a main clause. This choice correctly uses a comma to mark the boundary between the supplementary phrase (“powered…day”), which describes how the LEDs are powered, and the main clause (“the blinking…night”).

Choice A is incorrect because it fails to mark the boundary between the supplementary phrase and the main clause with appropriate punctuation. Furthermore, placing commas around the phrase “by solar panels” suggests that it could be removed without affecting the coherence of the sentence, which isn’t the case. **Choice B is incorrect** because it fails to mark the boundary between the supplementary phrase and the main clause with appropriate punctuation. **Choice D is incorrect**. Placing commas around the phrase “collected by solar panels during the day” suggests that it could be removed without affecting the coherence of the sentence, which isn’t the case.

113 Correct answer **C** — Medium — Back to question

C paradox, and

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "and" to join the first main clause ("This idea…paradox") and the second main clause ("research… retention").

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. **Choice B is incorrect** because it results in a run-on sentence. The two main clauses are fused

without punctuation and/or a conjunction. **Choice D is incorrect** because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction, not after it.

114 Correct answer **A** Medium ‹ Back to question

A soul," positing

Choice A is the best answer. The convention being tested is punctuation use between a main clause and a participial phrase. This choice correctly uses a comma to mark the boundary between the main clause ("Epicurus...'soul'") and the participial phrase ("positing...absence") that provides additional information about how Epicurus defined pleasure.

Choice B is incorrect because a colon can't be used in this way to join a main clause and a participial phrase. **Choice C is incorrect** because a semicolon can't be used in this way to join a main clause and a participial phrase. **Choice D is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "positing."

115 Correct answer **C** Medium ‹ Back to question

C falsework,

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "falsework" pairs with the comma after "supports" to separate the supplementary element "a construction system known as falsework" from the rest of the sentence. This supplementary element functions to clarify the term "these temporary supports," and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a semicolon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because it fails to use appropriate punctuation to separate the supplemental element from the rest of the sentence. **Choice D is incorrect** because a colon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence.

116 Correct answer **C** Medium ‹ Back to question

C materialism,"

Choice C is the best answer. The convention being tested is punctuation between a main clause and a supplementary noun phrase. This choice correctly uses a comma to mark the boundary between the main clause ("scholar...materialism") and the supplementary noun phrase ("an apt assessment") that describes Waid's observation about how *The House of Mirth* depicts the upper classes of New York society.

Choice A is incorrect because a semicolon and the conjunction "and" can't be used in this way to mark the boundary between a main clause and a supplementary noun phrase. **Choice B is incorrect**. Joining the main clause ("scholar...materialism") and the following noun phrase with the conjunction "and" results in a confusing and illogical sentence that suggests that the novel depicts the upper classes of New York society as "an apt assessment," which doesn't make sense in this context. **Choice D is incorrect** because it fails to mark the boundary between the main clause and the supplementary noun phrase with appropriate punctuation.

117 Correct answer **C** — Hard — Back to question

C Entomologist Heather Grab

Choice C is the best answer. The convention being tested is punctuation use between a name and title and between a subject and a verb. No punctuation is needed between the proper noun “Heather Grab” and “entomologist,” the title that describes Grab. Additionally, no punctuation is needed between the sentence’s subject (“Entomologist Heather Grab”) and the main verb (“found”) that indicates what Grab did.

Choice A is incorrect because no punctuation is needed between the subject and the verb. **Choice B is incorrect** because no punctuation is needed. Setting the entomologist’s name off with commas suggests that it could be removed without affecting the coherence of the sentence, which isn’t the case. **Choice D is incorrect** because no punctuation is needed between the subject and the verb.

118 Correct answer **D** — Hard — Back to question

D weightlessness;

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("The Limón...weightlessness") and the second main clause ("dancers...jump").

Choice A is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice B is incorrect**. The relative pronoun "which" can’t be used in this way to join two main clauses. **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses.

119 Correct answer **D** — Hard — Back to question

D writers, among

Choice D is the best answer. The convention being tested is punctuation use between a main clause and a supplementary phrase. This choice correctly uses a comma to mark the boundary between the main clause (“The haiku-like...writers”) and the supplementary phrase (“among... Cole”) that specifies a contemporary writer who has praised Tomas Tranströmer’s haiku-like poems.

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with “among.” **Choice B is incorrect** because it fails to mark the boundary between the main clause and the supplementary phrase with appropriate punctuation. **Choice C is incorrect** because a semicolon can’t be used in this way to join the main clause (“The haiku-like... writers”) and the supplementary phrase (“among...Cole”).

120 Correct answer **A** — Hard — Back to question

A plant). By

Choice A is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("In...plant") and another ("By...weeds"). The prepositional phrase beginning with "by" modifies the subject of the next sentence, "she," which refers to Macías-Rubalcava.

Choice B is incorrect because it results in a comma splice. A comma can't be used in this way to join two sentences. **Choice C is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join two sentences. **Choice D is incorrect** because it results in a run-on sentence. The two sentences are fused without punctuation and/or a conjunction.

121 Correct answer **C** Hard Back to question

C dependable

Choice C is the best answer. The convention being tested is the punctuation of an integrated relative clause. No punctuation is needed before the relative clause beginning with "that" because the content of the relative clause ("that...Lighthouse") is integral to the meaning of the coordinated adjectival phrase ("so bright, so localized, and so dependable") that it modifies.

Choice A is incorrect because no punctuation is needed between the coordinated adjectival phrase ("so bright...dependable") and the integrated relative clause that modifies it. **Choice B is incorrect** because no punctuation is needed between the coordinated adjectival phrase ("so bright...dependable") and the integrated relative clause that modifies it. **Choice D is incorrect** because no punctuation is needed between the coordinated adjectival phrase ("so bright...dependable") and the integrated relative clause that modifies it.

122 Correct answer **C** Hard Back to question

C microsculptures. Creations

Choice C is the best answer. The convention being tested is punctuation between sentences. In this choice, the period is used to correctly mark the boundary between one sentence ("Jamaican...microsculptures") and another ("Creations...strands"). The noun phrase beginning with "creations" modifies the subject of the next sentence, "Wigan's sculptures."

Choice A is incorrect because it results in a run-on sentence. The sentences ("Jamaican...microsculptures" and "Creations...strands") are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join sentences.

123 Correct answer **D** Hard Back to question

D case, though;

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. Placing the semicolon after the supplementary adverb "though" correctly indicates that the contrast in the text is between the information in the first sentence (that Earth's magnetic poles have remained fixed for the past 20 million years) and the initial clause of the second sentence ("This has not always been the case"), rather than between the two clauses of the second sentence.

Choice A is incorrect. Using the adverb "though" as the head of a subordinate clause illogically indicates that the information in the previous main clause ("This...case") is contrary to the information in the subordinate clause. Instead, the information in the second clause (that Earth's magnetic poles have swapped places several times) elaborates on the statement made in the previous clause (that Earth's magnetic poles are not as fixed as they may seem). **Choice B is incorrect** because it results in a comma splice. Commas can't be used in this way to punctuate a supplementary word or phrase between two main clauses. **Choice C is incorrect**. Using a semicolon after "case" places the adverb "though" inside the second main clause ("throughout...wandering"), illogically indicating that the information in the previous main clause is contrary to the information in the second one. Instead, the information in the second main clause (that Earth's magnetic poles have swapped places several times) elaborates on the statement made in the previous clause (that Earth's magnetic poles are not as fixed as they may seem).

124 Correct answer **B**

Hard

‹ Back to question

B practice at the time;

Choice B is the best answer. The convention being tested is the punctuation of elements in a complex series. It's conventional to use a semicolon to separate items in a complex series with internal punctuation, and in this choice, the semicolon after "time" is conventionally used to separate the first item ("offered...time") and the second ("celebrated...holiday") in the series of activities that librarian Pura Belpré offered. Moreover, the semicolon after "time" matches the semicolon used later to separate the second item ("celebrated...holiday") and the third ("and...folktales") in the series.

Choice A is incorrect because it fails to use appropriate punctuation to separate the first item and the second item in the complex series. Furthermore, a comma isn't needed between the noun "practice" and the prepositional phrase "at the time" because the prepositional phrase is essential to the full meaning of the phrase "an uncommon practice at the time." **Choice C is incorrect** because a comma after "time" doesn't match the semicolon used later to separate the second ("celebrated...holiday") and third ("and...folktales") items in the series. Furthermore, a comma isn't needed between the noun "practice" and the prepositional phrase "at the time" because the prepositional phrase is essential to the full meaning of the phrase "an uncommon practice at the time." **Choice D is incorrect** because a comma after "time" doesn't match the semicolon used later to separate the second ("celebrated...holiday") and third ("and...folktales") items in the series.

125 Correct answer **A**

Hard

‹ Back to question

A models—which

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. The dashes after "models" and "decision-makers" correctly separate the supplementary element "which assume that people are consistently rational decision-makers" from the rest of the sentence. This punctuation indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice B is incorrect because a comma can't be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it interrupts the sentence at an illogical and grammatically incoherent point. The dash should be placed before "which," not after it, to mark the beginning of the supplementary element.

126 Correct answer **B**

Hard

‹ Back to question

B speculative, though;

Choice B is the best answer. The convention being tested is the use of punctuation in a sentence. This choice correctly uses a comma to separate the supplementary adverb "though" from the preceding main clause ("Such interpretations are ultimately speculative") and uses a semicolon to join the next main clause ("the object's...makeup") to the rest of the sentence. Further, placing the semicolon after "though" indicates that the information in the preceding main clause (interpretations of an outer solar system object's composition based on its color are ultimately speculative) is a qualification of the information in the previous sentence (the composition of an outer solar system object is suggested by its color).

Choice A is incorrect because it fails to mark the boundary between the two main clauses with appropriate punctuation. **Choice C is incorrect** because placing the semicolon after "speculative" illogically indicates that the information in the next main clause ("the object's...makeup") is a qualification of the information in the previous clause ("Such...speculative"). **Choice D is incorrect** because it results in a comma splice. Commas can't be used in this way to punctuate a supplementary word or phrase between two main clauses.

127 Correct answer **A** — Hard — Back to question

A professor Yugang Sun

Choice A is the best answer. The convention being tested is the use of punctuation between titles and proper nouns. No punctuation is needed between the proper noun “Yugang Sun” and the title that describes Sun, “chemistry professor.” Furthermore, no punctuation is needed after “Sun” because “chemistry professor Yugang Sun and his colleagues at Temple University” functions as the coordinated subject of the sentence, and together Sun and colleagues performed the action of developing a new approach to producing iron nanoparticles.

Choice B is incorrect because no punctuation is needed between the proper noun “Yugang Sun” and the coordinated noun phrase “and his colleagues at Temple University.” **Choice C is incorrect** because no punctuation is needed before or after the proper noun “Yugang Sun.” Setting off the professor’s name with commas suggests that it could be removed without affecting the coherence of the sentence, which isn’t the case. **Choice D is incorrect** because no punctuation is needed between the title “chemistry professor” and the proper noun “Yugang Sun.”

128 Correct answer **D** — Hard — Back to question

D aesthetics. As

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("Philosopher...aesthetics") and another ("As...formalist"). The long adverbial element "as evidenced...itself" modifies the content in the following clause to support the claim that Kivy’s approach was formalist.

Choice A is incorrect because it results in a run-on sentence. The sentences ("Philosopher...aesthetics" and "As...formalist") are fused without punctuation and/or a conjunction. **Choice B is incorrect**. Without a comma preceding it, the conjunction "and" can’t be used in this way to join sentences. **Choice C is incorrect** because it results in a comma splice. A comma can’t be used in this way to mark the boundary between sentences.

129 Correct answer **B** — Hard — Back to question

B leaves; man-made trash,

Choice B is the best answer. The convention being tested is the punctuation of elements in a complex series. It’s conventional to use a semicolon to separate items in a complex series with internal punctuation, and in this choice, the semicolon after "leaves" is conventionally used to separate the first item ("natural debris, such as dried leaves") and the second item ("man-made trash, such as plastic bags") in the series of materials used by Gavua. Further, the comma after "trash" correctly separates the noun phrase "man-made trash" from the supplementary phrase ("such as plastic bags") that describes it.

Choice A is incorrect because a comma after "leaves" doesn’t match the semicolon used later to separate the second and third items in the series ("man-made...bags" and "and...glue"). Additionally, it’s not conventional to use a colon in this way to separate a supplementary phrase ("such as plastic bags") from the noun phrase it modifies ("man-made trash"). **Choice C is incorrect** because a comma after "leaves" doesn’t match the semicolon used later to separate the second and third items in the series ("man-made...bags" and "and...glue"). **Choice D is incorrect** because it’s not conventional to use a semicolon in this way to separate a supplementary phrase ("such as plastic bags") from the noun phrase it modifies ("man-made trash").

130 Correct answer **D** — Hard — Back to question

D music: the flute. A

Choice D is the best answer. The convention being tested is the use of punctuation within and between sentences. In this choice, the colon correctly introduces the name of the instrument (the flute) that novel audio technologies allowed to be added to jazz and swing. In addition, the period is used to correctly mark the boundary between one sentence ("In...flute") and another ("A relatively...greats").

Choice A is incorrect because it results in a comma splice. A comma can't be used in this way to join two main clauses ("In... quiet instrument" and "its...greats"). **Choice B is incorrect**. In standard English, it's unconventional to form a sentence in this way with two uncoordinated subjects ("the flute" and "its full range of sound"), and the lack of a clear main subject results in an awkwardly constructed and confusing sentence. **Choice C is incorrect**. In standard English, it's unconventional to form an independent clause in this way with two uncoordinated subjects ("the flute" and "its full range of sound"), and the lack of a clear main subject results in an awkwardly constructed and confusing clause.

131 Correct answer **B** Hard Back to question

B dislodge, in part due to its sheer size:

Choice B is the best answer. The convention being tested is punctuation between main clauses and a supplementary element. This choice correctly uses a comma to mark the boundary between the main clause ("The vessel took six days to dislodge") and the supplementary element ("in part due to its sheer size") that provides additional information on why the vessel was difficult to dislodge. Additionally, this choice correctly uses a colon to introduce another main clause that describes the vessel's size ("it's as heavy as two thousand blue whales when fully loaded").

Choice A is incorrect because it results in a comma splice. A comma can't be used in this way to mark the boundary between two main clauses ("The vessel...size" and "it's...loaded"). Additionally, it fails to mark the boundary between the main clause ("The vessel took six days to dislodge") and the supplementary element ("in part due to its sheer size"). **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between two main clauses ("The vessel...size" and "it's...loaded"). **Choice D is incorrect** because it results in a run-on sentence. The two main clauses ("The vessel...size" and "it's...loaded") are fused without punctuation and/or a conjunction.

132 Correct answer **D** Hard Back to question

D Ecuador)—

Choice D is the best answer. The convention being tested is the punctuation of a supplementary element within a sentence. The dash after "Ecuador" and the closing parenthesis pairs with the dash after "territories" to separate the supplementary element ("New...Ecuador") from the rest of the sentence. The supplementary element specifies the three South American territories that Simón Bolívar liberated, and the pair of dashes indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. Furthermore, punctuation isn't needed between "Ecuador" and the closing parenthesis. **Choice B is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a comma can't be paired with a dash to separate the supplementary element from the rest of the sentence.

133 Correct answer **D** Hard ‹ Back to question

D high on:

Choice D is the best answer. The convention being tested is punctuation use between a main clause and a supplementary phrase. In this choice, a colon is correctly used to mark the boundary between the main clause ("there...on") and the supplementary phrase ("openness to experience") and to introduce the information that identifies which personality trait participants scored especially high on.

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with "on" and separates a necessary preposition from the clause beginning with "there." **Choice B is incorrect** because a semicolon can't be used in this way to join the main clause ("there...on") and the supplementary phrase ("openness to experience"). A semicolon is conventionally used to join two main clauses, whereas a colon is conventionally used to introduce an element that explains or amplifies the information in the preceding clause, making the colon the better choice in this context. **Choice C is incorrect** because it fails to mark the boundary between the main clause ("there...on") and the supplementary phrase ("openness to experience").

134 Correct answer **B** Hard ‹ Back to question

B Bay. Having

Choice B is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after "Bay" is used correctly to mark the boundary between one sentence ("On...Bay") and another sentence that begins with a supplementary phrase ("Having... years"). Here, the supplementary phrase beginning with "having" modifies the subject of the second sentence, "the celebrated ship."

Choice A is incorrect. Without a comma preceding it, the conjunction "and" can't be used in this way to join sentences. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to join two sentences. **Choice D is incorrect** because it results in a run-on sentence. The sentences ("On...Bay" and "having...years") are fused without punctuation and/or a conjunction.

135 Correct answer **D** Hard ‹ Back to question

D compound aluminum oxide

Choice D is the best answer. The convention being tested is the use of punctuation around noun phrases. No punctuation is needed because the noun phrase "aluminum oxide" is a restrictive appositive, meaning that it provides essential identifying information about the noun phrase before it, "the chemical compound," and thus doesn't require punctuation around it.

Choice A is incorrect because no punctuation is needed. **Choice B is incorrect** because no punctuation is needed. **Choice C is incorrect** because the noun phrase "aluminum oxide" is a restrictive appositive. Setting the phrase off with punctuation suggests that it could be removed without affecting the coherence of the sentence, which isn't the case.

136 Correct answer **C** Hard ‹ Back to question

C formation that some

Choice C is the best answer. The convention being tested is the use and punctuation of an integrated relative clause. In this choice, the relative pronoun "that" is used to create an integrated relative clause that modifies the preceding noun phrase "a

conceptual framework for pattern formation." No punctuation is necessary between the noun phrase and the relative clause because the relative clause is supplying essential information about the framework.

Choice A is incorrect because no punctuation is needed between the noun phrase ("a conceptual...formation") and the integrated relative clause beginning with "that." **Choice B is incorrect** because it results in a confusing and ungrammatical sentence. **Choice D is incorrect** because it results in an ungrammatical sentence. A semicolon is used to join two main clauses or items in a complex series, and what follows "formation" is neither of these.

137 Correct answer **B** Hard Back to question

B described, from hair to grass to sculptures—

Choice B is the best answer. The convention being tested is the punctuation of supplementary elements within a sentence. The comma after "described" separates the first supplementary element ("both of interviewees and the items they described") from the second supplementary element ("from hair to grass to sculptures"). Furthermore, the dash after "sculptures" pairs with the dash after "photographs" to separate these two supplementary elements from the rest of the sentence. The pair of dashes, which operate at a higher organizing level than the comma, indicates that the elements between the dashes function together—in this case, the second supplement ("from...sculptures") describes the range of items mentioned in the first supplement—and could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it fails to appropriately punctuate the supplementary elements in the sentence. A dash is needed after "sculptures" to separate the supplementary elements ("both...sculptures") from the rest of the sentence. **Choice C is incorrect** because it fails to appropriately punctuate the supplementary elements in the sentence. The two supplementary elements "both...described" and "from...sculptures" function together to describe the photographs, and placing a dash between them would make this relationship less clear, suggesting that the supplement "both...described" is a standalone element that could be removed without affecting the grammatical coherence of the sentence, which isn't the case. **Choice D is incorrect** because it fails to appropriately punctuate the supplementary elements in the sentence. A colon isn't conventionally used in this way to separate a supplementary element ("from hair to grass to sculptures") from the noun phrase it is modifying ("items they described"). Additionally, a dash is needed after "sculptures" to separate the supplementary elements ("both... sculptures") from the rest of the sentence.

138 Correct answer **D** Hard Back to question

D regions

Choice D is the best answer. The convention being tested is punctuation between coordinates in a sentence. The two elements "how...regions" and "what...ocean" work together as coordinates to complete the description of what the team was able to determine. Because there are only two coordinates in this case (as opposed to a series of three or more), no punctuation is needed between them.

Choice A is incorrect because no punctuation is needed between the coordinates "how...regions" and "what...ocean." **Choice B is incorrect** because no punctuation is needed between the coordinates "how...regions" and "what...ocean." **Choice C is incorrect** because no punctuation is needed between the coordinates "how...regions" and "what...ocean."

139 Correct answer **D** Hard Back to question

D silk. By

Choice D is the best answer. The independent clauses "researcher Lin Zhi...silk" and "by dissolving...2 GPa" can be grammatically separated by a period. They can stand alone as sentences, and this is the only choice that lets them do that.

Choice A is incorrect. This choice results in a grammar error called a comma splice. "Researcher Lin Zhi...silk" and "by dissolving...2 GPa" are both independent clauses. They need to either be separated with punctuation like a period or a semicolon, or they need to be connected by a comma and a coordinating conjunction like "and." A comma alone isn't enough. **Choice B is incorrect**. This choice results in a grammar error called a run-on sentence. "Researcher Lin Zhi...silk" and "by dissolving...2 GPa" are both independent clauses. They need to either be separated with punctuation like a period or a semicolon, or they need to be connected by a comma and a coordinating conjunction like "and." **Choice C is incorrect**. This choice results in a grammar error called a run-on sentence. "Researcher Lin Zhi...silk" and "by dissolving...2 GPa" are both independent clauses. The coordinating conjunction "and" isn't enough to link them by itself. We need a comma, too.

140 Correct answer **C** Hard Back to question

C advance;

Choice C is the best answer. The clause "A subseasonal...advance" and the clause "its predictions...forecast" are both independent clauses, so using a semicolon to separate them is grammatically correct.

Choice A is incorrect. This choice creates a run-on sentence error. The clause "A subseasonal...advance" and the clause "its predictions... forecast" are both independent clauses, so a comma is not enough to separate them. **Choice B is incorrect**. This choice creates a run-on sentence error. The clause "A subseasonal...advance" and the clause "its predictions...forecast" are both independent clauses, so they need to be separated with specific punctuation (a period, a semi-colon, a colon, a dash, or a comma + a coordinating conjunction). **Choice D is incorrect**. This choice creates a run-on sentence error. The clause "A subseasonal...advance" and the clause "its predictions...forecast" are both independent clauses, so the word "and" by itself is not enough to separate them. There would need to be a comma before "and" for this choice to work.

141 Correct answer **C** Hard Back to question

C protest, a decision that,

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma after "protest" to mark the boundary between the main clause ("For...protest") and the supplementary appositive ("a decision...possessed") that provides additional information about Anderson's choice of narrator. Furthermore, the comma after "that" pairs with the comma after "own" to separate the supplementary adverbial phrase "by allowing...own" from the rest of the appositive. This adverbial phrase functions to explain how Anderson's choice of a narrator amplified the agency and power the hospital workers possessed, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with "a decision." **Choice B is incorrect** because a semicolon can't be used in this way to join the main clause ("For...protest") and the supplementary appositive ("a decision...possessed"). A semicolon is conventionally used to join two main clauses, and "a decision...possessed" isn't a main clause. **Choice D is incorrect** because it fails to mark the boundary between the main clause ("For...protest") and the supplementary appositive ("a decision...possessed") with appropriate punctuation.

142 Correct answer **C** Hard Back to question

C novel; rather,

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a semicolon to join a main clause ("Saville...novel") and a second main clause ("she's...it") preceded by supplementary elements ("rather...narrative").

Choice A is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, the comma after "novel" can't be used in this way to join the two main clauses.

143 Correct answer **A** Hard Back to question

A varied:

Choice A is the best answer. The convention being tested is the use of a colon within a sentence. In this choice, the colon is used in a conventional way to introduce the following description of how the number of jams available varied.

Choice B is incorrect because it creates a comma splice. A comma can't be used in this way to join two main clauses ("the number...varied" and "some...six"). **Choice C is incorrect** because it results in an illogical and confusing sentence. Using the conjunction "while" to join the main clause ("the number...varied") with the following clause's description of the number of jams available suggests that the variation in the number of jams is in contrast to some shoppers having twenty-four options. **Choice D is incorrect** because it results in an illogical and confusing sentence. Using "while" in this way suggests that the number of jams available varied during the time in which some shoppers had twenty-four options and others had six. The sentence makes clear, however, that what follows "varied" is a description of the variation, not a separate, simultaneous occurrence.

144 Correct answer **C** Hard Back to question

C temperature. Adding

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between the first sentence ("On...temperature") and the second sentence ("Adding... effect"). The gerund phrase beginning with "adding" is the subject of the second sentence, and the verb phrase "helps combat this effect" describes what adding a light-colored covering can do.

Choice A is incorrect because a semicolon can't be used in this way to join the sentence "On...temperature" and the supplementary phrases that follow. Doing so leaves the verb phrase "helps combat" without a subject and thus results in a grammatically unconventional sentence. **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect**. This choice results in a confusing and illogical sentence that suggests that adding a light-colored covering to an existing dark roof raises the temperature of the surrounding air. Furthermore, it creates ambiguity by leaving the verb phrase "helps combat" without a subject (so it isn't clear what helps combat the effect).

145 Correct answer **B** Hard Back to question

B spectrum:

Choice B is the best answer. The convention being tested is the use of a colon within a sentence. In this choice, the colon correctly introduces the following description of how the painting makes use of the entire visual light spectrum by depicting a rainbow-hued swimmer.

Choice A is incorrect because it results in a run-on sentence. The main clauses ("Like...spectrum" and "sporting...water") are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it results in a run-on sentence. The main clauses ("Like...spectrum" and "while... water") are fused without punctuation. Furthermore, the conjunction "while" fails to indicate that what follows is a description of how the painting makes use of the entire visual light spectrum. **Choice D is incorrect** because it results in a logically confusing sentence. The conjunction "while," which suggests that what follows is

occurring at the same time as or despite what came before, fails to indicate that what follows is a description of how the painting makes use of the entire visual light spectrum.

146 Correct answer **D** Hard Back to question

D rare;

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("In many...rare") and the second main clause ("in some... common") in this sentence.

Choice A is incorrect. Joining the first main clause ("In many...rare") and the second main clause ("in some...common") with the conjunction "and" conflicts with the use of "however" later in the sentence, resulting in a confusing and illogical sentence. **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice C is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

147 Correct answer **A** Hard Back to question

A single-handedly, however;

Choice A is the best answer. The convention being tested is the punctuation of a supplementary word or phrase between two main clauses. This choice correctly uses a comma to separate the supplementary adverb "however" from the preceding main clause ("Okinaka doesn't...single-handedly") and a semicolon to join the next main clause ("all...culture") to the rest of the sentence. Further, placing the semicolon after "however" correctly indicates that the information in the preceding main clause (Okinaka doesn't make such decisions single-handedly) is contrary to what might be assumed from the information in the previous sentence (Okinaka sits on the review board that adds new sites to the Hawaii Register of Historic Places).

Choice B is incorrect because placing the semicolon after "single-handedly" and the comma after "however" illogically indicates that the information in the next main clause (all historical designations must be approved by a group of experts) is contrary to the information in the previous clause (Okinaka doesn't make such decisions single-handedly). **Choice C is incorrect** because it results in a comma splice. Commas can't be used in this way to punctuate a supplementary word or phrase between two main clauses. **Choice D is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

148 Correct answer **A** Hard Back to question

A extensive: a

Choice A is the best answer. The convention being tested is the use of a colon within a sentence. In this choice, the colon is correctly used to introduce the following explanation of what the Patriot cause had grown into by 1774.

Choice B is incorrect because a semicolon can't be used in this way to join the main clause ("what...extensive") and the supplementary element ("a network...Congress"). A semicolon is conventionally used to join two main clauses, whereas a colon is conventionally used to introduce an element that explains or amplifies the information in the preceding clause, making the colon the better choice in this context. **Choice C is incorrect** because it results in a comma splice. The addition of the pronoun and verb "it was" forms the start of a new main clause in the sentence, and a comma can't be used in this way to mark the boundary between two main clauses. **Choice D is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "a network."

149 Correct answer **C** Hard Back to question

C emerged:

Choice C is the best answer. The convention being tested is punctuation use within a sentence. A colon can be used between two main clauses to signal that what follows is an elaboration of what came before. In this choice, the colon correctly introduces the following explanation of the divergent milk preservation strategies that emerged.

Choice A is incorrect because it results in a run-on sentence. The main clause ("As...emerged") and the subordinate clause followed by another main clause ("whereas...steppe") are fused without punctuation and/or a conjunction. **Choice B is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join a main clause ("As...emerged") and a subordinate clause followed by another main clause ("whereas...steppe"). **Choice D is incorrect** because it results in a comma splice. A comma can't be used in this way to join a main clause ("As... emerged") and a subordinate clause followed by another main clause ("whereas...steppe").

150 Correct answer **A** Hard Back to question

A awards, respectively;

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to separate the supplementary adverb "respectively" from the rest of the supplementary element introduced by the dash after "entertainment" ("the Emmy...awards"), and it uses a semicolon to join the first main clause ("In...respectively") and the second main clause ("the achievement...EGOT'").

Choice B is incorrect because placing the semicolon after "awards" illogically separates the supplementary adverb "respectively" from the supplementary element it belongs to ("the Emmy...awards") and attaches it to the following main clause ("the achievement...EGOT'"), resulting in a confusing and ungrammatical sentence. **Choice C is incorrect**. The dash after "respectively" pairs with the dash after "entertainment" to close the supplementary element ("the Emmy...respectively"), so it can't also serve to mark the boundary between the two main clauses ("In...respectively" and "the achievement...EGOT'"). The result fails to mark that boundary with appropriate punctuation. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, the comma after "respectively" can't be used in this way to join the first main clause ("In...respectively") and the second main clause ("the achievement...EGOT'").

151 Correct answer **A** Hard Back to question

A information, though;

Choice A is the best answer. This choice uses a semicolon to join two independent clauses ("Nakalembe doesn't just...though" and "she also shares..."). This choice also appropriately includes "though" in the first clause, where it logically belongs.

Choice B is incorrect. This choice results in a grammar error called a comma splice. It incorrectly joins two independent clauses with only a comma instead of a comma and a coordinating conjunction like "and" or "but." "Though" is a transition word, but it's not a coordinating conjunction. **Choice C is incorrect**. This choice results in a punctuation error. A semicolon can only be used to link two independent clauses. However, if "though" is included in the second clause, it turns the second clause into a dependent clause, so a semicolon can't be used after "information." **Choice D is incorrect**. This choice results in a grammar error called a comma splice. It incorrectly joins two independent clauses with only a comma instead of a comma and a coordinating conjunction like "and" or "but."

152 Correct answer **B**

Hard

< Back to question

B quilts, the

Choice B is the best answer. The convention being tested is punctuation use between a main clause and a supplementary phrase. This choice correctly uses a comma to mark the boundary between the main clause (“the portraits...quilts”) and the supplementary noun phrase (“the stitching...fabric”) that provides a further description of how the portraits can be identified as quilts.

Choice A is incorrect. A comma and the conjunction “and” can’t be used in this way to join a main clause and a supplementary noun phrase. **Choice C is incorrect** because a semicolon can’t be used in this way to join a main clause and a supplementary noun phrase. **Choice D is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with “the stitching.”

153 Correct answer **D**

Hard

< Back to question

D however. It

Choice D is the best answer. The clause “Like an Elvis impersonator...real thing” and the clause “it is...look-alike” are both independent clauses, so making them into two separate sentences is grammatically correct.

Choice A is incorrect. This choice creates a run-on sentence error. The clause “Like an Elvis impersonator...real thing” and the clause “it is...look-alike” are both independent clauses, so they need to be separated with at least a comma + a coordinating conjunction. This choice provides the coordinating conjunction “but,” but it’s missing a comma. **Choice B is incorrect**. This choice creates a run-on sentence error. The clause “Like an Elvis impersonator...real thing” and the clause “it is...look-alike” are both independent clauses, so they need to be separated with a semicolon, a colon, a dash, a period, or a comma + a coordinating conjunction. **Choice C is incorrect**. This choice creates a run-on sentence error. The clause “Like an Elvis impersonator...real thing” and the clause “it is...look-alike” are both independent clauses, so they need to be separated with at least a comma + a coordinating conjunction. This choice provides a comma, but it’s missing a coordinating conjunction.

154 Correct answer **C**

Hard

< Back to question

C conservation, though;

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to separate the supplementary adverb "though" from the preceding main clause ("Economists...conservation") and uses a semicolon to join the next main clause ("efficiency gains...rises") to the rest of the sentence. Further, placing the semicolon after "though" indicates that the information in the preceding main clause ("improvements in efficiency often correlate negatively with resource conservation") is contrary to what might be assumed from the information in the previous sentence (resource consumption would be expected to decrease with the development of new, more efficient technologies).

Choice A is incorrect because it results in a comma splice. Commas can’t be used in this way to punctuate a supplementary word or phrase between two main clauses. **Choice B is incorrect** because it fails to mark the boundary between the two main clauses ("Economists...though" and "efficiency gains....rises") with appropriate punctuation. Moreover, placing the semicolon after "conservation" illogically indicates that the information in the next clause (gains in efficiency may lead to an increase in resource consumption) is contrary to the information in the previous clause ("improvements in efficiency often correlate negatively with resource conservation"). **Choice D is incorrect** because placing a comma after "conservation" illogically indicates that the information in the next clause (gains in efficiency may lead to an increase in resource consumption) is contrary to the information in the previous clause ("improvements in efficiency often correlate negatively with resource conservation").

155 Correct answer **C** Hard Back to question

C photosynthesis:

Choice C is the best answer. The convention being tested is the use of punctuation in a sentence. In this choice, a colon is correctly used to mark the boundary between one main clause ("Along with...photosynthesis") and another main clause ("as light...oxygen") and to introduce the following explanation of how light intensity affects photosynthesis.

Choice A is incorrect because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction ("and"). **Choice B is incorrect** because it results in a comma splice. Without a coordinating conjunction following it, a comma can't be used in this way to join two main clauses ("Along with...photosynthesis" and "as light...oxygen"). **Choice D is incorrect** because it results in a run-on sentence. The two main clauses ("Along with...photosynthesis" and "as light...oxygen") are fused without punctuation and/or a conjunction.

156 Correct answer **B** Hard Back to question

B materials that Palma Rodríguez uses in his art

Choice B is the best answer. The convention being tested is the punctuation of an integrated relative clause within a sentence. No punctuation is needed between the noun phrase ("The natural and mechanical materials") and the integrated relative clause ("that Palma Rodríguez uses in his art"). The integrated relative clause provides essential information about the materials, so no punctuation should separate it from the noun phrase it modifies. Additionally, no punctuation is needed between the sentence's subject ("The natural and mechanical materials that Palma Rodríguez uses in his art") and its main verb ("highlight").

Choice A is incorrect because no punctuation is needed between the sentence's subject ("The natural...art") and its main verb ("highlight"). **Choice C is incorrect** because no punctuation is needed between the noun phrase ("The natural...materials") and the integrated relative clause ("that...art") that modifies it. Additionally, no punctuation is needed between the sentence's subject ("The natural...art") and its main verb ("highlight"). **Choice D is incorrect** because no punctuation is needed between the noun phrase ("The natural...materials") and the integrated relative clause ("that...art") that modifies it.

157 Correct answer **B** Hard Back to question

B species, both native and nonnative;

Choice B is the best answer. The convention being tested is the punctuation of items in a complex series (a series including internal punctuation). The semicolon after "nonnative" is correctly used to separate the first item ("growing diverse plant species, both native and nonnative") and the second item ("fostering scientific research") in the series of things that botanical gardens are dedicated to. Further, the comma after "species" is correctly used to separate the noun phrase "diverse plant species" and the supplementary phrase "both native and nonnative" that modifies it.

Choice A is incorrect because a comma (specifically, the comma after "nonnative") can't be used in this way to separate items in a complex series. **Choice C is incorrect** because a semicolon can't be used in this way to separate the noun phrase "diverse plant species" and the supplementary phrase "both native and nonnative" that modifies it. Further, a comma can't be used in this way to separate items in a complex series. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the noun phrase "diverse plant species" and the supplementary phrase "both native and nonnative" that modifies it. Further, a comma can't be used in this way to separate items in a complex series.

158 Correct answer **D** Hard Back to question

D *Panchali*. A

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("In...*Panchali*") and another ("A quiet...time"). The phrase beginning with "a quiet" modifies the subject of the next sentence, "Ray's film."

Choice A is incorrect because it results in a run-on sentence. The sentences are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences.

159 Correct answer **B** Hard ‹ Back to question

B continents: geological

Choice B is the best answer. The convention being tested is punctuation use between a main clause and a supplementary phrase. In this choice, a colon is correctly used to mark the boundary between the main clause ("A study...continents") and the supplementary phrase ("geological... above") and to introduce the following explanation of the origin of Earth's continents.

Choice A is incorrect because it fails to mark the boundary between the main clause ("A study...continents") and the supplementary phrase ("geological...above") with appropriate punctuation. **Choice C is incorrect** because a semicolon can't be used in this way to join the main clause ("A study...continents") and the supplementary phrase ("geological...above"). A semicolon is conventionally used to join two main clauses, whereas a colon is conventionally used to introduce an element that explains or amplifies the information in the preceding clause, making it the better choice in this context. **Choice D is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "geological."

160 Correct answer **A** Hard ‹ Back to question

A earlier. In

Choice A is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("However...earlier") and another ("In...area"). The supplementary phrase "in 1420 CE" modifies "humans," the subject of the third sentence.

Choice B is incorrect because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. Moreover, the subordinating conjunction "which" creates a confusing and illogical sentence that suggests that the supplementary phrase beginning with "in" modifies the previous information ("However...earlier") rather than the information that follows. **Choice D is incorrect** because it results in a run-on sentence. The sentences ("However...earlier" and "in...area") are fused without punctuation and/or a conjunction.

161 Correct answer **C** Hard ‹ Back to question

C linguist Diane Massam

Choice C is the best answer. The convention being tested is the use of punctuation between titles and proper nouns. No punctuation is needed to set off the proper noun "Diane Massam" from the title that describes Massam, "linguist." Because "Diane Massam" is essential information identifying the "linguist," no punctuation is necessary.

Choice A is incorrect because no punctuation is needed before or after the proper noun "Diane Massam." Setting the linguist's name off with commas suggests that it could be removed without affecting the coherence of the sentence, which isn't the case. **Choice B is incorrect** because no punctuation is needed. **Choice D is incorrect** because no punctuation is needed.

162 Correct answer **D** Hard Back to question

D 1929, for one. The

Choice D is the best answer. The conventions being tested are punctuation use between sentences and the punctuation of a supplementary element. This choice correctly uses a period to mark the boundary between one sentence ("During...one") and another ("The *Katzenbach*...event") and uses a comma to separate the supplementary phrase "for one" from the preceding main clause. Further, placing the period after "for one" correctly indicates that the information in the preceding main clause ("the founding...1929") is the first example provided of a pivotal event in the Latino rights movement.

Choice A is incorrect because placing the period after "1929" illogically indicates that the information in the next main clause (describing the *Katzenbach v. Morgan* court decision) is the first example provided of a pivotal event in the Latino rights movement; rather, it's a second example. **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to join two main clauses. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to join two main clauses. Moreover, it fails to use appropriate punctuation to separate the supplementary element "for one" from the preceding main clause.

163 Correct answer **B** Hard Back to question

B pristine, though;

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to separate the supplementary adverb "though" from the preceding main clause ("They are hardly pristine") and uses a semicolon to join the two main clauses ("They...though" and "many...objects"). Further, placing the semicolon after "though" indicates that the information in the preceding main clause (chondrites are far from pristine) is contrary to what might be assumed from the information in the previous sentence (chondrites have been generally unaltered by their environment).

Choice A is incorrect because placing the comma after "pristine" and using "though" as a subordinating conjunction illogically indicates that the information in the next main clause (many chondrites have experienced damage) is contrary to the information in the previous clause (chondrites are far from pristine). **Choice C is incorrect** because placing the semicolon after "pristine" illogically indicates that the information in the next main clause (many chondrites have experienced damage) is contrary to the information in the previous clause (chondrites are far from pristine). **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, the comma after "though" can't be used in this way to join two main clauses.

164 Correct answer **A** Hard Back to question

A effect, though;

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to separate the supplementary adverb "though" from the preceding main clause ("Jetties can sometimes have the opposite effect") and uses a semicolon to join the next main clause ("obstructing...areas") to the rest of the sentence. Further, placing the semicolon after "though" logically indicates that the information earlier in this sentence (that jetties can sometimes cause erosion) is contrary to what might be assumed from the information in the previous sentence (that jetties are often constructed for the purpose of protecting coastlines from erosion).

Choice B is incorrect because it fails to mark the boundary between the two main clauses with appropriate punctuation. With "though...areas" functioning as a subordinate clause following the comma, this choice illogically indicates that the following

information (that obstructing the natural flow of sand along the shore can sometimes lead to erosion) is contrary to the information earlier in the sentence (that jetties can sometimes cause erosion). Instead, the information following "though" supports the previous claim about the erosive effects of jetties. **Choice C is incorrect** because it's not conventional to use a semicolon in this way to separate a main clause from a dependent clause. Further, it illogically indicates that the following information (that obstructing the natural flow of sand along the shore can sometimes lead to erosion) is contrary to the information earlier in the sentence (that jetties can sometimes cause erosion). Instead, the information following "though" supports the previous claim about the erosive effects of jetties. **Choice D is incorrect** because it results in a comma splice. Commas can't be used in this way to set off a supplementary word or phrase between two main clauses.

165 Correct answer **A** Hard ‹ Back to question

A Tribe, and

Choice A is the best answer. This choice uses a comma and a coordinating conjunction ("and") to join two independent clauses ("The Tantaquidgeon…Tribe" and "Today…country").

Choice B is incorrect. This choice results in a grammar error known as a run-on sentence. The clauses before and after "Tribe" are both independent, so they need to be separated with some sort of punctuation. **Choice C is incorrect**. This choice results in a grammar error known as a run-on sentence. The clauses before and after "and" are both independent, so they can't be linked with just a conjunction. A comma would also be required. **Choice D is incorrect**. This choice results in a grammar error called a comma splice. The clauses before and after "Tribe" are both independent, so they can't be linked with just a comma. A coordinating conjunction like "and" or "but" would also be required.

166 Correct answer **A** Hard ‹ Back to question

A Chulalongkorn;

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("That…Chulalongkorn") and the second main clause ("deterring…achievement").

Choice B is incorrect. Using the conjunction "that" to introduce "deterring…achievement" as a subordinate element of the main clause ("That…Chulalongkorn") results in a confusing and ungrammatical sentence. **Choice C is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice D is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

167 Correct answer **D** Hard ‹ Back to question

D languages, however;

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to separate the supplementary adverb "however" from the preceding main clause ("Compiling…languages") and uses a semicolon to join the next main clause ("any…tool") to the rest of the sentence. Further, placing the semicolon after "however" indicates that the information in the preceding main clause ("compiling isn't exclusive to certain programming languages") is contrary to what might be assumed from the information in the previous sentence (Scala's status as a compiled programming language might suggest that compiling is unique to certain languages).

Choice A is incorrect because placing a period after "languages" and starting a new sentence with "however" illogically indicates that the information in the next sentence (any language can incorporate a compiler) is contrary to the information in the previous sentence ("compiling isn't exclusive to certain programming languages"). Instead, the information following "however" supports the previous claim. **Choice B is incorrect** because placing the semicolon after "languages" illogically

indicates that the information in the next main clause (any language can incorporate a compiler) is contrary to the information in the previous clause (“compiling isn’t exclusive to certain programming languages”). Instead, the information following “however” supports the previous claim. **Choice C is incorrect** because it results in a comma splice. Commas can’t be used in this way to punctuate a supplementary word or phrase between two main clauses.

168 Correct answer **D** Hard Back to question

D indiscriminate:

Choice D is the best answer. The convention being tested is punctuation use between two main clauses. In this choice, a colon is correctly used to mark the boundary between one main clause ("goats are notoriously indiscriminate") and another main clause ("they will devour all kinds of shrubs and weeds") and to introduce the following explanation of goats’ nondiscriminatory behavior when it comes to what they eat.

Choice A is incorrect because when coordinating two longer main clauses such as these, it’s conventional to use a comma before the coordinating conjunction. Furthermore, the conjunction "and" fails to indicate that what follows is an explanation of goats’ nondiscriminatory behavior when it comes to their diets. **Choice B is incorrect** because it results in a comma splice. A comma can’t be used in this way to join two main clauses ("goats...indiscriminate" and "they...weeds"). **Choice C is incorrect** because it results in a run-on sentence. The two main clauses ("goats...indiscriminate" and "they...weeds") are fused without punctuation and/or a conjunction.

169 Correct answer **A** Hard Back to question

A significance; depictions

Choice A is the best answer. The convention being tested is the punctuation of elements in a complex series. It’s conventional to use a semicolon to separate items in a complex series with internal punctuation, and in this choice, the semicolon after “significance” is conventionally used to separate the first item (“intricate...significance”) and the second item (“depictions...animals”) in the series of common elements found in Celtic art. Moreover, the semicolon after “significance” matches the semicolon used later to separate the second item (“depictions...animals”) and the third item (“and...accents”) in the series.

Choice B is incorrect because a comma after “significance” doesn’t match the semicolon used later to separate the second and third items in the series (“depictions...animals” and “and...accents”). **Choice C is incorrect** because a colon can’t be used in this way to separate items in a complex series. **Choice D is incorrect** because placing a period after “significance” results in a rhetorically unacceptable sentence fragment beginning with “depictions.”

170 Correct answer **D** Hard Back to question

D exclamation. Translated

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("The poem...exclamation") and another sentence that begins with a supplementary element ("Translated...poem"). The supplementary element "translated as ‘hark!’ or ‘listen!’ in some versions" modifies the subject of the second sentence, "the word" (referring to hwæt).

Choice A is incorrect because it results in a comma splice after "exclamation." A comma can’t be used in this way to mark the boundary between sentences. **Choice B is incorrect**. Without a comma preceding it, the conjunction "and" can’t be used in this way to join sentences. **Choice C is incorrect** because it results in a comma splice after "versions." A comma can’t be used in this way to mark the boundary between sentences.

171 Correct answer **B** — Hard — Back to question

B Lagos; *A Kind of Marriage*,

Choice B is the best answer. The convention being tested is the punctuation of items in a complex series (a series including internal punctuation). In this choice, the semicolon after "Lagos" is conventionally used to separate the first item ("*The Joys*... Lagos") and the second item ("*A Kind*...Nigeria") in the series. Further, the comma after *"Marriage"* correctly separates the title *"A Kind of Marriage"* from the supplementary phrase ("a television...Nigeria") that describes it.

Choice A is incorrect because the comma after "Lagos" doesn't match the semicolon used later in the series to separate the second item ("*A Kind*...Nigeria") from the third item ("and...autobiography"). **Choice C is incorrect** because the comma after "Lagos" doesn't match the semicolon used later in the series to separate the second item ("*A Kind*...Nigeria") from the third item ("and...autobiography"). Additionally, a colon can't be used in this way to separate the title *"A Kind of Marriage"* from the supplementary phrase ("a television...Nigeria") that describes it. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the title *"A Kind of Marriage"* from the supplementary phrase ("a television... Nigeria") that describes it.

172 Correct answer **B** — Hard — Back to question

B artist

Choice B is the best answer. The convention being tested is the use of punctuation between titles and proper nouns. No punctuation is needed to set off the proper noun "Marie-Denise Villers" from the title that describes Villers, "little-known French portrait artist."

Choice A is incorrect because no punctuation is needed. **Choice C is incorrect** because no punctuation is needed. **Choice D is incorrect** because no punctuation is needed.

173 Correct answer **A** — Hard — Back to question

A equations, though:

Choice A is the best answer. The convention being tested is the use of punctuation to mark boundaries between supplements and clauses. The comma after "equations" is used to separate the independent clause ("Hopper's...equation") from the supplementary adverb phrase "though." The colon after "though" is used to mark the boundary between the clause ending with "though" and the following clause ("as...age"). A colon used in this way introduces information that illustrates or explains information that has come before it. In this case, the colon after "though" introduces the following explanation of how Hopper's subsequent career would involve more than just solving equations: she would become a pioneering computer programmer.

Choice B is incorrect because it results in a comma splice. A comma can't be used in this way to join two independent clauses ("Hopper's... though" and "as...age") such as these. **Choice C is incorrect** because it results in an illogical sequence of sentences. Placing the period after "equations" and beginning the next sentence with "Though" illogically suggests that the following information (that Hopper would help usher in the digital age) is contrary to the information in the previous sentence (Hopper's subsequent career would involve more than just solving equations). Instead, the information that follows supports the information from the previous sentence by explaining how her work and influence extended beyond solely solving equations. **Choice D is incorrect** because it results in a run-on sentence. The two independent clauses ("Hopper's...though" and "as...age") are fused without punctuation.

174 Correct answer **A** — Hard — Back to question

A work, though,

Choice A is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "work" pairs with the comma after "though" to separate the supplementary element "though" from the rest of the sentence. This supplementary element signals that what follows is an exception to Chen using software tools to create illustrations, and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice B is incorrect because the comma after "work" must be paired with a comma after "though" to separate the supplementary element from the rest of the sentence. **Choice C is incorrect** because a semicolon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because a semicolon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence.

175 Correct answer **B** Hard Back to question

B Earth: at 41 light-years away,

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. In this choice, a colon is correctly used after the main clause ("The radial...Earth") to introduce the complex series that follows. Furthermore, the comma after "away" is conventionally used to separate the supplementary phrase "at 41 light-years away" from the noun phrase it describes ("the gas giant 55 Cancri d"), the first item in the series.

Choice A is incorrect because placing a colon after "away" illogically separates the supplementary phrase "at 41 light-years away" from the noun phrase it describes ("the gas giant 55 Cancri d") and attaches it to the main clause ("The radial...away"), resulting in a confusing and illogical sentence. **Choice C is incorrect** because a comma cannot be used in this way to mark the boundary between a main clause ("The radial...Earth") and a complex series. **Choice D is incorrect** because it fails to mark the boundary between the main clause ("The radial...Earth") and the complex series that follows with appropriate punctuation.

176 Correct answer **A** Hard Back to question

A tombs. Built

Choice A is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after "tombs" is used correctly to mark the boundary between one sentence ("Archaeologist...tombs") and another ("Built...nature").

Choice B is incorrect because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice C is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join the two sentences. **Choice D is incorrect** because it results in a run-on sentence. The sentences ("Archaeologist...tombs" and "Built...nature") are fused without punctuation and/or a conjunction.

177 Correct answer **B** Hard Back to question

B *Belgravia*. Published

Choice B is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between the first sentence ("Alberto...*Belgravia*") and the second ("Published...available"). The participial phrase beginning with "published" contains a complex series punctuated with commas and semicolons ("the Australian cities of Melbourne, Adelaide, and Hobart; the continental European cities of Brussels, Paris, and Turin; and cities in Turkey, India, and Jamaica"), and this participial phrase modifies the subject of the second sentence, "this magazine."

Choice A is incorrect. Using a semicolon to join two main clauses in this way in combination with the semicolons that separate the items in the complex series would result in an ambiguous and confusing sentence. **Choice C is incorrect** because it results in a comma splice. With no punctuation after *"Belgravia,"* the participial phrase "published...Jamaica" reads as an integrated modifier within the noun phrase "the magazine *Belgravia*," and the first main clause ("Alberto...Jamaica") is then joined to a second main clause ("this...available") using only a comma. A comma can't be used in this way to join two main clauses. **Choice D is incorrect** because it results in a comma splice. A comma can't be used in this way to join two main clauses.

178 Correct answer **D** Hard Back to question

D essays. Praising

Choice D is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after "essays" is used correctly to mark the boundary between one sentence ("American...essays") and another ("praising... Morrison"). The participial phrase beginning with "Praising" modifies the subject of the second sentence, "writer Robert Antoni."

Choice A is incorrect because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice B is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join sentences. **Choice C is incorrect** because it results in a run-on sentence. The sentences ("American...essays" and "Praising... Morrison") are fused without punctuation and/or a conjunction.

179 Correct answer **A** Hard Back to question

A tenets. Developed

Choice A is the best answer. The convention being tested is punctuation use between sentences. This choice correctly uses a period to mark the boundary between one sentence ("The pedagogy...tenets") and another ("Developed...'March in G'"). The participial phrase "developed by Japanese violinist Shinichi Suzuki" modifies the subject of the next sentence, "the method."

Choice B is incorrect because it results in a run-on sentence. The sentences ("The pedagogy...tenets" and "Developed...'March in G'") are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it creates a confusing and illogical sentence structure. The relative pronoun "that" followed by a comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences.

180 Correct answer **B** Hard Back to question

B works. Because

Choice B is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used to correctly mark the boundary between one sentence ("A ray...works") and another ("Because...image").

Choice A is incorrect because it results in a run-on sentence. The two sentences ("A ray...works" and "Because...image") are fused without punctuation and/or a conjunction. **Choice C is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect** because it results in a comma splice. Since the contraction "it's" creates a main clause, the comma after "single ray" can't be used in this way to mark the boundary between two main clauses ("it's...ray" and "all light...image").

181 Correct answer **B** Hard ‹ Back to question

B geologist

Choice B is the best answer. “Marie tharp” is essential information that completes the first clause — the first clause doesn’t function without it. So we don’t want to separate it with punctuation.

Choice A is incorrect. This choice creates a punctuation error. “The field of geological oceanography owes much to American geologist” is unclear: which geologist are we talking about? We need the “Marie Tharp” for clarity, which means it’s essential information and should not be separated by a comma. **Choice C is incorrect**. This choice creates a punctuation error. “The field of geological oceanography owes much to American geologist” is unclear: which geologist are we talking about? We need the “Marie Tharp” for clarity, which means it’s essential information and should not be separated by a semicolon. **Choice D is incorrect**. This choice creates a punctuation error. “The field of geological oceanography owes much to American geologist” is unclear: which geologist are we talking about? We need the “Marie Tharp” for clarity, which means it’s essential information and should not be separated by a colon.

182 Correct answer **C** Hard ‹ Back to question

C *Gingerbread*

Choice C is the best answer. The convention being tested is punctuation between a subject and a verb. When, as in this case, a subject (“her 2019 novel *Gingerbread*”) is immediately followed by a verb (“offers”), no punctuation is needed.

Choice A is incorrect because no punctuation is needed between the subject and the verb. **Choice B is incorrect** because no punctuation is needed between the subject and the verb. **Choice D is incorrect** because no punctuation is needed between the subject and the verb.

183 Correct answer **C** Hard ‹ Back to question

C vibrato—

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. The dash after “vibrato” pairs with the dash after “abilities” to separate the supplementary element (“acquiring…vibrato”) from the rest of the sentence. This supplementary element functions to describe the vocal abilities Vaughan developed, and the pair of dashes indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a colon can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice B is incorrect** because a comma can’t be paired with a dash in this way to separate the supplementary element from the rest of the sentence. **Choice D is incorrect** because it fails to use appropriate punctuation to separate the supplementary element from the rest of the sentence.

184 Correct answer **B** Hard ‹ Back to question

B and, in the process,

Choice B is the best answer. This choice uses paired punctuation in the form of two commas to set off the nonessential phrase "in the process."

Choice A is incorrect. The phrase "in the process" is a nonessential element and needs to be set off with paired punctuation. We need a comma after "and" to match the one after "process." **Choice C is incorrect**. The phrase "in the process" is a

nonessential element and needs to be set off with paired punctuation, so we would need a dash after "and" to match the one following "process." **Choice D is incorrect**. The phrase "in the process" is a nonessential element and needs to be set off with paired punctuation. We would need a comma after "process" to match the one following "and."

185 Correct answer **D** Hard Back to question

D involved;

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("That the...involved") and the second main clause ("establishing...divisive"). Further, the semicolon is the most appropriate choice when joining two separate, parallel statements, such as here, where the information following the semicolon contrasts with the information before.

Choice A is incorrect because placing a colon after "involved" illogically indicates that the information in the second main clause (the precise location was the subject of disagreement) explains or amplifies the information in the previous main clause (the general location was agreed upon by all). Instead, the information in the second clause contrasts with the previous information. **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice C is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

186 Correct answer **C** Hard Back to question

C system. Analyzing

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("The city...system") and another ("Analyzing...footage"). The participial phrase beginning with "analyzing" modifies the subject of the second sentence, "the AI algorithm."

Choice A is incorrect. Placing a dash before "analyzing" creates a confusing and ambiguous modifying element ("analyzing...areas") and a comma splice between "areas" and "the AI algorithm." (A comma can't be used in this way to mark the boundary between sentences.) **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. **Choice D is incorrect** because it results in a run-on sentence. The sentences ("The city...system" and "analyzing...footage") are fused without punctuation and/or a conjunction.

187 Correct answer **C** Hard Back to question

C nickname, however,

Choice C is the best answer. The convention being tested is punctuation use between a main clause and two supplementary elements. In this choice, the commas after "nickname" and "however" are correctly used to separate the supplementary adverb "however" from the main clause ("Scott-Heron...nickname") on one side and the supplementary participial phrase ("feeling...bluesologist") on the other.

Choice A is incorrect because it fails to mark the boundary between the supplementary adverb "however" and the supplementary phrase ("feeling...bluesologist"). **Choice B is incorrect** because a semicolon can't be used in this way to join the supplementary adverb "however" and the supplementary phrase ("feeling...bluesologist"). **Choice D is incorrect** because a semicolon can't be used in this way to join the main clause ("Scott-Heron...nickname") and the supplementary word and phrase ("however" and "feeling...bluesologist"). Moreover, placing the semicolon after "nickname" illogically signals that the following information (Scott-Heron's feeling that the nickname didn't encapsulate his devotion to the blues tradition) is contrary to the information in the previous clause (Scott-Heron's resistance to the nickname).

188 Correct answer **A**

Hard

Back to question

A new: sequencing

Choice A is the best answer. “A team...tried something new” is an independent clause leading to an explanation of what the new thing was. A colon can only be used at the end of an independent clause, and typically introduces further explanation that expands upon the first clause, which makes a colon the perfect choice here.

Choice B is incorrect. This choice results in a punctuation error. “Sequencing...dental plaque” can’t stand on its own as a sentence, and so it can’t be linked to the independent clause “a team...tried something new” with a semicolon. Only two independent clauses can be connected in this way. **Choice C is incorrect**. This choice results in a punctuation error. If “sequencing” is included in the first clause, it can no longer stand on its own as a complete idea. Since a colon can only come at the end of an independent clause, using one in this way creates an error. **Choice D is incorrect**. This choice results in a sentence fragment. “Sequencing...dental plaque” can’t stand on its own as a sentence.

189 Correct answer **C**

Hard

Back to question

C antiquity, however;

Choice C is the best answer. The convention being tested is the punctuation of a supplementary phrase following a clause. This choice uses a comma to separate the supplementary adverb phrase "however" from the independent clause it modifies ("They...antiquity") and uses a semicolon to join the first independent clause ("They...antiquity") and the second independent clause ("some...literature"). Further, placing the semicolon after "however" indicates that the information in the clause that this is part of (that neoclassical writers were not the first to adopt classical literary modes) is contrary to what might be assumed from the information in the previous sentence (that the neoclassical writers were unique in imitating classical epic poetry and satires).

Choice A is incorrect because it fails to mark the boundary after "however" between the two independent clauses with appropriate punctuation. **Choice B is incorrect** because the comma after "however" can’t be used in this way to mark the boundary between the two independent clauses. **Choice D is incorrect** because placing the semicolon after "antiquity" illogically indicates that the information in the clause that this is part of (that prominent Renaissance figures were also influenced by classical literature) is contrary to the information in the previous clause (that neoclassical writers were not the first to adopt classical literary modes).

190 Correct answer **A**

Hard

Back to question

A competitions, however:

Choice A is the best answer. The convention being tested is the punctuation of supplementary elements within a sentence. This choice correctly uses a comma to separate the supplementary adverb "however" from the preceding main clause ("only...competitions"), and it uses a colon to introduce the list of dances that follows ("rumba...jive"). Further, placing the colon after "however" rather than before indicates that the information in the preceding main clause (only...competitions) is contrary to what might be assumed from the information in the previous sentence (Latin America has many more dance forms).

Choice B is incorrect. The comma after "however" can’t be used in this way to introduce a series ("rumba...jive"). **Choice C is incorrect** because it isn’t conventional to use a semicolon in this way to introduce a series of items, such as the list of dances. **Choice D is incorrect** because placing the semicolon after "competitions" illogically indicates that the following list of five Latin American dances ("rumba...jive") is contrary to the information in the previous clause (only five Latin American dances are included in international ballroom dance competitions).

191 Correct answer **C** Hard ‹ Back to question

C biologist Yuree Lee

Choice C is the best answer. The convention being tested is the use of punctuation between titles and proper nouns. No punctuation is needed to offset the proper noun "Yuree Lee" from the title "plant cell biologist" that describes Lee.

Choice A is incorrect because no punctuation is needed. **Choice B is incorrect** because no punctuation is needed. **Choice D is incorrect** because no punctuation is needed around the proper noun "Yuree Lee." Setting the phrase off with punctuation suggests that it could be removed without affecting the coherence of the sentence, which isn't the case.

192 Correct answer **B** Hard ‹ Back to question

B observation, however,

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "observation" pairs with the comma after "however" to separate the supplementary adverb "however" from the rest of the sentence, which consists of a main clause ("Lai...observation") followed by a participial phrase ("recommending...study").

Choice A is incorrect because a semicolon can't be used in this way to join the main clause ("Lai...observation") and the participial phrase ("recommending...study") that follows the supplementary adverb "however." A semicolon is conventionally used to join two main clauses, and "recommending...study" isn't a main clause. **Choice C is incorrect** because placing a period after "observation" results in a rhetorically unacceptable sentence fragment beginning with "however." **Choice D is incorrect** because a semicolon can't be used in this way to join the main clause ("Lai...however") and the participial phrase ("recommending...study") that follows. A semicolon is conventionally used to join two main clauses, and "recommending...study" isn't a main clause.

193 Correct answer **A** Hard ‹ Back to question

A club

Choice A is the best answer. "That is...field" is an essential supplement, so we should not use punctuation to separate it from "scuba diving club." .

Choice B is incorrect. This choice creates a punctuation error. "That is...field" is an essential supplement, so we should not use a comma (or any kind of punctuation) to separate it from "scuba diving club." . **Choice C is incorrect**. This choice creates a punctuation error. "That is...field" is an essential supplement, so we should not use a dash (or any kind of punctuation) to separate it from "scuba diving club." . **Choice D is incorrect**. This choice creates a run-on sentence. It makes "that is...United States" into an awkward independent clause, but it also makes "that has...field" into its own awkward independent clause without the correct punctuation separating it.

194 Correct answer **C** Hard ‹ Back to question

C New Mexico, and

Choice C is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "and" to join the first main clause ("In 1919 Larrazolo was elected governor of New Mexico") and the second main clause ("in 1928 he became the nation's first Hispanic US Senator").

Choice A is incorrect because when coordinating two longer main clauses such as these, it's conventional to use a comma before the coordinating conjunction. **Choice B is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can't be used in this way to join two main clauses. **Choice D is incorrect** because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

195 Correct answer **C** Hard Back to question

C critic Stina Chyn claims

Choice C is the best answer. The conventions being tested are punctuation use between titles and proper nouns and between verbs and integrated quotations. No punctuation is needed to set off the proper noun "Stina Chyn" from the title that describes Chyn, "critic." Because "Stina Chyn" is essential information identifying the "critic," no punctuation is necessary. Further, no punctuation is needed between the verb "claims" and the following quotation because the quotation is integrated into the structure of the sentence.

Choice A is incorrect because no punctuation is needed before or after the proper noun "Stina Chyn." Setting the critic's name off with commas suggests that it could be removed without affecting the coherence of the sentence, which isn't the case. **Choice B is incorrect** because no punctuation is needed before or after the proper noun "Stina Chyn." Setting the critic's name off with commas suggests that it could be removed without affecting the coherence of the sentence, which isn't the case. Additionally, no punctuation is needed between "claims" and the integrated quotation. **Choice D is incorrect** because no punctuation is needed between the verb "claims" and its subject, "critic Stina Chyn." Additionally, no punctuation is needed between the verb "claims" and the integrated quotation.

196 Correct answer **C** Hard Back to question

C Kingelez

Choice C is the best answer. The convention being tested is punctuation between a subject and a verb. No punctuation is needed when the subject of a sentence is immediately followed by a main verb. In this case, the sentence's subject ("the innovative works of Congolese sculptor and architect Bodys Isek Kingelez") is followed by the main verb "were featured," and no punctuation should come between them.

Choice A is incorrect because no punctuation is needed between the subject and the verb. **Choice B is incorrect** because no punctuation is needed between the subject and the verb. **Choice D is incorrect** because no punctuation is needed between the subject and the verb.

197 Correct answer **D** Hard Back to question

D playwright Wakako Yamauchi

Choice D is the best answer. The convention being tested is the use of punctuation between titles and proper nouns. No punctuation is needed to set off the proper noun "Wakako Yamauchi" from the title that describes Yamauchi, "pioneering playwright." Because "Wakako Yamauchi" is essential information identifying the "pioneering playwright," no punctuation is necessary.

Choice A is incorrect because no punctuation is needed before or after the proper noun "Wakako Yamauchi." Setting the playwright's name off with commas suggests that it could be removed without affecting the coherence of the sentence, which isn't the case. **Choice B is incorrect** because no punctuation is needed between the title "pioneering playwright" and the proper noun "Wakako Yamauchi." **Choice C is incorrect** because no punctuation is needed between the proper noun "Wakako Yamauchi" and the verb "compares."

198 Correct answer **C** Hard ‹ Back to question

C 200,000 km^2 Puntland Desert

Choice C is the best answer. The convention being tested is the use of punctuation between a modifier and a noun and also between a subject and a verb. No punctuation is needed when, as in this case, a modifying phrase (“roughly 200,000 km^2”) precedes the noun phrase it modifies (“Puntland Desert”) to form the subject of the sentence. Additionally, no punctuation is needed between the subject (“The roughly…Desert”) and the main verb (“is classified”).

Choice A is incorrect because no punctuation is needed between the subject and the main verb. **Choice B is incorrect** because no punctuation is needed between the modifier and the noun phrase. **Choice D is incorrect** because no punctuation is needed between the modifier and the noun phrase, nor is it needed between the subject and the main verb.

199 Correct answer **B** Hard ‹ Back to question

B Culture—

Choice B is the best answer. The text uses a dash to introduce a nonessential element that explains the acronym FESTAC. The dash matches the dash that comes after “known,” ending the descriptive aside.

Choice A is incorrect. A colon can only come after an independent clause, which isn’t the case here. **Choice C is incorrect**. While punctuation is required to set off “or FESTAC…known” from the rest of the sentence, nonessential elements must be separated from the sentence with matching punctuation. Since a dash appears on the other side of the element, we can’t use a comma here. **Choice D is incorrect**. The descriptive aside “or FESTAC…known” is a nonessential element that must be separated with punctuation from the rest of the sentence. This choice fails to add the necessary punctuation before the nonessential element.

200 Correct answer **B** Hard ‹ Back to question

B content; in that era,

Choice B is the best answer. The convention being tested is the use of punctuation within a sentence. This choice uses a semicolon in a conventional way to join the first main clause ("Gitlin’s…content") and the second main clause beginning with a supplementary phrase ("in… audiences"). Further, placing a comma after "era" separates the supplementary phrase "in that era" from the rest of the main clause that follows ("even…audiences").

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. Further, this choice fails to mark the boundary between the supplementary phrase "in that era" and the rest of the main clause that follows ("even…audiences"). **Choice C is incorrect** because it results in a run-on sentence. The two main clauses ("Gitlin’s…content" and "in… audiences") are fused without punctuation and/or a conjunction. **Choice D is incorrect** because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses.

201 Correct answer **D** Hard ‹ Back to question

D plant:

Choice D is the best answer. The convention being tested is punctuation use between a main clause and a supplementary phrase. In this choice, a colon is correctly used to mark the boundary between the main clause (“A group…plant”) and the

supplementary element (“TN57…pests”) and to introduce the following elaboration on the specific varieties of sweet potato plants that were examined.

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with “TN57.” **Choice B is incorrect** because a semicolon can’t be used in this way to join the main clause (“A group…plant”) and the supplementary element (“TN57…pests”). A semicolon is conventionally used to join two main clauses, whereas a colon is conventionally used to introduce an element that explains or amplifies the information in the preceding clause. **Choice C is incorrect** because it fails to mark the boundary between the main clause (“A group…plant”) and the supplementary element (“TN57…pests”) with appropriate punctuation.

202 Correct answer **D** Hard ‹ Back to question

D nations Chile

Choice D is the best answer. The convention being tested is the use of punctuation between titles and proper nouns. No punctuation is needed to set off the coordinated noun phrase "Chile and Luxembourg" from the title that describes the two countries, "fellow OECD nations." Because the proper nouns "Chile and Luxembourg" are essential information identifying the "fellow OECD nations," no punctuation is necessary.

Choice A is incorrect because no punctuation is needed between the country names ("Chile and Luxembourg") and the title ("fellow OECD nations") describing them. Further, setting the countries’ names off with commas suggests that they could be removed without affecting the coherence of the sentence, which isn’t the case. **Choice B is incorrect** because no punctuation is needed between the country names ("Chile and Luxembourg") and the title ("fellow OECD nations") describing them. **Choice C is incorrect** because no punctuation is needed between the country names ("Chile and Luxembourg") and the title ("fellow OECD nations") describing them. Placing a colon after "nations" would confusingly suggest that these were the costs of the basket of goods for "fellow OECD nations" in general, not for Chile and Luxembourg specifically.

203 Correct answer **B** Hard ‹ Back to question

B artists Thomas Hart Benton and Jackson Pollock

Choice B is the best answer. The convention being tested is the use of punctuation around noun phrases. No punctuation is needed because the coordinated noun phrase "Thomas Hart Benton and Jackson Pollock" is a restrictive appositive, meaning that it provides essential identifying information about the noun phrase before it, "the renowned twentieth-century US artists."

Choice A is incorrect because no punctuation is needed between the noun phrase "the renowned twentieth-century US artists" and the restrictive appositive "Thomas Hart Benton and Jackson Pollock." Additionally, no punctuation is needed between the sentence’s subject ("paintings by the renowned twentieth-century US artists Thomas Hart Benton and Jackson Pollock") and the main verb ("were featured"). **Choice C is incorrect** because no punctuation is needed between the coordinated elements "Thomas Hart Benton" and "Jackson Pollock." Additionally, no punctuation is needed between the sentence’s subject ("paintings by the renowned twentieth-century US artists Thomas Hart Benton and Jackson Pollock") and the main verb ("were featured"). **Choice D is incorrect** because no punctuation is needed between the noun phrase "the renowned twentieth-century US artists" and the restrictive appositive "Thomas Hart Benton and Jackson Pollock."

204 Correct answer **D** Hard ‹ Back to question

D functions:

Choice D is the best answer. The convention being tested is the use of a colon within a sentence. In this choice, the colon correctly introduces the following explanation of the different functions of genomes and epigenomes.

Choice A is incorrect because it results in a run-on sentence. The two main clauses ("The relationship...functions" and "whereas...expressed") are fused without punctuation and/or a conjunction. **Choice B is incorrect** because it results in a comma splice. A comma can't be used in this way to join two main clauses ("The relationship...functions" and "whereas...expressed"). **Choice C is incorrect**. Without a comma preceding it, the conjunction "and" can't be used in this way to join two main clauses. Furthermore, "and" fails to indicate that what follows is an explanation of how cells with identical DNA develop different functions.

205 Correct answer **D** Hard ‹ Back to question

D supposed, a

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to mark the boundary between the main clause ("Recently...supposed") and the supplementary element ("a finding...Paleolithic") that provides additional information about the implications of the Neronian tool discovery.

Choice A is incorrect because a semicolon can't be used in this way to join the main clause ("Recently...supposed") and the supplementary element ("a finding...Paleolithic"). **Choice B is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "a finding." **Choice C is incorrect** because it results in a run-on sentence. The main clause ("Recently...supposed") and the supplementary element ("a finding...Paleolithic") are fused without punctuation and/or a conjunction.

206 Correct answer **C** Hard ‹ Back to question

C audience. To

Choice C is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence ("In modern...audience") and another ("To do...performance").

Choice A is incorrect because it results in a rhetorically unacceptable sentence fragment beginning with "as." **Choice B is incorrect** because it results in a run-on sentence. The sentences ("In modern...audience" and "To do...performance") are fused without punctuation and/or a conjunction. **Choice D is incorrect** because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences.

207 Correct answer **D** Hard ‹ Back to question

D Stanford;

Choice D is the best answer. This choice correctly uses a semicolon to punctuate a complex list (which is made up of items that have commas in them).

Choice A is incorrect. This is a complex list, indicated by the semicolon between "1998" and "Carolyn Bertozzi." What comes after the blank is a separate list item, so punctuation is needed after "Stanford." **Choice B is incorrect**. This is a complex list, indicated by the semicolon between "1998" and "Carolyn Bertozzi." The items in this list have internal punctuation in the form of commas and must therefore be separated by semicolons to avoid confusion. **Choice C is incorrect**. This is a complex list, indicated by the semicolon between "1998" and "Carolyn Bertozzi." Colons aren't used to separate items in a list.

208 Correct answer **D** Hard ‹ Back to question

D name—

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a dash after the main clause (“Later...name”) to introduce the supplementary element (“Gangnam...Korea”) that identifies the place that inspired the song’s name.

Choice A is incorrect because a semicolon can’t be used in this way to join the main clause (“Later...name”) and the supplementary element (“Gangnam...Korea”). A semicolon is conventionally used to join two main clauses. **Choice B is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with “Gangnam.” **Choice C is incorrect** because it fails to mark the boundary between the main clause and the supplementary element with appropriate punctuation.

209 Correct answer **C** Hard ‹ Back to question

C items; managing

Choice C is the best answer. The convention being tested is the punctuation of elements in a complex series. It’s conventional to use a semicolon to separate items in a complex series with internal punctuation, and in this choice, the semicolon after "items" is conventionally used to separate the first item ("overseeing...items") and the second item ("managing...law") in a list of Hayden’s responsibilities.

Choice A is incorrect because it fails to use appropriate punctuation to separate the first item and the second item in the complex series. **Choice B is incorrect** because a comma after "items" doesn’t match the semicolon used later to separate the second and third items in the series ("managing...law" and "and appointing the US poet laureate"). **Choice D is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "Managing."

210 Correct answer **D** Hard ‹ Back to question

D windows, transitional

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. This choice correctly uses a comma to mark the boundary between the introductory subordinate clause ("With...windows") and the main clause ("transitional design splits the difference between old and new").

Choice A is incorrect because a semicolon can’t be used in this way to separate the subordinate clause ("With...windows") from the main clause ("transitional...new"). **Choice B is incorrect** because a dash can’t be used in this way to separate the subordinate clause ("With...windows") from the main clause ("transitional...new"). **Choice C is incorrect** because it results in a rhetorically unacceptable sentence fragment beginning with "with."

211 Correct answer **B** Hard ‹ Back to question

B three. Known

Choice B is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period is used correctly to mark the boundary between one sentence (“The Balkan...three”) and another (“Known...chairperson”). While the supplementary element (“known...Croats”) could logically be attached to either the first main clause (“The Balkan...three”) or the second main clause (“these elected...chairperson”), end-of-sentence punctuation is needed to indicate to which sentence the supplementary element belongs.

Choice A is incorrect because it results in a comma splice. In this choice, the first sentence, consisting of a main clause ("The Balkan...three") and supplementary element ("known...Croats"), is incorrectly joined with a second main clause ("these elected...chairperson") using a comma. A comma can't be used in this way to join two sentences. **Choice C is incorrect** because it results in a comma splice. In this choice, the first sentence, consisting of a main clause ("The Balkan...three") and a relative clause ("who are...Croats"), is incorrectly joined with a second main clause ("these elected...chairperson") using a comma. A comma can't be used in this way to join two sentences. Additionally, this choice omits the comma needed after "three" to mark the beginning of the supplementary relative clause ("who are known...Croats"). **Choice D is incorrect** because it results in a comma splice. In this choice, the first sentence, consisting of a main clause ("The Balkan...three") and a supplementary relative clause ("who are...Croats"), is incorrectly joined with a second main clause ("these elected...chairperson") using a comma. A comma can't be used in this way to join two sentences.

212 Correct answer **A** — Hard — Back to question

A food:

Choice A is the best answer. The convention being tested is colon use within a sentence. A colon used in this way introduces information that illustrates or explains information that has come before it. In this case, the colon introduces the following explanation of why some roundworms in the Southern Hemisphere move in the opposite direction of Earth's magnetic field.

Choice B is incorrect because it results in a comma splice. A comma can't be used in this way to join two long independent clauses ("Researchers...food" and "in...sources") such as these. **Choice C is incorrect** because it results in a run-on sentence. The two clauses ("Researchers...food" and "in...sources") are fused without punctuation. Furthermore, the conjunction "while" fails to indicate that what follows is an explanation of why some roundworms in the Southern Hemisphere move in the opposite direction of Earth's magnetic field. **Choice D is incorrect** because it results in a run-on sentence. The two clauses ("Researchers...food" and "in...sources") are fused without punctuation and/or a conjunction.

213 Correct answer **C** — Hard — Back to question

C Basic, in 2009; an online television network,

Choice C is the best answer. The convention being tested is the punctuation of items in a complex series. It's conventional to use a semicolon to separate items in a complex series with internal punctuation, and in this choice, the semicolon after "2009" is conventionally used to separate the first item ("the world's...2009") and the second item ("an online...2010") in the series of things that Hinson helped create. Further, the comma after "Basic" correctly pairs with the comma after "app," and the comma after "network" correctly pairs with the comma after "TV" to set off the supplemental elements ("Chickasaw Basic" and "Chickasaw TV") that provide the names of the app and the TV network, respectively. Altogether, the punctuation in this choice results in a sentence that clearly indicates that Hinson helped make a language app in 2009, an online TV network in 2010, and a language course in 2015.

Choice A is incorrect because it fails to punctuate the complex series in a way that makes clear that Hinson helped make a language app in 2009, an online TV network in 2010, and a language course in 2015. **Choice B is incorrect** because it fails to punctuate the complex series in a way that makes clear that Hinson helped make a language app in 2009, an online TV network in 2010, and a language course in 2015. **Choice D is incorrect** because the comma after "2009" doesn't match the semicolon used to separate the second and third items in the complex series.

B Form, Structure & Sense

208 questions

214 Correct answer **A** — Easy — Back to question

A occurs

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "occurs" agrees in number with the singular subject "radiation."

Choice B is incorrect because the plural verb "have occurred" doesn't agree in number with the singular subject "radiation." **Choice C is incorrect** because the plural verb "occur" doesn't agree in number with the singular subject "radiation." **Choice D is incorrect** because the plural verb "are occurring" doesn't agree in number with the singular subject "radiation."

215 Correct answer **A** Easy Back to question

A measures

Choice A is the best answer. The previous sentence tells us how economists in India "use" a certain tool, while this sentence describes general facts about that tool. To express general facts (and also to match the simple present tense of "use"), we should use the simple present tense form "measures."

Choice B is incorrect. This choice uses the past perfect tense, but the previous sentence tells us that the tool is currently used to measure things, so the past tense doesn't make sense for this verb. **Choice C is incorrect**. This choice uses the future perfect conditional tense, but the previous sentence tells us that the tool is currently used to measure things, so the future tense doesn't make sense for this verb. **Choice D is incorrect**. This choice uses the future perfect continuous tense, but the previous sentence tells us that the tool is currently used to measure things, so the future tense doesn't make sense for this verb.

216 Correct answer **D** Easy Back to question

D is

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "is" agrees in number with the singular subject "the country's name."

Choice A is incorrect because the plural verb "are" doesn't agree in number with the singular subject "the country's name." **Choice B is incorrect** because the plural verb "have been" doesn't agree in number with the singular subject "the country's name." **Choice C is incorrect** because the plural verb "are being" doesn't agree in number with the singular subject "the country's name."

217 Correct answer **A** Easy Back to question

A its wings

Choice A is the best answer. The conventions being tested are the use of possessive determiners and plural nouns. The singular possessive determiner "its" and the plural noun "wings" correctly indicate that the butterfly has multiple wings.

Choice B is incorrect because the context requires the plural noun "wings," not the plural possessive noun "wings'." **Choice C is incorrect** because the context requires the singular possessive determiner "its" and the plural noun "wings," not the contraction "it's" and the singular possessive noun "wing's." **Choice D is incorrect** because the context requires the singular possessive determiner "its" and the plural noun "wings," not the contraction "it's" and the plural possessive noun "wings'."

218 Correct answer **C** Easy Back to question

C results

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. Relative clauses, such as the one beginning with “that,” require a finite (tensed) verb, a verb that can function as the main verb of a clause. This choice correctly supplies the clause with the finite present tense verb “results.” Furthermore, the simple present tense verb “results” correctly indicates that the formation of parallel arrays of long polygonal prisms is an enduring property of this fracturing pattern.

Choice A is incorrect because it results in an ungrammatical sentence. The nonfinite participle “resulting” doesn’t supply the clause with a finite verb. **Choice B is incorrect** because the past progressive tense verb “were resulting” doesn’t indicate that the formation of parallel arrays of long polygonal prisms is an enduring property of this fracturing pattern. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive “to result” doesn’t supply the clause with a finite verb.

219 Correct answer **A** Easy Back to question

A includes

Choice A is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the present tense verb “includes,” used in conjunction with the word “currently,” correctly indicates that the frog’s current range includes parts of northern New South Wales and southeastern Queensland.

Choice B is incorrect because the past tense verb “included” doesn’t indicate that the frog’s range currently includes parts of northern New South Wales and southeastern Queensland. **Choice C is incorrect** because the future perfect tense “will have included” doesn’t indicate that the frog’s range currently includes parts of northern New South Wales and southeastern Queensland. **Choice D is incorrect** because the past perfect tense “had included” doesn’t indicate that the frog’s range currently includes parts of northern New South Wales and southeastern Queensland.

220 Correct answer **B** Easy Back to question

B illuminates

Choice B is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the present tense verb "illuminates" is consistent with the other present tense verb ("is") used to describe the sculpture, correctly indicating that the sculpture habitually glows ("each night") and that the lamp inside is the source of its illumination.

Choice A is incorrect because the future progressive tense verb "will be illuminating" isn’t consistent with the other present tense verb used to describe the sculpture and the source of its glow. **Choice C is incorrect** because the modal "would," which is used to indicate a typical behavior in the past, isn’t consistent with the other present tense verb used to describe the sculpture and the source of its glow. **Choice D is incorrect** because the past tense verb "illuminated" isn’t consistent with the other present tense verb used to describe the sculpture and the source of its glow.

221 Correct answer **B** Easy Back to question

B vowed

Choice B is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the past tense verb “vowed” is consistent with the other past tense verbs (“guided” and “upheld”) used to narrate the events

surrounding President Roosevelt's decision to conserve the nation's wilderness areas.

Choice A is incorrect because the present progressive tense verb "is vowing" isn't consistent with the past tense verbs used to narrate the events surrounding President Roosevelt's decision to conserve the nation's wilderness areas. **Choice C is incorrect** because the future tense verb "will vow" isn't consistent with the past tense verbs used to narrate the events surrounding President Roosevelt's decision to conserve the nation's wilderness areas. **Choice D is incorrect** because the simple present tense verb "vows" isn't consistent with the past tense verbs used to narrate the events surrounding President Roosevelt's decision to conserve the nation's wilderness areas.

222 Correct answer **A** Easy ‹ Back to question

A enter

Choice A is the best answer. The convention being tested is finite and nonfinite verb forms within a sentence. A main clause requires a finite verb to perform the action of the subject (in this case, "embryos"), and this choice supplies the clause with the finite present tense verb "enter" to indicate how the embryos achieve diapause.

Choice B is incorrect because the nonfinite to-infinitive "to enter" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because the nonfinite participle "having entered" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because the nonfinite participle "entering" doesn't supply the main clause with a finite verb.

223 Correct answer **B** Easy ‹ Back to question

B claim

Choice B is the best answer. The convention being tested is the use of finite and nonfinite verb forms within a sentence. A main clause requires a finite verb to perform the action of the subject (in this case, "some historians"), and this choice supplies the finite present tense verb "claim" to indicate what some historians do.

Choice A is incorrect because the nonfinite participle "claiming" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because the nonfinite participle "having claimed" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because the nonfinite to-infinitive "to claim" doesn't supply the main clause with a finite verb.

224 Correct answer **A** Easy ‹ Back to question

A is

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, "yellow"), and this choice supplies the present tense verb "is considered" to indicate that yellow is considered a complementary color to blue in modern color theory.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite participle "having been considered" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to be considered" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "being considered" doesn't supply the main clause with a finite verb.

225 Correct answer **B** Easy ‹ Back to question

B had doubled

Choice B is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the past perfect verb "had doubled" properly indicates that the doubling of the organization's initial membership occurred during a specific period before the present (between the organization's founding in 1967 and the end of the 1990s).

Choice A is incorrect because the present perfect verb "has doubled" doesn't indicate that the organization's doubling of its initial membership occurred during a specific period in the past. **Choice C is incorrect** because the present tense verb "doubles" doesn't indicate that the organization's doubling of its initial membership occurred during a specific period in the past. **Choice D is incorrect** because the future tense verb "will double" doesn't indicate that the organization's doubling of its initial membership occurred during a specific period in the past.

226 Correct answer **B** Easy ‹ Back to question

B reach

Choice B is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the present tense verb "reach" is consistent with the present tense verbs "travel" and "are diverted" used to describe how atoms move through the synchrotron.

Choice A is incorrect because the future tense verb "will reach" is inconsistent with the present tense verbs used to describe how atoms move through the synchrotron. Though the atoms' movement is a recurring action and "will reach" can also be used to indicate a habitual or recurring action, it creates a logical inconsistency in this sentence when paired with the present tense verbs "travel" and "are diverted." **Choice C is incorrect** because the past perfect tense verb "had reached" is inconsistent with the present tense verbs used to describe how atoms move through the synchrotron. **Choice D is incorrect** because the present progressive tense verb "are reaching" is inconsistent with the present tense verbs used to describe how atoms move through the synchrotron. While both verbs occur in the present, the present progressive tense suggests that the action is currently in progress. This creates a logical inconsistency when paired with the present tense verbs "travel" and "are diverted," which offer a general description of the tendencies of the atoms' movement, rather than a description of an action that is currently in progress.

227 Correct answer **A** Easy ‹ Back to question

A get

Choice A is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the present tense verb "get" is consistent with the other present tense verbs ("are," "travel," and "pack") used to describe the Sherpas and their activities.

Choice B is incorrect. The past perfect verb "had gotten" isn't consistent with the other present tense verbs used to describe the Sherpas and their activities. **Choice C is incorrect**. The past tense verb "got" isn't consistent with the other present tense verbs used to describe the Sherpas and their activities. **Choice D is incorrect**. The past progressive verb "were getting" isn't consistent with the other present tense verbs used to describe the Sherpas and their activities.

228 Correct answer **B** Easy ‹ Back to question

B is

Choice B is the best answer. The convention being tested is subject-verb agreement. The singular verb "is" agrees in number with the singular subject "vest frottoir."

Choice A is incorrect because the plural verb "have been" doesn't agree in number with the singular subject "vest frottoir." **Choice C is incorrect** because the plural verb "were" doesn't agree in number with the singular subject "vest frottoir." **Choice D is incorrect** because the plural verb "are" doesn't agree in number with the singular subject "vest frottoir."

229 Correct answer **D** Easy Back to question

D had become

Choice D is the best answer. The convention being tested is the use of verbs to express tense in a sentence. The past perfect tense indicates an action that was completed before another past action. In this choice, the past perfect verb "had become," together with the supplemental phrase "by 2023," indicates that Lafourcade earned her status as one of the most celebrated musicians in Latin America before 2023.

Choice A is incorrect because the future tense "will become" doesn't indicate that Lafourcade earned her celebrated status before 2023. **Choice B is incorrect** because the present tense "becomes" doesn't indicate that Lafourcade earned her celebrated status before 2023. **Choice C is incorrect** because the future perfect tense "will have become" doesn't indicate that Lafourcade earned her celebrated status by 2023.

230 Correct answer **A** Easy Back to question

A use

Choice A is the best answer. The convention being tested is subject-verb agreement. The plural verb "use" agrees in number with the plural subject "speakers."

Choice B is incorrect because the singular verb "is using" doesn't agree in number with the plural subject "speakers." **Choice C is incorrect** because the singular verb "uses" doesn't agree in number with the plural subject "speakers." **Choice D is incorrect** because the singular verb "has used" doesn't agree in number with the plural subject "speakers."

231 Correct answer **D** Easy Back to question

D to include

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite to-infinitive verb "to include" is correctly used to form a subordinate clause that indicates what the Olympic committee decided (to include tug-of-war as an Olympic event).

Choice A is incorrect because it results in an ungrammatical sentence. The finite verb "included" can't be used in this way to form a subordinate clause that indicates what the Olympic committee decided. **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "including" can't be used in this way to form a subordinate clause that indicates what the Olympic committee decided. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite verb "include" can't be used in this way to form a subordinate clause that indicates what the Olympic committee decided.

232 Correct answer **A** Easy Back to question

A them

Choice A is the best answer. The convention being tested is pronoun-antecedent agreement. The plural pronoun "them" agrees in number with the plural antecedent "utensils."

Choice B is incorrect because the singular pronoun "this" doesn't agree in number with the plural antecedent "utensils." **Choice C is incorrect** because the singular pronoun "that" doesn't agree in number with the plural antecedent "utensils." **Choice D is incorrect** because the singular pronoun "it" doesn't agree in number with the plural antecedent "utensils."

233 Correct answer **B** Easy Back to question

B was

Choice B is the best answer. The convention being tested is subject-verb agreement. The singular verb "was" agrees in number with the singular subject "Farouk El-Baz."

Choice A is incorrect because the plural verb "are" doesn't agree in number with the singular subject "Farouk El-Baz." **Choice C is incorrect** because the plural verb "have been" doesn't agree in number with the singular subject "Farouk El-Baz." **Choice D is incorrect** because the plural verb "were" doesn't agree in number with the singular subject "Farouk El-Baz."

234 Correct answer **A** Easy Back to question

A These

Choice A is the best answer. The convention being tested is the use of determiners. The plural demonstrative determiner "these" agrees in number with the plural noun "plants" that it modifies. This choice clearly indicates that the plants, referring to cycads from the previous sentence, were abundant throughout the Mesozoic Era.

Choice B is incorrect because the singular demonstrative determiner "that" doesn't agree in number with the plural noun "plants." **Choice C is incorrect** because the singular determiner "each" doesn't agree in number with the plural noun "plants." **Choice D is incorrect** because the singular demonstrative determiner "this" doesn't agree in number with the plural noun "plants."

235 Correct answer **B** Easy Back to question

B to expand

Choice B is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite to-infinitive verb "to expand" is correctly used to form a subordinate clause that indicates what the National Oceanic and Atmospheric Administration seeks to do.

Choice A is incorrect because it results in an ungrammatical sentence. The finite verb "is expanding" can't be used in this way to form a subordinate clause that indicates what the National Oceanic and Atmospheric Administration seeks to do. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite verb "has expanded" can't be used in this way to form a subordinate clause that indicates what the National Oceanic and Atmospheric Administration seeks to do. **Choice D is incorrect** because it results in an ungrammatical sentence. The finite verb "expands" can't be used in this way to form a subordinate clause that indicates what the National Oceanic and Atmospheric Administration seeks to do.

236 Correct answer **C** Easy Back to question

C will learn

Choice C is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the future tense verb "will learn," used in conjunction with the phrase "in a later chapter," correctly indicates that "you" (the

reader) are going to learn about obsidian's structure at some point in the future.

Choice A is incorrect because the past perfect verb "had learned" doesn't indicate that the subject is going to learn about obsidian's structure in the future. **Choice B is incorrect** because the past perfect progressive verb "had been learning" doesn't indicate that the subject is going to learn about obsidian's structure in the future. **Choice D is incorrect** because the present perfect verb "have learned" doesn't indicate that the subject is going to learn about obsidian's structure in the future.

237 Correct answer **A** Easy ‹ Back to question

A they

Choice A is the best answer. The convention being tested is pronoun–antecedent agreement. The plural pronoun "they" agrees in number with the plural antecedent "customers."

Choice B is incorrect because the singular pronoun "one" doesn't agree in number with the plural antecedent "customers." **Choice C is incorrect** because the second person pronoun "you" isn't conventional as a substitute for "customers." It suggests that the audience ("you") is the customer. **Choice D is incorrect** because the singular pronoun "it" doesn't agree in number with the plural antecedent "customers."

238 Correct answer **A** Easy ‹ Back to question

A used

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, Land), and this choice supplies the finite past tense verb "used" to indicate what Land did with the technology he had invented.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite perfect infinitive "to have used" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to use" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "using" doesn't supply the main clause with a finite verb.

239 Correct answer **D** Easy ‹ Back to question

D sweeps

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "sweeps" agrees in number with the singular subject "she," which refers to Alice Coltrane.

Choice A is incorrect because the plural verb "sweep" doesn't agree in number with the singular subject "she." **Choice B is incorrect** because the plural verb "are sweeping" doesn't agree in number with the singular subject "she." **Choice C is incorrect** because the plural verb "were sweeping" doesn't agree in number with the singular subject "she."

240 Correct answer **D** Easy ‹ Back to question

D kept

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, "the women"), and this choice supplies the finite past tense verb "kept" to indicate what the women did.

Choice A is incorrect because it results in an ungrammatical sentence. The nonfinite to-infinitive “to keep” doesn’t supply the main clause with a finite verb. **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite perfect participle “having kept” doesn’t supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite present participle “keeping” doesn’t supply the main clause with a finite verb.

241 Correct answer **D** Easy Back to question

D were

Choice D is the best answer. The convention being tested is subject-verb agreement. The plural verb "were" agrees in number with the plural subject "objects."

Choice A is incorrect because the singular verb "was" doesn’t agree in number with the plural subject "objects." **Choice B is incorrect** because the singular verb "is" doesn’t agree in number with the plural subject "objects." **Choice C is incorrect** because the singular verb "has been" doesn’t agree in number with the plural subject "objects."

242 Correct answer **D** Easy Back to question

D to tell

Choice D is the best answer. The convention being tested is the use of finite and nonfinite verb forms within a sentence. The nonfinite to-infinitive “to tell” is correctly used to form a nonfinite (infinitive) clause that explains the reason Engle uses poetry in her novel.

Choice A is incorrect because the finite present tense verb “tells” can’t be used in this way to explain the reason that Engle uses poetry in her novel. **Choice B is incorrect** because the finite past tense verb “told” can’t be used in this way to explain the reason that Engle uses poetry in her novel. **Choice C is incorrect** because the finite present progressive tense verb “is telling” can’t be used in this way to explain the reason that Engle uses poetry in her novel.

243 Correct answer **D** Easy Back to question

D it uses

Choice D is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun “it” agrees in number with the singular antecedent “dark fiction” and clearly indicates that dark fiction uses horror tropes to challenge familiar ways of knowing.

Choice A is incorrect because the singular pronoun “one” is ambiguous in this context; the resulting sentence leaves unclear who or what uses horror tropes to challenge familiar ways of knowing. **Choice B is incorrect** because the first person plural pronoun “we” isn’t conventional as a substitute for “dark fiction.” It suggests that the readers, rather than dark fiction, use horror tropes to challenge familiar ways of knowing. **Choice C is incorrect** because the plural pronoun “they” doesn’t agree in number with the singular antecedent “dark fiction.”

244 Correct answer **B** Easy Back to question

B has collected

Choice B is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the present perfect tense verb “has collected,” used in conjunction with the phrase “since 1945,” correctly indicates that the Food

and Agriculture Organization has collected this type of information in the past and continues to do so in the present.

Choice A is incorrect because the present progressive tense verb "is collecting" is inconsistent with the phrase "since 1945," which indicates that the action occurred in the past and continues into the present. **Choice C is incorrect** because the future tense verb "will collect" is inconsistent with the phrase "since 1945," which indicates that the action occurred in the past and continues into the present. **Choice D is incorrect** because the present tense verb "collects" is inconsistent with the phrase "since 1945," which indicates that the action occurred in the past and continues into the present.

245 Correct answer **D** Easy Back to question

D survives

Choice D is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the present tense verb "survives" correctly indicates that the wood frog regularly survives subfreezing temperatures by producing large amounts of glucose.

Choice A is incorrect because the past perfect verb "had survived" doesn't indicate that the wood frog regularly survives subfreezing temperatures by producing large amounts of glucose. **Choice B is incorrect** because the past tense verb "survived" doesn't indicate that the wood frog regularly survives subfreezing temperatures by producing large amounts of glucose. **Choice C is incorrect** because the conditional verb "would survive" doesn't indicate that the wood frog regularly survives subfreezing temperatures by producing large amounts of glucose.

246 Correct answer **C** Easy Back to question

C to digest

Choice C is the best answer. The convention being tested is the use of nonfinite verb forms within a sentence. Working together with the finite verb "need," the nonfinite to-infinitive verb "to digest" is correctly used to form a subordinate clause that describes what the reindeer need.

Choice A is incorrect because the verb "digest" (in either its finite or nonfinite form) can't be used in this way with the finite verb "need." **Choice B is incorrect** because the finite verb "will digest" can't be used in this way with the finite verb "need." **Choice D is incorrect** because the nonfinite participle "digesting" can't be used in this way with the finite verb "need."

247 Correct answer **C** Easy Back to question

C Their

Choice C is the best answer. The convention being tested is the use of possessive determiners. The plural possessive determiner "their" agrees in number with the plural conjoined noun phrase "Watson and Crick" and thus indicates that the findings were those of Watson and Crick.

Choice A is incorrect because "they're" is the contraction for "they are," not a possessive determiner. **Choice B is incorrect** because "it's" is the contraction for "it is" or "it has," not a possessive determiner. **Choice D is incorrect** because the singular possessive determiner "its" doesn't agree in number with the plural conjoined noun phrase "Watson and Crick."

248 Correct answer **A** Easy ‹ Back to question

A Matthew Henson made several treks across Greenland between 1891 and 1909.

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the proper noun "Matthew Henson" the subject of the sentence and places it immediately after the modifying phrase "one...century." In doing so, this choice clearly establishes that Matthew Henson—and not another noun in the sentence—is being described as one of the few African American global explorers during the turn of the 20th century.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "1891 and 1909" immediately after the modifying phrase illogically suggests that those years were one of the few African American global explorers during the turn of the 20th century. **Choice C is incorrect** because it results in a dangling modifier. The placement of the proper noun "Greenland" immediately after the modifying phrase illogically suggests that Greenland was one of the few African American global explorers during the turn of the 20th century. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "several treks across Greenland" immediately after the modifying phrase illogically suggests that the treks were one of the few African American global explorers during the turn of the 20th century.

249 Correct answer **B** Easy ‹ Back to question

B create

Choice B is the best answer. The convention being tested is the use of non-finite (untensed) verb forms in a sentence. The modal “would,” which indicates the future from a perspective in the past, should be accompanied by a non-finite plain form verb. In this choice, the non-finite plain form verb “create” is used correctly in conjunction with the non-finite plain form verb “increase” to describe what the lock would do.

Choice A is incorrect because the finite present tense verb “creates” can’t be used in this way with the modal “would” to describe what the lock would do. **Choice C is incorrect** because the present participle “creating” can’t be used in this way with the modal “would” to describe what the lock would do. **Choice D is incorrect** because the finite past tense verb “created” can’t be used in this way with the modal “would” to describe what the lock would do.

250 Correct answer **D** Easy ‹ Back to question

D ensures

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "ensures" agrees in number with the singular subject "using."

Choice A is incorrect because the plural verb "are ensuring" doesn’t agree in number with the singular subject "using." **Choice B is incorrect** because the plural verb "have ensured" doesn’t agree in number with the singular subject "using." **Choice C is incorrect** because the plural verb "ensure" doesn’t agree in number with the singular subject "using."

251 Correct answer **D** Easy ‹ Back to question

D These

Choice D is the best answer. The convention being tested is the use of determiners in a sentence. The plural determiner "these" agrees in number with the plural noun "letters" that it modifies. This choice clearly indicates that the letters demonstrate Alcott’s business sense.

Choice A is incorrect because the singular determiner "one" doesn't agree in number with the plural noun "letters." **Choice B is incorrect** because the singular determiner "that" doesn't agree in number with the plural noun "letters." **Choice C is incorrect** because the singular determiner "this" doesn't agree in number with the plural noun "letters."

252 Correct answer **C** Easy Back to question

C is

Choice C is the best answer. The convention being tested is subject-verb agreement. The singular verb "is" agrees in number with the singular subject "village."

Choice A is incorrect because the plural verb "are being" doesn't agree in number with the singular subject "village." **Choice B is incorrect** because the plural verb "have been" doesn't agree in number with the singular subject "village." **Choice D is incorrect** because the plural verb "are" doesn't agree in number with the singular subject "village."

253 Correct answer **A** Easy Back to question

A allows

Choice A is the best answer. The convention being tested is subject–verb agreement. The singular verb "allows" agrees in number with the singular subject "landing."

Choice B is incorrect because the plural verb "are allowing" doesn't agree in number with the singular subject "landing." **Choice C is incorrect** because the plural verb "have allowed" doesn't agree in number with the singular subject "landing." **Choice D is incorrect** because the plural verb "allow" doesn't agree in number with the singular subject "landing."

254 Correct answer **A** Easy Back to question

A people's stories

Choice A is the best answer. The convention being tested is the use of plural and possessive nouns. The plural possessive noun "people's" and the plural noun "stories" correctly indicate that there are multiple stories from multiple people.

Choice B is incorrect because the context requires the plural possessive noun "people's" and the plural noun "stories," not the plural noun "peoples" and the singular possessive noun "story's." **Choice C is incorrect** because the context requires the plural possessive noun "people's," not the plural noun "peoples." **Choice D is incorrect** because the context requires the plural noun "stories," not the singular possessive noun "story's."

255 Correct answer **A** Easy Back to question

A musicians introduced audiences

Choice A is the best answer. The convention being tested is the use of plural nouns. The plural nouns "musicians" and "audiences" correctly indicate that there were multiple musicians introducing the music to multiple audiences.

Choice B is incorrect because the context requires the plural nouns "musicians" and "audiences," not the plural possessive nouns "musicians'" and "audiences'." **Choice C is incorrect** because the context requires the plural nouns "musicians" and "audiences," not the singular possessive nouns "musician's" and "audience's." **Choice D is incorrect** because the context requires the plural noun "musicians," not the plural possessive noun "musicians'."

256 Correct answer **C** Easy ‹ Back to question

C they

Choice C is the best answer. The convention being tested is pronoun-antecedent agreement. The plural pronoun "they" agrees in number with the plural antecedent "animals," which refers to tardigrades.

Choice A is incorrect because the singular pronoun "that" doesn't agree in number with the plural antecedent "animals." **Choice B is incorrect** because the singular pronoun "it" doesn't agree in number with the plural antecedent "animals." **Choice D is incorrect** because the singular pronoun "he" doesn't agree in number with the plural antecedent "animals."

257 Correct answer **D** Easy ‹ Back to question

D jugglers, regardless of their

Choice D is the best answer. The convention being tested is the use of plural nouns and possessive determiners. The plural noun "jugglers" and the plural possessive determiner "their" correctly indicate that there are multiple jugglers whose motion is being discussed.

Choice A is incorrect because the context requires the plural noun "jugglers" and the plural possessive determiner "their," not the plural possessive noun "jugglers'" and the contraction "they're." **Choice B is incorrect** because the context requires the plural possessive determiner "their," not the word "there," which means "in that place." **Choice C is incorrect** because the context requires the plural noun "jugglers," not the singular possessive noun "juggler's."

258 Correct answer **C** Easy ‹ Back to question

C have contributed

Choice C is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the present perfect tense verb "have contributed," used in conjunction with the phrase "since it began in 2012," correctly indicates that map editors have contributed in the past and continue to do so in the present.

Choice A is incorrect because the present tense verb "contribute" is inconsistent with the phrase "since it began in 2012," which suggests that the contributions occurred in the past and continue into the present. **Choice B is incorrect** because the future tense verb "will contribute" is inconsistent with the phrase "since it began in 2012," which suggests that the contributions occurred in the past and continue into the present. **Choice D is incorrect** because the future tense verb "will be contributing" is inconsistent with the phrase "since it began in 2012," which suggests that the contributions occurred in the past and continue into the present.

259 Correct answer **D** Easy ‹ Back to question

D He

Choice D is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "he" agrees in number with the singular antecedent "Félix González-Torres," and it clearly indicates that González-Torres created the additional installations.

Choice A is incorrect because the plural noun phrase "they all" doesn't agree in number with the singular antecedent "Félix González-Torres," and it doesn't clearly indicate that he (González-Torres) created the additional installations. **Choice B is incorrect** because the plural pronoun "those" doesn't agree in number with the singular antecedent "Félix González-Torres,"

and it doesn't clearly indicate that he (González-Torres) created the additional installations. **Choice C is incorrect** because the plural pronoun "both" doesn't agree in number with the singular antecedent "Félix González-Torres," and it doesn't clearly indicate that he (González-Torres) created the additional installations.

260 Correct answer **A** Easy Back to question

A published

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, Nery and her colleagues), and this choice supplies the finite past tense verb "published" to indicate that these biologists shared their findings about changes in whale genes associated with body size.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite participle "publishing" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "having published" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to publish" doesn't supply the main clause with a finite verb.

261 Correct answer **B** Easy Back to question

B hands between the two antennas,

Choice B is the best answer. The convention being tested is the use of plural nouns in a sentence. The plural noun "hands" and the plural noun "antennas" correctly indicate that two hands are placed between two antennas when playing the theremin.

Choice A is incorrect because the context requires the plural nouns "hands" and "antennas," not the singular possessive nouns "hand's" and "antenna's." **Choice C is incorrect** because the context requires the plural nouns "hands" and "antennas," not the plural possessive nouns "hands'" and "antennas'." **Choice D is incorrect** because the context requires the plural noun "hands," not the plural possessive noun "hands'."

262 Correct answer **B** Easy Back to question

B was

Choice B is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the past tense verb "was," used in conjunction with the prepositional phrase "from outside the United States," correctly indicates that in the 1860s nearly 30% of the population in Los Angeles wasn't from the US.

Choice A is incorrect because the present progressive tense verb "is being" doesn't indicate that the claim about Los Angeles's population refers to the population back in the 1860s. **Choice C is incorrect** because the present tense verb "is" doesn't indicate that the claim about Los Angeles's population refers to the population back in the 1860s. **Choice D is incorrect** because the future tense verb "will be" doesn't indicate that the claim about Los Angeles's population refers to the population back in the 1860s.

263 Correct answer **A** Easy ‹ Back to question

A Austen's most famous novels,

Choice A is the best answer. The convention being tested is the use of plural and possessive nouns. The singular possessive proper noun "Austen's" and the plural noun "novels" correctly indicates that Austen wrote multiple novels that were famous.

Choice B is incorrect because the context requires the singular possessive proper noun "Austen's" and the plural noun "novels," not the plural possessive nouns "Austens'" and "novels'." **Choice C is incorrect** because the context requires the singular possessive proper noun "Austen's," not the plural proper noun "Austens." **Choice D is incorrect** because the context requires the plural noun "novels," not the singular possessive noun "novel's."

264 Correct answer **C** Easy ‹ Back to question

C served

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, "more than 10,000 women"), and this choice supplies the finite past tense verb "served" to state what the women did.

Choice A is incorrect because it results in an ungrammatical sentence. The nonfinite participle "having served" doesn't supply the main clause with a finite verb. **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to serve" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "serving" doesn't supply the main clause with a finite verb.

265 Correct answer **A** Easy ‹ Back to question

A serve

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, "multiple newspapers"), and this choice supplies the finite present tense verb "serve" to indicate that there are multiple newspapers serving the Spanish-speaking population of Washington, DC.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite participle "having served" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to serve" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "serving" doesn't supply the main clause with a finite verb.

266 Correct answer **C** Easy ‹ Back to question

C stories of the South Asian immigrants

Choice C is the best answer. The convention being tested is the use of plural and possessive nouns. The plural nouns "stories" and "immigrants" correctly indicate that the memoir tells multiple stories of multiple immigrants.

Choice A is incorrect because the context requires the plural noun "stories," not the singular possessive noun "story's." **Choice B is incorrect** because the context requires the plural nouns "stories" and "immigrants," not the singular possessive

noun “story’s” and the plural possessive noun “immigrants’.” **Choice D is incorrect** because the context requires the plural nouns “stories” and “immigrants,” not the plural possessive noun “stories’” and the singular possessive noun “immigrant’s.”

267 Correct answer **C** Easy ‹ Back to question

C has been

Choice C is the best answer. The convention being tested is subject-verb agreement. The singular verb “has been” agrees in number with the singular subject “writing.”

Choice A is incorrect because the plural verb “were” doesn’t agree in number with the singular subject “writing.” **Choice B is incorrect** because the plural verb “have been” doesn’t agree in number with the singular subject “writing.” **Choice D is incorrect** because the plural verb “are” doesn’t agree in number with the singular subject “writing.”

268 Correct answer **C** Easy ‹ Back to question

C forcing

Choice C is the best answer. The convention being tested is the use of finite and nonfinite verb forms within a sentence. The nonfinite present participle “forcing” is correctly used to form a participial phrase that supplements the main clause “those...cover,” describing the effects on monkeys of the lack of food sources.

Choice A is incorrect because the finite present tense verb “forces” can’t be used in this way to supplement the main clause (“those...cover”). **Choice B is incorrect**. While the nonfinite to-infinitive “to force” could be used to form a subordinate clause that supplements the main clause (“those...cover”), to-infinitives conventionally express purpose, and nothing in the sentence suggests that the food sources become unavailable for the purpose of forcing monkeys to hunt marine animals. **Choice D is incorrect** because the finite past tense verb “forced” can’t be used in this way to supplement the main clause (“those...cover”).

269 Correct answer **C** Easy ‹ Back to question

C this

Choice C is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "this" agrees in number with the singular antecedent "Lê Lương Minh became the thirteenth secretary-general of the Association of Southeast Asian Nations (ASEAN) in January 2013." The pronoun "this" is referring back to the singular event described earlier in the sentence in which Minh became secretary-general of ASEAN.

Choice A is incorrect because the plural pronoun "these" doesn’t agree in number with the singular antecedent "Lê Lương Minh became the thirteenth secretary-general of the Association of Southeast Asian Nations (ASEAN) in January 2013." **Choice B is incorrect** because the plural pronoun "those" doesn’t agree in number with the singular antecedent "Lê Lương Minh became the thirteenth secretary-general of the Association of Southeast Asian Nations (ASEAN) in January 2013." **Choice D is incorrect** because the indefinite pronoun "some" is ambiguous in this context; the resulting sentence leaves unclear what marks the first time the organization appointed a Vietnamese leader.

270 Correct answer **C** Easy ‹ Back to question

C finished

Choice C is the best answer. The convention being tested is the use of a verb to express tense in a sentence. In this choice, the past tense verb “finished” is consistent with the other past tense verb (“retired”) used to refer to Girgrah’s retirement in 2004.

Choice A is incorrect because the present tense verb “finish” isn’t consistent with the other past tense verb (“retired”) used to refer to Girgrah’s retirement in 2004. Furthermore, the plural verb “finish” doesn’t agree in number with the sentence’s singular subject “The Yemeni American athlete.” **Choice B is incorrect** because the present perfect progressive tense verb “has been finishing” isn’t consistent with the other past tense verb (“retired”) used to refer to Girgrah’s retirement in 2004. **Choice D is incorrect** because the future progressive tense verb “will be finishing” isn’t consistent with the other past tense verb (“retired”) used to refer to Girgrah’s retirement in 2004.

271 Correct answer **C** Easy ‹ Back to question

C experiences

Choice C is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the present tense verb “experiences” is consistent with the other present tense verbs (e.g., “connects” and “prepares”) used to describe the events in Truong’s novels. Furthermore, it’s conventional to use the present tense when discussing a literary work.

Choice A is incorrect because the past tense verb “experienced” isn’t consistent with the other present tense verbs used to describe the events in Truong’s novels. **Choice B is incorrect** because the past perfect tense verb “had experienced” isn’t consistent with the other present tense verbs used to describe the events in Truong’s novels. **Choice D is incorrect** because the future progressive tense verb “will be experiencing” isn’t consistent with the other present tense verbs used to describe the events in Truong’s novels.

272 Correct answer **A** Easy ‹ Back to question

A Moon’s

Choice A is the best answer. The convention being tested is the use of possessive nouns. The singular possessive noun "Moon’s" correctly indicates that there is only one Moon, and it has a gravitational pull.

Choice B is incorrect because the context requires the singular possessive noun "Moon’s," not the plural noun "Moons." **Choice C is incorrect** because the context requires the singular possessive noun "Moon’s," not the plural possessive noun "Moons’." **Choice D is incorrect** because the context requires the singular possessive noun "Moon’s," not the singular noun "Moon."

273 Correct answer **C** Easy ‹ Back to question

C it

Choice C is the best answer. "It" is a singular pronoun used to stand in for objects. Since the antecedent in this case is the singular noun phrase "the human brain," "it" is a perfect pronoun to use here.

Choice A is incorrect. Although "she" is a singular pronoun, it is reserved for people and animals, not objects like "the human brain." **Choice B is incorrect**. "They" is a plural pronoun, but we need a singular pronoun to represent the antecedent "the

human brain." **Choice D is incorrect**. "Those" is a plural pronoun, but we need a singular pronoun to represent the antecedent "the human brain."

274 Correct answer **C** Easy ‹ Back to question

C including

Choice C is the best answer. The convention being tested is the use of nonfinite verb forms within a sentence. The nonfinite present participle "including" is correctly used to form a participial phrase that supplements the main clause "he patented many inventions," listing several of Spikes's patented inventions.

Choice A is incorrect because the finite past tense verb "included" can't be used in this way to supplement the main clause "he patented many inventions." **Choice B is incorrect** because the finite present tense verb "includes" can't be used in this way to supplement the main clause "he patented many inventions." **Choice D is incorrect** because the finite future tense verb "will include" can't be used in this way to supplement the main clause "he patented many inventions."

275 Correct answer **A** Easy ‹ Back to question

A explains

Choice A is the best answer. The convention being tested is the use of finite and nonfinite verb forms within a sentence. A main clause requires a finite verb to perform the action of the subject (in this case, "a recent study"), and this choice supplies the finite present tense verb "explains" to indicate that the study explains why plants that attract bats have evolved to produce moderately sweet nectar.

Choice B is incorrect because the nonfinite participle "explaining" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because the nonfinite participle "having explained" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because the nonfinite to-infinitive "to explain" doesn't supply the main clause with a finite verb.

276 Correct answer **D** Easy ‹ Back to question

D suspended

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. The past tense verb "suspended" provides a second finite verb to complete the coordinated structure of the sentence, in which the two finite verbs ("applied" and "suspended") are used to describe what Gilliam did.

Choice A is incorrect because it results in an ungrammatical sentence. The nonfinite to-infinitive "to have suspended" doesn't supply a second finite verb to complete the coordinated structure of the sentence. **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "suspending" doesn't supply a second finite verb to complete the coordinated structure of the sentence. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to suspend" doesn't supply a second finite verb to complete the coordinated structure of the sentence.

277 Correct answer **A** Easy ‹ Back to question

A studies

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "studies" agrees in number with the singular subject "anthropologist Lívia Barbosa."

Choice B is incorrect because the plural verb "are studying" doesn't agree in number with the singular subject "anthropologist Lívia Barbosa." **Choice C is incorrect** because the plural verb "have studied" doesn't agree in number with the singular subject "anthropologist Lívia Barbosa." **Choice D is incorrect** because the plural verb "study" doesn't agree in number with the singular subject "anthropologist Lívia Barbosa."

278 Correct answer **A** Easy Back to question

A them

Choice A is the best answer. The pronoun "them" agrees with the plural antecedents "poems" and "works."

Choice B is incorrect. "This" is a singular pronoun, but its antecedents, "poems" and "works," are plural. **Choice C is incorrect**. "That" is a singular pronoun, but its antecedents, "poems" and "works," are plural. **Choice D is incorrect**. "It" is a singular pronoun, but its antecedents, "poems" and "works," are plural.

279 Correct answer **B** Easy Back to question

B themselves

Choice B is the best answer. The convention being tested is pronoun-antecedent agreement. The plural reflexive pronoun "themselves" agrees in number with the plural antecedent "turtle barnacles," correctly indicating what is attached to a sea turtle shell.

Choice A is incorrect because the singular pronoun "it" doesn't agree in number with the plural antecedent "turtle barnacles." **Choice C is incorrect** because it results in an unclear and confusing sentence. In this context, it's unclear what the plural pronoun "them" refers to. **Choice D is incorrect** because the singular reflexive pronoun "itself" doesn't agree in number with the plural antecedent "turtle barnacles."

280 Correct answer **D** Easy Back to question

D was

Choice D is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the past tense verb "was ruled" correctly indicates that Oba Ewuare I ruled the Kingdom of Benin in the distant past (from 1440 to 1473). This past tense verb choice is consistent with the other past tense verb ("was") used to describe the Kingdom of Benin.

Choice A is incorrect because the present tense verb "is ruled" doesn't indicate that Oba Ewuare I ruled the Kingdom of Benin in the distant past. **Choice B is incorrect** because the future tense verb "will be ruled" doesn't indicate that Oba Ewuare I ruled the Kingdom of Benin in the distant past. **Choice C is incorrect** because the present perfect tense verb "has been ruled" doesn't indicate that Oba Ewuare I ruled the Kingdom of Benin in the distant past.

281 Correct answer **D** Easy Back to question

D includes

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case, "the collection"), and this choice supplies the finite present tense verb "includes" to indicate what is in the collection.

Choice A is incorrect because it results in an ungrammatical sentence. The nonfinite to-infinitive "to be including" doesn't supply the main clause with a finite verb. **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "including" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to include" doesn't supply the main clause with a finite verb.

282 Correct answer C — Easy — Back to question

C It

Choice C is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "multitask learning" and clearly indicates what multitask learning involves.

Choice A is incorrect because the plural demonstrative pronoun "those" doesn't agree in number with the singular antecedent "multitask learning." **Choice B is incorrect** because the plural pronoun "they" doesn't agree in number with the singular antecedent "multitask learning." **Choice D is incorrect** because the indefinite pronoun "some" is ambiguous in this context; the resulting sentence leaves unclear what exactly "involves training computer models."

283 Correct answer C — Easy — Back to question

C served

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. Relative clauses, such as the one beginning with "how," require a finite (tensed) verb, a verb that can function as the main verb of a clause. This choice correctly supplies the clause with the finite past tense verb "served."

Choice A is incorrect because it results in an ungrammatical sentence. The nonfinite participle "serving" doesn't supply the clause with a finite verb. **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "having served" doesn't supply the clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to serve" doesn't supply the clause with a finite verb.

284 Correct answer C — Easy — Back to question

C stands

Choice C is the best answer. The convention being tested is subject-verb agreement. The singular verb "stands" agrees in number with the singular subject "sculpture."

Choice A is incorrect because the plural verb "are standing" doesn't agree in number with the singular subject "sculpture." **Choice B is incorrect** because the plural verb "have been standing" doesn't agree in number with the singular subject "sculpture." **Choice D is incorrect** because the plural verb "were standing" doesn't agree in number with the singular subject "sculpture."

285 Correct answer C — Easy — Back to question

C outlines

Choice C is the best answer. The convention being tested is subject-verb agreement. The singular verb "outlines" agrees in number with the singular subject "document."

Choice A is incorrect because the plural verb “have outlined” doesn’t agree in number with the singular subject “document.” **Choice B is incorrect** because the plural verb “were outlining” doesn’t agree in number with the singular subject “document.” **Choice D is incorrect** because the plural verb “outline” doesn’t agree in number with the singular subject “document.”

286 Correct answer **D** Easy Back to question

D had already served

Choice D is the best answer. Misaka served in World War II before he joined the New York Knicks in 1947. To show that a past occurrence took place before another past occurrence, we need to use “had” + the past tense form of the verb. This is called the past perfect tense.

Choice A is incorrect. Misaka served in World War II before he joined the Knicks. Both events are in the past, but his service in World War II happened earlier, so we need a verb that makes it clear that his service (and the two national championships) had ended by the time he joined the Knicks. **Choice B is incorrect**. “Was already serving” forms the continuous past tense, which we use when we’re showing a past action that was ongoing. Misaka served in World War II before he joined the Knicks. Both events are in the past, but they’re not happening at the same time, so we shouldn’t use the continuous past tense here. **Choice C is incorrect**. Misaka served in World War II in the past, so we shouldn’t use the present tense “serves.”

287 Correct answer **B** Easy Back to question

B was

Choice B is the best answer. The convention being tested is subject-verb agreement. The singular verb "was" agrees in number with the singular subject "Mary Madden of Ohio."

Choice A is incorrect because the plural verb "are" doesn’t agree in number with the singular subject "Mary Madden of Ohio." **Choice C is incorrect** because the plural verb "have been" doesn’t agree in number with the singular subject "Mary Madden of Ohio." **Choice D is incorrect** because the plural verb "were" doesn’t agree in number with the singular subject "Mary Madden of Ohio."

288 Correct answer **B** Easy Back to question

B had reached

Choice B is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the past perfect verb “had reached” is used correctly to describe a past action that was completed before another action in the past. Specifically, in this hypothetical scenario about the origins of RNA and DNA on Earth, the simple sugars had to have reached Earth before they could react with other molecules on the planet.

Choice A is incorrect because the present tense verb “reach” doesn’t indicate that the simple sugars reached Earth before reacting with other molecules on the planet. **Choice C is incorrect** because the future tense verb “will reach” doesn’t indicate that the simple sugars reached Earth before reacting with other molecules on the planet. **Choice D is incorrect** because the present progressive verb “are reaching” doesn’t indicate that the simple sugars reached Earth before reacting with other molecules on the planet.

289 Correct answer **C** Easy ‹ Back to question

C photographer's early photos

Choice C is the best answer. There's only one photographer (Adams), and the photos are his, so the singular possessive "photographer's" is correct. There's more than one photo, and nothing belongs to the photos, so the simple plural "photos" is correct.

Choice A is incorrect. This choice uses the singular possessive "photo's," which isn't correct. There's more than one photo, and they don't possess anything, so the noun should be the simple plural "photos." **Choice B is incorrect**. This choice uses the simple plural "photographers" and the singular possessive "photo's," which aren't correct. There's only one photographer (Adams) and there's more than one photo. **Choice D is incorrect**. This choice uses the simple plural "photographers," which isn't correct. There's only one photographer (Adams).

290 Correct answer **D** Easy ‹ Back to question

D fly

Choice D is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the present tense verb "fly" is consistent with the other present tense verb ("journey") used to describe the butterflies' yearly migration. Together, these simple present tense verbs correctly indicate that the migration is a current, yearly occurrence.

Choice A is incorrect. The simple past tense verb "flew" isn't consistent with the other present tense verb used to describe the butterflies' yearly migration. **Choice B is incorrect**. The past progressive tense verb "were flying" isn't consistent with the other present tense verb used to describe the butterflies' yearly migration. **Choice C is incorrect**. The past perfect tense verb "had flown" isn't consistent with the other present tense verb used to describe the butterflies' yearly migration.

291 Correct answer **A** Easy ‹ Back to question

A ensuring

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite present participle "ensuring" is correctly used to form a supplementary element that modifies the main clause "Okie-Tex takes place in an area with low light pollution," describing the viewing conditions of the star party.

Choice B is incorrect because it results in a comma splice. The pronoun "this" and the finite future tense verb "will ensure" would add an additional main clause to this sentence, and the comma after "pollution" can't be used in this way to join two main clauses. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite present tense verb "ensures" can't be used in this way to form a supplementary element to modify the main clause. **Choice D is incorrect** because it results in a comma splice. The pronoun "it" and the finite present tense verb "ensures" would add an additional main clause to this sentence, and the comma after "pollution" can't be used in this way to join two main clauses.

292 Correct answer **A** Easy ‹ Back to question

A ascended

Choice A is the best answer. "Ascended" is in the simple past tense. Since Kamehameha became king in the past, this makes the most sense.

Choice B is incorrect. "Will ascend" is in the future tense, but we wouldn't know about Kamehameha III's ascent if it hadn't happened yet. The information in the sentence, as well as the tense of other verbs, tells us that the events described happened in the past. **Choice C is incorrect**. "Ascends" is in the simple present tense. However, the information in the sentence, as well as the tense of other verbs, tells us that the events described happened in the past. **Choice D is incorrect**. "Is ascending" is in the continuous present tense, which we use to show that something is ongoing, but this doesn't make sense here—the information in the sentence, as well as the tense of other verbs, tells us that the events described happened in the past.

293 Correct answer **D** Easy Back to question

D it

Choice D is the best answer. The convention being tested here is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "object."

Choice A is incorrect. The singular pronoun "this" is used to refer to a specific thing, but here there is no specific object being referred to. Instead, the sentence is referring back to a hypothetical object that Cave might use in a Soundsuit. **Choice B is incorrect**. The singular pronoun "that" is used to refer to a specific thing, but here there is no specific object being referred to. Instead, the sentence is referring back to a hypothetical object that Cave might use in a Soundsuit. **Choice C is incorrect** because the plural pronoun "these" doesn't agree in number with the singular antecedent "object."

294 Correct answer **C** Easy Back to question

C remains

Choice C is the best answer. This choice uses the singular verb "remains" to match the singular subject "equation."

Choice A is incorrect. The singular noun "equation" doesn't match with the plural verb conjugation "have remained." **Choice B is incorrect**. The singular noun "equation" doesn't match with the plural verb conjugation "remain." **Choice D is incorrect**. The singular noun "equation" doesn't match with the plural verb conjugation "are remaining."

295 Correct answer **A** Easy Back to question

A Union would finally acknowledge

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject (in this case "the International Astronomical Union"), and this choice supplies the finite modal verb phrase "would finally acknowledge" to indicate what the International Astronomical Union did.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite to-infinitive "to finally acknowledge" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "having finally acknowledged" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "acknowledging" doesn't supply the main clause with a finite verb.

296 Correct answer **D**

Easy

‹ Back to question

D affected

Choice D is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the past tense verb "affected," used in conjunction with the phrase "during this time," correctly indicates that the dust storms occurred in the 1930s.

Choice A is incorrect because the present progressive tense verb "are affecting" doesn't indicate that the dust storms occurred in the 1930s. **Choice B is incorrect** because the future perfect tense verb "will have affected" doesn't indicate that the dust storms occurred in the 1930s. **Choice C is incorrect** because the future tense verb "will affect" doesn't indicate that the dust storms occurred in the 1930s.

297 Correct answer **D**

Easy

‹ Back to question

D is

Choice D is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the present tense verb "is," used in conjunction with the word "today," correctly indicates that Paik is currently considered the first video artist.

Choice A is incorrect because the future tense verb "will be" doesn't indicate that Paik is currently considered the first video artist. **Choice B is incorrect** because the past perfect tense verb "had been" doesn't indicate that Paik is currently considered the first video artist. **Choice C is incorrect** because the past tense verb "was" doesn't indicate that Paik is currently considered the first video artist.

298 Correct answer **D**

Easy

‹ Back to question

D creates

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "creates" agrees in number with the singular subject "technique."

Choice A is incorrect because the plural verb "create" doesn't agree in number with the singular subject "technique." **Choice B is incorrect** because the plural verb "are creating" doesn't agree in number with the singular subject "technique." **Choice C is incorrect** because the plural verb "have created" doesn't agree in number with the singular subject "technique."

299 Correct answer **D**

Easy

‹ Back to question

D were

Choice D is the best answer. The convention being tested is subject-verb agreement. The plural verb "were" agrees in number with the plural subject "ayllus," which are described as plural "family clans."

Choice A is incorrect because the singular verb "is" doesn't agree in number with the plural subject "ayllus." **Choice B is incorrect** because the singular verb "was" doesn't agree in number with the plural subject "ayllus." **Choice C is incorrect** because the singular verb "has been" doesn't agree in number with the plural subject "ayllus."

300 Correct answer **A** Easy Back to question

A provided

Choice A is the best answer. The convention being tested is the use of finite verbs in a relative clause. Relative clauses, such as the one beginning with “which,” require a finite verb, a verb that can function as the main verb of a clause. This choice correctly supplies the clause with the finite past tense verb “provided.”

Choice B is incorrect because the non-finite participle “having provided” doesn’t supply the clause with a finite verb. **Choice C is incorrect** because the non-finite to-infinitive “to provide” doesn’t supply the clause with a finite verb. **Choice D is incorrect** because the non-finite participle “providing” doesn’t supply the clause with a finite verb.

301 Correct answer **B** Easy Back to question

B became

Choice B is the best answer. The conventions being tested are the use of verbs to express tense and the use of verb forms within a sentence. In this choice, the past tense verb "became" is consistent with the other past tense verbs ("owned," "operated," and "was") used to indicate that, at a period of time in the past, Bass’s leadership resulted in her newspaper becoming one of the most influential Black-owned newspapers in the US. In addition, "became" supplies the main clause with a finite (tensed) verb, which is required to perform the action of the subject (in this case, "*The Eagle*").

Choice A is incorrect because the future tense verb "will become" isn’t consistent with the other past tense verbs used to discuss Bass and her newspaper. **Choice C is incorrect** because the present progressive verb "is becoming" isn’t consistent with the other past tense verbs used to discuss Bass and her newspaper. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to become" doesn’t supply the main clause with a finite verb.

302 Correct answer **D** Easy Back to question

D includes

Choice D is the best answer. This verb needs to function as the main verb in the sentence, with the subject “one species,” so it needs to be conjugated. This choice gives us the singular present tense “includes,” which is the only conjugated form of the verb among the choices.

Choice A is incorrect. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This verb needs to function as the main verb in the sentence, with the subject “one species,” so it needs to be conjugated. “Having included” is a participle form of the verb: it’s not conjugated and doesn’t function like a normal verb. **Choice B is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This verb needs to function as the main verb in the sentence, with the subject “one species,” so it needs to be conjugated. “Including” is the gerund form of the verb: it’s not conjugated and doesn’t function like a normal verb. **Choice C is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This verb needs to function as the main verb in the sentence, with the subject “one species,” so it needs to be conjugated. “To include” is the infinitive form of the verb: it’s not conjugated.

303 Correct answer **A** Easy Back to question

A to join

Choice A is the best answer. The convention being tested is the use of nonfinite verb forms in a sentence. The nonfinite to-infinitive verb "to join" is correctly used to form a subordinate clause that expresses why Ochoa left her position (to join the

training program).

Choice B is incorrect because the finite verb "is joining" can't be used in this way to indicate Ochoa's action of joining the training program. A conjunction such as "and" would be needed to coordinate "is joining" with the previous finite verb, "left." **Choice C is incorrect** because the finite verb "joined" can't be used in this way to indicate Ochoa's action of joining the training program. A conjunction such as "and" would be needed to coordinate "joined" with the previous finite verb, "left." **Choice D is incorrect** because the finite verb "joins" can't be used in this way to indicate Ochoa's action of joining the training program. A conjunction such as "and" would be needed to coordinate "joins" with the previous finite verb, "left."

304 Correct answer **A** Easy Back to question

A explain

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The main clause of a sentence requires a finite (tensed) verb, and this choice supplies the finite present tense verb "explain" to indicate what the scientists do.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite participle "having explained" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "explaining" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite to-infinitive "to explain" doesn't supply the main clause with a finite verb.

305 Correct answer **B** Easy Back to question

B have used

Choice B is the best answer. The convention being tested is finite and nonfinite verb forms within a sentence. A main clause requires a finite verb to perform the action of the subject (in this case, "people in the Americas"), and this choice supplies the finite past perfect tense verb "have used" to indicate what people in the Americas used the gourd for.

Choice A is incorrect because the nonfinite to-infinitive "to use" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because the nonfinite participle "having used" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because the nonfinite participle "using" doesn't supply the main clause with a finite verb.

306 Correct answer **D** Easy Back to question

D had invented

Choice D is the best answer. Faure redesigned the battery in 1881, and the original battery was invented "fifteen years earlier." Notice that this is the only choice in the past tense. To indicate that a past occurrence took place before another past occurrence, we need to use "had" + the past tense form of the verb. This is called the "past perfect" tense.

Choice A is incorrect. This choice creates a tense error. Planté invented the original battery in the past, so we shouldn't use the present tense "is inventing." **Choice B is incorrect**. This choice creates a tense error. Planté invented the original battery in the past, so we shouldn't use the future tense "will invent." **Choice C is incorrect**. This choice creates a tense error. Planté invented the original battery in the past, so we shouldn't use the present tense "invents."

307 Correct answer **A** Easy Back to question

A Created

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite past participle "created" is correctly used to form a supplementary element that modifies the noun phrase "the saloon," identifying who established the Boston Saloon.

Choice B is incorrect because it results in an ungrammatical sentence. The finite present tense verb "creates" can't be used in this way to form a supplementary element to modify the noun phrase "the saloon." **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite present participle "creating" can't be used in this way to form a supplementary element to modify the noun phrase "the saloon." **Choice D is incorrect** because it results in an ungrammatical sentence. The finite present tense verb "create" can't be used in this way to form a supplementary element to modify the noun phrase "the saloon."

308 Correct answer **D** Easy Back to question

D malfunctioned

Choice D is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the past tense verb "malfunctioned" is consistent with the other past tense verbs ("ignited" and "was") used to describe the destruction of the original Globe Theatre.

Choice A is incorrect because the present tense verb "malfunctions" isn't consistent with the other past tense verbs used to describe the destruction of the original Globe Theatre. **Choice B is incorrect** because the future tense verb "will malfunction" isn't consistent with the other past tense verbs used to describe the destruction of the original Globe Theatre. **Choice C is incorrect** because the present perfect tense verb "has malfunctioned" isn't consistent with the other past tense verbs used to describe the destruction of the original Globe Theatre.

309 Correct answer **C** Easy Back to question

C produce

Choice C is the best answer. The convention being tested is the use of verbs to express tense. Simple present tense verbs can be used to describe actions that tend to occur, including in a hypothetical or future scenario. In this case, the simple present tense verb "produce" indicates what the air exchange systems might be able to do in the future (produce oxygen for astronauts).

Choice A is incorrect. The present progressive tense verb "are producing" suggests that the oxygen is currently being produced, not that it might be produced in the future. **Choice B is incorrect** because the past tense verb "produced" suggests that the oxygen was produced in the past, not that it might be produced in the future. **Choice D is incorrect** because the present perfect tense verb "have produced" suggests that the oxygen has been produced from a point in the past up to the present, not that it might be produced in the future.

310 Correct answer **A** Easy Back to question

A it was

Choice A is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "the Salt Lake Temple."

Choice B is incorrect because the singular pronoun "one" is ambiguous in this context; the resulting sentence leaves unclear whether there is only one Salt Lake temple or multiple. **Choice C is incorrect** because the plural pronoun "they" doesn't agree

in number with the singular antecedent "the Salt Lake Temple." **Choice D is incorrect** because the plural pronoun "both" doesn't agree in number with the singular antecedent "the Salt Lake Temple."

311 Correct answer **A** Easy ‹ Back to question

A describes

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The singular verb "describes" agrees in number with the singular subject "map."

Choice B is incorrect because the plural verb "describe" doesn't agree in number with the singular subject "map." **Choice C is incorrect** because the plural verb "have described" doesn't agree in number with the singular subject "map." **Choice D is incorrect** because the plural verb "are describing" doesn't agree in number with the singular subject "map."

312 Correct answer **B** Easy ‹ Back to question

B to study

Choice B is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite to-infinitive verb "to study" is correctly used to form a subordinate clause that indicates what Dr. Caballero-Gill uses chemistry and fossil evidence for (to study oceans as they were in the past).

Choice A is incorrect because it results in an ungrammatical sentence. The finite verb "has studied" can't be used in this way to form a subordinate clause that indicates what Dr. Caballero-Gill uses the evidence for. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite verb "studied" can't be used in this way to form a subordinate clause that indicates what Dr. Caballero-Gill uses the evidence for. **Choice D is incorrect** because it results in an ungrammatical sentence. The finite verb "studies" can't be used in this way to form a subordinate clause that indicates what Dr. Caballero-Gill uses the evidence for.

313 Correct answer **D** Medium ‹ Back to question

D the activists increased pressure on lawmakers by staging a sit-in protest

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the activists" the subject of the sentence and places it immediately after the modifying phrase "after...legislation." In doing so, this choice clearly establishes that the activists—and not another noun in the sentence—were pleading for the passage of antidiscrimination legislation.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun phrase "pressure on lawmakers" immediately after the modifying phrase illogically suggests that the "pressure" was pleading for the passage of antidiscrimination legislation. **Choice B is incorrect** because it results in a dangling modifier. The placement of the noun phrase "a sit-in protest" immediately after the modifying phrase illogically suggests that the "protest" was pleading for the passage of antidiscrimination legislation. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "lawmakers" immediately after the modifying phrase suggests that "lawmakers" were pleading for the passage of antidiscrimination legislation. While it's possible for lawmakers to plead for the passage of legislation, the context strongly suggests that it's the activists who pleaded for years for the passage of antidiscrimination legislation.

314 Correct answer **D** Medium Back to question

D phrase's simplicity masks its

Choice D is the best answer. The conventions being tested are the use of possessive nouns and the use of possessive determiners. The singular possessive noun "phrase's" correctly indicates that there is only one simple phrase. The singular possessive determiner "its" agrees in number with the singular possessive noun "phrase's," reinforcing the idea that there is only one simple yet complex phrase.

Choice A is incorrect because the context requires the singular possessive noun "phrase's," not the plural possessive noun "phrases'." **Choice B is incorrect** because the context requires the singular possessive noun "phrase's" and the corresponding singular possessive determiner "its," not the plural noun "phrases" and the corresponding plural possessive determiner "their." **Choice C is incorrect** because the context requires the singular possessive determiner "its," not the plural possessive determiner "their."

315 Correct answer **D** Medium Back to question

D was studying

Choice D is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the past progressive tense verb "was studying" is consistent with the other past tense verbs (e.g., "made" and "collected") used to describe Buratti's discovery. Further, the past progressive tense correctly indicates that an ongoing action in the past was occurring (she was studying) at the same time that another event occurred in the past (she made an interesting discovery).

Choice A is incorrect because the present tense verb "studies" isn't consistent with the past tense verbs used to describe Buratti's discovery. **Choice B is incorrect** because the present perfect progressive tense verb "has been studying" isn't consistent with the past tense verbs used to describe Buratti's discovery. **Choice C is incorrect** because the future tense verb "will study" isn't consistent with the past tense verbs used to describe Buratti's discovery.

316 Correct answer **D** Medium Back to question

D is a smaller, foam version

Choice D is the best answer. The convention being tested is subject-verb agreement and agreement between nouns. The singular verb "is" and the singular noun "version" both agree in number with the relative pronoun "which." In this context, "which" functions as a singular subject because it refers to the singular noun "the Nerf football."

Choice A is incorrect because the plural verb "were" doesn't agree in number with the singular noun phrase "the Nerf football" that it's modifying. **Choice B is incorrect** because the plural verb "are" and the plural noun "versions" don't agree in number with the singular noun phrase "the Nerf football" that they're modifying. **Choice C is incorrect** because the plural verb "were" and the plural noun "versions" don't agree in number with the singular noun phrase "the Nerf football" that they're modifying.

317 Correct answer **B** Medium Back to question

B author's political writings

Choice B is the best answer. The conventions being tested are the use of plural and possessive nouns. The singular possessive noun "author's" correctly indicates that the political writings are those of Thomas Paine, and the plural noun "writings" correctly indicates that multiple works by Paine are being discussed.

Choice A is incorrect because the context requires the singular possessive noun "author's," not the plural noun "authors."
Choice C is incorrect because the context requires the plural noun "writings," not the singular possessive noun "writing's."
Choice D is incorrect because the context requires the singular possessive noun "author's" and the plural noun "writings," not the plural possessive nouns "authors'" and "writings'."

318 Correct answer **D** Medium Back to question

D it

Choice D is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "water" and clearly indicates that the water swirls into a whirlpool.

Choice A is incorrect. The plural pronoun "these" neither agrees in number with the singular antecedent "water" nor clearly indicates that the water—not another plural noun in the sentence, such as "landmasses" or "winds"—swirls into a whirlpool.
Choice B is incorrect. The plural pronoun "those" neither agrees in number with the singular antecedent "water" nor clearly indicates that the water—not another plural noun in the sentence, such as "landmasses" or "winds"—swirls into a whirlpool.
Choice C is incorrect. The plural pronoun "them" neither agrees in number with the singular antecedent "water" nor clearly indicates that the water—not another plural noun in the sentence, such as "landmasses" or "winds"—swirls into a whirlpool.

319 Correct answer **D** Medium Back to question

D its two protagonists

Choice D is the best answer. The conventions being tested are the use of possessive determiners and the use of plural nouns. The singular possessive determiner "its"—which agrees in number with the singular noun phrase "Mira Nair's 1991 film *Mississippi Masala*"—and the plural noun "protagonists" correctly indicate that Nair's film has multiple protagonists.

Choice A is incorrect because "it's" is the contraction for "it is," not a possessive determiner. **Choice B is incorrect** because the context requires the plural noun "protagonists," not the singular possessive noun "protagonist's." **Choice C is incorrect** because the context requires the possessive determiner "its" and the plural noun "protagonists," not the contraction "it's" or the singular possessive noun "protagonist's."

320 Correct answer **A** Medium Back to question

A terms presidents

Choice A is the best answer. The convention being tested is the use of plural nouns. The plural nouns "terms" and "presidents" correctly indicate that the amendment involves multiple terms and applies to presidents in general.

Choice B is incorrect because the context requires the plural noun "terms," not the singular possessive noun "term's." **Choice C is incorrect** because the context requires the plural nouns "terms" and "presidents," not the singular possessive nouns "term's" and "president's." **Choice D is incorrect** because the context requires the plural noun "presidents," not the singular possessive noun "president's."

321 Correct answer **C** Medium ‹ Back to question

C powers

Choice C is the best answer. The convention being tested is subject-verb agreement. The singular verb "powers" agrees in number with the singular subject "an artificial intelligence."

Choice A is incorrect because the plural verb "have been powering" doesn't agree in number with the singular subject "an artificial intelligence." **Choice B is incorrect** because the plural verb "power" doesn't agree in number with the singular subject "an artificial intelligence." **Choice D is incorrect** because the plural verb "are powering" doesn't agree in number with the singular subject "an artificial intelligence."

322 Correct answer **D** Medium ‹ Back to question

D to place

Choice D is the best answer. The object for the verb "was" is "first," and "to place" is acting as a modifier for "first." What was the finding? It was "the first." The first to do what? The first "to place humans in North America" 10,000 years ago. When a verb serves as a modifier within a noun phrase, it must be nonfinite (i.e., not conjugated to a specific subject). The infinitive form "to place" is the only nonfinite option among the choices that makes sense in context.

Choice A is incorrect. The object for the verb "was" is "first," and "places" is acting as a modifier for "first." What was the thing that Parker's finding did? What was it the first to do? Place humans in North America 10,000 years ago. When a verb acts as a modifier, it must be nonfinite (i.e., not conjugated to a specific subject), but "places" is a finite form of the verb. **Choice B is incorrect**. The object for the verb "was" is "first," and "placed" is acting to modify "first." What was it that Parker's finding was the first to do? Place humans in North America 10,000 years ago. When a verb acts as a modifier, it must be nonfinite (i.e., not conjugated to a specific subject), but "placed" is a finite form. "Placed" can also be a past participle, but that wouldn't make sense here because the meaning of "the first placed humans" would be unclear. **Choice C is incorrect**. The object for the verb "was" is "first," and "place" is modifying "first." What was the thing that Parker's finding did? What was it the first to do? Place humans in North America. When a verb acts as a modifier, it must be nonfinite (i.e., not conjugated to a specific subject), but "place" is a finite form of the verb. Additionally, "place" can't serve as a noun here, because it results in an illogical sentence (the "finding" wasn't "the first place").

323 Correct answer **C** Medium ‹ Back to question

C was

Choice C is the best answer. The convention being tested is subject-verb agreement. The singular verb "was" agrees in number with the singular subject "every last second."

Choice A is incorrect because the plural verb "have been" doesn't agree in number with the singular subject "every last second." **Choice B is incorrect** because the plural verb "are" doesn't agree in number with the singular subject "every last second." **Choice D is incorrect** because the plural verb "were" doesn't agree in number with the singular subject "every last second."

324 Correct answer **A** Medium Back to question

A suggested

Choice A is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the simple past tense verb "suggested" properly indicates that Zufall offered her suggestion for the product's name in the past. This verb tense is consistent with the previous sentence's use of a simple past tense verb ("advised") to describe Zufall's advice to McVicker in the 1950s.

Choice B is incorrect because the present tense verb "suggests" doesn't indicate that Zufall offered her suggestion in the past. **Choice C is incorrect** because the past perfect verb "had suggested" isn't consistent with the previous sentence's use of the simple past tense verb "advised" to describe Zufall's advice to McVicker. **Choice D is incorrect** because the past progressive verb "was suggesting" isn't consistent with the previous sentence's use of the simple past tense verb "advised" to describe Zufall's advice to McVicker.

325 Correct answer **A** Medium Back to question

A bounds helped

Choice A is the best answer. The convention being tested is finite verb use in a main clause. A main clause requires a finite verb to perform the action of the subject (in this case, Ashford's "gestures" and "habit"), and this choice supplies the finite past tense verb "helped" to indicate what Ashford's gestures and habit helped accomplish.

Choice B is incorrect because the non-finite participle "helping" doesn't supply the main clause with a finite verb. **Choice C is incorrect** because the relative clause "that helped" doesn't supply the main clause with a finite verb. **Choice D is incorrect** because the non-finite to-infinitive "to help" doesn't supply the main clause with a finite verb.

326 Correct answer **A** Medium Back to question

A researcher Robert Losey has argued that domestication

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "researcher Robert Losey" the subject of the sentence and places it immediately after the modifying phrase "since…Siberia." In doing so, this choice clearly establishes that researcher Robert Losey—and not another noun in the sentence—is who uncovered fragments of a 2,000-year-old reindeer training harness in northern Siberia.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "researcher Robert Losey's argument" immediately after the modifying phrase illogically suggests that the "argument" is what uncovered fragments of a 2,000-year-old reindeer training harness in northern Siberia. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun "domestication" immediately after the modifying phrase illogically suggests that "domestication" is what uncovered fragments of a 2,000-year-old reindeer training harness in northern Siberia. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "the argument" immediately after the modifying phrase illogically suggests that the "argument" is what uncovered fragments of a 2,000-year-old reindeer training harness in northern Siberia.

327 Correct answer **A** Medium Back to question

A goes

Choice A is the best answer. The convention being tested is the use of verbs to express tense in a sentence. In this choice, the present tense verb "goes" is consistent with the other present tense verbs ("appears" and "symbolizes") used to describe the tortoise in Stoppard's play. Furthermore, it's conventional to use the present tense when discussing a literary work.

Choice B is incorrect because the future perfect tense verb "will have gone" isn't consistent with the other present tense verbs used to describe the tortoise in Stoppard's play. **Choice C is incorrect** because the past tense verb "went" isn't consistent with the other present tense verbs used to describe the tortoise in Stoppard's play. **Choice D is incorrect** because the past perfect tense verb "had gone" isn't consistent with the other present tense verbs used to describe the tortoise in Stoppard's play.

328 Correct answer **D** Medium Back to question

D the Alaska Centennial Commission sponsored a contest that would award $300 to an individual who came

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the Alaska Centennial Commission" the subject of the sentence and places it immediately after the modifying phrase "wanting...Purchase." In doing so, this choice clearly establishes that the Alaska Centennial Commission—and not another noun in the sentence—wanted to celebrate the 100th anniversary of the Alaska Purchase.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun phrase "a contest" immediately after the modifying phrase illogically suggests that the contest wanted to celebrate the 100th anniversary of the Alaska Purchase. **Choice B is incorrect** because it results in a dangling modifier. The placement of the noun phrase "an award of $300" immediately after the modifying phrase illogically suggests that the award of $300 wanted to celebrate the 100th anniversary of the Alaska Purchase. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "$300" immediately after the modifying phrase illogically suggests that the $300 wanted to celebrate the 100th anniversary of the Alaska Purchase.

329 Correct answer **C** Medium Back to question

C Julian's 1935 synthesis of the alkaloid physostigmine

Choice C is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "Julian's 1935 synthesis" the subject of the sentence and places it immediately after the modifying phrase "named...years." In doing so, this choice clearly establishes that Julian's 1935 synthesis of the alkaloid physostigmine—and not another noun in the sentence—was named in 1999 as one of the greatest achievements by a US chemist in the past hundred years.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun "Julian" immediately after the modifying phrase illogically suggests that Julian himself was named as one of the greatest achievements by a US chemist in the past hundred years. **Choice B is incorrect** because it results in a dangling modifier. The placement of the prepositional phrase "in 1935" immediately after the modifying phrase illogically and confusingly suggests that "in 1935" was named as one of the greatest achievements by a US chemist in the past hundred years. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "the alkaloid physostigmine" immediately after the modifying phrase illogically and confusingly suggests that the alkaloid physostigmine itself (not the synthesis of it) was named as one of the greatest achievements by a US chemist in the past hundred years.

330 Correct answer **B** Medium ‹ Back to question

B drinking straws were used by Sumerians in ancient Mesopotamia

Choice B is the best answer. Modifiers and their subjects must go next to each other. The modifier “far from being modern inventions” must be describing “drinking straws,” because those are the only possible inventions in this sentence.

Choice A is incorrect. Modifiers and their subjects must go next to each other. The modifier “far from being modern inventions” can’t be describing “Sumerians,” because they are a group of people, not an invention. **Choice C is incorrect**. Modifiers and their subjects must go next to each other. The modifier “far from being modern inventions” can’t be describing “the use of drinking straws,” because it is not “the use” of drinking straws that is an invention—it is the drinking straws themselves. **Choice D is incorrect**. Modifiers and their subjects must go next to each other. The modifier “far from being modern inventions” can’t be describing “Ancient Mesopotamia,” because that is a place, not an invention.

331 Correct answer **B** Medium ‹ Back to question

B grains’ physical properties

Choice B is the best answer. The convention being tested is the use of plural and possessive nouns. The plural possessive noun “grains’” and the plural noun “properties” correctly indicate that the simulations involved multiple snow grains and that those snow grains had several properties.

Choice A is incorrect because the context requires the plural possessive noun “grains’” and the plural noun “properties,” not the singular possessive noun “grain’s” and the plural possessive noun “properties’.” **Choice C is incorrect** because the context requires the plural noun “properties,” not the singular possessive noun “property’s.” **Choice D is incorrect** because the context requires the plural possessive noun “grains’,” not the plural noun “grains.”

332 Correct answer **D** Medium ‹ Back to question

D rain

Choice D is the best answer. "That...[rain] back onto Mars’s surface" is a relative clause that describes the "bits of molten rock." Forming the clause requires a conjugated, finite verb, and this is the only choice that provides that.

Choice A is incorrect. "To rain" is an infinitive and can’t serve as the main verb of a clause. A conjugated verb is needed here to form the main verb of the relative clause "that...[rain] back onto Mars’s surface," which describes the "bits of molten rock." **Choice B is incorrect**. "Raining" is a present participle and, on its own, can’t serve as the main verb of a clause. A conjugated verb is needed here to form the main verb of the relative clause "that...[rain] back onto Mars’s surface," which describes the "bits of molten rock." **Choice C is incorrect**. "Having rained" is a perfect participle and can’t serve as the main verb of a clause. A conjugated verb is needed here to form the main verb of the relative clause "that...[rain] back onto Mars’s surface," which describes the "bits of molten rock."

333 Correct answer **C** Medium ‹ Back to question

C playa’s sediment mark the rocks’

Choice C is the best answer. The convention being tested is the use of plural and possessive nouns. The singular possessive noun “playa’s” and the plural possessive noun “rocks’” correctly indicate that the sediment is that of one playa (the Racetrack Playa) and that there are multiple rocks that have mysteriously migrated across the sediment.

Choice A is incorrect because the context requires the singular possessive noun “playa’s” and the plural possessive noun “rocks’,” not the plural noun “playas” and the singular possessive noun “rock’s.” **Choice B is incorrect** because the context requires the plural possessive noun “rocks’,” not the plural noun “rocks.” **Choice D is incorrect** because the context requires the singular possessive noun “playa’s,” not the plural possessive noun “playas’.”

334 Correct answer **A** Medium Back to question

A they accumulate

Choice A is the best answer. The convention being tested is pronoun-antecedent agreement. The plural pronoun “they” agrees in number with the plural antecedent “rivers” and clearly expresses the general statement that rivers expand and contract as they accumulate sediment. Secondarily, the plural verb “accumulate” agrees in number with the plural pronoun and its plural antecedent.

Choice B is incorrect because the singular pronoun “one” doesn’t agree in number with the plural antecedent “rivers.” **Choice C is incorrect** because the singular pronoun “it” doesn’t agree in number with the plural antecedent “rivers.” **Choice D is incorrect** because the use of the personal pronoun “we” is illogical in this context; it suggests that a group of people (including the speaker) accumulate sediment, which doesn’t make sense.

335 Correct answer **A** Medium Back to question

A poems putatively written by the novel’s

Choice A is the best answer. Nothing belongs to the “poems” in the sentence, so it should not be possessive—just a simple plural noun. The protagonist does belong to the novel—it’s the protagonist of the novel—so “novel” needs to be a singular possessive noun.

Choice B is incorrect. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This choice uses the singular possessive “poem’s,” but the text indicates that it should be the simple plural “poems”: there is more than one poem, and nothing belongs to the poems. **Choice C is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This choice uses the singular possessive “poem’s,” but the text indicates that it should be the simple plural “poems”: there is more than one poem, and nothing belongs to the poems. This choice also uses the plural possessive “novels’,” which is incorrect because there is only one novel. **Choice D is incorrect**. This doesn’t complete the text in a way that conforms to the conventions of Standard English. This choice uses the plural possessive “novels’,” which is incorrect because there is only one novel, so it should be the singular possessive “novel’s.” .

336 Correct answer **A** Medium Back to question

A were

Choice A is the best answer. The convention being tested is subject-verb agreement. The plural verb “were signed” agrees in number with the plural subject “the treaties.”

Choice B is incorrect because the singular verb “is signed” doesn’t agree in number with the plural subject “the treaties.” **Choice C is incorrect** because the singular verb “was signed” doesn’t agree in number with the plural subject “the treaties.” **Choice D is incorrect** because the singular verb “has been signed” doesn’t agree in number with the plural subject “the treaties.”

337 Correct answer **A** Medium ‹ Back to question

A was

Choice A is the best answer. The convention being tested here is subject-verb agreement. The singular verb “was” agrees in number with the singular subject “Josephine St. Pierre Ruffin.”

Choice B is incorrect because the plural verb “were” doesn’t agree in number with the singular subject “Josephine St. Pierre Ruffin.” **Choice C is incorrect** because the plural verb “are” doesn’t agree in number with the singular subject “Josephine St. Pierre Ruffin.” **Choice D is incorrect** because the plural verb “have been” doesn’t agree in number with the singular subject “Josephine St. Pierre Ruffin.”

338 Correct answer **A** Medium ‹ Back to question

A is,

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "is" agrees in number with the singular subject "the Proto-Nilotic language."

Choice B is incorrect because the plural verb "are" doesn’t agree in number with the singular subject "the Proto-Nilotic language." **Choice C is incorrect** because the plural verb "have been" doesn’t agree in number with the singular subject "the Proto-Nilotic language." **Choice D is incorrect** because the plural verb "were" doesn’t agree in number with the singular subject "the Proto-Nilotic language."

339 Correct answer **D** Medium ‹ Back to question

D come

Choice D is the best answer. The convention being tested is subject-verb agreement. The plural verb "come" agrees in number with the plural subject "nematodes."

Choice A is incorrect because the singular verb "has come" doesn’t agree in number with the plural subject "nematodes." **Choice B is incorrect** because the singular verb "comes" doesn’t agree in number with the plural subject "nematodes." **Choice C is incorrect** because the singular verb "is coming" doesn’t agree in number with the plural subject "nematodes."

340 Correct answer **B** Medium ‹ Back to question

B are

Choice B is the best answer. The convention being tested is subject-verb agreement. The plural verb "are" agrees in number with the plural compound subject "the trefoil knot and the figure-eight knot." The two types of knots joined by "and" function as a plural subject and thus require a plural verb.

Choice A is incorrect because the singular verb "was" doesn’t agree in number with the plural compound subject "the trefoil knot and the figure-eight knot." **Choice C is incorrect** because the singular verb "has been" doesn’t agree in number with the plural compound subject "the trefoil knot and the figure-eight knot." **Choice D is incorrect** because the singular verb "is" doesn’t agree in number with the plural compound subject "the trefoil knot and the figure-eight knot."

341 Correct answer **C** Medium ‹ Back to question

C characterized

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite past participle "characterized" is correctly used within a supplementary element that modifies the main clause "Zhang...*shanshui*," defining *qinglü shanshui* and explaining some of its identifying traits.

Choice A is incorrect because it results in a comma splice. Using the finite present perfect tense verb "has been characterized" creates a second main clause in the sentence, and the two main clauses can't be joined in this way by only the comma before "a type." **Choice B is incorrect** because it results in a comma splice. Using the finite future tense verb "will be characterized" creates a second main clause in the sentence, and the two main clauses can't be joined in this way by only the comma before "a type." **Choice D is incorrect** because it results in a comma splice. Using the finite present tense verb "is characterized" creates a second main clause in the sentence, and the two main clauses can't be joined in this way by only the comma before "a type."

342 Correct answer **D** Medium ‹ Back to question

D is

Choice D is the best answer. The convention being tested is subject–verb agreement. The singular verb "is" agrees in number with the singular subject "the triangle."

Choice A is incorrect because the plural verb "are" doesn't agree in number with the singular subject "the triangle." **Choice B is incorrect** because the plural verb "have been" doesn't agree in number with the singular subject "the triangle." **Choice C is incorrect** because the plural verb "were" doesn't agree in number with the singular subject "the triangle."

343 Correct answer **B** Medium ‹ Back to question

B they were

Choice B is the best answer. The convention being tested is pronoun–antecedent agreement. The plural pronoun "they" agrees in number with the plural antecedent "woodcuts" and clearly identifies what was exhibited at the Smithsonian American Art Museum.

Choice A is incorrect because the singular pronoun "it" doesn't agree in number with the plural antecedent "woodcuts." **Choice C is incorrect** because the singular pronoun "this" doesn't agree in number with the plural antecedent "woodcuts." **Choice D is incorrect** because the plural pronoun "some" is illogical in this context (referring to "some" of two woodcuts).

344 Correct answer **C** Medium ‹ Back to question

C screw's threads.

Choice C is the best answer. The convention being tested is the use of plural and possessive nouns. The singular possessive noun "screw's" and the plural noun "threads" correctly indicate that there is only one screw and it has multiple threads.

Choice A is incorrect because the context requires the plural noun "threads," not the singular possessive noun "thread's." **Choice B is incorrect** because the context requires the singular possessive noun "screw's," not the plural possessive noun

"screws'." **Choice D is incorrect** because the context requires the singular possessive noun "screw's" and the plural noun "threads," not the plural noun "screws" or the plural possessive noun "threads.'"

345 Correct answer **A** Medium ‹ Back to question

A evokes

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "evokes" agrees in number with the singular subject "Alexander's use."

Choice B is incorrect because the plural verb "are evoking" doesn't agree in number with the singular subject "Alexander's use." **Choice C is incorrect** because the plural verb "have evoked" doesn't agree in number with the singular subject "Alexander's use." **Choice D is incorrect** because the plural verb "evoke" doesn't agree in number with the singular subject "Alexander's use."

346 Correct answer **B** Medium ‹ Back to question

B enable

Choice B is the best answer. The convention being tested is subject-verb agreement. The plural verb "enable" agrees in number with the plural subject "sound-based tools."

Choice A is incorrect because the singular verb "has enabled" doesn't agree in number with the plural subject "sound-based tools." **Choice C is incorrect** because the singular verb "is enabling" doesn't agree in number with the plural subject "sound-based tools." **Choice D is incorrect** because the singular verb "enables" doesn't agree in number with the plural subject "sound-based tools."

347 Correct answer **A** Medium ‹ Back to question

A the South Side Writers Group provided a valuable forum for Chicago writers to share ideas;

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the South Side Writers Group" the subject of the sentence and places it immediately after the modifying phrase "established in 1936 by African American novelist Richard Wright." In doing so, this choice clearly indicates that the South Side Writers Group —and not another noun in the sentence—was established in 1936 by Richard Wright.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "Chicago writers" immediately after the modifying phrase illogically suggests that the Chicago writers were established in 1936 by Richard Wright. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "writers" immediately after the modifying phrase illogically suggests that the writers were established in 1936 by Richard Wright. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "Chicago" immediately after the modifying phrase illogically suggests that Chicago was established in 1936 by Richard Wright.

348 Correct answer **B** Medium ‹ Back to question

B the titles allow the listener to approach each piece free from expectations.

Choice B is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the titles" the subject of the sentence and places it immediately after the modifying phrases "laden with emojis and seemingly

meaningless words, and driven largely by Sawano's 'personal feeling and mood.'" In doing so, this choice clearly establishes that the titles—and not another noun in the sentence —are being described as laden with emojis and driven by Sawano's personal feeling.

Choice A is incorrect because it results in a dangling modifier. The placement of "the listener" immediately after the modifying phrases illogically suggests that the listener, rather than the titles, is laden with emojis and driven by Sawano's personal feeling. **Choice C is incorrect** because it results in a dangling modifier. The placement of "each piece" (i.e., musical score) immediately after the modifying phrases illogically suggests that the pieces, rather than the titles of the pieces, are laden with emojis and driven by Sawano's personal feeling. **Choice D is incorrect** because it results in a dangling modifier. The placement of "the listener's approach" immediately after the modifying phrases illogically suggests that the listener's approach, rather than the titles, is laden with emojis and driven by Sawano's personal feeling.

349 Correct answer **D** Medium Back to question

D superlubricity is reached when two surfaces' COF drops below 0.01.

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun "superlubricity" the subject of the sentence and places it immediately after the modifying phrase "a nearly frictionless...state." In doing so, this choice clearly establishes that superlubricity—and not another noun in the sentence—is being described as nearly frictionless and extremely slippery.

Choice A is incorrect because it results in a dangling modifier. Regardless of the introductory "when..." clause, the main subject "two surfaces" follows the modifying phrase ("A nearly frictionless...state"), illogically suggesting that the surfaces are the nearly frictionless, extremely slippery state. **Choice B is incorrect** because it results in a dangling modifier. The placement of the noun phrase "two surfaces" immediately after the modifying phrase illogically suggests that the surfaces are a nearly frictionless and extremely slippery state. **Choice C is incorrect** because it results in a dangling modifier. The placement of the gerund phrase "reaching superlubricity" immediately after the modifying phrase illogically suggests that the act of reaching superlubricity is the nearly frictionless, extremely slippery state.

350 Correct answer **A** Medium Back to question

A benefit

Choice A is the best answer. The convention being tested is the use of verbs to express tense. In this choice, the present tense verb "benefit" is consistent with the other present tense verbs ("is," "stands," and "are shared") used to describe worker cooperatives and how they function.

Choice B is incorrect because the past tense verb "benefited" isn't consistent with the other present tense verbs used to describe worker cooperatives and how they function. **Choice C is incorrect** because the past progressive tense verb "were benefiting" isn't consistent with the other present tense verbs used to describe worker cooperatives and how they function. **Choice D is incorrect** because the past perfect tense verb "had benefited" isn't consistent with the other present tense verbs used to describe worker cooperatives and how they function.

351 Correct answer **B** Medium Back to question

B to create

Choice B is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite to-infinitive verb "to create" is correctly used to form a subordinate clause that expresses how ArcGIS facilitates the creation of maps (by analyzing and arranging certain data).

Choice A is incorrect because it results in an ungrammatical sentence. The finite verb "create" can't be used in this way to form a subordinate clause that expresses how ArcGIS facilitates the creation of maps. **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "creating" can't be used in this way to form a subordinate clause that expresses how ArcGIS facilitates the creation of maps. **Choice D is incorrect** because it results in an ungrammatical sentence. The finite verb "created" can't be used in this way to form a subordinate clause that expresses how ArcGIS facilitates the creation of maps.

352 Correct answer **D** Medium Back to question

D it

Choice D is the best answer. The convention being tested is pronoun–antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "violin" and thus indicates that the traditional violin (and not its curves) was made lighter.

Choice A is incorrect because the plural pronoun "those" doesn't agree in number with the singular antecedent "violin." **Choice B is incorrect** because the singular pronoun "one" is ambiguous in this context; the resulting sentence leaves unclear what Stradivari made lighter. **Choice C is incorrect** because the plural pronoun "them" doesn't agree in number with the singular antecedent "violin."

353 Correct answer **A** Medium Back to question

A vary

Choice A is the best answer. The convention being tested is subject-verb agreement. The plural verb "vary" agrees in number with the plural subject "such phrases." The supplementary phrase "known as story starters," set off by commas, doesn't change the subject's number.

Choice B is incorrect. The singular verb phrase "has varied" doesn't agree in number with the plural subject "such phrases." **Choice C is incorrect**. The singular verb "varies" doesn't agree in number with the plural subject "such phrases." **Choice D is incorrect**. The singular verb phrase "is varying" doesn't agree in number with the plural subject "such phrases."

354 Correct answer **A** Medium Back to question

A invites

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "invites" agrees in number with the singular subject "Tracy Fullerton's *Walden, a game*."

Choice B is incorrect because the plural verb "invite" doesn't agree in number with the singular subject "Tracy Fullerton's *Walden, a game*." **Choice C is incorrect** because the plural verb "are inviting" doesn't agree in number with the singular subject "Tracy Fullerton's *Walden, a game*." **Choice D is incorrect** because the plural verb "have invited" doesn't agree in number with the singular subject "Tracy Fullerton's *Walden, a game*."

355 Correct answer **C** Medium ‹ Back to question

C study

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. The plural verb "study" agrees in number with the plural subject "many."

Choice A is incorrect because the singular verb "is studying" doesn't agree in number with the plural subject "many." **Choice B is incorrect** because the singular verb "has studied" doesn't agree in number with the plural subject "many." **Choice D is incorrect** because the singular verb "studies" doesn't agree in number with the plural subject "many."

356 Correct answer **B** Medium ‹ Back to question

B Anna Behrensmeyer demonstrated in a 2005 analysis that fossils of thin-shelled organisms

Choice B is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "Anna Behrensmeyer" the subject of the sentence and places it immediately after the modifying phrase "a pioneer...fossils." In doing so, this choice clearly establishes that Anna Behrensmeyer—and not another noun in the sentence—is a pioneer in the field of taphonomy.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun phrase "fossils of thin-shelled organisms" immediately after the modifying phrase illogically suggests that the "fossils" are a pioneer in the field of taphonomy. **Choice C is incorrect** because it results in a dangling modifier. The placement of the pronoun "it" immediately after the modifying phrase illogically suggests that "it" is a pioneer in the field of taphonomy. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "a 2005 analysis" immediately after the modifying phrase illogically suggests that "a 2005 analysis" is a pioneer in the field of taphonomy.

357 Correct answer **D** Medium ‹ Back to question

D takes

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "takes" agrees in number with the singular subject "a cycle of lunar phases."

Choice A is incorrect because the plural verb "are taking" doesn't agree in number with the singular subject "a cycle of lunar phases." **Choice B is incorrect** because the plural verb "have taken" doesn't agree in number with the singular subject "a cycle of lunar phases." **Choice C is incorrect** because the plural verb "take" doesn't agree in number with the singular subject "a cycle of lunar phases."

358 Correct answer **A** Medium ‹ Back to question

A has entered

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "has entered" agrees in number with the singular subject "an abstract cubist painting."

Choice B is incorrect because the plural verb "have entered" doesn't agree in number with the singular subject "an abstract cubist painting." **Choice C is incorrect** because the plural verb "were entering" doesn't agree in number with the singular

subject "an abstract cubist painting." **Choice D is incorrect** because the plural verb "enter" doesn't agree in number with the singular subject "an abstract cubist painting."

359 Correct answer **D** Medium Back to question

D leveraged

Choice D is the best answer. The subject of the verb is "Lincoln," and the first sentence tells us that we're talking about something that Abraham Lincoln did in 1860. So the simple past tense "leveraged" fits the logic of the text.

Choice A is incorrect. This choice creates a tense issue. "Has leveraged" is the present perfect tense, which is used for an action that began in the past and continues into the present. Lincoln started leveraging his rivals' talents in 1860—it's definitely not still happening today. So the present perfect tense isn't appropriate. **Choice B is incorrect**. This choice creates a tense issue. "Is leveraging" is the present tense, but Lincoln leveraged his rivals' talents in 1860, so the present tense isn't appropriate. **Choice C is incorrect**. This choice creates a tense issue. "Will leverage" is the future tense, but Lincoln leveraged his rivals' talents in 1860, so the future tense isn't appropriate.

360 Correct answer **D** Medium Back to question

D towns'

Choice D is the best answer. The convention being tested is the use of possessive nouns. The plural possessive noun "towns'" correctly indicates that the natural beauty and unique cultural traditions belong to both Arteaga and Lagos de Moreno.

Choice A is incorrect because the context requires the plural possessive noun "towns'," not the singular noun "town." **Choice B is incorrect** because the context requires the plural possessive noun "towns'," not the singular possessive noun "town's." **Choice C is incorrect** because the context requires the plural possessive noun "towns'," not the plural noun "towns."

361 Correct answer **D** Hard Back to question

D commercial plastics have two associated problems:

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice ensures that the modifying phrase "despite being cheap, versatile, and easy to produce" appears immediately before the noun it modifies, "commercial plastics," clearly establishing that the commercial plastics—and not another noun in the sentence—are being described as cheap, versatile, and easy to produce.

Choice A is incorrect because it results in a dangling modifier. The placement of the function word "there" immediately after the modifying phrase illogically and confusingly suggests that "there" is cheap, versatile, and easy to produce. **Choice B is incorrect** because it results in a dangling modifier. The placement of the noun "two problems" immediately after the modifying phrase illogically suggests that the "problems" are cheap, versatile, and easy to produce. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "commercial plastics' two associated problems" immediately after the modifying phrase illogically suggests that the "problems" are cheap, versatile, and easy to produce.

362 Correct answer **B** — Hard — Back to question

B searching

Choice B is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite present participle “searching” is correctly used to form a supplementary element that modifies the subject “scientists,” indicating that the scientists who adapted the test were looking for evidence of self-awareness in snakes.

Choice A is incorrect because it results in an ungrammatical sentence. The finite past tense verb “searched” can’t be used in this way to form a supplementary element that indicates what evidence the scientists who adapted the test were looking for. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite past progressive verb “were searching” can’t be used in this way to form a supplementary element that indicates what evidence the scientists who adapted the test were looking for. **Choice D is incorrect** because it results in an ungrammatical sentence. The finite present perfect verb “have searched” can’t be used in this way to form a supplementary element that indicates what evidence the scientists who adapted the test were looking for.

363 Correct answer **C** — Hard — Back to question

C Serra, intending

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. This choice pairs the comma after "Serra" with the comma after "environment" and uses the nonfinite present participle "intending" to correctly form a supplementary phrase describing the reaction Serra intends his sculptures to provoke. This supplementary phrase appears between the noun phrase that it modifies ("American abstract artist Richard Serra") and the finite present tense verb ("assembles"), which functions as the sentence’s main verb and describes what Serra does.

Choice A is incorrect because it results in an ungrammatical sentence. The finite present continuous tense verb "is intending" can’t be used in this way in conjunction with the finite present tense verb "assembles," which already functions as the main verb in the sentence. **Choice B is incorrect** because it results in an ungrammatical sentence. The finite present tense verb "intends" can’t be used in this way to supplement the noun phrase "American abstract artist Richard Serra." **Choice D is incorrect** because it results in an ungrammatical sentence. The finite present tense verb "intends" can’t be used in this way in conjunction with the finite present tense verb "assembles," which already functions as the main verb in the sentence.

364 Correct answer **C** — Hard — Back to question

C it often consists

Choice C is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "industry" and clearly indicates that the industry consists of just one or two suppliers per municipality.

Choice A is incorrect. The plural pronoun "these" neither agrees in number with the singular antecedent "industry" nor clearly indicates that the industry—not another plural noun in the sentence, such as "start-up costs" or "barriers"—consists of just one or two suppliers per municipality. **Choice B is incorrect** because the plural pronoun "they" doesn’t agree in number with the singular antecedent "industry." **Choice D is incorrect** because the singular pronoun "this" is ambiguous in this context; the resulting sentence leaves unclear what consists of just one or two suppliers per municipality.

365 Correct answer **B** — Hard — Back to question

B rock’s and rap’s

Choice B is the best answer. The convention being tested is the use of possessive nouns. The singular possessive nouns "rock's" and "rap's" correctly indicate that the chorus-to-verse ratios belong to the genres of rock and rap.

Choice A is incorrect because the context requires the singular possessive nouns "rock's" and "rap's," not the plural nouns "rocks" and "raps." **Choice C is incorrect** because the context requires the singular possessive noun "rock's," not the plural noun "rocks." **Choice D is incorrect** because the context requires the singular possessive noun "rock's," not the singular noun "rock." This choice incorrectly suggests that there was a single chorus-to-verse ratio for rock and rap together, whereas the ratio was calculated for each genre individually.

366 Correct answer **D** Hard ‹ Back to question

D findings from a 2022 study suggested that vegetables and grains were the primary components of early medieval rulers' diets.

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "findings from a 2022 study" the subject of the sentence and places it immediately after the modifying phrase "supported...Ages." In doing so, this choice clearly establishes that the findings—and not another noun in the sentence—are supported by the biochemical analyses.

Choice A is incorrect because it results in a dangling modifier. The placement of "vegetables and grains" immediately after the modifying phrase illogically suggests that vegetables and grains are supported by biochemical analyses. **Choice B is incorrect** because it results in a dangling modifier. The placement of "early medieval rulers' diets" immediately after the modifying phrase illogically suggests that the rulers' diets are supported by biochemical analyses. **Choice C is incorrect** because it results in a dangling modifier. The placement of "the primary components" immediately after the modifying phrase illogically suggests that the primary components are supported by biochemical analyses.

367 Correct answer **D** Hard ‹ Back to question

D Udé, having

Choice D is the best answer. The convention being tested is the use of verb forms and punctuation within a sentence. The sentence's subject is "Udé," and its finite main verb is "honors." This choice correctly uses the nonfinite participle "having referred" to form a supplementary element ("having...excellence") describing Udé. The comma after "Udé" appropriately marks the boundary before that supplementary element.

Choice A is incorrect because using the finite verb "has referred" creates an ungrammatical sentence. The sentence already has the finite main verb "honors," so "has referred" can't also function as a second main verb here without additional punctuation or conjunctions. Moreover, no punctuation is needed when a subject ("Udé") is immediately followed by a finite verb ("has referred"). **Choice B is incorrect** because using the finite verb "has referred" creates an ungrammatical sentence. The sentence already has the finite main verb "honors," so "has referred" can't also function as a second main verb here without additional punctuation or conjunctions. **Choice C is incorrect** because using the finite verb "referred" creates an ungrammatical sentence. The sentence already has the finite main verb "honors," so "referred" can't also function as a second main verb here without additional punctuation or conjunctions.

368 Correct answer **A** — Hard — Back to question

A the researchers theorize that moths, mistaking nighttime lights for the Sun, continually try to reorient their bodies while flying near such lights.

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the researchers" the subject of the sentence and places it immediately after the modifying phrase "knowing...day." In doing so, this choice clearly establishes that the researchers—and not another noun in the sentence—know that flying insects keep their backs pointed toward sunlight during the day.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "the researchers' theory" immediately after the modifying phrase illogically suggests that the researchers' theory knows that flying insects keep their backs pointed toward sunlight during the day. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun "moths" immediately after the modifying phrase illogically suggests that moths know that flying insects keep their backs pointed toward sunlight during the day. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun "moths" immediately after the modifying phrase illogically suggests that moths know that flying insects keep their backs pointed toward sunlight during the day.

369 Correct answer **C** — Hard — Back to question

C underlie

Choice C is the best answer. The convention being tested is subject-verb agreement. The plural verb "underlie" agrees in number with the plural subject "frameworks."

Choice A is incorrect because the singular verb "underlies" doesn't agree in number with the plural subject "frameworks." **Choice B is incorrect** because the singular verb "is underlying" doesn't agree in number with the plural subject "frameworks." **Choice D is incorrect** because the singular verb "has been underlying" doesn't agree in number with the plural subject "frameworks."

370 Correct answer **B** — Hard — Back to question

B reinforces

Choice B is the best answer. The convention being tested is subject-verb agreement. The singular verb "reinforces" agrees in number with the singular subject "the presence."

Choice A is incorrect because the plural verb "have reinforced" doesn't agree in number with the singular subject "the presence." **Choice C is incorrect** because the plural verb "are reinforcing" doesn't agree in number with the singular subject "the presence." **Choice D is incorrect** because the plural verb "reinforce" doesn't agree in number with the singular subject "the presence."

371 Correct answer **A** — Hard — Back to question

A *Rabinal Achí* tells the story of K'iche' Achí, a military leader who

Choice A is the best answer. The modifier "Based on events...by a king," is describing the drama "Rabinal Achí." Modifiers need to be next to the subjects they describe, so "Rabinal Achí" needs to be the first word after the comma.

Choice B is incorrect. This doesn't complete the text in a way that conforms to the conventions of Standard English. The modifier "Based on events...by a king," is describing the drama "Rabinal Achí." Modifiers need to be next to the subjects they describe, so "Rabinal Achí" needs to be the first word after the comma. **Choice C is incorrect**. This doesn't complete the text in a way that conforms to the conventions of Standard English. The modifier "Based on events...by a king," is describing the drama "Rabinal Achí." Modifiers need to be next to the subjects they describe, so "Rabinal Achí" needs to be the first word after the comma. **Choice D is incorrect**. This doesn't complete the text in a way that conforms to the conventions of Standard English. The modifier "Based on events...by a king," is describing the drama "Rabinal Achí." Modifiers need to be next to the subjects they describe, so "Rabinal Achí" needs to be the first word after the comma.

372 Correct answer **D** Hard Back to question

D was

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "was" agrees in number with the singular subject "amplifying." Gerunds such as "amplifying" are always singular.

Choice A is incorrect because the plural verb "were" doesn't agree in number with the singular subject "amplifying." **Choice B is incorrect** because the plural verb "have been" doesn't agree in number with the singular subject "amplifying." **Choice C is incorrect** because the plural verb "are" doesn't agree in number with the singular subject "amplifying."

373 Correct answer **B** Hard Back to question

B the HHI score of a less concentrated market will be much lower.

Choice B is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the HHI...market" the subject of the sentence and places it immediately after the modifying phrase "compared...market." In doing so, this choice clearly establishes that the HHI score of a less concentrated market—and not another noun in the sentence—is being compared with the HHI score of a highly concentrated market.

Choice A is incorrect because it results in a dangling modifier. The placement of "a market that is less concentrated" immediately after the modifying phrase illogically suggests that a market is being compared with an HHI score. **Choice C is incorrect** because it results in a confusing, illogical sentence. The placement of the modifier "when a market is less concentrated" after "a highly concentrated market" is contradictory. Furthermore, it's ambiguous what "its" is referring to in "its HHI score," resulting in an illogical comparison. **Choice D is incorrect** because it results in a dangling modifier. The placement of "a less concentrated market" immediately after the modifying phrase illogically suggests that a market is being compared with an HHI score.

374 Correct answer **A** Hard Back to question

A fascinate

Choice A is the best answer. The convention being tested is subject-verb agreement. The plural verb "fascinate" agrees in number with the plural subject "musings."

Choice B is incorrect because the singular verb "has fascinated" doesn't agree in number with the plural subject "musings." **Choice C is incorrect** because the singular verb "fascinates" doesn't agree in number with the plural subject "musings." **Choice D is incorrect** because the singular verb "is fascinating" doesn't agree in number with the plural subject "musings."

375 Correct answer **D** Hard < Back to question

D was

Choice D is the best answer. The subject "survey" is singular, and so is the verb "was."

Choice A is incorrect. The subject "survey" is singular, but the verb "are" is plural. **Choice B is incorrect**. The subject "survey" is singular, but the verb "were" is plural. **Choice C is incorrect**. The subject "survey" is singular, but the verb "have been" is plural.

376 Correct answer **D** Hard < Back to question

D help

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. The plural verb “help” provides the relative clause beginning with “that” with a finite verb and agrees in number with the plural subject “coiled branching structures.”

Choice A is incorrect because the singular verb “has helped” doesn’t agree in number with the plural subject “coiled branching structures.” **Choice B is incorrect** because the singular verb “helps” doesn’t agree in number with the plural subject “coiled branching structures.” **Choice C is incorrect** because it results in an ungrammatical sentence. The nonfinite participle “helping” doesn’t supply a finite verb to the relative clause beginning with “that.”

377 Correct answer **D** Hard < Back to question

D aren’t

Choice D is the best answer. The subject "talents" is plural, and so is the verb "aren’t": "the artistic talents...aren’t limited."

Choice A is incorrect. The subject "talents" is plural, but the verb "hasn’t been" is singular. **Choice B is incorrect**. The subject "talents" is plural, but the verb "wasn’t" is singular. **Choice C is incorrect**. The subject "talents" is plural, but the verb "isn’t" is singular.

378 Correct answer **A** Hard < Back to question

A electrograms show that while responding to hypothetical match scenarios, the most highly skilled soccer players have

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun “electrograms” the subject of the sentence and places it immediately after the modifying phrase “recordings of electrical activity in the brain.” In doing so, this choice clearly establishes that electrograms—and not other nouns or noun phrases in the sentence—are recordings of electrical activity in the brain.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase “the most highly skilled soccer players” immediately after the modifying phrase illogically suggests that the players are recordings of electrical activity in the brain. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase “responses to hypothetical match scenarios” immediately after the modifying phrase illogically suggests that these responses are recordings of electrical activity in the brain. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun

phrase "hypothetical match scenario responses" immediately after the opening phrase illogically suggests that these responses are recordings of electrical activity in the brain.

379 Correct answer **A** Hard ‹ Back to question

A to forge

Choice A is the best answer. The convention being tested is the use of finite and nonfinite verb forms within a sentence. The nonfinite to-infinitive "to forge" is correctly used to form a nonfinite (infinitive) clause that explains why the chemists re-created and reprogrammed the DNA-cleaving bacteria.

Choice B is incorrect. Without a comma separating the main clause ("chemists...bacteria") from the participle "forging," this choice illogically suggests that the bacteria are forging a tool, which doesn't make sense. **Choice C is incorrect**. Without a coordinating conjunction such as "and" placed before it, the finite past tense verb "forged" can't be used in this way to describe the chemists' actions. **Choice D is incorrect**. If read as a finite verb, the present progressive verb "forging" isn't consistent with the past tense verbs used in this sentence to describe the actions of the chemists. If read as a nonfinite verb, the participle "forging" can't be used in this way because there is no following main clause for it to modify.

380 Correct answer **A** Hard ‹ Back to question

A many critics have focused on Kurosawa's use of Western literary sources but

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "many critics" the subject of the sentence and places it immediately after the modifying phrase "in assessing...Kurosawa." In doing so, this choice clearly establishes that it is the critics—and not another noun in the sentence—who assess Kurosawa's films.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "Kurosawa's...sources" immediately after the modifying phrase illogically suggests that his use of Western literary sources is what assesses Kurosawa's films. **Choice C is incorrect** because it results in a dangling modifier. The placement of the function word "there" immediately after the modifying phrase illogically suggests that "there" is what assesses Kurosawa's films. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "the focus... critics" immediately after the modifying phrase illogically suggests that the critics' focus is what assesses Kurosawa's films.

381 Correct answer **B** Hard ‹ Back to question

B developed

Choice B is the best answer. The missing verb is part of the same clause as the verb "premiered," and "Price" is the subject of both. So we need the past-tense form "developed" in order to match "premiered."

Choice A is incorrect. This choice creates a verb form error. The missing verb is part of the same clause as the verb "premiered," and "Price" is the subject of both. So we need the past-tense form "developed" in order to match "premiered." **Choice C is incorrect**. This choice creates a verb form error. The missing verb is part of the same clause as the verb "premiered," and "Price" is the subject of both. So we need the past-tense form "developed" in order to match "premiered." **Choice D is incorrect**. This choice creates a verb form error. The missing verb is part of the same clause as the verb "premiered," and "Price" is the subject of both. So we need the past-tense form "developed" in order to match "premiered."

382 Correct answer **C** Hard ‹ Back to question

C works,

Choice C is the best answer. The convention being tested is the use of punctuation and verb forms within a sentence. This choice leaves the verb "admired" in its nonfinite past participle form to function within a supplementary element ("much... followed"). Offset by commas after "works" and "followed," this supplementary element interrupts the main clause ("English poet and Shakespeare contemporary John Donne's works...had... been essentially gathering dust...") with additional information about the works' reception during Donne's lifetime.

Choice A is incorrect because it fails to offset the supplementary element ("much...followed") with appropriate punctuation, and using the finite verb "were much admired" results in an ungrammatical sentence. **Choice B is incorrect** because using the finite verb "were much admired" results in an ungrammatical sentence. **Choice D is incorrect** because it fails to offset the supplementary element ("much...followed") with appropriate punctuation, and using the finite verb "had been much admired" results in an ungrammatical sentence.

383 Correct answer **C** Hard ‹ Back to question

C its

Choice C is the best answer. The singular possessive pronoun "its" agrees with the singular antecedent "the animal" and indicates that the "young" belong to it.

Choice A is incorrect. This choice creates a pronoun-antecedent agreement error. "They're" is a contraction of "they are," a plural pronoun and verb, but the antecedent "the animal" is singular. Also, we don't need the extra verb "are" — we already have a main verb in this clause, so adding "are" would be confusing and ungrammatical. **Choice B is incorrect**. This choice creates a pronoun-antecedent agreement error. "Their" is a plural pronoun, but the subject of the sentence is "the animal," a singular noun. **Choice D is incorrect**. This choice creates a confusing and ungrammatical sentence. "It's" is a contraction for "it is." We already have the verb "nurses" in this clause, so we shouldn't add the verb "is."

384 Correct answer **C** Hard ‹ Back to question

C these crusts reduce global dust emissions by an estimated 60 percent each year, according to a recent study.

Choice C is the best answer. The subject of the modifier "fortifying soil in arid ecosystems against erosion" is "biocrusts." Subject-modifier placement requires a modifier and its subject to be next to each other, so "biocrusts" or some variant meaning "biocrusts" (in this case, "these crusts") must begin the missing clause.

Choice A is incorrect. Modifiers and their subjects must go next to each other. The subject of the modifier "fortifying soil in arid ecosystems against erosion" is "biocrusts," not "a recent study's estimate." **Choice B is incorrect**. Modifiers and their subjects must go next to each other. The subject of the modifier "fortifying soil in arid ecosystems against erosion" is "biocrusts," not "an estimated 60 percent reduction." **Choice D is incorrect**. Modifiers and their subjects must go next to each other. The subject of the modifier "fortifying soil in arid ecosystems against erosion" is "biocrusts," not "a recent study."

385 Correct answer **C** Hard ‹ Back to question

C promotes

Choice C is the best answer. The subject of the sentence is "The African Games Co-production Market." That's one market, so it's a singular noun, which means it needs a singular verb. "Promotes" is the only singular verb among the choices.

Choice A is incorrect. This choice creates a subject-verb agreement error. The subject “The African Games Co-production Market” is singular, but the verb “promote” is plural. **Choice B is incorrect**. This choice creates a subject-verb agreement error. The subject “The African Games Co-production Market” is singular, but the verb “are promoting” is plural. **Choice D is incorrect**. This choice creates a subject-verb agreement error. The subject “The African Games Co-production Market” is singular, but the verb “have promoted” is plural.

386 Correct answer **A** Hard Back to question

A have positioned

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. A main clause requires a finite (tensed) verb to perform the action of the subject. In this case, the subject is "several advantages," and the present perfect tense verb "have positioned" supplies the finite verb to indicate what has made acoustic waves a promising alternative to electrical waves.

Choice B is incorrect because it results in an ungrammatical sentence. The nonfinite participle "positioning" doesn’t supply the main clause with a finite verb. **Choice C is incorrect** because it results in an ungrammatical sentence. The prepositional phrase "by positioning" doesn’t supply the main clause with a finite verb. **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "having positioned" doesn’t supply the main clause with a finite verb.

387 Correct answer **B** Hard Back to question

B variables that characterize objects’

Choice B is the best answer. The conventions being tested are the use of plural and possessive nouns. The plural noun "variables" correctly indicates that there are multiple variables, and the plural possessive noun "objects’" correctly indicates that the movement of objects in general is being discussed.

Choice A is incorrect because the context requires the plural noun "variables," not the singular possessive noun "variable’s." **Choice C is incorrect** because the context requires the plural possessive noun "objects’," not the singular possessive noun "object’s." **Choice D is incorrect** because the context requires the plural possessive noun "objects’," not the plural noun "objects."

388 Correct answer **D** Hard Back to question

D identifies

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "identifies" agrees in number with the singular subject "analysis."

Choice A is incorrect because the plural verb "are identifying" doesn’t agree in number with the singular subject "analysis." **Choice B is incorrect** because the plural verb "identify" doesn’t agree in number with the singular subject "analysis." **Choice C is incorrect** because the plural verb "have identified" doesn’t agree in number with the singular subject "analysis."

389 Correct answer **C** Hard ‹ Back to question

C its

Choice C is the best answer. The convention being tested is the use of possessive determiners. The singular possessive determiner "its" agrees in number with the singular subject "the Tajik Republic" and thus indicates that the other republics were its peers.

Choice A is incorrect because the plural possessive determiner "their" doesn't agree in number with the singular subject "the Tajik Republic." **Choice B is incorrect** because "they're" is the contraction for "they are," not a possessive determiner. **Choice D is incorrect** because "it's" is the contraction for "it is" or "it has," not a possessive determiner.

390 Correct answer **A** Hard ‹ Back to question

A focuses

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "focuses" agrees in number with the singular subject "each one of these plays." While the prepositional phrase "of these plays" within the subject contains a plural noun, the head of the subject ("each one") is singular, indicating that each individual play focuses on a single historical figure.

Choice B is incorrect because the plural verb "focus" doesn't agree in number with the singular subject "each one of these plays." **Choice C is incorrect** because the plural verb "are focused" doesn't agree in number with the singular subject "each one of these plays." **Choice D is incorrect** because the plural verb "were focused" doesn't agree in number with the singular subject "each one of these plays."

391 Correct answer **A** Hard ‹ Back to question

A the topological tapestries of Argentine textile artist Alexandra Kehayoglou are

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "topological tapestries" the subject of the sentence and places it immediately after the modifying phrase "woven... grandmother." In doing so, this choice clearly establishes that the topological tapestries—and not another noun in the sentence—are being described as woven from recycled yarn and hand tufted.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "Argentine textile artist Alexandra Kehayoglou" immediately after the modifying phrase illogically suggests that Kehayoglou is woven from recycled yarn and hand tufted. **Choice C is incorrect** because it results in a dangling modifier. The placement of the pronoun "she" and the noun phrase "Argentine textile artist Alexandra Kehayoglou" after the modifying phrase illogically suggests that Kehayoglou is woven from recycled yarn and hand tufted. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun "Alexandra Kehayoglou" immediately after the modifying phrase illogically suggests that Kehayoglou is woven from recycled yarn and hand tufted.

392 Correct answer **D** Hard ‹ Back to question

D determine

Choice D is the best answer. The convention being tested is the use of verb forms in a sentence. The plural verb "determine" supplies the main clause with a finite main verb and agrees in number with the plural subject "a state's voting record and polling data."

Choice A is incorrect because the singular verb "determines" doesn't agree in number with the plural subject "a state's voting record and polling data." **Choice B is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "determining" doesn't supply the main clause with a finite plural verb. **Choice C is incorrect** because the singular verb "has determined" doesn't agree in number with the plural subject "a state's voting record and polling data."

393 Correct answer **B** Hard Back to question

B amorphous ice lacks the thermal energy to form the crystals found in ice Ih.

Choice B is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "amorphous ice" the subject of the sentence and places it immediately after the modifying phrase "defined...structure." In doing so, this choice clearly establishes that amorphous ice—and not another noun in the sentence—is being described as having a disorganized molecular structure.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun "ice Ih" immediately after the modifying phrase illogically suggests that ice Ih has a disorganized molecular structure, whereas ice Ih is previously described as having molecules that form a hexagonal pattern. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "the lack of thermal energy" immediately after the modifying phrase illogically suggests that the lack of thermal energy has a disorganized molecular structure. **Choice D is incorrect** because it results in a dangling modifier. The placement of "ice Ih" immediately after the modifying phrase illogically suggests that ice Ih has a disorganized molecular structure, whereas ice Ih is previously described as having molecules that form a hexagonal pattern.

394 Correct answer **A** Hard Back to question

A changes, including

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite present participle "including" is correctly used to form a supplementary element that interrupts the main clause "These extensive changes...reflected the poet's evolving literary perspective and experience of the US Civil War." This supplementary element, offset by commas after "changes" and "material," provides examples of the changes Whitman made to *Leaves of Grass*.

Choice B is incorrect because it results in an ungrammatical sentence. The finite modal verb "would include" can't be used in this way to form a supplementary element within the main clause. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite past tense verb "included" can't be used in this way to form a supplementary element within the main clause. **Choice D is incorrect** because it results in an ungrammatical sentence. The finite present tense verb "include" can't be used in this way to form a supplementary element within the main clause.

395 Correct answer **B** Hard Back to question

B Chraïbi's debut novel, published two years before Morocco gained its independence,

Choice B is the best answer. Subject-modifier placement requires a modifier and its subject to be next to each other. The subject of the modifier "a coming-of-age story...colonialism" is Chraïbi's novel *The Simple Past*, so the subject "Chraïbi's debut novel" fits perfectly after this introductory modifying phrase.

Choice A is incorrect. Modifiers and their subjects must go next to each other. The introductory modifier "a coming-of-age story...colonialism" is describing Chraïbi's novel, not Morocco. However, this choice places Morocco directly next to that modifier. **Choice C is incorrect**. Modifiers and their subjects must go next to each other. The introductory modifier "a coming-of-age story...colonialism" all describes Chraïbi's novel, not Chraïbi himself. However, this choice places Chraïbi directly next to that modifier. **Choice D is incorrect**. Modifiers and their subjects must go next to each other. The modifier "a coming-of-age story..." is describing Chraïbi's novel, so that needs to be the subject immediately after the modifier. This choice adds another

modifier that describes Chraïbi's novel, but then puts "Chraïbi" himself—not the novel—right after that modifier, which doesn't make sense. Chraïbi wasn't "published two years before" Moroccan independence; his novel *The Simple Past* was.

396 Correct answer **D** Hard ‹ Back to question

D is

Choice D is the best answer. The convention being tested is subject-verb agreement. The singular verb "is credited" agrees in number with the singular subject "mathematician Grigori Perelman."

Choice A is incorrect because the plural verb "are credited" doesn't agree in number with the singular subject "mathematician Grigori Perelman." **Choice B is incorrect** because the plural verb "have been credited" doesn't agree in number with the singular subject "mathematician Grigori Perelman." **Choice C is incorrect** because the plural verb "are being credited" doesn't agree in number with the singular subject "mathematician Grigori Perelman."

397 Correct answer **D** Hard ‹ Back to question

D silica glass's atomic arrangement is more dispersed, resulting in a significant disadvantage:

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice makes "silica glass's atomic arrangement" the subject of the sentence and places it immediately after the modifying phrase "compared to that of alumina glass." In doing so, this choice clearly establishes that silica glass's atomic arrangement—and not another noun in the sentence—is being compared to the atomic arrangement ("that") of alumina glass.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun phrase "silica glass" immediately after the modifying phrase illogically suggests that silica glass itself (rather than its atomic arrangement) is being compared to alumina glass's atomic arrangement. **Choice B is incorrect** because it results in a dangling modifier. The placement of the noun phrase "silica glass" immediately after the modifying phrase illogically suggests that silica glass itself (rather than its atomic arrangement) is being compared to alumina glass's atomic arrangement. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "a significant disadvantage" immediately after the modifying phrase illogically suggests that "a significant disadvantage" is being compared to alumina glass's atomic arrangement.

398 Correct answer **B** Hard ‹ Back to question

B the bioswales have mitigated both street flooding and the resulting pollution of nearby waterways.

Choice B is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "the bioswales" the subject of the sentence and places it immediately after the modifying phrase "By reducing...sewers." In doing so, this choice clearly establishes that the bioswales—and not another noun in the sentence—are reducing runoff flowing into city sewers.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun phrase "the mitigation...waterways" immediately after the modifying phrase results in unclear modification. The resulting sentence makes it hard to determine what is responsible for "reducing the runoff": the bioswales or some other noun in the sentence. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "the bioswales' mitigation...waterways" immediately after the modifying phrase results in unclear modification. The resulting sentence makes it hard to determine what is responsible for "reducing the runoff": the bioswales or some other noun in the sentence. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "street flooding and the resulting pollution" immediately after the modifying phrase illogically suggests that the "flooding and pollution" are reducing runoff flowing into city sewers.

399 Correct answer **A** — Hard — Back to question

A explore

Choice A is the best answer. The convention being tested is subject-verb agreement. The plural verb "explore" agrees in number with the plural subject "Barrada's pieces."

Choice B is incorrect because the singular verb phrase "has explored" doesn't agree in number with the plural subject "Barrada's pieces." **Choice C is incorrect** because the singular verb "explores" doesn't agree in number with the plural subject "Barrada's pieces." **Choice D is incorrect** because the nonfinite participle "exploring" doesn't supply the main clause with a finite verb.

400 Correct answer **D** — Hard — Back to question

D it often becomes

Choice D is the best answer. The convention being tested is pronoun-antecedent agreement. The singular pronoun "it" agrees in number with the singular antecedent "a given term" and clearly indicates that the term becomes susceptible to obliteration by incorporation.

Choice A is incorrect because the plural pronoun "they" neither agrees in number with the singular antecedent "a given term" nor clearly indicates that the given term—not another plural noun in the sentence, such as "examples"—becomes susceptible to obliteration by incorporation. **Choice B is incorrect** because the plural pronoun "these" neither agrees in number with the singular antecedent "a given term" nor clearly indicates that the given term—not another plural noun in the sentence, such as "examples"—becomes susceptible to obliteration by incorporation. **Choice C is incorrect** because the singular pronoun "this" is ambiguous in this context, leaving unclear what exactly becomes susceptible to obliteration by incorporation.

401 Correct answer **D** — Hard — Back to question

D looking

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite present participle verb "looking" is correctly used to form a subordinate clause that describes the intent behind how L'Engle begins her novel.

Choice A is incorrect because the finite past tense verb "looked" can't be used in this way to form a subordinate clause. **Choice B is incorrect** because the finite present tense verb "looks" can't be used in this way to form a subordinate clause. **Choice C is incorrect** because the finite present progressive tense verb "is looking" can't be used in this way to form a subordinate clause.

402 Correct answer **A** — Hard — Back to question

A its

Choice A is the best answer. The convention being tested is the use of possessive determiners. The singular possessive determiner "its" agrees in number with the singular noun "the North Sea" and thus indicates that the shores are those of the North Sea.

Choice B is incorrect because "it's" is the contraction for "it is" or "it has," not a possessive determiner. **Choice C is incorrect** because "they're" is the contraction for "they are," not a possessive determiner. **Choice D is incorrect** because the plural

possessive determiner “their” doesn’t agree in number with the singular noun “the North Sea.”

403 Correct answer **C** — Hard — Back to question

C highly prized

Choice C is the best answer. The convention being tested is the use of verb forms in a sentence. The nonfinite past participle phrase "highly prized" is correctly used to form a supplementary element that modifies the main clause "this...artistry," describing memorable features of Brass Era automotive design.

Choice A is incorrect because it results in a comma splice. Using the finite present tense verb phrase "are highly prized" creates a second main clause in the sentence, and two main clauses can’t be joined in this way with only a comma after "artistry." **Choice B is incorrect** because it results in a comma splice. Using the finite past perfect tense verb phrase "had been highly prized" creates a second main clause in the sentence, and two main clauses can’t be joined in this way with only a comma after "artistry." **Choice D is incorrect** because it results in a comma splice. Using the finite past tense verb phrase "were highly prized" creates a second main clause in the sentence, and two main clauses can’t be joined in this way with only a comma after "artistry."

404 Correct answer **B** — Hard — Back to question

B Iceland’s parliament is one of the oldest in the world, first meeting in 930 CE.

Choice B is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "Iceland’s parliament" the subject of the sentence and places it immediately after the modifying phrase "a government body officially known as the Althing." In doing so, this choice clearly establishes that Iceland’s parliament—and not another noun in the sentence—is the government body known as the Althing.

Choice A is incorrect because it results in a dangling modifier. The placement of the noun phrase "the world’s oldest parliaments" immediately after the modifying phrase illogically suggests that the world’s oldest parliaments are a government body known as the Althing. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "the first meeting" immediately after the modifying phrase illogically suggests that the first meeting of Iceland’s parliament was a government body known as the Althing. **Choice D is incorrect** because it results in a dangling modifier. The placement of the noun phrase "930 CE" immediately after the modifying phrase illogically suggests that the year 930 CE is a government body known as the Althing.

405 Correct answer **D** — Hard — Back to question

D pine trees and the fungus *Tricholoma matsutake* can transport nutrients through their entangled tree roots and fungal hyphae.

Choice D is the best answer. The convention being tested is subject-modifier placement. This choice makes the noun phrase "pine trees and the fungus *Tricholoma matsutake*" the subject of the sentence and places it immediately after the modifying phrase "forming...association." In doing so, this choice clearly establishes that the pine trees and fungus—and not another noun in the sentence—are forming the networks.

Choice A is incorrect because it results in a dangling modifier. The placement of the it-cleft "it is" immediately after the modifying phrase illogically and confusingly suggests that "it" is forming extensive networks. Furthermore, it’s not conventional to follow a long introductory modifying element with an it-cleft construction because it results in an unnecessarily wordy and confusing sentence, such as this. **Choice B is incorrect** because it results in a dangling modifier. The placement of "the transport of nutrients" immediately after the modifying phrase illogically suggests that the transport of nutrients is forming

extensive networks. **Choice C is incorrect** because it results in a dangling modifier. The placement of "nutrients" immediately after the modifying phrase illogically suggests that nutrients are forming extensive networks.

406 Correct answer **A** Hard Back to question

A their

Choice A is the best answer. The convention being tested is the use of possessive determiners. The plural possessive determiner "their" agrees in number with the plural noun "the poems," thus indicating that the poems had eight panels of text stitched together in the shape of a traditional eight-pointed Lakota star quilt.

Choice B is incorrect because "it's" is the contraction for "it is" or "it has," not a possessive determiner. **Choice C is incorrect** because "they're" is the contraction for "they are," not a possessive determiner. **Choice D is incorrect** because the singular possessive determiner "its" doesn't agree in number with the plural noun "the poems."

407 Correct answer **A** Hard Back to question

A animates

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "animates" agrees in number with the singular subject "question."

Choice B is incorrect because the plural verb "have animated" doesn't agree in number with the singular subject "question." **Choice C is incorrect** because the plural verb "animate" doesn't agree in number with the singular subject "question." **Choice D is incorrect** because it results in an ungrammatical sentence. The nonfinite participle "animating" doesn't supply the clause with a finite verb.

408 Correct answer **C** Hard Back to question

C earning

Choice C is the best answer. The word "earning" is being used to introduce an additional modifying phrase, which describes how Fairuz's repertoire lent her cross-generational appeal. When a verb ends in -ing and doesn't have a helper verb like "is" before it, it can be used to modify a noun or verb. This is appropriate here.

Choice A is incorrect. The underlined verb is being used to introduce additional descriptive information, which is set off from the rest of the sentence by a comma. Because there is no subject here, a finite form of the verb (like "earned") creates an error. We need another form of the verb that doesn't require a subject and can introduce descriptive information. **Choice B is incorrect**. The underlined verb is being used to introduce additional descriptive information, which is set off from the rest of the sentence by a comma. Because there is no subject here, a finite form of the verb (like "had earned") creates an error. We need another form of the verb that doesn't require a subject and can introduce descriptive information. **Choice D is incorrect**. The underlined verb is being used to introduce additional descriptive information, which is set off from the rest of the sentence by a comma. Because there is no subject here, a finite form of the verb (like "earn") creates an error. We need another form of the verb that doesn't require a subject and can introduce descriptive information.

409 Correct answer **A** — Hard — Back to question

A has enhanced

Choice A is the best answer. The convention being tested is subject-verb agreement. The singular verb "has enhanced" agrees in number with the singular subject *"A Sheaf Gleaned in French Fields,"* which is the title of a book of poems.

Choice B is incorrect because the plural verb "are enhancing" doesn't agree in number with the singular subject *"A Sheaf Gleaned in French Fields*." **Choice C is incorrect** because the plural verb "have enhanced" doesn't agree in number with the singular subject *"A Sheaf Gleaned in French Fields*." **Choice D is incorrect** because the plural verb "enhance" doesn't agree in number with the singular subject *"A Sheaf Gleaned in French Fields*."

410 Correct answer **A** — Hard — Back to question

A suggesting

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite present participle "suggesting" is correctly used to form a restrictive participial phrase ("suggesting...Holocene") within the main clause ("This hypothesis...cannot stand..."). This participial phrase functions as part of the sentence's subject ("This...Holocene"), providing essential identifying information about what the hypothesis states—namely, that certain trees survived without interruption or human intervention throughout the Holocene.

Choice B is incorrect because it results in an ungrammatical sentence. The finite verb "suggested" can't be used in this way within the subject of the sentence. **Choice C is incorrect** because it results in an ungrammatical sentence. The finite verb "suggests" can't be used in this way within the subject of the sentence. **Choice D is incorrect** because it results in an ungrammatical sentence. The finite verb "has suggested" can't be used in this way within the subject of the sentence.

411 Correct answer **D** — Hard — Back to question

D attest

Choice D is the best answer. The convention being tested is subject-verb agreement. The plural verb "attest" agrees in number with the plural subject "trailblazing accomplishments."

Choice A is incorrect because the singular verb "attests" doesn't agree in number with the plural subject "trailblazing accomplishments." **Choice B is incorrect** because the singular verb "has attested" doesn't agree in number with the plural subject "trailblazing accomplishments." **Choice C is incorrect** because the singular verb "is attesting" doesn't agree in number with the plural subject "trailblazing accomplishments."

412 Correct answer **D** — Hard — Back to question

D examining

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. The sentence's subject is "Aslanian's macroanalysis," and its finite main verb is "shows." This choice correctly uses the nonfinite present participle "examining" to form an integrated participial phrase ("examining...1800") that describes the macroanalysis, indicating what it examined.

Choice A is incorrect because using the finite verb "examined" creates an ungrammatical sentence. The sentence already has the finite main verb "shows," so "examined" can't also function as a second main verb here without additional punctuation or

conjunctions. **Choice B is incorrect** because using the finite verb “examines” creates an ungrammatical sentence. The sentence already has the finite main verb “shows,” so “examines” can’t also function as a second main verb here without additional punctuation or conjunctions. **Choice C is incorrect** because using the finite verb “had examined” creates an ungrammatical sentence. The sentence already has the finite main verb “shows,” so “had examined” can’t also function as a second main verb here without additional punctuation or conjunctions.

413 Correct answer **A** Hard Back to question

A is

Choice A is the best answer. The convention being tested is the use of verb forms within a sentence. The singular verb "is" agrees in number with the singular subject "each one of a ghazal’s couplets." While the prepositional phrase "of a ghazal’s couplets" within the subject contains a plural noun, the head of the subject ("each one") is singular, indicating that each individual couplet (not the couplets as a group) is "thematically and logically autonomous," or self-standing.

Choice B is incorrect because the plural verb "were" doesn’t agree in number with the singular subject "each one of a ghazal’s couplets." **Choice C is incorrect** because the plural verb "have been" doesn’t agree in number with the singular subject "each one of a ghazal’s couplets." **Choice D is incorrect** because the plural verb "are" doesn’t agree in number with the singular subject "each one of a ghazal’s couplets."

414 Correct answer **C** Hard Back to question

C dating

Choice C is the best answer. The convention being tested is the use of verb forms within a sentence. The sentence’s subject is “a unique tradition of embroidery,” and its finite main verb is “remains.” This choice correctly uses the nonfinite present participle “dating” to form an integrated participial phrase (“dating…years”) that modifies the subject, providing additional information about how far back the tradition goes.

Choice A is incorrect because it results in an ungrammatical sentence. Using the finite present tense verb “dates” creates a second finite verb in the main clause, which already has the finite verb “remains” as its main verb. **Choice B is incorrect** because it results in an ungrammatical sentence. Using the finite present tense verb “date” creates a second finite verb in the main clause, which already has the finite verb “remains” as its main verb. Furthermore, the plural verb “date” doesn’t agree in number with the singular subject, “a unique tradition of embroidery.” **Choice D is incorrect** because it results in an ungrammatical sentence. Using the finite present perfect tense verb “has dated” creates a second finite verb in the main clause, which already has the finite verb “remains” as its main verb.

415 Correct answer **C** Hard Back to question

C their

Choice C is the best answer. The convention being tested is the use of possessive determiners. The plural possessive determiner "their" agrees in number with the plural noun "types" and thus indicates that the more personal subject matter of Marisol’s 1968 sculpture takes the place of those types of pop culture references that made Marisol a star.

Choice A is incorrect because the singular possessive determiner "its" doesn’t agree in number with the plural noun "types." **Choice B is incorrect** because "they’re" is the contraction for "they are," not a possessive determiner. **Choice D is incorrect** because "it’s" is the contraction for "it is" or "it has," not a possessive determiner.

416 Correct answer **B** — Hard — Back to question

B is

Choice B is the best answer. The convention being tested is subject-verb agreement. The singular verb "is" agrees in number with the singular subject "the shape."

Choice A is incorrect because the plural verb "are" doesn't agree in number with the singular subject "the shape." **Choice C is incorrect** because the plural verb "were" doesn't agree in number with the singular subject "the shape." **Choice D is incorrect** because the plural verb "have been" doesn't agree in number with the singular subject "the shape."

417 Correct answer **A** — Hard — Back to question

A Henry resumed his reign,

Choice A is the best answer. The convention being tested is subject-modifier placement. This choice ensures that the introductory phrase "upon recovering two years later" appears immediately before the noun it modifies ("Henry"), clearly establishing that Henry recovered two years later.

Choice B is incorrect because it results in a dangling modifier. The placement of the noun phrase "the reign of Henry" immediately after the introductory phrase illogically suggests that the reign of Henry recovered two years later. **Choice C is incorrect** because it results in a dangling modifier. The placement of the noun phrase "Henry's reign" immediately after the introductory phrase illogically suggests that Henry's reign recovered two years later. **Choice D is incorrect** because it results in a dangling modifier. The placement of the function word "it" immediately after the introductory phrase illogically suggests that "it" recovered two years later.

418 Correct answer **D** — Hard — Back to question

D will be

Choice D is the best answer. The convention being tested is finite and nonfinite verb forms within a sentence. Relative clauses, such as the one beginning with "that," require a finite verb, a verb that can function as the main verb of a clause. This choice correctly supplies the clause with the finite future tense verb "will be."

Choice A is incorrect because the nonfinite participle "being" doesn't supply the clause with a finite verb. **Choice B is incorrect** because the nonfinite to-infinitive "to be" doesn't supply the clause with a finite verb. **Choice C is incorrect** because the nonfinite to-infinitive "to have been" doesn't supply the clause with a finite verb.

419 Correct answer **D** — Hard — Back to question

D prioritizing

Choice D is the best answer. The convention being tested is the use of verb forms within a sentence. The nonfinite present participle "prioritizing" is correctly used to form a supplementary element that modifies "their design," describing what the headrests' design prioritized.

Choice A is incorrect because it results in a comma splice. The finite past perfect verb "had prioritized" creates a second main clause in the sentence, and the comma after "headrests" can't be used in this way to join two main clauses. **Choice B is incorrect** because it results in a comma splice. The finite past progressive verb "was prioritizing" creates a second main clause in the sentence, and the comma after "headrests" can't be used in this way to join two main clauses. **Choice C is incorrect**

because it results in a comma splice. The finite past tense verb “prioritized” creates a second main clause in the sentence, and the comma after “headrests” can’t be used in this way to join two main clauses.

420 Correct answer **B** Hard ‹ Back to question

B increase

Choice B is the best answer. The convention being tested is subject-verb agreement. The plural verb "increase" agrees in number with the plural subject "toxins."

Choice A is incorrect because the singular verb "is increasing" doesn’t agree in number with the plural subject "toxins." **Choice C is incorrect** because the singular verb "increases" doesn’t agree in number with the plural subject "toxins." **Choice D is incorrect** because the singular verb "has increased" doesn’t agree in number with the plural subject "toxins."

421 Correct answer **D** Hard ‹ Back to question

D swimming,

Choice D is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after “swimming” pairs with the dash after “ciliates” to offset the supplementary element (“widely…ciliates”) that interrupts the main clause of the sentence.

Choice A is incorrect. Adding the verb “is” here creates an ungrammatical sentence structure with two main verbs (“is” and “bestows”) without appropriate punctuation and/or conjunction. **Choice B is incorrect** because it fails to offset the supplementary element with appropriate punctuation. Furthermore, adding the verb “is” here creates an ungrammatical sentence that has two finite verbs (“is” and “bestows”) without appropriate punctuation and/or conjunction. **Choice C is incorrect** because it fails to offset the supplementary element with appropriate punctuation. Furthermore, adding the verb “has been” here creates an ungrammatical sentence that has two finite verbs (“has been” and “bestows”) without appropriate punctuation and/or conjunction.

12 Transitions

Logical connections between ideas

A transition is a word or a short phrase that shows how one sentence is related to the sentence before it. It adds no information of its own. Its whole job is to tell the reader what kind of turn the writing is about to take.

194 questions · 80 Easy · 73 Medium · 41 Hard

The bridge was rebuilt in 1998. **However,** the traffic never returned.
The bridge was rebuilt in 1998. **As a result,** the traffic never returned.
The bridge was rebuilt in 1998. **Meanwhile,** the traffic never returned.

WHAT YOU HAVE TO DO

All four choices are ordinary, correctly punctuated words, so grammar will not separate them. Only meaning will. The right transition names the relationship between the two sentences. The wrong ones name a relationship that is not there.

THE METHOD

1. Read the whole text.
2. Ignore the answer choices completely.
3. Look only at the sentence before the gap and the sentence after it.
4. Ask yourself what the connection between them is.
5. Predict the transition in your own words.
6. Choose the answer closest to your prediction.
7. If it still will not come, translate the two sentences into your own language and notice which transition you use there.

WHAT TO TAKE FROM THIS

- Steps 2 and 5 are the method. Everything else is support. Read the four choices first and all four begin to sound reasonable; predict before you look and only one choice will match.
- Words that do this job: However · Therefore · For example · In addition · Instead · Meanwhile · Similarly · As a result · Nevertheless · Moreover · In fact · Finally · Then · Of course · On the other hand · Consequently · Regardless · Lastly.

(C) Specifically,
(D) That said,

Charles Demuth's 1931 painting *Chimney and Water Tower* is a classic Precisionist work. The Precisionists strove for cold, machine-like perfection, with crisp lines, geometric shapes, and smooth, brushstroke-free surfaces. _____ Precisionist works often feature skyscrapers, bridges, and factories, highlighting these angular structures' engineered symmetry.

Explanations

1 Correct answer **B** — Easy — ‹ Back to question

B Then,

Choice B is the best answer. "Then" logically signals that the event described in this sentence—lawmakers' 2017 declaration of Alaska Highway Day—is part of a chronological sequence of events, occurring after the decades-long period in which the soldiers' contribution was overlooked.

Choice A is incorrect because "lastly" illogically signals that this sentence presents the last of a series of points or reasons. Instead, it describes a later event occurring in a chronological sequence of events. **Choice C is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the previous information about the soldiers' contribution being overlooked for decades. Instead, it describes an event occurring after that decades-long period. **Choice D is incorrect**

because "for example" illogically signals that this sentence provides an example illustrating the previous information about the soldiers' contribution being overlooked for decades. Instead, it describes an event occurring after that decades-long period.

2 Correct answer **A** Easy Back to question

A In addition,

Choice A is the best answer. "In addition" logically signals that the detail in this sentence—that Coleridge-Taylor included traditional African music in his classical compositions—adds to the information in the previous sentence. Specifically, the previous sentence indicates one way in which Coleridge-Taylor emphasized his mixed-race ancestry, and the claim that follows indicates a second, additional way.

Choice B is incorrect because "actually" illogically signals that the detail in this sentence is surprising in light of the information in the previous sentence. Instead, the detail adds to the information, indicating a second, additional way in which Coleridge-Taylor emphasized his mixed-race ancestry. **Choice C is incorrect** because "however" illogically signals that the detail in this sentence contrasts with the information in the previous sentence. Instead, the detail adds to the information, indicating a second, additional way in which Coleridge-Taylor emphasized his mixed-race ancestry. **Choice D is incorrect** because "regardless" illogically signals that the detail in this sentence is true despite the information in the previous sentence. Instead, the detail adds to the information, indicating a second, additional way in which Coleridge-Taylor emphasized his mixed-race ancestry.

3 Correct answer **B** Easy Back to question

B ultimately,

Choice B is the best answer. "Ultimately" means "in the long run" or "at the highest level." Although Bolívar wrote to a local merchant, his ultimate goal was to send a message to political leaders in Europe. Therefore, "ultimately" fits perfectly in this context.

Choice A is incorrect. This choice uses a transition that indicates the addition of an agreeing idea. However, the second part of the sentence actually disagrees with the first part. Bolívar addressed the letter to Cullen, but he was really sending a message to someone else. Notice how the contrast word "though" also acts as a transition between these ideas. **Choice C is incorrect**. This choice uses a cause-and-effect transition. Bolívar's writing of the letter to Cullen would not cause him to have a goal of persuading European powers to support him. **Choice D is incorrect**. This choice uses a cause-and-effect transition. Bolívar's writing of the letter to Cullen would not cause him to have a goal of persuading European powers to support him.

4 Correct answer **C** Easy Back to question

C Finally,

Choice C is the best answer. "Finally" logically signals that the bill passing—following many attempts between 1968 and 1983—is the final, concluding event in the sequence described in the previous sentences.

Choice A is incorrect because "instead" illogically signals that the bill passing is an alternative to one of the events described in the previous sentences. Instead, it is the final event in the sequence. **Choice B is incorrect** because "likewise" illogically signals that the bill passing is similar to one of the events described in the previous sentences. Instead, it is the final event in the sequence. **Choice D is incorrect** because "additionally" illogically signals that the bill passing is merely another event described along with the events of the previous sentences. Instead, it is the final, concluding event in the sequence.

5 Correct answer **C** Easy Back to question

C However,

Choice C is the best answer. "However" logically signals that the theory discussed in this sentence—that humans may have arrived in the Americas over 30,000 years ago—contrasts with the previously discussed theory that humans arrived around 13,000 years ago.

Choice A is incorrect because "as a result" illogically signals that the theory in this sentence is the result of the theory discussed in the previous sentence. Instead, this theory contrasts with the previous one. **Choice B is incorrect** because "similarly" illogically signals that the theory in this sentence is similar to the theory discussed in the previous sentence. Instead, this theory contrasts with the previous one. **Choice D is incorrect** because "in conclusion" illogically signals that the theory in this sentence concludes or summarizes the discussion of the previous theory. Instead, this theory contrasts with the previous one.

6 Correct answer **B** Easy Back to question

B Ultimately,

Choice B is the best answer. "Ultimately" logically signals that the information in this sentence—that the court's jurisdiction was subdivided into two districts—was the eventual outcome or resolution of the previously described struggle of the single district to serve the needs of everyone in the state.

Choice A is incorrect because "nevertheless" illogically signals that the information in the sentence is true despite the single district's struggle to serve the state's needs. Instead, the sentence describes the eventual resolution of that struggle. **Choice C is incorrect** because "additionally" illogically signals that the information in the sentence is merely an additional fact related to the single district's struggle. Instead, the sentence describes the eventual resolution of that struggle. **Choice D is incorrect** because "for example" illogically signals that the information in the sentence provides a specific example of the single district's struggle to serve the state's needs. Instead, the sentence describes the eventual resolution of that struggle.

7 Correct answer **D** Easy Back to question

D However,

Choice D is the best answer. "However" logically signals that this sentence, which indicates that the Pūhāhonu volcano may be larger than the Mauna Loa volcano, offers a contrast to or refutation of the previous assumption that Mauna Loa is the largest shield volcano.

Choice A is incorrect because "secondly" illogically signals that this sentence merely offers an additional or secondary point concerning the previous assumption that Mauna Loa is the largest shield volcano. Instead, the sentence offers a contrast to or refutation of that assumption. **Choice B is incorrect** because "consequently" illogically signals that this sentence offers a result or consequence of the previous assumption that Mauna Loa is the largest shield volcano. Instead, the sentence offers a contrast to or refutation of that assumption. **Choice C is incorrect** because "moreover" illogically signals that this sentence merely adds to the previous assumption that Mauna Loa is the largest shield volcano. Instead, the sentence offers a contrast to or refutation of that assumption.

8 Correct answer **B** Easy ‹ Back to question

B Fittingly,

Choice B is the best answer. "Fittingly" is a transition that means "appropriately" or "suitably," and it is appropriate that writers who adopted their style from Okot p'Bitek would be known as the Okot School poets.

Choice A is incorrect. This choice uses a disagreement transition. But this sentence is not disagreeing with anything—rather, it's discussing how it makes sense for those writers who adopted Okot's style to be known as the Okot School poets. **Choice C is incorrect**. This choice uses a transition that compares two ideas. But this sentence is not comparing the Okot School poets and their style to Okot's style. **Choice D is incorrect**. This choice uses a disagreement transition. But this sentence is not disagreeing with anything—rather, it's discussing how it makes sense for those writers who adopted Okot's style to be known as the Okot School poets.

9 Correct answer **D** Easy ‹ Back to question

D Actually,

Choice D is the best answer. "Actually" logically signals that the information in this sentence—that the entry fee is charged per person—corrects the assumption described in the previous sentence that the fee is charged per vehicle.

Choice A is incorrect because "consequently" illogically signals that the fee being charged per person is a consequence of visitors assuming the fee is charged per vehicle. Instead, the sentence corrects that assumption. **Choice B is incorrect** because "second" illogically signals that the fee being charged per person is a second point in a series following the previous information about what visitors assume. Instead, the sentence corrects that assumption. **Choice C is incorrect** because "moreover" illogically signals that the fee being charged per person is merely an additional fact related to the previous information about what visitors assume. Instead, the sentence corrects that assumption.

10 Correct answer **D** Easy ‹ Back to question

D For example,

Choice D is the best answer. The previous sentence tells us that potters think about the look and use of a piece when selecting clay. This sentence provides a specific example of a type of clay selected for its appearance, so the transition "for example" fits perfectly.

Choice A is incorrect. This choice uses a transition that indicates a restatement of the same idea. But this sentence does more than just restate the previous idea. Instead, it provides a more specific example of the idea presented in the first sentence. **Choice B is incorrect**. This choice uses a disagreement transition. But this sentence actually agrees with the previous sentence. Both sentences suggest that desired look plays a role in the selection of clay types for pottery pieces. **Choice C is incorrect**. This choice uses a concluding transition. But this sentence doesn't sum up the previous sentence. Instead, it gives a specific example of the idea presented in the previous sentence.

11 Correct answer **D** Easy ‹ Back to question

D As a result,

Choice D is the best answer. "As a result" logically signals that the thinner, higher walls in this sentence were a result of the invention of flying buttresses in the previous sentence.

Choice A is incorrect because “similarly” illogically signals that the thinner, higher walls in this sentence are similar to the invention of flying buttresses in the previous sentence. Instead, the walls were a result of that invention. **Choice B is incorrect** because “for instance” illogically signals that the thinner, higher walls in this sentence are an example supporting the statement about the invention of flying buttresses in the previous sentence. Instead, the walls were a result of that invention. **Choice C is incorrect** because “nevertheless” illogically signals that the thinner, higher walls in this sentence occurred despite the invention of flying buttresses in the previous sentence. Instead, the walls were a result of that invention.

12 Correct answer **A** Easy Back to question

A In fact,

Choice A is the best answer. “In fact” logically signals that the claim in this sentence—Phoenicia being named after the color purple—emphasizes and supports the previous claim that Phoenicians were famous for using purple dye.

Choice B is incorrect because “regardless” illogically signals that the claim about Phoenicia’s name contrasts with the previous claim that Phoenicians were famous for using purple dye. Instead, the naming emphasizes and supports this claim. **Choice C is incorrect** because “lastly” illogically signals that the claim about Phoenicia’s name is the final step in a process or sequence. Instead, the naming emphasizes and supports the previous claim that Phoenicians were famous for using purple dye. **Choice D is incorrect** because “on the contrary” illogically signals that the claim about Phoenicia’s name directly opposes the previous claim that Phoenicians were famous for using purple dye. Instead, the naming emphasizes and supports this claim.

13 Correct answer **D** Easy Back to question

D As a result,

Choice D is the best answer. "As a result" logically signals that the information in this sentence—the vessel turning black—is a result of the heating technique discussed in the previous sentence.

Choice A is incorrect because "on the contrary" illogically signals that the information in this sentence directly opposes the heating technique in the previous sentence. Instead, the vessel turns black as a result of that technique. **Choice B is incorrect** because "for example" illogically signals that the information in this sentence is an example of the heating technique in the previous sentence. Instead, the vessel turns black as a result of that technique. **Choice C is incorrect** because "previously" illogically signals that the information in this sentence occurs earlier in a chronological series of events than does the heating technique discussed in the first two sentences. Instead, the vessel turns black as a result of that technique.

14 Correct answer **A** Easy Back to question

A Currently,

Choice A is the best answer. “Currently” logically signals that the archaeologists’ use of drones (a current technology) to photograph the lines is the present-day continuation of the ongoing archaeological research described in the previous sentence.

Choice B is incorrect because “in comparison” illogically signals that the action described in this sentence offers a comparison to the ongoing archaeological research described in the previous sentence. Instead, the use of drones is the present-day continuation of that research. **Choice C is incorrect** because “still” illogically signals that the action described in this sentence occurs despite the ongoing archaeological research described in the previous sentence. Instead, the use of drones is the present-day continuation of that research. **Choice D is incorrect** because “however” illogically signals that the action described in this sentence occurs either despite or in contrast to the ongoing archaeological research described in the previous sentence. Instead, the use of drones is the present-day continuation of that research.

15 Correct answer **A** Easy ‹ Back to question

A for instance,

Choice A is the best answer. “For instance” logically signals that the information in this sentence—that larch trees lose their needles every fall—is an example supporting the claim in the previous sentence (that not all conifer species keep their leaves or needles year-round).

Choice B is incorrect because “nevertheless” illogically signals that the information in this sentence is true in spite of the claim about conifer species in the previous sentence. Instead, it’s an example supporting that claim. **Choice C is incorrect** because “meanwhile” illogically signals that the information in this sentence is separate from (while occurring simultaneously with) the claim about conifer species in the previous sentence. Instead, it’s an example supporting that claim. **Choice D is incorrect** because “in addition” illogically signals that the information in this sentence is merely an additional fact related to the claim about conifer species in the previous sentence. Instead, it’s an example supporting that claim.

16 Correct answer **D** Easy ‹ Back to question

D As a result,

Choice D is the best answer. “As a result” logically signals that the claim in this sentence—that spiders can cling to and climb almost any surface —is because of the previous information about the bonding properties of spiders’ spatulae.

Choice A is incorrect because “for instance” illogically signals that the claim in this sentence exemplifies the information in the previous sentences. Instead, the claim is because of the previous information about the bonding properties of spiders’ spatulae. **Choice B is incorrect** because “however” illogically signals that the claim in this sentence contrasts with the information in the previous sentences. Instead, the claim is because of the previous information about the bonding properties of spiders’ spatulae. **Choice C is incorrect** because “similarly” illogically signals that the claim in this sentence is similar to, but separate from, the information in the previous sentences. Instead, the claim is because of the previous information about the bonding properties of spiders’ spatulae.

17 Correct answer **C** Easy ‹ Back to question

C In addition,

Choice C is the best answer. "In addition" logically signals that Naff’s artifact collecting was separate from, and in addition to, her interviewing.

Choice A is incorrect because "in other words" illogically signals that the information about Naff’s artifact collecting restates the previous information about her interviewing. Instead, Naff collected artifacts in addition to conducting interviews. **Choice B is incorrect** because "on the contrary" illogically signals that Naff’s artifact collecting was contrary to her interviewing. Instead, Naff collected artifacts in addition to conducting interviews. **Choice D is incorrect** because "today" illogically signals that Naff’s artifact collecting is occurring in the present day. Instead, this activity occurred in the past, as indicated by the past tense verb "collected."

18 Correct answer **B** Easy ‹ Back to question

B In comparison,

Choice B is the best answer. "In comparison" logically signals that the description of savannas in this sentence—that they are drier and their trees are spaced further apart—forms a comparison with the description of tropical forests in the previous

sentence.

Choice A is incorrect because "for instance" illogically signals that the description of savannas in this sentence exemplifies the description of tropical forests in the previous sentence. Instead, this description forms a comparison with the description of tropical forests. **Choice C is incorrect** because "firstly" illogically signals that the description of savannas in this sentence indicates the first in a series of things. Instead, this description forms a comparison with the description of tropical forests in the previous sentence. **Choice D is incorrect** because "in conclusion" illogically signals that the description of savannas in this sentence concludes or summarizes information in the previous sentences. Instead, this description forms a comparison with the description of tropical forests in the previous sentence.

19 Correct answer **B** Easy ‹ Back to question

B Next,

Choice B is the best answer. "Next" logically signals that the action described in this sentence—Konkoly recording participants' eye movements—is the next step in Konkoly's experiment.

Choice A is incorrect because "specifically" illogically signals that this sentence specifies or elaborates on an aspect of the action described in the previous sentence. Instead, it describes the next step in Konkoly's experiment. **Choice C is incorrect** because "for instance" illogically signals that the action described in this sentence is an example of the action described in the previous sentence. Instead, it is the next step in Konkoly's experiment. **Choice D is incorrect** because "in sum" illogically signals that this sentence summarizes or concludes the action described in the previous sentence. Instead, it describes the next step in Konkoly's experiment.

20 Correct answer **C** Easy ‹ Back to question

C Next,

Choice C is the best answer. "Next" logically signals that the egg laying in this sentence is the next step in the sequence of events described in the other sentences.

Choice A is incorrect because "by contrast" illogically signals that the egg laying in this sentence contrasts with the nest digging in the previous sentence. Instead, the egg laying follows the nest digging as the next step in the sequence of events. **Choice B is incorrect** because "similarly" illogically signals that the egg laying in this sentence is similar to the nest digging in the previous sentence. Though the two actions are related, they are not similar. Instead, the egg laying follows the nest digging as the next step in the sequence of events. **Choice D is incorrect** because "for example" illogically signals that the egg laying in this sentence is an example of the nest digging in the previous sentence. Instead, the egg laying follows the nest digging as the next step in the sequence of events.

21 Correct answer **B** Easy ‹ Back to question

B In doing so,

Choice B is the best answer. "In doing so" logically signals that the information in this sentence—that the medical students develop better observational skills—is an outcome of the action described in the previous sentence (the students learning art-based techniques).

Choice A is incorrect because "by contrast" illogically signals that the students developing better observational skills contrasts with the previous information about learning art-based techniques. Instead, the students' improved skills are a direct result of learning those techniques. **Choice C is incorrect** because "for example" illogically signals that the students developing better observational skills is a specific example of learning art-based techniques. Instead, the students' improved skills are a direct

result of learning those techniques. **Choice D is incorrect** because “nevertheless” illogically signals that the students develop better observational skills despite the previous information about learning art-based techniques. Instead, the students’ improved skills are a direct result of learning those techniques.

22 Correct answer **A** Easy Back to question

A As a result,

Choice A is the best answer. "As a result" logically signals that the information in the sentence—that, in the US House of Representatives, the entire state of Alaska has just one district—is the result or consequence of Alaska having only about 730,000 people. This is slightly below the average for House districts, which are designed to have roughly equal populations.

Choice B is incorrect because "instead" illogically signals that Alaska having just one state district is an alternative to the information about the state’s population in the previous sentence. Rather, the fact that Alaska has just one district is a result or consequence of the entire state having slightly fewer people than an average-sized district. **Choice C is incorrect** because "finally" illogically signals that the information in this sentence about Alaska having just one district indicates a last step in a process or a concluding summary. Instead, the fact that Alaska has just one district is a result or consequence of the entire state having slightly fewer people than an average-sized district. **Choice D is incorrect** because "for instance" illogically signals that the information in this sentence about Alaska having just one district exemplifies the information about the state’s population in the previous sentence. Instead, the fact that Alaska has just one district is a result or consequence of the entire state having slightly fewer people than an average-sized district.

23 Correct answer **B** Easy Back to question

B Instead,

Choice B is the best answer. "Instead" logically signals that the information in this sentence—that Bartholdi decided to slim and tilt out the arm of the Statue of Liberty—contrasts with Eiffel’s design suggestions for the statue.

Choice A is incorrect because "additionally" illogically suggests that the information in this sentence is merely an additional fact related to Eiffel’s design suggestions in the previous sentence. Instead, it contrasts with those suggestions. **Choice C is incorrect** because "thus" illogically signals that the information that follows is a result of Eiffel’s design suggestions in the previous sentence. Instead, it contrasts with those suggestions. **Choice D is incorrect** because "for example" illogically signals that the information about Bartholdi’s design decisions in this sentence exemplifies Eiffel’s design suggestions in the previous sentence. Instead, it contrasts with those suggestions.

24 Correct answer **B** Easy Back to question

B Previously,

Choice B is the best answer. “Previously” logically signals that the event described in this sentence—Bigelow being named best director—occurred before Zhao’s win. The fact that only one other woman had won the award before puts Zhao’s win in perspective.

Choice A is incorrect because “as a result” illogically signals that the event described in this sentence occurred as a result or consequence of Zhao’s win. Instead, it occurred before Zhao was named best director and puts Zhao’s win in perspective. **Choice C is incorrect** because “however” illogically signals that the event described in this sentence occurred in spite of or in contrast to Zhao’s win. Instead, it occurred before Zhao was named best director and puts Zhao’s win in perspective. **Choice D is incorrect** because “likewise” illogically signals that this sentence merely adds a second, similar piece of information to the

information about Zhao's win. Instead, the fact that only one other woman had won the award before puts Zhao's win in perspective.

25 Correct answer **B** Easy ‹ Back to question

B As a result,

Choice B is the best answer. "As a result" logically signals that the action described in this sentence—closing the area around Garisenda Tower to explore stabilization solutions—occurred as a consequence or result of measurements revealing the tower's concerning rotation.

Choice A is incorrect because "similarly" illogically signals that the action of closing the tower area is similar to the discovery of concerning rotation described in the previous sentence. Instead, closing the area around the tower to explore solutions occurred as a result of the measurements revealing the rotation. **Choice C is incorrect** because "for example" illogically signals that the action of closing the tower area serves as an example of the tower's concerning rotation described in the previous sentence. Instead, closing the area around the tower to explore solutions occurred as a result of the measurements revealing the rotation. **Choice D is incorrect** because "in comparison" illogically signals that the action of closing the tower area is being compared to the discovery of concerning rotation described in the previous sentence. Instead, closing the area around the tower to explore solutions occurred as a result of the measurements revealing the rotation.

26 Correct answer **D** Easy ‹ Back to question

D However,

Choice D is the best answer. "However" logically signals that the claim in this sentence—that many New Yorkers have seen Pollard's work in a famous Broadway musical—is true despite the previous information that few New Yorkers have heard Pollard's name.

Choice A is incorrect because "similarly" illogically signals that the claim in this sentence is similar to the previous information that few New Yorkers have heard Pollard's name. Instead, the claim that many New Yorkers have seen Pollard's work is true despite the previous information. **Choice B is incorrect** because "therefore" illogically signals that the claim in this sentence is a result of the previous information that few New Yorkers have heard Pollard's name. Instead, the claim that many New Yorkers have seen Pollard's work is true despite the previous information. **Choice C is incorrect** because "for example" illogically signals that the claim in this sentence exemplifies the previous information that few New Yorkers have heard Pollard's name. Instead, the claim that many New Yorkers have seen Pollard's work is true despite the previous information.

27 Correct answer **C** Easy ‹ Back to question

C For example,

Choice C is the best answer. "For example" logically signals that this sentence supports the previous information about the descriptive notations opera singers use by providing specific examples of these notations: *giocoso* (playfully) and *lento* (at a slow tempo).

Choice A is incorrect because "on the other hand" illogically signals that the information in this sentence contrasts with the previous information about the descriptive notations opera singers use. Instead, the sentence provides examples of these notations. **Choice B is incorrect** because "all the same" illogically signals that the information in this sentence is true despite the previous information about the descriptive notations opera singers use. Instead, the sentence provides examples of these notations. **Choice D is incorrect** because "in the second place" illogically signals that the information in this sentence is a

second point that is separate from the previous information about the descriptive notations opera singers use. Instead, the sentence provides examples of these notations.

28 Correct answer **D** Easy ‹ Back to question

D Finally,

Choice D is the best answer. "Finally" logically signals that the actions in this sentence—the removal, cataloging, and analysis of artifacts—are the next and final steps in a process, following the previous actions of surveying, digging, recording, and mapping.

Choice A is incorrect because "for instance" illogically signals that the actions in this sentence are an example of the actions in the previous sentence. Instead, the removal, cataloging, and analysis of artifacts are the next and final steps in a process. **Choice B is incorrect** because "on the contrary" illogically signals that the actions in this sentence are directly opposed to the actions in the previous sentence. Instead, the removal, cataloging, and analysis of artifacts are the next and final steps in a process. **Choice C is incorrect** because "earlier" illogically signals that the actions in this sentence occur before the actions in the previous sentence. Instead, the removal, cataloging, and analysis of artifacts are the next and final steps in a process.

29 Correct answer **B** Easy ‹ Back to question

B Indeed,

Choice B is the best answer. "Indeed" logically signals that the information in this sentence—that the sculpture raised the question of whether displaying any object in an art gallery transforms the object into a work of art—offers emphasis in support of the claim in the previous sentence that the sculpture was intended to challenge conceptions about the nature of art.

Choice A is incorrect because "similarly" illogically signals that information in this sentence is similar to the claim about the sculptor's intention in the previous sentence. Instead, the information about the question raised by the sculpture offers emphasis in support of that claim. **Choice C is incorrect** because "instead" illogically signals that the information in this sentence is an alternative to the claim about the sculptor's intention in the previous sentence. Rather, the information about the question raised by the sculpture offers emphasis in support of that claim. **Choice D is incorrect** because "in addition" illogically signals that the information in this sentence is merely an additional fact related to the claim about the sculptor's intention in the previous sentence. Instead, the information about the question raised by the sculpture offers emphasis in support of that claim.

30 Correct answer **B** Easy ‹ Back to question

B As a result,

Choice B is the best answer. "As a result" logically signals that the information in this sentence—that many people in Switzerland gained a new opportunity to participate in their country's political process—is a result or consequence of the previous information about the Swiss government lowering the voting age.

Choice A is incorrect because "nevertheless" illogically signals that the information that follows is despite the information in the previous sentence about the Swiss government lowering the voting age. Instead, people gained a new opportunity to participate in Switzerland's political process as a result or consequence of that change. **Choice C is incorrect** because "by contrast" illogically signals that the information in this sentence contrasts with the information in the previous sentence about the Swiss government lowering the voting age. Instead, people gained a new opportunity to participate in Switzerland's political process as a result or consequence of that change. **Choice D is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the information about the Swiss government lowering the voting age in the previous

sentence. Instead, people gained a new opportunity to participate in Switzerland's political process as a result or consequence of that change.

31 Correct answer **D** Easy ‹ Back to question

D On the other hand,

Choice D is the best answer. "On the other hand" logically signals that the information in this sentence—that dust can lower sea surface temperatures, weakening the storm—presents an opposing effect to the one described in the previous sentence, in which dust enhances ice cloud formation and increases precipitation.

Choice A is incorrect because "previously" illogically signals that the information in this sentence is an event that occurred before the dust-enhanced ice cloud formation mentioned in the previous sentence. Instead, the dust lowering surface temperatures—and weakening the storm—is an opposing effect. **Choice B is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about dust enhancing ice cloud formation. Instead, the dust lowering surface temperatures—and weakening the storm—is an opposing effect. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence is an example of the previous information about dust enhancing ice cloud formation. Instead, the dust lowering surface temperatures—and weakening the storm—is an opposing effect.

32 Correct answer **A** Easy ‹ Back to question

A However,

Choice A is the best answer. "However" logically signals that the information in this sentence—that envelope-shaped bags dominated the market —contrasts with the previous claim that these bags were impractical for carrying goods.

Choice B is incorrect because "for instance" illogically signals that the information in this sentence is an example supporting the previous claim that envelope-shaped bags were impractical for carrying goods. Instead, the sentence contrasts with the previous claim about the bags. **Choice C is incorrect** because "thus" illogically signals that the information in this sentence is a result of the previous claim that envelope-shaped bags were impractical for carrying goods. Instead, the sentence contrasts with the previous claim about the bags. **Choice D is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase of the previous claim that envelope-shaped bags were impractical for carrying goods. Instead, the sentence contrasts with the previous claim about the bags.

33 Correct answer **D** Easy ‹ Back to question

D for example,

Choice D is the best answer. "For example" logically signals that the information in this sentence—that *The Emperor's Babe* is a novel conveyed in lines of poetry—exemplifies the claim in the previous sentence about hybrid works that incorporate elements of both novels and poems.

Choice A is incorrect because "by contrast" illogically signals that the information in this sentence contrasts with the claim about hybrid works in the previous sentence. Instead, the information demonstrates that Evaristo's novel is an example of a hybrid work. **Choice B is incorrect** because "consequently" illogically signals that the information in this sentence is a consequence, or result, of the claim about hybrid works in the previous sentence. Instead, the information demonstrates that Evaristo's novel is an example of a hybrid work. **Choice C is incorrect** because "secondly" illogically signals that the information in this sentence is a second, separate claim from the previous sentence's claim about hybrid works. Instead, the information demonstrates that Evaristo's novel is an example of a hybrid work.

34 Correct answer **B**

Easy

‹ Back to question

B First,

Choice B is the best answer. “First” logically signals that the question in this sentence—whether there is a daily period during which jellyfish pulse rates decline—is the first in a sequence of three questions the researchers attempted to answer about jellyfish sleep behavior.

Choice A is incorrect because “as a result” illogically signals that the question in this sentence is a result of the three questions the researchers attempted to answer. Instead, it is the first of those three questions. **Choice C is incorrect** because “additionally” illogically signals that the question in this sentence is an additional question related to the three questions the researchers attempted to answer. Instead, it is the first of those three questions. **Choice D is incorrect** because “however” illogically signals that the question in this sentence contrasts with the three questions the researchers attempted to answer. Instead, it is the first of those three questions.

35 Correct answer **C**

Easy

‹ Back to question

C Thus,

Choice C is the best answer. “Thus” logically signals that the action described in this sentence—the researcher being able to determine the chemical makeup of the planet’s bright regions based on how they reflect light—is a result or consequence of the previous information about spectroscopic fingerprints.

Choice A is incorrect because “regardless” illogically signals that the action described in this sentence occurs despite the previous information about spectroscopic fingerprints. Instead, the finding in this sentence is a result or consequence of that information. **Choice B is incorrect** because “meanwhile” illogically signals that the action described in this sentence either occurs at the same time as or offers an alternative to the previous information about spectroscopic fingerprints. Instead, the finding in this sentence is a result or consequence of that information. **Choice D is incorrect** because “in comparison” illogically signals that the action described in this sentence is being compared with the previous information about spectroscopic fingerprints. Instead, the finding in this sentence is a result or consequence of that information.

36 Correct answer **D**

Easy

‹ Back to question

D For instance,

Choice D is the best answer. "For instance" logically signals that the concise, witty exchange between Philip II and the Spartans is an example supporting the previous claim—that the Spartans employed wit even in the face of peril.

Choice A is incorrect because "rather" illogically signals that the exchange between Philip II and the Spartans contrasts with the previous claim about the Spartans’ wit. Instead, the exchange is an example of their wit. **Choice B is incorrect** because "in other words" illogically signals that the exchange between Philip II and the Spartans is a restatement of the previous claim about the Spartans’ wit. Instead, the exchange is an example of their wit. **Choice C is incorrect** because "that said" illogically signals that the exchange between Philip II and the Spartans is an exception to the previous claim about the Spartans’ wit. Instead, the exchange is an example of their wit.

37 Correct answer **A**

Easy

‹ Back to question

A Ultimately,

Choice A is the best answer. "Ultimately" logically signals that West's completion of the computer program was the conclusion of the process described in the previous sentence, in which scientists working on GPS sought to develop a mathematical model of Earth.

Choice B is incorrect because "in other words" illogically signals that the information about West's program is a restatement of the information about the scientists' efforts to develop a mathematical model of Earth. Instead, West's program was the conclusion of those efforts. **Choice C is incorrect** because "secondly" illogically signals that West's completion of the computer program was merely the next step in the scientists' efforts to develop a mathematical model of Earth. Instead, West's program was the conclusion of those efforts. **Choice D is incorrect** because "in addition" illogically signals that West's completion of the computer program was merely additional information related to the scientists' work on GPS. Instead, West's program was the conclusion of the scientists' efforts to develop a mathematical model of Earth.

38 Correct answer **A**

Easy

‹ Back to question

A Additionally,

Choice A is the best answer. "Additionally" logically signals that guard cells' role in regulating water loss is an additional function of these specialized plant cells that is separate from the function of regulating carbon dioxide intake.

Choice B is incorrect because "previously" illogically signals that the activity described in this sentence occurs earlier in a chronological sequence of events than the regulation of carbon dioxide intake described in the previous sentence. Instead, regulating water loss is an additional function of guard cells that is separate from the function of regulating carbon dioxide intake. **Choice C is incorrect** because "in conclusion" illogically signals that the description of guard cells' role in regulating water loss concludes or summarizes the information about guard cells provided in the previous sentences. Instead, regulating water loss is one of the two distinct functions of guard cells described in the text. **Choice D is incorrect** because "instead" illogically signals that the activity described in this sentence happens in place of the activity of regulating carbon dioxide intake described in the previous sentence. Rather, regulating water loss is an additional function of guard cells.

39 Correct answer **C**

Easy

‹ Back to question

C There,

Choice C is the best answer. "There" logically signals where the events described in this sentence (Anning making several important discoveries) occurred: in Lyme Regis along the Jurassic Coast of southern England, which the previous sentence indicates is where she lived.

Choice A is incorrect because "for example" illogically signals that the information in this sentence about Anning's discoveries exemplifies the previous information about her living in Lyme Regis. Instead, the sentence refers to the discoveries Anning made while living there—as the information in the third sentence makes clear. **Choice B is incorrect** because "likewise" illogically signals that the information about Anning's discoveries is similar to the previous information about her living in Lyme Regis. Instead, the sentence refers to the discoveries Anning made while living there—as the information in the third sentence makes clear. **Choice D is incorrect** because "later" illogically signals that the information in this sentence about Anning's discoveries occurred after she lived in Lyme Regis, as described in the previous sentence. Instead, the sentence refers to the discoveries Anning made while living there—as the information in the third sentence makes clear.

40 Correct answer **D**

Easy

‹ Back to question

D Instead,

Choice D is the best answer. "Instead" logically signals that the idea in this sentence—that researchers should use the word "lyfe"—is an alternative to the idea mentioned in the previous sentence (scientists' use of the word "life").

Choice A is incorrect because "previously" illogically signals that the idea in this sentence occurs before the action in the first sentence. Instead, the use of "lyfe" is an alternative to the previously mentioned use of "life." **Choice B is incorrect** because "regardless" illogically signals that the idea in this sentence is true despite the information in the first sentence. Instead, the use of "lyfe" is an alternative to the previously mentioned use of "life." **Choice C is incorrect** because "there" illogically signals that the idea in this sentence occurs in a place mentioned in the previous sentence. Instead, the use of "lyfe" is an alternative to the previously mentioned use of "life."

41 Correct answer **B**

Easy

‹ Back to question

B For this reason,

Choice B is the best answer. The first sentence tells us that practical effects are more realistic but also more expensive than CGI. The second sentence tells us that many filmmakers use both kinds of effects, balancing realism with cost. To connect these ideas, we need a cause-and-effect transition, like "therefore." "For this reason" has the same meaning as "therefore." .

Choice A is incorrect. This isn't a logical transition. The first sentence tells us that practical effects are more realistic but also more expensive than CGI. The second sentence tells us that many filmmakers use both kinds of effects, balancing realism with cost. To connect these ideas, we need a cause-and-effect transition, like "therefore." "Similarly" doesn't show cause and effect: it shows the addition of another agreeing idea. **Choice C is incorrect**. This isn't a logical transition. The first sentence tells us that practical effects are more realistic but also more expensive than CGI. The second sentence tells us that many filmmakers use both kinds of effects, balancing realism with cost. To connect these ideas, we need a cause-and-effect transition, like "therefore." "Furthermore" doesn't show cause and effect: it shows the addition of another agreeing idea. **Choice D is incorrect**. This isn't a logical transition. The first sentence tells us that practical effects are more realistic but also more expensive than CGI. The second sentence tells us that many filmmakers use both kinds of effects, balancing realism with cost. To connect these ideas, we need a cause-and-effect transition, like "therefore." "In other words" doesn't show cause and effect: it shows a restatement of the same idea in different words.

42 Correct answer **C**

Easy

‹ Back to question

C In fact,

Choice C is the best answer. "In fact" logically signals that the information in this sentence about the creation of the video game offers additional emphasis in support of the previous claim that video game studio founders Koola and Viv love cats.

Choice A is incorrect because "intermittently" illogically signals that the information in this sentence occurs sporadically or in intervals. Instead, the creation of the video game offers additional emphasis in support of the previous claim about Koola and Viv. **Choice B is incorrect** because "on the other hand" illogically signals that the information in this sentence contrasts with the previous claim about Koola and Viv. Instead, the creation of the video game offers additional emphasis in support of that claim. **Choice D is incorrect** because "nevertheless" illogically signals that the information in this sentence is true despite the previous claim that Koola and Viv love cats. Instead, the creation of the video game offers additional emphasis in support of that claim.

43 Correct answer **D**

Easy

‹ Back to question

D As a result,

Choice D is the best answer. “As a result” logically signals that the information in this sentence—that the widened grooves in balsa wood can accommodate electrical conductors—is a direct consequence of the researchers’ method described in the previous sentence (using heat and chemicals to widen the grooves).

Choice A is incorrect because “for example” illogically signals that this sentence provides an example of the researchers’ method described in the previous sentence. Instead, the sentence indicates a consequence of that method. **Choice B is incorrect** because “previously” illogically signals that this sentence describes an event that occurred before the researchers’ development of the method described in the previous sentence. Instead, the sentence indicates a consequence of that method. **Choice C is incorrect** because “in contrast” illogically signals that the information in this sentence contrasts with the previous sentence’s description of the researchers’ method. Instead, the sentence indicates a consequence of that method.

44 Correct answer **C**

Easy

‹ Back to question

C However,

Choice C is the best answer. "However" logically signals that the claim about reindeer in this sentence contrasts with the information about most deer species in the previous sentence.

Choice A is incorrect because "similarly" illogically signals that the claim in this sentence is similar to the previous information about most deer species. Instead, it contrasts with that information. **Choice B is incorrect** because "next" illogically signals that the claim about reindeer in this sentence is the next step in a process. Instead, it contrasts with the previous information about most deer species. **Choice D is incorrect** because "thus" illogically signals that the claim in this sentence results from the previous information about most deer species. Instead, it contrasts with that information.

45 Correct answer **A**

Easy

‹ Back to question

A Meanwhile,

Choice A is the best answer. “Meanwhile” logically signals that the action described in this sentence (Obinze’s move to London to pursue a career) is simultaneous with the action described in the previous sentence (Ifemelu’s move to the United States). The first sentence establishes that the actions take place around the same time, referring to the characters’ “divergent experiences” following high school.

Choice B is incorrect because “nevertheless” illogically signals that the information in this sentence about Obinze’s move to London is true despite the previous information about Ifemelu’s move to the United States. Instead, as the first sentence establishes, Obinze’s move and Ifemelu’s move are related, parallel experiences that occur around the same time. **Choice C is incorrect** because “secondly” illogically signals that the information in this sentence is a second point or reason separate from the previous information about Ifemelu’s move to the United States. Instead, as the first sentence establishes, Obinze’s move and Ifemelu’s move are related, parallel experiences that occur around the same time. **Choice D is incorrect** because “in fact” illogically signals that the information in this sentence emphasizes, modifies, or contradicts the previous information about Ifemelu’s move to the United States. Instead, as the first sentence establishes, Obinze’s move and Ifemelu’s move are related, parallel experiences that occur around the same time.

46 Correct answer **B**

Easy

‹ Back to question

B For example,

Choice B is the best answer. "For example" logically signals that this sentence—noting Singletary's work with Jody Naranjo—provides an example supporting the previous point about Singletary's collaborations with other artists.

Choice A is incorrect because "in conclusion" illogically signals that the information in this sentence concludes or summarizes the previous point about Singletary's collaborations with other artists. Instead, it provides an example in support of that point. **Choice C is incorrect** because "however" illogically signals that the information in this sentence contrasts with the previous point about Singletary's collaborations with other artists. Instead, it provides an example in support of that point. **Choice D is incorrect** because "in comparison" illogically signals that the information in this sentence is being compared to the previous point about Singletary's collaborations with other artists. Instead, it provides an example in support of that point.

47 Correct answer **D** Easy ‹ Back to question

D For this reason,

Choice D is the best answer. "For this reason" logically signals that the information that follows—that metrologists developed the SI based on unchanging values in nature—is a result of the previous claim that scientists rely on precise, unchanging standards of measurement to guarantee the validity of experimental results.

Choice A is incorrect because "in contrast" illogically signals that the information that follows contrasts with the previous claim that scientists rely on precise, unchanging standards of measurement. Instead, the information that metrologists developed the SI based on unchanging values in nature is a result of that claim. **Choice B is incorrect** because "regardless" illogically signals that the information that follows is true despite the previous claim that scientists rely on precise, unchanging standards of measure. Instead, the information that metrologists developed the SI based on unchanging values in nature is a result of that claim. **Choice C is incorrect** because "in addition" illogically signals that the information that follows is merely an additional fact related to the previous claim that scientists rely on precise, unchanging standards of measurement. Instead, the information that metrologists developed the SI based on unchanging values in nature is a result of that claim.

48 Correct answer **A** Easy ‹ Back to question

A Therefore,

Choice A is the best answer. "Therefore" logically signals that the information in this sentence—that it was necessary to process the acorns before eating them—is a result or consequence of the previous information about raw acorns having an extremely bitter taste due to high tannin levels.

Choice B is incorrect because "similarly" illogically signals that the need to process acorns is similar to the previous information about their bitter taste. Instead, the need to process the acorns is a result or consequence of their bitter taste. **Choice C is incorrect** because "afterward" illogically signals that the need to process acorns is an event that occurred later in a chronological sequence than the acorns' bitter taste. Instead, the need to process the acorns is a result or consequence of their bitter taste. **Choice D is incorrect** because "however" illogically signals that the need to process acorns contrasts with the previous information about their bitter taste. Instead, the need to process the acorns is a result or consequence of their bitter taste.

49 Correct answer **B** Easy ‹ Back to question

B As a result,

Choice B is the best answer. "As a result" indicates that water molecules maintaining their linked structure at high pressures is caused by the strengthening of these water molecules by trimethylamine N-oxide. So the transition "as a result" fits the context perfectly.

Choice A is incorrect. This choice uses a disagreement transition. But this sentence doesn't disagree with the previous one—rather, it's describing an effect of the phenomenon described in the previous sentence. **Choice C is incorrect**. This choice uses a disagreement transition. But this sentence doesn't disagree with the previous one; it actually expands on the previous sentence by describing an effect of the strengthened molecules. **Choice D is incorrect**. This choice uses an exemplification transition, which doesn't make sense here. The second sentence doesn't provide an example or instance of the idea in the previous sentence. Instead, it explores the effects of the previous idea in more depth.

50 Correct answer **A** Easy ‹ Back to question

A In fact,

Choice A is the best answer. "In fact" logically signals that the information in this sentence about the large number of recordings in ANLA's collection emphasizes and supports the previous claim that ANLA is known for its impressive audio collection.

Choice B is incorrect because "after" illogically signals that the information in this sentence occurs later in a sequence of events than the previous claim about ANLA's impressive audio collection. Instead, the information about the large number of recordings emphasizes and supports that claim. **Choice C is incorrect** because "regardless" illogically signals that the information in this sentence is true despite the previous claim about ANLA's impressive audio collection. Instead, the information about the large number of recordings emphasizes and supports that claim. **Choice D is incorrect** because "instead" illogically signals that the information in this sentence presents an alternative to the previous claim about ANLA's impressive audio collection. Rather, the information about the large number of recordings emphasizes and supports that claim.

51 Correct answer **D** Easy ‹ Back to question

D Finally,

Choice D is the best answer. "Finally" logically signals that the information in this sentence—that the artisan slips paper in and out of the liquid to transfer the design onto paper—is the final step in the process of Turkish paper marbling, which began with what happens "first" (filling a tray with a solution) and continued with what happens "next" (adding inks or paints to the solution).

Choice A is incorrect because "actually" illogically signals that the information in this sentence about slipping paper in and out of liquid to transfer a design onto paper is unexpected in light of the previously described steps. Instead, the sentence describes the final step in the process of Turkish paper marbling. **Choice B is incorrect** because "therefore" illogically signals that the information in this sentence about slipping paper in and out of liquid to transfer a design onto paper is a consequence of the previously described steps. Instead, the sentence describes the final step in the process of Turkish paper marbling. **Choice C is incorrect** because "nevertheless" illogically signals that the information in this sentence about slipping paper in and out of liquid to transfer a design onto paper contrasts with the previously described steps. Instead, the sentence describes the final step in the process of Turkish paper marbling.

52 Correct answer **B** Easy ‹ Back to question

B However,

Choice B is the best answer. "However" logically signals that the information in this sentence—that Still is discussed less frequently today than other famous Black abolitionists—contrasts with the information in the previous sentence, which indicates that Still was once so prominent that he was called "the Father of the Underground Railroad."

Choice A is incorrect because "for example" illogically signals that this sentence provides an example supporting the information about Still's accomplishments. Instead, the sentence indicates that Still is discussed less frequently today than

other famous Black abolitionists. **Choice C is incorrect** because “specifically” illogically signals that this sentence provides a specific example supporting the information about Still’s accomplishments. Instead, the sentence indicates that Still is discussed less frequently today than other famous Black abolitionists. **Choice D is incorrect** because “similarly” illogically signals that this sentence provides similar information to the information about Still’s accomplishments. Instead, the sentence indicates that Still is discussed less frequently today than other famous Black abolitionists.

53 Correct answer **C** Easy Back to question

C Eventually,

Choice C is the best answer. "Eventually" logically signals that the information in this sentence—that textile artists will remove the cloth when it has turned red—is the final step in the chronological sequence of the dyeing process described in the previous sentences.

Choice A is incorrect because "nevertheless" illogically signals that the information in this sentence is true despite the previous information about simmering the cloth in the dyebath. Instead, the removal of the cloth is the final step in the dyeing process. **Choice B is incorrect** because "likewise" illogically signals that the information in this sentence is similar to the previous information about simmering the cloth in the dyebath. Instead, the removal of the cloth is the final step in the dyeing process. **Choice D is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about simmering the cloth in the dyebath. Instead, the removal of the cloth is the final step in the dyeing process.

54 Correct answer **C** Easy Back to question

C Later,

Choice C is the best answer. "Later" logically signals that the information in the sentence—that in 2017 Gomez created a platform for others to share stories about their immigration experiences—occurs later in a chronological series of events than the previous information about Gomez winning his first storytelling competition in 2014.

Choice A is incorrect because "instead" illogically signals that Gomez created a platform for others to share stories about their immigration experiences as an alternative to winning his first storytelling competition. Rather, Gomez created the platform later —in a chronological series of events—than when he won the competition. **Choice B is incorrect** because "for example" illogically signals that the information about Gomez creating a platform for others to share stories exemplifies his winning his first storytelling competition. Rather, Gomez created the platform later —in a chronological series of events—than when he won the competition. **Choice D is incorrect** because "in other words" illogically signals that the information about Gomez creating a platform for others to share stories is merely a paraphrase or restatement of the previous information about Gomez winning his first storytelling competition. Rather, Gomez created the platform later—in a chronological series of events—than when he won the competition.

55 Correct answer **A** Easy Back to question

A Earlier,

Choice A is the best answer. This choice uses a transition that indicates a shift back in time. Since the first sentence talks about Thaden’s race win in 1929 and the second shifts back to talking about her record in 1928, this makes the most sense here.

Choice B is incorrect. This choice uses a disagreement transition. But this sentence actually agrees with and expands on the previous sentence by describing the earlier record that Thaden had "already" held. **Choice C is incorrect**. This choice uses a transition that indicates a shift forward in time, which doesn’t make sense here. A record in 1928 didn’t come after Thaden’s

race win in 1929. **Choice D is incorrect**. This choice uses a cause-and-effect transition, which doesn't make sense in this context—an event in 1929 can't cause something in 1928.

56 Correct answer **D** Easy ‹ Back to question

D However,

Choice D is the best answer. "However" logically signals that the information in this sentence about butterfly species—that some have colorless, transparent wings—contrasts with the previous information about butterfly species with bold, colorful wings.

Choice A is incorrect because "similarly" illogically signals that the information in this sentence is similar to the previous information about butterfly species. Instead, it contrasts with the previous information. **Choice B is incorrect** because "previously" illogically signals that this sentence describes an event that occurred before another event. Instead, the sentence provides information about butterfly species that contrasts with the information in the first sentence. **Choice C is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about butterfly species. Instead, it contrasts with the previous information.

57 Correct answer **B** Easy ‹ Back to question

B For this reason,

Choice B is the best answer. "For this reason" is a cause-and-effect transition. The cause in this case is that the mother elephant wants to know that her calf is safe, so the effect is that she lets out an infrasonic call for the calf to hear. Therefore, "for this reason" fits perfectly in this context.

Choice A is incorrect. This choice uses a transition that introduces an example of a previous idea. But the second sentence doesn't provide an example of the events described in the first sentence. Instead, it describes what happens next: the mother elephant calls for her calf. **Choice C is incorrect**. This choice uses a transition that indicates a shift from the past to the current time, which doesn't make sense here. Both sentences use the present tense, as they're describing the same time period. **Choice D is incorrect**. This choice uses a transition that indicates commonality or agreement between two ideas. But this sentence isn't similar to the events in the first sentence. Instead, it describes the events that happen next.

58 Correct answer **D** Easy ‹ Back to question

D By comparison,

Choice D is the best answer. "By comparison" logically signals that the information in this sentence about the number of sunspots in December 2008 offers a point of comparison with the previous sentence, which indicates the number of sunspots in November 2001. The two sentences work together to support the claim that the number of these spots "can vary greatly."

Choice A is incorrect because "in other words" illogically signals that this sentence restates the information in the previous sentence. Instead, this sentence presents new information, offering a point of comparison to the previous sentence. **Choice B is incorrect** because "similarly" illogically signals that the example in this sentence is similar to the example in the previous sentence. In fact, the examples of numbers of sunspots are very different. **Choice C is incorrect** because "therefore" illogically signals that this sentence has a cause-and-effect relationship to the previous sentence. Instead, this sentence presents new information, offering a point of comparison to the previous sentence.

59 Correct answer **D**

Easy

‹ Back to question

D though,

Choice D is the best answer. "Though" logically signals that the claim in the sentence—that Morton's improvisational skills helped shape jazz as a genre during its early years ("No one can deny" it)—is true despite the previous information about Morton's exaggerated claim to have invented jazz.

Choice A is incorrect because "therefore" illogically signals that the claim in the sentence is a result of the previous information about Morton's claim to have invented jazz. Instead, the sentence states that Morton helped to shape jazz—even if his claim was an exaggeration. **Choice B is incorrect** because "in the second place" illogically signals that the claim in the sentence is a second, separate point in addition to Morton's claim to have invented jazz. Instead, the sentence states that Morton helped to shape jazz—even if his claim was an exaggeration. **Choice C is incorrect** because "in other words" illogically signals that the claim in the sentence is merely a paraphrase or restatement of the previous information about Morton's claim to have invented jazz. Instead, the sentence states that Morton helped to shape jazz—even if his claim was an exaggeration.

60 Correct answer **A**

Easy

‹ Back to question

A in contrast,

Choice A is the best answer. "In contrast" logically signals that the information in this sentence—that Jordan has yet to officially ratify the treaty—contrasts with the previous information about Niger having already ratified the treaty.

Choice B is incorrect because "specifically" illogically signals that the information in this sentence specifies or elaborates on the previous information about Niger ratifying the treaty. Instead, the sentence changes subjects from Niger to Jordan, presenting contrasting information about Jordan's treaty status. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence exemplifies the previous information about Niger ratifying the treaty. Instead, the sentence explains that Jordan has yet to ratify the treaty. **Choice D is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the previous information about Niger ratifying the treaty. Instead, the sentence presents contrasting information that Jordan has yet to ratify the treaty.

61 Correct answer **B**

Easy

‹ Back to question

B for example,

Choice B is the best answer. "For example" logically signals that the information in this sentence—that tadpole shrimp embryos can pause development during extended periods of drought—exemplifies the previous sentence's claim that organisms have evolved surprising adaptations to survive in adverse conditions.

Choice A is incorrect because "in contrast" illogically signals that the information in this sentence contrasts with the claim about organisms in the previous sentence. Instead, it exemplifies this claim. **Choice C is incorrect** because "meanwhile" illogically signals that the information in this sentence is separate from (while occurring simultaneously with) the claim about organisms in the previous sentence. Instead, it exemplifies this claim. **Choice D is incorrect** because "consequently" illogically signals that the information in this sentence is a consequence, or result, of the claim about organisms in the previous sentence. Instead, it exemplifies this claim.

62 Correct answer **B**

Easy

‹ Back to question

B As a result,

Choice B is the best answer. "As a result" logically signals that the information in this sentence about Amaya leaving Spain to perform abroad is a result of the previous information about the Spanish Civil War.

Choice A is incorrect because "in comparison" illogically signals that the information in this sentence is being compared to the previous information about the Spanish Civil War. Instead, Amaya leaving Spain is a result of that war. **Choice C is incorrect** because "first of all" illogically signals that the information in this sentence is the beginning of a sequence of events. Instead, Amaya leaving Spain is a result of the event (the outbreak of war) described in the previous sentence. **Choice D is incorrect** because "for example" illogically signals that the information in this sentence is an example supporting the previous statement about the Spanish Civil War. Instead, Amaya leaving Spain is a result of that war.

63 Correct answer **A**

Easy

‹ Back to question

A As a result,

Choice A is the best answer. The second sentence describes a consequence of the system laid out in the first sentence: because air is owned and sold by companies in this world, people have to buy it.

Choice B is incorrect. This choice uses a transition that means "no matter what happens" or "whatever the situation is," which doesn't make sense here. There's only one situation described in the text: a fictional world in which companies own all the breathable air, forcing people to buy it. **Choice C is incorrect**. This choice uses a disagreement transition. But this sentence doesn't disagree with the previous sentence. They both describe the same fictional situation. **Choice D is incorrect**. This choice uses a transition that indicates a shift back in time, which doesn't make sense here. Both sentences use the present tense, as they're describing the same fictional time period.

64 Correct answer **C**

Easy

‹ Back to question

C For this reason,

Choice C is the best answer. "For this reason" logically signals that the behavior described in this sentence is a consequence of the information about seals in the previous sentence. That is, a seal moves its flippers as little as possible during a deep dive because it needs to keep its heart rate low enough that it does not run out of oxygen.

Choice A is incorrect because "in the first place" illogically signals that this sentence is the first point in a discussion. Instead, the sentence describes a behavior that is a consequence of the previous information about seals. **Choice B is incorrect** because "on the other hand" illogically signals that the behavior described in this sentence contrasts with the previous information about seals. Instead, it is a consequence of that information. **Choice D is incorrect** because "in comparison" illogically signals that the behavior described in this sentence is being compared to the previous information about seals. Instead, it is a consequence of that information.

65 Correct answer **D**

Easy

‹ Back to question

D By contrast,

Choice D is the best answer. "By contrast" logically signals that the finding described in this sentence contrasts with the finding described in the previous sentence. That is, quicker blinks were associated with longer talking times, whereas slower blinks were associated with shorter talking times.

Choice A is incorrect because “for example” illogically signals that the finding described in this sentence is an example of the finding described in the previous sentence. Instead, it contrasts with that finding. **Choice B is incorrect** because “specifically” illogically signals that this sentence provides specific, precise details about the finding described in the previous sentence. Instead, it presents information that contrasts with that finding. **Choice C is incorrect** because “firstly” illogically signals that the finding described in this sentence is a first point or occurs first in a chronological sequence of events. Instead, it contrasts with the finding described in the previous sentence.

66 Correct answer **B** Easy ‹ Back to question

B Next,

Choice B is the best answer. "Next" logically signals that the action in this sentence—the water spraying—is the next step in the resurfacing process, following the ice scraping mentioned in the previous sentence.

Choice A is incorrect because "for example" illogically signals that the action in this sentence is an example of the action in the previous sentence. Instead, the water spraying is the next step in a process that begins with the ice scraping. **Choice C is incorrect** because "similarly" illogically signals that the action in this sentence is similar to the action in the previous sentence. Instead, the water spraying is the next step in a process that begins with the ice scraping. **Choice D is incorrect** because "in contrast" illogically signals that the action in this sentence contrasts with the action in the previous sentence. Instead, the water spraying is the next step in a process that begins with the ice scraping.

67 Correct answer **D** Easy ‹ Back to question

D Second,

Choice D is the best answer. "Second" logically signals that the activity described in this sentence—coming up with a prediction—is the next step in the three-part sequence of steps described in the text.

Choice A is incorrect because "therefore" illogically signals that coming up with a prediction is a result or consequence of the activity described in the previous sentence: researching a question. While a prediction may be influenced by prior research, these activities are distinct steps in planning a scientific inquiry. Coming up with a prediction is the next step in the three-part sequence of steps described in the text. **Choice B is incorrect** because "instead" illogically signals that coming up with a prediction is an alternative to the activity described in the previous sentence: researching a question. Rather, coming up with a prediction is the next step in the three-part sequence of steps described in the text. **Choice C is incorrect** because "for example" illogically signals that coming up with a prediction is an example of the activity described in the previous sentence: researching a question. Instead, coming up with a prediction is the next step in the three-part sequence of steps described in the text.

68 Correct answer **D** Easy ‹ Back to question

D Based on these models,

Choice D is the best answer. “Based on these models” logically signals that the research finding described in this sentence—that the largest *T. rex* could have been 70% heavier than the current largest-known specimens—is derived from the computer models described in the previous sentence.

Choice A is incorrect because “in addition to these factors” illogically signals that the research finding about *T. rex* size presented in this sentence introduces factors beyond those noted in the previous sentence (growth rate, lifespan, and the size of available fossils). Instead, the finding is derived from the researchers’ models, which incorporated those factors. **Choice B is incorrect** because “despite these estimates” illogically signals that the research finding about *T. rex* size presented in this sentence is true despite the previous information about the researchers’ model-generated size estimates. Instead, the finding

is derived from the researchers' models. **Choice C is incorrect** because "further complicating these issues" illogically signals that the previous information about the researchers' computer models presents difficulties and that the research finding about *T. rex* size presented in this sentence adds to those difficulties. Instead, the finding is simply derived from the researchers' use of the models.

69 Correct answer **A** Easy ‹ Back to question

A in turn,

Choice A is the best answer. "In turn" logically signals that the information in the sentence—that the electrical currents create a protective barrier around Earth—is a result or consequence of the previous information about the circulation of liquid metals generating electrical currents that flow between Earth's magnetic poles.

Choice B is incorrect because "likewise" illogically signals that the information in the sentence is similar to the previous information about the circulation of liquid metals generating electrical currents that flow between Earth's magnetic poles. Instead, the new information about the electrical currents is a direct result or consequence of the previous information. **Choice C is incorrect** because "nevertheless" illogically signals that the information in the sentence is true despite the previous information about the circulation of liquid metals generating electrical currents that flow between Earth's magnetic poles. Instead, the new information about the electrical currents is a direct result or consequence of the previous information. **Choice D is incorrect** because "in reality" illogically signals that the information in the sentence contradicts the previous information about the circulation of liquid metals generating electrical currents that flow between Earth's magnetic poles. Instead, the new information about the electrical currents is a direct result or consequence of the previous information.

70 Correct answer **B** Easy ‹ Back to question

B However,

Choice B is the best answer. "However" logically signals that the information in this sentence—that nothing in Copeland's career matches her accomplishment of being the first African American woman named principal dancer at the American Ballet Theatre—offers a contrast or exception to the previous information about Copeland's accomplishments.

Choice A is incorrect because "thus" illogically signals that the information that follows is a result of the previous information about Copeland's accomplishments. Instead, the statement that nothing in Copeland's career matches this accomplishment offers a contrast or exception to that information. **Choice C is incorrect** because "for example" illogically signals that Copeland's statement about her greatest accomplishment exemplifies the claim about her accomplishments in the previous sentence. Instead, it offers a contrast or exception to that information. **Choice D is incorrect** because "second of all" illogically signals that the information in this sentence is a second, separate claim from the previous sentence's information about her accomplishments. Instead, the statement that nothing in Copeland's career matches this accomplishment offers a contrast or exception to that information.

71 Correct answer **A** Easy ‹ Back to question

A Later,

Choice A is the best answer. "Later" logically signals that the letter-writing discussed in this sentence occurred later in a chronological sequence of events than did the antidiscrimination case discussed in the previous sentence.

Choice B is incorrect because "for instance" illogically signals that the letter-writing discussed in this sentence is an example of the antidiscrimination case discussed in the previous sentence. Instead, the letter-writing is an event that occurred after the court case. **Choice C is incorrect** because "in other words" illogically signals that the letter-writing discussed in this sentence is a paraphrase or restatement of the antidiscrimination case discussed in the previous sentence. Instead, the letter-writing is

an event that occurred after the court case. **Choice D is incorrect** because “rather” illogically signals that the letter-writing discussed in this sentence is an alternative to the antidiscrimination case discussed in the previous sentence. Instead, the letter-writing is an event that occurred after the court case.

72 Correct answer **D** Easy Back to question

D Today,

Choice D is the best answer. "Today" logically signals that the information in the sentence—that the museum is able to display close to 30% of its collection—is true of the Art Institute of Chicago as it exists in the present day after the previously mentioned unveiling of the massive new gallery in 2009.

Choice A is incorrect because "additionally" illogically signals that the information in the sentence is merely an additional fact related to the information about the museum before the new gallery opened. Instead, the sentence is about the museum in the present day after the new gallery opened. **Choice B is incorrect** because "for example" illogically signals that the information in the sentence exemplifies the previous information about the museum before the new gallery opened. Instead, the sentence is about the museum in the present day after the new gallery opened. **Choice C is incorrect** because "nevertheless" illogically signals that the information in the sentence is true despite the previous information about the museum before the new gallery opened. Instead, the sentence is about the museum in the present day after the new gallery opened.

73 Correct answer **D** Easy Back to question

D For example,

Choice D is the best answer. “For example” logically signals that the information in this sentence—that resins quickly seal wounds to help prevent harmful insects and fungi from entering trees—provides a specific example to support the previous sentence’s claim about resins playing several important roles in maintaining tree health.

Choice A is incorrect because “however” illogically signals that the information in this sentence contrasts with the previous claim about resins playing several important roles in maintaining tree health. Instead, the sentence provides a specific example of one such role. **Choice B is incorrect** because “regardless” illogically signals that the information in this sentence is true despite the previous claim about resins playing several important roles in maintaining tree health. Instead, the sentence provides a specific example of one such role. **Choice C is incorrect** because “next” illogically signals that the information in this sentence is the next step in a process. Instead, the sentence provides a specific example to support the previous claim that resins play several important roles in maintaining tree health.

74 Correct answer **A** Easy Back to question

A Afterward,

Choice A is the best answer. “Afterward” logically signals that the events described in this sentence—the CEO’s public acknowledgment and apology—occurred after the rocket booster’s failure and are part of a chronological sequence of events.

Choice B is incorrect because “additionally” illogically signals that the events described in this sentence merely occurred in addition to the rocket booster’s failure. Instead, they occurred after the rocket booster’s failure and are part of a chronological sequence of events. **Choice C is incorrect** because “indeed” illogically signals that the events described in this sentence emphasize or strengthen a statement made in the previous sentence. Instead, they occurred after the rocket booster’s failure and are part of a chronological sequence of events. **Choice D is incorrect** because “similarly” illogically signals that the events described in this sentence are similar to the rocket booster’s failure. Instead, they occurred after the rocket booster’s failure and are part of a chronological sequence of events.

75 Correct answer **C**

Easy

‹ Back to question

C Later,

Choice C is the best answer. “Later” logically signals that the event discussed in this sentence—the creation of the short film featuring Fuller’s dance—is a related event that occurred after the event discussed in the previous sentence (the 1891 debut of the dance).

Choice A is incorrect because “however” illogically signals that the information in this sentence contrasts with the information in the previous sentence. Instead, the creation of the short film is a related event that followed the event discussed in the previous sentence. **Choice B is incorrect** because “in conclusion” illogically signals that the information in this sentence concludes or summarizes the information in the previous sentence. Instead, the creation of the short film is a related event that followed the event discussed in the previous sentence. **Choice D is incorrect** because “in other words” illogically signals that the information in this sentence is a paraphrase or restatement of the information in the previous sentence. Instead, the creation of the short film is a related event that followed the event discussed in the previous sentence.

76 Correct answer **D**

Easy

‹ Back to question

D Next,

Choice D is the best answer. "Next" logically signals that the information in this sentence—which explains how Celado builds the pot’s walls—is the next step in Celado’s pot creation process. The sentences that follow further signal this information by completing the process.

Choice A is incorrect because "for example" illogically signals that the information about Celado building pot walls in this sentence exemplifies the information in the previous sentence about how Celado’s pot creation process begins. Instead, it is the next step in this process. **Choice B is incorrect** because "however" illogically signals that the information in this sentence contrasts with the information in the previous sentence about how Celado’s pot creation process begins. Instead, it is the next step in this process. **Choice C is incorrect** because "by contrast" illogically signals that the information in this sentence contrasts with the information in the previous sentence about how Celado’s pot creation process begins. Instead, it is the next step in this process.

77 Correct answer **D**

Easy

‹ Back to question

D Then,

Choice D is the best answer. “Then” logically signals that the event described in this sentence—carbon in phytoplankton cells being trapped in sediment after the organisms have died—occurs later in a chronological sequence than the event described in the previous sentence (phytoplankton absorbing carbon while alive).

Choice A is incorrect because “specifically” illogically signals that the information that follows provides specific, precise details elaborating on the previous information about what phytoplankton do when alive. Instead, this sentence explains what happens after phytoplankton die—a later step in the chronological sequence of events. **Choice B is incorrect** because “by contrast” illogically signals that the information that follows contrasts with the previous information about what phytoplankton do when alive. Instead, this sentence explains what happens after phytoplankton die—a later step in the chronological sequence of events. There is no contrast: in both life and death, phytoplankton contribute to the ocean’s carbon uptake. **Choice C is incorrect** because “nevertheless” illogically signals that the information that follows is in spite of the previous information about what phytoplankton do when alive. Instead, this sentence explains what happens after phytoplankton die—a later step in the chronological sequence of events. There is no contrast: in both life and death, phytoplankton contribute to the ocean’s carbon uptake.

78 Correct answer **A** Easy ‹ Back to question

A With this in mind,

Choice A is the best answer. "With this in mind" logically signals that the activity described in this sentence—Dominguez's use of techniques like decalcomania to produce unpredictable abstract patterns—is a result of his desire to include random elements in his art.

Choice B is incorrect. "On the contrary" illogically signals that the activity in this sentence opposes or is contrary to Dominguez's desire to use random elements in his art. Instead, his use of decalcomania is a result of that desire. **Choice C is incorrect**. "In conclusion" illogically signals that the activity in this sentence is a conclusion or summary of Dominguez's desire to use random elements in his art. Instead, his use of decalcomania is a result of that desire. **Choice D is incorrect**. "Regardless" illogically signals that the activity in this sentence occurs despite Dominguez's desire to use random elements in his art. Instead, his use of decalcomania is a result of that desire.

79 Correct answer **C** Easy ‹ Back to question

C However,

Choice C is the best answer. "However" logically signals that the claim in this sentence—that the weight of the gold rhinestones likely limited Elvis's mobility—contrasts with the previous information about the material being flexible enough for Elvis's dance moves.

Choice A is incorrect because "for this reason" illogically signals that the claim in this sentence is caused by the previous information about the material being flexible enough for Elvis's dance moves. Instead, the claim that the weight of the suit's rhinestones limited movement contrasts with the previous information about the jumpsuit's flexibility. **Choice B is incorrect** because "firstly" illogically signals that the claim in this sentence is the first in a series of claims about the jumpsuit being flexible enough for Elvis's dance moves. Instead, the claim that the weight of the suit's rhinestones limited movement contrasts with the previous information about the jumpsuit's flexibility. **Choice D is incorrect** because "in other words" illogically signals that the claim in this sentence is a paraphrase or restatement of the previous information about the material being flexible enough for Elvis's dance moves. Instead, the claim that the weight of the suit's rhinestones limited movement contrasts with the previous information about the jumpsuit's flexibility.

80 Correct answer **C** Easy ‹ Back to question

C For example,

Choice C is the best answer. "For example" logically signals that the following information about Ky—that she once shaped her hair to look like Africa—is an example supporting the previous statement that she makes different shapes with her hair.

Choice A is incorrect because "soon" illogically signals that the event described in this sentence occurred soon after the statement about Ky making different shapes with her hair. Instead, the sentence provides an example of one of these shapes. **Choice B is incorrect** because "elsewhere" illogically signals that the event described in this sentence occurred in a different place than the statement about Ky making different shapes with her hair. Instead, the sentence provides an example of one of these shapes. **Choice D is incorrect** because "however" illogically signals that the information in this sentence contrasts with the statement that Ky makes different shapes with her hair. Instead, the sentence provides an example of one of these shapes.

81 Correct answer **B** Medium ‹ Back to question

B Instead,

Choice B is the best answer. “Instead” logically signals that the information about the researchers’ discovery in this sentence—that jorō spiders are gentle giants who “freeze” in place when disturbed—contradicts their initial hypothesis about the spiders’ aggressiveness described in the previous sentence.

Choice A is incorrect because “therefore” illogically signals that the discovery about jorō spiders’ gentleness is a result of the initial hypothesis about their aggressive behavior. Instead, the sentence presents information that contradicts the initial hypothesis. **Choice C is incorrect** because “for example” illogically signals that the discovery about jorō spiders’ gentleness exemplifies the initial hypothesis about their aggressive behavior. Instead, the sentence presents information that contradicts the initial hypothesis. **Choice D is incorrect** because “in other words” illogically signals that the discovery about jorō spiders’ gentleness is merely restating or rephrasing the initial hypothesis about their aggressive behavior. Instead, the sentence presents information that contradicts the initial hypothesis.

82 Correct answer **A** Medium Back to question

A By contrast,

Choice A is the best answer. "By contrast" logically signals that the information in this sentence—that isolating molybdenum was a relatively long process—contrasts with the previous information that isolating selenium was a short process.

Choice B is incorrect because "thus" illogically signals that the information in this sentence is a result of the previous information about selenium’s short isolation process. Instead, the sentence presents contrasting information about molybdenum’s longer isolation process. **Choice C is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the previous information about selenium’s short isolation process. Instead, the sentence presents contrasting information about molybdenum’s longer isolation process. **Choice D is incorrect** because "for instance" illogically signals that the information in this sentence exemplifies the previous information about selenium’s short isolation process. Instead, the sentence presents contrasting information about molybdenum’s longer isolation process.

83 Correct answer **B** Medium Back to question

B however,

Choice B is the best answer. The word “however” logically signals that the information in this sentence about the planet KELT-9b—that it orbits a B-type star—contrasts with the previous information about planets discovered outside our solar system. Most of these planets orbit G-type stars, not B-type stars.

Choice A is incorrect because “likewise” illogically signals that the information about the planet KELT-9b is similar to the previous information about most planets outside our solar system. Instead, it contrasts with that information. **Choice C is incorrect** because “therefore” illogically signals that the information about the planet KELT-9b is a result of the previous information about most planets outside our solar system. Instead, it contrasts with that information. **Choice D is incorrect** because “for example” illogically signals that the information about the planet KELT-9b is an example of the previous information about most planets outside our solar system. Instead, it contrasts with that information.

84 Correct answer **B** Medium Back to question

B Specifically,

Choice B is the best answer. “Specifically” logically signals that the information in this sentence—that pauses between chimpanzee gestures average about 120 milliseconds, comparable to the 200-millisecond average pause in human speech—provides specific, precise details elaborating on the previous sentence’s claim about the pace of chimpanzee communication being similar to that of human conversations.

Choice A is incorrect because “as a result” illogically signals that this sentence presents a result or consequence of the claim about chimpanzee communication described in the previous sentence. Instead, the sentence provides specific details elaborating on that claim. **Choice C is incorrect** because “by contrast” illogically signals that the information about chimpanzee gesture exchanges in this sentence contrasts with the previous sentence’s claim about the pace of chimpanzee communication being similar to that of human conversations. Instead, the sentence provides specific details elaborating on that claim. **Choice D is incorrect** because “nevertheless” illogically signals that the information about chimpanzee gesture exchanges in this sentence is true despite the previous claim about the pace of chimpanzee communication. Instead, the sentence provides specific details elaborating on that claim.

85 Correct answer **C** Medium Back to question

C however,

Choice C is the best answer. “However” logically signals that the information in this sentence—that Hammurabi is mainly remembered for just a single achievement, the Code of Hammurabi—is contrary to what might be assumed from the previous information about Hammurabi’s many achievements.

Choice A is incorrect because “therefore” illogically signals that the information in this sentence is a result of the previous information about Hammurabi’s many achievements. Instead, this sentence makes a point that is contrary to what might be assumed from the previous information. **Choice B is incorrect** because “likewise” illogically signals that the information in this sentence is similar to the previous information about Hammurabi’s many achievements. Instead, this sentence makes a point that is contrary to what might be assumed from the previous information. **Choice D is incorrect** because “for instance” illogically signals that this sentence exemplifies the previous information about Hammurabi’s many achievements. Instead, this sentence makes a point that is contrary to what might be assumed from the previous information.

86 Correct answer **C** Medium Back to question

C In addition,

Choice C is the best answer. "In addition" logically signals that the claim in this sentence—that the Inca of South America may have used quipus to record more complex information—is an additional point related to the previous statement about the Inca using quipus to record countable information.

Choice A is incorrect because "as a result" illogically signals that the claim in the sentence is a consequence or result of the previous statement about the Inca using quipus to record countable information. Instead, the possibility that the Inca used quipus to record more complex information is an additional point about how the quipus were used. **Choice B is incorrect** because "in other words" illogically signals that the claim in the sentence is merely a paraphrase or restatement of the previous statement about the Inca using quipus to record countable information. Instead, the possibility that the Inca used quipus to record more complex information is an additional point about how the quipus were used. **Choice D is incorrect** because "for example" illogically signals that the claim in the sentence exemplifies the previous statement about the Inca using quipus to record countable information. Instead, the possibility that the Inca used quipus to record more complex information is an additional point about how the quipus were used.

87 Correct answer **B** Medium Back to question

B Additionally,

Choice B is the best answer. “Additionally” logically signals that the claim in this sentence—that some Supreme Court justices worry that viewers (of televised court arguments) would watch only short, misleading clips—adds to the information in the

previous sentence. Specifically, the previous sentence indicates one concern raised by those opposed to televising the court's oral arguments, and the claim that follows indicates a second, additional concern.

Choice A is incorrect because "however" illogically signals that the claim in this sentence contrasts with the information in the previous sentence. Instead, the claim adds to the information, indicating a second, additional concern that some Supreme Court justices have about televising the court's arguments. **Choice C is incorrect** because "in comparison" illogically signals that the claim in this sentence is being compared to the information in the previous sentence. Instead, the claim adds to the information, indicating a second, additional concern that some Supreme Court justices have about televising the court's arguments. **Choice D is incorrect** because "for example" illogically signals that the claim in this sentence exemplifies the information in the previous sentence. Instead, the claim adds to the information, indicating a second, additional concern that some Supreme Court justices have about televising the court's arguments.

88 Correct answer **D** Medium Back to question

D Specifically,

Choice D is the best answer. "Specifically" logically signals that the information in this sentence—Latimer making the light bulb more durable—provides a specific detail elaborating on the more general claim in the previous sentence that Latimer improved the light bulb.

Choice A is incorrect because "soon" illogically signals that the information in this sentence occurred shortly after Latimer improved the light bulb. Instead, Latimer making the bulb more durable was the specific improvement. **Choice B is incorrect** because "regardless" illogically signals that the information in this sentence is true despite the previous claim about Latimer. Instead, the information about Latimer making the bulb more durable provides a specific detail elaborating on that claim. **Choice C is incorrect** because "however" illogically signals that the information in this sentence contrasts with the previous claim about Latimer. Instead, the information about Latimer making the bulb more durable provides a specific detail elaborating on that claim.

89 Correct answer **D** Medium Back to question

D In fact,

Choice D is the best answer. "In fact" logically signals that the information in this sentence—that McFerrin finds the research phase of her work to be just as fascinating as travel—emphasizes and elaborates on the previous sentence's point that McFerrin regards background research as a rewarding activity.

Choice A is incorrect because "by contrast" illogically signals that the information in this sentence contrasts with the previous sentence's point about McFerrin's attitude toward background research. Instead, it emphasizes and elaborates on that point. **Choice B is incorrect** because "likewise" illogically signals that this sentence merely adds a second, similar point to the previous sentence's point about McFerrin's attitude toward background research. Instead, it emphasizes and elaborates on that point. **Choice C is incorrect** because "besides" illogically signals that this sentence provides a separate point in addition to, or apart from, the previous sentence's point about McFerrin's attitude toward background research. Instead, it emphasizes and elaborates on that point.

90 Correct answer **B** Medium Back to question

B Previously,

Choice B is the best answer. "Previously" logically signals that the fused fiber theory came before Ramón y Cajal's discovery.

Choice A is incorrect. "However" illogically signals that the fused fiber theory in this sentence contrasts with the information in the previous sentence. While this theory does contrast with Ramón y Cajal's discovery, the previous sentence concludes by stating that his discovery went against prior assumptions about the brain. The fact that the fused fiber theory was one of those earlier assumptions makes "however" an illogical choice. **Choice C is incorrect** because "as a result" illogically signals that the fused fiber theory in this sentence was a result of the discovery in the previous sentence. Instead, the fused fiber theory came before Ramón y Cajal's discovery. **Choice D is incorrect** because "likewise" illogically signals that the fused fiber theory in this sentence was similar to the discovery in the previous sentence. Instead, the fused fiber theory, which came before Ramón y Cajal's discovery, was very different from it.

91 Correct answer **B** Medium ‹ Back to question

B In many cases,

Choice B is the best answer. "In many cases" logically links the information that follows to the previous sentence's claim that the results of bacterial cleaning "have been impressive overall." This sentence supports that claim by indicating that the bacteria "have proven more effective than traditional chemical cleaning methods." Noting that this is true "in many cases" appropriately frames the information in the sentence and thus completes the text with the most logical transition.

Choice A is incorrect because "however" illogically signals that the information in this sentence contrasts with the previous information. Instead, this sentence supports the previous sentence's claim that the results of bacterial cleaning "have been impressive overall," noting that the bacteria "have proven more effective than traditional chemical cleaning methods." **Choice C is incorrect** because "as a result" illogically signals that the information in this sentence is a consequence of the claim about the results of bacterial cleaning. Instead, this sentence supports the previous sentence's claim that the results of bacterial cleaning "have been impressive overall," noting that the bacteria "have proven more effective than traditional chemical cleaning methods." **Choice D is incorrect** because "additionally" illogically signals that the information in this sentence is merely additional to (and separate from) the previous information about the results of bacterial cleaning. Instead, this sentence supports the previous sentence's claim that the results of bacterial cleaning "have been impressive overall," noting that the bacteria "have proven more effective than traditional chemical cleaning methods."

92 Correct answer **B** Medium ‹ Back to question

B conversely,

Choice B is the best answer. "Conversely" logically signals that the information in this sentence—that the actors' responses were normal in nonacting contexts—presents the opposite of the previous finding that actors showed suppressed responses when their names were called during performances.

Choice A is incorrect because "specifically" illogically signals that the information about the actors' normal responses in nonacting contexts provides specific details elaborating on the previous finding of suppressed responses during performances. Instead, the sentence presents the responses as opposites. **Choice C is incorrect** because "likewise" illogically signals that the actors' normal responses in nonacting contexts are similar to the suppressed responses observed during performances. Instead, the sentence presents the responses as opposites. **Choice D is incorrect** because "thus" illogically signals that the actors' normal responses in nonacting contexts are a result or consequence of the suppressed responses observed during performances. Instead, the sentence presents the responses as opposites.

93 Correct answer **B** Medium ‹ Back to question

B For example,

Choice B is the best answer. "For example" logically signals that the Siletz beeswax stories mentioned in this sentence are examples consistent with the previous claim that Siletz stories support the shipwreck theory.

Choice A is incorrect because "for this reason" illogically signals that the Siletz stories about the beeswax were caused by the previous claim that Siletz stories support the shipwreck theory. Instead, the beeswax stories are examples consistent with the claim. **Choice C is incorrect** because "however" illogically signals that the Siletz stories about the beeswax contrast with the previous claim that Siletz stories support the shipwreck theory. Instead, the beeswax stories are examples consistent with the claim. **Choice D is incorrect** because "likewise" illogically signals that the Siletz stories about the beeswax are similar to the previous claim that Siletz stories support the shipwreck theory. Instead, the beeswax stories are examples consistent with the claim.

94 Correct answer **D** Medium ‹ Back to question

D by contrast,

Choice D is the best answer. This sentence compares two examples of Posey's tone: the "heartfelt language" he used in his poetry versus the "humor and satire" he used in his journalism. We know from these descriptions and from the claim in the previous sentence that the two tones are very different from each other. So the transition "by contrast" fits the context perfectly.

Choice A is incorrect. This choice uses a transition that indicates a restatement of the same idea in other words. But the text isn't restating the first example here. Instead, it's offering a second, totally different example. **Choice B is incorrect**. This choice uses a transition that means "admittedly." But the text isn't admitting or conceding anything here. Instead, these two examples work together to support the claim made in the first sentence. **Choice C is incorrect**. This choice uses a transition that indicates the addition of an agreeing idea. But these two examples are intentionally very different from each other, so "similarly" doesn't make sense here.

95 Correct answer **C** Medium ‹ Back to question

C Consequently,

Choice C is the best answer. "Consequently" logically signals that the postal problems described in this sentence (slow fee collection, heaps of undeliverable mail) were a consequence of the fee system described in the previous sentence.

Choice A is incorrect because "regardless" illogically signals that the postal problems described in this sentence occurred despite the fee system described in the previous sentence. Instead, they were a consequence of that system. **Choice B is incorrect** because "on the contrary" illogically signals that the postal problems described in this sentence contrast with the fee system described in the previous sentence. Instead, they were a consequence of that system. **Choice D is incorrect** because "for example" illogically signals that the postal problems described in this sentence are an example of the fee system described in the previous sentence. Instead, they were a consequence of that system.

96 Correct answer **D** Medium ‹ Back to question

D Consequently,

Choice D is the best answer. “Consequently” logically signals that the information in this sentence—that many Arabic words entered the Spanish language—is a result or consequence of the previous information about Arabic-speaking Muslim states ruling Al-Andalus for centuries.

Choice A is incorrect because “for example” illogically signals that the information about Arabic words entering Spanish exemplifies the Arabic-speaking history of Al-Andalus mentioned in the previous sentence. Instead, Arabic words entering Spanish is a consequence of that history. **Choice B is incorrect** because “instead” illogically signals that the information about Arabic words entering Spanish provides an alternative to the Arabic-speaking history of Al-Andalus mentioned in the previous sentence. The information about Arabic words entering Spanish is a consequence of that history. **Choice C is incorrect** because “specifically” illogically signals that the information about Arabic words entering Spanish provides specific details elaborating on the Arabic-speaking history of Al-Andalus mentioned in the previous sentence. Instead, Arabic words entering Spanish is a consequence of that history.

97 Correct answer **B** Medium ‹ Back to question

B That said,

Choice B is the best answer. "That said" logically signals that the statement in this sentence—that Metzinger offers a glimpse of four-dimensional space by depicting multiple, simultaneous perspectives—is true despite the point in the previous sentence (that Metzinger’s painting doesn’t technically represent a fourth dimension because humans can only see in three dimensions).

Choice A is incorrect because "moreover" illogically signals that the information in this sentence merely adds to the previous point about Metzinger’s painting. Instead, it provides information that is true despite that previous point. **Choice C is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous point about Metzinger’s painting. Instead, it provides information that is true despite that previous point. **Choice D is incorrect** because "for example" illogically signals that the information in this sentence provides an example that supports the previous point about Metzinger’s painting. Instead, it provides information that is true despite that previous point.

98 Correct answer **C** Medium ‹ Back to question

C Likewise,

Choice C is the best answer. "Likewise" is a transition that indicates the addition of a new but related idea. In this sentence, the author is providing another similar example to that discussed in the previous sentence. Therefore, "likewise" works best in this context.

Choice A is incorrect. This choice uses a transition that means "admittedly." But the text isn’t admitting or conceding anything here. Instead, these two examples work together to support the claim made in the first sentence. **Choice B is incorrect**. This choice uses an exemplification transition, which doesn’t make sense here. The second story is not an example of the story in the previous sentence—it’s another, similar story. And while both stories exemplify the first sentence in the text, the transition we’re looking for isn’t actually connected to that sentence. **Choice D is incorrect**. This choice uses a cause-and-effect transition, which doesn’t make sense here. The first story didn’t result in the events of the second story.

99 Correct answer **C** Medium ‹ Back to question

C Similarly,

Choice C is the best answer. “Similarly” logically signals that the activity described in this sentence (Nancy Tuttle Craig distributing Votes for Women Tea in her Los Angeles grocery stores) is like the activity described in the previous sentence (the Woman’s Suffrage Party selling Equality Tea at fairs in San Francisco). Together, the two examples support the preceding claim that “activists across the state sold tea to promote the cause of suffrage.”

Choice A is incorrect because “for example” illogically signals that the activity described in this sentence exemplifies the activity described in the previous sentence. Instead, the two activities are similar, and both support the preceding claim about selling tea to promote women’s right to vote. **Choice B is incorrect** because “to conclude” illogically signals that the activity described in this sentence concludes or summarizes the information in the previous sentences. Instead, the activity is similar to the one described in the previous sentence, and both support the preceding claim about selling tea to promote women’s right to vote. **Choice D is incorrect** because “in other words” illogically signals that the activity described in this sentence paraphrases the activity described in the previous sentence. Instead, the two activities are similar, and both support the preceding claim about selling tea to promote women’s right to vote.

100 Correct answer **D** Medium Back to question

D Sometimes,

Choice D is the best answer. “Sometimes” logically signals that the information in this sentence—that words retained much of their original sound—describes an occasional exception, elaborating on the previous statement that the evolution of words to sound very different from their proto-language origins “wasn’t always the case.”

Choice A is incorrect because “however” illogically signals that the information about words retaining much of their original sound contrasts with the previous statement. Instead, the sentence describes an occasional exception, elaborating on the previous statement that the evolution of words to sound very different from their proto-language origins “wasn’t always the case.” **Choice B is incorrect** because “moreover” illogically signals that the information about words retaining much of their original sound merely adds to the previous statement. Instead, the sentence describes an occasional exception, elaborating on the previous statement that the evolution of words to sound very different from their proto-language origins “wasn’t always the case.” **Choice C is incorrect** because “thus” illogically signals that the information about words retaining much of their original sound is a result or consequence of the previous statement. Instead, the sentence describes an occasional exception, elaborating on the previous statement that the evolution of words to sound very different from their proto-language origins “wasn’t always the case.”

101 Correct answer **A** Medium Back to question

A Therefore,

Choice A is the best answer. "Therefore" logically signals that the action described in this sentence—the researchers theorizing that the dish was named for its effect on diners—is a result or consequence of the previous observation that the dish had a calming effect.

Choice B is incorrect because "alternately" illogically signals that the action described in this sentence offers an alternative or contrast to the previous observation that the dish had a calming effect. Instead, the action is a result or consequence of that observation. **Choice C is incorrect** because "nevertheless" illogically signals that the action described in this sentence occurs despite the previous observation that the dish had a calming effect. Instead, the action is a result or consequence of that observation. **Choice D is incorrect** because "likewise" illogically signals that this sentence merely adds a second, similar detail to the previous observation that the dish had a calming effect. Instead, this sentence describes an action that is a result or consequence of that observation.

102 Correct answer **A** Medium ‹ Back to question

A Fittingly,

Choice A is the best answer. "Fittingly" logically signals that the naming of an unprecedented radiocarbon surge for Fusa Miyake is appropriate to the situation, since Miyake is the person who identified the surge (through her Yaku Island tree-ring analysis).

Choice B is incorrect because "similarly" illogically signals that the information in this sentence is similar to the previous information about Miyake's identification of a massive radiation burst through tree-ring analysis. Instead, the naming of the event for its discoverer is a fitting and appropriate outcome. **Choice C is incorrect** because "however" illogically signals that the information in this sentence contrasts with the previous information about Miyake's identification of a massive radiation burst through tree-ring analysis. Instead, the naming of the event for its discoverer is a fitting and appropriate outcome. **Choice D is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about Miyake's identification of a massive radiation burst through tree-ring analysis. Instead, the naming of the event for its discoverer is a fitting and appropriate outcome.

103 Correct answer **C** Medium ‹ Back to question

C Granted,

Choice C is the best answer. "Granted" logically signals that the information in this sentence—that Alkaid's brightness is likely due to its relative proximity to Earth—is a concession acknowledging that the star likely appears bright for different reasons than the faraway star to which it is compared, Shaula.

Choice A is incorrect because "indeed" illogically signals that the information in this sentence offers additional emphasis in support of the previous information about Alkaid ranking among the 50 brightest stars. Instead, the sentence concedes that the most likely reason Alkaid is counted among the sky's brightest stars is its relative proximity to Earth. **Choice B is incorrect** because "as a result" illogically signals that Alkaid's brightness is caused by the previous information about Alkaid ranking among the 50 brightest stars. Instead, the sentence concedes that the most likely reason Alkaid is counted among the sky's brightest stars is its relative proximity to Earth. **Choice D is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the previous information about Alkaid ranking among the 50 brightest stars. Instead, the sentence concedes that the most likely reason Alkaid is counted among the sky's brightest stars is its relative proximity to Earth.

104 Correct answer **A** Medium ‹ Back to question

A By contrast,

Choice A is the best answer. "By contrast" logically signals that the information in this sentence—that paper scraps left over from printing a magazine are pre-consumer waste—contrasts with the previous information about magazines being post-consumer waste.

Choice B is incorrect because "for example" illogically signals that the information in this sentence exemplifies the previous information about post-consumer waste. Instead, the paper scraps being pre-consumer waste contrasts with the previous information. **Choice C is incorrect** because "as a result" illogically signals that the information in this sentence is a result or consequence of the previous information about post-consumer waste. Instead, the paper scraps being pre-consumer waste contrasts with the previous information. **Choice D is incorrect** because "specifically" illogically signals that the information in this sentence provides specific, precise details elaborating on the previous information about post-consumer waste. Instead, the paper scraps being pre-consumer waste contrasts with the previous information.

105 Correct answer **D** Medium Back to question

D Finally,

Choice D is the best answer. "Finally" logically signals that the information in this sentence—that scientists found evidence that chondrules were formed by shock waves in nearby nebulae—indicates a conclusion to the scientific debate mentioned in the previous sentences.

Choice A is incorrect because "for example" illogically signals that the information about the evidence for chondrule formation in this sentence exemplifies the information about the scientific debate regarding chondrule formation in the previous sentences. Instead, it indicates a conclusion to the debate. **Choice B is incorrect** because "therefore" illogically signals that the information in this sentence is a result of the previous information about the scientific debate regarding chondrule formation. Instead, it indicates a conclusion to the debate. **Choice C is incorrect** because "similarly" illogically signals that the information that follows is similar to the information about the scientific debate regarding chondrule formation in the previous sentences. Instead, it indicates a conclusion to the debate.

106 Correct answer **D** Medium Back to question

D Accordingly,

Choice D is the best answer. "Accordingly" logically signals that the information in this sentence—that the voting members awarded Banda Cuisillos the Best Banda Album award—is in accordance with, or results from, the previous information about the voters being impressed by Banda Cuisillos's album.

Choice A is incorrect because "in contrast" illogically signals that the information in this sentence contrasts with the previous information about voting members being impressed by Banda Cuisillos's album. Instead, the voters' decision to give the group the Best Banda Album award is in accordance with, or results from, that information. **Choice B is incorrect** because "meanwhile" illogically signals that the information in this sentence is separate from (while occurring simultaneously with) the previous information about the voting members being impressed by Banda Cuisillos's album. Instead, the voters' decision to give the group the Best Banda Album award is in accordance with, or results from, that information. **Choice C is incorrect** because "nevertheless" illogically signals that the information that follows is despite the information about the voting members being impressed by Banda Cuisillos's album. Instead, the voters' decision to give the group the Best Banda Album award is in accordance with, or results from, that information.

107 Correct answer **A** Medium Back to question

A Beyond the simple coining of a term,

Choice A is the best answer. "Beyond the simple coining of a term" logically signals that the information in this sentence—that Čapek's play contributed to a literary and mythological tradition of using artificial beings as mirrors and foils for humanity—describes contributions that extend beyond the previously described achievement of introducing the term "robot" to the English language.

Choice B is incorrect because "by achieving such a lofty goal" illogically signals that the play's contribution to a literary and mythological tradition was accomplished through the means of the previously described achievement of introducing the term "robot." Instead, the sentence describes an additional contribution that goes beyond that achievement. **Choice C is incorrect** because "ultimately limited in its lasting influence" illogically minimizes the play's influence, which is inconsistent with the text's other claims about the play. Instead, the sentence describes contributions that go beyond the previously described achievement of introducing the term "robot." **Choice D is incorrect** because "despite its creation of such an iconic trope" illogically signals that the play's contribution to a literary and mythological tradition is surprising given the play's creation of an

iconic trope. Instead, the sentence describes contributions that go beyond the previously described achievement of introducing the term “robot.”

108 Correct answer **D** Medium ‹ Back to question

D Likewise,

Choice D is the best answer. "Likewise" logically signals that the information about Albert’s son David is similar to the previous information about Albert Popa. Both artists have used unconventional surfaces for their work: Albert used concrete, and David is using ice floes.

Choice A is incorrect because "however" illogically signals that the information about David contrasts with the previous information about Albert Popa. Instead, it is similar to the previous information about Albert Popa. **Choice B is incorrect** because "indeed" illogically signals that the information about David emphasizes or strengthens the previous point about Albert Popa. Instead, it is similar to the previous information; it highlights a similarity between father and son. **Choice C is incorrect** because "second" illogically signals that the information about David is a second point or reason separate from the previous information about Albert Popa. Instead, it is similar to the previous information; it highlights a similarity between father and son.

109 Correct answer **A** Medium ‹ Back to question

A To be exact,

Choice A is the best answer. "To be exact" logically signals that this sentence about the Coastal Virginia Offshore Wind project plan provides specific, precise details—number of turbines, location of site—elaborating on the more general information about the project in the previous sentence.

Choice B is incorrect because "in conclusion" illogically signals that the information in this sentence about the Coastal Virginia Offshore Wind project plan concludes or summarizes the discussion of the project in the previous sentences. Instead, the sentence provides specific, precise details elaborating on the previous information. **Choice C is incorrect** because "as a result" illogically signals that the information in this sentence about the Coastal Virginia Offshore Wind project plan is caused by, or occurs as a result of, the information about the project in the previous sentence. Instead, the sentence provides specific, precise details elaborating on the previous information. **Choice D is incorrect** because "in contrast" illogically signals that the information in this sentence about the Coastal Virginia Offshore Wind project plan contrasts with information about the project in the previous sentence. Instead, the sentence provides specific, precise details elaborating on the previous information.

110 Correct answer **D** Medium ‹ Back to question

D In addition,

Choice D is the best answer. “In addition” logically signals that the information in this sentence—that the Twentieth Amendment requires newly elected US senators and representatives to be sworn in on January 3—is separate from and additional to the amendment’s mandate concerning presidential inaugurations.

Choice A is incorrect because “instead” illogically signals that the information in the sentence presents an alternative to or substitute for the Twentieth Amendment’s mandate concerning presidential inaugurations. Rather, the sentence presents a separate requirement in addition to that one. **Choice B is incorrect** because “for instance” illogically signals that the information in the sentence exemplifies the Twentieth Amendment’s mandate concerning presidential inaugurations. Instead, the sentence presents a separate requirement in addition to that one. **Choice C is incorrect** because “specifically” illogically signals that the

sentence provides specific, precise details elaborating on the Twentieth Amendment's mandate concerning presidential inaugurations. Instead, the sentence presents a separate requirement in addition to that one.

111 Correct answer **B** Medium ‹ Back to question

B Nevertheless,

Choice B is the best answer. "Nevertheless" logically signals that the claim in the sentence—that the speaker could visit every state in the US and not find the oldest public library in the Western Hemisphere—is true despite the previous claim about the speaker seeking out old public libraries.

Choice A is incorrect because "as a result" illogically signals that the claim in the sentence is a consequence of the previous claim about the speaker seeking out old public libraries. Instead, the claim is true despite the previous claim. **Choice C is incorrect** because "earlier" illogically signals that the claim in the sentence occurs earlier in a chronological sequence of events than the previous claim about the speaker seeking out old public libraries. Instead, the claim is true despite the previous claim. **Choice D is incorrect** because "in other words" illogically signals that the claim in the sentence is merely a paraphrase or restatement of the previous claim about the speaker seeking out old public libraries. Instead, the claim is true despite the previous claim.

112 Correct answer **C** Medium ‹ Back to question

C in other words,

Choice C is the best answer. "In other words" logically signals that the claim about sensory experience that follows—that sensory experience is the source of knowledge—is a restatement of Aristotle's theory from earlier in the sentence.

Choice A is incorrect because "regardless" illogically signals that the claim about sensory experience that follows is true in spite of Aristotle's theory from earlier in the sentence. Instead, this claim is a restatement of his theory. **Choice B is incorrect** because "admittedly" illogically signals that the claim about sensory experience that follows is an exception to Aristotle's theory from earlier in the sentence. Instead, this claim is a restatement of his theory. **Choice D is incorrect** because "meanwhile" illogically signals that the claim about sensory experience that follows is separate from (while occurring simultaneously with) Aristotle's theory from earlier in the sentence. Instead, this claim is a restatement of his theory.

113 Correct answer **D** Medium ‹ Back to question

D though,

Choice D is the best answer. "Though" logically signals that the information in this sentence—that volcanologists can distinguish the two volcanoes by how they were formed—presents a qualification or exception to the previous statement that the volcanoes look similar. The volcanoes are actually of two different types.

Choice A is incorrect because "for example" illogically signals that the information in this sentence exemplifies the previous information about the volcanoes looking similar. Instead, the sentence presents a qualification to that apparent similarity—the volcanoes are actually of two different types. **Choice B is incorrect** because "in addition" illogically signals that the information in this sentence merely adds to the previous information about the volcanoes looking similar. Instead, the sentence presents a qualification to that apparent similarity—the volcanoes are actually of two different types. **Choice C is incorrect** because "therefore" illogically signals that the information in this sentence is a result of the previous information about the volcanoes looking similar. Instead, the sentence presents a qualification to that apparent similarity—the volcanoes are actually of two different types.

114 Correct answer **D** Medium ‹ Back to question

D Thus,

Choice D is the best answer. "Thus" logically signals that the claim in this sentence—that animals performing only basic actions should allocate relatively few resources to their brain tissue—is a consequence of the previous sentence's claim about the energy demands of animal brains (namely, that the more diverse an animal's behaviors, the more energy its brain needs).

Choice A is incorrect because "subsequently" illogically signals that the claim in this sentence occurs later in a chronological sequence of events than the previous sentence's claim about the energy demands of animal brains. Instead, the second claim is a consequence of the first. **Choice B is incorrect** because "besides" illogically signals that the claim in this sentence provides a separate point in addition to, or apart from, the previous sentence's claim about the energy demands of animal brains. Instead, the second claim is a consequence of the first. **Choice C is incorrect** because "nevertheless" illogically signals that the claim in this sentence is true in spite of the previous sentence's claim about the energy demands of animal brains. Instead, the second claim is a consequence of the first.

115 Correct answer **C** Medium ‹ Back to question

C by contrast,

Choice C is the best answer. "By contrast" logically signals that the information about bathymetric maps in this sentence—that they show landforms' elevation below the sea—presents a direct contrast to the previous information about topographic maps showing landforms' elevation above sea level.

Choice A is incorrect because "in conclusion" illogically signals that the information about bathymetric maps in this sentence concludes or summarizes the previous information about topographic maps. Instead, the sentence provides contrasting information about bathymetric maps. **Choice B is incorrect** because "for example" illogically signals that the information about bathymetric maps in this sentence exemplifies the previous information about topographic maps. Instead, the sentence provides contrasting information about bathymetric maps. **Choice D is incorrect** because "afterward" illogically signals that this sentence describes an event that chronologically follows the previous information about topographic maps. Instead, the sentence provides contrasting information about bathymetric maps.

116 Correct answer **D** Medium ‹ Back to question

D Specifically,

Choice D is the best answer. "Specifically" logically signals that the information in this sentence about Sauer's argument—that, according to Sauer, cultures play a role in their own development, as opposed to being shaped solely by natural surroundings—provides specific, precise details elaborating on the more general information in the previous sentence about how Sauer challenged prevailing views about how natural landscapes influence human cultures.

Choice A is incorrect because "similarly" illogically signals that the information in this sentence about Sauer's argument is similar to, but separate from, the more general information in the previous sentence. Instead, it provides specific, precise details elaborating on that information. **Choice B is incorrect** because "finally" illogically signals that the information in this sentence about Sauer's argument indicates a last step in a process or a concluding summary. Instead, it provides specific, precise details elaborating on the general information in the previous sentence. **Choice C is incorrect** because "therefore" illogically signals that the information in this sentence about Sauer's argument is a result of the more general information in the previous sentence. Instead, it provides specific, precise details elaborating on that information.

117 Correct answer **B** Medium ‹ Back to question

B in fact,

Choice B is the best answer. "In fact" logically signals that the critics' claim at the end of this sentence—that the two editions are essentially two different novels altogether—offers additional emphasis in support of the previous claim that the differences between the editions are extreme.

Choice A is incorrect because "by contrast" illogically signals that the claim at the end of this sentence contrasts with the previous claim about the differences between the editions. Instead, the critics' opinion offers additional emphasis in support of that claim. **Choice C is incorrect** because "nevertheless" illogically signals that the claim at the end of this sentence is true despite the previous claim about the differences between the two editions. Instead, the critics' opinion offers additional emphasis in support of that claim. **Choice D is incorrect** because "in other words" illogically signals that the claim at the end of this sentence is merely paraphrasing the previous claim about the differences between the two editions. The critics' opinion adds new information to the previous claim rather than simply paraphrasing it.

118 Correct answer **D** Medium ‹ Back to question

D To that end,

Choice D is the best answer. "To that end" logically signals that the information in this sentence—the students' creation of a show with six starring female roles—is the product of a goal or desire in the previous sentence (the students' wish to develop a musical with roles for female actors).

Choice A is incorrect because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about the students' wish to develop a musical with roles for female actors. Instead, the students' show is the product of that desire. **Choice B is incorrect** because "in summary" illogically signals that the information in this sentence summarizes the previous information about the students' wish to develop a musical with roles for female actors. Instead, the students' show is the product of that desire. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence is merely an example of the previous information about the students' wish to develop a musical with roles for female actors. Instead, the students' show is the direct product of that desire.

119 Correct answer **A** Medium ‹ Back to question

A There,

Choice A is the best answer. "There" indicates that the work of calculating Coordinated Universal Time takes place at the International Bureau of Weights and Measures in France. Because "there" indicates a location, it fits the context perfectly.

Choice B is incorrect. This choice uses an exemplification transition, which doesn't make sense here. This sentence is describing where the work of coordinating Coordinated Universal Time takes place, not giving an example of the work described in the previous sentence. **Choice C is incorrect**. This choice uses an exemplification transition, which doesn't make sense here. This sentence is describing where the work of coordinating Coordinated Universal Time takes place, not giving an example of the work described in the previous sentence. **Choice D is incorrect**. This choice uses a disagreement transition. But this sentence doesn't disagree with the previous sentence. They both describe the work involved in calculating Coordinated Universal Time.

120 Correct answer **A** Medium ‹ Back to question

A Specifically,

Choice A is the best answer. “Specifically” logically signals that the information in this sentence—that the Sun releases charged particles that later collide with atoms, resulting in auroral light—provides specific, precise details about how auroras result from the Sun’s activity.

Choice B is incorrect because “similarly” illogically signals that the information in this sentence is similar to the general information about auroras in the previous sentence. Instead, this sentence provides specific, precise details about how auroras form. **Choice C is incorrect** because “nevertheless” illogically signals that the information in this sentence is despite the general information about auroras in the previous sentence. Instead, this sentence provides specific, precise details about how auroras form. **Choice D is incorrect** because “hence” illogically signals that the information in this sentence is a result of the general information about auroras in the previous sentence. Instead, this sentence provides specific, precise details about how auroras form.

121 Correct answer **B** Medium Back to question

B For this reason,

Choice B is the best answer. "For this reason" logically signals that the reason Joseph Priestley termed oxygen "dephlogisticated air" was that he accepted the theory mentioned in the previous sentence—that the presence of phlogiston, rather than the absence of oxygen, causes fire in a closed container to go out.

Choice A is incorrect because "in other words" illogically signals that the information about Priestley terming oxygen "dephlogisticated air" is a restatement of the previous theory concerning phlogiston. Instead, Priestley chose the term as a result of this theory. **Choice C is incorrect** because "alternatively" illogically signals that Priestley termed oxygen "dephlogisticated air" as an alternative to the previous theory concerning phlogiston. Instead, Priestley chose the term as a result of this theory. **Choice D is incorrect** because "nevertheless" illogically signals that Priestley termed oxygen "dephlogisticated air" despite the previous theory concerning phlogiston. Instead, Priestley chose the term as a result of this theory.

122 Correct answer **C** Medium Back to question

C Indeed,

Choice C is the best answer. "Indeed" logically signals that the description of the art installation in this sentence—its blue room and preening unicorn that leave visitors "dazzled and confused"—offers additional emphasis in support of the previous sentence’s claim about the installation’s "whimsical yet perplexing experience."

Choice A is incorrect because "second" illogically signals that the description in this sentence is a second, separate claim from the previous sentence’s claim about the installation’s "whimsical yet perplexing experience." Instead, the specific details describing the installation emphasize and support the previous claim. **Choice B is incorrect** because "instead" illogically signals that the description in this sentence is an alternative to the previous sentence’s claim about the installation’s "whimsical yet perplexing experience." Rather, the specific details describing the installation emphasize and support that claim. **Choice D is incorrect** because "nevertheless" illogically signals that the description in this sentence is true despite the previous sentence’s claim about the installation’s "whimsical yet perplexing experience." Instead, the specific details describing the installation emphasize and support that claim.

123 Correct answer **D** — Medium — Back to question

D therefore,

Choice D is the best answer. This sentence is arguing that new evidence contradicting popular beliefs about "tulip mania" should cast doubt on those beliefs. "Therefore" is a cause-and-effect transition, which fits perfectly in this context.

Choice A is incorrect. This choice uses an exemplification transition, which doesn't make sense here. Skepticism about the popular beliefs is not an example of recent evidence contradicting those beliefs—rather, skepticism is an effect of that recent evidence. **Choice B is incorrect**. This choice uses a disagreement transition. But this sentence doesn't disagree with the previous sentence. Instead, it connects a cause from the previous sentence (new evidence that tulip mania was not as disastrous as thought) to an effect (that we should look with skepticism upon the myth about its disastrousness). **Choice C is incorrect**. This choice uses a disagreement transition. But this sentence doesn't disagree with the previous sentence. Instead, it connects a cause from the previous sentence (new evidence that tulip mania was not as disastrous as thought) to an effect (that we should look with skepticism upon the myth about its disastrousness).

124 Correct answer **A** — Medium — Back to question

A Hence,

Choice A is the best answer. "Hence" logically signals that the information in this sentence—that geologists couldn't confirm the theory of cyclical Ice Ages until the 1960s—is a consequence of the previous information about the destructiveness of each Ice Age and the erasure of necessary geological evidence.

Choice B is incorrect because "moreover" illogically signals that the information in this sentence is merely additional to the previous information about the destructiveness of each Ice Age. Instead, the sentence identifies a specific consequence of that information. **Choice C is incorrect** because "nevertheless" illogically signals that the information in this sentence is true despite the previous information about the destructiveness of each Ice Age. Instead, the sentence identifies a specific consequence of that information. **Choice D is incorrect** because "next" illogically signals that the information in this sentence is the next step in a process. Instead, the sentence identifies a specific consequence of the previous information.

125 Correct answer **C** — Medium — Back to question

C In response,

Choice C is the best answer. "In response" logically signals that the information in this sentence—that a new version of reCAPTCHA capable of analyzing cursor movements was released in 2014—was a direct response to the previously described issue of bots becoming capable of deciphering distorted text.

Choice A is incorrect because "for example" illogically signals that the information in this sentence exemplifies the previously described issue of bots deciphering distorted text. Instead, the release of the new version of reCAPTCHA was a direct response to that issue. **Choice B is incorrect** because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previously described issue of bots deciphering distorted text. Instead, the release of the new version of reCAPTCHA was a direct response to that issue. **Choice D is incorrect** because "indeed" illogically signals that the information in this sentence offers additional emphasis in support of the previously described issue of bots deciphering distorted text. Instead, the release of the new version of reCAPTCHA was a direct response to that issue.

126 Correct answer **C** — Medium — Back to question

C Similarly,

Choice C is the best answer. “Similarly” logically signals that the information in this sentence about a labor monopsony is similar to the information in the previous sentence about a product monopsony. In both types of markets, one party (an employer or a buyer) has the power to force another party (a worker or seller) to accept less money (for labor or products).

Choice A is incorrect because “earlier” illogically signals that the information in this sentence about a labor monopsony occurs earlier (in a chronological sequence) than the information about a product monopsony. Instead, it is similar to the information about a product monopsony. **Choice B is incorrect** because “instead” illogically signals that the information in this sentence about a labor monopsony is an alternative to the previous information about a product monopsony. Instead, it is similar to the information about a product monopsony. **Choice D is incorrect** because “in particular” illogically signals that the information in this sentence about a labor monopsony provides specific details elaborating on the previous information about a product monopsony. Instead, it is similar to the information about a product monopsony.

127 Correct answer **B** Medium ‹ Back to question

B Conversely,

Choice B is the best answer. "Conversely" logically signals that the information in this sentence—that countries with proportional-representation electoral systems tend toward multi-partyism—contrasts with the previous information about countries with single-ballot majoritarian elections, which tend to have two-party systems.

Choice A is incorrect because "subsequently" illogically signals that the information in this sentence about countries with proportional-representation electoral systems occurs later in a chronological sequence of events than the information in the previous sentence. Instead, it contrasts with the previous information. **Choice C is incorrect** because "for instance" illogically signals that the information in this sentence about countries with proportional-representation electoral systems is an example supporting the previous statement about countries with single-ballot majoritarian elections. Instead, it contrasts with the previous statement. **Choice D is incorrect** because "in other words" illogically signals that the information in this sentence about countries with proportional-representation electoral systems is a paraphrase or restatement of the previous information about countries with single-ballot majoritarian elections. Instead, it contrasts with the previous information.

128 Correct answer **D** Medium ‹ Back to question

D Nevertheless,

Choice D is the best answer. “Nevertheless” logically signals that the claim in this sentence—that the telegenic Kennedy was ultimately considered the winner of the debate—is true despite the previous information about the poll of radio listeners.

Choice A is incorrect because “in other words” illogically signals that the claim in this sentence is a paraphrase of the previous information about the poll of radio listeners. Instead, Kennedy was ultimately considered the winner despite what that poll suggested about his performance. **Choice B is incorrect** because “therefore” illogically signals that the claim in this sentence is a result of the previous information about the poll of radio listeners. Instead, Kennedy was ultimately considered the winner despite what that poll suggested about his performance. **Choice C is incorrect** because “likewise” illogically signals that the claim in this sentence is similar to the previous information about the poll of radio listeners. Instead, Kennedy was ultimately considered the winner despite what that poll suggested about his performance.

129 Correct answer **B** Medium ‹ Back to question

B By contrast,

Choice B is the best answer. “By contrast” logically signals that the information in this sentence—that a firefly’s glow ceases when it stops drawing in oxygen—contrasts with the previous sentence’s discussion of the processes that cause a firefly to

begin to glow.

Choice A is incorrect because “for instance” illogically signals that the information in the sentence exemplifies the previous sentence’s discussion of how a firefly begins to glow. Instead, it contrasts with the previous sentence’s discussion. **Choice C is incorrect** because “specifically” illogically signals that the information in the sentence provides specific details elaborating on the previous sentence’s discussion of how a firefly begins to glow. Instead, it contrasts with the previous sentence’s discussion. **Choice D is incorrect** because “in conclusion” illogically signals that the information in the sentence sums up the previous sentence’s discussion of how a firefly begins to glow. Instead, it contrasts with the previous sentence’s discussion.

130 Correct answer **C** Medium Back to question

C Indeed,

Choice C is the best answer. "Indeed" logically signals that the information in this sentence—that Laleh Mehran’s installation resembled both a typical movie theater and a coal mine—supports the previous sentence’s claim that the space Mehran created felt both "familiar and distant."

Choice A is incorrect because "next" illogically signals that the description of Laleh Mehran’s installation in this sentence is the next step in a process. Rather, it supports the previous sentence’s claim about Mehran’s installation. **Choice B is incorrect** because "nevertheless" illogically signals that the information in this sentence is true despite the claim about Laleh Mehran’s installation in the previous sentence. Rather, it supports that claim. **Choice D is incorrect** because "instead" illogically signals that this sentence presents an alternative to the previous sentence’s claim about Laleh Mehran’s installation. Rather, it supports that claim.

131 Correct answer **B** Medium Back to question

B Nonetheless,

Choice B is the best answer. “Nonetheless” is a transition that indicates disagreement. The first sentence describes the unlikelihood of finding much for critical analysis in Ashbery’s poem (“barren terrain”), while the second sentence describes how Berlant did in fact find much to analyze in Ashbery’s poem (“fertile ground”), so the transition “nonetheless” fits perfectly.

Choice A is incorrect. This choice uses a transition that indicates the addition of a new but similar idea, which doesn’t make sense here. The idea in this sentence directly contradicts the idea in the previous sentence. **Choice C is incorrect**. This choice uses a cause-and-effect transition, which doesn’t make sense in this context—a poem seemingly having little opportunity for critical analysis would not cause someone to write an extensive critical analysis (in fact, we might expect the opposite). **Choice D is incorrect**. This choice uses a transition that indicates a restatement of the same idea in other words. But the text isn’t restating the first idea here. Instead, it’s offering a contradiction to the idea expressed in the first sentence.

132 Correct answer **C** Medium Back to question

C Still,

Choice C is the best answer. "Still" logically signals that the information in this sentence about Old Faithful’s thriving bacteria species is true despite the previous claim that conditions at the geyser seem as if they would be inhospitable to life.

Choice A is incorrect because "thus" illogically signals that the information in this sentence is a result or consequence of the previous claim about Old Faithful’s seemingly inhospitable conditions. Instead, this information about the geyser’s many thriving bacteria species is true despite the previous claim. **Choice B is incorrect** because "specifically" illogically signals that the information in this sentence provides specific, precise details elaborating on the previous claim about Old Faithful’s seemingly inhospitable conditions. Instead, this information about the geyser’s many thriving bacteria species is true despite the previous

claim. **Choice D is incorrect** because "in other words" illogically signals that the information in this sentence serves as a paraphrase or restatement of the previous claim about Old Faithful's seemingly inhospitable conditions. Instead, this information about the geyser's many thriving bacteria species is true despite the previous claim.

133 Correct answer **B** Medium Back to question

B Specifically,

Choice B is the best answer. "Specifically" logically signals that the information in this sentence—that Molina and Rowland's research laid the foundation for a later treaty—provides specific, precise details elaborating on the previous sentence's more general claim about the influence of the research.

Choice A is incorrect because "regardless" illogically signals that the information in this sentence is true despite the previous sentence's claim about the influence of Molina and Rowland's research. Instead, this information—that the research laid the foundation for a later treaty—provides specific details elaborating on the previous claim. **Choice C is incorrect** because "however" illogically signals that the information in this sentence contrasts with the previous sentence's claim about the influence of Molina and Rowland's research. Instead, this information—that the research laid the foundation for a later treaty—provides specific details elaborating on the previous claim. **Choice D is incorrect** because "earlier" illogically signals that the information in this sentence occurred at a time before Molina and Rowland's research influenced the fight against CFCs. Instead, this information—that the research laid the foundation for a later treaty—provides specific details elaborating on the previous claim about the research's influence.

134 Correct answer **D** Medium Back to question

D Specifically,

Choice D is the best answer. "Specifically" logically signals that the information in this sentence—that the researchers examined the overhead costs and attendance at events of 22,328 nonprofits—provides specific, precise details elaborating on how the researchers investigated the relationship between nonprofits' spending and performance.

Choice A is incorrect. "Thus" illogically signals that the information in this sentence is a result or consequence of the researchers' investigation of nonprofits' spending and performance. Instead, it specifies how they examined that correlation. **Choice B is incorrect**. "In addition" illogically signals that the information in this sentence is merely an additional fact about the researchers' investigation of nonprofits' spending and performance. Instead, it specifies how they examined that correlation. **Choice C is incorrect**. "By comparison" illogically signals that the information in this sentence is being compared to the researchers' investigation of nonprofits' spending and performance. Instead, it specifies how they examined that correlation.

135 Correct answer **D** Medium Back to question

D Increasingly,

Choice D is the best answer. "Increasingly" logically signals that the claim in this sentence—that mathematicians are collaborating with their peers—marks a change relative to what was traditionally done. As the previous sentence explains, while mathematicians may have traditionally worked alone, evidence points to a shift in the opposite direction. The claim describes the shift: a rise in collaboration.

Choice A is incorrect because "similarly" illogically signals that the claim in this sentence is similar to, but separate from, the previous claim about the shift away from mathematicians working alone. Instead, the claim about the rise in collaboration elaborates on the previous claim, describing the shift. **Choice B is incorrect** because "for this reason" illogically signals that the claim in this sentence is caused by the previous claim about the shift away from mathematicians working alone. Instead, the claim about the rise in collaboration elaborates on the previous claim, describing the shift. **Choice C is incorrect** because

"furthermore" illogically signals that the claim in this sentence is in addition to the previous claim about the shift away from mathematicians working alone. Instead, the claim about the rise in collaboration elaborates on the previous claim, describing the shift.

136 Correct answer **B** Medium Back to question

B In so doing,

Choice B is the best answer. "In so doing" logically signals that the information in this sentence about Gibson's piece—that it blurs the distinction between contemporary art and traditional crafts—is a result or consequence of the piece's blending of particular Native and non-Native cultural symbols.

Choice A is incorrect. "Conversely" illogically signals that the information in this sentence contrasts with the previous information about the blending of particular cultural symbols in Gibson's piece. Instead, it presents a result or consequence of that information. **Choice C is incorrect**. "For instance" illogically signals that this sentence provides an example supporting the previous information about the blending of particular cultural symbols in Gibson's piece. Instead, it presents a result or consequence of that information. **Choice D is incorrect**. "In particular" illogically signals that this sentence provides specific details elaborating on the previous information about the blending of particular cultural symbols in Gibson's piece. Instead, it presents a result or consequence of that information.

137 Correct answer **C** Medium Back to question

C Consequently,

Choice C is the best answer. "Consequently" logically signals that the information in this sentence—that many individual gold prospectors gave up their fortune-hunting dreams and became employees of mining companies—is a result or consequence of the previous information about the inaccessibility of the state's gold deposits.

Choice A is incorrect because "furthermore" illogically signals that the information in this sentence merely adds to the previous information about the inaccessibility of the state's gold deposits. Instead, it's a result or consequence of that information. **Choice B is incorrect** because "still" illogically signals that the information in this sentence offers a contrast or exception to the previous information about the inaccessibility of the state's gold deposits. Instead, it's a result or consequence of that information. **Choice D is incorrect** because "next" illogically signals that the information in this sentence is the next step in a process. Instead, it's a result or consequence of the previous information about the inaccessibility of the state's gold deposits.

138 Correct answer **A** Medium Back to question

A Then,

Choice A is the best answer. "Then" indicates that the events in this sentence took place after the events in the previous sentence. Only after users upload images of unknown soldiers can those images be analyzed.

Choice B is incorrect. This transition is used to emphasize the truth of a statement that modifies the previous statement. But this sentence doesn't modify the step described in the previous statement: instead, it introduces an entirely new step in the process. So "in fact" wouldn't make sense here. **Choice C is incorrect**. This choice uses a transition that indicates the addition of a new but related idea, which doesn't make sense here. Analyzing the physical features in the uploaded photographs isn't a similar idea, but rather the next step in the process. **Choice D is incorrect**. This choice uses an exemplification transition, which doesn't make sense here. Analyzing physical features is not an example of uploading and tagging an image.

139 Correct answer **D** Medium ‹ Back to question

D thus,

Choice D is the best answer. "Thus" logically signals that the information in this clause—that listeners can "hear" carbon levels increasing—is a result of the previous information about the audio distorting as carbon levels increase.

Choice A is incorrect because "furthermore" illogically signals that the information in this clause merely adds to the previous information about the audio distorting as carbon levels rise. Instead, the listeners' ability to "hear" carbon levels increasing is a result of that distortion. **Choice B is incorrect** because "by comparison" illogically signals that the information in this clause is being compared to the information about the audio distorting as carbon levels rise. Instead, the listeners' ability to "hear" carbon levels increasing is a result of that distortion. **Choice C is incorrect** because "for instance" illogically signals that the information in this clause is an example of how the audio distorts as carbon levels rise. Instead, the audio was distorted for the express purpose of representing ecological data; the listeners' ability to "hear" carbon levels increasing is a direct, intended result of the distortion, not merely an example of it.

140 Correct answer **C** Medium ‹ Back to question

C on the other hand,

Choice C is the best answer. "On the other hand" logically signals that the information in the sentence—that the snowpack at higher elevations in the Chuska Mountains was deepest in mid-March—contrasts with the previous information about the snowpack at lower elevations being deepest in early March.

Choice A is incorrect because "in other words" illogically signals that information in the sentence is merely a paraphrase or restatement of the previous information about the snowpack at lower elevations. Instead, the information about the snowpack at higher elevations contrasts with that information. **Choice B is incorrect** because "for instance" illogically signals that the information in the sentence exemplifies the previous information about the snowpack at lower elevations. Instead, the information about the snowpack at higher elevations contrasts with that information. **Choice D is incorrect** because "in summary" illogically signals that the information in the sentence summarizes the previous information about the snowpack at lower elevations. Instead, the information about the snowpack at higher elevations contrasts with that information.

141 Correct answer **D** Medium ‹ Back to question

D Second,

Choice D is the best answer. "Second" logically signals that the information in this sentence—that the effort to bury the ship would likely only have been made for a king—joins the information in the previous sentence ("first...") in supporting Brunning's claim that the burial site was likely the tomb of a king.

Choice A is incorrect because "instead" illogically signals that the information in this sentence presents an alternative or substitute to the previous information about the gold artifacts inside the ship. Rather, this sentence presents a second piece of information that supports Brunning's claim. **Choice B is incorrect** because "still" illogically signals that the information in this sentence exists in contrast to or despite the previous information about the gold artifacts inside the ship. Instead, this sentence presents a second piece of information that supports Brunning's claim. **Choice C is incorrect** because "specifically" illogically signals that the information in this sentence specifies or elaborates on the previous information about the gold artifacts inside the ship. Instead, this sentence presents a second piece of information that supports Brunning's claim.

142 Correct answer **D** Medium ‹ Back to question

D that is,

Choice D is the best answer. "That is" logically signals that the information that follows in the sentence clarifies a term used in the previous discussion of the researchers' findings: cognate replacement.

Choice A is incorrect because "for example" illogically signals that the information that follows in the sentence provides a specific example of the research findings described earlier. Instead, it clarifies a term introduced earlier in the sentence. **Choice B is incorrect** because "likewise" illogically signals that the information that follows in the sentence is similar to the previous information about the researchers' findings. Instead, it clarifies a term introduced earlier in the sentence. **Choice C is incorrect** because "in addition" illogically signals that the information that follows in the sentence merely adds to the previous information about the researchers' findings. Instead, it clarifies a term introduced earlier in the sentence.

143 Correct answer **B** Medium ‹ Back to question

B Thus,

Choice B is the best answer. "Thus" logically signals that the information in this sentence—that the researchers concluded that Antarctica had glaciers long before the formation of its continent-wide ice sheet—is a result of the previous information about the discovery that Antarctica's glaciers are at least 60 million years old, whereas its continent-wide ice sheet formed just 34 million years ago.

Choice A is incorrect because "by contrast" illogically signals that the researchers' conclusion about Antarctica having glaciers before its ice sheet formed contrasts with the previous finding about the age of Antarctica's glaciers. Instead, the conclusion is a result of that finding. **Choice C is incorrect** because "nevertheless" illogically signals that the researchers' conclusion about Antarctica having glaciers before its ice sheet formed is true despite the previous finding about the age of Antarctica's glaciers. Instead, the conclusion is a result of that finding. **Choice D is incorrect** because "even so" illogically signals that the researchers' conclusion about Antarctica having glaciers before its ice sheet formed is true despite the previous finding about the age of Antarctica's glaciers. Instead, the conclusion is a result of that finding.

144 Correct answer **A** Medium ‹ Back to question

A Additionally,

Choice A is the best answer because "additionally" logically signals that the information in this sentence—that Idár founded the League of Mexican Women—is another instance of Idár fighting injustice, this time advocating for the rights of Mexican Americans.

Choice B is incorrect because "in conclusion" illogically signals that the information in this sentence sums up or concludes the discussion of Idár's support for the Mexican people's revolt. Instead, the founding of the League of Mexican Women is a separate instance of Idár fighting injustice. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence is an example of how, as a newspaper reporter, Idár voiced support for the Mexican people's revolt. Instead, the founding of the League of Mexican Women is a separate instance of Idár fighting injustice, this time in support of Mexican Americans. **Choice D is incorrect** because "rather" illogically signals that the information in this sentence offers a contrast or exception to the previous information about Idár's support for the Mexican people's revolt. Instead, the founding of the League of Mexican Women is a separate instance of Idár fighting injustice.

145 Correct answer **A** Medium ‹ Back to question

A Still,

Choice A is the best answer. “Still” logically signals that the information about Sher-Gil in this sentence—that she longed to leave Paris and return to India—contrasts with what one would expect after reading about Sher-Gil’s experiences in Paris in the previous sentences.

Choice B is incorrect because “therefore” illogically signals that the information about Sher-Gil in this sentence is a result or consequence of the descriptions in the previous sentences. Instead, this information contrasts with what one would expect after reading about Sher-Gil’s experiences in Paris. **Choice C is incorrect** because “indeed” illogically signals that the information about Sher-Gil in this sentence offers additional emphasis in support of the descriptions in the previous sentences. Instead, this information contrasts with what one would expect after reading about Sher-Gil’s experiences in Paris. **Choice D is incorrect** because “furthermore” illogically signals that the information about Sher-Gil in this sentence offers additional support for or confirmation of the descriptions in the previous sentences. Instead, this information contrasts with what one would expect after reading about Sher-Gil’s experiences in Paris.

146 Correct answer **D** Medium ‹ Back to question

D Specifically,

Choice D is the best answer. "Specifically" logically signals that the information about Pleasant’s 1866 lawsuit provides specific, precise details elaborating on the previous point that Pleasant successfully challenged discrimination in California.

Choice A is incorrect because "for this reason" illogically signals that Pleasant’s 1866 lawsuit was a result of her successful challenge to discrimination in California. Instead, this sentence provides specific details elaborating on her challenge to discrimination in the state. **Choice B is incorrect** because "then" illogically signals that Pleasant’s 1866 lawsuit was subsequent to or resulted from her successful challenge to discrimination in California. Instead, this sentence provides specific, precise details elaborating on how she challenged discrimination in the state. **Choice C is incorrect** because "in addition" illogically signals that the information about Pleasant’s 1866 lawsuit is merely additional to the previous point that Pleasant successfully challenged discrimination in California. Instead, this sentence provides specific details elaborating on how she did so.

147 Correct answer **D** Medium ‹ Back to question

D Specifically,

Choice D is the best answer. "Specifically" logically signals that the information in this sentence—that the Local Bubble’s expansion trapped clouds of gas and dust that formed new stars—provides specific, precise details elaborating on the more general information in the previous sentence about the relationship between the Local Bubble’s expansion and the formation of new stars.

Choice A is incorrect because "hence" illogically signals that the information in this sentence is a result of the information in the previous sentence about the relationship between the Local Bubble’s expansion and the formation of new stars. Instead, this sentence provides specific, precise details elaborating on that information. **Choice B is incorrect** because "however" illogically signals that the information in this sentence contrasts with the information in the previous sentence about the relationship between the Local Bubble’s expansion and the formation of new stars. Instead, this sentence provides specific, precise details elaborating on that information. **Choice C is incorrect** because "admittedly" illogically signals that the information in this sentence provides an exception or caveat to the previous information about the relationship between the Local Bubble’s expansion and the formation of new stars. Instead, this sentence provides specific, precise details elaborating on that information.

148 Correct answer **A** Medium ‹ Back to question

A in particular,

Choice A is the best answer. "In particular" logically signals that the information in this sentence—that maize and wheat supply chains transformed North American foodways into a global food system—provides specific, precise details elaborating on the more general information in the previous sentence about the transformation of North American foodways (with maize and wheat the "certain grains" at the center of it).

Choice B is incorrect because "alternatively" illogically signals that the information in this sentence is an alternative option to the previous information about the transformation of North American foodways. Instead, the roles of maize and wheat in creating a global food system are specific, precise details elaborating on that information. **Choice C is incorrect** because "by comparison" illogically signals that the information in this sentence is being compared to the previous information about the transformation of North American foodways. Instead, the roles of maize and wheat in creating a global food system are specific, precise details elaborating on that information. **Choice D is incorrect** because "second of all" illogically signals that the information in this sentence is a second, separate claim from the previous claim that North American foodways were transformed. Instead, the roles of maize and wheat in creating a global food system are specific, precise details elaborating on that information, rather than a separate claim.

149 Correct answer **D** Medium ‹ Back to question

D Of course,

Choice D is the best answer. “Of course” logically signals that the information in this sentence—that the smokelike effect in the image was actually the blackbird’s breath hitting the cold morning air—is an expected or self-evident clarification of the previous description of the bird appearing to exhale rings of smoke.

Choice A is incorrect because “furthermore” illogically signals that the information in this sentence about the smokelike effect merely adds to the previous description of the image. Instead, the sentence clarifies what produced the smokelike effect in the image. **Choice B is incorrect** because “for example” illogically signals that the information in this sentence about the smokelike effect provides a specific example of the previous description of the image. Instead, the sentence clarifies what produced the smokelike effect in the image. **Choice C is incorrect** because “therefore” illogically signals that the information in this sentence about the smokelike effect is a result or consequence of the previous description of the image. Instead, the sentence clarifies what produced the smokelike effect in the image.

150 Correct answer **C** Medium ‹ Back to question

C Specifically,

Choice C is the best answer. The second sentence provides more specific information about the fieldwork mentioned in the first sentence—that the paleontological digs took place in Utah, Montana, and Wyoming. Therefore, “specifically” fits perfectly in this context.

Choice A is incorrect. This choice uses a disagreement transition. But this sentence doesn’t disagree with the previous sentence. Rather, this sentence agrees with and elaborates on the last sentence by providing more specifics about the fieldwork Black does. **Choice B is incorrect**. This choice uses a transition that indicates that an event took place after another event. But the two sentences are not describing different events—instead, this sentence gives more details about the fieldwork discussed in the first sentence. **Choice D is incorrect**. This choice uses a disagreement transition. But this sentence doesn’t disagree with the previous sentence. Rather, this sentence agrees with and elaborates on the last sentence by providing more specifics about the fieldwork Black does.

151 Correct answer **C** Medium ‹ Back to question

C Moreover,

Choice C is the best answer. "Moreover" logically signals that the information in this sentence—that nonrecyclable products can damage machinery—adds to the information in the previous sentence to support the claim in the first sentence of the text. The first sentence indicates that "wishcycling" is harmful, the second sentence gives an example, and this sentence gives another example.

Choice A is incorrect because "fittingly," which means "appropriately," illogically signals that it is fitting or appropriate that nonrecyclable products can damage machinery, which doesn't make sense in this context. Instead, this sentence adds another example of the potential harm caused by "wishcycling." **Choice B is incorrect** because "on the contrary" illogically signals that this sentence provides information contrary to the information in the previous sentence. Instead, this sentence adds another example of the potential harm caused by "wishcycling." **Choice D is incorrect** because "nevertheless" illogically signals that this sentence provides information that is true in spite of the information in the previous sentence. Instead, this sentence adds another example of the potential harm caused by "wishcycling."

152 Correct answer **C** Medium ‹ Back to question

C by contrast,

Choice C is the best answer. "By contrast" logically signals that the information in this sentence—that dogs can see, hear, and smell by the end of two weeks—contrasts with the preceding information (that wolves can smell but not see or hear at the same age).

Choice A is incorrect because "in other words" illogically signals that the information about domesticated dogs in this sentence paraphrases the information about wolves in the previous sentence. Instead, the information about dogs contrasts with what came before. **Choice B is incorrect** because "for instance" illogically signals that the information about domesticated dogs in this sentence exemplifies the information about wolves in the previous sentence. Instead, the information about dogs contrasts with what came before. **Choice D is incorrect** because "accordingly" illogically signals that the information about domesticated dogs in this sentence is in accordance with, or results from, the information about wolves in the previous sentence. Instead, the information about dogs contrasts with what came before.

153 Correct answer **D** Medium ‹ Back to question

D Additionally,

Choice D is the best answer. "Additionally" logically signals that the painting analysis discussed in this sentence is an additional part of the botany research discussed in the previous sentence. That is, to research which fruits Umbrians grew in the past, the botanist analyzes old paintings in addition to looking at old lists of ingredients.

Choice A is incorrect because "in sum" illogically signals that the painting analysis discussed in this sentence is a concluding summary of the botany research discussed in the previous sentence. Instead, the painting analysis is an additional part of that research. **Choice B is incorrect** because "instead" illogically signals that the painting analysis discussed in this sentence is an alternative to the botany research discussed in the previous sentence. Rather, the painting analysis is an additional part of that research. **Choice C is incorrect** because "thus" illogically signals that the painting analysis discussed in this sentence is a result of the botany research discussed in the previous sentence. Instead, the painting analysis is an additional part of that research.

154 Correct answer **C** — Hard — Back to question

C Again and again,

Choice C is the best answer. "Again and again" logically signals that the information in this sentence—that new calculations revealed increasingly precise coordinates for the location of the prime meridian—refers to events that occurred multiple times in the decades after the establishment of the prime meridian in 1884 (which is described in the preceding sentence).

Choice A is incorrect because "specifically" illogically signals that the information in this sentence provides specific, precise details elaborating on the description of the prime meridian's establishment in the previous sentence. Instead, the sentence indicates that increasingly precise coordinates were revealed on multiple occasions in the decades following the meridian's establishment. **Choice B is incorrect** because "to that end" illogically signals that the information in this sentence is a means of accomplishing a goal established in the previous sentence about the prime meridian's establishment. Instead, the sentence indicates that increasingly precise coordinates were revealed on multiple occasions in the decades following the meridian's establishment. **Choice D is incorrect** because "granted" illogically signals that the information in this sentence is in opposition to the information about the prime meridian's establishment in the previous sentence. Instead, the sentence indicates that increasingly precise coordinates were revealed on multiple occasions in the decades following the meridian's establishment.

155 Correct answer **D** — Hard — Back to question

D Similarly,

Choice D is the best answer. "Similarly" logically signals that the information in the sentence—that Dove situates Beulah's life in the context of the US Civil Rights Movement—is similar to the previous information about Thomas and the Great Migration. Both sentences support the first sentence's claim that Dove portrays her characters in the context of broader historical narratives.

Choice A is incorrect because "specifically" illogically signals that the information about Beulah in this sentence provides specific details elaborating on the previous information about Thomas. Instead, it's similar to the previous information about Thomas. **Choice B is incorrect** because "thus" illogically signals that the information about Beulah in this sentence is a result or consequence of the previous information about Thomas. Instead, it's similar to the previous information about Thomas. **Choice C is incorrect** because "regardless" illogically signals that the information about Beulah in this sentence is true despite the previous information about Thomas. Instead, it's similar to the previous information about Thomas.

156 Correct answer **B** — Hard — Back to question

B more often,

Choice B is the best answer. "More often" logically signals that the historical outcome in this clause—dust bowl migrants' relocation within the Great Plains region—was more common than the movement to California described in many historical accounts.

Choice A is incorrect because "for this reason" illogically signals that the historical outcome in this clause was caused by either the narrative about widespread movement to California or the 2016 study's complication of that narrative. Instead, dust bowl migrants' regional relocation was found to be more common than the movement to California described in many historical accounts. **Choice C is incorrect** because "additionally" illogically signals that the historical outcome in this clause merely adds to either the narrative about widespread movement to California or the 2016 study's complication of that narrative. Instead, dust bowl migrants' regional relocation was found to be more common than the movement to California described in many historical accounts. **Choice D is incorrect** because "nevertheless" illogically signals that the historical outcome in this clause is true despite either the narrative about widespread movement to California or the 2016 study's complication of that narrative. While the findings about dust bowl migrants' regional relocation did challenge the previous narrative, they did not challenge the

study's findings, and this choice creates a confusing ambiguity. Instead, dust bowl migrants' regional relocation was found to be more common than the movement to California described in many historical accounts.

157 Correct answer **D** Hard ‹ Back to question

D That is,

Choice D is the best answer. "That is" logically signals that the information in this sentence, which explains the difference between the dispersalists' position and the vicariancists' position, clarifies the terms of the debate between dispersalists and vicariancists introduced in the previous sentence.

Choice A is incorrect because "furthermore" illogically signals that the information in this sentence is merely additional to (and separate from) the information in the previous sentence about the debate between dispersalists and vicariancists. Instead, the sentence clarifies the terms of the debate, explaining the difference between the dispersalists' position and the vicariancists' position. **Choice B is incorrect** because "by contrast" illogically signals that the information in this sentence contrasts with the information in the previous sentence. Instead, the sentence clarifies the terms of the debate between dispersalists and vicariancists introduced in the previous sentence. **Choice C is incorrect** because "similarly" illogically signals that the information in this sentence is merely similar to (and separate from) the information in the previous sentence about the debate between dispersalists and vicariancists. Instead, the sentence clarifies the terms of the debate, explaining the difference between the dispersalists' position and the vicariancists' position.

158 Correct answer **B** Hard ‹ Back to question

B then,

Choice B is the best answer. "Then" signals that this sentence's claim about Darwin and Wallace follows logically from the previous information. In other words, both scientists independently arriving at the theory of natural selection was, arguably, an expected outcome of the circumstances mentioned in the previous sentence.

Choice A is incorrect because "however" illogically signals that the claim in this sentence contrasts with the previous information about the ideas circulating among British scientists in the 1800s. Instead, this claim follows logically from that information. **Choice C is incorrect** because "moreover" illogically signals that the claim in this sentence merely adds to the previous information about the ideas circulating among British scientists in the 1800s. Instead, this claim follows logically from that information. **Choice D is incorrect** because "for example" illogically signals that this sentence provides an example supporting the previous information about the ideas circulating among British scientists in the 1800s. Instead, it presents a claim that follows logically from that information.

159 Correct answer **B** Hard ‹ Back to question

B Undermining this explanation,

Choice B is the best answer. "Undermining this explanation" logically signals that the information in this sentence—that adult *Chelonibia testudinaria* showed behavior consistent with self-initiated locomotion—undermines or weakens the previous explanation that barnacle movement was a result of passive displacement by water currents.

Choice A is incorrect because "contrary to this phenomenon" illogically signals that the information in this sentence about barnacles exhibiting behavior consistent with self-initiated locomotion opposes the previous information about barnacles shifting slightly in position over time. Instead, the sentence undermines or weakens the previous claim about passive displacement. That is, the sentence doesn't oppose the fact that the barnacles shifted position: it challenges the previous sentence's explanation for the movement. **Choice C is incorrect** because "drawing a similar conclusion" illogically signals that the information in this sentence about barnacles exhibiting behavior consistent with self-initiated locomotion is similar to the

previous conclusion that barnacle movement is the result of passive displacement. Instead, the sentence undermines or weakens the previous sentence's explanation for how the barnacles moved. **Choice D is incorrect** because "confirming this hypothesis" illogically signals that the information in this sentence about barnacles exhibiting behavior consistent with self-initiated locomotion confirms the hypothesis in the previous sentence that the barnacle movement was the result of passive displacement. Instead, the sentence undermines or weakens the previous sentence's explanation for how the barnacles moved.

160 Correct answer **D** Hard ‹ Back to question

D Hence,

Choice D is the best answer. "Hence" logically signals that the information in this sentence about turtle shells—that people incorrectly assume they are exoskeletons—is a consequence of the shells appearing external to the animal.

Choice A is incorrect because "that being said" illogically signals that this sentence qualifies or contrasts with the previous information about turtle shells appearing external to the animal. Instead, it presents a consequence of that information. **Choice B is incorrect** because "however" illogically signals that this sentence contrasts with the previous information about turtle shells appearing external to the animal. Instead, it presents a consequence of that information. **Choice C is incorrect** because "for instance" illogically signals that this sentence provides an example supporting the previous information about turtle shells appearing external to the animal. Instead, it presents a consequence of that information.

161 Correct answer **B** Hard ‹ Back to question

B by contrast,

Choice B is the best answer. This sentence compares a chiral molecule to an achiral one. It discusses how when a chiral molecule is flipped, it results in something very different than when an achiral molecule is flipped. So the transition "by contrast" fits the context perfectly.

Choice A is incorrect. This choice uses a transition that indicates a restatement of the same idea in different words. But this sentence doesn't restate the same idea as the previous sentence. Instead, it makes a new point about a different type of molecule (chiral instead of achiral). **Choice C is incorrect**. This choice uses a transition that introduces an example, which doesn't make sense here. The second sentence isn't an example of the first sentence's claim about achiral molecules: it actually introduces an entirely different idea that focuses on chiral molecules. **Choice D is incorrect**. This choice uses a transition that indicates the addition of an agreeing idea. But this sentence shows a contrast with the first sentence—namely, that a chiral molecule acts very differently from an achiral molecule when flipped.

162 Correct answer **A** Hard ‹ Back to question

A To that end,

Choice A is the best answer. "To that end" logically signals that the activity described in this sentence—Nazareth titling his course "Elvis as Anthology"—is meant to further Nazareth's goal of helping others understand Presley's music as an anthology with a wide range of influences.

Choice B is incorrect. "In sum" illogically signals that the activity described in this sentence summarizes Nazareth's view of Presley's music as an anthology. Instead, titling his course "Elvis as Anthology" is a way for him to promote this view. **Choice C is incorrect**. "That is" illogically signals that the activity described in this sentence is a clarification or interpretation of Nazareth's view of Presley's music as an anthology. Instead, titling his course "Elvis as Anthology" is a way for him to promote this view. **Choice D is incorrect**. "In addition" illogically signals that the activity described in this sentence is merely an

additional fact about Nazareth. Instead, titling his course "Elvis as Anthology" is a way for him to promote his view of Presley's music as an anthology.

163 Correct answer **C** Hard ‹ Back to question

C What's more,

Choice C is the best answer. "What's more" logically signals that this sentence introduces an additional aspect of Wadud's poem beyond what was previously discussed. While the previous sentence establishes that Adnan's painting has inspired "the poem's exploration of temporality and identity," this sentence provides a separate, additional claim about the poem: that it reflects on poetry's relationship to other art forms.

Choice A is incorrect because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous point about how Adnan's painting has inspired "the poem's exploration of temporality and identity." Instead, the sentence provides a separate, additional claim about the poem. **Choice B is incorrect** because "for instance" illogically signals that the information in this sentence supports the previous point about "the poem's exploration of temporality and identity" by providing an example. Instead, the sentence provides a separate, additional claim about the poem. **Choice D is incorrect** because "conversely" illogically signals that the information in this sentence is contrary to the previous point about how Adnan's painting has inspired "the poem's exploration of temporality and identity." Instead, the sentence provides a separate, additional claim about the poem.

164 Correct answer **C** Hard ‹ Back to question

C Specifically,

Choice C is the best answer. "Specifically" logically signals that this sentence provides specific, precise details elaborating on the previous sentence's claim that de Larios's art reflects a mix of cultures. This sentence specifies which cultures the previous sentence is referring to: the artistic traditions of both Mexico and Japan.

Choice A is incorrect because "in addition" illogically signals that the information in this sentence is a separate point that follows the previous claim about de Larios's art. Instead, it provides specific details elaborating on that claim. **Choice B is incorrect** because "in contrast" illogically signals that the information in this sentence contrasts with the previous claim about de Larios's art. Instead, it provides specific details elaborating on that claim. **Choice D is incorrect** because "therefore" illogically signals that the information in this sentence is a result of the previous claim about de Larios's art. Instead, it provides specific details elaborating on that claim.

165 Correct answer **C** Hard ‹ Back to question

C More often,

Choice C is the best answer. "More often" logically signals that the claim in this sentence—that new via ferratas favor recreation over utility—explains a difference between the new "sporting activity" routes and the older "mode of travel" routes. In so doing, it emphasizes and reinforces the previous claim ("modern via ferratas are rarely designed to simply reach a summit").

Choice A is incorrect because "additionally" illogically signals that this sentence's claim about new via ferratas adds a new, separate point to the previous claim ("modern via ferratas are rarely designed to simply reach a summit"). Instead, the second claim—that new routes favor recreation over utility—emphasizes and reinforces the previous one. **Choice B is incorrect** because "on the other hand" illogically signals that this sentence's claim about new via ferratas contrasts with or opposes the previous claim ("modern via ferratas are rarely designed to simply reach a summit"). Instead, the second claim—that new routes favor recreation over utility—emphasizes and reinforces the previous one. **Choice D is incorrect** because "nonetheless"

illogically signals that this sentence's claim about new via ferratas is true despite the previous claim ("modern via ferratas are rarely designed to simply reach a summit"). Instead, the second claim—that new routes favor recreation over utility—emphasizes and reinforces the previous one.

166 Correct answer **C** Hard Back to question

C Of course,

Choice C is the best answer. "Of course" logically signals that the information in this sentence—that "the wavy staircase and ornate floral tilework" of the Modernista hospital couldn't actually grow in a forest—acknowledges an obvious limitation of, or qualification to, the previous claim that Modernista architects championed nature in their designs.

Choice A is incorrect because "furthermore" illogically signals that the information in this sentence merely adds to the previous claim that Modernista architects championed nature in their designs. Instead, the sentence acknowledges an obvious limitation in how literally that natural influence was expressed in the hospital's features. **Choice B is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the previous claim that Modernista architects championed nature in their designs. Instead, the sentence acknowledges an obvious limitation in how literally that natural influence was expressed in the hospital's features. **Choice D is incorrect** because "thus" illogically signals that the information in this sentence is a result of the previous claim that Modernista architects championed nature in their designs. Instead, the sentence acknowledges an obvious limitation in how literally that natural influence was expressed in the hospital's features.

167 Correct answer **C** Hard Back to question

C Ultimately,

Choice C is the best answer. The first sentence describes an experience that the viewer has when they're looking at the photos: they imagine other planets. This sentence describes an experience that the viewer has afterward: the title reminds them that the photos are of frying pans, bringing them back to reality. "Ultimately" is a transition that means "eventually" or "in the end," so it fits the context perfectly.

Choice A is incorrect. This choice uses a cause-and-effect transition, which doesn't make sense here. The viewer imagining other planets when they're looking at the photos doesn't cause the title to bring them back to reality. **Choice B is incorrect**. This choice uses a transition that indicates another option or possibility, which doesn't make sense here. Rather, the viewer has both experiences: first the viewer imagines that they're looking at another planet, and then the title reminds them that it's just a frying pan. **Choice D is incorrect**. This choice uses a transition that indicates the addition of an agreeing idea. But the viewer's experience in the second sentence is actually the opposite of the viewer's experience in the first sentence. In the first sentence, the viewer is imagining that they're seeing a landscape from another planet. In the second sentence, the viewer is reminded that they're looking at a frying pan.

168 Correct answer **C** Hard Back to question

C that said,

Choice C is the best answer because "that said" logically signals that the information that follows—that the crystals of microcrystalline minerals can be seen with a microscope—is an exception to the previous information about the crystalline structure of minerals not being visible under a microscope.

Choice A is incorrect because "thus" illogically signals that the information that follows is a direct result or consequence of the fact that the crystals of microcrystalline minerals aren't visible to the naked eye. Instead, the fact that they can be seen under a microscope is an exception to the previous information about crystalline minerals. **Choice B is incorrect** because "for example" illogically signals that the information that follows exemplifies the fact that the crystals of microcrystalline minerals aren't

visible to the naked eye. Instead, the fact that they can be seen under a microscope is an exception to the previous information about crystalline minerals. **Choice D is incorrect** because "similarly" illogically signals that the information that follows is similar or comparable to the fact that the crystals of microcrystalline minerals aren't visible to the naked eye. Instead, the fact that they can be seen under a microscope is an exception to the previous information about crystalline minerals.

169 Correct answer **C** Hard ‹ Back to question

C To that end,

Choice C is the best answer. "To that end" logically signals that the information in this sentence—that Dowsett founded the National Women's Equal Suffrage Association of Hawai'i—describes an action Dowsett took to achieve the goal stated in the previous sentence: to coordinate the efforts of suffragists in Hawai'i.

Choice A is incorrect because "in other words" illogically signals that the information in this sentence about Dowsett founding a women's suffrage association is a paraphrase or restatement of the previous information about Dowsett seeking to coordinate suffragists' efforts. Instead, the sentence describes a specific action Dowsett took to achieve this goal. **Choice B is incorrect** because "conversely" illogically signals that the information in this sentence about Dowsett founding a women's suffrage association contrasts with the previous information about Dowsett seeking to coordinate suffragists' efforts. Instead, the sentence describes a specific action Dowsett took to achieve this goal. **Choice D is incorrect** because "alternatively" illogically signals that the information in this sentence about Dowsett founding a women's suffrage association presents an alternative to her seeking to coordinate suffragists' efforts. Instead, the sentence describes a specific action Dowsett took to achieve this goal.

170 Correct answer **C** Hard ‹ Back to question

C indeed,

Choice C is the best answer. "Indeed" logically signals that the information that follows—that the majority of jets reach heights of only 20 to 50 km—offers additional emphasis in support of the previous claim that jets reaching the ionosphere (about 80 km above Earth) are outliers.

Choice A is incorrect because "nevertheless" illogically signals that the information about most jets reaching heights of only 20 to 50 km contrasts with the previous claim that jets reaching the ionosphere are outliers. Instead, it provides additional emphasis in support of that claim. **Choice B is incorrect** because "consequently" illogically signals that the information about most jets reaching heights of only 20 to 50 km is a consequence, or result, of some jets being outliers. Instead, it offers additional emphasis in support of the claim that jets reaching the ionosphere are outliers. **Choice D is incorrect** because "in addition" illogically signals that the information about most jets reaching heights of only 20 to 50 km merely adds to the previous claim that jets reaching the ionosphere are considered outliers. Instead, it provides additional emphasis in support of that claim.

171 Correct answer **A** Hard ‹ Back to question

A Alternatively,

Choice A is the best answer. "Alternatively" logically signals that the soil decontamination method described in this sentence—removing toxic metals from the soil via phytoremediation—offers an alternative to the previously described method (removing the contaminated soil from the ground).

Choice B is incorrect because "specifically" illogically signals that the soil decontamination method described in this sentence specifies or elaborates on an aspect of the previously described method (removing the contaminated soil from the ground). Instead, phytoremediation is an alternative to that method. **Choice C is incorrect** because "for example" illogically signals that

the soil decontamination method described in this sentence is an example of the previously described method (removing the contaminated soil from the ground). Instead, phytoremediation is an alternative to that method. **Choice D is incorrect** because "as a result" illogically signals that the soil decontamination method described in this sentence is a result or consequence of the previously described method (removing the contaminated soil from the ground). Instead, phytoremediation is an alternative to that method.

172 Correct answer **D** Hard ‹ Back to question

D Accordingly,

Choice D is the best answer. "Accordingly" logically signals that this sentence states a result or consequence of the previous information about the 2003 Human Genome Project. Taking into account an important lesson of the 2003 project (that a gene is affected by interactions with the protein products of other genes), research has begun to consider the human proteome instead of just the genome.

Choice A is incorrect because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about the 2003 Human Genome Project. Instead, this sentence states a result or consequence of that information. **Choice B is incorrect** because "that said" illogically signals that the information in this sentence qualifies or contrasts with the previous information about the 2003 Human Genome Project. Instead, this sentence states a result or consequence of that information. **Choice C is incorrect** because "for example" illogically signals that this sentence provides an example supporting the previous information about the 2003 Human Genome Project. Instead, this sentence states a result or consequence of that information.

173 Correct answer **A** Hard ‹ Back to question

A In fact,

Choice A is the best answer. This sentence emphasizes just how far maglev advocates' dreams are from coming true. "In fact" is a transition used to emphasize the truth of a statement that modifies the previous statement and therefore fits perfectly in this context.

Choice B is incorrect. This choice uses a cause-and-effect transition, which doesn't make sense here. Maglev advocates' dream remaining unrealized would not cause there to be only a few maglev trains, all located in Asia. **Choice C is incorrect**. This choice uses a disagreement transition, which doesn't make sense here. In fact, this sentence agrees with the previous sentence—both talk about how maglev trains are far from becoming common in the US. **Choice D is incorrect**. This choice uses a disagreement transition, which doesn't make sense here. In fact, this sentence agrees with the previous sentence—both talk about how maglev trains are far from becoming common in the US.

174 Correct answer **D** Hard ‹ Back to question

D though,

Choice D is the best answer. The first sentence tells us that Al-Malaika sometimes used "traditional forms". The second tells us that even when she used traditional forms, Al-Malaika was "breaking new ground". To connect these ideas, we need a contrast word like "but." "Though" is a contrast word similar to "but."

Choice A is incorrect. This isn't a logical transition. The first sentence tells us that Al-Malaika sometimes used "traditional forms". The second tells us that even when she used traditional forms, Al-Malaika was "breaking new ground". To connect these ideas, we need a contrast word like "but." "Therefore" doesn't show contrast; it shows cause and effect. **Choice B is incorrect**. This isn't a logical transition. The first sentence tells us that Al-Malaika sometimes used "traditional forms". The second tells us that even when she used traditional forms, Al-Malaika was "breaking new ground". To connect these ideas, we

need a contrast word like "but." "In fact" is a phrase that usually emphasizes the truth of the previous statement. **Choice C is incorrect**. This isn't a logical transition. The first sentence tells us that Al-Malaika sometimes used "traditional forms". The second tells us that even when she used traditional forms, Al-Malaika was "breaking new ground". To connect these ideas, we need a contrast word like "but." "Moreover" doesn't show contrast—it introduces additional information that continues or supports the previous idea.

175 Correct answer **A** Hard Back to question

A though,

Choice A is the best answer. "Though" logically signals that the information in this sentence—that Morgado and colleagues detected a dense ring orbiting outside the Roche limit that remained intact—presents an exception to the previous sentence's claim about debris orbiting outside an object's Roche limit. Such debris would be expected to accrete into a satellite, not remain intact as a ring.

Choice B is incorrect because "for example" illogically signals that the information about Morgado's discovery exemplifies the previous sentence's claim about debris orbiting outside an object's Roche limit. Instead, the sentence presents an exception to the claim. **Choice C is incorrect** because "fittingly" illogically signals that the information about Morgado's discovery aligns with the previous sentence's claim about debris orbiting outside an object's Roche limit. Instead, the sentence presents an exception to the claim. **Choice D is incorrect** because "likewise" illogically signals that the information about Morgado's discovery is similar to the previous sentence's claim about debris orbiting outside an object's Roche limit. Instead, the sentence presents an exception to the claim.

176 Correct answer **D** Hard Back to question

D by contrast,

Choice D is the best answer. "By contrast" logically signals that the information in this sentence—that one of de la Paz's poems subverts sonnet conventions—contrasts with the previous information that his poems often adhere to sonnet conventions.

Choice A is incorrect because "fittingly" illogically signals that the information in this sentence is an appropriate or expected outcome of the previous information about de la Paz's adherence to sonnet conventions. Instead, de la Paz's subversion of sonnet conventions contrasts with that information. **Choice B is incorrect** because "similarly" illogically signals that the information in this sentence is similar to the previous information about de la Paz's adherence to sonnet conventions. Instead, de la Paz's subversion of sonnet conventions contrasts with that information. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence exemplifies the previous information about de la Paz's adherence to sonnet conventions. Instead, de la Paz's subversion of sonnet conventions contrasts with that information.

177 Correct answer **C** Hard Back to question

C Granted,

Choice C is the best answer. "Granted" logically signals that the information in this sentence—that iconicity is not as highly correlated with acquisition as sign frequency is—is true in spite of the information in the previous sentence about the positive correlation between iconicity and acquisition.

Choice A is incorrect because "in fact" illogically signals that this sentence either emphasizes or refutes the information in the previous sentence about the positive correlation between acquisition and iconicity. Instead, it provides information about a different correlation—that between acquisition and sign frequency. **Choice B is incorrect** because "in other words" illogically signals that this sentence merely restates the information in the previous sentence about the positive correlation between

acquisition and iconicity. Instead, this sentence provides information about a different correlation—that between acquisition and sign frequency. **Choice D is incorrect** because "as a result" illogically signals that this sentence is a consequence of the information in the previous sentence about the positive correlation between acquisition and iconicity. Instead, this sentence provides information about a different correlation—that between acquisition and sign frequency.

178 Correct answer **D** Hard ‹ Back to question

D for instance,

Choice D is the best answer. "For instance" logically signals that the details in this sentence—that Mexican conductor Alondra de la Parra and Colombian conductor Lina Gonzalez-Granados took new conducting positions—are examples supporting the previous claim about the new generation of artists.

Choice A is incorrect because "in addition" illogically signals that the details in this sentence about de la Parra and Gonzalez-Granados are merely additional facts related to the previous claim about the new generation of artists. Instead, they are examples supporting that claim. **Choice B is incorrect** because "lastly" illogically signals that the details in this sentence about de la Parra and Gonzalez-Granados are the last step or a concluding summary of the previous claim about the new generation of artists. Instead, they are examples supporting that claim. **Choice C is incorrect** because "granted" illogically signals that the details in this sentence about de la Parra and Gonzalez-Granados are exceptions to the previous claim about the new generation of artists. Instead, they are examples supporting that claim.

179 Correct answer **B** Hard ‹ Back to question

B alternatively,

Choice B is the best answer. "Alternatively" logically signals that the information in this sentence—that Subject 7F64B incubated her own eggs—describes a contrasting alternative to the brood parasitism behavior described in the previous sentence, in which female wood ducks laid eggs to be incubated by other nesting ducks.

Choice A is incorrect because "in particular" illogically signals that Subject 7F64B's behavior provides a specific, focused detail about, or example of, the brood parasitism behavior described in the previous sentence. Instead, Subject 7F64B's behavior represents a contrasting alternative to that brood parasitism. **Choice C is incorrect** because "for example" illogically signals that Subject 7F64B's behavior provides a specific example of the brood parasitism behavior described in the previous sentence. Instead, Subject 7F64B's behavior represents a contrasting alternative to that brood parasitism. **Choice D is incorrect** because "similarly" illogically signals that Subject 7F64B's behavior is similar to the brood parasitism behavior described in the previous sentence. Instead, Subject 7F64B's behavior represents a contrasting alternative to that brood parasitism.

180 Correct answer **D** Hard ‹ Back to question

D As such,

Choice D is the best answer. "As such" correctly signals that the claim in this sentence—that Ostrom's work is a repudiation of the "tragedy of the commons" view—follows logically from the information about Ostrom's studies in the previous sentence. According to that sentence, Ostrom's studies demonstrate that common pool resources can in fact be sustainably managed by the people who use them.

Choice A is incorrect because "by contrast" illogically signals that the information in this sentence contrasts with the information about Ostrom's studies in the previous sentence. Instead, the claim that Ostrom's work repudiates the "tragedy of the commons" view follows logically from that information. **Choice B is incorrect** because "for example" illogically signals that the claim in this sentence exemplifies the information about Ostrom's studies in the previous sentence. Instead, the claim that

Ostrom's work repudiates the "tragedy of the commons" view follows logically from that information. **Choice C is incorrect** because "that said" illogically signals that the information in this sentence is an exception or caveat to the information about Ostrom's studies in the previous sentence. Instead, the claim that Ostrom's work repudiates the "tragedy of the commons" view follows logically from that information.

181 Correct answer **B** Hard Back to question

B by contrast,

Choice B is the best answer. "By contrast" logically signals that the information about how Massey defined space—by focusing on socio-political forces—contrasts with the information in the previous clause, which discusses quantitative analytical approaches and spatial technologies.

Choice A is incorrect because "for example" illogically signals that the information that follows in the sentence exemplifies the quantitative analytical approaches to defining space described previously. Instead, the information about Massey's socio-political focus presents a contrasting approach. **Choice C is incorrect** because "as such" illogically signals that the information that follows in the sentence is a direct result or logical consequence of the quantitative analytical approaches to defining space described previously. Instead, the information about Massey's socio-political focus presents a contrasting approach. **Choice D is incorrect** because "likewise" illogically signals that the information that follows in the sentence is similar to the quantitative analytical approaches to defining space described previously. Instead, the information about Massey's socio-political focus presents a contrasting approach.

182 Correct answer **B** Hard Back to question

B Of course,

Choice B is the best answer. "Of course" logically signals that the information that follows—about many dances being "defined by order, repetition, and synchronicity"—acknowledges an obvious similarity between these dances and the previous description of the Madison. The sentence then goes on to emphasize a distinguishing feature of the Madison.

Choice A is incorrect because "however" illogically signals that the information that follows contrasts with the previous description of the Madison. Instead, the information about many dances' features acknowledges an obvious similarity between these dances and the Madison. The sentence then goes on to emphasize a distinguishing feature of the Madison. **Choice C is incorrect** because "specifically" illogically signals that the information that follows specifies or elaborates on the previous description of the Madison. Instead, the information about many dances' features acknowledges an obvious similarity between these dances and the Madison. The sentence then goes on to emphasize a distinguishing feature of the Madison. **Choice D is incorrect** because "moreover" illogically signals that the information that follows adds to or expands on the previous description of the Madison. Instead, the information about many dances' features acknowledges an obvious similarity between these dances and the Madison. The sentence then goes on to emphasize a distinguishing feature of the Madison.

183 Correct answer **B** Hard Back to question

B Fittingly,

Choice B is the best answer. "Fittingly" logically signals that the information in this sentence—that the audience was amazed when Malinin landed the first quad axel—describes a suitable or appropriate reaction to the completion of this extremely difficult jump.

Choice A is incorrect. "Moreover" illogically signals that the information in this sentence merely adds to the previous information about the difficulty of completing a quad axel. Instead, the audience's amazement is a suitable or appropriate reaction to this accomplishment. **Choice C is incorrect**. "Next" illogically signals that the information in this sentence is simply

the next step in a process. Instead, the audience's amazement is a suitable or appropriate reaction to the accomplishment. **Choice D is incorrect**. "However" illogically signals that the information in this sentence is in contrast or an exception to the difficulty of completing a quad axel. Instead, the audience's amazement is a suitable or appropriate reaction to this accomplishment.

184 Correct answer **A** Hard ‹ Back to question

A indeed,

Choice A is the best answer. The second part of the sentence says that many volcanoes use shallow pockets of magma. This is an elaboration of the same underlying idea from the first part of the sentence, which says that the super deep magma of Icelandic volcanoes' makes them outliers. "Indeed" is a transition used for elaborating on the same idea, so it fits the context perfectly.

Choice B is incorrect. This choice uses a disagreement transition. But these two parts of the sentence agree with each other, so "nevertheless" doesn't make sense. **Choice C is incorrect**. This choice uses a transition that indicates the addition of a new idea. But the second part of the sentence isn't adding a new idea: it's elaborating on the same idea expressed in the first part of the sentence. **Choice D is incorrect**. This choice uses a cause-and-effect transition, which doesn't make sense here. The fact that Iceland's deep-magma volcanoes are outliers doesn't cause many other volcanoes to get fed by shallow pockets of magma.

185 Correct answer **D** Hard ‹ Back to question

D Moreover,

Choice D is the best answer. "Moreover" logically signals that the information in this sentence—that Franklin stamped imprints on paper money to make forgery more difficult—adds to the previous information by describing Franklin's other strategy for combatting forgers: weaving materials into the paper used for printing money.

Choice A is incorrect because "specifically" illogically signals that the information in this sentence provides specific, precise details elaborating on the previous information about Franklin's other strategy for combatting forgers (weaving materials into paper). Instead, this information about stamping imprints on money adds new information. **Choice B is incorrect** because "that said" illogically signals that the information in this sentence is an exception to the previous information about Franklin's other strategy for combatting forgers (weaving materials into paper). Instead, this information about stamping imprints on money adds new information. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence serves as an example of the previous information about Franklin's other strategy for combatting forgers (weaving materials into paper). Instead, this information about stamping imprints on money adds new information.

186 Correct answer **B** Hard ‹ Back to question

B Instead,

Choice B is the best answer. "Instead" logically signals that the information in this sentence—that an aircraft sustains flight past the Kármán line primarily by its velocity—is an alternative means of sustaining flight past this line, which the previous sentence indicates is the theoretical height at which an aircraft no longer remains aloft by using the force of lift.

Choice A is incorrect because "for instance" illogically signals that the information about an aircraft sustaining flight by velocity exemplifies the previous information about the Kármán line marking the theoretical height at which an aircraft no longer remains aloft using lift. Rather, the sentence describes an alternative means of sustaining flight past this line. **Choice C is incorrect** because "granted" illogically signals that the information about an aircraft sustaining flight by velocity is a concession or acknowledgment that qualifies the previous information about the Kármán line marking the theoretical height at

which an aircraft no longer remains aloft using lift. Rather, the sentence describes an alternative means of sustaining flight past this line. **Choice D is incorrect** because "regardless" illogically signals that the information about an aircraft sustaining flight by velocity is true despite the previous information about the Kármán line marking the theoretical height at which an aircraft no longer remains aloft using lift. Rather, the sentence describes an alternative means of sustaining flight past this line.

187 Correct answer **B** Hard Back to question

B In contrast,

Choice B is the best answer. "In contrast" logically signals that the information in this sentence—that ABA triggers accelerated growth in the mustard plant *Schrenkiella parvula*—contrasts with the previous information about ABA triggering a slowdown in most plants' biological processes.

Choice A is incorrect because "moreover" illogically signals that the information in this sentence about the mustard plant merely adds to the previous information about the effects of ABA. Instead, it contrasts with that information. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence about the mustard plant provides an example consistent with the previous information about the effects of ABA. Instead, it contrasts with that information. **Choice D is incorrect** because "thus" illogically signals that the information in this sentence about the mustard plant is a consequence, or result, of the previous information about the effects of ABA. Instead, it contrasts with that information.

188 Correct answer **B** Hard Back to question

B Additionally,

Choice B is the best answer. "Additionally" logically signals that the information in this sentence—that Varichon's book features many high-quality images of color presentation tools—is an additional feature of the book, supplementing the vivid prose descriptions of these tools mentioned in the previous sentence.

Choice A is incorrect because "consequently" illogically signals that the information about the book's high-quality images is a result or consequence of the previous statement about Varichon's vivid prose descriptions. Instead, the images are an additional feature of the book. **Choice C is incorrect** because "that said" illogically signals that the information about the book's high-quality images is an exception to or qualification of the previous statement about Varichon's vivid prose descriptions. Instead, the images are an additional feature of the book. **Choice D is incorrect** because "specifically" illogically signals that the information about the book's high-quality images provides specific, precise details about the vivid prose descriptions mentioned in the previous sentence. Instead, the images are an additional feature of the book.

189 Correct answer **B** Hard Back to question

B Hence,

Choice B is the best answer. "Hence" correctly signals that the claim in this sentence regarding extraterrestrial material follows logically from the information in the previous sentences. The previous sentences establish that siderophile elements in the mantle are more abundant than predicted in the core-differentiation model. This sentence claims, logically, that these elements came from extraterrestrial material that accreted to Earth *after* core differentiation.

Choice A is incorrect because "that said" illogically signals that the information in this sentence regarding extraterrestrial material is an exception to the previous information about siderophiles' abundance in the mantle. Instead, it is a new claim that follows logically from the previous information. **Choice C is incorrect** because "for example" illogically signals that the information in this sentence regarding extraterrestrial material exemplifies the previous information about siderophiles' abundance in the mantle. Instead, it is a new claim that follows logically from the previous information. **Choice D is incorrect** because "likewise" illogically signals that the information in this sentence regarding extraterrestrial material is merely similar to

the previous information about siderophiles' abundance in the mantle. Instead, it is a new claim that follows logically from the previous information.

190 Correct answer **B** Hard Back to question

B Ultimately,

Choice B is the best answer. "Ultimately" logically signals that the information in this sentence—that, for Dillard, nature's mesmerizing intricacy and pitiless harshness are inextricably linked—is the final conclusion or realization reached after her struggle to reconcile the juxtapositions of the natural world mentioned in the previous sentence.

Choice A is incorrect because "to that end" illogically signals that linking nature's intricacy and harshness was Dillard's deliberate goal or purpose in struggling to reconcile nature's juxtapositions. Instead, the sentence presents her final realization after that struggle. **Choice C is incorrect** because "moreover" illogically signals that the information in this sentence merely adds to Dillard's struggle to reconcile nature's juxtapositions mentioned in the previous sentence. Instead, the sentence presents her final realization after that struggle. **Choice D is incorrect** because "hence" illogically signals that nature's intricacy and harshness being linked is a direct consequence of Dillard's struggle to reconcile the juxtapositions mentioned in the previous sentence. Instead, the sentence presents her final realization after that struggle.

191 Correct answer **A** Hard Back to question

A Nevertheless,

Choice A is the best answer. "Nevertheless" logically signals that the information in this sentence—that the spacesuits Suttirat Larlarb designed for the film *Sunshine* were made in standard sizes in a factory—presents a notable exception to Larlarb's typical approach of custom-fitting garments to actors, which is described in the previous sentence.

Choice B is incorrect because "thus" illogically signals that the information in this sentence is a result or consequence of the previous information about Larlarb's typical approach of custom-fitting garments to actors. Instead, it presents a notable exception to Larlarb's typical approach. **Choice C is incorrect** because "likewise" illogically signals that the information in this sentence is similar to the previous information about Larlarb's typical approach of custom-fitting garments to actors. Instead, it presents a notable exception to Larlarb's typical approach. **Choice D is incorrect** because "moreover" illogically signals that the information in this sentence merely adds to the previous information about Larlarb's typical approach of custom-fitting garments to actors. Instead, it presents a notable exception to Larlarb's typical approach.

192 Correct answer **B** Hard Back to question

B On the contrary,

Choice B is the best answer. "On the contrary" logically signals that the information in this sentence—that *Dies Irae*'s appearance of depth is merely an illusion—contrasts with the previous statement about a viewer's possible assumption regarding the street painting.

Choice A is incorrect because "additionally" illogically signals that this sentence is simply additional information about a viewer's possible assumption regarding the street painting. Instead, the information about how Wenner achieved the illusion of depth contrasts with the previous sentence's description of the illusion. **Choice C is incorrect** because "as a result" illogically signals that the information in this sentence is a result of, or caused by, a viewer's possible assumption regarding the street painting. Instead, the information about how Wenner achieved the illusion of depth contrasts with the previous sentence's description of the illusion. **Choice D is incorrect** because "next" illogically signals that the information in this sentence is the

next step in a process. Instead, the information about how Wenner achieved the illusion of depth contrasts with the previous sentence's description of the illusion.

193 Correct answer **D** Hard Back to question

D That said,

Choice D is the best answer. Scientists believe in fusion's potential as an energy source, but have struggled to actually make it work—in other words, there is a contradiction between scientists' beliefs and their reality. "That said" is a disagreement transition that works perfectly in this context.

Choice A is incorrect. This choice uses a cause-and-effect transition, which doesn't make sense here. Scientists not being able to generate extra energy from lab fusion reactions isn't an effect of them believing in fusion's potential. **Choice B is incorrect**. This transition indicates the addition of another supporting point. But this sentence is not adding a supporting point to the previous sentence—scientists not being able to successfully generate energy from fusion isn't another point in favor of fusion meeting humanity's clean energy needs. **Choice C is incorrect**. This choice uses a transition that introduces or elaborates on a particular example. But this sentence doesn't give an example of scientists' belief in fusion's potential to meet humanity's clean energy needs—in fact, it contrasts that optimistic belief with the reality of past failures to successfully employ fusion for energy production.

194 Correct answer **A** Hard Back to question

A Accordingly,

Choice A is the best answer. "Accordingly" logically signals that the information in this sentence—that Precisionist works often feature angular, symmetrical structures, such as skyscrapers, bridges, and factories—is in accordance with the previous claim about the Precisionist style of "cold, machine-like perfection, with crisp lines, geometric shapes, and smooth, brushstroke-free surfaces."

Choice B is incorrect because "in the end" illogically signals that the information in this sentence is a final conclusion or summary of the previous claim about the Precisionist style. Instead, the sentence describes features in Precisionist works that are in accordance with that style. **Choice C is incorrect** because "that said" illogically signals that the information in this sentence is an exception to or qualification of the previous claim about the Precisionist style. Instead, the sentence describes features in Precisionist works that are in accordance with that style. **Choice D is incorrect** because "however" illogically signals that the information in this sentence contrasts with the previous claim about the Precisionist style. Instead, the sentence describes features in Precisionist works that are in accordance with that style.

13 Notes

Rhetorical synthesis

These questions give you a student's research notes, a few bullet points of facts, and then one sentence saying what the student wants to do. Four sentences follow. Only one of them does the stated job.

204 questions | 37 Easy | 124 Medium | 43 Hard

THREE THINGS THAT ARE ALWAYS TRUE

Every choice is grammatically correct; grammar is never the issue here. Almost every choice is factually true, taken straight from the notes; being true is not enough. Only one choice does the exact job named in the goal sentence. That is the only thing being marked.

THE METHOD

1. Read the goal.
2. Read the answer choices.
3. If only one choice meets the goal, choose it and move on.
4. If more than one choice meets the goal, go to the notes.
5. Find which of them the notes actually support.
6. Choose.
7. If the text is too hard, check the clock. If you have time, take it. If you do not, pick C and move on.

WHAT TO TAKE FROM THIS

- The goal sentence is the whole question. Almost every wrong answer is a true sentence that answers a different goal.
- The notes come fourth, not first. On many of these questions three of the four choices fail the goal on sight.
- Step 7 is not giving up. It is protecting the questions you can still answer. Nothing is deducted for a wrong answer.

The Types of Goal 1313

Questions 1314

Answers & explanations 1416

The Types of Goal

The goal sentence comes in a small number of shapes. Learn what each one demands and most of the work is done before you read the choices.

1 State one fact

Goal says: *specify, indicate, emphasize how many, what year, where*

The answer must contain that one fact, stated plainly. Other choices will be true and will sound fuller, but if the fact is missing they are out.

2 Compare two things

Goal says: *emphasize a similarity, contrast, emphasize a difference*

The answer must name both things and say how they relate. A choice that only covers one of them is out. So is a choice that mentions both without connecting them. If the goal asks for a similarity, a sentence pointing out a difference is wrong even though it is true.

3 Describe or introduce something

Goal says: *describe X, present X to an audience unfamiliar with it*

Assume the reader knows nothing. The answer must say what the thing is. An example of it is not a description. One detail about it is not a description either.

4 Summarize a study, or give an overview

Goal says: *summarize the study, present the results, give a historical overview*

The answer has to carry the whole thing. Watch for choices that give only the aim of a study, or only the method. If the goal asks for results, the answer must contain the finding.

5 Make and support a claim or generalization

Goal says: *make and support a claim, make and support a generalization*

Two parts are needed: a general statement, and the evidence behind it. A choice with only data is out. A choice with only an opinion is out.

6 Give an example

Goal says: *provide an example of*

The answer must name one specific case. A definition is not an example, however clear it is.

7 Put events in order

Goal says: *recount the sequence of events*

The events, in the order they happened. Watch for a choice that gives the order of what the researchers did rather than the order of what actually happened.

ONE MORE TRAP, IN EVERY TYPE

Some wrong choices are not just off-target, they are false. They flip a cause and its effect, or attach a number to the wrong thing. Check the facts in a choice against the notes before you accept it. If a choice does the job perfectly but says something the notes do not say, it is wrong.

EASY 37 questions

While researching a topic, a student has taken the following notes:

- Sue is the nickname of a dinosaur fossil specimen housed at the Field Museum of Natural History.
- The Field Museum of Natural History is located in Chicago, Illinois.
- Sue is a member of the genus *Tyrannosaurus.*
- Big Mike is the nickname of a dinosaur fossil specimen housed at the Museum of the Rockies.
- The Museum of the Rockies is located in Bozeman, Montana.
- Big Mike is a member of the genus *Tyrannosaurus.*

ID af76771f

1 Mark for Review Easy Explanation ›

The student wants to emphasize a similarity between the two specimens. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Field Museum of Natural History, where Sue is housed, is located in Chicago, Illinois.

(B) Big Mike is the nickname of a *Tyrannosaurus* fossil specimen housed at the Museum of the Rockies in Bozeman, Montana.

(C) The dinosaur fossil specimens Sue and Big Mike are both members of the genus *Tyrannosaurus.*

(D) While Sue is housed at the Field Museum of Natural History, Big Mike is housed at the Museum of the Rockies.

While researching a topic, a student has taken the following notes:

- The Haber-Bosch process is an industrial process used to manufacture ammonia (NH_3).
- It was invented by chemists Fritz Haber and Carl Bosch in 1910.
- The process's primary reaction combines nitrogen (N_2) from the air with hydrogen (H_2).
- It requires an iron catalyst and high temperatures and pressures.
- Most of the ammonia produced by this process is used in fertilizers.

ID 064c8999

2 Mark for Review Easy Explanation ›

The student wants to provide an overview of the Haber-Bosch process. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Haber-Bosch process needs nitrogen, hydrogen, and an iron catalyst.

(B) The Haber-Bosch process uses an iron catalyst along with high temperatures and pressures to manufacture ammonia from nitrogen and hydrogen.

(C) Chemists Fritz Haber and Carl Bosch invented an industrial process to manufacture ammonia to be used in fertilizers.

(D) In 1910, chemists Fritz Haber and Carl Bosch invented the Haber-Bosch process, which requires high temperatures and pressures.

While researching a topic, a student has taken the following notes:

- The Philadelphia and Lancaster Turnpike was a road built between 1792 and 1794.
- It was the first private turnpike in the United States.
- It connected the cities of Philadelphia and Lancaster in the state of Pennsylvania.
- It was sixty-two miles long.

ID 264e7415

3 Mark for Review Easy Explanation >

The student wants to emphasize the distance covered by the Philadelphia and Lancaster Turnpike. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The sixty-two-mile-long Philadelphia and Lancaster Turnpike connected the Pennsylvania cities of Philadelphia and Lancaster.

(B) The Philadelphia and Lancaster Turnpike was the first private turnpike in the United States.

(C) The Philadelphia and Lancaster Turnpike, which connected two Pennsylvania cities, was built between 1792 and 1794.

(D) A historic Pennsylvania road, the Philadelphia and Lancaster Turnpike was completed in 1794.

While researching a topic, a student has taken the following notes:

- The human body requires magnesium for over 300 essential processes.
- Magnesium is a mineral present in many foods.
- Peanuts contain 49 milligrams per ounce (mg/oz) of magnesium.
- Almonds contain 80 mg/oz.
- Chia seeds contain 150 mg/oz.

ID 25a197dd

4 Mark for Review Easy Explanation >

The student wants to identify which of the three foods has the highest magnesium content. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) At 80 mg/oz, almonds contain more magnesium than peanuts (49 mg/oz).

(B) Chia seeds contain 150 mg/oz of magnesium, which is more than peanuts and almonds.

(C) Magnesium is present in many foods, including peanuts, almonds, and chia seeds.

(D) Peanuts contain 49 mg/oz of magnesium, a mineral the human body requires for over 300 essential processes.

While researching a topic, a student has taken the following notes:

- In World War I, US soldiers who were members of the Choctaw Nation in Oklahoma participated in the Choctaw Code Talkers program.
- The Choctaw Code Talkers were trained to relay coded military information in their native language.
- In World War II, the US Army recruited Navajo (Diné) soldiers to transmit coded messages in their native language.
- These soldiers were known as the Navajo Code Talkers.

ID e3bbf2bf

5 Mark for Review Easy Explanation ›

The student wants to emphasize a similarity between the Choctaw Code Talkers and the Navajo Code Talkers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) US soldiers who were members of the Choctaw Nation in Oklahoma used their native language to relay coded information.

(B) In World War II, one group of Navajo (Diné) soldiers was known as the Navajo Code Talkers.

(C) Both the Choctaw Code Talkers and the Navajo Code Talkers transmitted coded military messages in the soldiers' native languages.

(D) The Choctaw Code Talkers, not the Navajo Code Talkers, served in World War I.

While researching a topic, a student has taken the following notes:

- *Oracles of the Pink Universe* was a 2021 exhibition at the Denver Museum of Art in Colorado.
- It featured eight artworks by South African artist Simphiwe Ndzube.
- One of these works is a painting titled *Assertion of Will*.
- *Assertion of Will* depicts three standing figures.
- The figures wear clothing made of fabric pieces stitched to the painting's canvas.

ID e2693197

6 Mark for Review Easy Explanation ›

The student wants to describe how fabric is used in *Assertion of Will*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In *Assertion of Will*, the figures' clothing is made of fabric pieces stitched to the painting's canvas.

(B) The exhibition *Oracles of the Pink Universe* featured artworks by artist Simphiwe Ndzube.

(C) Depicting three standing, clothed figures, *Assertion of Will* is a painting by Simphiwe Ndzube.

(D) Simphiwe Ndzube's *Assertion of Will* was one of eight artworks exhibited in *Oracles of the Pink Universe* at the Denver Museum of Art.

While researching a topic, a student has taken the following notes:

- The mountain pygmy possum is a mammal species.
- Up until 1966, it was believed to be extinct.
- That year, a live mountain pygmy possum was identified in the wild in Australia.
- The mountain pygmy possum is considered a Lazarus species.
- "Lazarus species" is a term for living species of organisms that were once believed to be extinct.

ID 54227b8e

7 Mark for Review Easy Explanation ›

The student wants to define the term "Lazarus species" and provide an example of one. Which choice most effectively uses relevant information from the notes to accomplish these goals?

(A) The term "Lazarus species" describes a living species of organism, such as the mountain pygmy possum, that was once believed to be extinct.

(B) One example of a Lazarus species is the mountain pygmy possum, a mammal species that was identified in the wild in Australia in 1966.

(C) The mountain pygmy possum, a species of mammal, was identified in the wild in 1966.

(D) Sometimes, a species once believed to be extinct is later found living in the wild.

While researching a topic, a student has taken the following notes:

- Muslins are woven cotton fabrics with a variety of uses.
- Dhaka muslin is a handmade fabric produced in Dhaka, Bangladesh.
- It has an extremely fine weave and is primarily used to make luxury clothing.
- Sheeting muslin is a machine-made fabric produced in factories.
- It has a coarse weave and is primarily used to upholster furniture and create backdrops for theater sets.

ID ca4ff52d

8 Mark for Review Easy Explanation ›

The student wants to emphasize a difference between the two muslins. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Dhaka muslin is a handmade fabric with an extremely fine weave, while sheeting muslin is machine made with a coarse weave.

(B) Dhaka muslin and sheeting muslin are two different types of woven cotton fabrics.

(C) Muslins can be used in a variety of ways, from making luxury clothing to upholstering furniture and creating backdrops for theater sets.

(D) Sheeting muslin is machine made, has a coarse weave, and is used for furniture and theater sets.

While researching a topic, a student has taken the following notes:

- Yellowstone is a national park in the northwest United States.
- In 1995, gray wolves were reintroduced into the park.
- Since then, the number of gray wolves in the park has stabilized at roughly 100.
- This number is believed to be the park's carrying capacity.
- Carrying capacity describes the maximum number of a species that a specific environment's resources can sustain over time.

ID a3204ab0

9 Mark for Review Easy Explanation ›

The student wants to specify the number of gray wolves in Yellowstone. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Gray wolves were reintroduced into Yellowstone, a national park in the northwest United States, in 1995.

(B) As of 1995, there were gray wolves living in Yellowstone, a national park in the northwest United States.

(C) The carrying capacity of an environment, such as Yellowstone, describes the maximum number of species that the environment can sustain over time.

(D) Yellowstone is a national park that has roughly 100 gray wolves living in it.

While researching a topic, a student has taken the following notes:

- Chiura Obata was a Japanese American artist who lived in California.
- *Yosemite Falls* is a notable painting by Obata.
- It uses a Japanese method of black ink painting called sumi-e.
- This painting was completed in 1930.

ID bc930940

10 Mark for Review Easy Explanation ›

The student wants to indicate the year *Yosemite Falls* was completed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) While living in California, Obata created black ink paintings.

(B) Obata, a Japanese American artist, created a notable painting.

(C) *Yosemite Falls* was completed in 1930.

(D) Obata used a Japanese painting method called sumi-e.

While researching a topic, a student has taken the following notes:

- Dr. Sunil Bajpai studies dinosaurs at the Indian Institute of Technology.
- Bajpai's research team recently found a 167-million-year-old dicraeosaurid fossil.
- It is the oldest fossil from the dicraeosaurid dinosaur group ever recovered.
- It was found in the Thar Desert in western India.

ID c6645cab

11 Mark for Review — Easy — Explanation ›

The student wants to indicate where the dicraeosaurid fossil was found. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The dicraeosaurid fossil was found in western India's Thar Desert.

(B) Bajpai's team recently found the oldest dicraeosaurid fossil ever recovered.

(C) Dr. Sunil Bajpai, of the Indian Institute of Technology, is part of a research team.

(D) The fossil, which is from the dicraeosaurid dinosaur group, is 167 million years old.

While researching a topic, a student has taken the following notes:

- Pauline Hopkins (1859-1930) was an African American writer.
- In her career, she created many genre-defining stories.
- Her serialized novel *Hagar's Daughter* was published from 1901 to 1902 in *The Colored American Magazine*.
- It is considered the first African American mystery novel.

ID 5a2a4b36

12 Mark for Review — Easy — Explanation ›

The student wants to introduce Pauline Hopkins to an audience unfamiliar with her career. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Pauline Hopkins is the author of *Hagar's Daughter*, a serialized novel published from 1901 to 1902.

(B) African American writer Pauline Hopkins created many genre-defining stories during her career, including the first African American mystery novel, *Hagar's Daughter*.

(C) Published in *The Colored American Magazine* from 1901 to 1902, *Hagar's Daughter* is a serialized novel by Pauline Hopkins.

(D) *Hagar's Daughter* by Pauline Hopkins is considered the first African American mystery novel.

While researching a topic, a student has taken the following notes:

- Angana Chaudhuri is a scientist.
- Chaudhuri studies sedimentary rocks.
- A scientist who studies sedimentary rocks is called a sedimentologist.
- Shale, chalk, and sandstone are examples of sedimentary rocks.

ID 8b2636ee

13 Mark for Review Easy Explanation ›

The student wants to identify what type of scientist Chaudhuri is. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Chalk is a type of sedimentary rock.

(B) Some scientists study shale, chalk, and sandstone.

(C) There are scientists who study sedimentary rocks.

(D) Chaudhuri is a sedimentologist.

While researching a topic, a student has taken the following notes:

- The engineer Robert Fulton designed the *Clermont* steamboat in 1807.
- He designed it in New York City.
- *Clermont* was the world's first commercially successful steamboat.
- The city of Fulton, Missouri, is named after Robert Fulton.
- New York City's Fulton Street is named after him.

ID 79c6a01e

14 Mark for Review Easy Explanation ›

The student wants to indicate how Fulton, Missouri, got its name. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Fulton, Missouri, shares its name with Fulton Street in New York City.

(B) Fulton Street is in New York City, where the steamboat *Clermont* was designed in 1807.

(C) Designed in 1807 in New York City, *Clermont* was the first commercially successful steamboat.

(D) Fulton, Missouri, is named after Robert Fulton, designer of the first commercially successful steamboat.

While researching a topic, a student has taken the following notes:

- Some atoms contain an excess of neutrons.
- Often, these neutrons form a "skin" on the atom's surface.
- An atom of lead-208 has a neutron skin.
- The thickness of its neutron skin is approximately 0.28 trillionths of a millimeter.

ID 878f835a

15 Mark for Review Easy Explanation ›

The student wants to emphasize the thickness of lead-208's neutron skin. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The neutron skin surrounding an atom of lead-208 measures about 0.28 trillionths of a millimeter.

(B) Atoms with excess neutrons will often acquire a neutron skin.

(C) An atom of lead-208, like some other atoms, is surrounded by a neutron skin.

(D) Neutrons surround the surface of an atom of lead-208.

While researching a topic, a student has taken the following notes:

- Komodo dragons are the largest lizards in the world.
- They live on four islands in Komodo National Park, Indonesia.
- The park has a total of twenty-nine islands.

ID d436a2b2

16 Mark for Review Easy Explanation ›

The student wants to emphasize how many islands in Komodo National Park have Komodo dragons living on them. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Komodo dragons, the world's largest lizards, live on islands in Komodo National Park, Indonesia.

(B) The largest lizards in the world are found in Komodo National Park.

(C) Only four of the twenty-nine islands in Komodo National Park have Komodo dragons living on them.

(D) There are twenty-nine islands in Indonesia's Komodo National Park.

While researching a topic, a student has taken the following notes:

- The tundra is a type of environment characterized by especially harsh winter conditions.
- Winter temperatures in the tundra average a frigid −30 degrees Fahrenheit.
- Animals that have adapted to these conditions can survive tundra winters.
- During the tundra's short growing season, average temperatures can reach a relatively mild 54 degrees Fahrenheit.
- Around 1,700 different kinds of plants are able to grow in the tundra.

ID 1792fa73

17 Mark for Review Easy Explanation ›

The student wants to emphasize how harsh the conditions can be in the tundra. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Winters in the tundra are especially harsh, with temperatures averaging a frigid −30 degrees Fahrenheit.

(B) Animals that have adapted to harsh winter conditions can survive tundra winters.

(C) There are around 1,700 different kinds of plants that can live in the tundra, where average temperatures can reach a mild 54 degrees Fahrenheit.

(D) Along with animals that have adapted to the tundra's conditions, around 1,700 different kinds of plants can live in the tundra.

While researching a topic, a student has taken the following notes:

- The Seikan Tunnel is a rail tunnel in Japan.
- It connects the island of Honshu to the island of Hokkaido.
- It is roughly 33 miles long.
- The Channel Tunnel is a rail tunnel in Europe.
- It connects Folkestone, England, to Coquelles, France.
- It is about 31 miles long.

ID 3067723b

18 Mark for Review Easy Explanation ›

The student wants to compare the lengths of the two rail tunnels. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Some of the world's rail tunnels, including one tunnel that extends from Folkestone, England, to Coquelles, France, are longer than 30 miles.

(B) The Seikan Tunnel is roughly 33 miles long, while the slightly shorter Channel Tunnel is about 31 miles long.

(C) The Seikan Tunnel, which is roughly 33 miles long, connects the Japanese islands of Honshu and Hokkaido.

(D) Both the Seikan Tunnel, which is located in Japan, and the Channel Tunnel, which is located in Europe, are examples of rail tunnels.

While researching a topic, a student has taken the following notes:

- Georeferencing is the process of assigning geographic coordinates to an image.
- This process enables mapping software to place the image in its real-world location.
- A 2017 project by Tania López Marrero and colleagues georeferenced a set of aerial photographs of Puerto Rico's coastline taken in 1930.
- These photographs are the earliest known aerial photographs of Puerto Rico.
- López Marrero's project provided data that can help researchers analyze changes in Puerto Rico's coastline.

ID 4e063114

19 Mark for Review Easy Explanation ›

The student wants to define the term "georeferencing." Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A 2017 project by Tania López Marrero and colleagues assigned geographic coordinates to photographs of Puerto Rico's coastline and also used georeferencing.

(B) Tania López Marrero and colleagues used georeferencing in their analysis of the earliest known aerial photographs of Puerto Rico.

(C) Georeferenced aerial photographs from 1930 can help researchers analyze changes in Puerto Rico's coastline.

(D) Georeferencing is the process of assigning geographic coordinates to an image so that mapping software can place it in its real-world location.

While researching a topic, a student has taken the following notes:

- On January 3, 1959, Alaska became the 49th state to join the US.
- On August 21, 1959, Hawaii became the 50th state to join the US.
- A new 50-star US flag was unveiled the same day.

ID d2b52c50

20 Mark for Review — Easy — Explanation ›

The student wants to emphasize the order in which Alaska and Hawaii became US states. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Alaska, the 49th US state, became a state several months before Hawaii, the 50th state, did.

(B) On August 21, 1959, a new 50-star US flag was unveiled.

(C) The 49th and 50th states to join the US did so in the same year.

(D) The same day that Hawaii became a US state—August 21, 1959—a new US flag was unveiled.

While researching a topic, a student has taken the following notes:

- NASA uses rovers, large remote vehicles with wheels, to explore the surface of Mars.
- NASA's rovers can't explore regions inaccessible to wheeled vehicles.
- Rovers are also heavy, making them difficult to land on the planet's surface.
- Microprobes, robotic probes that weigh as little as 50 milligrams, could be deployed virtually anywhere on the surface of Mars.
- Microprobes have been proposed as an alternative to rovers.

ID 4b376902

21 Mark for Review — Easy — Explanation ›

The student wants to explain an advantage of microprobes. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Despite being heavy, NASA's rovers can land successfully on the surface of Mars.

(B) Microprobes, which weigh as little as 50 milligrams, could explore areas of Mars that are inaccessible to NASA's heavy, wheeled rovers.

(C) NASA currently uses its rovers on Mars, but microprobes have been proposed as an alternative.

(D) Though they are different sizes, both microprobes and rovers can be used to explore the surface of Mars.

While researching a topic, a student has taken the following notes:

- The Sasanian Empire lasted about 400 years (AD 224 to AD 651).
- The Sasanians controlled an area spanning 1.4 million square miles.
- This area included present-day Iran and Iraq.
- The empire's capital was the ancient city of Ctesiphon.
- Ctesiphon was located near present-day Baghdad, Iraq.

ID 6b5bc97d

22 Mark for Review Easy Explanation ›

The student wants to specify the location of Ctesiphon. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Sasanian Empire began in AD 224 and ended in AD 651.

(B) The capital of the Sasanian Empire, which spanned 1.4 million square miles, was Ctesiphon.

(C) The Sasanians controlled an area of 1.4 million square miles, including present-day Iran and Iraq.

(D) Ctesiphon, the capital of the Sasanian Empire, was located near present-day Baghdad, Iraq.

While researching a topic, a student has taken the following notes:

- Samuel Delany is a US writer known for his science fiction.
- Delany's science fiction novel *Babel-17* was published in 1966.
- The novel won a Nebula Award in 1967.
- The Nebula Awards are given each year to the best works of science fiction published in the US.

ID b5cd28a7

23 Mark for Review Easy Explanation ›

The student wants to indicate the title of a novel that won a Nebula Award. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) *Babel-17*, by Samuel Delany, won a Nebula Award in 1967.

(B) Samuel Delany published a science fiction novel in 1966.

(C) Samuel Delany is an award-winning US writer known for his science fiction.

(D) One of Samuel Delany's novels was among the best works of science fiction published in the US.

While researching a topic, a student has taken the following notes:

- Ibn Sina was a Persian philosopher and physician.
- His book *The Canon of Medicine* recorded the most advanced medical knowledge of his time.
- It was published in the year 1025 CE.
- It was used as a medical textbook in Middle Eastern and European universities for centuries.

ID 9922b364

24 Mark for Review Easy Explanation ›

The student wants to identify the year that *The Canon of Medicine* was published. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Ibn Sina's book *The Canon of Medicine* was published in the year 1025 CE.

(B) A Persian philosopher and physician wrote a medical textbook called *The Canon of Medicine*.

(C) *The Canon of Medicine* was a medical textbook used by Middle Eastern and European universities for centuries.

(D) Ibn Sina recorded the most advanced medical knowledge of his time in his book *The Canon of Medicine*.

While researching a topic, a student has taken the following notes:

- Spiders are classified as arachnids.
- There are other types of arachnids besides spiders.
- Harvestmen are a type of arachnid.
- Harvestmen are also known as daddy longlegs.
- Harvestmen are not spiders.

ID 742695d7

25 Mark for Review Easy Explanation ›

The student wants to explain what harvestmen are. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Spiders, also known as harvestmen, are classified as arachnids.

(B) There are other types of arachnids besides spiders, such as daddy longlegs.

(C) The spiders known as daddy longlegs are classified as harvestmen.

(D) Harvestmen, also known as daddy longlegs, are arachnids but not spiders.

While researching a topic, a student has taken the following notes:

- Chromosomes are cellular structures that contain genes.
- Genes carry critical instructions for determining an organism's physical traits.
- Members of the same species typically have the same number of chromosomes.
- The pineapple (*Ananas comosus*) and the melon (*Cucumis melo*) are species of fruits.
- The pineapple has fifty chromosomes.
- The melon has twenty-four chromosomes.

ID 0778b4ac

26 Mark for Review Easy Explanation ›

The student wants to specify how many chromosomes the pineapple has. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The pineapple's chromosomes contain genes, which are critical to determining an organism's physical traits.

(B) The pineapple (*Ananas comosus*) has fifty chromosomes.

(C) The pineapple (*Ananas comosus*) and the melon (*Cucumis melo*) both have chromosomes, but the pineapple has more than the melon does.

(D) The melon, a species of fruit, has twenty-four structures called chromosomes.

While researching a topic, a student has taken the following notes:

- The green iguana is a species of reptile.
- It can be found in Central America and Brazil.
- The green iguana primarily eats leaves and fruit.
- It has an average length of 4.8 feet.

ID 54f29331

27 Mark for Review Easy Explanation ›

The student wants to specify the average length of the green iguana. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The green iguana can be found in Central America.

(B) The green iguana has an average length of 4.8 feet.

(C) One species of reptile found in Brazil primarily eats leaves and fruit.

(D) The green iguana is a reptile that primarily eats leaves and fruit.

While researching a topic, a student has taken the following notes:

- Jon Ching is a Los Angeles-based painter.
- He uses the term “flauna” to describe the plant-animal hybrids that he depicts in his surreal paintings.
- “Flauna” is a combination of the words “flora” and “fauna.”
- His painting *Nectar* depicts a parrot with leaves for feathers.
- His painting *Primaveral* depicts a snow leopard whose fur sprouts flowers.

ID 13f36b03

28 Mark for Review Easy Explanation ›

The student wants to provide an explanation and example of “flauna.” Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The term “flauna,” used by Los Angeles-based painter Jon Ching, is a combination of the words “flora” and “fauna.”

(B) Jon Ching uses the term “flauna,” a combination of the words “flora” and “fauna,” to describe the subjects of his surreal paintings: plant-animal hybrids such as a parrot with leaves for feathers.

(C) Jon Ching, who created *Nectar*, refers to the subjects of his paintings as “flauna.”

(D) The subjects of *Nectar* and *Primaveral* are types of “flauna,” a term that the paintings’ creator, Jon Ching, uses when describing his surreal artworks.

While researching a topic, a student has taken the following notes:

- The painter Frida Kahlo is one of the most influential artists of the twentieth century.
- She was born in Coyoacán, Mexico, in 1907.
- She is best known for her vivid and richly symbolic self-portraits.
- *The Two Fridas* (1939) features two versions of Kahlo sitting together.
- One version wears a European-style dress and the other a traditional Tehuana dress.

ID eaded344

29 Mark for Review Easy Explanation ›

The student wants to introduce Kahlo to an audience unfamiliar with the artist. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Known for being vivid and richly symbolic, Frida Kahlo’s self-portraits include *The Two Fridas* (1939).

(B) The 1939 painting *The Two Fridas* is one example of a self-portrait by Frida Kahlo.

(C) One painting by Frida Kahlo features two versions of herself, with one version wearing a European-style dress and the other a traditional Tehuana dress.

(D) One of the most influential artists of the twentieth century, Mexican painter Frida Kahlo is best known for her self-portraits, which are vivid and richly symbolic.

While researching a topic, a student has taken the following notes:

- Bioluminescence is the emission of light by living organisms.
- This light is produced by chemical reactions in organisms' cells.
- Jellyfish emit flashes of blue light.
- This behavior serves to startle predators.
- Black dragonfish emit a steady red light.
- This behavior helps them locate prey in deep waters.

ID e3484c07

30 Mark for Review — Easy — Explanation ›

The student wants to emphasize a difference between the behavior of jellyfish and that of black dragonfish. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Both jellyfish and black dragonfish are organisms that emit light, which is produced by chemical reactions in these organisms' cells.

(B) Black dragonfish emit a steady red light, which helps them locate prey in deep waters.

(C) Bioluminescence, the emission of light by living organisms, results from chemical reactions in organisms' cells.

(D) Jellyfish emit light to startle predators, whereas black dragonfish do so to locate prey.

While researching a topic, a student has taken the following notes:

- "Organ^2/ASLSP (As Slow as Possible)" is a musical piece by avant-garde composer John Cage.
- A specially designed automated organ in St. Burchardi Church in Halberstadt, Germany, began playing the piece in 2001.
- It is scheduled to stop playing the piece in 2640.
- The performance will last 639 years.
- It will be the longest continuous musical performance in history.

ID e887dab1

31 Mark for Review — Easy — Explanation ›

The student wants to indicate how long John Cage's musical piece will last. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) John Cage is the composer of the musical piece "Organ^2/ASLSP (As Slow as Possible)."

(B) "Organ^2/ASLSP (As Slow as Possible)" is a musical piece currently being played in St. Burchardi Church in Halberstadt, Germany.

(C) Lasting 639 years, John Cage's musical piece will be the longest continuous musical performance in history.

(D) An organ in St. Burchardi Church in Halberstadt, Germany, began playing a musical piece by avant-garde composer John Cage.

While researching a topic, a student has taken the following notes:

- Miguel Luciano is a multimedia visual artist.
- One of his sculptures is *Double Phantom/EntroP.R.* (2017).
- The work consists of two red Schwinn Phantom bicycles that he fused together.
- The bicycles face opposite directions.
- The bicycles share the same rear wheel.

ID 00bb356a

32 Mark for Review Easy Explanation ›

The student wants to describe how the bicycles in *Double Phantom/EntroP.R.* are fused together. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) To create the sculpture *Double Phantom/EntroP.R.*, Miguel Luciano fused together two Schwinn Phantom bicycles.

(B) There are two red Schwinn Phantom bicycles in the sculpture *Double Phantom/EntroP.R.*

(C) The two red bicycles in *Double Phantom/EntroP.R.* are fused together so that they share the same rear wheel while facing opposite directions.

(D) *Double Phantom/EntroP.R.* is a sculpture created by multimedia visual artist Miguel Luciano.

While researching a topic, a student has taken the following notes:

- In 1897, twenty Black US Army infantrymen rode bicycles from Montana to Missouri.
- The 1,900-mile journey took forty-one days.
- The goal was to test the idea of forming a military bicycle corps.
- In 2022, Erick Cedeño, a Black long-distance cyclist, reenacted the journey.
- Cedeño wanted to honor the infantrymen on the journey's 125th anniversary.

ID 25adba4e

33 Mark for Review Easy Explanation ›

The student wants to emphasize how far the infantrymen traveled. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The US infantrymen rode their bicycles from Montana to Missouri—traveling a total of 1,900 miles.

(B) The 125th anniversary of the infantrymen's journey was in 2022.

(C) The goal of the 1897 journey was to test the idea of forming a military bicycle corps.

(D) Over a century later, Erick Cedeño honored the infantrymen by reenacting their 1897 journey.

While researching a topic, a student has taken the following notes:

- *Certhidea olivacea* is a perching bird that can be found on the Galápagos Island of Pinzón.
- *Creagrus furcatus* is a seabird that can be found on the Galápagos Island of Darwin.
- Conservation organizations evaluate the risk that species will become extinct in the near future.
- *C. olivacea* faces a high risk of extinction.
- *C. furcatus* faces little risk of becoming extinct in the near future.

ID 7f2781fd

34 Mark for Review Easy Explanation ›

The student wants to compare the extinction risk faced by *C. olivacea* with that faced by *C. furcatus*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) According to conservation organizations, *C. olivacea* has a higher risk of becoming extinct in the near future than *C. furcatus*.

(B) *C. furcatus* faces a high risk of extinction, while *C. olivacea* faces little risk of becoming extinct in the near future.

(C) Conservation organizations have evaluated both *C. furcatus*'s and *C. olivacea*'s risk of becoming extinct in the near future.

(D) *C. olivacea* is a perching bird that faces a high risk of extinction.

While researching a topic, a student has taken the following notes:

- The Royal Alcázar of Seville is a historic royal palace in Andalucía, Spain.
- The palace is famous for its intricate tilework.
- The palace features majolica and arista tiles.
- In the majolica style, designs are painted directly on the ceramic tiles.
- In the arista style, designs are stamped into the ceramic tiles.

ID 3150021d

35 Mark for Review Easy Explanation ›

The student wants to contrast the two styles of tiles. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Tiles in the majolica and arista styles can be found in the Royal Alcázar of Seville in Andalucía, Spain.

(B) Featuring tiles in the majolica and arista styles, the Royal Alcázar of Seville in Spain is famous for its intricate tilework.

(C) In the arista style, designs are stamped into the ceramic tiles, whereas in the majolica style, the designs are painted directly on them.

(D) Among the famous tilework of the Royal Alcázar of Seville are majolica style tiles, made by painting designs directly on the ceramic tiles.

While researching a topic, a student has taken the following notes:

- "Raymond's Run" is a short story.
- It was written by African American author Toni Cade Bambara.
- It was first published in her book *Gorilla, My Love* in 1972.
- It is told from a first person perspective.
- It takes place in Harlem.

ID 02527f43

36 Mark for Review Easy Explanation ›

The student wants to indicate where the short story takes place. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) "Raymond's Run" takes place in Harlem.

(B) "Raymond's Run" was published in *Gorilla, My Love*.

(C) "Raymond's Run" is told from a first person perspective.

(D) "Raymond's Run" was written by Toni Cade Bambara.

While researching a topic, a student has taken the following notes:

- The calendar used by most of the world (the Gregorian calendar) has 365 days.
- Because 365 days can't be divided evenly by 7 (the number of days in a week), calendar dates fall on a different day of the week each year.
- The Hanke-Henry permanent calendar, developed as an alternative to the Gregorian calendar, has 364 days.
- Because 364 can be divided evenly by 7, calendar dates fall on the same day of the week each year, which supports more predictable scheduling.

ID eae29760

37 Mark for Review Easy Explanation ›

The student wants to explain an advantage of the Hanke-Henry calendar. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Gregorian calendar has 365 days, which is one day longer than the Hanke-Henry permanent calendar.

(B) Adopting the Hanke-Henry permanent calendar would help solve a problem with the Gregorian calendar.

(C) Designed so calendar dates would occur on the same day of the week each year, the Hanke-Henry calendar supports more predictable scheduling than does the Gregorian calendar.

(D) The Hanke-Henry permanent calendar was developed as an alternative to the Gregorian calendar, which is currently the most-used calendar in the world.

MEDIUM 124 questions

While researching a topic, a student has taken the following notes:

- As engineered structures, many bird nests are uniquely flexible yet cohesive.
- A research team led by Yashraj Bhosale wanted to better understand the mechanics behind these structural properties.
- Bhosale's team used laboratory models that simulated the arrangement of flexible sticks into nest-like structures.
- The researchers analyzed the points where sticks touched one another.
- When pressure was applied to the model nests, the number of contact points between the sticks increased, making the structures stiffer.

ID afec1a70

38 Mark for Review Medium Explanation ›

The student wants to present the primary aim of the research study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Bhosale's team wanted to better understand the mechanics behind bird nests' uniquely flexible yet cohesive structural properties.

(B) The researchers used laboratory models that simulated the arrangement of flexible sticks and analyzed the points where sticks touched one another.

(C) After analyzing the points where sticks touched, the researchers found that the structures became stiffer when pressure was applied.

(D) As analyzed by Bhosale's team, bird nests are uniquely flexible yet cohesive engineered structures.

While researching a topic, a student has taken the following notes:

- Organisms release cellular material into their environment by shedding substances such as hair or skin.
- The DNA in these substances is known as environmental DNA, or eDNA.
- Researchers collect and analyze eDNA to detect the presence of species that are difficult to observe.
- Geneticist Sara Oyler-McCance's research team analyzed eDNA in water samples from the Florida Everglades to detect invasive constrictor snake species in the area.
- The study determined a 91% probability of detecting Burmese python eDNA in a given location.

ID b46e0c8a

39 Mark for Review Medium Explanation ›

The student wants to present the study to an audience already familiar with environmental DNA. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Sara Oyler-McCance's researchers analyzed eDNA in water samples from the Florida Everglades for evidence of invasive constrictor snakes, which are difficult to observe.

(B) An analysis of eDNA can detect the presence of invasive species that are difficult to observe, such as constrictor snakes.

(C) Researchers found Burmese python eDNA, or environmental DNA, in water samples; eDNA is the DNA in released cellular materials, such as shed skin cells.

(D) Sara Oyler-McCance's researchers analyzed environmental DNA (eDNA)—that is, DNA from cellular materials released by organisms—in water samples from the Florida Everglades.

While researching a topic, a student has taken the following notes:

- Sam Maloof (1916–2009) was an American woodworker and furniture designer.
- He was the son of Lebanese immigrants.
- He received a "genius grant" from the John D. and Catherine T. MacArthur Foundation in 1985.
- The Museum of Fine Arts in Boston, Massachusetts, owns a rocking chair that Maloof made from walnut wood.
- The armrests and the seat of the chair are sleek and contoured, and the back consists of seven spindle-like slats.

ID 48d0bb34

40 Mark for Review Medium Explanation ›

The student wants to describe the rocking chair to an audience unfamiliar with Sam Maloof. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) With its sleek, contoured armrests and seat, the walnut rocking chair in Boston's Museum of Fine Arts is just one piece of furniture created by American woodworker Sam Maloof.

(B) Sam Maloof was born in 1916 and died in 2009, and during his life, he made a chair that you can see if you visit the Museum of Fine Arts in Boston.

(C) Furniture designer Sam Maloof was a recipient of one of the John D. and Catherine T. MacArthur Foundation's "genius grants."

(D) The rocking chair is made from walnut, and it has been shaped such that its armrests and seat are sleek and contoured.

While researching a topic, a student has taken the following notes:

- Species belonging to the Orchidaceae (orchid) family can be found in both tropical and temperate environments.
- Orchidaceae species diversity has not been well studied in temperate forests, such as those in Oaxaca, Mexico.
- Arelee Estefanía Muñoz-Hernández led a study to determine how many different Orchidaceae species are present in the forests of Oaxaca.
- Muñoz-Hernández and her team collected orchids each month for a year at a site in Oaxaca.
- Seventy-four Orchidaceae species were present at the site.

ID aa7e10d0

41 Mark for Review Medium Explanation ›

The student wants to present the study and its findings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A study led by Arelee Estefanía Muñoz-Hernández identified a total of 74 Orchidaceae species in the temperate forests of Oaxaca, Mexico.

(B) There are orchids in many environments, but there are 74 Orchidaceae species in Oaxaca, Mexico.

(C) Oaxaca, Mexico, is home to temperate forests containing 74 Orchidaceae species.

(D) Arelee Estefanía Muñoz-Hernández and her team wanted to know how many different Orchidaceae species are present in the forests of Oaxaca, Mexico, so they conducted a study to collect orchids.

While researching a topic, a student has taken the following notes:

- The International Center for the Arts of the Americas (ICAA) is directed by Mari Carmen Ramírez.
- Ramírez oversaw an initiative to create an online archive of historical documents related to the history of Latin American and Latino visual art.
- The ICAA digitized over 10,000 documents, including the writings of Latin American and Latino artists and critics.
- The creation of the archive didn't require historical documents to be removed from their countries of origin.
- Scholars now have more access to these documents.

ID 4c43bf61

42 Mark for Review Medium Explanation ›

The student wants to explain an advantage of the ICAA's archive being digital. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Over 10,000 documents related to the history of Latin American and Latino visual art are part of the ICAA archive.

(B) By offering online versions of historical documents, the ICAA's archive provides more access to these materials without removing them from their countries of origin.

(C) Among the historical documents in the ICAA's archive are the writings of Latin American and Latino artists and critics.

(D) The ICAA's director, Mari Carmen Ramírez, oversaw the creation of an online archive of historical documents related to Latin American and Latino visual art.

While researching a topic, a student has taken the following notes:

- The Million Song Dataset (MSD) includes main audio features and descriptive tags for popular songs.
- Audio features include acoustic traits such as loudness and pitch intervals.
- Many algorithms use these audio features to predict a new song's popularity.
- These algorithms may fail to accurately identify main audio features of a song with varying acoustic traits.
- Algorithms based on descriptive tags that describe fixed traits such as genre are more reliable predictors of song popularity.

ID 16631d34

43 Mark for Review Medium Explanation ›

The student wants to explain a disadvantage of relying on audio features to predict a song's popularity. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Many popularity-predicting algorithms are based on a song's audio features, such as loudness and pitch intervals.

(B) Algorithms based on audio features may misidentify the main features of a song with varying acoustic traits, making such algorithms less reliable predictors of popularity than those based on fixed traits.

(C) Audio features describe acoustic traits such as pitch intervals, which may vary within a song, whereas descriptive tags describe fixed traits such as genre, which are reliable predictors of popularity.

(D) The MSD's descriptive tags are reliable predictors of a song's popularity, as the traits they describe are fixed.

While researching a topic, a student has taken the following notes:

- Platinum is a rare and expensive metal.
- It is used as a catalyst for chemical reactions.
- Platinum catalysts typically require a large amount of platinum to be effective.
- Researcher Jianbo Tang and his colleagues created a platinum catalyst that combines platinum with liquid gallium.
- Their catalyst was highly effective and required only trace amounts of platinum (0.0001% of the atoms in the mixture).

ID 84e108cf

44 Mark for Review Medium Explanation ›

The student wants to explain an advantage of the new platinum catalyst developed by Jianbo Tang and his colleagues. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Researcher Jianbo Tang and his colleagues created a platinum catalyst that combines platinum, a rare and expensive metal, with liquid gallium.

(B) Like other platinum catalysts, the new platinum catalyst requires a particular amount of the metal to be effective.

(C) Platinum is a rare and expensive metal that is used as a catalyst for chemical reactions; however, platinum catalysts typically require a large amount of platinum to be effective.

(D) While still highly effective, the new platinum catalyst requires far less of the rare and expensive metal than do other platinum catalysts.

While researching a topic, a student has taken the following notes:

- Grimanesa Amoros is a Peruvian American artist well known for her LED light sculptures.
- Her sculpture *Uros Island* is made of smooth multicolored LED domes.
- It occupies 335 cubic feet of space.
- Her sculpture *Fortuna* is made of entangled blue and white LED tubes.
- It occupies 19,950 cubic feet of space.

ID 7298633c

45 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between *Uros Island* and *Fortuna*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The smooth LED domes of Grimanesa Amoros's *Uros Island* stand in contrast to the tangled LED tubes of *Fortuna*.

(B) At 19,950 cubic feet in size, Grimanesa Amoros's *Fortuna* cuts a larger figure than the 335-cubic-foot *Uros Island*.

(C) Grimanesa Amoros is the artist behind *Uros Island*—a sculpture made of smooth multicolored LED domes.

(D) *Uros Island* is an LED light sculpture made by Grimanesa Amoros, as is *Fortuna*.

While researching a topic, a student has taken the following notes:

- A lever is a simple machine consisting of a rigid beam and a fulcrum.
- The fulcrum is the point about which the beam pivots.
- The input force (effort) is the force applied to the lever.
- The output force (load) is the force that the lever exerts on another object.
- In first-class levers, the fulcrum is located between the effort and the load.
- In second-class levers, the load is located between the effort and the fulcrum.

ID 441f0505

46 Mark for Review Medium Explanation ›

The student wants to contrast first-class levers and second-class levers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In levers, the effort is the force applied to the lever; the load, in contrast, is the force that the lever exerts on another object.

(B) In first-class and second-class levers, the fulcrum and the load are in different locations.

(C) First-class levers are simple machines consisting of a rigid beam and a fulcrum, but then again, the same is true of second-class levers.

(D) In first-class levers, the fulcrum is located between the effort and the load, but in second-class levers, the load is located between the effort and the fulcrum.

While researching a topic, a student has taken the following notes:

- Some powerful works of literature have so influenced readers that new legislation has been passed as a result.
- *The Interesting Narrative of the Life of Olaudah Equiano* (1789) is the autobiography of a man who endured slavery on both sides of the Atlantic.
- Equiano's book contributed to the passage of the Slave Trade Act of 1807.
- *The Jungle* (1906) is a fictional work by Upton Sinclair that describes unsanitary conditions in US meatpacking plants.
- Sinclair's book contributed to the passage of the Pure Food and Drug Act in 1906.

ID 6c9df5d1

47 Mark for Review Medium Explanation ›

The student wants to emphasize a difference between the two books. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Although both are powerful works of literature that contributed to new legislation, Equiano's book is an autobiography, while Sinclair's is fictional.

(B) They may have written about different topics, but Equiano and Sinclair both influenced readers.

(C) The 1807 Slave Trade Act resulted in part from a book by Equiano, while the 1906 Pure Food and Drug Act resulted in part from a book by Sinclair.

(D) *The Interesting Narrative of the Life of Olaudah Equiano* and *The Jungle* are two works of literature that contributed to new legislation (concerning the slave trade and food safety, respectively).

While researching a topic, a student has taken the following notes:

- Scientists have developed a “freeze-thaw” battery that can retain 92% of its charge after twelve weeks.
- The battery contains molten salt (a type of salt that liquifies when heated and solidifies at room temperature).
- When the salt is in a liquid state, energy flows through the battery.
- When the salt is in a solid state, energy stops flowing and is stored in the battery.
- The stored (frozen) energy can be used by reheating (thawing) the battery.

ID 4b99b481

48 Mark for Review Medium Explanation ›

The student wants to specify how the salt enables energy storage. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Scientists have developed a freeze-thaw battery that contains molten salt, which liquifies when heated and solidifies at room temperature.

(B) The stored energy in a freeze-thaw battery, which contains molten salt, can be used by reheating the battery.

(C) When the molten salt in a freeze-thaw battery solidifies at room temperature, energy stops flowing and can be stored in the battery.

(D) Molten salt allows a freeze-thaw battery to retain 92% of its charge after twelve weeks.

While researching a topic, a student has taken the following notes:

- Musicians around the world have used protest songs to raise awareness about human rights violations.
- US folk singer Aunt Molly Jackson released the protest song “Poor Miner’s Farewell” in 1932.
- It exposed the unlivable wages and dangerous working conditions coal miners faced in Kentucky during the 1920s and 1930s.
- South African singer-songwriter Hugh Masekela released the protest song “Bring Him Back Home” in 1987.
- It called on the South African government to free Nelson Mandela, an anti-apartheid leader who’d been unjustly imprisoned.

ID a4366255

49 Mark for Review Medium Explanation ›

The student wants to contrast the song “Poor Miner’s Farewell” with the song “Bring Him Back Home.” Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The songs “Poor Miner’s Farewell” and “Bring Him Back Home” both raised awareness about human rights violations.

(B) While both are protest songs, “Poor Miner’s Farewell” is about coal miners in Kentucky, whereas “Bring Him Back Home” is about the anti-apartheid leader Nelson Mandela.

(C) Hugh Masekela’s song “Bring Him Back Home,” released in 1987, called on the South African government to free Nelson Mandela.

(D) Released in 1932 by Aunt Molly Jackson, the song “Poor Miner’s Farewell” was a protest against the unlivable wages and dangerous working conditions faced by Kentucky coal miners.

While researching a topic, a student has taken the following notes:

- The Azores is a group of islands about 870 miles off the coast of Portugal.
- Historians have long believed that in the fifteenth century Portuguese mariners were the first humans to populate the Azores.
- A 2015 study coauthored by Sofia Gabriel and Maria da Luz Mathias found that Vikings from Scandinavia may have populated the Azores as early as the ninth century.
- The researchers found a genetic connection between house mice in the Azores and house mice in Scandinavia.
- House mice may have traveled from Scandinavia to the Azores on Viking ships.

ID 296801d2

50 Mark for Review Medium Explanation ›

The student wants to specify who may have first populated the Azores, according to the 2015 study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Historians have long believed that the first humans to populate the Azores, a group of islands about 870 miles off the coast of Portugal, arrived in the fifteenth century.

(B) Portuguese mariners may not have been the first humans to populate the Azores.

(C) In their 2015 study, the researchers found a genetic connection between house mice in the Azores and those in Scandinavia.

(D) According to a 2015 study, the first humans to populate the Azores may have been Vikings from Scandinavia, not mariners from Portugal as previously believed.

While researching a topic, a student has taken the following notes:

- Allan Houser was a Chiricahua Warm Springs Apache sculptor, illustrator, and painter.
- Many of his sculptures featured Native American figures.
- He depicted this subject matter using abstract, modernist forms, developing a distinctive style that influenced many other artists.
- His well-known sculpture *Sacred Rain Arrow* was pictured on the State of Oklahoma license plate.

ID 883493d5

51 Mark for Review Medium Explanation ›

The student wants to describe the distinctive style of Houser's sculptures. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A sculptor, illustrator, and painter, Houser developed a distinctive style for portraying Native American figures.

(B) Houser's sculptures employ abstract, modernist forms to depict Native American figures.

(C) Many other artists have been influenced by the style of Houser's sculptures.

(D) The sculpture *Sacred Rain Arrow* is a well-known example of Houser's style.

While researching a topic, a student has taken the following notes:

- Ukiyo-e woodblock prints were a popular artistic form in Japan from the 1600s through the 1800s.
- Ukiyo-e prints were produced by teams of artisans that included artists, wood-carvers, printers, and publishers.
- Sōsaku-hanga was a popular Japanese printmaking movement that emerged in the early 1900s.
- Sōsaku-hanga prioritized individual artistic expression.
- An artist working in this style typically handled all aspects of print creation, from drawing to wood carving to printing.

ID 539abc58

52 Mark for Review Medium Explanation ›

The student wants to contrast ukiyo-e and sōsaku-hanga production methods. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) One notable distinction between ukiyo-e and sōsaku-hanga prints is sōsaku-hanga's emphasis on individual artistic expression.

(B) Ukiyo-e prints were popular in Japan from the 1600s through the 1800s, while sōsaku-hanga prints emerged later, in the early 1900s.

(C) Teams of artisans produced ukiyo-e prints, whereas individual artists typically handled all aspects of sōsaku-hanga printmaking themselves.

(D) In contrast to ukiyo-e prints, sōsaku-hanga prints were produced using methods such as drawing and wood carving.

While researching a topic, a student has taken the following notes:

- In the midst of the US Civil War, Susie Taylor escaped slavery and fled to Union-army-occupied St. Simons Island off the Georgia coast.
- She began working for an all-Black army regiment as a nurse and teacher.
- In 1902, she published a book about the time she spent with the regiment.
- Her book was the only Civil War memoir to be published by a Black woman.
- It is still available to readers in print and online.

ID 2bf05ae9

53 Mark for Review Medium Explanation ›

The student wants to emphasize the uniqueness of Taylor's accomplishment. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Taylor fled to St. Simons Island, which was then occupied by the Union army, for whom she began working.

(B) After escaping slavery, Taylor began working for an all-Black army regiment as a nurse and teacher.

(C) The book Taylor wrote about the time she spent with the regiment is still available to readers in print and online.

(D) Taylor was the only Black woman to publish a Civil War memoir.

While researching a topic, a student has taken the following notes:

- The melting rate of glaciers varies based on air temperature.
- In the warm summer months, massive glaciers on the coast of Greenland melt into the surrounding water.
- The melting glaciers contribute to rising sea levels each summer.
- Huge icebergs also break off Greenland's glaciers into the water and melt.
- In 2017, geoscientist Twila Moon found that the iceberg melting rate depends not on air temperature but on water temperature.
- Because water temperature is consistent, melting icebergs contribute to rising sea levels all year.

ID e876e395

54 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between glaciers and icebergs in Greenland. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Because icebergs break off Greenland's glaciers into the water, their melting rate depends on water temperature.

(B) Greenland's glaciers and icebergs both melt during the year, contributing to rising sea levels.

(C) Geoscientist Twila Moon found that the melting rate of Greenland's icebergs, unlike that of glaciers, does not depend on air temperature.

(D) Glaciers on the coast of Greenland melt during the warm summer months into the surrounding water, the temperature of which remains consistent throughout the year.

While researching a topic, a student has taken the following notes:

- Cities tend to have a wide range of flowering vegetation in parks, yards, and gardens.
- This vegetation provides a varied diet for honeybees, strengthening bees' immune systems.
- On average, 62.5 percent of bees in an urban area will survive a harsh winter.
- Rural areas are often dominated by monoculture crops such as corn or wheat.
- On average, only 40 percent of honeybees in a rural area will survive a harsh winter.

ID bb275f0d

55 Mark for Review Medium Explanation ›

The student wants to make and support a generalization about honeybees. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Cities tend to have a wider range of flowering vegetation than do rural areas, which are often dominated by monoculture crops.

(B) In urban areas, over 60 percent of honeybees, on average, will survive a harsh winter, whereas in rural areas, only 40 percent will.

(C) The strength of honeybees' immune systems depends on what the bees eat, and a varied diet is more available to bees in an urban area than to those in a rural area.

(D) Honeybees are more likely to thrive in cities than in rural areas because the varied diet available in urban areas strengthens the bees' immune systems.

While researching a topic, a student has taken the following notes:

- In 2018 researchers Adwait Deshpande, Shreejata Gupta, and Anindya Sinha were observing wild macaques in India's Bandipur National Park.
- They saw macaques calling out to and gesturing at humans who were eating or carrying food.
- They designed a study to find out if the macaques were intentionally communicating to try to persuade the humans to share their food.
- In the study trials, macaques frequently called out to and gestured at humans holding food.
- In the study trials, macaques called out to and gestured at empty-handed humans less frequently.

ID 6249b173

56 Mark for Review — Medium — Explanation ›

The student wants to present the study's results. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Macaques in the study called out to and gestured more frequently at humans holding food than at empty-handed humans.

(B) In 2018, researchers who had observed macaques in India's Bandipur National Park calling out to and gesturing at humans designed a study.

(C) The researchers hoped to find out if the macaques were intentionally communicating to try to persuade humans to share their food.

(D) The researchers studied how macaques behaved around both humans holding food and empty-handed humans.

While researching a topic, a student has taken the following notes:

- In 2013, archaeologists studied cat bone fragments they had found in the ruins of Quanhucun, a Chinese farming village.
- The fragments were estimated to be 5,300 years old.
- A chemical analysis of the fragments revealed that the cats had consumed large amounts of grain.
- The grain consumption is evidence that the Quanhucun cats may have been domesticated.

ID 63a4fa29

57 Mark for Review — Medium — Explanation ›

The student wants to present the Quanhucun study and its conclusions. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) As part of a 2013 study of cat domestication, a chemical analysis was conducted on cat bone fragments found in Quanhucun, China.

(B) A 2013 analysis of cat bone fragments found in Quanhucun, China, suggests that cats there may have been domesticated 5,300 years ago.

(C) In 2013, archaeologists studied what cats in Quanhucun, China, had eaten more than 5,000 years ago.

(D) Cat bone fragments estimated to be 5,300 years old were found in Quanhucun, China, in 2013.

While researching a topic, a student has taken the following notes:

- Novelist Willa Cather grew up in Nebraska and attended the University of Nebraska-Lincoln.
- Some of Cather's best-known novels are set in Nebraska.
- Two such novels are *O Pioneers!* (1913) and *My Ántonia* (1918).
- Cather's novels describe the experiences of immigrants who settled in the Great Plains.

ID 00460c13

58 Mark for Review Medium Explanation ›

The student wants to identify the setting of Cather's novel *My Ántonia.* Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) *My Ántonia* is set in Nebraska, where Cather grew up.

(B) Cather, author of *My Ántonia*, described the experiences of immigrants in her novels.

(C) Among Cather's best-known novels are *O Pioneers!* (1913) and *My Ántonia* (1918).

(D) Cather attended the University of Nebraska-Lincoln and set some of her novels in Nebraska.

While researching a topic, a student has taken the following notes:

- Muckrakers were journalists who sought to expose corruption in US institutions during the Progressive Era (1897–1920).
- Ida Tarbell was a muckraker who investigated the Standard Oil Company.
- She interviewed Standard Oil Company executives, oil industry workers, and public officials.
- She examined thousands of pages of the company's internal communications, including letters and financial records.
- Her book *The History of the Standard Oil Company* (1904) exposed the company's unfair business practices.

ID dd11e5ab

59 Mark for Review Medium Explanation ›

The student wants to emphasize the thoroughness of Ida Tarbell's investigation of the Standard Oil Company. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Ida Tarbell not only interviewed Standard Oil executives, oil industry workers, and public officials but also examined thousands of pages of the company's internal communications.

(B) Ida Tarbell, who investigated the Standard Oil Company, was a muckraker (a journalist who sought to expose corruption in US institutions during the Progressive Era, 1897–1920).

(C) As part of her investigation of the Standard Oil Company, muckraker Ida Tarbell conducted interviews.

(D) Published in 1904, muckraker Ida Tarbell's book *The History of the Standard Oil Company* exposed the company's unfair business practices.

While researching a topic, a student has taken the following notes:

- John Carver was one of the 41 signatories of the Mayflower Compact.
- The Mayflower Compact was a legal agreement among the pilgrims that immigrated to Plymouth Colony.
- It was created in 1620 to establish a common government.
- It states that the pilgrims who signed it wanted to "plant the first colony in the northern parts of Virginia" under King James.
- Carver became the first governor of Plymouth Colony.

ID 74149724

60 Mark for Review Medium Explanation ›

The student wants to specify the reason the Mayflower Compact was created. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Stating that its signatories wanted to "plant the first colony in the northern parts of Virginia," the Mayflower Compact was a legal agreement among the pilgrims that immigrated to Plymouth Colony.

(B) Created in 1620, the Mayflower Compact states that the pilgrims wanted to "plant the first colony in the northern parts of Virginia."

(C) The Mayflower Compact was created to establish a common government among the pilgrims that immigrated to Plymouth Colony.

(D) The Mayflower Compact had 41 signatories, including John Carver, the first governor of Plymouth Colony.

While researching a topic, a student has taken the following notes:

- Jordan Bennett is a Mi'Kmaq visual artist.
- The Mi'Kmaq are a First Nations people in North America.
- Bennett's paintings pay homage to traditional Mi'Kmaq craftsmanship and have been displayed in over 75 exhibitions.
- His 2017 exhibition *Wije'wi* was held at the Grenfell Art Gallery.
- His 2018 exhibition *Ketu'elmita'jik* was held at the Art Gallery of Nova Scotia.

ID f1d8550e

61 Mark for Review Medium Explanation ›

The student wants to emphasize the order in which two of Jordan Bennett's exhibitions were held. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Jordan Bennett's 2017 exhibition *Wije'wi* was followed a year later by his exhibition *Ketu'elmita'jik*.

(B) Jordan Bennett's paintings, some of which appeared in 2017 and 2018 exhibitions, pay homage to traditional Mi'Kmaq craftsmanship.

(C) Mi'Kmaq visual artist Jordan Bennett has displayed his work in over 75 exhibitions, including *Wije'wi* and *Ketu'elmita'jik*.

(D) Jordan Bennett's 2018 exhibition *Ketu'elmita'jik* was held at the Art Gallery of Nova Scotia; another was held at the Grenfell Art Gallery.

While researching a topic, a student has taken the following notes:

- Crown shyness is a phenomenon in which the tops (crowns) of neighboring trees grow close together but don't overlap.
- To explain how this happens, Australian forester M.R. Jacobs proposes the mutual abrasion theory.
- According to Jacobs's theory, when trees brush against one another, branches break off.
- Malaysian scholar Francis S.P. Ng posits the mutual shade avoidance theory.
- According to Ng's theory, when tree branches detect shade from nearby trees' branches, they stop growing.

ID ff8d2125

62 Mark for Review Medium Explanation ›

The student wants to compare the causes of crown shyness proposed in the two theories. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) While Jacobs proposes that crown shyness is caused by neighboring tree branches brushing against one another, Ng posits that it occurs when branches detect shade from nearby trees' branches.

(B) Both Jacobs and Ng have proposed theories to explain what causes crown shyness.

(C) Ng posits the mutual shade avoidance theory, whereas Jacobs proposes an alternative theory.

(D) Jacobs's mutual abrasion theory proposes that when neighboring trees brush against one another, branches break off, resulting in a phenomenon in which the tops of trees grow close together but don't overlap.

While researching a topic, a student has taken the following notes:

- Scientists have long sought to determine the origin of glass in Chile's Atacama Desert.
- A 2017 study concluded that ancient grass fires had melted the area's sandy soil into glass.
- In 2021, a different study revealed that the mineral signatures of glass samples were consistent with the mineral signatures of comet samples collected by NASA.
- That study concluded that the glass had formed as a result of a cometary explosion close to the desert's surface.

ID 23da9791

63 Mark for Review Medium Explanation ›

The student wants to describe how scientific understanding about the glass's origin has evolved. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Scientists have long sought to determine the origin of the glass, with one study concluding that it formed when ancient grass fires melted the area's sandy soil.

(B) Studies in 2017 and 2021 offered different explanations for the origin of the glass.

(C) Mineral signatures of glass samples are consistent with those of comet samples collected by NASA, according to new research.

(D) A 2017 study concluded that ancient grass fires had caused the glass's formation, but new research suggests that the glass formed as a result of a cometary explosion close to the desert's surface.

While researching a topic, a student has taken the following notes:

- Hina Hanta is an online archive curated by the Choctaw Nation of Oklahoma.
- Hina Hanta means “bright path” in Choctaw.
- It features images of cultural artifacts relevant to the history of the Choctaw people.
- It includes a fanner basket (*ufko tapushik* in Choctaw) made from cane.
- It includes a robe (*nita anchi*) made from bear fur.

ID 31ac4d2c

64 Mark for Review Medium Explanation ›

The student wants to specify the fanner basket’s name in Choctaw. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Hina Hanta archive features cultural artifacts, such as a fanner basket and a robe, that are relevant to the history of the Choctaw people.

(B) The cane fanner basket, which is included in the Hina Hanta online archive, is called an *ufko tapushik* in Choctaw.

(C) Hina Hanta, which means “bright path” in Choctaw, includes a fanner basket in its archive.

(D) The name of the online archive Hina Hanta means “bright path” in Choctaw.

While researching a topic, a student has taken the following notes:

- Marine biologist Camille Jazmin Gaynus studies coral reefs.
- Coral reefs are vital underwater ecosystems that provide habitats to 25% of all marine species.
- Reefs can include up to 8,000 species of fish, such as toadfish, seahorses, and clown triggerfish.
- The Amazon Reef is a coral reef in Brazil.
- It is one of the largest known reefs in the world.

ID 8432a140

65 Mark for Review Medium Explanation ›

The student wants to introduce the scientist and her field of study to a new audience. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Located in Brazil, the Amazon Reef is one of the largest known coral reefs in the world.

(B) Marine biologist Camille Jazmin Gaynus studies coral reefs, vital underwater ecosystems that provide homes to 25% of all marine species.

(C) Providing homes to 25% of all marine species, including up to 8,000 species of fish, coral reefs are vital underwater ecosystems and thus of great interest to marine biologists.

(D) As Camille Jazmin Gaynus knows well, coral reefs are vital underwater ecosystems, providing homes to thousands of species of fish.

While researching a topic, a student has taken the following notes:

- In 2022, University of Miami researchers discovered brine pools in the Gulf of Aqaba.
- A brine pool is an underwater lake that sits on the ocean floor.
- The water in brine pools is three to eight times saltier than the surrounding ocean.
- The extreme saltiness of this water makes it toxic to most sea life.
- Some forms of bacteria are able to survive in brine pools.

ID 94f48106

66 Mark for Review Medium Explanation ›

The student wants to explain why brine pools are toxic to most sea life. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Though brine pools are toxic to most sea life, some bacteria can survive there.

(B) The water in brine pools is toxic to most sea life because it is three to eight times saltier than the surrounding ocean.

(C) The brine pools in the Gulf of Aqaba are toxic to most sea life and were discovered by researchers in 2022.

(D) Brine pools are salty underwater lakes that sit on the ocean floor.

While researching a topic, a student has taken the following notes:

- Lighthouses send out crucial light signals to help ships and other watercraft navigate at night.
- Before automation, lighthouses were run by lighthouse keepers.
- Maria Younghans was the lighthouse keeper at Biloxi Light in Mississippi.
- She held this position from 1867 to 1918.
- Flora McNeil was the lighthouse keeper at Bridgeport Breakwater Light in Connecticut.
- She held this position from 1904 to 1920.

ID 146233fc

67 Mark for Review Medium Explanation ›

The student wants to emphasize the order in which the two lighthouse keepers began their careers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) From 1867 to 1918, the nighttime waters of Mississippi were more navigable thanks to lighthouse keepers Flora McNeil and Maria Younghans.

(B) Before automation, lighthouse keepers like Maria Younghans and Flora McNeil were crucial to ensuring safe navigation for watercraft.

(C) Flora McNeil began her career as a lighthouse keeper years after Maria Younghans did.

(D) Maria Younghans's career as a lighthouse keeper ended in 1918, whereas Flora McNeil's ended in 1920.

While researching a topic, a student has taken the following notes:

- Researchers Gwangsu Kim et al. sought to explore the relationship between the brain's ability to process natural sounds and its ability to process music.
- They used an artificial deep neural network (DNN) that models how the brain processes auditory information.
- The DNN had been trained to detect natural sounds (excluding music).
- Finding: The DNN spontaneously developed neurons that responded to music but not to other auditory stimuli.
- Conclusion: The brain's ability to process music may arise as a by-product of natural sound processing.

ID c3b854fa

68 Mark for Review Medium Explanation ›

The student wants to present the aim of the study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In their study, the researchers evaluated whether an artificial deep neural network could model how the brain processes auditory information.

(B) By training an artificial deep neural network, the researchers aimed to establish that the brain's ability to process natural sounds arises as a by-product of processing music.

(C) The researchers used an artificial deep neural network, which spontaneously developed neurons that responded to music but not to other auditory stimuli.

(D) Using an artificial deep neural network, the researchers sought to explore the relationship between the brain's ability to process natural sounds and its ability to process music.

While researching a topic, a student has taken the following notes:

- In 1971, experimental musician Pauline Oliveros created *Sonic Meditations*.
- *Sonic Meditations* is not music but rather a series of sound-based exercises called meditations.
- Each meditation consists of instructions for participants to make, imagine, listen to, or remember sounds.
- The instructions for Meditation V state, "walk so silently that the bottoms of your feet become ears."
- Those for Meditation XVIII state, "listen to a sound until you no longer recognize it."

ID 64e88c58

69 Mark for Review Medium Explanation ›

The student wants to provide an explanation and an example of Oliveros's *Sonic Meditations*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) *Sonic Meditations* is not music but rather a series of sound-based meditations that consist of instructions; Meditation XVIII, for instance, instructs participants to "listen to a sound until you no longer recognize it."

(B) In 1971, Oliveros created *Sonic Meditations*, a series of meditations that consist of instructions for participants to make, imagine, listen to, or remember sounds.

(C) "Walk so silently that the bottoms of your feet become ears" is one example of the instructions found in Oliveros's *Sonic Meditations*.

(D) While both meditations consist of instructions, Meditation XVIII instructs participants to "listen," whereas Meditation V instructs participants to "walk."

While researching a topic, a student has taken the following notes:

- Edmonia Lewis (1844–1907) was an African American and Mississauga Ojibwe sculptor.
- *Forever Free* (1867) is a marble sculpture by Lewis.
- It depicts a male figure and a female figure gazing upward.
- It commemorates the 1863 Emancipation Proclamation.
- The phrase "forever free" from the text of the Emancipation Proclamation is inscribed on the sculpture's base.
- Art historian Kirsten Buick describes the sculpture as a "celebration of liberty."

ID a1955620

70 Mark for Review Medium Explanation ›

The student wants to explain the sculpture's specific historical context. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) According to art historian Kirsten Buick, *Forever Free*, which depicts a male figure and a female figure gazing upward, is a "celebration of liberty."

(B) The base of Edmonia Lewis's 1867 marble sculpture is inscribed with a historically significant phrase: "forever free."

(C) Completed in 1867, Lewis's sculpture *Forever Free* commemorates the Emancipation Proclamation, which had been issued four years previously.

(D) *Forever Free* (1867) is a marble sculpture by Edmonia Lewis, an African American and Mississauga Ojibwe sculptor who lived from 1844 to 1907.

While researching a topic, a student has taken the following notes:

- *The Heartbeat of Wounded Knee: Native America from 1890 to the Present* is a history book by Ojibwe author David Treuer.
- In a review, a critic for *The Economist* noted that "Treuer's storytelling skills shine" and that the book is an "elegant handling of [a] complex narrative."
- A critic for *O, The Oprah Magazine* called it "a marvel of research and storytelling."
- A critic for the *Missoulian* dubbed it "a monumental achievement."

ID 14037904

71 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity in how critics responded to Treuer's book. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Treuer's book, which was widely reviewed, focuses on Native American history from 1890 to the present.

(B) Dubbed "a monumental achievement" by the *Missoulian*, Treuer's book documents over a century of Native American history.

(C) Critics praised Treuer's book for its compelling narrative, with *O, The Oprah Magazine* calling it "a marvel of research and storytelling" and *The Economist* likewise writing that "Treuer's storytelling skills shine" and that the book is an "elegant handling of [a] complex narrative."

(D) While the *Missoulian* focused on the book's broader achievement, *The Economist* zeroed in on Treuer's storytelling skills.

While researching a topic, a student has taken the following notes:

- Some animals have evolved to physically resemble another animal, plant, or object.
- This is known as mimicry.
- Crab spiders mimic the appearance of flowers.
- This helps crab spiders ambush their prey.
- Katydids mimic the appearance of leaves.
- This helps katydids hide from their predators.

ID 113f16da

72 Mark for Review Medium Explanation ›

The student wants to emphasize a difference in how katydids and crab spiders use mimicry. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Katydids mimic the appearance of flowers, and crab spiders mimic that of leaves.

(B) Katydids and crab spiders are two examples of animals that use mimicry.

(C) Unlike crab spiders, which use mimicry to ambush prey, katydids use mimicry to hide from predators.

(D) Animals that use mimicry have evolved to resemble another animal, plant, or object.

While researching a topic, a student has taken the following notes:

- In 2013, paleontology professor Hesham Sallam and his students from Mansoura University in Egypt made a discovery.
- The team found a partial dinosaur skeleton at a site in Egypt's Dakhla Oasis.
- The skeleton belonged to a dinosaur species that lived approximately 80 million years ago.
- The new species was named *Mansourasaurus* to recognize the team that discovered it.

ID f4b63a04

73 Mark for Review Medium Explanation ›

The student wants to explain the origin of the species' name. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) *Mansourasaurus,* a new species discovered in Egypt in 2013, lived approximately 80 million years ago.

(B) A partial dinosaur skeleton found in Egypt's Dakhla Oasis belonged to a species named *Mansourasaurus*.

(C) *Mansourasaurus,* a species that lived approximately 80 million years ago, was discovered in 2013 by Egyptian paleontologist Hesham Sallam and a team of university students.

(D) The new species was named *Mansourasaurus* to recognize the team that discovered it, a professor and students from Mansoura University.

While researching a topic, a student has taken the following notes:

- In 2019, Emily Shepard and colleagues in the UK and Germany studied the effect of wind on auks' success in landing at cliffside nesting sites.
- They found as wind conditions intensified, the birds needed more attempts in order to make a successful landing.
- When the wind was still, almost 100% of landing attempts were successful.
- In a strong breeze, approximately 40% of attempts were successful.
- In near-gale conditions, only around 20% of attempts were successful.

ID d6dec50e

74 Mark for Review Medium Explanation ›

The student wants to summarize the study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) For a 2019 study, researchers from the UK and Germany collected data on auks' attempts to land at cliffside nesting sites in different wind conditions.

(B) Emily Shepard and her colleagues wanted to know the extent to which wind affected auks' success in landing at cliffside nesting sites, so they conducted a study.

(C) Knowing that auks often need multiple attempts to land at their cliffside nesting sites, Emily Shepard studied the birds' success rate, which was only around 20% in some conditions.

(D) Emily Shepard's 2019 study of auks' success in landing at cliffside nesting sites showed that as wind conditions intensified, the birds' success rate decreased.

While researching a topic, a student has taken the following notes:

- In 2020, theater students at Radford and Virginia Tech chose an interactive, online format to present a play about woman suffrage activists.
- Their "Women and the Vote" website featured an interactive digital drawing of a Victorian-style house.
- Audiences were asked to focus on a room of their choice and select from that room an artifact related to the suffrage movement.
- One click took them to video clips, songs, artwork, and texts associated with the artifact.
- The play was popular with audiences because the format allowed them to control the experience.

ID 94cb8720

75 Mark for Review Medium Explanation ›

The student wants to explain an advantage of the "Women and the Vote" format. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) "Women and the Vote" featured a drawing of a Victorian-style house with several rooms, each containing suffrage artifacts.

(B) To access video clips, songs, artwork, and texts, audiences had to first click on an artifact.

(C) The "Women and the Vote" format appealed to audiences because it allowed them to control the experience.

(D) Using an interactive format, theater students at Radford and Virginia Tech created "Women and the Vote," a play about woman suffrage activists.

While researching a topic, a student has taken the following notes:

- Thailand's annual Songkran Water Festival is held each April.
- It marks Songkran, the traditional Thai New Year.
- People splash and spray each other for fun at the festival's community-wide water fights.
- In Bangkok, thousands gather along Silom Road for the city's largest water fight.
- In Chiang Mai, thousands gather at a historical monument called the Tha Phae Gate for the city's largest water fight.

ID 6de02dfa

76 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity in how people in Bangkok and Chiang Mai celebrate Songkran. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The largest water fight in Bangkok takes place along a city street, whereas the largest water fight in Chiang Mai takes place at a historical monument.

(B) In both Bangkok and Chiang Mai, thousands gather to celebrate Songkran with water fights.

(C) People in both Bangkok and Chiang Mai celebrate Songkran, but they don't do so in exactly the same way.

(D) Each April, people in Thailand celebrate Songkran, the traditional Thai New Year.

While researching a topic, a student has taken the following notes:

- *The Ramayana* is a Sanskrit epic poem from ancient India.
- In *The Ramayana*, the character Kaikeyi is often portrayed as a villain.
- *Kaikeyi* is a 2022 novel by Vaishnavi Patel.
- The novel is a retelling of the epic poem from Kaikeyi's point of view.
- It often portrays Kaikeyi as heroic.

ID c92ea686

77 Mark for Review Medium Explanation ›

The student wants to emphasize whose point of view the novel is told from. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) From the point of view of *The Ramayana*, the character Kaikeyi is often a villain.

(B) Vaishnavi Patel often portrays the character as heroic.

(C) *Kaikeyi* is a retelling of *The Ramayana* from the character Kaikeyi's point of view.

(D) *The Ramayana* is an epic poem that features the character Kaikeyi.

While researching a topic, a student has taken the following notes:

- Meteorites found on Earth are divided into two categories.
- A meteorite that was observed falling to Earth before being recovered is known as a meteorite fall.
- All other meteorites found on Earth are known as meteorite finds.
- There have been about 1,200 recorded meteorite falls.
- There have been over 60,000 recorded meteorite finds.

ID 1bb4aec8

78 Mark for Review — Medium — Explanation ›

The student wants to contrast the number of meteorite falls with the number of meteorite finds. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A meteorite that was observed falling to Earth before being recovered is known as a meteorite fall; all others are known as meteorite finds.

(B) Meteorites found on Earth are divided into two categories: meteorite falls and meteorite finds.

(C) There have been about 1,200 recorded meteorite falls, or meteorites observed falling to Earth.

(D) While there have been only about 1,200 recorded meteorite falls, there have been over 60,000 meteorite finds.

While researching a topic, a student has taken the following notes:

- Texture analysis and historical analysis are two approaches to art criticism.
- Texture analysis examines how surfaces are visually represented in an artwork.
- Such an analysis of Giorgione's *Youth Holding an Arrow* might consider how the painting's blended colors make the subject's skin appear smooth in texture.
- Historical analysis considers the historical context in which a work was created.
- Such an analysis of Diego Velázquez's *Las Meninas* might consider how the painting's depiction of the artist with King Philip IV symbolizes art's historical ties to power.

ID 85c0c0f0

79 Mark for Review — Medium — Explanation ›

The student wants to present historical analysis to an audience unfamiliar with the concept. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A texture analysis of *Youth Holding an Arrow* might consider how the painting's blended colors make the subject's skin appear smooth in texture.

(B) Texture analysis differs from historical analysis in that texture analysis examines how surfaces are visually represented in an artwork.

(C) An approach to art criticism, historical analysis considers the historical context in which a work was created.

(D) *Las Meninas*'s depiction of the artist with King Philip IV symbolizes art's historical ties to power.

While researching a topic, a student has taken the following notes:

- Soo Sunny Park is a Korean American artist who uses light as her primary medium of expression.
- She created her work *Unwoven Light* in 2013.
- *Unwoven Light* featured a chain-link fence fitted with iridescent plexiglass tiles.
- When light passed through the fence, colorful prisms formed.

ID 58281fc4

80 Mark for Review Medium Explanation ›

The student wants to describe *Unwoven Light* to an audience unfamiliar with Soo Sunny Park. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Park's 2013 installation *Unwoven Light*, which included a chain-link fence and iridescent tiles made from plexiglass, featured light as its primary medium of expression.

(B) Korean American light artist Soo Sunny Park created *Unwoven Light* in 2013.

(C) The chain-link fence in Soo Sunny Park's *Unwoven Light* was fitted with tiles made from iridescent plexiglass.

(D) In *Unwoven Light*, a 2013 work by Korean American artist Soo Sunny Park, light formed colorful prisms as it passed through a fence Park had fitted with iridescent tiles.

While researching a topic, a student has taken the following notes:

- Bharati Mukherjee was an Indian-born author of novels and short stories.
- She published the novel *The Holder of the World* in 1993.
- A central character in the novel is a woman living in twentieth-century United States.
- Another central character is a woman living in seventeenth-century India.

ID 17ec916d

81 Mark for Review Medium Explanation ›

The student wants to introduce the novel *The Holder of the World* to an audience already familiar with Bharati Mukherjee. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Bharati Mukherjee's settings include both twentieth-century United States and seventeenth-century India.

(B) In addition to her novel *The Holder of the World*, which was published in 1993, Indian-born author Bharati Mukherjee wrote other novels and short stories.

(C) Bharati Mukherjee's novel *The Holder of the World* centers around two women, one living in twentieth-century United States and the other in seventeenth-century India.

(D) *The Holder of the World* was not the only novel written by Indian-born author Bharati Mukherjee.

While researching a topic, a student has taken the following notes:

- In astronomy, the mass of stars can be described in units called solar masses.
- One solar mass is roughly equal to the mass of the Sun.
- The mass of the star Proxima Centauri is 0.122 solar masses.
- The mass of the star Sirius A is 2.063 solar masses.

ID d8aa8ba2

82 Mark for Review — Medium — Explanation ›

The student wants to emphasize the mass of Sirius A. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The mass of stars, like Proxima Centauri, can be described in units called solar masses.

(B) In astronomy, the mass of stars can be described in units called solar masses, and one solar mass is roughly equal to the mass of the Sun.

(C) The Sun is more massive than Proxima Centauri, which has a mass of 0.122 solar masses.

(D) With a mass of 2.063 solar masses, Sirius A is more massive than the Sun.

While researching a topic, a student has taken the following notes:

- Severo Ochoa discovered the enzyme PNPase in 1955.
- PNPase is involved in both the creation and degradation of mRNA.
- Ochoa incorrectly hypothesized that PNPase provides the genetic blueprints for mRNA.
- The discovery of PNPase proved critical to deciphering the human genetic code.
- Deciphering the genetic code has led to a better understanding of how genetic variations affect human health.

ID 24014c3f

83 Mark for Review — Medium — Explanation ›

The student wants to emphasize the significance of Ochoa's discovery. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Ochoa's 1955 discovery of PNPase proved critical to deciphering the human genetic code, leading to a better understanding of how genetic variations affect human health.

(B) Ochoa first discovered PNPase, an enzyme that he hypothesized contained the genetic blueprints for mRNA, in 1955.

(C) In 1955, Ochoa discovered the PNPase enzyme, which is involved in both the creation and degradation of mRNA.

(D) Though his discovery of PNPase was critical to deciphering the human genetic code, Ochoa incorrectly hypothesized that the enzyme was the source of mRNA's genetic blueprints.

While researching a topic, a student has taken the following notes:

- Pterosaurs were flying reptiles that existed millions of years ago.
- In a 2021 study, Anusuya Chinsamy-Turan analyzed fragments of pterosaur jawbones located in the Sahara Desert.
- She was initially unsure if the bones belonged to juvenile or adult pterosaurs.
- She used advanced microscope techniques to determine that the bones had few growth lines relative to the bones of fully grown pterosaurs.
- She concluded that the bones belonged to juveniles.

ID e2d97f10

84 Mark for Review Medium Explanation ›

The student wants to present the study and its findings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In 2021, Chinsamy-Turan studied pterosaur jawbones and was initially unsure if the bones belonged to juveniles or adults.

(B) Pterosaur jawbones located in the Sahara Desert were the focus of a 2021 study.

(C) In a 2021 study, Chinsamy-Turan used advanced microscope techniques to analyze the jawbones of pterosaurs, flying reptiles that existed millions of years ago.

(D) In a 2021 study, Chinsamy-Turan determined that pterosaur jawbones located in the Sahara Desert had few growth lines relative to the bones of fully grown pterosaurs and thus belonged to juveniles.

While researching a topic, a student has taken the following notes:

- Some US reformers sought to improve society in the 1800s by building utopias.
- A utopia is a community intended to represent a perfect society based on a specific set of principles.
- One such community was Brook Farm near Boston, Massachusetts.
- It was founded in 1841 by writer George Ripley.
- Ripley wrote in a letter that his goal for Brook Farm was “to guarantee the highest mental freedom, by providing all with labor, adapted to their tastes and talents, and securing to them the fruits of their industry.”

ID bce57278

85 Mark for Review Medium Explanation ›

The student wants to explain the goal of Brook Farm using a quotation from George Ripley. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In a letter, writer George Ripley explained his goal to “guarantee the highest mental freedom.”

(B) Utopias, such as Brook Farm, founded by George Ripley in 1841, were based on a specific set of principles intended to create a perfect society.

(C) Founded by George Ripley near Boston, Massachusetts, Brook Farm was part of a trend in the 1800s, when reformers in the United States built utopias.

(D) Established in 1841, Brook Farm was a utopian community created to “guarantee the highest mental freedom, by providing all with labor... [and] the fruits of their industry,” according to founder George Ripley.

While researching a topic, a student has taken the following notes:

- In 1999, astronomer Todd Henry studied the differences in surface temperature between the Sun and nearby stars.
- His team mapped all stars within 10 parsecs (approximately 200 trillion miles) of the Sun.
- The surface temperature of the Sun is around 9,800°F, which classifies it as a G star.
- 327 of the 357 stars in the study were classified as K or M stars, with surface temperatures under 8,900°F (cooler than the Sun).
- 11 of the 357 stars in the study were classified as A or F stars, with surface temperatures greater than 10,300°F (hotter than the Sun).

ID 2b89bfe5

86 Mark for Review — Medium — Explanation ›

The student wants to emphasize how hot the Sun is relative to nearby stars. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) At around 9,800°F, which classifies it as a G star, the Sun is hotter than most but not all of the stars within 10 parsecs of it.

(B) Astronomer Todd Henry determined that the Sun, at around 9,800°F, is a G star, and several other stars within a 10-parsec range are A or F stars.

(C) Of the 357 stars within ten parsecs of the Sun, 327 are classified as K or M stars, with surface temperatures under 8,900°F.

(D) While most of the stars within 10 parsecs of the Sun are classified as K, M, A, or F stars, the Sun is classified as a G star due to its surface temperature of 9,800°F.

While researching a topic, a student has taken the following notes:

- Elizabeth Catlett's sculpture *Recognition* (1970) shows two African American figures with rounded, indistinct features.
- The figures reach out to each other in a pose that symbolizes a close, supportive relationship.
- Her sculpture *Students Aspire* (1978) shows two African American figures with sharply defined features.
- The figures hold an equal sign above their heads with one hand and embrace each other with the other hand.
- This pose symbolizes their support for each other in the pursuit of equality.

ID 7572131d

87 Mark for Review — Medium — Explanation ›

The student wants to emphasize a similarity between the two sculptures. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Catlett's *Students Aspire* depicts two figures supporting each other in the pursuit of equality.

(B) *Recognition* and *Students Aspire* both show African American figures in poses that symbolize supportive relationships.

(C) Catlett completed *Recognition* in 1970 and *Students Aspire* in 1978.

(D) The figures in *Recognition* have features that are rounded and indistinct, while the figures in *Students Aspire* have sharply defined features.

While researching a topic, a student has taken the following notes:

- In 1851, German American artist Emanuel Leutze painted *Washington Crossing the Delaware*.
- His huge painting (149 × 255 inches) depicts the first US president crossing a river with soldiers in the Revolutionary War.
- In 2019, Cree artist Kent Monkman painted *mistikôsiwak (Wooden Boat People): Resurgence of the People*.
- Monkman's huge painting (132 × 264 inches) was inspired by Leutze's.
- It portrays Indigenous people in a boat rescuing refugees.

ID 54c1b2dd

88 Mark for Review — Medium — Explanation ›

The student wants to emphasize a similarity between the two paintings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Monkman, a Cree artist, finished his painting in 2019; Leutze, a German American artist, completed his in 1851.

(B) Although Monkman's painting was inspired by Leutze's, the people and actions the two paintings portray are very different.

(C) Leutze's and Monkman's paintings are both huge, measuring 149 × 255 inches and 132 × 264 inches, respectively.

(D) Leutze's painting depicts Revolutionary War soldiers, while Monkman's depicts Indigenous people and refugees.

While researching a topic, a student has taken the following notes:

- In the early 1960s, the US had a strict national-origins quota system for immigrants.
- The number of new immigrants allowed from a country each year was based on how many people from that country lived in the US in 1890.
- This system favored immigrants from northern Europe.
- Almost 70% of slots were reserved for immigrants from Great Britain, Ireland, and Germany.
- The 1965 Hart-Celler Act abolished the national-origins quota system.

ID 5d3177aa

89 Mark for Review — Medium — Explanation ›

The student wants to present the significance of the Hart-Celler Act to an audience unfamiliar with the history of US immigration. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Almost 70% of slots were reserved for immigrants from Great Britain, Ireland, and Germany at the time the Hart-Celler Act was proposed.

(B) Prior to the Hart-Celler Act, new immigration quotas were based on how many people from each country lived in the US in 1890.

(C) The quota system in place in the early 1960s was abolished by the 1965 Hart-Celler Act.

(D) The 1965 Hart-Celler Act abolished the national-origins quota system, which favored immigrants from northern Europe.

While researching a topic, a student has taken the following notes:

- Roughly 96% of Australia's estimated 200,000 animal species are invertebrates.
- Invertebrates of the order Hymenoptera, which consists of sawflies, wasps, bees, and ants, are estimated to total 14,800 species in Australia.
- Invertebrates of the order Coleoptera, which consists of beetles and weevils, are estimated to total 28,200 species in Australia.
- Some of these invertebrates' populations are threatened by invasive bird and fish species.

ID 7c9d0e38

90 Mark for Review — Medium — Explanation ›

The student wants to emphasize the different orders in which Australia's invertebrate animals are classified. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In Australia, 28,200 species are estimated to be beetles and weevils, both classified as invertebrates of the order Coleoptera.

(B) Among Australia's many invertebrates, sawflies, wasps, bees, and ants belong to the order Hymenoptera, while beetles and weevils belong to the order Coleoptera.

(C) Many sawflies, wasps, bees, and ants of the order Hymenoptera are threatened by some of Australia's invasive bird and fish species.

(D) The order Hymenoptera is estimated to make up 14,800 of Australia's 200,000 animal species.

While researching a topic, a student has taken the following notes:

- A wok is a cooking pan that originated in China during the Han dynasty (206 BCE–220 CE).
- The wok's round, wide base helps to cook food evenly.
- The wok's high, angled sides help to contain oil splatters.
- Grace Young is a cook and culinary historian.
- Her book *The Breath of a Wok* (2004) traces the history of the wok.

ID ff3865b3

91 Mark for Review — Medium — Explanation ›

The student wants to describe the wok's shape. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Grace Young's 2004 book, *The Breath of a Wok*, traces the history of the cooking pan.

(B) Able to cook food evenly and contain oil splatters, the wok is the subject of Grace Young's 2004 book.

(C) A wok is a cooking pan with a round, wide base and high, angled sides.

(D) The design of a wok, a type of cooking pan that originated in China during the Han dynasty, helps the pan cook food evenly and contain oil splatters.

While researching a topic, a student has taken the following notes:

- Pointillism is a painting technique in which small, distinct dots of color are applied in patterns to form an image.
- Betty Acquah is an artist from Ghana who uses pointillism in her work.
- "By extending dabs of color in the subject matter into the background and vice-versa, an illusion of movement is created," she says about pointillism.
- Her work often portrays Ghanaian women, whom she sees as the "unsung heroines of the Ghanaian Republic."
- Her pointillist painting "Exquisite" (2016) features five dancing women twirling their skirts.

ID 35507eba

92 Mark for Review Medium Explanation ›

The student wants to provide a quotation from Acquah that explains why she used pointillism in "Exquisite." Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In painting "Exquisite," Acquah applied pointillism to create what she called an "illusion of movement" within the painting's five dancing women and their twirling skirts.

(B) Pointillism, the technique used in Acquah's "Exquisite," involves the application of small, distinct dots of color.

(C) In "Exquisite," Acquah uses a technique that she says involves "extending dabs of color in the subject matter into the background and vice-versa."

(D) "Exquisite" portrays Acquah's fellow Ghanaian women as she sees them: the "unsung heroes of the Ghanaian Republic."

While researching a topic, a student has taken the following notes:

- Gaspar Enriquez is an artist.
- He specializes in portraits of Mexican Americans.
- A portrait is an artistic representation of a person.
- Enriquez completed a painting of the sculptor Luis Jimenez in 2003.
- He completed a drawing of the writer Rudolfo Anaya in 2016.

ID f1631638

93 Mark for Review Medium Explanation ›

The student wants to emphasize a difference between the two portraits. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The portraits, or artistic representations, of Luis Jimenez and Rudolfo Anaya were both completed by Enriquez in the early 2000s.

(B) Enriquez has completed portraits of numerous Mexican Americans, including sculptor Luis Jimenez and writer Rudolfo Anaya.

(C) While both are by Enriquez, the 2003 portrait of Luis Jimenez is a painting, and the 2016 portrait of Rudolfo Anaya is a drawing.

(D) Luis Jimenez was a Mexican American sculptor, and Rudolfo Anaya was a Mexican American writer.

While researching a topic, a student has taken the following notes:

- The popular wood-wide web theory posits that trees can communicate and exchange resources with one another via common mycorrhizal networks (CMNs) of fungi.
- Ecologist Dr. Suzanne Simard first suggested this theory in 1997.
- She described trees as "super-cooperators."
- In the 2022 study "The Decay of the Wood-Wide Web?," mycologist Dr. Justine Karst and colleagues evaluated dozens of CMN studies.
- They write that CMNs "have captured the interest of broad audiences. We are concerned, however, that recent claims about CMNs in forests are disconnected from evidence."

ID fdd9a360

94 Mark for Review Medium Explanation ›

The student wants to use a quotation to emphasize a potential problem with the wood-wide web theory. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Describing trees as "super-cooperators," Simard first suggested that trees can exchange resources with one another in 1997.

(B) In "The Decay of the Wood-Wide Web?," Karst and colleagues note that common mycorrhizal networks "have captured the interest of broad audiences."

(C) After evaluating dozens of CMN studies, Karst and colleagues expressed concern that recent claims about common mycorrhizal networks are "disconnected from evidence."

(D) Despite the concerns expressed in the 2022 study "The Decay of the Wood-Wide Web?," the wood-wide web theory remains popular.

While researching a topic, a student has taken the following notes:

- Wool is a natural—and economically important—fiber that is obtained from animals like sheep.
- Australia is a leading producer of wool.
- The thickness of wool fibers varies across sheep breeds.
- Merino sheep produce fine wool that is used for apparel.
- Rambouillet sheep produce fine wool that is used for apparel.
- Romney sheep produce thick wool that is used for rugs and blankets.

ID 1b94a80a

95 Mark for Review Medium Explanation ›

The student wants to emphasize how Romney wool differs from Merino and Rambouillet wool. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Romney wool is just one of the many kinds of wools, each originating from a different breed of sheep.

(B) Sheep wool varies from breed to breed, so Romney wool will be different than other kinds of wool.

(C) The fine wool produced by Merino and Rambouillet sheep is used for apparel, whereas the thicker wool of Romney sheep is used in rugs and blankets.

(D) Wool is an economically important fiber—especially in Australia—that can be used to make apparel or even rugs and blankets.

While researching a topic, a student has taken the following notes:

- Shaun Tan is an Australian author.
- In 2008, he published *Tales from Outer Suburbia*, a book of fifteen short stories.
- The stories describe surreal events occurring in otherwise ordinary suburban neighborhoods.
- In 2018, he published *Tales from the Inner City*, a book of twenty-five short stories.
- The stories describe surreal events occurring in otherwise ordinary urban settings.

ID 88308a39

96 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between the two books by Shaun Tan. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Shaun Tan's book *Tales from Outer Suburbia*, which describes surreal events occurring in otherwise ordinary places, contains fewer short stories than *Tales from the Inner City* does.

(B) *Tales from Outer Suburbia* was published in 2008, and *Tales from the Inner City* was published in 2018.

(C) Unlike *Tales from the Inner City*, Shaun Tan's book *Tales from Outer Suburbia* is set in suburban neighborhoods.

(D) Shaun Tan's books *Tales from Outer Suburbia* and *Tales from the Inner City* both describe surreal events occurring in otherwise ordinary places.

While researching a topic, a student has taken the following notes:

- Tibetan mastiffs are large dogs native to the Himalayas.
- A mutation in their EPAS1 gene prevents excess hemoglobin production.
- A mutation in their HBB gene boosts hemoglobin's oxygen-carrying ability.
- These mutations enable the dogs to withstand hypoxic (low-oxygen) conditions at high altitudes.
- In a 2016 study, Zhen Wang and colleagues noted that Tibetan wolves' DNA has the same EPAS1 and HBB mutations.
- Wang and colleagues determined that the dogs first acquired these mutations by interbreeding with Tibetan wolves around 24,000 years ago.

ID a0da8114

97 Mark for Review Medium Explanation ›

The student wants to present the conclusion of Zhen Wang and colleagues' 2016 study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Like Tibetan mastiffs, Tibetan wolves can withstand hypoxic conditions at high altitudes.

(B) Both Tibetan mastiffs and Tibetan wolves have mutations in their EPAS1 and HBB genes, which prevent excess hemoglobin production and boost hemoglobin's oxygen-carrying ability, respectively.

(C) In addition to preventing excess hemoglobin production, a mutation in Tibetan mastiffs' HBB gene boosts hemoglobin's oxygen-carrying ability.

(D) By interbreeding with Tibetan wolves around 24,000 years ago, Tibetan mastiffs acquired the genetic mutations that enable them to withstand hypoxic conditions.

While researching a topic, a student has taken the following notes:

- Mexican tetras are a fish species with two distinct populations.
- Surface-dwelling tetras live on the surface and are able to see.
- Cave-dwelling tetras live in total darkness and have lost the ability to see.
- Cave-dwelling tetras have asymmetrical skulls with more sensory receptors on one side than the other.
- These receptors help cave-dwelling tetras navigate in darkness.

ID 56cad44a

98 Mark for Review — Medium — Explanation ›

The student wants to emphasize a difference between surface-dwelling and cave-dwelling tetras. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Surface-dwelling and cave-dwelling tetras may belong to the same species, but they are quite different.

(B) Cave-dwelling tetras can no longer see but use sensory receptors on their skulls to navigate.

(C) Mexican tetras are a fish species with two distinct populations: surface-dwelling tetras and cave-dwelling tetras.

(D) Surface-dwelling tetras can see, whereas cave-dwelling tetras cannot.

While researching a topic, a student has taken the following notes:

- A thermal inversion is a phenomenon where a layer of atmosphere is warmer than the layer beneath it.
- In 2022, a team of researchers studied the presence of thermal inversions in twenty-five gas giants.
- Gas giants are planets largely composed of helium and hydrogen.
- The team found that gas giants featuring a thermal inversion were also likely to contain heat-absorbing metals.
- One explanation for this relationship is that these metals may reside in a planet's upper atmosphere, where their absorbed heat causes an increase in temperature.

ID 10cd0327

99 Mark for Review — Medium — Explanation ›

The student wants to present the study's findings to an audience already familiar with thermal inversions. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Heat-absorbing metals may reside in a planet's upper atmosphere.

(B) The team studied thermal inversions in twenty-five gas giants, which are largely composed of helium and hydrogen.

(C) Researchers found that gas giants featuring a thermal inversion were likely to contain heat-absorbing metals, which may reside in the planets' upper atmospheres.

(D) Gas giants were likely to contain heat-absorbing metals when they featured a layer of atmosphere warmer than the layer beneath it, researchers found; this phenomenon is known as a thermal inversion.

While researching a topic, a student has taken the following notes:

- When medical students mention their patients on social media, they may violate patient confidentiality.
- Terry Kind led a study to determine how many medical schools have student policies that mention social media use.
- Kind and her team reviewed 132 medical school websites, examining publicly available student policies.
- Only thirteen medical schools had guidelines that explicitly mention social media, and only five defined what constitutes acceptable social media use.

ID dede8260

100 Mark for Review Medium Explanation ›

The student wants to emphasize the study's methodology. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The student policies of 132 medical schools can be found online, according to research by Terry Kind.

(B) To find out how many medical schools have guidelines about student social media use, Terry Kind and her team examined the student policies of 132 medical schools.

(C) Out of 132 medical schools, only thirteen had student policies that mentioned social media, and only five specified what use was acceptable.

(D) Terry Kind and her team wanted to know how many medical schools have student social media policies in place about protecting patient confidentiality.

While researching a topic, a student has taken the following notes:

- A marathon is a long-distance running race that is 26.2 miles long.
- An ultramarathon is a long-distance running race of more than 26.2 miles.
- The Kepler Challenge is a one-day, 37.3-mile ultramarathon in New Zealand.
- The Spreelauf is a six-day, 261-mile ultramarathon in Germany.

ID 81315093

101 Mark for Review Medium Explanation ›

The student wants to make a generalization about ultramarathons. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Examples of ultramarathons include the 37.3-mile Kepler Challenge in New Zealand and the 261-mile Spreelauf in Germany.

(B) A marathon is 26.2 miles long, but the Spreelauf ultramarathon, at 261 miles, is far longer.

(C) Ultramarathons range widely in length, from a few dozen miles to a few hundred.

(D) While the Kepler Challenge is a one-day ultramarathon, the Spreelauf is a six-day ultramarathon.

While researching a topic, a student has taken the following notes:

- From Earth, all the meteors in a meteor shower appear to originate from a single spot in the sky.
- This spot is called the meteor shower's radiant.
- The Perseid meteor shower is visible in the northern hemisphere in July and August.
- Like many meteor showers, it is named for the location of its radiant.
- Its radiant is located within the constellation Perseus.

ID 49fe306b

102 Mark for Review Medium Explanation ›

The student wants to explain the origin of the Perseid meteor shower's name. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Perseid meteor shower is named for the constellation Perseus, the location of the meteor shower's radiant.

(B) A meteor shower's name may be linked to a single spot in the sky.

(C) The Perseid meteor shower, which has a radiant, is visible in the northern hemisphere in July and August.

(D) From Earth, all the meteors in a meteor shower appear to originate from a radiant, such as the one within Perseus.

While researching a topic, a student has taken the following notes:

- Physicist Muluneh Abebe was working on a garment suited for both warm and cold conditions.
- He analyzed the emissivity, or ability to emit heat, of the materials he planned to use.
- Abebe found that reflective metal fibers emitted almost no heat and had an emissivity of 0.02.
- He found that silicon carbide fibers absorbed large amounts of heat and had an emissivity of 0.74.
- The amount of heat a material absorbs is equal to the amount of heat it emits.

ID 5888712f

103 Mark for Review Medium Explanation ›

The student wants to contrast the emissivity of reflective metal fibers with that of silicon carbide fibers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The ability of reflective metal fibers and silicon carbide fibers to emit heat was determined by an analysis of each material's emissivity.

(B) The amount of heat a material absorbs is equal to the amount it emits, as evidenced in Abebe's analyses.

(C) Though the reflective metal fibers and silicon carbide fibers had different rates of emissivity, Abebe planned to use both in a garment.

(D) Whereas the reflective metal fibers had an emissivity of just 0.02, the silicon carbide fibers absorbed large amounts of heat, resulting in an emissivity of 0.74.

While researching a topic, a student has taken the following notes:

- The Haudenosaunee Confederacy is a nearly 1,000-year-old alliance of six Native nations in the northeastern US.
- The members are bound by a centuries-old agreement known as the Great Law of Peace.
- Historian Bruce Johansen is one of several scholars who believe that the principles of the Great Law of Peace influenced the US Constitution.
- This theory is called the influence theory.
- Johansen cites the fact that Benjamin Franklin and Thomas Jefferson both studied the Haudenosaunee Confederacy.

ID 04397a63

104 Mark for Review Medium Explanation ›

The student wants to present the influence theory to an audience unfamiliar with the Haudenosaunee Confederacy. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Historian Bruce Johansen believes that the Great Law of Peace was very influential.

(B) The influence theory is supported by the fact that Benjamin Franklin and Thomas Jefferson both studied the Haudenosaunee Confederacy.

(C) The influence theory holds that the principles of the Great Law of Peace, a centuries-old agreement binding six Native nations in the northeastern US, influenced the US Constitution.

(D) Native people, including the members of the Haudenosaunee Confederacy, influenced the founding of the US in many different ways.

While researching a topic, a student has taken the following notes:

- Claude McKay (1889–1948) was a Jamaican American writer.
- *Songs of Jamaica* (1912) and *Constab Ballads* (1912) are two acclaimed poetry collections that McKay published while living in Jamaica.
- McKay moved to Harlem in New York City in 1914.
- He is best known as a poet and novelist of the Harlem Renaissance, a literary and cultural movement of the 1920s and 1930s.
- His most famous works include the poetry collection *Harlem Shadows* (1922) and the novel *Home to Harlem* (1928).

ID 164a32e7

105 Mark for Review Medium Explanation ›

The student wants to emphasize Claude McKay's accomplishments before moving to Harlem. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Jamaican American writer Claude McKay is the author of works such as *Songs of Jamaica* (1912), *Constab Ballads* (1912), *Harlem Shadows* (1922), and *Home to Harlem* (1928).

(B) Although he is best known as a Harlem Renaissance writer, Claude McKay had published two acclaimed poetry collections in 1912 while living in Jamaica: *Songs of Jamaica* and *Constab Ballads*.

(C) In 1914, Claude McKay moved to Harlem, where he would become known as a poet and novelist of the Harlem Renaissance (a literary and cultural movement of the 1920s and 1930s).

(D) Before moving to Harlem, Claude McKay—author of the poetry collection *Harlem Shadows* (1922) and the novel *Home to Harlem* (1928)—lived in Jamaica.

While researching a topic, a student has taken the following notes:

- Archaeologist Dr. Sada Mire founded the Horn Heritage Foundation to preserve the cultural history of regions in the Horn of Africa.
- Horn Heritage has overseen a preservation project to create 3D digital scans of ancient rock art in Somaliland.
- Paintings found at the Laas Geel caves are included in the scans.
- The Laas Geel paintings feature human figures and animals.
- Paintings found at the Dhagah Nabi Galay caves are included in the scans.
- The Dhagah Nabi Galay caves feature what are thought to be the earliest examples of writing in East Africa.

ID fbffb352

106 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between the Laas Geel paintings and the Dhagah Nabi Galay paintings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The earliest examples of writing in East Africa are thought to be featured in the paintings at the Dhagah Nabi Galay caves in Somaliland.

(B) The paintings at the Dhagah Nabi Galay caves feature examples of writing, while those at the Laas Geel caves feature humans and animals.

(C) In Somaliland, the paintings in the Laas Geel caves feature human figures and animals.

(D) The Laas Geel paintings and the Dhagah Nabi Galay paintings are both examples of ancient rock art found in Somaliland.

While researching a topic, a student has taken the following notes:

- Mary Kang is a Korean American portrait photographer.
- She is based in New York City and in Austin, Texas.
- One of Kang's photographs features artist Dominique Fung.
- In the portrait, Fung is seated on the floor.
- Five of Fung's paintings are resting against the wall behind her.

ID 804928b6

107 Mark for Review Medium Explanation ›

The student wants to describe where Fung is in the photograph to an audience already familiar with Kang and Fung. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Dominique Fung is in a photograph by Mary Kang, a portrait photographer based in New York City and Austin, Texas.

(B) Mary Kang is a photographer based in both New York City and Austin, Texas.

(C) Five paintings by artist Dominique Fung can be seen in the background of Mary Kang's photograph.

(D) In Kang's portrait of her, Fung is seated on the floor, with five of her paintings resting against the wall behind her.

While researching a topic, a student has taken the following notes:

- Pineapple is a fruit that contains ascorbic acid, an essential nutrient for humans.
- Every 100 grams (g) of pineapple contains 48 milligrams (mg) of ascorbic acid.
- Many animals can make ascorbic acid in their bodies, but humans cannot.
- Humans must get ascorbic acid from foods, including fruits and vegetables.
- Ascorbic acid is also known as vitamin C.

ID 3c925481

108 Mark for Review — Medium — Explanation ›

The student wants to provide an example of a fruit that contains vitamin C. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Humans cannot make ascorbic acid in their bodies, but they can get it from foods, such as fruits, for example.

(B) Vitamin C, also known as ascorbic acid, can be found in pineapple as well as other fruits.

(C) Since humans cannot make vitamin C in their bodies, they must get it from food.

(D) Many animals can make ascorbic acid, which is also known as vitamin C, in their bodies, but humans cannot.

While researching a topic, a student has taken the following notes:

- Generally, an object will heat up when twisted.
- The twisting of an object is known as torsion.
- A 2019 study led by Zunfeng Liu and Ray Baughman tested the torsional heating of various fibers.
- When a 3-millimeter-thick sample of thermoplastic polyurethane (TPU) fiber was twisted, its average surface temperature increased by 6°C.
- When a 4-millimeter-thick sample of styrene-ethylene-butylene-styrene (SEBS) rubber fiber was twisted, its average surface temperature increased by 3.5°C.

ID 25755def

109 Mark for Review — Medium — Explanation ›

The student wants to contrast the two samples. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) When the fibers were twisted as part of the 2019 study, the surface temperature of both samples increased.

(B) In 2019, researchers studied the effect of torsional heating on various fibers, including samples of SEBS rubber and TPU.

(C) Twisting an object will generally cause its temperature to increase, a process known as torsional heating.

(D) The SEBS rubber sample used in the 2019 study was thicker than the TPU sample.

While researching a topic, a student has taken the following notes:

- In 1965, Yale University historians claimed that a world map called the Vinland Map was drawn in the fifteenth century.
- Since that time, the map's age has been the subject of debate.
- In 2021, researchers conducted a study to analyze the elemental composition of the map's ink.
- Their analysis revealed that the ink contains a titanium compound not used in inks until the 1920s.
- The researchers concluded that the map was drawn in the twentieth century.

ID 4223d4a6

110 Mark for Review Medium Explanation ›

The student wants to present the study and its findings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Given the debate about the Vinland Map's age, researchers in 2021 conducted a study to analyze the elemental composition of the map's ink.

(B) A 2021 study of the Vinland Map's ink revealed that it contains a titanium compound not used in inks until the 1920s, indicating that the map was drawn in the twentieth century.

(C) The Vinland Map, believed by some to have been drawn in the fifteenth century, was the focus of a 2021 study.

(D) Aware that a certain titanium compound was not used in inks until the 1920s, researchers in 2021 studied the elemental composition of the Vinland Map's ink.

While researching a topic, a student has taken the following notes:

- Architect Julian Abele studied Gregorian and neo-Gothic architecture in Europe.
- Abele worked for an architecture firm that was hired in 1924 to design buildings for Duke University's new campus.
- Most of the buildings on Duke's campus were designed in the Gregorian or neo-Gothic architectural styles.
- At the time, Abele was not formally credited with designing the buildings.
- Based on the buildings' architectural styles, historians believe Abele designed most of the campus buildings.

ID 7aac173e

111 Mark for Review Medium Explanation ›

The student wants to specify why historians believe Abele designed most of Duke's campus buildings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Given that most of the buildings on Duke's campus feature architectural styles that Abele had studied in Europe, historians believe Abele is the one who designed them.

(B) Though Abele wasn't formally credited at the time, historians believe he designed most of the buildings on Duke's campus.

(C) Most of Duke's campus buildings, which were designed by a firm Abele worked for, were designed in the Gregorian and neo-Gothic architectural styles.

(D) Abele, an architect who studied Gregorian and neo-Gothic architecture in Europe, is believed to have designed most of the buildings on Duke's campus.

While researching a topic, a student has taken the following notes:

- In the early 1900s, suffragists organized marches for women's voting rights.
- Suffragists in the United Kingdom marched from Edinburgh to London.
- This march began on October 12, 1912, and ended on November 16, 1912.
- Suffragists in the United States marched from New York City to Albany, New York.
- This march began on December 16, 1912, and ended on December 28, 1912.

ID 72ae9bca

112 Mark for Review Medium Explanation ›

The student wants to emphasize the order in which the two marches occurred. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) After suffragists in the UK marched from Edinburgh to London, suffragists in the US marched from New York City to Albany, New York.

(B) In the early 1900s, suffragists in the UK and the US marched for women's voting rights.

(C) A march from New York City to Albany, New York, was followed by one that began in Edinburgh and ended in London.

(D) From October 12 to November 16, 1912, suffragists in the UK marched from Edinburgh to London.

While researching a topic, a student has taken the following notes:

- Tecozautla is a municipality in the state of Hidalgo, Mexico.
- Municipalities are governmental regions responsible for providing many public services to their residents.
- One service they provide is street lighting.
- Tecozautla covers an area of roughly 535 km^2.
- Hidalgo is divided into 84 municipalities.

ID 45eaf7fb

113 Mark for Review Medium Explanation ›

The student wants to emphasize the size of Tecozautla. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The municipality of Tecozautla in Hidalgo, Mexico, covers an area of roughly 535 km^2.

(B) Providing street lighting is just one example of the public services that municipalities provide.

(C) Tecozautla is one of 84 governmental regions, known as municipalities, across Hidalgo.

(D) Tecozautla—a governmental region in the state of Hidalgo, Mexico—provides many public services to its residents.

While researching a topic, a student has taken the following notes:

- Cecilia Vicuña is a multidisciplinary artist.
- In 1971, her first solo art exhibition, *Pinturas, poemas y explicaciones*, was shown at the Museo Nacional de Bellas Artes in Santiago, Chile.
- Her poetry collection *Precario/Precarious* was published in 1983 by Tanam Press.
- Her poetry collection *Instan* was published in 2002 by Kelsey St. Press.
- She lives part time in Chile, where she was born, and part time in New York.

ID a1ca7ec4

114 Mark for Review Medium Explanation ›

The student wants to introduce the artist's 1983 poetry collection. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Before she published the books *Precario/Precarious* (1983) and *Instan* (2002), Cecilia Vicuña exhibited visual art at the Museo Nacional de Bellas Artes in Santiago, Chile.

(B) Cecilia Vicuña is a true multidisciplinary artist whose works include numerous poetry collections and visual art exhibitions.

(C) Published in 1983 by Tanam Press, *Precario/Precarious* is a collection of poetry by the multidisciplinary artist Cecilia Vicuña.

(D) In 1971, Cecilia Vicuña exhibited her first solo art exhibition, *Pinturas, poemas y explicaciones*, in Chile, her country of birth.

While researching a topic, a student has taken the following notes:

- 1926: The US Congress gave the US Commerce Department authority to regulate safety standards in the fledgling commercial airline industry.
- 1938: Congress transferred this authority to a new independent government agency called the Civil Aeronautics Authority (CAA).
- 1958: Congress transferred authority from the CAA to the newly established Federal Aviation Administration (FAA).
- The FAA's first administrator, Elwood R. Quesada, updated safety standards and technologies for the era of commercial jets.
- The FAA remains the regulatory authority for airline safety.

ID b98b8f64

115 Mark for Review Medium Explanation ›

The student wants to specify the order in which different government entities were given the authority to regulate airline safety in the US. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The CAA had the authority to regulate safety for US airlines from 1938 until 1958, at which point authority was transferred to the US Commerce Department by Elwood R. Quesada.

(B) The FAA, CAA, and the US Commerce Department all had the authority to regulate US airline safety, but they possessed this authority at different times.

(C) The FAA has regulated airline safety since it was established by the US Congress in 1958.

(D) The authority to regulate US airline safety transferred from the US Commerce Department to the CAA in 1938, then from the CAA to the FAA in 1958.

While researching a topic, a student has taken the following notes:

- By interlocking their bodies, ants can form bridges to help fellow ants cross gaps.
- In 2020, Yasemin Ozkan-Aydin was inspired by ant behavior to design collaborative quadruped robots.
- Over the course of a year, she designed, built, tested, and refined her robots.
- Each robot is programmed to send a signal to another robot upon encountering a gap in a path.
- The signaled robot connects to the back of the signaler robot via magnetic sensors and pushes it across the gap.

ID 4c26f18a

116 Mark for Review — Medium — Explanation ›

The student wants to begin a narrative about the creation of the robots. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) When one of Yasemin Ozkan-Aydin's robots encounters a gap in its path, it sends a signal to another robot; the signaled robot connects to the back of the signaler and pushes it across the gap.

(B) After a year, Yasemin Ozkan-Aydin had designed, built, tested, and refined her robots.

(C) Inspired by ants, which form bridges with their interlocked bodies to help fellow ants cross gaps, Yasemin Ozkan-Aydin set out to design quadruped robots capable of similarly collaborative behavior.

(D) Ants, which have inspired the design of robots, form bridges by interlocking their bodies.

While researching a topic, a student has taken the following notes:

- Planetary scientists classify asteroids based on their composition.
- C-type asteroids are composed primarily of carbon.
- They account for roughly 75 percent of known asteroids.
- S-type asteroids are primarily made up of silicate minerals.
- They account for roughly 17 percent of known asteroids.

ID d7c5388f

117 Mark for Review — Medium — Explanation ›

The student wants to emphasize a difference between C-type and S-type asteroids. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Planetary scientists classify asteroids into types, two of which are the C-type and the S-type.

(B) Planetary scientists consider an asteroid's composition (such as whether the asteroid is composed mainly of silicate minerals or carbon) when classifying it.

(C) Roughly 17 percent of known asteroids are classified as S-type asteroids; another percentage is classified as C-type asteroids.

(D) C-type asteroids are mainly composed of carbon, whereas S-type asteroids are primarily made up of silicate minerals.

While researching a topic, a student has taken the following notes:

- The meter of a poem is the rhythmic structure or pattern of accents in its lines.
- Alliterative meter is structured by a pattern of repeated sounds.
- Quantitative meter is structured by a pattern of long and short syllables.
- The Old English poem *Widsith* uses an alliterative meter.
- The Sanskrit poem *Meghadūta* uses a quantitative meter.

ID efa2be4f

118 Mark for Review Medium Explanation ›

The student wants to emphasize a difference between the meters of the two poems. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The poem *Widsith* is written in Old English, but *Meghadūta* is written in Sanskrit.

(B) Alliterative meter is a pattern of repeated sounds, but quantitative meter is a rhythmic structure or pattern of accents.

(C) The Sanskrit poem *Meghadūta* uses a quantitative meter, while the meter of the Old English poem *Widsith* uses a pattern of long and short syllables.

(D) The lines of the poem *Meghadūta* use a pattern of long and short syllables, whereas *Widsith*'s lines use a pattern of repeated sounds.

While researching a topic, a student has taken the following notes:

- In geology, an Aeolian landform is one that has been created by the wind.
- In Greek mythology, Aeolus is the keeper of the winds.
- Aeolian landforms are created when the wind erodes, transports, or deposits material.
- A mushroom rock is a rock formation in which the top is wider than the base.
- A mushroom rock can be formed when the wind erodes the base and the top at different rates.

ID 34e1124f

119 Mark for Review Medium Explanation ›

The student wants to provide an explanation and an example of Aeolian landforms. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Aeolian landforms are created by different wind-based processes; for example, some are created by wind erosion.

(B) Aeolian landforms—landforms created by the wind—include the mushroom rock, a rock formation in which the wind erodes the base of the rock faster than the top.

(C) Erosion, transportation, and deposition are three examples of how the wind can create Aeolian landforms and mushroom rocks.

(D) A mushroom rock is a rock formation that owes its shape to the wind, a natural force associated with Aeolus in Greek mythology.

While researching a topic, a student has taken the following notes:

- Circular particle accelerators known as synchrotrons radiate energy in the form of light.
- Synchrotron light is among the brightest light ever produced.
- Synchrotron light is an ideal tool for researchers investigating the structure of matter.
- The first synchrotron created for the purpose of providing synchrotron light was built in 1968.
- It was called Tantalus and was housed near the University of Wisconsin–Madison.

ID 7fd39a42

120 Mark for Review Medium Explanation ›

The student wants to emphasize the location of the first synchrotron built to provide synchrotron light. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Tantalus, the first synchrotron created for the purpose of providing synchrotron light, was built in 1968.

(B) Circular particle accelerators known as synchrotrons radiate energy in the form of light, and this light is an ideal tool for researchers investigating the structure of matter.

(C) The first synchrotron created for the purpose of providing synchrotron light, Tantalus, was housed near the University of Wisconsin–Madison.

(D) Synchrotron light is among the brightest light ever produced, making it an ideal tool for researchers investigating the structure of matter.

While researching a topic, a student has taken the following notes:

- Stars form in a galaxy when gravity causes a massive cloud of dust and gas to collapse.
- A galaxy in a phase of rapid star formation is called a starburst galaxy.
- Quenching is a process in which a galaxy loses star-forming gas.
- A galaxy that no longer forms stars is called a quenched galaxy.
- A quenched galaxy has entered the poststarburst phase.

ID db3ad406

121 Mark for Review Medium Explanation ›

The student wants to explain what a quenched galaxy is. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Before quenching, a starburst galaxy will form stars at a rapid rate.

(B) When it becomes quenched, a starburst galaxy enters the poststarburst phase.

(C) Having entered the poststarburst phase, a quenched galaxy is one that no longer forms stars.

(D) A starburst galaxy will lose star-forming gas and eventually become quenched.

While researching a topic, a student has taken the following notes:

- Pinnipeds, which include seals, sea lions, and walruses, live in and around water.
- Pinnipeds are descended not from sea animals but from four-legged, land-dwelling carnivores.
- Canadian paleobiologist Natalia Rybczynski recently found a fossil with four legs, webbed toes, and the skull and teeth of a seal.
- Rybczynski refers to her rare find as a "transitional fossil."
- The fossil illustrates an early stage in the evolution of pinnipeds from their land-dwelling ancestors.

ID d9d314d9

122 Mark for Review Medium Explanation ›

The student wants to emphasize the fossil's significance. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Canadian paleobiologist Natalia Rybczynski's fossil has the skull and teeth of a seal, which, like sea lions and walruses, is a pinniped.

(B) Pinnipeds are descended from four-legged, land-dwelling carnivores; a fossil that resembles both was recently found.

(C) Having four legs but the skull and teeth of a seal, the rare fossil illustrates an early stage in the evolution of pinnipeds from their land-dwelling ancestors.

(D) A "transitional fossil" was recently found by paleobiologist Natalia Rybczynski.

While researching a topic, a student has taken the following notes:

- J.R.R. Tolkien's 1937 novel *The Hobbit* features two maps.
- The novel opens with a reproduction of the map that the characters use on their quest.
- This map introduces readers to the fictional world they are about to enter.
- The novel closes with a map depicting every stop on the characters' journey.
- That map allows readers to reconstruct the story they have just read.

ID ce282575

123 Mark for Review Medium Explanation ›

The student wants to contrast the purposes of the two maps in *The Hobbit*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) *The Hobbit*'s opening map introduces readers to the fictional world they are about to enter, while the closing map allows them to reconstruct the story they have just read.

(B) *The Hobbit*, a novel published by J.R.R. Tolkien in 1937, features a reproduction of a map that the characters use on their quest, as well as a map that appears at the end of the novel.

(C) *The Hobbit*'s two maps, one opening and one closing the novel, each serve a purpose for readers.

(D) In 1937, author J.R.R. Tolkien published *The Hobbit*, a novel featuring both an opening and a closing map.

While researching a topic, a student has taken the following notes:

- Etel Adnan was a Lebanese American poet and artist known for making many leporellos.
- A leporello is an artist's book that is folded accordion style.
- When the book is expanded, the artist's work is revealed, and its zigzag shape allows it to stand on its own.
- Her leporello *December from My Window* (1993) features a panoramic landscape.
- It is painted using ink and watercolor.

ID 1469d23a

124 Mark for Review Medium Explanation ›

The student wants to describe Adnan's *December from My Window* to an audience already familiar with leporellos. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Featuring a panoramic landscape, the 1993 work is one of Adnan's many leporellos, which are accordion-style folded books that when expanded reveal the artist's work.

(B) When expanded, Adnan's 1993 leporello *December from My Window* reveals a panoramic landscape painted in ink and watercolor.

(C) Known for making many other accordion-style folded books called leporellos, Adnan created *December from My Window* in 1993.

(D) A leporello, such as Adnan's *December from My Window*, is folded accordion style, and due to its zigzag shape it is able to stand on its own when fully expanded.

While researching a topic, a student has taken the following notes:

- Jacob Lawrence was a US painter best known for *The Migration Series* (1940–41).
- *The Migration Series* portrays scenes from the Great Migration of African Americans from the rural South to cities in the North and Midwest.
- The series consists of 60 colorful semiabstract paintings, numbered 1 through 60.
- The odd-numbered paintings are on display at the Phillips Collection in Washington, DC.
- The even-numbered paintings are on display at the Museum of Modern Art in New York City.
- Painting #12 depicts people buying tickets in a crowded train station.

ID 1c60119d

125 Mark for Review Medium Explanation ›

The student wants to indicate where to go to view Painting #12 from Lawrence's *Migration Series*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Depicting a crowded train station, Painting #12 from *The Migration Series* is on display at the Museum of Modern Art in New York City.

(B) In Painting #12 and the other works of *The Migration Series*, Lawrence painted African Americans going from the rural South to cities in the North and Midwest.

(C) To view an even-numbered painting from Lawrence's *Migration Series*, such as the one that depicts people buying train tickets, one must go to Washington, DC.

(D) The 60 colorful semiabstract paintings of Lawrence's series can be viewed in two places: the Phillips Collection in Washington, DC, and the Museum of Modern Art in New York City.

While researching a topic, a student has taken the following notes:

- In the art world, the term biennial traditionally refers to an art exhibition that takes place every two years in a single location.
- Such biennials are held in New York, Berlin, and Venice.
- In 2006, artists Ed Gomez and Luis Hernandez founded the unconventional MexiCali Biennial.
- The MexiCali Biennial hosts exhibitions in different venues on both sides of the US-Mexico border.
- The MexiCali Biennial has taken place on an uneven schedule, with exhibitions in 2006, 2009–10, 2013, and 2018–20.

ID 3ea7372e

126 Mark for Review Medium Explanation ›

The student wants to emphasize a difference between the MexiCali Biennial and traditional biennials. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In 2006, artists Ed Gomez and Luis Hernandez founded the MexiCali Biennial, which has taken place in 2006, 2009–10, 2013, and 2018–20.

(B) Unlike traditional biennials, the MexiCali Biennial hosts exhibitions in different venues on an uneven schedule.

(C) The term biennial traditionally refers to an art exhibition that takes place every two years in a single location, not to exhibitions hosted at a variety of times and venues.

(D) Biennial exhibitions have been held in New York, Berlin, and Venice but also on both sides of the US-Mexico border.

While researching a topic, a student has taken the following notes:

- The international Slow Food movement was founded in 1989 with the signing of the “Slow Food Manifesto.”
- The movement promotes universal access to healthy, high-quality food.
- It calls for sustainable food production practices that protect local environments, ecosystems, and biodiversity.
- It advocates for fair treatment of and compensation for food production workers.
- The Slow Food USA organization was founded in 2000.

ID 28a46cb0

127 Mark for Review Medium Explanation ›

The student wants to introduce the Slow Food movement to a new audience. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The international Slow Food movement, founded in 1989, promotes universal access to healthy, high-quality food that is produced sustainably by workers who are treated and compensated fairly.

(B) The signing of the “Slow Food Manifesto” in 1989 marked the founding of the international Slow Food movement, while the Slow Food USA organization was founded in 2000.

(C) The Slow Food movement advocates for food production workers.

(D) Goals of the movement include universal access to healthy, high-quality food and sustainable food practices.

While researching a topic, a student has taken the following notes:

- In 1859, the novel *Adam Bede* was published in England.
- According to the novel's title page, the author's name was George Eliot.
- George Eliot was widely assumed to be a pseudonym.
- A pseudonym is a fake name used to conceal an author's identity.
- A woman named Mary Ann Evans later revealed herself as the novel's real author.

ID 259d16ac

128 Mark for Review Medium Explanation ›

The student wants to identify the real author of *Adam Bede*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The real author of *Adam Bede* was Mary Ann Evans, who published the novel using the pseudonym George Eliot.

(B) George Eliot, which *Adam Bede*'s title page indicated was the name of the novel's author, was widely assumed to be a pseudonym.

(C) The title page of the novel *Adam Bede* indicated that the author's name was George Eliot.

(D) A woman who had used a pseudonym to conceal her identity later revealed herself as the real author of *Adam Bede.*

While researching a topic, a student has taken the following notes:

- Little is known about the life of Wong Fei-hung (1847–1925).
- He was born near Foshan, China, and gained local recognition as a physician and Hung Ga (also known as Hung Gar) Kung Fu master.
- He achieved many incredible martial arts feats—some confirmed and some rumored.
- He has become an internationally known folk hero thanks to his depiction in over a hundred films, television shows, and other media.
- In the 1991 film *Once Upon a Time in China*, actor Jet Li portrays Wong Fei-hung using superhuman kung fu abilities to save his community.

ID f2f6009b

129 Mark for Review Medium Explanation ›

The student wants to emphasize the effect media had on building Wong Fei-hung's legacy. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Thanks to his depiction in over a hundred pieces of media, Wong Fei-hung was locally known as a successful physician and Hung Ga Kung Fu master.

(B) Though he was known locally during his lifetime, Wong Fei-hung's later depiction in television, film, and other media has turned him into an internationally known folk hero.

(C) Various media have depicted Wong Fei-hung, the successful physician and kung fu master who became an internationally known folk hero.

(D) Wong Fei-hung's abilities as a kung fu master are depicted in many media, including the 1991 film *Once Upon a Time in China*.

While researching a topic, a student has taken the following notes:

- In 1897, African American inventor Andrew Beard invented an automatic coupler.
- It improved on the existing design of train car couplers.
- It made the job of connecting train cars safer.
- In 1938, African American inventor Frederick Jones invented a mobile refrigeration system.
- It improved on the existing design of food transport trucks.
- It enabled trucks to carry perishable foods farther.

ID ba263620

130 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between Beard's invention and Jones's invention. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Beard's automatic coupler and Jones's mobile refrigeration system both improved on existing designs.

(B) In 1897, Beard invented an automatic coupler, which made the job of connecting train cars safer.

(C) Beard's invention made the job of connecting train cars safer, whereas Jones's invention enabled food transport trucks to carry perishables farther.

(D) Jones's mobile refrigeration system, which he invented in 1938, made it possible for food transport trucks to carry perishable foods farther.

While researching a topic, a student has taken the following notes:

- The Pueblo of Zuni is located about 150 miles west of Albuquerque, New Mexico.
- It is the traditional home of the A:shiwi (Zuni) people.
- The A:shiwi A:wan Museum and Heritage Center was established by tribal members in 1992.
- Its mission is stated on its website: "As a tribal museum and heritage center for the Zuni people and by the Zuni people we work to provide learning experiences that emphasize A:shiwi ways of knowing, as well as exploring modern concepts of knowledge and the transfer of knowledge."

ID ed80971c

131 Mark for Review Medium Explanation ›

The student wants to emphasize how long the museum has existed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Pueblo of Zuni is home to the A:shiwi A:wan Museum and Heritage Center, which was founded by tribal members.

(B) The A:shiwi A:wan Museum and Heritage Center has served the Pueblo of Zuni since 1992.

(C) According to its website, the A:shiwi A:wan Museum and Heritage Center (founded in the 1990s) works to "emphasize A:shiwi ways of knowing."

(D) Knowledge has been one of the central themes of the A:shiwi A:wan Museum and Heritage Center from its founding.

While researching a topic, a student has taken the following notes:

- Earthquakes start at a point called a “focus” and spread out from there as seismic waves.
- The two types of seismic waves that travel beneath Earth’s surface are primary waves (P waves) and secondary waves (S waves).
- P waves travel more quickly beneath Earth’s surface than do S waves.
- P waves compress and expand the ground, causing it to move backward and forward.
- S waves cause the ground to move from side to side.

ID 114bbce6

132 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between P waves and S waves. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) P waves and S waves both travel beneath Earth’s surface, causing the ground to move.

(B) P waves travel away from an earthquake’s starting point at a higher rate of speed than do S waves.

(C) Spreading out from the focus of an earthquake, P waves move the ground backward and forward.

(D) Although P waves and S waves start at the same point, they behave very differently.

While researching a topic, a student has taken the following notes:

- Ancient Native American and Australian Aboriginal cultures described the Pleiades star cluster as having seven stars.
- It was referred to as the Seven Sisters in the mythology of ancient Greece.
- Today, the cluster appears to have only six stars.
- Two of the stars have moved so close together that they now appear as one.

ID a86c0b1b

133 Mark for Review Medium Explanation ›

The student wants to specify the reason the Pleiades’ appearance changed. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Ancient Native American and Australian Aboriginal cultures described the Pleiades, which was referred to in Greek mythology as the Seven Sisters, as having seven stars.

(B) Although once referred to as the Seven Sisters, the Pleiades appears to have only six stars today.

(C) In the time since ancient cultures described the Pleiades as having seven stars, two of the cluster’s stars have moved so close together that they now appear as one.

(D) The Pleiades has seven stars, but two are so close together that they appear to be a single star.

While researching a topic, a student has taken the following notes:

- Traditionally, manufacturers have dyed denim jeans blue by dipping them in a solution containing indigo powder.
- Indigo doesn't dissolve in just water, so manufacturers must mix hazardous chemicals with water to dissolve the powder.
- Textile researcher Smriti Rai discovered a process for dyeing blue jeans without chemicals.
- Rai added indigo powder to a hydrogel containing nanocellulose and produced a dye that could be spread directly onto the denim.
- Nanocellulose is a natural, plant-based substance that separates the molecules of indigo powder.

ID e2eb70b9

134 Mark for Review Medium Explanation ›

The student wants to emphasize a difference between the two approaches to dyeing blue jeans. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Though created using a different process, Rai's dye contains the same ingredient as the dye produced by blue jean manufacturers.

(B) Nanocellulose is a natural, plant-based substance that separates the molecules of indigo powder, which doesn't dissolve in water.

(C) The traditional approach to dyeing blue jeans is to dip them in a solution containing hazardous chemicals.

(D) Rai's approach substitutes a natural, plant-based substance for the hazardous chemicals that manufacturers have traditionally used.

While researching a topic, a student has taken the following notes:

- Samuel Selvon was a Trinidadian author.
- *The Lonely Londoners* is one of his most celebrated novels.
- Selvon published the novel in 1956.
- It is about a group of men who emigrate from the Caribbean to Great Britain after World War II.
- Some of *The Lonely Londoners*' characters also appear in Selvon's later novel *Moses Ascending*.

ID 86b78078

135 Mark for Review Medium Explanation ›

The student wants to introduce Samuel Selvon and his novel *The Lonely Londoners* to a new audience. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In 1956, Trinidadian author Samuel Selvon published one of his most celebrated novels, *The Lonely Londoners,* which is about a group of men who emigrate from the Caribbean to Great Britain after World War II.

(B) Samuel Selvon wrote the novel *Moses Ascending* after he wrote *The Lonely Londoners.*

(C) *The Lonely Londoners*, a celebrated novel that was published in 1956, depicts post–World War II Caribbean migration from the perspective of a Trinidadian author.

(D) Some of the characters who appear in Samuel Selvon's *Moses Ascending* also appear in *The Lonely Londoners.*

While researching a topic, a student has taken the following notes:

- Seven species of sea turtle exist today.
- Five sea turtle species can be found in the Atlantic Ocean.
- One of those species is the Kemp's ridley sea turtle.
- Its scientific name is *Lepidochelys kempii*.
- Another of those species is the olive ridley sea turtle.
- Its scientific name is *Lepidochelys olivacea*.

ID 4f9ee1dc

136 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between the two sea turtle species. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Among the seven species of sea turtle is the olive ridley sea turtle, which can be found in the Atlantic Ocean.

(B) The Kemp's ridley sea turtle is referred to as *Lepidochelys kempii*, while the olive ridley sea turtle is referred to as *Lepidochelys olivacea*.

(C) Both the Kemp's ridley sea turtle and the olive ridley sea turtle can be found in the Atlantic Ocean.

(D) The Kemp's ridley sea turtle (*Lepidochelys kempii*) and the olive ridley sea turtle (*Lepidochelys olivacea*) are different species.

While researching a topic, a student has taken the following notes:

- Pedestrian malls are outdoor streets in a city or town where vehicle traffic is prohibited.
- Many pedestrian malls were built in the 19th and 20th centuries in Europe and Asia.
- Qianmen Dajie is a famous pedestrian mall in Beijing.
- It has existed since the Ming dynasty (1368–1644 CE).
- Rue Mouffetard is a famous pedestrian mall in Paris.
- It has existed since the mid-Roman Empire (117–235 CE).

ID bb43fc3c

137 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between the ages of the malls. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The Qianmen Dajie pedestrian mall has roots as far back as the Ming dynasty; likewise, Rue Mouffetard has existed for centuries.

(B) Both Qianmen Dajie and Rue Mouffetard are famous pedestrian malls, the former in Beijing and the latter in Paris.

(C) Qianmen Dajie and Rue Mouffetard are pedestrian malls, outdoor streets closed to vehicle traffic.

(D) Qianmen Dajie and Rue Mouffetard are examples of pedestrian malls, which proliferated in Europe in the 19th and 20th centuries.

While researching a topic, a student has taken the following notes:

- Sister Rosetta Tharpe (1915–1973) was a gospel musician.
- She was known for her passionate vocals and electric guitar performances.
- In 2018, Tharpe was inducted into the Rock and Roll Hall of Fame for her major impact on the genre.
- According to songwriter Roxie Moore, "[Tharpe] would sing until you cried and then she would sing until you danced for joy."
- According to guitarist Celisse Henderson, "Tharpe is the unquestioned founding mother of rock 'n' roll."

ID 2c7dced2

138 Mark for Review Medium Explanation ›

The student wants to use a quotation to support a claim about Tharpe's contribution to rock 'n' roll. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Gospel musician Sister Rosetta Tharpe had a major impact on rock 'n' roll, and she was known for her passionate electric guitar performances.

(B) Celisse Henderson believes that Sister Rosetta Tharpe had a major impact on the development of rock 'n' roll.

(C) Sister Rosetta Tharpe had such a major impact on rock 'n' roll that Celisse Henderson called her "the unquestioned founding mother" of the genre.

(D) A gospel musician, Sister Rosetta Tharpe had the ability to "sing until you cried" and also "until you danced for joy," according to Roxie Moore.

While researching a topic, a student has taken the following notes:

- Gravitational waves are powerful ripples that originate in deep space and eventually pass through Earth.
- The Laser Interferometer Gravitational Wave Observatory (LIGO) is a physics study that began in 2002.
- LIGO's goal is to detect and analyze gravitational waves.
- LIGO uses a pair of massive gravitational wave detectors called interferometers that are thousands of miles apart.
- In 2015, for the first time in history, LIGO researchers detected a gravitational wave passing through Earth.

ID 5a5e22b5

139 Mark for Review Medium Explanation ›

The student wants to present LIGO's aim and methodology. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In 2015, LIGO's massive interferometers detected a powerful ripple that originated in deep space and eventually passed through Earth.

(B) Though the physics study LIGO began in 2002, its massive interferometers didn't detect a gravitational wave until 2015.

(C) To achieve its aims, LIGO uses a pair of massive interferometers that are thousands of miles apart.

(D) A physics study designed to detect and analyze gravitational waves, LIGO uses a pair of massive interferometers that are thousands of miles apart.

While researching a topic, a student has taken the following notes:

- Most, but not all, of the Moon's oxygen comes from the Sun, via solar wind.
- Cosmochemist Kentaro Terada from Osaka University wondered if some of the unaccounted-for oxygen could be coming from Earth.
- In 2008, he analyzed data from the Japanese satellite Kaguya.
- Kaguya gathered data about gases and particles it encountered while orbiting the Moon.
- Based on the Kaguya data, Terada confirmed his suspicion that Earth is sending oxygen to the Moon.

ID bc56170b

140 Mark for Review Medium Explanation ›

The student wants to emphasize the aim of the research study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) As it orbited the Moon, the Kaguya satellite collected data that was later analyzed by cosmochemist Kentaro Terada.

(B) Before 2008, Kentaro Terada wondered if the Moon was receiving some of its oxygen from Earth.

(C) Cosmochemist Kentaro Terada set out to determine whether some of the Moon's oxygen was coming from Earth.

(D) Kentaro Terada's study determined that Earth is sending a small amount of oxygen to the Moon.

While researching a topic, a student has taken the following notes:

- Annie Wu is a prominent American flutist who graduated from the New England Conservatory.
- She has won multiple national flute competitions.
- She is best known for a 2011 YouTube video that has been viewed over two million times.
- The video shows her performing *Three Beats for Beatbox Flute*, an original work by composer Greg Pattillo.
- Wu combines flute playing and beatboxing in the video.

ID d7f31e68

141 Mark for Review Medium Explanation ›

The student wants to emphasize Wu's most well-known achievement. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Annie Wu, who has won multiple national flute competitions, has also combined flute playing and beatboxing.

(B) Among her many achievements, prominent American flutist Annie Wu graduated from the New England Conservatory and has won multiple national flute competitions.

(C) Annie Wu is best known for a 2011 YouTube video performance of *Three Beats for Beatbox Flute* that has been viewed over two million times.

(D) Composer Greg Pattillo's original work *Three Beats for Beatbox Flute* combines flute playing and beatboxing.

While researching a topic, a student has taken the following notes:

- In the late 1890s, over 14,000 unique varieties of apples were grown in the US.
- The rise of industrial agriculture in the mid-1900s narrowed the range of commercially grown crops.
- Thousands of apple varieties considered less suitable for commercial growth were lost.
- Today, only 15 apple varieties dominate the market, making up 90% of apples purchased in the US.
- The Lost Apple Project, based in Washington State, attempts to find and grow lost apple varieties.

ID 6351062d

142 Mark for Review Medium Explanation ›

The student wants to emphasize the decline in unique apple varieties in the US and specify why this decline occurred. Which choice most effectively uses relevant information from the notes to accomplish these goals?

(A) The Lost Apple Project is dedicated to finding some of the apple varieties lost following a shift in agricultural practices in the mid-1900s.

(B) While over 14,000 apple varieties were grown in the US in the late 1890s, only 15 unique varieties make up most of the apples sold today.

(C) Since the rise of industrial agriculture, US farmers have mainly grown the same few unique apple varieties, resulting in the loss of thousands of varieties less suitable for commercial growth.

(D) As industrial agriculture rose to prominence in the mid-1900s, the number of crops selected for cultivation decreased dramatically.

While researching a topic, a student has taken the following notes:

- Started in 1925, the Scripps National Spelling Bee is a US-based spelling competition.
- The words used in the competition have diverse linguistic origins.
- In 2008, Sameer Mishra won by correctly spelling the word “guerdon.”
- “Guerdon” derives from the Anglo-French word “guerdun.”
- In 2009, Kavya Shivashankar won by correctly spelling the word “Laodicean.”
- “Laodicean” derives from the ancient Greek word “Laodíkeia.”

ID 5bb7dc03

143 Mark for Review Medium Explanation ›

The student wants to emphasize a difference in the origins of the two words. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) “Guerdon,” the final word of the 2008 Scripps National Spelling Bee, is of Anglo-French origin, while the following year’s final word, “Laodicean,” derives from ancient Greek.

(B) In 2008, Sameer Mishra won the Scripps National Spelling Bee by correctly spelling the word “guerdon”; however, the following year, Kavya Shivashankar won based on spelling the word “Laodicean.”

(C) Kavya Shivashankar won the 2009 Scripps National Spelling Bee by correctly spelling “Laodicean,” which derives from the ancient Greek word “Laodíkeia.”

(D) The Scripps National Spelling Bee uses words from diverse linguistic origins, such as “guerdon” and “Laodicean.”

While researching a topic, a student has taken the following notes:

- Iranian scholar Abu Rayhan al-Biruni studied Earth's physical features.
- He theorized that a large landmass existed west of Europe and east of Asia.
- Al-Biruni published his landmass theory in 1037 CE.

ID e6b57c9b

144 Mark for Review Medium Explanation ›

The student wants to specify when al-Biruni published his landmass theory. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In 1037 CE, al-Biruni published his theory that a large landmass existed west of Europe and east of Asia.

(B) Al-Biruni, who studied Earth's physical features, published a theory about a large landmass.

(C) Al-Biruni was an Iranian scholar who studied Earth's physical features.

(D) An Iranian scholar who studied Earth's physical features, al-Biruni theorized that a large landmass existed west of Europe and east of Asia.

While researching a topic, a student has taken the following notes:

- Abdulrazak Gurnah was awarded the 2021 Nobel Prize in Literature.
- Gurnah was born in Zanzibar in East Africa and currently lives in the United Kingdom.
- Many readers have singled out Gurnah's 1994 book *Paradise* for praise.
- *Paradise* is a historical novel about events that occurred in colonial East Africa.

ID 9e2d4ef7

145 Mark for Review Medium Explanation ›

The student wants to introduce *Paradise* to an audience unfamiliar with the novel and its author. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Abdulrazak Gurnah, who wrote *Paradise* and later was awarded the Nobel Prize in Literature, was born in Zanzibar in East Africa and currently lives in the United Kingdom.

(B) Many readers have singled out Abdulrazak Gurnah's 1994 book *Paradise,* a historical novel about colonial East Africa, for praise.

(C) A much-praised historical novel about colonial East Africa, *Paradise* (1994) was written by Abdulrazak Gurnah, winner of the 2021 Nobel Prize in Literature.

(D) *Paradise* is a historical novel about events that occurred in colonial East Africa, Abdulrazak Gurnah's homeland.

While researching a topic, a student has taken the following notes:

- *Las sergas de Esplandián* was a novel popular in sixteenth-century Spain.
- The novel featured a fictional island inhabited solely by Black women and known as California.
- That same century, Spanish explorers learned of an "island" off the west coast of Mexico.
- They called it California after the island in the novel.
- The "island" was actually the peninsula now known as Baja California ("Lower California"), which lies to the south of the US state of California.

ID 94f4eecb

146 Mark for Review Medium Explanation ›

The student wants to emphasize the role a misconception played in the naming of a place. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The novel *Las sergas de Esplandián* featured a fictional island known as California.

(B) To the south of the US state of California lies Baja California ("Lower California"), originally called California after a fictional place.

(C) In the sixteenth century, Spanish explorers learned of a peninsula off the west coast of Mexico and called it California.

(D) Thinking it was an island, Spanish explorers called a peninsula California after an island in a popular novel.

While researching a topic, a student has taken the following notes:

- Some sandstone arches in Utah's Arches National Park have been defaced by tourists' carvings.
- Park rangers can smooth away some carvings using power grinders.
- For deep carvings, power grinding is not always feasible because it can greatly alter or damage the rock.
- Park rangers can use an infilling technique, which involves filling in carvings with ground sandstone and a bonding agent.
- This technique is minimally invasive.

ID 99183985

147 Mark for Review Medium Explanation ›

The student wants to explain an advantage of the infilling technique. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) To remove carvings from sandstone arches in Utah's Arches National Park, power grinding is not always feasible.

(B) Filling in carvings with ground sandstone and a bonding agent is less invasive than smoothing them away with a power grinder, which can greatly alter or damage the sandstone arches.

(C) Park rangers can use a power grinding technique to smooth away carvings or fill them in with ground sandstone and a bonding agent.

(D) As methods for removing carvings from sandstone, power grinding and infilling differ in their level of invasiveness.

While researching a topic, a student has taken the following notes:

- In the 1930s, the Imperial Sugar Cane Institute in India sought to limit the country's dependence on imported sugarcane.
- The institute enlisted botanist Janaki Ammal to breed a local variety of sugarcane.
- She crossbred the imported sugarcane species *Saccharum officinarum* with grasses native to India.
- She succeeded in creating sugarcane hybrids well suited to India's climate.

ID 70538b9a

148 Mark for Review Medium Explanation ›

The student wants to emphasize Janaki Ammal's achievement. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) By crossbreeding the imported sugarcane species *Saccharum officinarum* with grasses native to India, Ammal succeeded in creating sugarcane hybrids well suited to India's climate.

(B) In the 1930s, the Imperial Sugar Cane Institute, which enlisted Ammal, sought to limit dependence on imported sugarcane.

(C) Ammal was enlisted by the Imperial Sugar Cane Institute at a time when a local variety of sugarcane needed to be produced.

(D) As part of efforts to breed a local variety of sugarcane, an imported sugarcane species called *Saccharum officinarum* was crossbred with grasses native to India.

While researching a topic, a student has taken the following notes:

- Albert Einstein's theory of general relativity allows for potential shortcuts through spacetime.
- These hypothetical spacetime tunnels are known as wormholes.
- For matter to travel through a wormhole, it would need to have negative energy density.
- Negative energy density means that the matter would have less energy than empty space.
- Such matter has not been shown to exist.

ID 0f64ded3

149 Mark for Review Medium Explanation ›

The student wants to acknowledge a complication affecting travel through wormholes. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Einstein's theory of general relativity allows for potential spacetime shortcuts called wormholes but does not explain how matter with negative energy density could travel through them.

(B) For matter to travel through a wormhole, the matter would need to have less energy than empty space; such matter has not been shown to exist.

(C) The hypothetical tunnels known as wormholes would be potential shortcuts through spacetime were it not for one complication: they have less energy than empty space.

(D) For wormholes to be possible, according to Einstein's theory of general relativity, they would have to allow for potential shortcuts through spacetime.

While researching a topic, a student has taken the following notes:

- In a 2020 study, researchers in California investigated how many potential nesting sites female wood ducks visited during the nesting season.
- The researchers placed nest boxes throughout the survey area and tagged 138 female wood ducks with radio frequency ID trackers.
- These trackers recorded how many nest boxes each duck visited.
- 67 ducks (48.5%) visited only one nest box.
- 18 ducks (13.0%) visited 10 or more nest boxes.
- Younger ducks were more likely to visit multiple nest boxes.

ID fb3abe38

150 Mark for Review Medium Explanation ›

The student wants to present the methods used in the 2020 study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) By recording how many nest boxes each duck visited, the researchers discovered that only a relatively small percentage (13.0%) of the ducks visited 10 or more nest boxes.

(B) After tracking how many nest boxes the 138 wood ducks visited, the researchers found that the younger ducks tended to visit more nest boxes than the older ducks.

(C) The researchers tagged 138 female wood ducks with radio frequency ID trackers and recorded how many nest boxes each duck visited during the nesting season.

(D) The researchers investigated each nesting site for signs that it had been visited by the female wood ducks.

While researching a topic, a student has taken the following notes:

- *Here I Have Returned* is a sculpture by Egyptian American artist Sherin Guirguis.
- It is a large, curved strip of wood inspired by the shape of a sistrum.
- A sistrum is a curved musical instrument played by ancient Egyptian priestesses in ceremonies.
- Guirguis says that the sculpture symbolizes “women who have lifted and supported Egyptian society and culture.”
- Overall, Guirguis wants her works to “engage audiences in a dialogue about power, agency, and social transformation.”

ID 570dd854

151 Mark for Review Medium Explanation ›

The student wants to use a quotation from Guirguis to explain what the sculpture represents. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Guirguis, whose works include a sculpture that is a large, curved strip of wood, has explained that she wants her work to create a dialogue with audiences.

(B) Inspired by the sistrum played by Egyptian priestesses, *Here I Have Returned* symbolizes “women who have lifted and supported Egyptian society and culture,” according to Guirguis.

(C) According to Guirguis, the curved strip of wood used in *Here I Have Returned* was inspired by the sistrum, a musical instrument played by ancient Egyptian priestesses in ceremonies.

(D) Guirguis, the sculptor of *Here I Have Returned*, wants her works to “engage audiences in a dialogue about power, agency, and social transformation.”

While researching a topic, a student has taken the following notes:

- Just like states have state flags, some cities have city flags.
- Over one hundred US cities have redesigned their flags since 2015.
- The city of Pocatello, Idaho, redesigned its flag after it was named the most poorly designed flag in North America.
- Pocatello's new flag better represents the city's mountainous geography and civic priorities.
- Residents consider the new flag to be a meaningful symbol of civic pride.

ID efc19153

152 Mark for Review Medium Explanation ›

The student wants to make and support a generalization about the effect of redesigning a city flag. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Over one hundred US cities have redesigned their flags, including Pocatello, whose flag had been named the most poorly designed flag in North America.

(B) Pocatello is just one of over one hundred US cities that have redesigned their flags.

(C) After it was named the most poorly designed flag in North America, the flag of Pocatello was redesigned to better represent the city's geography and civic priorities.

(D) Redesigning a poorly designed city flag can create a meaningful symbol of civic pride, as was the case when Pocatello redesigned its original flag to better represent its geography and civic priorities.

While researching a topic, a student has taken the following notes:

- Minnesota defines a lake as an inland body of water of at least 10 acres.
- Wisconsin's definition of a lake doesn't take size into account.
- By its own definition, Wisconsin has over 15,000 lakes, many smaller than 10 acres.
- By Minnesota's definition, Wisconsin has only about 6,000 lakes.

ID 835b101b

153 Mark for Review Medium Explanation ›

The student wants to contrast Minnesota's definition of a lake with Wisconsin's. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Wisconsin, which doesn't take size into account in defining a lake, claims that it has over 15,000 lakes.

(B) Because its definition of a lake is different from Minnesota's, it is unclear how many lakes Wisconsin really has.

(C) According to Minnesota's definition of a lake—an inland body of water of at least 10 acres—Wisconsin has about 6,000 lakes.

(D) Minnesota's definition of a lake—an inland body of water of at least 10 acres—is more restrictive than Wisconsin's, which doesn't take size into account.

While researching a topic, a student has taken the following notes:

- Chemical leavening agents cause carbon dioxide to be released within a liquid batter, making the batter rise as it bakes.
- Baking soda and baking powder are chemical leavening agents.
- Baking soda is pure sodium bicarbonate.
- To produce carbon dioxide, baking soda needs to be mixed with liquid and an acidic ingredient such as honey.
- Baking powder is a mixture of sodium bicarbonate and an acid.
- To produce carbon dioxide, baking powder needs to be mixed with liquid but not with an acidic ingredient.

ID aec8d3e8

154 Mark for Review Medium Explanation ›

The student wants to emphasize a difference between baking soda and baking powder. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) To make batters rise, bakers use chemical leavening agents such as baking soda and baking powder.

(B) Baking soda and baking powder are chemical leavening agents that, when mixed with other ingredients, cause carbon dioxide to be released within a batter.

(C) Baking soda is pure sodium bicarbonate, and honey is a type of acidic ingredient.

(D) To produce carbon dioxide within a liquid batter, baking soda needs to be mixed with an acidic ingredient, whereas baking powder does not.

- In 2017, a research team led by Mary Caswell Stoddard determined the average lengths of eggs produced by various bird species.
- *Gygis alba* is a species of bird in the order Charadriiformes.
- *Gygis alba* eggs had an average length of 4.46 cm.
- *Gavia stellata* is a species of bird in the order Gaviiformes.
- *Gavia stellata* eggs had an average length of 7.22 cm.

ID 61c0f7b3

155 Mark for Review Medium Explanation ›

Which choice most effectively uses information from the given sentences to emphasize a difference between the eggs of the two species?

(A) A 2017 study compared the lengths of eggs produced by an array of different bird species, such as *Gygis alba* and *Gavia stellata*.

(B) A 2017 study found that *Gygis alba* eggs had an average length of 4.46 cm, whereas *Gavia stellata* eggs were longer, with an average length of 7.22 cm.

(C) The bird species *Gygis alba*, which belongs to the order Charadriiformes, and *Gavia stellata*, of the order Gaviiformes, were included in a 2017 study that compared the average lengths of their eggs.

(D) Mary Caswell Stoddard led a research study that determined the average lengths of eggs, including those of *Gygis alba* birds (4.46 cm) and *Gavia stellata* birds (7.22 cm).

While researching a topic, a student has taken the following notes:

- 2024: Spain and Portugal sponsored a workshop to address recent encounters between Iberian orcas and marine vessels off the Iberian Peninsula.
- Many of the 637 documented incidents involved pods of orcas damaging vessels by ramming, nudging, or biting the rudders.
- Studies of Iberian orcas suggest recent increases in tuna populations have reduced the time the orcas spend hunting by 99%.
- Researchers believe this shift has increased the number of interactions between marine vessels and understimulated orcas.
- The workshop advised mariners to avoid orcas pending further testing of the efficacy of TAST, a harmless acoustic deterrent.

ID 77e3b3b3

156 Mark for Review Medium Explanation ›

The student wants to make and support a claim about Iberian orca behavior. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The recent destructive behavior of Iberian orcas may be the result of understimulation, given that orcas' interactions with marine vessels have increased as the orcas have spent less time hunting.

(B) As supported by the workshop's analysis of 637 encounters between vessels and Iberian orcas, TAST is a harmless and effective acoustic deterrent.

(C) In 2024, Spain and Portugal sponsored a workshop that addressed incidents where pods of Iberian orcas were ramming, nudging, or biting the rudders of vessels.

(D) Tuna populations have increased by approximately 99% off the Iberian Peninsula due to changes in the hunting behavior of Iberian orcas.

While researching a topic, a student has taken the following notes:

- In meteorology, an air mass is a large body of air with generally uniform humidity and temperature.
- Air masses are commonly classified by two-letter names.
- The first letter indicates the humidity of the air mass, while the second letter indicates the temperature.
- cA (continental arctic) means dry and cold, for example.
- mT (maritime tropical) means moist and warm.
- This classification system is based on the work of a Swedish meteorologist named Tor Bergeron (1891–1977).

ID 7fa2b1ee

157 Mark for Review Medium Explanation ›

The student wants to provide an example of an air mass. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Air masses are large bodies of air with generally uniform humidity and temperature.

(B) The air mass classification system uses two-letter names and is based on the work of Tor Bergeron, a Swedish meteorologist.

(C) Air masses are commonly classified by a two-letter name that indicates humidity and temperature.

(D) One type of air mass is known as a cA, or continental arctic, air mass because it is dry and cold.

While researching a topic, a student has taken the following notes:

- If a moon orbiting a planet comes close enough to that planet, tidal forces can cause the moon to break apart.
- In a 2022 study, researchers proposed that Saturn was once orbited by a large moon they named Chrysalis.
- Their simulations indicated that Chrysalis would likely have come very close to Saturn around 160 million years ago.
- At that distance, Chrysalis would have been broken apart by tidal forces.
- The researchers hypothesized that the resulting debris formed Saturn's rings.

ID f6d454c1

158 Mark for Review Medium Explanation ›

The student wants to recount the sequence of events proposed by the researchers. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) According to researchers' simulations, two events likely occurred around 160 million years ago: first, Chrysalis came very close to Saturn, and second, debris from Saturn's rings caused the moon to break apart.

(B) If a moon orbiting a planet (like Saturn) comes close enough to that planet, tidal forces can cause the moon to break apart.

(C) Around 160 million years ago, a large moon (Chrysalis) came close enough to Saturn that tidal forces broke the moon apart; its debris then formed the planet's rings.

(D) First, researchers proposed that Saturn was orbited by a large moon (Chrysalis); next, they conducted simulations; and, finally, they formed a hypothesis.

While researching a topic, a student has taken the following notes:

- Maika'i Tubbs is a Native Hawaiian sculptor and installation artist.
- His work has been shown in the United States, Canada, Japan, and Germany, among other places.
- Many of his sculptures feature discarded objects.
- His work *Erasure* (2008) includes discarded audiocassette tapes and magnets.
- His work *Home Grown* (2009) includes discarded pushpins, plastic plates and forks, and wood.

ID 92dec236

159 Mark for Review Medium Explanation ›

The student wants to emphasize a similarity between the two works. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) *Erasure* (2008) uses discarded objects such as audiocassette tapes and magnets; *Home Grown* (2009), however, includes pushpins, plastic plates and forks, and wood.

(B) Tubbs's work, which often features discarded objects, has been shown both within the United States and abroad.

(C) Like many of Tubbs's sculptures, both *Erasure* and *Home Grown* include discarded objects: *Erasure* uses audiocassette tapes, and *Home Grown* uses plastic forks.

(D) Tubbs completed *Erasure* in 2008 and *Home Grown* in 2009.

While researching a topic, a student has taken the following notes:

- 1914: British explorer Ernest Shackleton and a small crew embarked on an expedition to Antarctica.
- 1915: Shackleton's ship *Endurance* became stuck in ice before eventually breaking apart and sinking.
- 1916: After more harrowing sea-ice adventures, the entire crew was rescued.
- 1959: Historian Alfred Lansing wrote a book called *Endurance: Shackleton's Incredible Voyage.*
- 2001: Filmmaker George Butler released a documentary called *The Endurance: Shackleton's Legendary Antarctic Expedition.*
- 2022: The wreckage of *Endurance* was discovered at the bottom of Antarctica's Weddell Sea.

ID e1453c88

160 Mark for Review Medium Explanation ›

The student wants to provide a historical overview of the Shackleton expedition. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Leaving in 1914 for Antarctica, Shackleton and his crew underwent many harrowing sea-ice adventures, including losing their ship in 1915, before being rescued in 1916.

(B) In 1914, the Shackleton expedition sailed to Antarctica, where, in 1916, they rescued the crew of a ship that had sunk, *Endurance* (the wreckage of which was discovered in 2022).

(C) Shackleton's expedition has inspired a 1959 book, a 2001 film, and a 2022 discovery.

(D) Alfred Lansing wrote about the history of Shackleton's 1914–16 expedition in the book *Endurance: Shackleton's Incredible Voyage* (1959); years later, in 2001, George Butler released a documentary about the expedition.

While researching a topic, a student has taken the following notes:

- Brass is a metal alloy composed primarily of zinc and copper.
- Alpha brass contains less than 35% zinc.
- It is more malleable than beta brass and can be manipulated at room temperature.
- Beta brass contains more than 45% zinc.
- It is harder and stronger than alpha brass but is more difficult to work with because it requires heat to manipulate.

ID bfad4508

161 Mark for Review Medium Explanation ›

The student wants to specify an advantage of alpha brass. Which choice most effectively uses information from the notes to accomplish this goal?

(A) As a metal alloy composed primarily of zinc and copper, alpha brass has a notable advantage over beta brass.

(B) Unlike beta brass, which requires heat to manipulate, alpha brass can be shaped at room temperature.

(C) Alpha brass contains less than 35% zinc, whereas beta brass contains more than 45% zinc.

(D) With its higher zinc content, alpha brass is a stronger material than beta brass.

HARD 43 questions

While researching a topic, a student has taken the following notes:

- The *Atlantic Monthly* magazine was first published in 1857.
- The magazine focused on politics, art, and literature.
- In 2019, historian Cathryn Halverson published the book *Faraway Women and the "Atlantic Monthly."*
- Its subject is female authors whose autobiographies appeared in the magazine in the early 1900s.
- One of the authors discussed is Juanita Harrison.

ID 39ccb463

162 Mark for Review Hard Explanation ›

The student wants to introduce Cathryn Halverson's book to an audience already familiar with the *Atlantic Monthly*. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Cathryn Halverson's *Faraway Women and the "Atlantic Monthly"* discusses female authors whose autobiographies appeared in the magazine in the early 1900s.

(B) A magazine called the *Atlantic Monthly*, referred to in Cathryn Halverson's book title, was first published in 1857.

(C) *Faraway Women and the "Atlantic Monthly"* features contributors to the *Atlantic Monthly*, first published in 1857 as a magazine focusing on politics, art, and literature.

(D) An author discussed by Cathryn Halverson is Juanita Harrison, whose autobiography appeared in the *Atlantic Monthly* in the early 1900s.

While researching a topic, a student has taken the following notes:

- Leaders of the Province of Guatemala proclaimed independence for Central America from the Spanish Empire on September 15, 1821.
- The accompanying Declaration of Independence was written by Honduran scholar and politician José Cecilio del Valle.
- The 1812 Spanish Constitution had provided some degree of independence for Central America, but it was repealed by the Spanish king in 1814.
- Valle, a loyal advisor to the Spanish Empire's administrators in Central America, had long opposed independence.
- He changed his mind after Colonel Rafael del Riego's 1820 revolt, which demanded the return of rights lost in 1814.

ID 1d79a59d

163 Mark for Review Hard Explanation ›

The student wants to place the 1821 Declaration of Independence in the context of Valle's changing political beliefs. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Colonel Riego's revolt was the inspiration that Valle, a long-standing opponent of Central American independence, needed to change his political beliefs.

(B) Long an opponent of Central American independence, Valle changed his mind after an 1820 revolt and wrote the 1821 declaration.

(C) A change in Valle's political beliefs that occurred when the Spanish king repealed the 1812 constitution led to Valle writing Central America's Declaration of Independence.

(D) The writing of Central America's Declaration of Independence may not have happened were it not for Colonel Riego's 1820 revolt.

While researching a topic, a student has taken the following notes:

- The fifth Solvay Conference on Physics was held in 1927.
- It brought together twenty-nine of the era's preeminent scientists to discuss the emerging field of quantum theory.
- The conference famously featured a debate between physicists Albert Einstein and Niels Bohr.
- Bohr proposed that subatomic entities like electrons had only probable realities until they were observed.
- Einstein argued that subatomic entities like electrons had a reality independent of observation.
- Bohr's position, later called the Copenhagen interpretation, remains the most widely accepted theory of quantum mechanics.

ID 7d5c32e6

164 Mark for Review — Hard — Explanation ›

The student wants to place Einstein's argument within its historical context. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) During the dawn of quantum theory, Einstein maintained the independent reality of some subatomic entities, although Bohr's opposing interpretation would become the widely accepted view.

(B) At the 1927 Solvay Conference on Physics, Einstein disagreed with Bohr's argument that subatomic entities like electrons had a reality independent of observation.

(C) The attendees of the 1927 Solvay Conference were among the preeminent scientists of their era, including Einstein, who opposed Bohr's proposal.

(D) In 1927, Einstein and Bohr engaged in a famous debate; Bohr's argument, later called the Copenhagen interpretation, would remain popular decades after.

While researching a topic, a student has taken the following notes:

- Digital Light Synthesis (DLS) is a form of additive manufacturing that utilizes light to rapidly cure liquid resin into high-quality, 3D objects.
- Step 1: Ultraviolet (UV) light images are projected up into a pool of liquid resin, where the object's first layer takes shape.
- Step 2: The partially cured resin object is raised, leaving a thin space (a "dead zone") beneath it for oxygen and liquid resin to flow through.
- Step 3: The UV light passes through the dead zone—maintaining the flow of resin—and partially cures additional layers of the object.
- Step 4: When the resin object is complete, it is baked in an oven to complete the curing.

ID b07a7634

165 Mark for Review — Hard — Explanation ›

The student wants to describe how DLS cures 3D objects. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) DLS is a form of additive manufacturing that creates a "dead zone" in which UV light solidifies layer by layer before being baked in an oven, creating a high-quality, 3D object.

(B) DLS cures 3D objects by passing through a "dead zone," adding layers to the object, then curing the object in an oven.

(C) In DLS, UV light images are projected into a liquid resin pool to cure a 3D object layer by layer; once solidified, the object is baked in an oven.

(D) In DLS, UV light is projected into layers of liquid resin until the resin solidifies and passes through a "dead zone," wherein the curing is completed.

While researching a topic, a student has taken the following notes:

- British scholar Robert Plot described fossilized dinosaur bones in his 1676 book *The Natural History of Oxfordshire.*
- Plot earned a reputation for being the first person to have discovered dinosaur remains.
- In 1990, archaeologists in Lesotho, in southern Africa, discovered a fossilized phalanx of a *Massospondylus carinatus* dinosaur in a cave once inhabited by humans.
- Indigenous Khoesan and Basotho peoples had inhabited the cave beginning around 1100 CE.
- According to paleontologist Julien Benoit, these peoples may have found the phalanx and brought it to the cave centuries before Plot's descriptions.

ID 3fa48bf3

166 Mark for Review Hard Explanation ›

The student wants to emphasize the significance of the 1990 discovery to Plot's reputation. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Benoit challenged Plot's reputation for being the first person to have discovered *M. carinatus* remains.

(B) Evidence that Khoesan and Basotho peoples may have found an *M. carinatus* phalanx as long ago as 1100 CE suggests that Plot may not have been the first person to have discovered dinosaur remains.

(C) According to Benoit's analysis of the 1990 discovery, Indigenous peoples in southern Africa may have brought the fossilized phalanx to the cave as long ago as 1100 CE.

(D) In 1990, more than three centuries after Plot claimed in his book that he had found fossilized dinosaur bones, archaeologists uncovered evidence in southern Africa that disproved his claims.

While researching a topic, a student has taken the following notes:

- One of history's greatest libraries was the House of Wisdom in Baghdad, Iraq.
- It was founded in the eighth century with the goal of preserving all the world's knowledge.
- Scholars at the House of Wisdom collected ancient and contemporary texts from Greece, India, and elsewhere and translated them into Arabic.
- Writings included those of the Greek philosopher Aristotle and the Indian mathematician Aryabhata.
- The House of Wisdom used Chinese papermaking technology to create paper versions to be studied and shared.

ID 8fe4f4ab

167 Mark for Review Hard Explanation ›

The student wants to explain how the House of Wisdom preserved the world's knowledge. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The House of Wisdom was known for bringing together knowledge from around the world, including from Greece, India, and China.

(B) Founded in Iraq in the eighth century, the House of Wisdom employed many scholars as translators.

(C) Writings from the Greek philosopher Aristotle and the Indian mathematician Aryabhata were preserved at the House of Wisdom.

(D) The House of Wisdom collected writings from different countries and created paper versions in Arabic to be studied and shared.

While researching a topic, a student has taken the following notes:

- The ancient Arab dhow was a sailing vessel distinguishable by its triangular sails and stitched hull construction.
- Dhows were used primarily for trade along the coasts of Arab, South Asian, and East African countries.
- Contemporary shipbuilders in Oman use a mix of modern and traditional materials to build replicas of ancient dhows.
- Most of the materials used are traditional.
- Replica hulls are stitched together using the same traditional coconut palm fiber rope used on the hulls of ancient dhows.

ID 3b02e88a

168 Mark for Review Hard Explanation ›

The student wants to make a generalization about the materials used in dhow replicas. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A traditional material that was used to stitch together the hulls of ancient dhows, coconut palm fiber rope is still used by shipbuilders.

(B) The ancient Arab dhow was a sailing vessel used primarily for trade and distinguishable by its triangular sails.

(C) Although most materials used in dhow replicas are traditional, some modern materials are used.

(D) Contemporary shipbuilders in Oman build replicas of the dhow, which was an ancient sailing vessel with a stitched hull construction.

While researching a topic, a student has taken the following notes:

- Two opposing theories of vision divided scholars for many centuries.
- The ancient Greek mathematician Euclid (circa 300 BCE) supported the extramission theory.
- This theory held that the eyes emit a form of radiation that illuminates objects in its range.
- The ancient Greek philosopher Aristotle (384–322 BCE) supported the intromission theory.
- This theory held that objects emit a form of radiation that reaches the eyes.
- In the eleventh century, Arab mathematician Ibn al-Haytham (965–1040 CE) largely settled the debate with the first conclusive experiments supporting intromission.

ID 964c6055

169 Mark for Review Hard Explanation ›

The student wants to provide a historical overview of the two theories. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Scholars were divided between the extramission and intromission theories of vision until Ibn al-Haytham's eleventh-century experiments largely settled the debate in support of intromission.

(B) Through two opposing theories of vision—extramission and intromission—Euclid, Aristotle, and Ibn al-Haytham held that a form of radiation is emitted either from objects or from the eyes.

(C) While Ibn al-Haytham largely settled the debate in the eleventh century, Aristotle supported the theory of intromission centuries before.

(D) Before the eleventh century, the ancient Greek philosopher Aristotle supported the intromission theory, which held that objects emit a form of radiation that reaches the eyes.

While researching a topic, a student has taken the following notes:

- British musicians John Lennon and Paul McCartney shared writing credit for numerous Beatles songs.
- Many Lennon-McCartney songs were actually written by either Lennon or McCartney, not by both.
- The exact authorship of specific parts of many Beatles songs, such as the verse for "In My Life," is disputed.
- Mark Glickman, Jason Brown, and Ryan Song used statistical methods to analyze the musical content of Beatles songs.
- They concluded that there is 18.9% probability that McCartney wrote the verse for "In My Life," stating that the verse is "consistent with Lennon's songwriting style."

ID 2c61e0b9

170 Mark for Review Hard Explanation ›

The student wants to make a generalization about the kind of study conducted by Glickman, Brown, and Song. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Based on statistical analysis, Glickman, Brown, and Song claim that John Lennon wrote the verse of "In My Life."

(B) There is only an 18.9% probability that Paul McCartney wrote the verse for "In My Life"; John Lennon is the more likely author.

(C) It is likely that John Lennon, not Paul McCartney, wrote the verse for "In My Life."

(D) Researchers have used statistical methods to address questions of authorship within the field of music.

While researching a topic, a student has taken the following notes:

- Freddie Wong (born 1985) is a director and special effects artist from the United States.
- He is best known for the action-comedy web series *Video Game High School* (*VGHS*).
- *VGHS* premiered in 2012 on RocketJump, a YouTube channel that Wong cocreated.
- The series was celebrated for its inventive video game–centric world and high-quality special effects.
- *VGHS* was nominated for a Producers Guild Award for Outstanding Digital Series.

ID af88c47a

171 Mark for Review Hard Explanation ›

The student wants to begin a narrative about Wong's award-nominated web series. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In 2012, director and visual effects artist Freddie Wong launched a new action-comedy web series: *Video Game High School.*

(B) *Video Game High School* was celebrated for its inventive video game–centric world and high-quality special effects, and it was nominated for a Producer's Guild Award for Outstanding Digital Series.

(C) Wong, cocreator of the YouTube channel RocketJump, would go on to see his web series be nominated for a Producers Guild Award.

(D) In 2012, *Video Game High School* premiered on RocketJump; it would later be nominated for an award.

While researching a topic, a student has taken the following notes:

- The magnificent frigatebird (*fregata magnificens*) is a species of seabird that feeds mainly on fish, tuna, squid, and other small sea animals.
- It is unusual among seabirds in that it doesn't dive into the water for prey.
- One way it acquires food is by using its hook-tipped bill to snatch prey from the surface of the water.
- Another way it acquires food is by taking it from weaker birds by force.
- This behavior is known as kleptoparasitism.

ID 9551ef8b

172 Mark for Review — Hard — Explanation ›

The student wants to emphasize a similarity between the two ways a magnificent frigatebird acquires food. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A magnificent frigatebird never dives into the water, instead using its hook-tipped bill to snatch prey from the surface.

(B) Neither of a magnificent frigatebird's two ways of acquiring food requires the bird to dive into the water.

(C) Of the magnificent frigatebird's two ways of acquiring food, only one is known as kleptoparasitism.

(D) In addition to snatching prey from the water with its hook-tipped bill, a magnificent frigatebird takes food from other birds by force.

While researching a topic, a student has taken the following notes:

- Suzanne K. Birner led a study analyzing rocks on the seafloor to better understand the history of Earth's mantle.
- Rock samples were collected from two seafloor ridges.
- The researchers determined the samples' period of formation (the Archean eon) and oxidation level (extremely low).
- High temperatures in the Archean likely caused the rocks' low oxidation.
- Birner's team suggests the oxidation of Earth's mantle has remained stable over time, contrary to previous theories.
- The findings help explain the unique conditions that allowed life to develop on Earth.

ID be3363dd

173 Mark for Review — Hard — Explanation ›

The student wants to present the study's research methods. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Birner led a study to better understand the history of Earth's mantle and explain the conditions that allowed life to develop.

(B) To further analyze the origins of Earth's unique conditions, researchers focused on rocks from the Archean eon, when Earth's temperatures were extremely high.

(C) By studying these ancient rocks, the team aimed to challenge previous theories about changes in Earth's mantle over time.

(D) Birner's team analyzed the age and oxidation levels of rock samples collected from two seafloor ridges.

While researching a topic, a student has taken the following notes:

- Modularity of mind is the notion that the mind is at least partly composed of innate neural structures (modules) that perform fast, necessary tasks.
- 1983: cognitive scientist Jerry A. Fodor hypothesized that low-level cognitive systems (e.g., perception, language) are modular.
- In Fodorian modularity, high-level systems (e.g., reasoning) are not modular.
- 2003: cognitive scientist Peter Carruthers proposed the massive modularity hypothesis (MMH).
- MMH expands modularity to include all cognitive systems.

ID 459df2ba

174 Mark for Review — Hard — Explanation ›

The student wants to compare Fodor's hypothesis with Carruthers's. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In considering some but not all cognitive systems modular, Fodorian modularity is not as expansive in its definition of modularity as MMH is.

(B) Following Fodor's 1983 hypothesis, Carruthers proposed that modularity of mind includes all cognitive systems.

(C) The hypotheses of Fodor and Carruthers differ in whether they consider low-level cognitive systems, such as perception and language, modular.

(D) In 2003, Carruthers proposed the massive modularity hypothesis, disagreeing with Fodor's earlier hypothesis that the mind is composed of innate neural structures.

While researching a topic, a student has taken the following notes:

- A 2024 study analyzed the facial expressions of wolves and domestic dogs.
- In the study, facial expressions were coded under 46 different facial actions.
- The "ears rotator" facial action is seen in wolves.
- Dog breeds with erect (wolf-like) ears can produce the "ears rotator" facial action.
- Dog breeds with flopped or semi-flopped (non-wolf-like) ears cannot produce the "ears rotator" facial action.

ID 8e9e473d

175 Mark for Review — Hard — Explanation ›

The student wants to compare dog breeds with wolf-like ears to dog breeds with non-wolf-like ears. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) In a 2024 study, dog breeds with non-wolf-like ears were able to produce the same facial movements that wolves could.

(B) One difference between dog breeds with wolf-like ears and dog breeds without them is that wolf-like breeds cannot produce the "ears rotator" facial action.

(C) Non-wolf-like ears are flopped or semi-flopped, but wolf-like ears are different: they are erect and can produce the "ears rotator" facial action.

(D) Like wolves, dog breeds with erect ears can produce the "ears rotator" facial action, while those with flopped or semi-flopped ears cannot.

While researching a topic, a student has taken the following notes:

- Malapportionment is the over- or underrepresentation (relative to population size) of electoral districts in a governing body.
- It is a common feature of representative governments.
- There are 169 seats in Norway's supreme legislature (the Storting).
- Seats are distributed by a formula that awards 1 point per resident and 1.8 points per unit of land.
- Less populated rural districts with large tracts of land receive a disproportionate number of seats compared to smaller but more populated urban districts.

ID 07456405

176 Mark for Review — Hard — Explanation ›

The student wants to refute a claim that malapportionment in the Storting favors small urban districts. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Less populated rural districts are disproportionally underrepresented in the Storting, creating an unfair advantage for smaller but more populated urban districts.

(B) It's untrue that malapportionment in the 169-seat Storting favors small urban districts; rather, the formula for distributing seats overrepresents more populated districts.

(C) A common feature of representative governments, malapportionment occurs when electoral districts are over- or underrepresented.

(D) Awarding more points per unit of land than points per resident, the formula for distributing Storting seats overrepresents less populated rural districts with large tracts of land.

While researching a topic, a student has taken the following notes:

- Ulaanbaatar is the capital of Mongolia.
- The city's population is 907,802.
- Ulaanbaatar contains 31.98 percent of Mongolia's population.
- Hanoi is the capital of Vietnam.
- The city's population is 7,781,631.
- Hanoi contains 8.14 percent of Vietnam's population.

ID 5fa51c86

177 Mark for Review — Hard — Explanation ›

The student wants to emphasize the relative sizes of the two capitals' populations. Which choice most effectively uses information from the given sentences to emphasize the relative sizes of the two capitals' populations?

(A) Mongolia's capital is Ulaanbaatar, which has 907,802 people, and Vietnam's capital is Hanoi, which has 7,781,631 people.

(B) Comparing Vietnam and Mongolia, 7,781,631 is 8.14 percent of Vietnam's population, and 907,802 is 31.98 percent of Mongolia's.

(C) Even though Hanoi (population 7,781,631) is larger than Ulaanbaatar (population 907,802), Ulaanbaatar accounts for more of its country's population.

(D) The populations of the capitals of Mongolia and Vietnam are 907,802 (Ulaanbaatar) and 7,781,631 (Hanoi), respectively.

While researching a topic, a student has taken the following notes:

- The Gullah are a group of African Americans who have lived in parts of the southeastern United States since the 18th century.
- Gullah culture is influenced by West African and Central African traditions.
- Louise Miller Cohen is a Gullah historian, storyteller, and preservationist.
- She founded the Gullah Museum of Hilton Head Island, South Carolina, in 2003.
- Vermelle Rodrigues is a Gullah historian, artist, and preservationist.
- She founded the Gullah Museum of Georgetown, South Carolina, in 2003.

ID 0fab0c90

178 Mark for Review Hard Explanation ›

The student wants to emphasize the duration and purpose of Cohen's and Rodrigues's work. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) At the Gullah Museums in Hilton Head Island and Georgetown, South Carolina, visitors can learn more about the Gullah people who have lived in the region for centuries.

(B) Louise Miller Cohen and Vermelle Rodrigues have worked to preserve the culture of the Gullah people, who have lived in the United States since the 18th century.

(C) Since 2003, Louise Miller Cohen and Vermelle Rodrigues have worked to preserve Gullah culture through their museums.

(D) Influenced by the traditions of West and Central Africa, Gullah culture developed in parts of the southeastern United States in the 18th century.

While researching a topic, a student has taken the following notes:

- The nautical mile (6,076 feet) is the measure of distance used in seafaring navigation.
- A nautical mile directly correlates to one minute (1/60th of a degree) of latitude.
- The curvature of Earth affects the accurate measurement of long distances when using flat maps.
- Measuring distances with latitude and longitude coordinates takes into account Earth's curvature.
- Mariners use nautical charts marked with latitude and longitude to quickly calculate distances and positions.

ID ee51ad04

179 Mark for Review Hard Explanation ›

The student wants to explain why nautical miles are used to measure distances in seafaring navigation. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Nautical miles are a measure of distance equal to one minute of latitude, which is a feature nautical charts use to calculate distances and positions.

(B) Since they directly correlate to the coordinates on nautical charts, which take into account Earth's curvature, nautical miles are an efficient way to calculate distances at sea.

(C) Using nautical miles for navigation at sea takes Earth's curvature into account, whereas measuring distances with latitude and longitude coordinates does not.

(D) Nautical charts use latitude and longitude to measure long distances; these charts are more accurate than flat maps for measuring distances in seafaring navigation because they account for Earth's curvature.

While researching a topic, a student has taken the following notes:

- A commodity chain is the series of links connecting the production and purchase of a commodity on the world market.
- Chinese American anthropologist Anna Tsing studies the contemporary commodity chain of matsutake mushrooms.
- At one end of the matsutake chain are mushroom pickers in Oregon.
- At the other end are wealthy consumers who buy the costly matsutake in Japan.
- According to Tsing, "Japanese traders began importing matsutake in the 1980s, when the scarcity of matsutake in Japan first became clear."

ID 1773fa73

180 Mark for Review — Hard — Explanation ›

The student wants to provide an overview of the matsutake commodity chain. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The contemporary matsutake commodity chain has its origins in the 1980s when, according to Tsing, "the scarcity of matsutake in Japan first became clear."

(B) Commodity chains include the linked production and purchase of commodities, such as the matsutake mushroom, on the world market.

(C) Decades after the Japanese import of matsutake began, a commodity chain now links matsutake pickers in Oregon with wealthy consumers of the costly mushrooms in Japan.

(D) Wealthy consumers who buy the costly mushrooms in Japan are at one end of the matsutake commodity chain.

While researching a topic, a student has taken the following notes:

- Archaeologist Jon Erlandson and colleagues argue that humans first arrived in the Americas by sea.
- They propose that humans traveled between Pacific Ocean islands and coastlines from northeast Asia to the Americas.
- Many of these islands and coastal zones were later submerged as glaciers melted and sea levels rose.
- The researchers think that "a coastal route, including kelp forests and estuaries, would have provided a rich mix of marine, estuarine, riverine, and terrestrial resources" such as seaweeds, fish, and birds.
- This proposed scenario is known as the kelp highway hypothesis.

ID 5b8b69a2

181 Mark for Review — Hard — Explanation ›

The student wants to summarize the kelp highway hypothesis. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Pacific Ocean islands and coastlines likely contained "a rich mix of marine, estuarine, riverine, and terrestrial resources" such as seaweeds, fish, and birds, according to researchers.

(B) One argument about how humans first arrived in the Americas is the kelp highway hypothesis proposed by Jon Erlandson and colleagues.

(C) Humans may have first arrived in the Americas by sea, traveling between Pacific Ocean islands and coastlines and subsisting on a variety of resources.

(D) As glaciers melted and sea levels rose, many Pacific Ocean islands and coastal zones were submerged.

While researching a topic, a student has taken the following notes:

- Astronomers estimate that the number of comets orbiting the Sun is in the billions.
- 81P/Wild is one of many comets whose orbit has changed over time.
- 81P/Wild's orbit once lay between the orbits of Uranus and Jupiter.
- The comet's orbit is now positioned between the orbits of Jupiter and Mars.

ID 0acc26b2

182 Mark for Review Hard Explanation ›

The student wants to make and support a generalization about the orbits of comets. Which choice most effectively uses relevant information from the notes to accomplish these goals?

(A) Astronomers estimate that the number of comets orbiting the Sun is in the billions; the comets' orbits may change over time.

(B) Like Uranus, Jupiter, and Mars, billions of comets orbit the Sun.

(C) One example of a comet is 81P/Wild, whose orbit around the Sun once lay between Uranus's and Jupiter's orbits but is now positioned between those of Jupiter and Mars.

(D) A comet's orbit around the Sun may change over time: the orbit of comet 81P/Wild once lay between the orbits of Uranus and Jupiter but is now positioned between those of Jupiter and Mars.

While researching a topic, a student has taken the following notes:

- A small number of US Navy sailors of Filipino descent served during the US Civil War (1861–1865).
- Stephen Amos was born in the Philippines around 1830.
- He enlisted in the US Navy in November 1863.
- Raphael Ignases was born in the Philippines around 1834.
- He enlisted in the US Navy in July 1861.

ID 9336f63b

183 Mark for Review Hard Explanation ›

The student wants to emphasize the historical significance of Stephen Amos's enlistment date. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Both Stephen Amos and Raphael Ignases were US Navy sailors of Filipino descent, but Amos enlisted in the Navy in 1863, two years later than Ignases.

(B) Stephen Amos was a US Navy sailor of Filipino descent, along with Raphael Ignases, who was born in the Philippines around 1834.

(C) Stephen Amos enlisted in the US Navy in 1863, making him one of the few sailors of Filipino descent to serve in the US Civil War (1861–1865).

(D) When Stephen Amos enlisted in the US Navy in November 1863, he joined sailors such as Raphael Ignases, who had been born in the Philippines around 1834.

While researching a topic, a student has taken the following notes:

- The background colors of US and UK road signs are used to denote each sign's purpose.
- Directional signs are a type of sign containing information such as route names, distance to a destination, etc.
- Highways, major roadways, and minor roadways in the US generally use green for directional signs.
- Highways in the UK generally use blue for directional signs.
- Major roadways in the UK generally use green for directional signs.

ID de01ccef

184 Mark for Review Hard Explanation ›

The student wants to contrast how green backgrounds are used in US and UK road signs. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Blue backgrounds are generally used on directional highway signs in the UK, in contrast to the green highway signs used in the US.

(B) In the US, green signs indicate directional information on both highways and major roadways, but in the UK, directional signs of this color generally appear only on major roadways.

(C) Green road signs are used in both the US and UK to denote directional information on major roadways, like distance to a destination or route names.

(D) Both the UK and the US use directional signs, which include information on route names and distance to a destination.

While researching a topic, a student has taken the following notes:

- Marcela Guerrero is a curator at the Whitney Museum of American Art in New York.
- She curated the Whitney's 2018 exhibition *Pacha, Llaqta, Wasichay: Indigenous Space, Modern Architecture, New Art*.
- This exhibition featured works by seven emerging Latino artists.
- She curated the Whitney's 2020 exhibition *Vida Americana: Mexican Muralists Remake American Art, 1925–1945*.
- This exhibition included nearly 200 works by twentieth-century Latino and Mexican artists.

ID cfade68d

185 Mark for Review Hard Explanation ›

The student wants to describe the exhibition that Guerrero curated in 2018. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Held at the Whitney Museum of American Art, the exhibition *Vida Americana: Mexican Muralists Remake American Art, 1925–1945* included nearly 200 works by twentieth-century Mexican and Latino artists.

(B) *Pacha, Llaqta, Wasichay: Indigenous Space, Modern Architecture, New Art*, an exhibition at the Whitney Museum of American Art, featured works by seven emerging Latino artists.

(C) In both 2018 and 2020, Marcela Guerrero curated exhibitions at the Whitney Museum of American Art in New York.

(D) While one exhibition that Marcela Guerrero curated featured works by emerging artists, another included works by twentieth-century artists.

While researching a topic, a student has taken the following notes:

- Neuroscientists Krishnan Padmanabhan and Zhen Chen sought to better understand the workings of the brain's olfactory system.
- They devised a study using mathematical models.
- They found that certain fibers allow the brain to toggle from one method of processing smells to another.
- In one method, cells in the piriform cortex (where the perception of odor forms) capture olfactory information at a given moment.
- In the other, the cells track changes in olfactory information over time.

ID 5222ffab

186 Mark for Review Hard Explanation ›

The student wants to summarize the study's findings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) To arrive at these findings, which describe dual methods of processing smells in the piriform cortex, Padmanabhan and Chen devised a study using mathematical models.

(B) Padmanabhan and Chen showed that olfactory information is captured by cells in the piriform cortex, where the perception of odor forms.

(C) Using mathematical models, Padmanabhan and Chen devised a study to better understand the workings of the brain's olfactory system.

(D) According to Padmanabhan and Chen, the brain can toggle between capturing olfactory information at a given moment and tracking changes in that information over time.

While researching a topic, a student has taken the following notes:

- Nissologists are scientists who study islands.
- Some nissologists define an island as any piece of land surrounded by water.
- Using that definition, they determined that Sweden has 221,000 islands.
- Other nissologists define an island as being 1 kilometer square, a certain distance from the mainland, and having at least 50 permanent residents.
- Using that definition, they determined that Sweden has 24 islands.

ID 3dcc7140

187 Mark for Review Hard Explanation ›

The student wants to make and support a generalization about nissologists' definition of an island. Which choice most effectively uses relevant information from the notes to accomplish these goals?

(A) The definition of an island as any piece of land surrounded by water is supported by some nissologists, scientists who study islands.

(B) Multiple counts of Sweden's islands have been based on different definitions of an island.

(C) Based on a recent count, Sweden has a relatively small number of islands with at least 50 permanent residents.

(D) Nissologists' different definitions can result in huge disparities in counts of islands, as the example of Sweden shows.

While researching a topic, a student has taken the following notes:

- In 1978, Sámi activists staged protests to block the construction of a dam on the Alta River in Norway.
- The dam would disrupt Sámi fishing and reindeer herding.
- The dam was ultimately built, but the Alta conflict had a lasting impact.
- It brought international attention to the issue of Sámi rights.
- It led to a set of 2005 legal protections establishing Sámi rights to lands, waters, and resources.

ID 622a351d

188 Mark for Review Hard Explanation ›

The student wants to make and support a generalization about the Alta conflict. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) During the Alta conflict, Sámi activists staged protests to block the construction of a dam on the Alta River in Norway that would disrupt local fishing and reindeer herding.

(B) Although the dam that the Sámi activists had protested was ultimately built, the Alta conflict had a lasting impact.

(C) Sámi rights to lands, waters, and resources received international attention and legal protections as a result of the Alta conflict.

(D) The Alta conflict had a lasting impact, resulting in international attention and legal protections for Sámi rights to lands, waters, and resources.

While researching a topic, a student has taken the following notes:

- In a 2023 study, environmental scientist Jazmin Locke-Rodriguez and colleagues tested the use of floating treatment wetlands (FTWs) in Florida.
- FTWs are artificial floating platforms of plants used to remediate polluted or nutrient-imbalanced water.
- Finding: FTWs using marigold flowers removed 52% more total phosphorus than the control.
- Finding: The test yielded 65 market-quality blooms per square meter.
- The authors concluded marigolds showed "promising potential as a commercially viable remediating crop cultivated on FTWs in South Florida."

ID 5645f119

189 Mark for Review Hard Explanation ›

The student wants to present the findings of the study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The authors concluded that marigolds grown on FTWs were "commercially viable," having produced 65 blooms per square meter of market-quality blooms in a 2023 study.

(B) In a 2023 study, Locke-Rodriguez and colleagues found that marigolds cultivated on FTWs produced 52% more market-quality flower blooms than the control.

(C) Locke-Rodriguez and colleagues found that FTWs using marigolds not only helped remove phosphorus from the water but also yielded market-quality blooms.

(D) FTWs using marigolds, Locke-Rodriguez and colleagues found, yielded 65 flower blooms and removed 52% of phosphorus from the water.

While researching a topic, a student has taken the following notes:

- Cambodia's Angkor Wat was built in the 1100s to honor the Hindu god Vishnu.
- It has been a Buddhist temple since the sixteenth century.
- Decorrelation stretch analysis is a novel digital imaging technique that enhances the contrast between colors in a photograph.
- Archaeologist Noel Hidalgo Tan applied decorrelation stretch analysis to photographs he had taken of Angkor Wat's plaster walls.
- Tan's analysis revealed hundreds of images unknown to researchers.

ID 96a86bce

190 Mark for Review — Hard — Explanation ›

The student wants to present Tan's research to an audience unfamiliar with Angkor Wat. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Tan photographed Angkor Wat's plaster walls and then applied decorrelation stretch analysis to the photographs.

(B) Decorrelation stretch analysis is a novel digital imaging technique that Tan used to enhance the contrast between colors in a photograph.

(C) Using a novel digital imaging technique, Tan revealed hundreds of images hidden on the walls of Angkor Wat, a Cambodian temple.

(D) Built to honor a Hindu god before becoming a Buddhist temple, Cambodia's Angkor Wat concealed hundreds of images on its plaster walls.

While researching a topic, a student has taken the following notes:

- In North America, woodlands have expanded into areas that were once grasslands.
- Thomas Rogers and F. Leland Russell of Wichita State University investigated whether woodland expansion is related to changes in climate.
- Rogers and Russell analyzed core samples from oak trees on a site that was not wooded in the past and indexed the age of the trees with historical climate data to see if tree populations and climate were correlated.
- Tree population growth was associated with dry intervals.
- Droughts may have played a role in woodland expansion.

ID 973632d2

191 Mark for Review — Hard — Explanation ›

The student wants to emphasize the aim of the research study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Thomas Rogers and F. Leland Russell, researchers at Wichita State University, wanted to know if woodland expansion is related to changes in climate.

(B) Thanks to the work done by Thomas Rogers and F. Leland Russell, we now know that droughts may have played a role in woodland expansion.

(C) Wichita State University researchers have determined that tree population growth was associated with dry intervals.

(D) Thomas Rogers and F. Leland Russell analyzed core samples from oak trees on a site that was not wooded in the past, indexing the age of the trees with historical climate data.

While researching a topic, a student has taken the following notes:

- Bike-share programs provide bicycles for shared use.
- In docked bike sharing, riders rent a bike and return it to designated docking stations.
- Docked programs are orderly and offer consistency to riders but require significant space and money to implement.
- In dockless bike sharing, riders locate a bike and leave it wherever they choose.
- Dockless programs are relatively simple and inexpensive to implement and offer flexibility to riders.
- Dockless programs can be disorganized.

ID e98b1690

192 Mark for Review Hard Explanation ›

The student wants to compare some disadvantages of docked and dockless bike-share programs. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Dockless programs can be disorganized; docked programs, on the other hand, offer order and consistency.

(B) Worth noting is that while dockless programs are relatively easy and inexpensive to implement, they are less flexible than docked programs.

(C) Docked programs are more resource-intensive than dockless programs, but they avoid some of the latter's organizational challenges.

(D) Though dockless programs offer flexibility, docked bike-share programs provide bicycles for shared use.

While researching a topic, a student has taken the following notes:

- Producing the nutrient-rich cyanobacterium *L. maxima* at industrial scale requires high-quality samples of *L. maxima* DNA.
- Yirlis Yadeth Pineda-Rodriguez and a team of researchers at the University of Córdoba, Colombia, evaluated the quantity and purity of *L. maxima* DNA extracted using three different DNA extraction kits.
- CTAB 2X (kit 1) had a DNA yield of 2,134 nanograms per microliter (ng/μL) and a purity ratio of 2.2.
- Pbact (kit 2) had a DNA yield of 157 ng/μL and a purity ratio of 1.6.
- Pplant (kit 3) had a DNA yield of 12.5 ng/μL and a purity ratio of 1.5.
- According to the researchers, Pbact was the most effective because it was the only one with both a sufficiently high yield and a purity rate close to the ideal of 1.8.

ID 19b08ead

193 Mark for Review Hard Explanation ›

The student wants to emphasize the significance of a similarity between two of the kits. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Due to their insufficient yield or purity, CTAB 2X and Pplant were deemed by the researchers to be less effective than Pbact.

(B) Compared to CTAB 2X, which had a DNA yield of 2,134 ng/μL, both Pbact and Pplant had insufficient yields; Pplant, in particular, was ineffective due to its low yield.

(C) CTAB 2X and Pplant both had a DNA yield above 10 and a purity ratio above 1.4.

(D) With the ideal purity ratio being 1.8, CTAB 2X and Pbact were equal in purity, according to the researchers.

While researching a topic, a student has taken the following notes:

- Ducklings expend up to 62.8% less energy when swimming in a line behind their mother than when swimming alone.
- The physics behind this energy savings hasn't always been well understood.
- Naval architect Zhiming Yuan used computer simulations to study the effect of the mother duck's wake.
- The study revealed that ducklings are pushed in a forward direction by the wake's waves.
- Yuan determined this push reduces the effect of wave drag on the ducklings by 158%.

ID 8d1ddd1b

194 Mark for Review Hard Explanation ›

The student wants to present the study and its methodology. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A study revealed that ducklings, which expend up to 62.8% less energy when swimming in a line behind their mother, also experience 158% less drag.

(B) Seeking to understand how ducklings swimming in a line behind their mother save energy, Zhiming Yuan used computer simulations to study the effect of the mother duck's wake.

(C) Zhiming Yuan studied the physics behind the fact that by being pushed in a forward direction by waves, ducklings save energy.

(D) Naval architect Zhiming Yuan discovered that ducklings are pushed in a forward direction by the waves of their mother's wake, reducing the effect of drag by 158%.

While researching a topic, a student has taken the following notes:

- Researchers in a 2021 study wanted to determine the rate at which 17 languages conveyed both information and syllables.
- They calculated the bits of information conveyed per second (the IR, or information rate).
- The IR was found to be approximately consistent across the 17 languages (an average of 39 bits per second).
- They calculated the number of syllables spoken per second (the SR, or syllable rate).
- Spanish had the second-fastest SR (7.7 syllables per second).
- Vietnamese had the sixteenth-fastest SR (5.3 syllables per second).

ID b44141cf

195 Mark for Review Hard Explanation ›

The student wants to present an overview of the study's findings. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The 2021 study determined the information rate (IR) of 17 languages in bits of information conveyed per second.

(B) Researchers found that information was conveyed more quickly in Spanish, at 7.7 syllables per second, than in Vietnamese, at 5.3 syllables per second.

(C) Vietnamese had the sixteenth-fastest syllable rate, lower than that of Spanish, which had the second-fastest; however, Spanish had the lower information rate of the two.

(D) Though some of the languages differed in number of syllables spoken per second, all 17 conveyed information at roughly the same rate.

While researching a topic, a student has taken the following notes:

- African American women played prominent roles in the Civil Rights Movement, including at the famous 1963 March on Washington.
- Civil rights activist Anna Hedgeman, one of the march's organizers, was a political adviser who had worked for President Truman.
- Civil rights activist Daisy Bates was a well-known journalist and advocate for school desegregation.
- Hedgeman worked behind the scenes to make sure a woman was included in the lineup of speakers at the march.
- Bates was the sole woman to speak, delivering a brief but memorable address to the cheering crowd.

ID c34d6bff

196 Mark for Review — Hard — Explanation ›

The student wants to compare the two women's contributions to the March on Washington. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Hedgeman and Bates contributed to the march in different ways; Bates, for example, delivered a brief but memorable address.

(B) Hedgeman worked in politics and helped organize the march, while Bates was a journalist and school desegregation advocate.

(C) Although Hedgeman worked behind the scenes to make sure a woman speaker was included, Bates was the sole woman to speak at the march.

(D) Many African American women, including Bates and Hedgeman, fought for civil rights, but only one spoke at the march.

While researching a topic, a student has taken the following notes:

- A sestina is a thirty-nine-line poetic form.
- Each line of the poem ends with one of six end words, which alternate according to a set pattern.
- "Forage Sestina" is a sestina by Marilyn Hacker.
- Its end words are *words*, *structure*, *wire*, *beam*, *wall*, and *room*.
- "Towards Autumn" is a sestina by Marilyn Hacker.
- Its end words are *daughter*, *friend*, *bread*, *mother*, *lover*, and *myself*.

ID ec03f090

197 Mark for Review — Hard — Explanation ›

The student wants to use one of the poems to illustrate the sestina form. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Hacker employs the sestina, a poetic form with thirty-nine lines and six end words, in both "Forage Sestina" and "Towards Autumn."

(B) As a sestina, "Towards Autumn" contains thirty-nine lines and six end words—in this case, *daughter*, *friend*, *bread*, *mother*, *lover*, and *myself*—that alternate in a set pattern.

(C) The thirty-nine-line sestina form uses the words *daughter*, *friend*, *bread*, *mother*, *lover*, and *myself*, which are found in the poem "Forage Sestina."

(D) Hacker has used the sestina form multiple times, as in "Towards Autumn," which contains these six words: *words*, *structure*, *wire*, *beam*, *wall*, and *room*.

While researching a topic, a student has taken the following notes:

- Leigh Torres is a marine ecologist.
- She conducted a study of blue whales in New Zealand's South Taranaki Bight region.
- She wanted to know how ocean temperature affects where the whales forage for krill in that region.
- She found that during a marine heat wave, the whales foraged farther offshore than they had during cooler periods.
- The offshore waters, which were colder than areas closer to shore, had a higher relative abundance of krill.

ID c40a1964

198 Mark for Review Hard Explanation ›

The student wants to emphasize the aim of the research study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Analyzing ocean temperature data, Torres found that during a marine heat wave, blue whales foraged farther offshore than they had during cooler periods.

(B) In her study, Torres sought to determine how ocean temperature affects where blue whales forage for krill in the South Taranaki Bight region.

(C) Torres's study revealed that blue whales were attracted to offshore waters with a relatively high abundance of krill.

(D) Torres, a marine ecologist, studied blue whales in the South Taranaki Bight region, where the whales forage.

While researching a topic, a student has taken the following notes:

- Phobetor, a name drawn from Greek mythology, is an exoplanet that orbits the star PSR B1257+12, also known as Lich.
- Phobetor's mass is 0.01 times that of Jupiter, or 0.01 Jupiter masses.
- Mastika, which means "gem" or "jewel" in Malay, is an exoplanet that orbits the star HD 179949, also known as Gumala.
- Mastika's mass is 0.92 Jupiter masses.

ID b0620764

199 Mark for Review Hard Explanation ›

The student wants to make and support a generalization about exoplanets. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Exoplanets that are named Phobetor orbit Lich, and those that are named Mastika orbit Gumala.

(B) Even though Phobetor and Mastika are both exoplanets, their masses are different: Phobetor's mass is 0.01 Jupiter masses, and Mastika's is 0.92 Jupiter masses.

(C) Many stars have both a designation and a proper name; for instance, PSR B1257+12 is also known as Lich, and HD 179949 is also known as Gumala.

(D) Exoplanet names have diverse origins, a fact that can be seen in the cases of Phobetor, a name drawn from Greek mythology, and Mastika, which means "gem" or "jewel" in Malay.

While researching a topic, a student has taken the following notes:

- The farm-size transition hypothesis predicts that economic pressures associated with modernization result in smaller farms amalgamating into larger-scale commercial farms.
- Masters et al. (2013): The average farm size in Asia "already has or will soon begin to rise."
- Promkhambut et al. (2023) argue that small rice farms in Thailand have adopted modern farming methods without a significant scaling-up of farm size.
- Promkhambut et al.: "The persistence of [small] rice farms [in Thailand] does not represent a 'failure' to modernize...or a 'truncated' transition—it is a *response* to modernization."

ID 7f5715e4

200 Mark for Review — Hard — Explanation ›

The student wants to make and support a claim regarding the applicability of the farm-size transition hypothesis to Thailand. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Taken together, the studies by Masters et al. and Promkhambut et al. suggest that rice farms in Thailand have responded to the economic pressures associated with modernization by expanding in size.

(B) Masters et al. report that the average farm size "already has or will soon begin to rise" in Asia, a finding that is consistent with the farm-size transition hypothesis.

(C) The predicted shift to large-scale commercial farming may not hold true for rice farms in Thailand, where, according to Promkhambut et al., rice farms have remained small as they've modernized.

(D) Although the farm-size transition hypothesis may be applicable to some countries in Asia, it is inconsistent with the development of rice farming in Thailand.

While researching a topic, a student has taken the following notes:

- Shanawdithit (1801–1829) was a Beothuk cartographer (mapmaker).
- Her maps of Newfoundland's Beothuk Lake outline both the lake and various points around the lake where encounters between the Indigenous Beothuk people and British colonists occurred.
- Her maps are notable for depicting the experiences the Beothuk had within the landscape.
- Contemporary Potawatomi cartographer Margaret Pearce: Indigenous cartography emphasizes "experienced space, or place, as opposed to the Western convention of depicting space as universal, homogenized, and devoid of human experience."
- Pearce: "Indigenous cartographies are as diverse as Indigenous cultures, from Hawaiian performative cartographies to Navajo verbal maps and sand paintings."

ID d4b07ce6

201 Mark for Review — Hard — Explanation ›

The student wants to describe Shanawdithit's approach and explain its significance. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Shanawdithit's maps are part of a broader tradition of Indigenous cartography that, according to Pearce, ranges from "Hawaiian performative cartographies to Navajo verbal maps and sand paintings."

(B) Shanawdithit mapped Beothuk Lake through significant encounters that occurred there, an approach described as "depicting space as universal [and] homogenized."

(C) According to Pearce, Indigenous cartography, such as Shanawdithit's maps of Beothuk Lake, emphasizes "experienced space, or place," with a variety of approaches that reflect the diversity of Indigenous cultures.

(D) By depicting experiences of the Beothuk that occurred around Beothuk Lake, Shanawdithit's maps reflect Indigenous cartography's emphasis on "experienced space, or place" rather than the landscape alone.

While researching a topic, a student has taken the following notes:

- Political scientist Graham Allison is known for his Thucydides trap theory.
- Allison's theory states that whenever "a rising power is threatening to displace a ruling power," conflict is likely.
- The theory is based on Thucydides's explanation of the conflict between Athens and Sparta.
- Thucydides wrote that "the rise of Athens and the fear this instilled in Sparta" made conflict "inevitable."
- History professor Edmund Stewart recently challenged the historical basis of the theory.
- Stewart claimed that Athens was not a rising power and that the rivals experienced a "clash of cultures" instead.

ID e8494245

202 Mark for Review Hard Explanation ›

The student wants to use a quotation to challenge Thucydides's explanation of the conflict between Athens and Sparta. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) According to Allison's Thucydides trap theory, whenever "a rising power is threatening to displace a ruling power," conflict is likely.

(B) Thucydides wrote that conflict between the two powers was "inevitable," although Stewart later challenged the historical basis of this claim.

(C) According to Stewart, a "clash of cultures" between Athens and Sparta caused the conflict, not Athens's rise.

(D) Thucydides explained that conflict was caused by "the rise of Athens and the fear this instilled in Sparta," but Allison disagreed, seeing the conflict as an example of the Thucydides trap.

While researching a topic, a student has taken the following notes:

- The factors that affect clutch size (the number of eggs laid at one time) have been well studied in birds but not in lizards.
- A team led by Shai Meiri of Tel Aviv University investigated which factors influence lizard clutch size.
- Meiri's team obtained clutch-size and habitat data for over 3,900 lizard species and analyzed the data with statistical models.
- Larger clutch size was associated with environments in higher latitudes that have more seasonal change.
- Lizards in higher-latitude environments may lay larger clutches to take advantage of shorter windows of favorable conditions.

ID 56b000d0

203 Mark for Review Hard Explanation ›

The student wants to emphasize the aim of the research study. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Researchers wanted to know which factors influence lizard egg clutch size because such factors have been well studied in birds but not in lizards.

(B) After they obtained data for over 3,900 lizard species, researchers determined that larger clutch size was associated with environments in higher latitudes that have more seasonal change.

(C) We now know that lizards in higher-latitude environments may lay larger clutches to take advantage of shorter windows of favorable conditions.

(D) Researchers obtained clutch-size and habitat data for over 3,900 lizard species and analyzed the data with statistical models.

While researching a topic, a student has taken the following notes:

- The National Congress of American Indians (NCAI) was founded in 1944 by representatives of fifty tribal governments.
- The NCAI was created to protect the sovereignty of Indigenous tribes.
- Napoleon B. Johnson (Cherokee) was the NCAI's first president.
- In 1975, the US Congress passed the Indian Self-Determination and Education Assistance Act (Public Law 96-638).
- This legislation formally acknowledged tribes' right to self-governance.
- The advocacy of the NCAI was a key factor in the law's passing.

Hard

Explanation >

The student wants to identify an accomplishment of the NCAI. Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) The NCAI, founded by representatives of fifty tribal governments, had Napoleon B. Johnson (Cherokee) as its first president.

(B) Founded in 1944, the NCAI was created by representatives of tribal governments from fifty sovereign Indigenous tribes.

(C) The NCAI's advocacy was key to the passing of Public Law 96-638, legislation formally acknowledging Indigenous tribes' right to self-governance.

(D) In 1975, the NCAI passed the Indian Self-Determination and Education Assistance Act, which was created to protect the sovereignty of Indigenous tribes.

Explanations

1 Correct answer **C** — Easy — ‹ Back to question

C The dinosaur fossil specimens Sue and Big Mike are both members of the genus *Tyrannosaurus.*

Choice C is the best answer. The sentence emphasizes a similarity between the two specimens, noting that Sue and Big Mike are members of the same genus: *Tyrannosaurus*.

Choice A is incorrect. The sentence only provides information about where one of the specimens (Sue) can be found; it doesn't emphasize a similarity between the two specimens. **Choice B is incorrect**. The sentence only provides information

about one specimen (Big Mike); it doesn't emphasize a similarity between the two specimens. **Choice D is incorrect**. The sentence contrasts the locations of Sue and Big Mike; it doesn't emphasize a similarity between the two specimens.

2 Correct answer **B** Easy ‹ Back to question

B The Haber-Bosch process uses an iron catalyst along with high temperatures and pressures to manufacture ammonia from nitrogen and hydrogen.

Choice B is the best answer. The sentence provides an overview of the Haber-Bosch process, explaining that it uses an iron catalyst, high temperatures, and high pressures to manufacture ammonia from nitrogen and hydrogen.

Choice A is incorrect. While the sentence identifies some of the process's required components (nitrogen, hydrogen, and an iron catalyst), the overview is incomplete; it doesn't explain what the process does (produces ammonia) or mention the conditions needed for it to function (high temperatures and pressures). **Choice C is incorrect**. While the sentence indicates who invented the process (Fritz Haber and Carl Bosch) and that it produces ammonia, the overview is incomplete; it doesn't mention any of the necessary ingredients or conditions. **Choice D is incorrect**. While the sentence mentions the inventors of the process along with the required conditions (high temperatures and pressures), it doesn't explain that the process produces ammonia or indicate what components are needed.

3 Correct answer **A** Easy ‹ Back to question

A The sixty-two-mile-long Philadelphia and Lancaster Turnpike connected the Pennsylvania cities of Philadelphia and Lancaster.

Choice A is the best answer. The sentence emphasizes the distance covered by the Philadelphia and Lancaster Turnpike, noting that the turnpike, which connected the two Pennsylvania cities in its name, was sixty-two miles long.

Choice B is incorrect. The sentence emphasizes the significance of the turnpike; it doesn't emphasize the distance that the turnpike covered. **Choice C is incorrect**. While the sentence mentions that the turnpike connected two Pennsylvania cities, it doesn't emphasize the specific distance covered by the turnpike. **Choice D is incorrect**. The sentence emphasizes when the turnpike was built; it doesn't emphasize the distance that the turnpike covered.

4 Correct answer **B** Easy ‹ Back to question

B Chia seeds contain 150 mg/oz of magnesium, which is more than peanuts and almonds.

Choice B is the best answer. The sentence identifies chia seeds as having the highest magnesium content of the three foods, noting that they contain 150 mg/oz, which is more than both peanuts and almonds.

Choice A is incorrect. The sentence compares the magnesium content of almonds and peanuts; it doesn't identify which of the three foods has the highest magnesium content. **Choice C is incorrect**. The sentence merely mentions the three foods; it doesn't identify which one has the highest magnesium content. **Choice D is incorrect**. The sentence identifies the magnesium content of peanuts; it doesn't identify which of the three foods has the highest magnesium content.

5 Correct answer **C**

Easy

‹ Back to question

C Both the Choctaw Code Talkers and the Navajo Code Talkers transmitted coded military messages in the soldiers' native languages.

Choice C is the best answer. The sentence emphasizes a similarity between the Choctaw Code Talkers and the Navajo Code Talkers by explaining that both groups used their native languages to transmit coded messages for the military.

Choice A is incorrect. The sentence describes the Choctaw Code Talkers; it doesn't emphasize a similarity between the Choctaw Code Talkers and the Navajo Code Talkers. **Choice B is incorrect**. The sentence introduces the Navajo Code Talkers; it doesn't emphasize a similarity between the Choctaw Code Talkers and the Navajo Code Talkers. **Choice D is incorrect**. The sentence emphasizes a difference between the Choctaw Code Talkers and the Navajo Code Talkers; it doesn't emphasize a similarity.

6 Correct answer **A**

Easy

‹ Back to question

A In *Assertion of Will*, the figures' clothing is made of fabric pieces stitched to the painting's canvas.

Choice A is the best answer. This choice directly describes how fabric is used in *Assertion of Will*, by explaining that the fabric pieces are part of the painting itself.

Choice B is incorrect. This choice provides contextual information about the exhibition, but it doesn't mention anything about the painting or the fabric. **Choice C is incorrect**. This choice mentions that the figures are clothed, but it doesn't explain how the fabric is integrated into the painting. **Choice D is incorrect**. This choice provides contextual information about the painting, but it doesn't mention anything about the fabric or how it is used.

7 Correct answer **A**

Easy

‹ Back to question

A The term "Lazarus species" describes a living species of organism, such as the mountain pygmy possum, that was once believed to be extinct.

Choice A is the best answer. The sentence defines the term "Lazarus species" and provides an example of one, explaining that a Lazarus species is a living organism that was once believed to be extinct and providing the mountain pygmy possum as an example.

Choice B is incorrect. While the sentence provides an example of a Lazarus species, it doesn't define the term "Lazarus species." **Choice C is incorrect**. The sentence provides information about the mountain pygmy possum; it doesn't define the term "Lazarus species" or explicitly identify the mountain pygmy possum as a Lazarus species. **Choice D is incorrect**. While the sentence describes the concept of a Lazarus species, it doesn't define the term or provide an example of a Lazarus species.

8 Correct answer **A**

Easy

‹ Back to question

A Dhaka muslin is a handmade fabric with an extremely fine weave, while sheeting muslin is machine made with a coarse weave.

Choice A is the best answer. The difference between the two different kinds of muslin is emphasized.

Choice B is incorrect. This choice lists two kinds of muslins, but does not say how they are different from one another. **Choice C is incorrect**. This choice does not emphasize a difference between the two muslins. **Choice D is incorrect**. This choice does not emphasize a difference between the two muslins. It only describes sheeting muslin.

9 Correct answer **D**

Easy

Back to question

D Yellowstone is a national park that has roughly 100 gray wolves living in it.

Choice D is the best answer. This choice uses relevant information from the third bullet point to state the approximate number of gray wolves in Yellowstone.

Choice A is incorrect. This choice mentions the year gray wolves in Yellowstone were reintroduced but not how many there are currently. **Choice B is incorrect**. This choice mentions the year gray wolves in Yellowstone were reintroduced but not how many there are currently. **Choice C is incorrect**. This choice defines the term carrying capacity but doesn't connect it to the specific number of gray wolves currently living in Yellowstone.

10 Correct answer **C**

Easy

Back to question

C *Yosemite Falls* was completed in 1930.

Choice C is the best answer. The sentence indicates the year *Yosemite Falls* was completed, stating that it was completed in 1930.

Choice A is incorrect. The sentence indicates where Obata created black ink paintings; it doesn't indicate when the painting was completed. **Choice B is incorrect**. While the sentence identifies Obata as an artist who created a notable painting, it doesn't indicate when that painting was completed. **Choice D is incorrect**. The sentence identifies the method Obata used; it doesn't indicate when the painting was completed.

11 Correct answer **A**

Easy

Back to question

A The dicraeosaurid fossil was found in western India's Thar Desert.

Choice A is the best answer. The sentence indicates where the dicraeosaurid fossil was found: western India's Thar Desert.

Choice B is incorrect. The sentence states that Bajpai's team discovered the dicraeosaurid fossil; it doesn't specify where they found it. **Choice C is incorrect**. The sentence provides information about Dr. Sunil Bajpai; it doesn't indicate where the fossil was found. **Choice D is incorrect**. While the sentence provides information about the fossil, it doesn't indicate where the fossil was found.

12 Correct answer **B**

Easy

Back to question

B African American writer Pauline Hopkins created many genre-defining stories during her career, including the first African American mystery novel, *Hagar's Daughter*.

Choice B is the best answer. The sentence introduces Pauline Hopkins to an audience unfamiliar with her career, identifying her as a genre-defining African American writer and noting a career accomplishment.

Choice A is incorrect. The sentence emphasizes that Pauline Hopkins wrote a serialized novel but doesn't introduce Hopkins to an audience unfamiliar with her career. **Choice C is incorrect**. The sentence introduces Hopkins's novel; it doesn't introduce

Hopkins. **Choice D is incorrect**. The sentence explains that a novel written by Hopkins is considered the first African American mystery novel; it doesn't introduce Hopkins to an audience unfamiliar with her career.

13 Correct answer **D** Easy ‹ Back to question

D Chaudhuri is a sedimentologist.

Choice D is the best answer. The sentence identifies the type of scientist Chaudhuri is, noting that she is a sedimentologist.

Choice A is incorrect. The sentence provides an example of a type of sedimentary rock; it doesn't identify what type of scientist Chaudhuri is. **Choice B is incorrect**. The sentence indicates types of rock that some scientists study; it doesn't identify what type of scientist Chaudhuri is. **Choice C is incorrect**. While the sentence states that some scientists study sedimentary rocks, it doesn't identify Chaudhuri as this type of scientist.

14 Correct answer **D** Easy ‹ Back to question

D Fulton, Missouri, is named after Robert Fulton, designer of the first commercially successful steamboat.

Choice D is the best answer. The sentence indicates how Fulton, Missouri, got its name, noting that the city was named after the designer of the first commercially successful steamboat, Robert Fulton.

Choice A is incorrect. The sentence indicates that Fulton, Missouri, has the same name as a street in New York City; it doesn't indicate how the city of Fulton got its name. **Choice B is incorrect**. The sentence indicates that Fulton Street is in New York City; it doesn't indicate how Fulton, Missouri, got its name. **Choice C is incorrect**. The sentence provides details about Fulton's steamboat; it doesn't indicate how Fulton, Missouri, got its name.

15 Correct answer **A** Easy ‹ Back to question

A The neutron skin surrounding an atom of lead-208 measures about 0.28 trillionths of a millimeter.

Choice A is the best answer. The sentence emphasizes the thickness of lead-208's neutron skin, noting that it is about 0.28 trillionths of a millimeter thick.

Choice B is incorrect. The sentence makes a generalization about atoms, stating that atoms with excess neutrons will often acquire a neutron skin; it doesn't emphasize the thickness of lead-208's neutron skin. **Choice C is incorrect**. The sentence states that lead-208 has a neutron skin; it doesn't emphasize the thickness of that skin. **Choice D is incorrect**. The sentence indicates that lead-208 is surrounded by neutrons; it doesn't emphasize the thickness of lead-208's neutron skin.

16 Correct answer **C** Easy ‹ Back to question

C Only four of the twenty-nine islands in Komodo National Park have Komodo dragons living on them.

Choice C is the best answer. The sentence emphasizes the number of islands in Komodo National Park that have Komodo dragons living on them, noting that four of the park's twenty-nine islands have Komodo dragons.

Choice A is incorrect. While the sentence does explain that Komodo dragons live on the islands of Komodo National Park, it doesn't emphasize how many of those islands Komodo dragons live on. **Choice B is incorrect**. The sentence explains that Komodo National Park contains the world's largest lizards; it doesn't identify these lizards as Komodo dragons or emphasize

how many of the park's islands the lizards live on. **Choice D is incorrect**. The sentence specifies the total number of islands in Komodo National Park; it doesn't emphasize how many of those islands have Komodo dragons.

17 Correct answer **A** Easy Back to question

A Winters in the tundra are especially harsh, with temperatures averaging a frigid −30 degrees Fahrenheit.

Choice A is the best answer. The sentence emphasizes how harsh the conditions in the tundra can be, noting that the winters are especially harsh and describing the average temperatures as "frigid."

Choice B is incorrect because the sentence explains that some animals can survive harsh tundra winters; it doesn't emphasize how harsh the conditions can be. **Choice C is incorrect** because the sentence specifies how many different kinds of plants can live in the tundra; it doesn't emphasize how harsh the conditions in the tundra can be. **Choice D is incorrect** because the sentence explains that both plants and animals can survive in the tundra; it doesn't emphasize how harsh the conditions in the tundra can be.

18 Correct answer **B** Easy Back to question

B The Seikan Tunnel is roughly 33 miles long, while the slightly shorter Channel Tunnel is about 31 miles long.

Choice B is the best answer. The sentence compares the lengths of the two rail tunnels, noting that the Channel Tunnel (about 31 miles long) is slightly shorter than the Seikan Tunnel (roughly 33 miles long).

Choice A is incorrect. The sentence makes a generalization about the length of some rail tunnels; it doesn't compare the lengths of the two rail tunnels. **Choice C is incorrect**. The sentence describes a single rail tunnel; it doesn't compare the lengths of the two rail tunnels. **Choice D is incorrect**. While the sentence mentions the two rail tunnels, it doesn't compare their lengths.

19 Correct answer **D** Easy Back to question

D Georeferencing is the process of assigning geographic coordinates to an image so that mapping software can place it in its real-world location.

Choice D is the best answer. The sentence defines the term "georeferencing," stating that it is the process of assigning geographic coordinates to an image so that mapping software can place the image in its real-world location.

Choice A is incorrect. The sentence describes López Marrero's team's 2017 project; it doesn't provide a definition of the term "georeferencing." Moreover, it misrepresents the information in the notes by characterizing the team's assignment of geographic coordinates to photographs as a process distinct from georeferencing. **Choice B is incorrect**. The sentence states that López Marrero's team used georeferencing, but it doesn't provide a definition of the term. **Choice C is incorrect**. The sentence explains why a particular group of georeferenced aerial photographs is potentially useful for researchers; it doesn't provide a definition of the term "georeferencing."

20 Correct answer **A** Easy Back to question

A Alaska, the 49th US state, became a state several months before Hawaii, the 50th state, did.

Choice A is the best answer. The sentence emphasizes the order in which Alaska and Hawaii became US states, noting that Alaska became a US state several months before Hawaii did.

Choice B is incorrect. The sentence specifies when the 50-star US flag was unveiled; it doesn't emphasize the order in which Alaska and Hawaii became US states. **Choice C is incorrect**. While the sentence indicates that the 49th and 50th states became US states in the same year, it doesn't identify which state was the 49th and which was the 50th; as a result, it doesn't emphasize the order in which Alaska and Hawaii became states. **Choice D is incorrect**. The sentence indicates that a new US flag was unveiled when Hawaii became a US state; it doesn't emphasize the order in which Alaska and Hawaii became states.

21 Correct answer **B** Easy ‹ Back to question

B Microprobes, which weigh as little as 50 milligrams, could explore areas of Mars that are inaccessible to NASA's heavy, wheeled rovers.

Choice B is the best answer. The sentence explains an advantage of microprobes, noting that because microprobes weigh as little as 50 milligrams, they can explore areas inaccessible to rovers.

Choice A is incorrect. The sentence indicates that rovers can land successfully on Mars despite their weight; it doesn't explain an advantage of microprobes. **Choice C is incorrect**. While the sentence mentions that microprobes have been proposed as an alternative to rovers, it doesn't explain an advantage of microprobes. **Choice D is incorrect**. The sentence emphasizes a similarity between microprobes and rovers; it doesn't explain an advantage of microprobes.

22 Correct answer **D** Easy ‹ Back to question

D Ctesiphon, the capital of the Sasanian Empire, was located near present-day Baghdad, Iraq.

Choice D is the best answer. The sentence specifies the location of Ctesiphon, noting that it was located near present-day Baghdad, Iraq.

Choice A is incorrect because the sentence explains when the Sasanian Empire began and ended; it doesn't specify the location of Ctesiphon. **Choice B is incorrect** because the sentence emphasizes that Ctesiphon was the capital of the Sasanian Empire; it doesn't specify Ctesiphon's location. **Choice C is incorrect** because it emphasizes the size of the Sasanian Empire; it doesn't specify the location of Ctesiphon.

23 Correct answer **A** Easy ‹ Back to question

A *Babel-17*, by Samuel Delany, won a Nebula Award in 1967.

Choice A is the best answer. The sentence indicates the title of a novel that won a Nebula Award, noting that *Babel-17* by Samuel Delany won the award in 1967.

Choice B is incorrect because the sentence identifies the year that Samuel Delany published a science fiction novel; it doesn't indicate the novel's title or that it won a Nebula Award. **Choice C is incorrect** because the sentence provides an introduction of Samuel Delany; it doesn't indicate the title of a novel that has won a Nebula Award. **Choice D is incorrect** because the sentence indicates that one of Samuel Delany's novels met the qualification for a Nebula Award; it doesn't indicate the novel's title or that it won an award.

24 Correct answer **A** Easy ‹ Back to question

A Ibn Sina's book *The Canon of Medicine* was published in the year 1025 CE.

Choice A is the best answer. The sentence identifies the year in which the book was published.

Choice B is incorrect. While the sentence provides information about the book's author, it doesn't identify the year in which the book was published. **Choice C is incorrect**. While the sentence provides information about the book's historical use, it doesn't identify the year in which the book was published. **Choice D is incorrect**. While the sentence provides information about the book's contents, it doesn't identify the year in which the book was published.

25 Correct answer **D** Easy ‹ Back to question

D Harvestmen, also known as daddy longlegs, are arachnids but not spiders.

Choice D is the best answer. The sentence explains what harvestmen are, noting that they are also known as daddy longlegs and that they are arachnids but not spiders.

Choice A is incorrect. While the sentence does mention harvestmen, its main focus is on spiders. Moreover, it misrepresents information from the notes: harvestmen are not spiders. **Choice B is incorrect**. The sentence focuses on the broader point that arachnids include more than just spiders; it doesn't mention harvestmen directly or explain what they are. **Choice C is incorrect**. The sentence focuses on how daddy longlegs are classified; it doesn't explain what harvestmen are. Moreover, it misrepresents information from the notes. The notes indicate that harvestmen are not spiders, and "harvestmen" is presented in the notes as an alternate name for "daddy longlegs," not a category in which daddy longlegs belong.

26 Correct answer **B** Easy ‹ Back to question

B The pineapple (*Ananas comosus*) has fifty chromosomes.

Choice B is the best answer. The sentence directly specifies how many chromosomes the pineapple has, as indicated in the notes: fifty.

Choice A is incorrect. While the sentence mentions the pineapple's chromosomes, it doesn't specify how many it has. **Choice C is incorrect**. The sentence indicates that the pineapple has more chromosomes than the melon; it doesn't specify the exact number of chromosomes the pineapple has. **Choice D is incorrect**. The sentence specifies how many chromosomes the melon has, not how many the pineapple has.

27 Correct answer **B** Easy ‹ Back to question

B The green iguana has an average length of 4.8 feet.

Choice B is the best answer. The sentence specifies the average length of the green iguana: 4.8 feet.

Choice A is incorrect. While the sentence provides information about the green iguana, it doesn't specify the green iguana's average length. **Choice C is incorrect**. The sentence describes the diet of a species of reptile in Brazil; it doesn't specify the green iguana's average length. **Choice D is incorrect**. While the sentence provides information about the green iguana, it doesn't specify the green iguana's average length.

28 Correct answer **B** Easy ‹ Back to question

B Jon Ching uses the term "flauna," a combination of the words "flora" and "fauna," to describe the subjects of his surreal paintings: plant-animal hybrids such as a parrot with leaves for feathers.

Choice B is the best answer because it provides both an explanation and an example of "flauna." The sentence explains that flauna, a combination of the words "flora" and "fauna," is a term used by Jon Ching to describe the plant-animal hybrids in his

paintings. The sentence also mentions an example of Ching's flauna: a parrot with leaves for feathers.

Choice A is incorrect. While the sentence partially explains what "flauna" is, it doesn't provide a full explanation or specific example of Ching's flauna. **Choice C is incorrect**. While the sentence partially explains what "flauna" is and includes a title of a Ching painting, it doesn't provide a full explanation or specific example of Ching's flauna. **Choice D is incorrect**. While the sentence partially explains what "flauna" is and includes the titles of two Ching paintings, it doesn't provide a full explanation of Ching's flauna.

29 Correct answer **D** Easy ‹ Back to question

D One of the most influential artists of the twentieth century, Mexican painter Frida Kahlo is best known for her self-portraits, which are vivid and richly symbolic.

Choice D is the best answer. By identifying Kahlo as an influential artist from Mexico, and by describing the work she's best known for, this choice provides the background information necessary to introduce Kahlo to an unfamiliar audience.

Choice A is incorrect. This choice doesn't effectively introduce Kahlo. It doesn't include any background information about who Kahlo is or where she's from. It simply identifies one of her paintings. **Choice B is incorrect**. This choice doesn't effectively introduce Kahlo. It doesn't include any background information about who Kahlo is or where she's from. It simply identifies one of her paintings. **Choice C is incorrect**. This choice doesn't effectively introduce Kahlo. It doesn't include any background information about who Kahlo is or where she's from. Instead, it describes one of her paintings in detail.

30 Correct answer **D** Easy ‹ Back to question

D Jellyfish emit light to startle predators, whereas black dragonfish do so to locate prey.

Choice D is the best answer. The sentence emphasizes a difference between the behavior of jellyfish and that of black dragonfish, noting that jellyfish and black dragonfish emit light as part of different behaviors (protection and predation, respectively).

Choice A is incorrect. The sentence emphasizes a similarity between jellyfish and black dragonfish; it doesn't emphasize a difference between the behavior of the two animals. **Choice B is incorrect**. The sentence emphasizes the type of bioluminescence exhibited by black dragonfish, noting that it's used in predation; it doesn't emphasize a difference between the behavior of the two animals. **Choice C is incorrect**. The sentence defines bioluminescence and explains how it works; the sentence doesn't mention either animal or emphasize a difference between them.

31 Correct answer **C** Easy ‹ Back to question

C Lasting 639 years, John Cage's musical piece will be the longest continuous musical performance in history.

Choice C is the best answer. The sentence indicates how long John Cage's musical piece will last, noting that it will last 639 years and be the longest continuous musical performance in history.

Choice A is incorrect. The sentence identifies John Cage as the composer and provides the name of the musical piece; it doesn't indicate how long the piece will last. **Choice B is incorrect**. The sentence provides the name of the musical piece and where it is currently being played; it doesn't indicate how long the piece will last. **Choice D is incorrect**. The sentence mentions where the musical piece is being played and identifies John Cage as the composer; it doesn't indicate how long the piece will last.

32 Correct answer **C**

Easy

‹ Back to question

C The two red bicycles in *Double Phantom/EntroP.R.* are fused together so that they share the same rear wheel while facing opposite directions.

Choice C is the best answer. The sentence correctly describes how the bicycles in the sculpture are fused together: they share the same rear wheel while facing opposite directions.

Choice A is incorrect. The sentence states that the bicycles are fused together but doesn't describe how they are fused. **Choice B is incorrect**. The sentence states that there are two bicycles in the sculpture without indicating that they are fused together or describing how they are fused. **Choice D is incorrect**. It identifies the artist who created the sculpture but doesn't describe how the bicycles are fused together.

33 Correct answer **A**

Easy

‹ Back to question

A The US infantrymen rode their bicycles from Montana to Missouri—traveling a total of 1,900 miles.

Choice A is the best answer. The sentence emphasizes how far the infantrymen traveled, indicating that they rode their bicycles from Montana to Missouri, a total of 1,900 miles.

Choice B is incorrect because the sentence mentions when the anniversary of the journey occurred; it doesn't emphasize how far the infantrymen traveled. **Choice C is incorrect** because the sentence discusses the goal of the journey; it doesn't emphasize how far the infantrymen traveled. **Choice D is incorrect** because the sentence notes that Cedeño honored the infantrymen by reenacting their journey; it doesn't emphasize how far the infantrymen traveled.

34 Correct answer **A**

Easy

‹ Back to question

A According to conservation organizations, *C. olivacea* has a higher risk of becoming extinct in the near future than *C. furcatus*.

Choice A is the best answer. The sentence compares the extinction risks of the two species, noting that *C. olivacea* has a higher risk of becoming extinct in the near future than *C. furcatus*.

Choice B is incorrect. While the sentence does compare the extinction risks of the two species, it misrepresents information from the notes; *C. olivacea* faces a higher risk of becoming extinct in the near future than *C. furcatus*, not the other way around. **Choice C is incorrect**. While the sentence mentions that conservation organizations have evaluated both species for extinction risk, it doesn't compare the extinction risks of the two species. **Choice D is incorrect**. While the sentence states that *C. olivacea* faces a high risk of extinction, it doesn't mention *C. furcatus* or compare the extinction risks of the two species.

35 Correct answer **C**

Easy

‹ Back to question

C In the arista style, designs are stamped into the ceramic tiles, whereas in the majolica style, the designs are painted directly on them.

Choice C is the best answer. The sentence contrasts the two styles of tiles, noting that tiles in the arista style have designs stamped into them, whereas tiles in the majolica style have designs painted directly on them.

Choice A is incorrect because the sentence indicates that the two styles of tile can be found in the same location; it doesn't contrast the two styles of tile. **Choice B is incorrect** because the sentence indicates that the Royal Alcázar of Seville features tiles in both the majolica and arista styles; it doesn't contrast the two styles of tile. **Choice D is incorrect** because the sentence

indicates that the tilework of the Royal Alcázar of Seville includes tiles in the majolica style; it doesn't contrast tiles in the majolica style with tiles in the arista style.

36 Correct answer **A** Easy ‹ Back to question

A "Raymond's Run" takes place in Harlem.

Choice A is the best answer. The sentence indicates where "Raymond's Run" takes place, stating that it takes place in Harlem.

Choice B is incorrect. The sentence identifies the book in which the story "Raymond's Run" was published; it doesn't indicate where the story takes place. **Choice C is incorrect**. The sentence indicates the point of view used in "Raymond's Run"; it doesn't indicate where the story takes place. **Choice D is incorrect**. The sentence identifies the author of "Raymond's Run"; it doesn't indicate where the story takes place.

37 Correct answer **C** Easy ‹ Back to question

C Designed so calendar dates would occur on the same day of the week each year, the Hanke-Henry calendar supports more predictable scheduling than does the Gregorian calendar.

Choice C is the best answer. The sentence explains an advantage of the Hanke-Henry calendar, noting that it supports more predictable scheduling than does the Gregorian calendar and describing how it does so (by having calendar dates occur on the same day each year).

Choice A is incorrect. The sentence compares the number of days in the Gregorian and Hanke-Henry calendars; it doesn't explain an advantage of the Hanke-Henry calendar. **Choice B is incorrect**. While the sentence refers to a possible reason to adopt the Hanke-Henry calendar—that doing so would help solve a problem with the Gregorian calendar—it doesn't identify the problem or the solution and thus doesn't explain the advantage of the Hanke-Henry calendar. **Choice D is incorrect**. The sentence describes the origins of the Hanke-Henry calendar; it doesn't explain an advantage of it.

38 Correct answer **A** Medium ‹ Back to question

A Bhosale's team wanted to better understand the mechanics behind bird nests' uniquely flexible yet cohesive structural properties.

Choice A is the best answer. It describes the reason Bhosale's team wanted to study the structures of bird nests—that is to say, the study's primary aim.

Choice B is incorrect. This choice doesn't present the primary aim of the research study. It describes how the study worked, but not why it was done. **Choice C is incorrect**. This choice doesn't present the primary aim of the research study. It describes a result of the experiment, but not why it was carried out. **Choice D is incorrect**. This choice doesn't present the primary aim of the research study.

39 Correct answer **A** Medium ‹ Back to question

A Sara Oyler-McCance's researchers analyzed eDNA in water samples from the Florida Everglades for evidence of invasive constrictor snakes, which are difficult to observe.

Choice A is the best answer. This choice presents the study in a way that assumes the audience is already familiar with eDNA.

Choice B is incorrect. This choice doesn't present the study. It only states a general fact about eDNA analysis. **Choice C is incorrect**. This choice isn't suited for an audience already familiar with eDNA. A familiar audience wouldn't need to have the term defined or explained. **Choice D is incorrect**. This choice isn't suited for an audience already familiar with eDNA. A familiar audience wouldn't need to have the term defined or explained. It also doesn't present the study.

40 Correct answer **A** Medium Back to question

A With its sleek, contoured armrests and seat, the walnut rocking chair in Boston's Museum of Fine Arts is just one piece of furniture created by American woodworker Sam Maloof.

Choice A is the best answer. The sentence effectively describes the rocking chair to an audience unfamiliar with Sam Maloof, noting its sleek, contoured armrests and seat and explaining that Sam Maloof (the walnut chair's creator) was an American woodworker.

Choice B is incorrect. While the sentence explains who Sam Maloof was and mentions a chair, it doesn't describe the chair. **Choice C is incorrect**. While the sentence explains who Sam Maloof was, it doesn't describe the rocking chair. **Choice D is incorrect**. While the sentence describes the rocking chair, it doesn't explain who Sam Maloof was.

41 Correct answer **A** Medium Back to question

A A study led by Arelee Estefanía Muñoz-Hernández identified a total of 74 Orchidaceae species in the temperate forests of Oaxaca, Mexico.

Choice A is the best answer. This choice most effectively presents the study and its findings. It opens with the study and names its lead researcher, then tells us its finding: that they identified 74 Orchidaceae species in the temperate forests of Oaxaca, Mexico.

Choice B is incorrect. This choice doesn't include the study's findings, so it fails to achieve the goal. It doesn't mention that there was a study at all. **Choice C is incorrect**. This choice doesn't present the study, so it fails to achieve the goal. It doesn't mention that there was a study at all. **Choice D is incorrect**. This choice doesn't include the study's findings, so it fails to achieve the goal.

42 Correct answer **B** Medium Back to question

B By offering online versions of historical documents, the ICAA's archive provides more access to these materials without removing them from their countries of origin.

Choice B is the best answer. The sentence explains an advantage of the ICAA's archive being digital, noting that the archive provides more access to historical documents since they don't have to be removed from their countries of origin.

Choice A is incorrect. The sentence emphasizes the number of documents in the ICAA archive; it doesn't explain an advantage of the archive being digital. **Choice C is incorrect**. The sentence notes the types of historical documents the ICAA's archive contains; it doesn't explain an advantage of the archive being digital. **Choice D is incorrect**. The sentence identifies who oversaw the creation of the ICAA's online archive; it doesn't explain an advantage of the archive being digital.

43 Correct answer **B** Medium Back to question

B Algorithms based on audio features may misidentify the main features of a song with varying acoustic traits, making such algorithms less reliable predictors of popularity than those based on fixed traits.

Choice B is the best answer. This choice uses relevant information from the notes to explain a disadvantage of relying on audio features to predict a song's popularity—namely, that it may misidentify features of certain songs. It also contrasts audio features with descriptive tags, which are more reliable predictors.

Choice A is incorrect. This choice only states a fact about the algorithms without evaluating their reliability or accuracy. **Choice C is incorrect**. This choice only describes the difference between audio features and descriptive tags without indicating why this difference matters for predicting popularity. **Choice D is incorrect**. This choice only mentions descriptive tags, which are not the focus of the student's rhetorical goal.

44 Correct answer **D** Medium Back to question

D While still highly effective, the new platinum catalyst requires far less of the rare and expensive metal than do other platinum catalysts.

Choice D is the best answer. The sentence explains an advantage of Tang and his colleagues' platinum catalyst, noting that it requires far less platinum (which is rare and expensive) than other platinum catalysts do.

Choice A is incorrect. The sentence describes the platinum catalyst that Tang and his colleagues created; it doesn't explain an advantage of their platinum catalyst. **Choice B is incorrect**. The sentence emphasizes a similarity between the new platinum catalyst and other platinum catalysts; it doesn't explain an advantage of the new platinum catalyst. **Choice C is incorrect**. The sentence connects the metal platinum to the functioning of platinum catalysts, noting that large amounts of platinum are typically required for platinum catalysts to be effective; it doesn't explain an advantage of Tang and his colleagues' platinum catalyst.

45 Correct answer **D** Medium Back to question

D *Uros Island* is an LED light sculpture made by Grimanesa Amoros, as is *Fortuna*.

Choice D is the best answer. The sentence emphasizes a similarity between the sculptures, noting that both *Uros Island* and *Fortuna* are LED light sculptures created by Grimanesa Amoros.

Choice A is incorrect. Noting that *Uros Island*'s smooth LED domes contrast with *Fortuna*'s tangled LED tubes, the sentence emphasizes a difference between the two sculptures rather than a similarity. **Choice B is incorrect**. Contrasting the respective sizes of *Uros Island* and *Fortuna*, the sentence emphasizes a difference between the two sculptures rather than a similarity. **Choice C is incorrect**. While the sentence describes *Uros Island*, it doesn't mention *Fortuna* or emphasize any similarity between the two sculptures.

46 Correct answer **D** Medium Back to question

D In first-class levers, the fulcrum is located between the effort and the load, but in second-class levers, the load is located between the effort and the fulcrum.

Choice D is the best answer. The sentence contrasts first-class levers and second-class levers, explaining that the fulcrum in a first-class lever is between the effort and the load, whereas in a second-class lever the load is between the effort and the fulcrum.

Choice A is incorrect. The sentence defines two terms associated with levers; it doesn't contrast first-class levers and second-class levers. **Choice B is incorrect**. While the sentence seems to acknowledge a general difference in fulcrum and load locations between first-class and second-class levers, it does not specify what this difference is. Moreover, the sentence could be read as emphasizing a similarity—that in both types of levers, the fulcrum and load are in different locations. The sentence thus fails to effectively contrast the two types of levers. **Choice C is incorrect**. The sentence describes a similarity between first-class and second-class levers; it doesn't contrast them.

47 Correct answer **A** Medium ‹ Back to question

A Although both are powerful works of literature that contributed to new legislation, Equiano's book is an autobiography, while Sinclair's is fictional.

Choice A is the best answer. This choice emphasizes a difference between the two books by using relevant information from the notes to contrast their genres.

Choice B is incorrect. This choice mentions a difference between the books (their different topics), but it emphasizes a similarity between the books (their influence on readers). **Choice C is incorrect**. This choice provides information about the books that reflects both a similarity (both resulted in new laws) and a difference (the specific laws that resulted), without emphasizing either. **Choice D is incorrect**. This choice doesn't emphasize a difference between the two books. Instead, it *emphasizes a similarity*.

48 Correct answer **C** Medium ‹ Back to question

C When the molten salt in a freeze-thaw battery solidifies at room temperature, energy stops flowing and can be stored in the battery.

Choice C is the best answer. The sentence specifies how the salt in a freeze-thaw battery enables energy storage, explaining that energy stops flowing and can be stored when the salt solidifies at room temperature.

Choice A is incorrect. The sentence explains some properties of molten salt; it doesn't specify how that salt enables energy storage. **Choice B is incorrect**. The sentence indicates how the energy in a freeze-thaw battery can be released; it doesn't specify how the salt in the battery enables energy storage. **Choice D is incorrect**. The sentence specifies how much charge the freeze-thaw battery retains when storing energy; it doesn't specify how the salt in the battery enables energy storage.

49 Correct answer **B** Medium ‹ Back to question

B While both are protest songs, "Poor Miner's Farewell" is about coal miners in Kentucky, whereas "Bring Him Back Home" is about the anti-apartheid leader Nelson Mandela.

Choice B is the best answer. The sentence contrasts the two songs, noting that "Poor Miner's Farewell" is about coal miners in Kentucky, whereas "Bring Him Back Home" is about Nelson Mandela.

Choice A is incorrect. The sentence emphasizes a similarity between "Poor Miner's Farewell" and "Bring Him Back Home"; it doesn't contrast the two songs. **Choice C is incorrect**. While the sentence provides a description of the song "Bring Him Back Home," it doesn't mention "Poor Miner's Farewell" or contrast the two songs. **Choice D is incorrect**. While the sentence provides a description of the song "Poor Miner's Farewell," it doesn't mention "Bring Him Back Home" or contrast the two songs.

50 Correct answer **D** — Medium — Back to question

D According to a 2015 study, the first humans to populate the Azores may have been Vikings from Scandinavia, not mariners from Portugal as previously believed.

Choice D is the best answer. This choice effectively specifies who may have first populated the Azores, according to the 2015 study: the Vikings.

Choice A is incorrect. This choice doesn't effectively specify who may have first populated the Azores, according to the 2015 study. It only mentions the historical belief that the Portuguese were first. The 2015 study drew a different conclusion. **Choice B is incorrect**. This choice casts doubt on the Portuguese claim but doesn't name the group of people who may have arrived before the Portuguese. **Choice C is incorrect**. This choice mentions the evidence that the researchers found but not the conclusion they drew from it. It doesn't name the possible group of people who may have arrived before the Portuguese.

51 Correct answer **B** — Medium — Back to question

B Houser's sculptures employ abstract, modernist forms to depict Native American figures.

Choice B is the best answer. The sentence describes the distinctive style of Houser's sculptures, explaining that the sculptures use abstract, modernist forms to depict Native American figures.

Choice A is incorrect. While the sentence indicates that Houser developed a distinctive style for portraying Native American figures, it doesn't describe this style. **Choice C is incorrect**. While the sentence states that other artists have been influenced by the style of Houser's sculptures, it doesn't describe this style. **Choice D is incorrect**. While the sentence mentions the name of a sculpture that's a well-known example of Houser's style, it doesn't describe the sculpture's style.

52 Correct answer **C** — Medium — Back to question

C Teams of artisans produced ukiyo-e prints, whereas individual artists typically handled all aspects of sōsaku-hanga printmaking themselves.

Choice C is the best answer. The sentence contrasts the two production methods, noting that ukiyo-e prints are produced by teams of artisans, whereas sōsaku-hanga prints are typically produced by an individual artist.

Choice A is incorrect. The sentence indicates a difference between the two styles, noting that sōsaku-hanga emphasizes individual artistic expression, but it doesn't provide sufficient information about ukiyo-e prints to contrast the two styles' production methods. **Choice B is incorrect**. The sentence contrasts when the two styles were popular; it doesn't contrast their production methods. **Choice D is incorrect**. The sentence mischaracterizes information from the notes: both styles include drawing and wood carving in their production, not just sōsaku-hanga.

53 Correct answer **D** — Medium — Back to question

D Taylor was the only Black woman to publish a Civil War memoir.

Choice D is the best answer. By indicating that Taylor's book was the only Civil War memoir published by a Black woman, this sentence emphasizes the uniqueness, or one-of-a-kind nature, of Taylor's accomplishment.

Choice A is incorrect. While the sentence describes some of Taylor's accomplishments, it doesn't emphasize the uniqueness of them. **Choice B is incorrect**. While the sentence describes some of Taylor's accomplishments, it doesn't emphasize that

they were unique. **Choice C is incorrect**. While the sentence provides information about Taylor's book, it doesn't emphasize what made the book unique.

54 Correct answer **B** Medium ‹ Back to question

B Greenland's glaciers and icebergs both melt during the year, contributing to rising sea levels.

Choice B is the best answer. The sentence emphasizes a similarity between glaciers and icebergs in Greenland, noting that both melt and thereby contribute to rising sea levels.

Choice A is incorrect. The sentence provides information about the melting rate of icebergs in Greenland; it doesn't emphasize a similarity between glaciers and icebergs in Greenland. **Choice C is incorrect**. The sentence emphasizes a difference between glaciers and icebergs in Greenland, noting that their melting rates depend on different factors; it doesn't emphasize a similarity. **Choice D is incorrect**. The sentence explains the conditions under which glaciers in Greenland melt; it doesn't emphasize a similarity between glaciers and icebergs in Greenland.

55 Correct answer **D** Medium ‹ Back to question

D Honeybees are more likely to thrive in cities than in rural areas because the varied diet available in urban areas strengthens the bees' immune systems.

Choice D is the best answer because the sentence makes and supports a generalization about honeybees. It claims that honeybees living in urban areas are more likely to thrive than rural bees, and it supports the claim with information about the effect of a varied diet on urban bees' immune systems.

Choice A is incorrect. While the sentence makes a generalization, it doesn't mention honeybees. **Choice B is incorrect**. While the sentence provides data about honeybee survival, it doesn't make a generalization about honeybees based on this information. **Choice C is incorrect**. While the sentence makes a generalization about honeybees' diets and immune systems, it doesn't provide adequate support for this generalization.

56 Correct answer **A** Medium ‹ Back to question

A Macaques in the study called out to and gestured more frequently at humans holding food than at empty-handed humans.

Choice A is the best answer. This choice presents the study's results from the last two bullet points.

Choice B is incorrect. This choice describes the background and motivation of the study but not the outcome or findings. **Choice C is incorrect**. This choice describes the research question or hypothesis of the study but not the evidence or conclusion. **Choice D is incorrect**. This choice describes the method or design of the study but not the actual results.

57 Correct answer **B** Medium ‹ Back to question

B A 2013 analysis of cat bone fragments found in Quanhucun, China, suggests that cats there may have been domesticated 5,300 years ago.

Choice B is the best answer. The sentence presents the study, describing it as a 2013 analysis of Quanhucun cat bone fragments, and its conclusions, indicating what the analysis suggests about cat domestication in Quanhucun.

Choice A is incorrect because the sentence focuses on the study's methodology; it doesn't present conclusions from the study. **Choice C is incorrect**. While the sentence provides a general overview of the study, it doesn't present conclusions from the study. **Choice D is incorrect**. The sentence describes a finding from the study; it doesn't present conclusions from the study.

58 Correct answer **A** Medium Back to question

A *My Ántonia* is set in Nebraska, where Cather grew up.

Choice A is the best answer. This choice directly identifies the setting of Cather's novel *My Ántonia* as Nebraska.

Choice B is incorrect. This choice mentions that Cather wrote about immigrants, but it doesn't indicate where they lived. **Choice C is incorrect**. This choice mentions that *My Ántonia* is one of Cather's best-known novels but doesn't state where it takes place. **Choice D is incorrect**. This choice mentions that some of Cather's novels are set in Nebraska, but it doesn't specify which ones, so we can't be certain that *My Ántonia* is one of them. It also includes irrelevant information about Cather's education.

59 Correct answer **A** Medium Back to question

A Ida Tarbell not only interviewed Standard Oil executives, oil industry workers, and public officials but also examined thousands of pages of the company's internal communications.

Choice A is the best answer. It describes Tarbell's investigation and the lengths she went to complete it.

Choice B is incorrect. This choice doesn't describe how thorough Tarbell was. Instead, it gives a biographical sketch. **Choice C is incorrect**. This choice doesn't describe how thorough Tarbell was. Tarbell didn't only conduct interviews—she also "examined thousands of pages of the company's internal communications." **Choice D is incorrect**. This choice doesn't describe how thorough Tarbell was. It describes her book but doesn't include anything about her investigation.

60 Correct answer **C** Medium Back to question

C The Mayflower Compact was created to establish a common government among the pilgrims that immigrated to Plymouth Colony.

Choice C is the best answer. The sentence specifies the reason the Mayflower Compact was created, noting that it was created to establish a common government among the pilgrims that immigrated to Plymouth Colony.

Choice A is incorrect. While the sentence provides background information about the Mayflower Compact and notes the signatories' goal for the colony, it doesn't specify why the compact was created. **Choice B is incorrect**. While the sentence provides background information about the Mayflower Compact and notes the signatories' goal for the colony, it doesn't specify why the compact was created. **Choice D is incorrect**. The sentence specifies the number of pilgrims that signed the Mayflower Compact; it doesn't specify the reason the compact was created.

61 Correct answer **A** Medium Back to question

A Jordan Bennett's 2017 exhibition *Wije'wi* was followed a year later by his exhibition *Ketu'elmita'jik*.

Choice A is the best answer. The sentence emphasizes the order in which two of Jordan Bennett's exhibitions were held, indicating that *Wije'wi* took place in 2017 and *Ketu'elmita'jik* took place a year later (2018).

Choice B is incorrect. While the sentence mentions that exhibitions of Jordan Bennett's paintings took place in 2017 and 2018, it doesn't identify the exhibitions or emphasize the order in which they were held. **Choice C is incorrect**. While the sentence mentions two of Jordan Bennett's exhibitions, it doesn't indicate the order in which they were held. **Choice D is incorrect**. While the sentence mentions two of Jordan Bennett's exhibitions and specifies when one of them was held, it doesn't state when the exhibition at the Grenfell Art Gallery occurred. Thus, the order in which the two exhibitions were held isn't clearly established in the sentence.

62 Correct answer **A** Medium ‹ Back to question

A While Jacobs proposes that crown shyness is caused by neighboring tree branches brushing against one another, Ng posits that it occurs when branches detect shade from nearby trees' branches.

Choice A is the best answer. The sentence compares the two proposed causes of crown shyness, noting the theories' differences: Jacobs cites branches brushing against one another as the cause, while Ng cites branches detecting shade from other branches as the cause.

Choice B is incorrect. The sentence merely identifies the existence of two theories for crown shyness; it doesn't compare the causes proposed by each theory. **Choice C is incorrect**. The sentence merely indicates that there are two different theories for crown shyness; it doesn't compare the causes proposed by each theory. **Choice D is incorrect**. The sentence merely explains one theory for crown shyness; it doesn't compare two theories.

63 Correct answer **D** Medium ‹ Back to question

D A 2017 study concluded that ancient grass fires had caused the glass's formation, but new research suggests that the glass formed as a result of a cometary explosion close to the desert's surface.

Choice D is the best answer. The sentence describes how scientific understanding of the glass's origin has evolved, explaining that new research suggests the glass formed as a result of a cometary explosion instead of being caused by grass fires (as was previously believed).

Choice A is incorrect. The sentence explains the conclusion of the older study; it doesn't describe how scientific understanding of the glass's origin has evolved. **Choice B is incorrect**. While the sentence indicates that the two studies provided different explanations, it doesn't describe how scientific understanding of the glass's origin has evolved. **Choice C is incorrect**. The sentence references a recent finding but doesn't effectively describe how scientific understanding of the glass's origin has evolved.

64 Correct answer **B** Medium ‹ Back to question

B The cane fanner basket, which is included in the Hina Hanta online archive, is called an *ufko tapushik* in Choctaw.

Choice B is the best answer. The sentence specifies the fanner basket's name in Choctaw, noting that it's called *ufko tapushik*.

Choice A is incorrect. While the sentence mentions the fanner basket, it doesn't specify its name in Choctaw. **Choice C is incorrect**. While the sentence mentions the fanner basket, it doesn't specify its name in Choctaw. **Choice D is incorrect**. The sentence doesn't mention the fanner basket or specify its name in Choctaw.

65 Correct answer **B** Medium Back to question

B Marine biologist Camille Jazmin Gaynus studies coral reefs, vital underwater ecosystems that provide homes to 25% of all marine species.

Choice B is the best answer. We're asked to select the sentence that "introduce[s] the scientist and her field of study." This choice introduces scientist Camille Jazmin Gaynus as a marine biologist and explains what marine life she studies.

Choice A is incorrect. This choice doesn't mention Camille Jazmin Gaynus, so it fails to "introduce the scientist." **Choice C is incorrect**. This choice doesn't mention Camille Jazmin Gaynus, so it fails to "introduce the scientist." **Choice D is incorrect**. This choice mentions Camille Jazmin Gaynus, but it doesn't identify her as a marine biologist. It says she "knows well" about coral reefs, but doesn't identify her expertise as a "field of study."

66 Correct answer **B** Medium Back to question

B The water in brine pools is toxic to most sea life because it is three to eight times saltier than the surrounding ocean.

Choice B is the best answer. The sentence explains why brine pools are toxic to most sea life, noting that the water in the pools is three to eight times saltier than the surrounding ocean.

Choice A is incorrect. While the sentence states that brine pools are toxic to most sea life, it doesn't explain why the pools are toxic. **Choice C is incorrect**. While the sentence states that brine pools are toxic to most sea life, it doesn't explain why the pools are toxic. **Choice D is incorrect** because the sentence describes brine pools, mentioning that they are salty, but doesn't explain why they are toxic to most sea life.

67 Correct answer **C** Medium Back to question

C Flora McNeil began her career as a lighthouse keeper years after Maria Younghans did.

Choice C is the best answer. The sentence emphasizes the order in which the two lighthouse keepers began their careers, noting that McNeil, who became the keeper at Bridgeport Breakwater Light in 1904, began her career years after Younghans, who became the keeper at Biloxi Light in 1867.

Choice A is incorrect because it makes a generalization about the effects of McNeil's and Younghans's work; it doesn't emphasize the order in which the two keepers began their careers. In addition, the sentence misrepresents information from the notes; McNeil was the keeper at a lighthouse in Connecticut from 1904 to 1920, not at a lighthouse in Mississippi from 1867 to 1918. **Choice B is incorrect**. The sentence claims that Younghans and McNeil were crucial to ensuring the safety of watercraft before lighthouses became automated; it doesn't emphasize the order in which the two keepers began their careers. **Choice D is incorrect**. The sentence emphasizes when the lighthouse keepers' respective careers ended; it doesn't emphasize the order in which the two keepers began their careers.

68 Correct answer **D** Medium Back to question

D Using an artificial deep neural network, the researchers sought to explore the relationship between the brain's ability to process natural sounds and its ability to process music.

Choice D is the best answer. The sentence presents the aim of the study, noting that the researchers sought to explore the relationship between the brain's ability to process natural sounds and its ability to process music.

Choice A is incorrect. The researchers used the DNN to achieve their aim of exploring the relationship between the brain's ability to process natural sounds and its ability to process music; evaluating the DNN itself was not their aim. **Choice B is incorrect**. The sentence misrepresents the researchers' conclusion as their aim and also misrepresents that conclusion. The researchers' aim was to explore the relationship between the brain's ability to process natural sounds and its ability to process music; their conclusion was that the brain's ability to process music arises as a by-product of natural sound processing, not the other way around. **Choice C is incorrect**. The sentence merely describes a finding from the study; it doesn't present the aim of the study.

69 Correct answer **A** Medium Back to question

A *Sonic Meditations* is not music but rather a series of sound-based meditations that consist of instructions; Meditation XVIII, for instance, instructs participants to "listen to a sound until you no longer recognize it."

Choice A is the best answer. It describes what a "Sonic Meditation" is, and then gives an example in the form of Meditation XVIII.

Choice B is incorrect. This choice describes what a "Sonic Meditation" is, but doesn't give an example of one. **Choice C is incorrect**. This choice gives an example of a "Sonic Meditation," but doesn't explain what the meditations are. **Choice D is incorrect**. This choice doesn't describe what a "Sonic Meditation" is.

70 Correct answer **C** Medium Back to question

C Completed in 1867, Lewis's sculpture *Forever Free* commemorates the Emancipation Proclamation, which had been issued four years previously.

Choice C is the best answer. The sentence explains the specific historical context of Lewis's sculpture, noting that it commemorates the Emancipation Proclamation, which was issued four years before the sculpture was completed in 1867.

Choice A is incorrect. The sentence quotes an art historian's general interpretation of the sculpture's meaning; it doesn't explain the sculpture's specific historical context. **Choice B is incorrect**. While the sentence mentions a historically significant phrase on the sculpture's base, it doesn't explain the specific historical context of the phrase or the sculpture. **Choice D is incorrect**. The sentence provides biographical information about Lewis; it doesn't explain the specific historical context of the sculpture.

71 Correct answer **C** Medium Back to question

C Critics praised Treuer's book for its compelling narrative, with *O, The Oprah Magazine* calling it "a marvel of research and storytelling" and *The Economist* likewise writing that "Treuer's storytelling skills shine" and that the book is an "elegant handling of [a] complex narrative."

Choice C is the best answer. The sentence emphasizes a similarity in how critics responded to Treuer's book, noting that the critics for *O, The Oprah Magazine* and *The Economist* both praised the book's storytelling.

Choice A is incorrect. The sentence provides background information about Treuer's book; it doesn't emphasize a similarity in how critics responded to it. **Choice B is incorrect**. The sentence cites a single critic's response to Treuer's book; it doesn't emphasize a similarity in the responses of multiple critics. **Choice D is incorrect**. The sentence emphasizes a difference, not a similarity, in how two critics responded to Treuer's book.

72 Correct answer **C** Medium Back to question

C Unlike crab spiders, which use mimicry to ambush prey, katydids use mimicry to hide from predators.

Choice C is the best answer. The sentence uses "unlike" to emphasize a difference in how katydids and crab spiders use mimicry, noting that crab spiders use mimicry to ambush prey while katydids use it to hide from predators.

Choice A is incorrect. While the sentence does contrast katydids and crab spiders, it misrepresents the information in the notes. Katydids mimic the appearance of leaves (not flowers), whereas crab spiders mimic the appearance of flowers (not leaves). **Choice B is incorrect**. While the sentence indicates that katydids and crab spiders use mimicry, it doesn't emphasize a difference in how they use it. **Choice D is incorrect**. The sentence describes what mimicry is; it doesn't emphasize a difference in how katydids and crab spiders specifically use mimicry.

73 Correct answer **D** Medium Back to question

D The new species was named *Mansourasaurus* to recognize the team that discovered it, a professor and students from Mansoura University.

Choice D is the best answer. It explains where the dinosaur's name came from.

Choice A is incorrect. This choice does not explain the origin of the dinosaur's name. **Choice B is incorrect**. This choice does not explain the origin of the dinosaur's name. **Choice C is incorrect**. This choice does not explain the origin of the dinosaur's name.

74 Correct answer **D** Medium Back to question

D Emily Shepard's 2019 study of auks' success in landing at cliffside nesting sites showed that as wind conditions intensified, the birds' success rate decreased.

Choice D is the best answer. The sentence effectively summarizes the study, noting who conducted it, when it was conducted, and what its results showed: that auks' landing success rate decreased as wind conditions intensified.

Choice A is incorrect. While the sentence presents the methodology of the study—that is, the approach taken by the researchers—it fails to summarize the study as a whole. **Choice B is incorrect**. While the sentence presents the aim, or goal, of the study, it fails to summarize the study as a whole. **Choice C is incorrect**. While the sentence indicates what Shepard studied, it fails to mention a key factor: the effect of wind. It thus fails to summarize the study as a whole.

75 Correct answer **C** Medium Back to question

C The "Women and the Vote" format appealed to audiences because it allowed them to control the experience.

Choice C is the best answer. The sentence explains an advantage of the "Women and the Vote" format, noting that the format appealed to audiences because it allowed them to control the experience.

Choice A is incorrect. The sentence describes a digital drawing on the "Women and the Vote" website; it doesn't explain an advantage of the play's format. **Choice B is incorrect**. The sentence explains how audiences interacted with the "Women and the Vote" website; it doesn't explain an advantage of the play's format. **Choice D is incorrect**. While the sentence mentions that "Women and the Vote" had an interactive format, it doesn't explain what advantage this format might have.

76 Correct answer **B** Medium Back to question

B In both Bangkok and Chiang Mai, thousands gather to celebrate Songkran with water fights.

Choice B is the best answer. The sentence emphasizes a similarity in how people in Bangkok and Chiang Mai celebrate Songkran, indicating that people in both cities gather to celebrate with water fights.

Choice A is incorrect. The sentence notes the different locations of the largest water fight in Bangkok and the largest water fight in Chiang Mai; it doesn't emphasize a similarity in how people in Bangkok and Chiang Mai celebrate Songkran. **Choice C is incorrect**. The sentence indicates that people in Bangkok and Chiang Mai don't celebrate Songkran in exactly the same way; it doesn't emphasize a similarity in how people in the two cities celebrate Songkran. **Choice D is incorrect**. The sentence explains when people in Thailand celebrate Songkran; it doesn't emphasize a similarity in how people in Bangkok and Chiang Mai celebrate Songkran.

77 Correct answer **C** Medium Back to question

C *Kaikeyi* is a retelling of *The Ramayana* from the character Kaikeyi's point of view.

Choice C is the best answer. The sentence emphasizes whose point of view the novel *Kaikeyi* is told from: the character Kaikeyi's.

Choice A is incorrect. While the sentence does discuss point of view, it focuses on that of the epic poem rather than the novel. **Choice B is incorrect**. While the sentence seems to be referring to Patel's novel, it doesn't establish whose point of view the novel is told from. **Choice D is incorrect**. The sentence discusses the character Kaikeyi in the context of the epic poem; it doesn't discuss the novel's point of view.

78 Correct answer **D** Medium Back to question

D While there have been only about 1,200 recorded meteorite falls, there have been over 60,000 meteorite finds.

Choice D is the best answer. The sentence contrasts the number of meteorite falls with the number of meteorite finds, noting that there have been over 60,000 meteorite finds but only about 1,200 recorded meteorite falls.

Choice A is incorrect. While the sentence explains the difference between meteorite falls and meteorite finds, it doesn't contrast the number of meteorite falls and meteorite finds. **Choice B is incorrect**. The sentence indicates the two categories of meteorites found on Earth; it doesn't contrast the number of meteorite falls and meteorite finds. **Choice C is incorrect**. While the sentence notes the number of recorded meteorite falls, it doesn't contrast this with the number of meteorite finds.

79 Correct answer **C** Medium Back to question

C An approach to art criticism, historical analysis considers the historical context in which a work was created.

Choice C is the best answer. The sentence presents historical analysis to an audience unfamiliar with the concept by defining it as an approach to art criticism that considers the historical context in which a work was created.

Choice A is incorrect because it provides an example of texture analysis; it doesn't present historical analysis to an audience unfamiliar with the concept. **Choice B is incorrect**. The sentence explains a difference between texture analysis and historical analysis; it doesn't present historical analysis to an audience unfamiliar with the concept. **Choice D is incorrect**. It provides an example of historical analysis; it doesn't present historical analysis to an audience unfamiliar with the concept.

80 Correct answer **D** Medium ‹ Back to question

D In *Unwoven Light*, a 2013 work by Korean American artist Soo Sunny Park, light formed colorful prisms as it passed through a fence Park had fitted with iridescent tiles.

Choice D is the best answer. The sentence effectively describes *Unwoven Light* to an audience unfamiliar with Park, noting that Soo Sunny Park is a Korean American artist and that the 2013 work consists of colorful prisms formed by light passing through iridescent tiles.

Choice A is incorrect. The sentence describes aspects of *Unwoven Light* but doesn't mention who Park is; it thus doesn't effectively describe the work to an audience unfamiliar with Park. **Choice B is incorrect**. Although the sentence indicates when the work was created and who Park is, it lacks descriptive details and thus doesn't effectively describe *Unwoven Light*. **Choice C is incorrect**. The sentence mentions Park and describes an aspect of *Unwoven Light*—the chain-link fence—but doesn't effectively describe the overall work to an audience unfamiliar with the artist.

81 Correct answer **C** Medium ‹ Back to question

C Bharati Mukherjee's novel *The Holder of the World* centers around two women, one living in twentieth-century United States and the other in seventeenth-century India.

Choice C is the best answer. The sentence effectively introduces *The Holder of the World* to an audience already familiar with Mukherjee, explaining that the novel centers around two women and mentioning the author without providing any other identifying information.

Choice A is incorrect. The sentence provides a detail about Mukherjee's settings; it doesn't introduce, or even mention, the novel. **Choice B is incorrect**. The sentence provides introductory information about Mukherjee; it doesn't effectively introduce her novel to an audience already familiar with the author. **Choice D is incorrect**. The sentence provides introductory information about Mukherjee; it doesn't effectively introduce her novel to an audience already familiar with the author.

82 Correct answer **D** Medium ‹ Back to question

D With a mass of 2.063 solar masses, Sirius A is more massive than the Sun.

Choice D is the best answer. The sentence emphasizes the mass of Sirius A, noting that it has a mass of 2.063 solar masses and that it is larger than the Sun.

Choice A is incorrect. The sentence makes a generalization about how the mass of stars can be measured; it doesn't emphasize the mass of Sirius A. **Choice B is incorrect**. The sentence introduces solar masses as a unit of measurement; it doesn't emphasize the mass of Sirius A. **Choice C is incorrect**. The sentence emphasizes the mass of Proxima Centauri, not the mass of Sirius A.

83 Correct answer **A** Medium ‹ Back to question

A Ochoa's 1955 discovery of PNPase proved critical to deciphering the human genetic code, leading to a better understanding of how genetic variations affect human health.

Choice A is the best answer. The sentence emphasizes the significance of Ochoa's discovery, noting that it proved critical to deciphering the human genetic code, which resulted in a better understanding of how genetic variations affect human health.

Choice B is incorrect. While the sentence explains what Ochoa discovered, it doesn't emphasize the significance of the discovery. **Choice C is incorrect**. While the sentence explains what Ochoa discovered, it doesn't emphasize the significance of

the discovery. **Choice D is incorrect**. While the sentence mentions that Ochoa's discovery was crucial, it emphasizes Ochoa's incorrect hypothesis, not the significance of the discovery.

84 Correct answer **D** Medium ‹ Back to question

D In a 2021 study, Chinsamy-Turan determined that pterosaur jawbones located in the Sahara Desert had few growth lines relative to the bones of fully grown pterosaurs and thus belonged to juveniles.

Choice D is the best answer. The sentence presents both the study and its findings, noting the study's date and the researcher's name as well as describing what the researcher determined about the jawbones and how she determined it.

Choice A is incorrect. While the sentence describes the study and the researcher's initial assessment, it doesn't present the study's findings. **Choice B is incorrect**. While the sentence describes the study and its focus, it doesn't present the study's findings or the name of the researcher who conducted it. **Choice C is incorrect**. While the sentence mentions the study's methodology and provides information about pterosaurs, it doesn't present the study's findings.

85 Correct answer **D** Medium ‹ Back to question

D Established in 1841, Brook Farm was a utopian community created to "guarantee the highest mental freedom, by providing all with labor... [and] the fruits of their industry," according to founder George Ripley.

Choice D is the best answer. This choice explains the goal of Brook Farm—to provide mental freedom to all by engaging individuals in labor suited to their interests—using a quotation from George Ripley.

Choice A is incorrect. This choice only mentions part of Ripley's goal, and it doesn't mention Brook Farm at all. **Choice B is incorrect**. This choice defines what a utopia is but doesn't use Ripley's words to describe his vision for Brook Farm. **Choice C is incorrect**. This choice provides some background information about Brook Farm, but it doesn't explain its goals or include Ripley's words.

86 Correct answer **A** Medium ‹ Back to question

A At around 9,800°F, which classifies it as a G star, the Sun is hotter than most but not all of the stars within 10 parsecs of it.

Choice A is the best answer. Noting that the Sun (9,800°F) is hotter than most stars within 10 parsecs of it, the sentence emphasizes how hot the Sun is relative to nearby stars.

Choice B is incorrect. The sentence explains that astronomer Todd Henry determined the classifications for the Sun and several other stars nearby; it doesn't emphasize how hot the Sun is relative to nearby stars. **Choice C is incorrect**. The sentence explains that the majority of stars near the Sun are classified as K or M stars; it doesn't indicate the Sun's temperature or emphasize how hot it is relative to nearby stars. **Choice D is incorrect**. While the sentence indicates that the Sun is classified differently than most nearby stars due to its surface temperature, it doesn't emphasize how hot the Sun is relative to nearby stars.

87 Correct answer **B** Medium ‹ Back to question

B *Recognition* and *Students Aspire* both show African American figures in poses that symbolize supportive relationships.

Choice B is the best answer. The sentence emphasizes a similarity between the sculptures *Recognition* and *Students Aspire*, noting that both sculptures show African American figures in poses that symbolize supportive relationships.

Choice A is incorrect. The sentence describes one of the sculptures; it doesn't emphasize a similarity between the two sculptures. **Choice C is incorrect**. The sentence specifies the different years the sculptures were completed in; it doesn't emphasize a similarity between the two sculptures. **Choice D is incorrect**. The sentence emphasizes a difference between the two sculptures, noting that the figures in the sculptures have different feature definition; it doesn't emphasize a similarity between the two sculptures.

88 Correct answer **C** Medium ‹ Back to question

C Leutze's and Monkman's paintings are both huge, measuring 149 × 255 inches and 132 × 264 inches, respectively.

Choice C is the best answer. The sentence emphasizes a similarity between the two paintings, noting that Leutze's painting (which measures 149 × 255 inches) and Monkman's painting (which measures 132 × 264 inches) are both very large.

Choice A is incorrect. The sentence mentions that Monkman's painting was completed in 2019 and Leutze's was completed in 1851; it doesn't emphasize a similarity between the two paintings. **Choice B is incorrect**. While the sentence acknowledges that one painting was inspired by the other, it emphasizes differences between the two paintings; it doesn't emphasize a similarity between them. **Choice D is incorrect**. The sentence mentions a difference between the two paintings; it doesn't emphasize a similarity between them.

89 Correct answer **D** Medium ‹ Back to question

D The 1965 Hart-Celler Act abolished the national-origins quota system, which favored immigrants from northern Europe.

Choice D is the best answer. The sentence presents the significance of the Hart-Celler Act to an audience unfamiliar with the history of US immigration, noting that the 1965 act abolished the national-origins quota system and explaining why that mattered, historically: because the old quota system had favored immigrants from northern Europe.

Choice A is incorrect. The sentence describes an aspect of immigration policy at the time the Hart-Celler Act was proposed; it doesn't present the significance of the Hart-Celler Act to an audience unfamiliar with the history of US immigration. **Choice B is incorrect**. The sentence describes an aspect of immigration policy before the Hart-Celler Act; it doesn't describe or present the significance of the act to an audience unfamiliar with the history of US immigration. **Choice C is incorrect**. While the sentence indicates that the Hart-Celler Act abolished the old quota system, it doesn't explain the act or the quota system to an audience unfamiliar with the history of US immigration.

90 Correct answer **B** Medium ‹ Back to question

B Among Australia's many invertebrates, sawflies, wasps, bees, and ants belong to the order Hymenoptera, while beetles and weevils belong to the order Coleoptera.

Choice B is the best answer. The sentence emphasizes the different orders that Australia's invertebrates belong to, specifying that sawflies, wasps, bees, and ants belong to the order Hymenoptera, whereas beetles and weevils belong to the order

Coleoptera.

Choice A is incorrect. The sentence only mentions one order, Coleoptera; it doesn't emphasize the different orders that Australia's invertebrates belong to. **Choice C is incorrect**. The sentence only mentions one order, Hymenoptera; it doesn't emphasize the different orders that Australia's invertebrates belong to. **Choice D is incorrect**. The sentence only mentions one order, Hymenoptera; it doesn't emphasize the different orders that Australia's invertebrates belong to.

91 Correct answer **C** Medium Back to question

C A wok is a cooking pan with a round, wide base and high, angled sides.

Choice C is the best answer. It summarizes the information that describes the wok's shape from the second and third bullet points.

Choice A is incorrect. This choice doesn't describe the shape of a wok. **Choice B is incorrect**. This choice doesn't describe the shape of a wok, just some of its features. **Choice D is incorrect**. This choice doesn't describe the shape of a wok, only some of its benefits or functions.

92 Correct answer **A** Medium Back to question

A In painting "Exquisite," Acquah applied pointillism to create what she called an "illusion of movement" within the painting's five dancing women and their twirling skirts.

Choice A is the best answer. The sentence provides Acquah's quotation about pointillism's "illusion of movement" to explain that she used pointillism to create the illusion of movement in her painting of women dancing.

Choice B is incorrect. The sentence explains pointillism and indicates that Acquah used the technique in her painting, but it doesn't provide a quotation or explain why. **Choice C is incorrect**. While the sentence provides a quotation from Acquah about pointillism, the quotation merely describes a specific aspect of the technique; the sentence doesn't explain why Acquah used pointillism in her painting. **Choice D is incorrect**. While the sentence provides a quotation from Acquah, the quotation illustrates Acquah's views on Ghanaian women; the sentence doesn't explain why Acquah used pointillism in her painting.

93 Correct answer **C** Medium Back to question

C While both are by Enriquez, the 2003 portrait of Luis Jimenez is a painting, and the 2016 portrait of Rudolfo Anaya is a drawing.

Choice C is the best answer. The sentence emphasizes a difference between the portraits, noting that one is a painting and the other is a drawing.

Choice A is incorrect. The sentence emphasizes a similarity between the two portraits rather than a difference. **Choice B is incorrect**. The sentence makes a generalization about Enriquez's portraits; it doesn't emphasize a difference between the portraits of Jimenez and Anaya. **Choice D is incorrect**. While the sentence notes a difference between Jimenez and Anaya, it doesn't emphasize a difference between, or even mention, their portraits.

94 Correct answer **C** Medium Back to question

C After evaluating dozens of CMN studies, Karst and colleagues expressed concern that recent claims about common mycorrhizal networks are "disconnected from evidence."

Choice C is the best answer. This choice uses a quotation to convey the authors' criticism and challenge to the wood-wide web theory due to an absence of evidence.

Choice A is incorrect. This choice doesn't emphasize a potential problem with the wood-wide web theory. It uses a quotation to introduce the theory and its originator. It doesn't mention any criticism or challenge to the theory. **Choice B is incorrect**. This choice uses a quotation, but it doesn't emphasize a potential problem with the wood-wide web theory. It uses a quotation to describe the appeal and interest of the theory, but it doesn't indicate why the authors are concerned or what evidence they have. **Choice D is incorrect**. This choice doesn't use a quotation at all. It paraphrases the main idea of the 2022 study, but it doesn't include any specific words or phrases from the notes. It also doesn't emphasize a potential problem with the theory, but rather its popularity.

95 Correct answer **C** Medium Back to question

C The fine wool produced by Merino and Rambouillet sheep is used for apparel, whereas the thicker wool of Romney sheep is used in rugs and blankets.

Choice C is the best answer. This choice most effectively emphasizes how Romney wool differs from Merino and Rambouillet wool. It describes the difference in thickness and the difference in what they're used for.

Choice A is incorrect. This choice doesn't emphasize how Romney wool differs from Merino and Rambouillet wool. It doesn't mention Merino or Rambouillet wool at all. **Choice B is incorrect**. This choice doesn't emphasize how Romney wool differs from Merino and Rambouillet wool. It doesn't mention Merino or Rambouillet wool at all. **Choice D is incorrect**. This choice doesn't emphasize how Romney wool differs from Merino and Rambouillet wool. It doesn't mention Romney, Merino or Rambouillet wool at all.

96 Correct answer **D** Medium Back to question

D Shaun Tan's books *Tales from Outer Suburbia* and *Tales from the Inner City* both describe surreal events occurring in otherwise ordinary places.

Choice D is the best answer. The sentence uses "both" to emphasize a thematic similarity between Tan's two books, noting that both *Tales from Outer Suburbia* and *Tales from the Inner City* describe surreal events occurring in otherwise ordinary places.

Choice A is incorrect. The sentence emphasizes a difference (one contains fewer stories than the other), not a similarity, between the two books. **Choice B is incorrect**. The sentence indicates that Tan's books were published ten years apart; it doesn't emphasize a similarity between the two books. **Choice C is incorrect**. The sentence uses "unlike" to emphasize a difference between *Tales from Outer Suburbia* and *Tales from the Inner City*; it doesn't emphasize a similarity between the two books.

97 Correct answer **D** Medium ‹ Back to question

D By interbreeding with Tibetan wolves around 24,000 years ago, Tibetan mastiffs acquired the genetic mutations that enable them to withstand hypoxic conditions.

Choice D is the best answer. The sentence presents the conclusion of Zhen Wang and colleagues' 2016 study: Tibetan mastiffs are able to withstand hypoxic conditions due to their interbreeding with Tibetan wolves 24,000 years ago (which allowed the mastiffs to acquire the necessary genetic mutations).

Choice A is incorrect. The sentence emphasizes a similarity between Tibetan mastiffs and Tibetan wolves; it doesn't present the conclusions of the 2016 study. **Choice B is incorrect**. The sentence emphasizes a similarity between the genes of Tibetan mastiffs and Tibetan wolves; it doesn't present the conclusions of the 2016 study. **Choice C is incorrect**. The sentence misrepresents information from the notes by indicating that a mutation in mastiffs' HBB gene prevents excess hemoglobin production; moreover, it doesn't present the conclusions of the 2016 study.

98 Correct answer **D** Medium ‹ Back to question

D Surface-dwelling tetras can see, whereas cave-dwelling tetras cannot.

Choice D is the best answer. The sentence emphasizes a difference between surface-dwelling and cave-dwelling tetras, noting that while surface-dwelling tetras can see, cave-dwelling tetras can't.

Choice A is incorrect. While the sentence notes that surface-dwelling and cave-dwelling tetras are different, it doesn't emphasize any difference between the two populations of tetras. **Choice B is incorrect** because the sentence explains that cave-dwelling tetras use sensory receptors on their skulls to navigate; it doesn't emphasize a difference between surface-dwelling and cave-dwelling tetras. **Choice C is incorrect**. While the sentence notes that there are two different populations of Mexican tetras, it doesn't emphasize any difference between the two populations.

99 Correct answer **C** Medium ‹ Back to question

C Researchers found that gas giants featuring a thermal inversion were likely to contain heat-absorbing metals, which may reside in the planets' upper atmospheres.

Choice C is the best answer. It describes the study's findings in a way that assumes the audience is already familiar with thermal inversions.

Choice A is incorrect. This choice doesn't fully describe the findings of the study, because it doesn't include anything about thermal inversions. **Choice B is incorrect**. This choice doesn't describe the study's findings. **Choice D is incorrect**. This choice isn't suited for an audience already familiar with thermal inversion. A familiar audience wouldn't need to have the term defined.

100 Correct answer **B** Medium ‹ Back to question

B To find out how many medical schools have guidelines about student social media use, Terry Kind and her team examined the student policies of 132 medical schools.

Choice B is the best answer. The sentence effectively emphasizes Kind's methodology: examining the student policies of 132 medical schools for guidelines about student social media use.

Choice A is incorrect. The sentence specifies how many medical schools' student policies are available online; it doesn't emphasize the study's methodology. **Choice C is incorrect**. The sentence emphasizes the study's results, not the study's methodology. **Choice D is incorrect**. The sentence emphasizes the aim of the study, not the study's methodology.

101 Correct answer **C** Medium Back to question

C Ultramarathons range widely in length, from a few dozen miles to a few hundred.

Choice C is the best answer. This is the only choice that makes a generalization about ultramarathons.

Choice A is incorrect. This choice gives specific examples of ultramarathons but doesn't say anything about them as a category. **Choice B is incorrect**. This choice compares marathons in general to one specific ultramarathon but doesn't say anything about ultramarathons as a category. **Choice D is incorrect**. This choice contrasts two specific ultramarathons but doesn't say anything about them as a category.

102 Correct answer **A** Medium Back to question

A The Perseid meteor shower is named for the constellation Perseus, the location of the meteor shower's radiant.

Choice A is the best answer. The sentence explains the origin of the Perseid meteor shower's name: the constellation Perseus, where the meteor shower's radiant is located.

Choice B is incorrect. The sentence makes a claim about meteor shower names in general; it doesn't explain the origin of the Perseid meteor shower's name specifically. **Choice C is incorrect**. The sentence indicates when and where the Perseid meteor shower is visible; it doesn't explain the origin of the meteor shower's name. **Choice D is incorrect**. The sentence discusses meteor showers in general; it doesn't explain the origin of the Perseid meteor shower's name.

103 Correct answer **D** Medium Back to question

D Whereas the reflective metal fibers had an emissivity of just 0.02, the silicon carbide fibers absorbed large amounts of heat, resulting in an emissivity of 0.74.

Choice D is the best answer. The sentence uses "whereas" to contrast the emissivities of the two fibers, noting that the emissivity of the reflective metal fibers was just 0.02, far lower than that of the silicon carbide fibers (0.74).

Choice A is incorrect. The sentence emphasizes the ability of reflective metal fibers and silicon carbide fibers to emit heat; it doesn't contrast the emissivities of the two fibers. **Choice B is incorrect**. The sentence states a law of thermodynamics: the amount of heat a material absorbs is equal to the amount it emits. The sentence doesn't contrast the emissivity of reflective metal fibers with that of silicon carbide fibers. **Choice C is incorrect**. While the sentence includes a generalization about the emissivities of reflective metal fibers and silicon carbide fibers, it emphasizes Abebe's plans for their use in a garment; it doesn't contrast the emissivities of the two fibers.

104 Correct answer **C** Medium Back to question

C The influence theory holds that the principles of the Great Law of Peace, a centuries-old agreement binding six Native nations in the northeastern US, influenced the US Constitution.

Choice C is the best answer. The sentence effectively presents the influence theory to an audience unfamiliar with the Haudenosaunee Confederacy, explaining the theory's position that the Great Law of Peace influenced the US Constitution

while avoiding mention of the Haudenosaunee Confederacy itself.

Choice A is incorrect. The sentence broadly emphasizes Johansen's ideas about the Great Law of Peace; it doesn't identify the influence theory or effectively present it. **Choice B is incorrect**. The sentence emphasizes one fact that supports the influence theory; it doesn't effectively present the theory to an audience unfamiliar with the Haudenosaunee Confederacy. **Choice D is incorrect**. The sentence makes a broad generalization about Native people's influence on the founding of the US; it doesn't effectively present the influence theory.

105 Correct answer **B** Medium Back to question

B Although he is best known as a Harlem Renaissance writer, Claude McKay had published two acclaimed poetry collections in 1912 while living in Jamaica: *Songs of Jamaica* and *Constab Ballads*.

Choice B is the best answer. This choice contrasts McKay's fame as a Harlem Renaissance writer with his earlier achievements as a Jamaican poet, and it names the two collections he published before moving to Harlem.

Choice A is incorrect. This choice doesn't emphasize McKay's accomplishments before moving to Harlem. It lists some of his works but doesn't distinguish between those he wrote in Jamaica and those he wrote in Harlem. **Choice C is incorrect**. This choice doesn't emphasize McKay's accomplishments before moving to Harlem. It only mentions the year he moved and what he would become known for afterwards. **Choice D is incorrect**. This choice doesn't emphasize McKay's accomplishments before moving to Harlem. It mentions that he lived in Jamaica, but it doesn't name any of the works he published there.

106 Correct answer **D** Medium Back to question

D The Laas Geel paintings and the Dhagah Nabi Galay paintings are both examples of ancient rock art found in Somaliland.

Choice D is the best answer. This choice compares the Laas Geel paintings and the Dhagah Nabi Galay paintings to one another and emphasizes what they have in common: they are both ancient rock art found in the same region.

Choice A is incorrect. This choice only mentions the Dhagah Nabi Galay paintings. It doesn't compare them to the Laas Geel paintings. **Choice B is incorrect**. This choice doesn't emphasize a similarity between the two paintings. Instead, it emphasizes a difference: the type of content they depict. **Choice C is incorrect**. This choice only mentions the Laas Geel paintings. It doesn't compare them to the Dhagah Nabi Galay paintings.

107 Correct answer **D** Medium Back to question

D In Kang's portrait of her, Fung is seated on the floor, with five of her paintings resting against the wall behind her.

Choice D is the best answer. The sentence describes Fung's location in Kang's photograph, noting that Fung is seated on the floor. Additionally, because the sentence is intended for an audience already familiar with the artists, it omits the artists' first names and other biographical information about them.

Choice A is incorrect. The sentence indicates that Fung appears in Kang's photograph; it doesn't describe Fung's location in Kang's photograph. **Choice B is incorrect**. The sentence identifies Kang and where she is based; it doesn't describe Fung's location in Kang's photograph. **Choice C is incorrect**. The sentence describes the background of Kang's photograph; it doesn't describe Fung's location in Kang's photograph.

108 Correct answer **B** Medium ‹ Back to question

B Vitamin C, also known as ascorbic acid, can be found in pineapple as well as other fruits.

Choice B is the best answer. The sentence provides an example of a fruit that contains vitamin C, noting that vitamin C (also known as ascorbic acid) can be found in pineapple as well as other fruits.

Choice A is incorrect. While the sentence does explain that humans can get vitamin C from fruits, it doesn't provide an example of a specific fruit that contains vitamin C. **Choice C is incorrect**. The sentence explains why humans must get vitamin C from foods; it doesn't provide an example of a fruit that contains vitamin C. **Choice D is incorrect**. The sentence compares vitamin C production in animals with vitamin C production in humans; it doesn't provide an example of a fruit that contains vitamin C.

109 Correct answer **D** Medium ‹ Back to question

D The SEBS rubber sample used in the 2019 study was thicker than the TPU sample.

Choice D is the best answer. The sentence contrasts the two samples, noting that the SEBS rubber sample, at 4 millimeters thick, was thicker than the TPU sample, which was 3 millimeters thick.

Choice A is incorrect because the sentence mentions a similarity between the TPU fiber and the SEBS rubber; it doesn't contrast the two samples. **Choice B is incorrect** because the sentence indicates that both the SEBS rubber and TPU samples were part of the 2019 study; it doesn't contrast the two samples. **Choice C is incorrect** because the sentence describes the process of torsional heating; it doesn't contrast the two samples.

110 Correct answer **B** Medium ‹ Back to question

B A 2021 study of the Vinland Map's ink revealed that it contains a titanium compound not used in inks until the 1920s, indicating that the map was drawn in the twentieth century.

Choice B is the best answer. The sentence effectively presents the study and its findings, providing relevant information: a 2021 study of the Vinland Map found that the map's ink contains a compound not used in inks until the twentieth century.

Choice A is incorrect. While the sentence introduces the study, it does not present the study's findings. **Choice C is incorrect**. While the sentence mentions the study, it does not effectively present the study or its findings. **Choice D is incorrect**. While the sentence introduces the study, it does not present the study's findings.

111 Correct answer **A** Medium ‹ Back to question

A Given that most of the buildings on Duke's campus feature architectural styles that Abele had studied in Europe, historians believe Abele is the one who designed them.

Choice A is the best answer. The sentence specifies why historians believe Abele designed most of Duke's campus buildings, noting that most of the buildings feature architectural styles that Abele had studied.

Choice B is incorrect. While the sentence explains that historians believe Abele designed most of Duke's campus buildings, it doesn't specify why historians hold that belief. **Choice C is incorrect** because the sentence emphasizes the architectural styles of Duke's campus buildings; it doesn't specify why historians believe Abele designed the buildings. **Choice D is incorrect**. While the sentence explains that Abele is believed to have designed most of the buildings on Duke's campus, it doesn't specify why historians believe that he designed the buildings.

112 Correct answer **A** — Medium — Back to question

A. After suffragists in the UK marched from Edinburgh to London, suffragists in the US marched from New York City to Albany, New York.

Choice A is the best answer. The sentence emphasizes the order in which the two marches occurred, correctly indicating that the US march (December 16 to December 28, 1912) occurred after the march in the UK (October 12 to November 16, 1912).

Choice B is incorrect. While the sentence mentions that both marches took place in the early 1900s, it doesn't emphasize the order in which the two marches occurred. **Choice C is incorrect**. While the sentence does emphasize the order in which the two marches occurred, the order is incorrect. The UK march took place from October 12 to November 16, 1912, which was before the US march (December 1912). **Choice D is incorrect**. While the sentence specifies the dates of the UK march, it doesn't mention the US march or emphasize the order in which the two marches occurred.

113 Correct answer **A** — Medium — Back to question

A. The municipality of Tecozautla in Hidalgo, Mexico, covers an area of roughly 535 km^2.

Choice A is the best answer. The sentence emphasizes the size of Tecozautla, noting that it covers an area of roughly 535 km^2.

Choice B is incorrect. The sentence gives an example of a public service that municipalities provide; it doesn't emphasize the size of Tecozautla. **Choice C is incorrect**. While the sentence provides information about Tecozautla, it doesn't emphasize Tecozautla's size. **Choice D is incorrect**. While the sentence provides information about Tecozautla, it doesn't emphasize Tecozautla's size.

114 Correct answer **C** — Medium — Back to question

C. Published in 1983 by Tanam Press, *Precario/Precarious* is a collection of poetry by the multidisciplinary artist Cecilia Vicuña.

Choice C is the best answer. The sentence effectively introduces the poetry collection *Precario/Precarious*, noting that it is a collection by Vicuña that was published in 1983 by Tanam Press.

Choice A is incorrect. While the sentence mentions the 1983 poetry collection *Precario/Precarious*, it focuses mainly on Vicuña's visual art. **Choice B is incorrect**. The sentence doesn't introduce the 1983 poetry collection *Precario/Precarious*; instead, it introduces Vicuña. **Choice D is incorrect**. The sentence emphasizes the location of Vicuña's 1971 exhibition *Pinturas, poemas y explicaciones*; it doesn't introduce the 1983 poetry collection *Precario/Precarious*.

115 Correct answer **D** — Medium — Back to question

D. The authority to regulate US airline safety transferred from the US Commerce Department to the CAA in 1938, then from the CAA to the FAA in 1958.

Choice D is the best answer. The sentence specifies the order in which different government entities were given the authority to regulate US airline safety, noting that this role shifted from the US Commerce Department to the CAA in 1938, then from the CAA to the FAA in 1958.

Choice A is incorrect because it misrepresents information from the notes. The authority to regulate airline safety was transferred to the FAA in 1958, not to the US Commerce Department. Moreover, the sentence misrepresents Quesada's role as described in the notes. **Choice B is incorrect**. While the sentence mentions that all three entities had the authority to regulate

US airline safety at different times, it doesn't specify the chronological order in which they held that authority. **Choice C is incorrect**. The sentence only mentions when the FAA began regulating US airline safety; it doesn't specify the order in which different government entities held that authority.

116 Correct answer **C** Medium Back to question

C Inspired by ants, which form bridges with their interlocked bodies to help fellow ants cross gaps, Yasemin Ozkan-Aydin set out to design quadruped robots capable of similarly collaborative behavior.

Choice C is the best answer. The sentence effectively begins a narrative about the creation of the robots, explaining that ants' gap-crossing technique inspired Yasemin Ozkan-Aydin to "set out to design" robots that could collaborate in a similar manner.

Choice A is incorrect. The sentence describes how the robots work together to cross gaps; it doesn't effectively begin a narrative about the creation of the robots. **Choice B is incorrect**. The sentence provides an overview of the steps Ozkan-Aydin took in creating the robots; it doesn't effectively begin a narrative about their creation. **Choice D is incorrect**. The sentence explains how ants form bridges; it doesn't effectively begin a narrative about the creation of the robots.

117 Correct answer **D** Medium Back to question

D C-type asteroids are mainly composed of carbon, whereas S-type asteroids are primarily made up of silicate minerals.

Choice D is the best answer. The sentence emphasizes a difference between C-type and S-type asteroids, noting that C-type asteroids are mainly composed of carbon, while S-type asteroids are mainly composed of silicate minerals.

Choice A is incorrect. The sentence states that C-type and S-type are two types of asteroids, but it doesn't emphasize a difference between them. **Choice B is incorrect** because it doesn't directly mention C-type or S-type asteroids. **Choice C is incorrect**. While the sentence mentions that 17 percent of known asteroids are S-type asteroids, it doesn't identify the percentage of asteroids that are C-type. Therefore, the sentence doesn't emphasize a difference between the two types.

118 Correct answer **D** Medium Back to question

D The lines of the poem *Meghadūta* use a pattern of long and short syllables, whereas *Widsith*'s lines use a pattern of repeated sounds.

Choice D is the best answer. Noting that *Meghadūta* uses a pattern of long and short syllables in its lines (quantitative meter) and *Widsith* uses a pattern of repeated sounds in its lines (alliterative meter), and signaling a contrast with "whereas," the sentence emphasizes a difference between the meters of the two poems.

Choice A is incorrect. The sentence indicates that the two poems were written in different languages; it doesn't emphasize a difference between the meters of the two poems. **Choice B is incorrect**. The sentence mentions the meters of the two poems but misrepresents information from the notes; the overall definition of a meter (the rhythmic structure or pattern of accents in a poem's lines) applies to both alliterative and quantitative meters, not just quantitative. **Choice C is incorrect**. While the sentence emphasizes a difference between the meters of the two poems, it misrepresents information from the notes; *Widsith* uses an alliterative meter, which is structured by a pattern of repeated sounds, not a pattern of long and short syllables.

119 Correct answer **B** Medium ‹ Back to question

B Aeolian landforms—landforms created by the wind—include the mushroom rock, a rock formation in which the wind erodes the base of the rock faster than the top.

Choice B is the best answer. The sentence provides an explanation and an example of Aeolian landforms, explaining that they are landforms created by wind and offering the mushroom rock as an example.

Choice A is incorrect. The sentence explains that Aeolian landforms are created by wind but does not provide an example of any specific Aeolian landforms. Rather, the example it provides is of a wind-based process. **Choice C is incorrect**. While the sentence provides a partial explanation of Aeolian landforms, noting that they are created by the wind, it does not effectively provide an example. The sentence seems to indicate that mushroom rocks, rather than being an example of Aeolian landforms, are distinct from them. **Choice D is incorrect**. While the sentence provides an explanation of a mushroom rock, which is a specific example of an Aeolian landform, it doesn't provide an explanation of Aeolian landforms in general.

120 Correct answer **C** Medium ‹ Back to question

C The first synchrotron created for the purpose of providing synchrotron light, Tantalus, was housed near the University of Wisconsin–Madison.

Choice C is the best answer. After identifying Tantalus as the first synchrotron built to provide light, the sentence emphasizes its location.

Choice A is incorrect. While the sentence identifies Tantalus as the first synchrotron built to provide light, it doesn't emphasize (or mention) its location. **Choice B is incorrect**. The sentence describes synchrotrons and how researchers use them; it doesn't emphasize (or mention) the location of Tantalus. **Choice D is incorrect**. The sentence describes synchrotron light and how researchers use it; the sentence doesn't emphasize (or mention) the location of Tantalus.

121 Correct answer **C** Medium ‹ Back to question

C Having entered the poststarburst phase, a quenched galaxy is one that no longer forms stars.

Choice C is the best answer. This choice defines a quenched galaxy as "one that no longer forms stars."

Choice A is incorrect. This choice only describes what happens before quenching. **Choice B is incorrect**. This choice only describes what happens after quenching. **Choice D is incorrect**. This choice only describes what causes quenching.

122 Correct answer **C** Medium ‹ Back to question

C Having four legs but the skull and teeth of a seal, the rare fossil illustrates an early stage in the evolution of pinnipeds from their land-dwelling ancestors.

Choice C is the best answer. The sentence effectively emphasizes the fossil's significance, explaining that the fossil is rare and illustrates an early stage in the evolution of pinnipeds from their land-dwelling ancestors.

Choice A is incorrect. The sentence describes the fossil Rybczynski found; it doesn't emphasize the fossil's significance. **Choice B is incorrect**. The sentence mentions that a fossil resembling both pinnipeds and their ancestors was found; it doesn't emphasize the fossil's significance. **Choice D is incorrect**. The sentence notes a term used to describe the fossil Rybczynski found; it doesn't emphasize the fossil's significance.

123 Correct answer **A** Medium ‹ Back to question

A *The Hobbit*'s opening map introduces readers to the fictional world they are about to enter, while the closing map allows them to reconstruct the story they have just read.

Choice A is the best answer. The sentence contrasts the purposes of the two maps in *The Hobbit*, noting that the opening map introduces readers to the book's fictional world, while the closing map helps readers reconstruct the story. The word "while" helps signal a contrast between the purposes of the maps.

Choice B is incorrect. While the sentence mentions the two maps, it doesn't contrast the maps' purposes. **Choice C is incorrect**. While the sentence mentions the two maps and notes that each has a purpose, it doesn't specify what those purposes are or how they contrast. **Choice D is incorrect**. While the sentence mentions the two maps, it doesn't contrast the maps' purposes.

124 Correct answer **B** Medium ‹ Back to question

B When expanded, Adnan's 1993 leporello *December from My Window* reveals a panoramic landscape painted in ink and watercolor.

Choice B is the best answer. This choice describes Adnan's *December from My Window* in a way that assumes the audience is already familiar with leporellos and focuses on the specific features of the work—its content and medium.

Choice A is incorrect. This choice isn't suited for an audience already familiar with leporellos. A familiar audience wouldn't need to have the term defined or explained. **Choice C is incorrect**. This choice doesn't describe Adnan's *December from My Window*. It mentions the year and the type of work but not the content or the medium. In addition, it provides a simple definition of leporellos, making this an inappropriate choice for an audience already familiar with leporellos. **Choice D is incorrect**. This choice isn't suited for an audience already familiar with leporellos. A familiar audience wouldn't need to have the term defined.

125 Correct answer **A** Medium ‹ Back to question

A Depicting a crowded train station, Painting #12 from *The Migration Series* is on display at the Museum of Modern Art in New York City.

Choice A is the best answer. The sentence indicates where to go to view Painting #12 from Lawrence's *Migration Series*, noting that this even-numbered painting is on display at the Museum of Modern Art in New York City.

Choice B is incorrect. The sentence describes the subject matter of *The Migration Series*; it doesn't indicate where to go to view Painting #12. **Choice C is incorrect**. The sentence misrepresents information from the notes: even-numbered paintings, such as Painting #12, are on display at the Museum of Modern Art in New York City, not in Washington, DC. **Choice D is incorrect**. While the sentence mentions both locations where paintings from the series are displayed, it doesn't indicate where to go to view Painting #12 specifically.

126 Correct answer **B** Medium ‹ Back to question

B Unlike traditional biennials, the MexiCali Biennial hosts exhibitions in different venues on an uneven schedule.

Choice B is the best answer. The sentence effectively emphasizes a difference between the MexiCali Biennial and traditional biennials, stating that the MexiCali Biennial is unlike traditional biennials because it hosts exhibitions in different venues on an uneven schedule.

Choice A is incorrect. The sentence indicates who founded the MexiCali Biennial and the years this biennial has taken place; it doesn't emphasize a difference between the MexiCali Biennial and traditional biennials. **Choice C is incorrect**. While the sentence clarifies the traditional meaning of biennial with language that could apply to the MexiCali Biennial, it doesn't mention the MexiCali Biennial by name. Therefore, the sentence doesn't effectively emphasize a difference between the MexiCali Biennial and traditional biennials. **Choice D is incorrect**. The sentence notes locations where various biennial exhibitions have been held; it doesn't emphasize a difference between the MexiCali Biennial and traditional biennials.

127 Correct answer **A** Medium ‹ Back to question

A The international Slow Food movement, founded in 1989, promotes universal access to healthy, high-quality food that is produced sustainably by workers who are treated and compensated fairly.

Choice A is the best answer. The sentence effectively introduces the Slow Food movement to a new audience, explaining that the movement, which was founded in 1989, promotes universal access to high-quality and healthy food that is produced sustainably by workers who are treated fairly.

Choice B is incorrect. While the sentence indicates when the international Slow Food movement and the Slow Food USA organization were founded, it doesn't effectively introduce the movement to a new audience. **Choice C is incorrect**. While the sentence notes that the Slow Food movement includes advocacy for food production workers, it doesn't effectively introduce the movement to a new audience. **Choice D is incorrect**. While the sentence describes some of the goals of the Slow Food movement, it doesn't effectively introduce the movement to a new audience.

128 Correct answer **A** Medium ‹ Back to question

A The real author of *Adam Bede* was Mary Ann Evans, who published the novel using the pseudonym George Eliot.

Choice A is the best answer. The sentence identifies the novel's real author, explaining that Mary Ann Evans published the novel under the pseudonym of George Eliot.

Choice B is incorrect. The sentence explains that George Eliot was assumed to be a pseudonym; it doesn't identify the novel's real author. **Choice C is incorrect**. The sentence specifies the pseudonym used on the novel's title page; it doesn't identify the novel's real author. **Choice D is incorrect**. While the sentence indicates that the novel's real author used a pseudonym, it doesn't identify that author as Mary Ann Evans.

129 Correct answer **B** Medium ‹ Back to question

B Though he was known locally during his lifetime, Wong Fei-hung's later depiction in television, film, and other media has turned him into an internationally known folk hero.

Choice B is the best answer. The sentence emphasizes the effect media had on building Wong Fei-hung's legacy, noting that media depictions after his lifetime turned Wong Fei-hung into an internationally known folk hero.

Choice A is incorrect. While it appears to emphasize the effect of media depictions of Wong Fei-hung, the sentence misrepresents information from the notes. According to the notes, media depictions resulted in Wong Fei-hung becoming an internationally known folk hero, not a locally known physician and kung fu master. **Choice C is incorrect**. The sentence discusses Wong Fei-hung's legacy, noting that he became an internationally known folk hero, but it doesn't emphasize the effect media had on building that legacy. **Choice D is incorrect**. The sentence indicates that Wong Fei-hung has been depicted in many media but doesn't emphasize the effect of these media depictions on building his legacy.

130 Correct answer **A** Medium ‹ Back to question

A Beard's automatic coupler and Jones's mobile refrigeration system both improved on existing designs.

Choice A is the best answer. It compares Beard's and Jones's inventions to one another, and emphasizes what they have in common.

Choice B is incorrect. This choice doesn't emphasize a similarity. It only mentions Beard's invention. It doesn't compare it to Jones's invention. **Choice C is incorrect**. This choice doesn't emphasize a similarity between the two inventions. Instead, it emphasizes a difference. **Choice D is incorrect**. This choice doesn't emphasize a similarity. It only mentions Jones's invention. It doesn't compare it to Beard's invention.

131 Correct answer **B** Medium ‹ Back to question

B The A:shiwi A:wan Museum and Heritage Center has served the Pueblo of Zuni since 1992.

Choice B is the best answer. This choice effectively uses information from the notes to emphasize how long the museum has existed. It says that the museum has existed since 1992.

Choice A is incorrect. This choice doesn't emphasize how long the museum has existed. It doesn't say when the museum was founded. **Choice C is incorrect**. This choice doesn't emphasize how long the museum has existed. It doesn't say the exact date of the museum's founding. Rather, it emphasizes the museum's mission. **Choice D is incorrect**. This choice doesn't emphasize how long the museum has existed. It doesn't say when the museum was founded.

132 Correct answer **A** Medium ‹ Back to question

A P waves and S waves both travel beneath Earth's surface, causing the ground to move.

Choice A is the best answer. The sentence emphasizes a similarity between P waves and S waves, noting that they both travel beneath Earth's surface, thereby causing the ground to move.

Choice B is incorrect. The sentence emphasizes a difference between P waves and S waves, noting that P waves travel faster than S waves; it doesn't emphasize a similarity between the two types of waves. **Choice C is incorrect**. The sentence emphasizes how P waves move; it doesn't emphasize a similarity between P waves and S waves. **Choice D is incorrect**. While the sentence acknowledges that P waves and S waves start at the same point, it doesn't emphasize a similarity; instead, the sentence emphasizes a difference between the two types of waves, noting that they behave very differently.

133 Correct answer **C** Medium ‹ Back to question

C In the time since ancient cultures described the Pleiades as having seven stars, two of the cluster's stars have moved so close together that they now appear as one.

Choice C is the best answer. The sentence specifies the reason the Pleiades' appearance changed, noting that two of the cluster's stars have moved so close together that they now appear as one star.

Choice A is incorrect. The sentence specifies how ancient Native American and Australian Aboriginal cultures described the Pleiades; it doesn't specify the reason the Pleiades' appearance changed. **Choice B is incorrect**. The sentence describes the appearance of the Pleiades today; it doesn't specify the reason the Pleiades' appearance changed. **Choice D is incorrect**. The

sentence explains why two of the Pleiades' stars appear to be a single star; it doesn't specify the reason the Pleiades' appearance changed.

134 Correct answer **D** Medium ‹ Back to question

D Rai's approach substitutes a natural, plant-based substance for the hazardous chemicals that manufacturers have traditionally used.

Choice D is the best answer. The sentence emphasizes a difference between the two approaches to dyeing blue jeans, noting that Rai's approach uses a natural, plant-based substance in place of hazardous chemicals.

Choice A is incorrect. The sentence emphasizes a similarity between the dyes used in the two approaches, noting that the dyes contain the same ingredient; it doesn't emphasize a difference between the two approaches to dyeing blue jeans. **Choice B is incorrect**. The sentence explains what nanocellulose is; it doesn't emphasize a difference between the two approaches to dyeing blue jeans. **Choice C is incorrect**. The sentence explains the traditional approach to dyeing blue jeans; it doesn't emphasize a difference between the traditional approach and Rai's approach.

135 Correct answer **A** Medium ‹ Back to question

A In 1956, Trinidadian author Samuel Selvon published one of his most celebrated novels, *The Lonely Londoners,* which is about a group of men who emigrate from the Caribbean to Great Britain after World War II.

Choice A is the best answer. By noting that Selvon is a Trinidadian author and indicating that *The Lonely Londoners*, published in 1956, is about a group of men who emigrate from the Caribbean to Great Britain after World War II, the sentence effectively introduces Samuel Selvon and his novel to a new audience.

Choice B is incorrect. The sentence indicates the order in which two of Selvon's novels were written; it doesn't introduce Samuel Selvon and *The Lonely Londoners* to a new audience. **Choice C is incorrect**. While the sentence describes the novel *The Lonely Londoners*, it doesn't mention its author, Samuel Selvon, by name and thus doesn't effectively introduce him to a new audience. **Choice D is incorrect**. The sentence indicates that two of Selvon's novels include the same characters; it doesn't introduce Samuel Selvon and *The Lonely Londoners* to a new audience.

136 Correct answer **C** Medium ‹ Back to question

C Both the Kemp's ridley sea turtle and the olive ridley sea turtle can be found in the Atlantic Ocean.

Choice C is the best answer. The sentence emphasizes a similarity between the two sea turtle species: both can be found in the Atlantic Ocean.

Choice A is incorrect. The sentence indicates that the olive ridley sea turtle is one of seven species of sea turtle; it fails to mention the Kemp's ridley sea turtle. **Choice B is incorrect**. The sentence emphasizes a difference between the two sea turtle species rather than a similarity. **Choice D is incorrect**. The sentence emphasizes a difference between the two sea turtle species rather than a similarity.

137 Correct answer **A** — Medium — Back to question

A The Qianmen Dajie pedestrian mall has roots as far back as the Ming dynasty; likewise, Rue Mouffetard has existed for centuries.

Choice A is the best answer. The sentence emphasizes a similarity between the ages of the two pedestrian malls, noting that both are relatively old—Qianmen Dajie has roots that go back hundreds of years and Rue Mouffetard has existed for centuries.

Choice B is incorrect. The sentence emphasizes that both locations are famous pedestrian malls and notes that they are in different locations; it doesn't emphasize a similarity in their ages. **Choice C is incorrect**. While the sentence emphasizes that both locations are pedestrian malls, it doesn't emphasize a similarity in their ages. **Choice D is incorrect**. The sentence explains that Qianmen Dajie and Rue Mouffetard are examples of pedestrian malls and gives information about pedestrian malls in general; it doesn't emphasize a similarity in the ages of these two malls specifically.

138 Correct answer **C** — Medium — Back to question

C Sister Rosetta Tharpe had such a major impact on rock 'n' roll that Celisse Henderson called her "the unquestioned founding mother" of the genre.

Choice C is the best answer. The sentence uses the quotation from Henderson to support a claim about Tharpe's contribution to rock 'n' roll, noting that the impact Tharpe had on the genre led Henderson to call her "the unquestioned founding mother of rock 'n' roll."

Choice A is incorrect. While the sentence makes the claim that Tharpe had a major impact on rock 'n' roll, it doesn't use a quotation to support this claim. **Choice B is incorrect**. The sentence presents Henderson's opinion that Tharpe had a major impact on rock 'n' roll, but it doesn't use a quotation to support this claim. **Choice D is incorrect**. While the sentence includes a quotation about audience reactions to Tharpe's music, the sentence describes Tharpe as a gospel musician; it doesn't support a claim about her contribution to rock 'n' roll.

139 Correct answer **D** — Medium — Back to question

D A physics study designed to detect and analyze gravitational waves, LIGO uses a pair of massive interferometers that are thousands of miles apart.

Choice D is the best answer. The sentence effectively presents the LIGO study's aim, noting that it is designed to detect and analyze gravitational waves, and its methodology (it uses two interferometers to detect the waves).

Choice A is incorrect. The sentence describes a finding from the LIGO study; it doesn't effectively present the study's aim or its methodology. **Choice B is incorrect**. The sentence provides background information about the LIGO study's timeline; it doesn't effectively present the study's aim or its methodology. **Choice C is incorrect**. The sentence touches on LIGO's methodology, noting that it uses two interferometers, but doesn't indicate what the study's aims are.

140 Correct answer **C** — Medium — Back to question

C Cosmochemist Kentaro Terada set out to determine whether some of the Moon's oxygen was coming from Earth.

Choice C is the best answer. The sentence emphasizes the aim, or goal, of the research study, noting what Terada set out to do: determine whether some of the Moon's oxygen was coming from Earth.

Choice A is incorrect. The sentence focuses on how the Kaguya satellite collected data; it doesn't emphasize the aim of the research study. **Choice B is incorrect**. While the sentence mentions what Terada was curious about before conducting the

research study, it doesn't emphasize his study's aim. **Choice D is incorrect**. The sentence presents the research study's conclusion; it doesn't emphasize the study's aim.

141 Correct answer **C** Medium Back to question

C Annie Wu is best known for a 2011 YouTube video performance of *Three Beats for Beatbox Flute* that has been viewed over two million times.

Choice C is the best answer. This describes the achievement for which Wu is best known.

Choice A is incorrect. This choice doesn't emphasize Wu's most well-known achievement. It mentions some of her general achievements, but not the one for which she is "best known." **Choice B is incorrect**. This choice doesn't emphasize Wu's most well-known achievement—it describes several of her achievements equally. **Choice D is incorrect**. This choice doesn't emphasize Wu's most well-known achievement. It describes a piece of music featured in her most well-known achievement.

142 Correct answer **C** Medium Back to question

C Since the rise of industrial agriculture, US farmers have mainly grown the same few unique apple varieties, resulting in the loss of thousands of varieties less suitable for commercial growth.

Choice C is the best answer. The sentence emphasizes the decline in unique apple varieties in the US and specifies why this decline occurred, noting that thousands of apple varieties were lost because US farmers started mainly growing the same few unique varieties.

Choice A is incorrect. The sentence introduces the Lost Apple Project; it doesn't emphasize the decline in unique apple varieties in the US and specify why this decline occurred. **Choice B is incorrect**. While the sentence emphasizes the decline in unique apple varieties in the US, it doesn't explain why this decline occurred. **Choice D is incorrect**. The sentence emphasizes the general decline of crop varieties in the mid-1900s; it doesn't emphasize the specific decline in unique apple varieties in the US.

143 Correct answer **A** Medium Back to question

A "Guerdon," the final word of the 2008 Scripps National Spelling Bee, is of Anglo-French origin, while the following year's final word, "Laodicean," derives from ancient Greek.

Choice A is the best answer. Noting that "guerdon" is of Anglo-French origin and "Laodicean" is of ancient Greek origin, the sentence uses "while" to emphasize a difference in the origins of the two words.

Choice B is incorrect. While the sentence emphasizes two words used in the Scripps National Spelling Bee, it doesn't emphasize (or mention) the words' linguistic origins. **Choice C is incorrect**. While the sentence specifies the linguistic origin of one word used in the Scripps National Spelling Bee, it doesn't mention the other word or emphasize a difference in the two words' origins. **Choice D is incorrect**. While the sentence makes a generalization about words used in the Scripps National Spelling Bee, it doesn't emphasize a difference in the words' origins.

144 Correct answer **A** Medium ‹ Back to question

A In 1037 CE, al-Biruni published his theory that a large landmass existed west of Europe and east of Asia.

Choice A is the best answer. The sentence specifies when al-Biruni published his landmass theory, indicating that it was published in the year 1037 CE.

Choice B is incorrect. While the sentence notes that al-Biruni published a landmass theory, it doesn't specify when the theory was published. **Choice C is incorrect**. The sentence identifies al-Biruni as a scholar of Earth's physical features; it doesn't specify when he published his landmass theory. **Choice D is incorrect**. The sentence describes al-Biruni's landmass theory; it doesn't specify when the theory was published.

145 Correct answer **C** Medium ‹ Back to question

C A much-praised historical novel about colonial East Africa, *Paradise* (1994) was written by Abdulrazak Gurnah, winner of the 2021 Nobel Prize in Literature.

Choice C is the best answer. The sentence effectively introduces *Paradise* to an audience unfamiliar with the novel and its author, describing *Paradise* as a historical novel about colonial East Africa and its author as the winner of the 2021 Nobel Prize in Literature.

Choice A is incorrect. While the sentence introduces Abdulrazak Gurnah to an audience unfamiliar with the author, it doesn't effectively introduce *Paradise*. **Choice B is incorrect**. While the sentence provides background information about *Paradise*, it doesn't effectively introduce the novel to an audience unfamiliar with its author. **Choice D is incorrect**. While the sentence provides background information about *Paradise*, it doesn't effectively introduce the novel to an audience unfamiliar with its author.

146 Correct answer **D** Medium ‹ Back to question

D Thinking it was an island, Spanish explorers called a peninsula California after an island in a popular novel.

Choice D is the best answer. The sentence emphasizes the role a misconception played in the naming of a place, explaining that Spanish explorers mistook a peninsula for an island and, as a result, named the peninsula after a fictional island, California.

Choice A is incorrect. The sentence mentions a novel that featured a fictional island, California; it doesn't emphasize the role a misconception played in the naming of a place. **Choice B is incorrect**. The sentence notes that Baja California was originally named after a fictional place; it doesn't emphasize the role a misconception—specifically, the Spanish explorers' mistaken belief that the peninsula was an island—played in the naming of a place. **Choice C is incorrect**. The sentence indicates when Spanish explorers learned of the peninsula they called California; it doesn't emphasize the role a misconception played in the naming of a place.

147 Correct answer **B** Medium ‹ Back to question

B Filling in carvings with ground sandstone and a bonding agent is less invasive than smoothing them away with a power grinder, which can greatly alter or damage the sandstone arches.

Choice B is the best answer. The sentence effectively explains an advantage of infilling: it's less invasive than using a power grinder.

Choice A is incorrect. The sentence identifies a disadvantage of power grinding; it doesn't explain an advantage of infilling. **Choice C is incorrect**. The sentence identifies the two techniques park rangers use; it doesn't explain an advantage of infilling. **Choice D is incorrect**. The sentence indicates that power grinding and infilling are different in one aspect; it fails to explain an advantage of infilling.

148 Correct answer **A** Medium Back to question

A By crossbreeding the imported sugarcane species *Saccharum officinarum* with grasses native to India, Ammal succeeded in creating sugarcane hybrids well suited to India's climate.

Choice A is the best answer. The sentence emphasizes Janaki Ammal's achievement, explaining that she successfully created sugarcane hybrids that are well suited to India's climate by crossbreeding an imported sugarcane species with grasses native to India.

Choice B is incorrect. The sentence emphasizes the goal of the Imperial Sugar Cane Institute in the 1930s; it doesn't emphasize Janaki Ammal's achievement. **Choice C is incorrect**. While the sentence mentions Ammal, it doesn't emphasize her achievement of successfully creating sugarcane hybrids. **Choice D is incorrect**. While the sentence mentions the achievement of crossbreeding imported sugarcane species with grasses native to India, it doesn't emphasize the achievement as belonging to Janaki Ammal.

149 Correct answer **B** Medium Back to question

B For matter to travel through a wormhole, the matter would need to have less energy than empty space; such matter has not been shown to exist.

Choice B is the best answer. The sentence acknowledges a complication affecting travel through wormholes, noting that the matter traveling through a wormhole would need to have less energy than empty space and that such matter has not been shown to exist.

Choice A is incorrect. The sentence notes that Einstein's theory doesn't explain how matter with negative energy density can travel through wormholes; it doesn't acknowledge a complication affecting travel through wormholes. **Choice C is incorrect**. While the sentence acknowledges a complication affecting travel through wormholes, it misrepresents information from the notes; matter traveling through wormholes, not the wormholes themselves, would need to have negative energy density. **Choice D is incorrect**. The sentence presents a misleading interpretation of Einstein's theory (confusing the definition of a wormhole with a condition a wormhole must fulfill); it doesn't acknowledge a complication affecting travel through wormholes.

150 Correct answer **C** Medium Back to question

C The researchers tagged 138 female wood ducks with radio frequency ID trackers and recorded how many nest boxes each duck visited during the nesting season.

Choice C is the best answer. The sentence presents the methods used in the study, noting that researchers tagged 138 female wood ducks with radio frequency ID trackers and recorded the number of nest boxes each duck visited.

Choice A is incorrect. While the sentence mentions an aspect of the study's design (that the researchers recorded the number of nest boxes the wood ducks visited), it primarily focuses on a finding of the study rather than the methods the researchers used. **Choice B is incorrect**. While the sentence mentions an aspect of the study's design (that the researchers tracked the number of nest boxes the wood ducks visited), it primarily focuses on a finding of the study rather than the methods the researchers used. **Choice D is incorrect**. The sentence misrepresents information from the notes. The researchers used radio frequency ID trackers to record the ducks' visits; they didn't investigate each site to look for evidence that it had been visited.

151 Correct answer **B** Medium ‹ Back to question

B Inspired by the sistrum played by Egyptian priestesses, *Here I Have Returned* symbolizes "women who have lifted and supported Egyptian society and culture," according to Guirguis.

Choice B is the best answer. The sentence uses a quotation from Guirguis to explain what *Here I Have Returned* represents, noting that Guirguis said the sculpture symbolizes "women who have lifted and supported Egyptian society and culture."

Choice A is incorrect. The sentence explains what Guirguis says she wants her work to achieve and provides an example of her work; it doesn't use a quotation to explain what the sculpture represents. **Choice C is incorrect**. The sentence mentions the instrument whose shape inspired the sculpture but doesn't use a quotation to explain what the sculpture represents. **Choice D is incorrect**. While the sentence does use a quotation from Guirguis, the quotation explains what she hopes her works in general achieve, not what the sculpture in particular represents.

152 Correct answer **D** Medium ‹ Back to question

D Redesigning a poorly designed city flag can create a meaningful symbol of civic pride, as was the case when Pocatello redesigned its original flag to better represent its geography and civic priorities.

Choice D is the best answer. The sentence makes and supports a generalization about the effect of redesigning a city flag, noting that redesigning a city flag can create a meaningful symbol of civic pride, as was the case when the city of Pocatello redesigned its flag.

Choice A is incorrect because the sentence explains that many US cities have redesigned their flags and provides an example; it doesn't make and support a generalization about the effect of redesigning a city flag. **Choice B is incorrect** because the sentence provides an example of a city that redesigned its flag; it doesn't make and support a generalization about the effect of redesigning a city flag. **Choice C is incorrect** because the sentence emphasizes why the flag of Pocatello was redesigned; it doesn't make and support a generalization about the effect of redesigning a city flag.

153 Correct answer **D** Medium ‹ Back to question

D Minnesota's definition of a lake—an inland body of water of at least 10 acres—is more restrictive than Wisconsin's, which doesn't take size into account.

Choice D is the best answer. The sentence contrasts Minnesota's definition of a lake with Wisconsin's, explaining that Minnesota's definition (which takes size into account) is more restrictive than Wisconsin's definition (which doesn't).

Choice A is incorrect. While the sentence notes that Wisconsin's definition of a lake doesn't take size into account, it doesn't contrast Minnesota's definition with Wisconsin's. **Choice B is incorrect**. The sentence states that Wisconsin's definition of a lake is different from Minnesota's, but it doesn't clarify how they differ. In other words, it doesn't contrast Minnesota's definition with Wisconsin's. **Choice C is incorrect**. The sentence indicates how many lakes Wisconsin has according to Minnesota's definition of a lake, but it doesn't clarify how the states' definitions differ. In other words, it doesn't contrast Minnesota's definition with Wisconsin's.

154 Correct answer **D** Medium ‹ Back to question

D To produce carbon dioxide within a liquid batter, baking soda needs to be mixed with an acidic ingredient, whereas baking powder does not.

Choice D is the best answer. The sentence emphasizes a difference between baking soda and baking powder, noting that baking soda needs to be mixed with an acidic ingredient to produce carbon dioxide but baking powder doesn't.

Choice A is incorrect. The sentence focuses on what bakers use to make batters rise; it doesn't emphasize a difference between baking soda and baking powder. **Choice B is incorrect**. The sentence provides a general description of baking soda and baking powder; it doesn't emphasize a difference between them. **Choice C is incorrect**. The sentence explains what baking soda and honey are; it doesn't emphasize a difference between baking soda and baking powder.

155 Correct answer **B** Medium ‹ Back to question

B A 2017 study found that *Gygis alba* eggs had an average length of 4.46 cm, whereas *Gavia stellata* eggs were longer, with an average length of 7.22 cm.

Choice B is the best answer. The sentence emphasizes a difference between the eggs of the two species, directly contrasting the shorter average length of *Gygis alba* eggs (4.46 cm) with the longer average length of *Gavia stellata* eggs (7.22 cm).

Choice A is incorrect. While the sentence mentions both bird species, it doesn't emphasize a difference between their eggs. **Choice C is incorrect**. While the sentence provides information about the two bird species, it doesn't emphasize a difference between their eggs. **Choice D is incorrect**. While the sentence provides the average lengths of both species' eggs, it doesn't explicitly emphasize the difference between them.

156 Correct answer **A** Medium ‹ Back to question

A The recent destructive behavior of Iberian orcas may be the result of understimulation, given that orcas' interactions with marine vessels have increased as the orcas have spent less time hunting.

Choice A is the best answer. The sentence makes and supports a claim about Iberian orca behavior, claiming that the orcas' destructive behavior may be the result of understimulation and citing as support the fact that as orcas have spent less time hunting (a stimulating activity), encounters with vessels have increased.

Choice B is incorrect. While the sentence makes a claim about an orca deterrent, it misrepresents information from the notes. The workshop advised avoiding orcas pending further testing of TAST's efficacy; it didn't claim that TAST was effective. **Choice C is incorrect**. The sentence describes a workshop that addressed the orcas' behavior; it doesn't make or support a claim about their behavior. **Choice D is incorrect**. While the sentence does make a claim about orcas' hunting behavior, it misrepresents information from the notes; the notes state that increased tuna populations have reduced orcas' hunting time by 99%, not that tuna populations have increased by 99% because of the orcas' behavior.

157 Correct answer **D** Medium ‹ Back to question

D One type of air mass is known as a cA, or continental arctic, air mass because it is dry and cold.

Choice D is the best answer. The sentence provides an example of an air mass: the cA, or continental arctic, air mass.

Choice A is incorrect. The sentence provides a general definition of air masses; it doesn't provide an example of a specific air mass. **Choice B is incorrect**. The sentence describes the system used to classify air masses; it doesn't provide an example of a

specific air mass. **Choice C is incorrect**. The sentence explains how air masses are classified; it doesn't provide an example of a specific air mass.

158 Correct answer **C** Medium ‹ Back to question

C Around 160 million years ago, a large moon (Chrysalis) came close enough to Saturn that tidal forces broke the moon apart; its debris then formed the planet's rings.

Choice C is the best answer. The sentence recounts the sequence of events proposed by the researchers: a large moon orbiting Saturn came close enough to the planet that it was broken apart by tidal forces, and the resulting debris formed Saturn's rings.

Choice A is incorrect because the sentence misrepresents information from the notes; according to the notes, tidal forces, not debris, caused the moon to break apart. **Choice B is incorrect**. The sentence offers information relevant to the 2022 study but doesn't recount the sequence of events proposed by the researchers. **Choice D is incorrect**. The sentence recounts a sequence, but it's a sequence of the researchers' activities, not the sequence of events proposed by the researchers.

159 Correct answer **C** Medium ‹ Back to question

C Like many of Tubbs's sculptures, both *Erasure* and *Home Grown* include discarded objects: *Erasure* uses audiocassette tapes, and *Home Grown* uses plastic forks.

Choice C is the best answer. This choice most effectively emphasizes "a similarity" by identifying a trait the works share: "both Erasure and Home Grown include discarded objects."

Choice A is incorrect. This choice doesn't "emphasize a similarity." Instead, this choice shows how the materials used in the two works are different. Notice the use of the contrast word "however." **Choice B is incorrect**. This choice doesn't "emphasize a similarity between the two works." While it says that Tubbs's work "often features discarded objects," it doesn't provide details about the two works in question. **Choice D is incorrect**. This choice doesn't "emphasize a similarity." Instead, this choice shows how the works were produced at different times.

160 Correct answer **A** Medium ‹ Back to question

A Leaving in 1914 for Antarctica, Shackleton and his crew underwent many harrowing sea-ice adventures, including losing their ship in 1915, before being rescued in 1916.

Choice A is the best answer. The sentence provides a historical overview of the Shackleton expedition, noting that the explorers left for Antarctica in 1914, lost their ship in 1915, and were rescued in 1916.

Choice B is incorrect. The sentence misrepresents information from the notes; Shackleton and his crew were themselves rescued in 1916—they weren't rescuing others. **Choice C is incorrect**. The sentence provides examples of works and discoveries inspired by the expedition; it doesn't provide an overview of the expedition itself. **Choice D is incorrect**. The sentence provides examples of works made about the expedition; it doesn't provide an overview of the expedition itself.

161 Correct answer **B** Medium Back to question

B Unlike beta brass, which requires heat to manipulate, alpha brass can be shaped at room temperature.

Choice B is the best answer. The sentence specifies an advantage of alpha brass, noting that unlike beta brass, which requires heat to manipulate, alpha brass can be shaped at room temperature.

Choice A is incorrect. While the sentence indicates that alpha brass has an advantage over beta brass, it doesn't specify what that advantage is. Both alpha brass and beta brass are metal alloys composed primarily of zinc and copper. **Choice C is incorrect**. The sentence contrasts the zinc content of alpha and beta brass; it doesn't specify an advantage of alpha brass. **Choice D is incorrect**. While the sentence does specify an advantage, it misrepresents information from the notes: beta brass, not alpha brass, has the higher zinc content and is the stronger material.

162 Correct answer **A** Hard Back to question

A Cathryn Halverson's *Faraway Women and the "Atlantic Monthly"* discusses female authors whose autobiographies appeared in the magazine in the early 1900s.

Choice A is the best answer. The sentence effectively introduces Cathryn Halverson's book to an audience already familiar with the *Atlantic Monthly*, noting the title of Halverson's book and describing its content without providing background information about the *Atlantic Monthly*.

Choice B is incorrect. The sentence introduces the *Atlantic Monthly* and mentions that it's referred to in Cathryn Halverson's book title; it doesn't effectively introduce Halverson's book. **Choice C is incorrect**. The sentence assumes that the audience is unfamiliar with the *Atlantic Monthly*, providing background information about the magazine; it doesn't effectively introduce Halverson's book to an audience already familiar with the *Atlantic Monthly*. **Choice D is incorrect**. While the sentence assumes that the audience is familiar with the *Atlantic Monthly*, it doesn't effectively introduce Cathryn Halverson's book.

163 Correct answer **B** Hard Back to question

B Long an opponent of Central American independence, Valle changed his mind after an 1820 revolt and wrote the 1821 declaration.

Choice B is the best answer. The sentence places the Declaration of Independence in the context of Valle's changing political beliefs, noting that Valle was long an opponent of Central American independence but changed his mind after an 1820 revolt and then wrote the Declaration of Independence in 1821.

Choice A is incorrect. The sentence states that Valle's political beliefs changed after Riego's revolt but doesn't indicate how these changed beliefs provide context for the 1821 Declaration of Independence. **Choice C is incorrect** because it misrepresents information from the notes. Valle's political beliefs changed after Riego's 1820 revolt, not when the Spanish king repealed the 1812 constitution. **Choice D is incorrect**. While the sentence indicates a relationship between Colonel Riego's 1820 revolt and Central America's Declaration of Independence, it doesn't mention Valle's changing political beliefs.

164 Correct answer **A** Hard Back to question

A During the dawn of quantum theory, Einstein maintained the independent reality of some subatomic entities, although Bohr's opposing interpretation would become the widely accepted view.

Choice A is the best answer. The sentence places Einstein's argument within the historical context of the development of quantum theory, noting that his argument—made during the dawn of the field—conflicted with Bohr's argument, which became

the widely accepted view.

Choice B is incorrect. The sentence misrepresents information from the notes, attributing the argument that electrons had a reality independent of observation to Bohr, not Einstein. In addition, while the sentence provides the date of the conference, it doesn't place Einstein's argument in the context of the development of quantum theory. **Choice C is incorrect**. The sentence indicates that Einstein attended the 1927 Solvay Conference; it doesn't identify Einstein's argument or place it in the historical context of the development of quantum theory. **Choice D is incorrect**. The sentence explains that Einstein and Bohr had a famous debate in 1927 and that Bohr's argument remained popular decades afterward; it doesn't identify Einstein's argument or place it in the context of the development of quantum theory.

165 Correct answer **C** Hard ‹ Back to question

C In DLS, UV light images are projected into a liquid resin pool to cure a 3D object layer by layer; once solidified, the object is baked in an oven.

Choice C is the best answer. The sentence describes how DLS cures 3D objects, noting that UV light is projected into resin to cure the object in layers, after which the object is baked to complete the curing process.

Choice A is incorrect. While the sentence does describe some elements of the curing process, the description misrepresents information in the notes; this sentence suggests that the UV light, rather than the 3D object, is baked in an oven. **Choice B is incorrect**. While the sentence does describe some elements of the curing process, the description misrepresents information in the notes: the UV light, not DLS, passes through the dead zone. **Choice D is incorrect**. While the sentence does describe some elements of the curing process, the description misrepresents information in the notes. This sentence suggests that curing is complete when the already-solidified resin passes through the dead zone; rather, liquid resin passes through the dead zone and is solidified in layers, after which curing is completed in the oven.

166 Correct answer **B** Hard ‹ Back to question

B Evidence that Khoesan and Basotho peoples may have found an *M. carinatus* phalanx as long ago as 1100 CE suggests that Plot may not have been the first person to have discovered dinosaur remains.

Choice B is the best answer. Noting that the evidence suggests Indigenous peoples may have found dinosaur remains in 1100 CE, the sentence emphasizes how the 1990 discovery challenged Plot's reputation as the first person to discover dinosaur remains.

Choice A is incorrect. While the sentence does emphasize that Benoit challenged Plot's reputation, it misrepresents information in the notes; Plot was reputed to be the first person to discover dinosaur remains in general, not the first person to discover *M. carinatus* remains specifically. **Choice C is incorrect**. The sentence only partially explains the significance of the 1990 discovery, noting that it suggests Indigenous people brought dinosaur remains to the cave in 1100 CE; it doesn't explain the discovery's significance to Plot's reputation. **Choice D is incorrect**. While the sentence does emphasize that the discovery challenged Plot's reputation, it misrepresents information in the notes. The notes don't indicate that the 1990 discovery cast any doubt on Plot's claims to have found fossilized dinosaur bones; rather, the discovery challenged Plot's reputation for being the first to discover dinosaur bones.

167 Correct answer **D** Hard ‹ Back to question

D The House of Wisdom collected writings from different countries and created paper versions in Arabic to be studied and shared.

Choice D is the best answer. The sentence explains how the House of Wisdom preserved the world's knowledge, noting that the library collected, translated, and printed writings from different countries.

Choice A is incorrect. While the sentence indicates that the House of Wisdom was known for bringing together knowledge from around the world, it doesn't explain how the library preserved this knowledge. **Choice B is incorrect**. The sentence makes a generalization about the scholars who were employed by the House of Wisdom; it doesn't explain how the library preserved the world's knowledge. **Choice C is incorrect**. The sentence identifies two authors whose writings were preserved at the House of Wisdom; it doesn't explain how the library preserved the world's knowledge.

168 Correct answer **C** Hard Back to question

C Although most materials used in dhow replicas are traditional, some modern materials are used.

Choice C is the best answer. The sentence makes a generalization about the materials used in dhow replicas, noting that while some modern materials are used, most of the materials are traditional.

Choice A is incorrect. The sentence provides an example of a traditional material used in ancient dhows; it doesn't indicate that the material is used in dhow replicas or make any other generalization about materials used in those replicas. **Choice B is incorrect**. The sentence explains what an ancient dhow was; it doesn't make a generalization about materials used to make dhow replicas. **Choice D is incorrect**. The sentence introduces the construction of dhow replicas to an audience unfamiliar with the vessel; it doesn't make a generalization about the materials used in those replicas.

169 Correct answer **A** Hard Back to question

A Scholars were divided between the extramission and intromission theories of vision until Ibn al-Haytham's eleventh-century experiments largely settled the debate in support of intromission.

Choice A is the best answer. The sentence provides a historical overview of the two theories, noting that scholars were divided between them before Ibn al-Haytham's experiments supporting intromission largely settled the debate in the eleventh century.

Choice B is incorrect. While the sentence identifies the two theories and the scholars that supported them, it doesn't provide a historical overview of the theories. **Choice C is incorrect**. While the sentence indicates Aristotle supported intromission theory centuries before Ibn al-Haytham settled the debate, it doesn't mention extramission theory or provide a historical overview of both theories. **Choice D is incorrect**. The sentence provides information about intromission theory but doesn't mention extramission theory or provide a historical overview of both theories.

170 Correct answer **D** Hard Back to question

D Researchers have used statistical methods to address questions of authorship within the field of music.

Choice D is the best answer. The sentence uses information from the notes to make a generalization about the kind of study Glickman, Brown, and Song conducted. Specifically, the sentence indicates that the study was of a kind that used statistical methods to address questions of authorship within the field of music.

Choice A is incorrect because the sentence summarizes the methodology and findings of a particular analysis of a single song; it doesn't make a generalization about the kind of study conducted. **Choice B is incorrect** because the sentence mentions the data and conclusion of a particular analysis of a single song; it doesn't make a generalization about the kind of study conducted. **Choice C is incorrect** because the sentence focuses on a specific conclusion from a particular analysis of a single song; it doesn't make a generalization about the kind of study conducted.

171 Correct answer **A** — Hard — Back to question

A. In 2012, director and visual effects artist Freddie Wong launched a new action-comedy web series: *Video Game High School.*

Choice A is the best answer. This choice introduces Wong and *VGHS* in an active and specific way, as if to an audience unfamiliar with the series. It also sets up the time and genre of the web series, which are useful ways to introduce the series of events in a narrative.

Choice B is incorrect. This choice isn't suited for beginning a narrative. A narrative is a story that follows a sequence of events and creates interest and suspense for the reader. This choice jumps to the end, explaining the success of *VGHS* without explaining what it is. **Choice C is incorrect**. This choice isn't suited for beginning a narrative. It doesn't actually introduce the web series by name. It just jumps to later in the story without sufficient explanation. **Choice D is incorrect**. This choice is not very effective for beginning a narrative. It doesn't explain what *VGHS* is, and it doesn't mention Wong.

172 Correct answer **B** — Hard — Back to question

B. Neither of a magnificent frigatebird's two ways of acquiring food requires the bird to dive into the water.

Choice B is the best answer. The sentence emphasizes a similarity between the two ways a magnificent frigatebird acquires food, noting that neither way requires the seabird to dive into the water.

Choice A is incorrect. The sentence describes how a magnificent frigatebird captures prey without diving into water; it doesn't emphasize a similarity between the two ways the seabird acquires food. **Choice C is incorrect**. The sentence notes the term used to describe one of the two ways that magnificent frigatebirds acquire food; it doesn't emphasize a similarity between the two ways. **Choice D is incorrect**. The sentence describes the two ways that a magnificent frigatebird acquires food; it doesn't emphasize a similarity between the two ways.

173 Correct answer **D** — Hard — Back to question

D. Birner's team analyzed the age and oxidation levels of rock samples collected from two seafloor ridges.

Choice D is the best answer. The sentence presents the study's research methods, explaining that Birner's team analyzed the age and oxidation levels of rock samples collected from two seafloor ridges.

Choice A is incorrect. The sentence describes the purpose of the study (to understand the history of Earth's mantle and explain conditions for life); it doesn't present the study's research methods. **Choice B is incorrect**. The sentence notes the study's focus on rocks from the Archean eon and a characteristic of the eon; it doesn't present the study's research methods. **Choice C is incorrect**. The sentence indicates the goal of the study (to challenge previous theories); it doesn't present the study's research methods.

174 Correct answer **A** — Hard — Back to question

A. In considering some but not all cognitive systems modular, Fodorian modularity is not as expansive in its definition of modularity as MMH is.

Choice A is the best answer. The sentence compares Fodor's hypothesis with Carruthers's, noting that because Fodorian modularity considers some but not all cognitive systems modular, it is not as expansive in its definition of modularity as Carruthers's MMH, which includes all cognitive systems.

Choice B is incorrect. The sentence describes Carruthers's hypothesis—that modularity of mind includes all cognitive systems—but indicates only that this hypothesis followed Fodor's 1983 hypothesis rather than making a comparison between the hypotheses. **Choice C is incorrect**. The sentence misrepresents a difference between Fodor's and Carruthers's hypotheses. According to the information in the notes, both Fodor and Carruthers consider low-level cognitive systems modular, and their difference lies in whether they also consider high-level systems modular. **Choice D is incorrect**. The sentence misrepresents a difference between Fodor's and Carruthers's hypotheses. According to the information in the notes, both Fodor and Carruthers consider the mind to be at least partly composed of innate neural structures (modules). Their difference lies in whether they consider high-level systems modular.

175 Correct answer **D** Hard ‹ Back to question

D Like wolves, dog breeds with erect ears can produce the "ears rotator" facial action, while those with flopped or semi-flopped ears cannot.

Choice D is the best answer. The sentence compares dog breeds with wolf-like (erect) and non-wolf-like (flopped or semi-flopped) ears, noting that breeds with erect ears are able to produce the same "ears rotator" facial action as wolves, while breeds with flopped or semi-flopped ears cannot.

Choice A is incorrect. The sentence compares dog breeds with non-wolf-like ears to wolves, not to other dog breeds. It also misrepresents information from the notes: breeds with non-wolf-like ears cannot produce the "ears rotator" facial action. **Choice B is incorrect**. While the sentence appears to compare dog breeds with wolf-like and non-wolf-like ears, it misrepresents information from the notes: breeds with wolf-like ears can produce the "ears rotator" facial action. **Choice C is incorrect**. While the sentence compares the physical characteristics of the two ear types, it doesn't compare the dog breeds that have these ear types.

176 Correct answer **D** Hard ‹ Back to question

D Awarding more points per unit of land than points per resident, the formula for distributing Storting seats overrepresents less populated rural districts with large tracts of land.

Choice D is the best answer. By noting that the formula for distributing Storting seats overrepresents less populated rural districts, the sentence effectively refutes a claim that malapportionment in the Storting favors small urban districts.

Choice A is incorrect because the sentence claims that malapportionment in the Storting favors small urban districts; it doesn't refute such a claim. Moreover, it misrepresents information in the notes. According to the notes, the formula for distributing seats overrepresents less populated, not more populated, districts. **Choice B is incorrect**. While the sentence appears to refute a claim that malapportionment in the Storting favors small urban districts, it misrepresents information in the notes. According to the notes, the formula for distributing seats overrepresents less populated, not more populated, districts. **Choice C is incorrect**. The sentence explains what malapportionment is but doesn't address malapportionment in the Storting specifically.

177 Correct answer **C** Hard ‹ Back to question

C Even though Hanoi (population 7,781,631) is larger than Ulaanbaatar (population 907,802), Ulaanbaatar accounts for more of its country's population.

Choice C is the best answer. The sentence emphasizes the relative sizes of the capital cities' populations, noting that even though Hanoi has more people overall, Ulaanbaatar accounts for a larger percentage of the people in its country.

Choice A is incorrect. While the sentence indicates the population size of each capital, it fails to emphasize their sizes relative to each other or to their countries' overall population sizes. **Choice B is incorrect**. The sentence emphasizes the population

sizes of the two countries; it fails to mention the capitals. **Choice D is incorrect**. While the sentence indicates the population size of each capital, it fails to emphasize their sizes relative to each other or to their countries' overall population sizes.

178 Correct answer **C** Hard Back to question

C Since 2003, Louise Miller Cohen and Vermelle Rodrigues have worked to preserve Gullah culture through their museums.

Choice C is the best answer. The sentence emphasizes both the duration (the length of time) and the purpose of Cohen's and Rodrigues's work by noting that the women have been working since 2003 to preserve Gullah culture.

Choice A is incorrect. While the sentence emphasizes what visitors to Cohen's and Rodrigues's museums can learn, it doesn't mention the duration or purpose of the women's work. **Choice B is incorrect**. While the sentence emphasizes the purpose of Cohen's and Rodrigues's work, it doesn't mention the duration of that work (the length of time the women have been working to preserve Gullah culture). **Choice D is incorrect**. While the sentence emphasizes where and when Gullah culture developed, it doesn't mention the duration or purpose of Cohen's and Rodrigues's work.

179 Correct answer **B** Hard Back to question

B Since they directly correlate to the coordinates on nautical charts, which take into account Earth's curvature, nautical miles are an efficient way to calculate distances at sea.

Choice B is the best answer. The sentence explains why nautical miles are used to measure distances in seafaring navigation, noting that they directly correlate to the coordinates on nautical charts that take into account Earth's curvature, making them an efficient way to calculate distances at sea.

Choice A is incorrect. While the sentence describes what nautical miles are and their relationship to nautical charts, it doesn't explain why nautical miles are used to measure distances in seafaring navigation. **Choice C is incorrect**. While the sentence indicates a reason why nautical miles are used, it misrepresents information from the notes: measuring distances with latitude and longitude does in fact account for Earth's curvature. **Choice D is incorrect**. The sentence explains why nautical charts are more accurate than flat maps; it doesn't explain why nautical miles specifically are used to measure distances in seafaring navigation.

180 Correct answer **C** Hard Back to question

C Decades after the Japanese import of matsutake began, a commodity chain now links matsutake pickers in Oregon with wealthy consumers of the costly mushrooms in Japan.

Choice C is the best answer. The sentence provides an overview of the matsutake commodity chain, connecting the Oregon mushroom pickers at one end to the Japanese consumers at the other.

Choice A is incorrect. While the sentence mentions the matsutake commodity chain, it focuses only on its origins; it does not provide an overview. **Choice B is incorrect**. The sentence provides a general definition of commodity chains, not an overview of the matsutake chain. **Choice D is incorrect**. While the sentence mentions the matsutake commodity chain, it focuses only on one end of the chain (the consumers); it does not provide an overview.

181 Correct answer **C** — Hard — Back to question

C Humans may have first arrived in the Americas by sea, traveling between Pacific Ocean islands and coastlines and subsisting on a variety of resources.

Choice C is the best answer. This choice summarizes the main idea of the kelp highway hypothesis, providing a high-level overview of how the hypothesis explains human migration to the Americas.

Choice A is incorrect. This choice describes one aspect of the proposed scenario but doesn't discuss human migration, which is the main focus of the kelp highway hypothesis. **Choice B is incorrect**. This choice introduces the kelp highway hypothesis but doesn't explain what it entails. **Choice D is incorrect**. This choice describes one element of the proposed scenario but doesn't discuss human migration, which is the main focus of the kelp highway hypothesis.

182 Correct answer **D** — Hard — Back to question

D A comet's orbit around the Sun may change over time: the orbit of comet 81P/Wild once lay between the orbits of Uranus and Jupiter but is now positioned between those of Jupiter and Mars.

Choice D is the best answer. The sentence makes a generalization—that a comet's orbit around the Sun may change over time—and supports the generalization with the example of the orbit of comet 81P/Wild, which once lay between the orbits of Uranus and Jupiter but is now positioned between the orbits of Jupiter and Mars.

Choice A is incorrect. The sentence emphasizes the number of comets orbiting the Sun and makes a generalization about their orbits, but it doesn't support the generalization with an example. **Choice B is incorrect**. The sentence makes a generalization about comets and compares them to the planets Uranus, Jupiter, and Mars; it doesn't make and support a generalization about comets' orbits. **Choice C is incorrect**. While the sentence provides an example of a comet whose orbit has changed, it doesn't make a generalization about the orbits of comets.

183 Correct answer **C** — Hard — Back to question

C Stephen Amos enlisted in the US Navy in 1863, making him one of the few sailors of Filipino descent to serve in the US Civil War (1861–1865).

Choice C is the best answer. Noting the time frame of the US Civil War and the fact that Amos enlisted during this time frame, the sentence emphasizes that Amos's enlistment date places him among the historically significant group of US Navy sailors of Filipino descent who served during the Civil War.

Choice A is incorrect. The sentence identifies Amos and Ignases and notes that Amos's enlistment date was later than Ignases's; the sentence doesn't explain the historical significance of the date. **Choice B is incorrect**. The sentence identifies Amos and Ignases as US Navy sailors of Filipino descent, noting Ignases's birth year; the sentence doesn't provide Amos's enlistment date or its historical significance. **Choice D is incorrect**. The sentence provides Amos's enlistment date and mentions that he served alongside a sailor of Filipino descent; it doesn't explain the historical significance of the date.

184 Correct answer **B** — Hard — Back to question

B In the US, green signs indicate directional information on both highways and major roadways, but in the UK, directional signs of this color generally appear only on major roadways.

Choice B is the best answer. The sentence contrasts how green backgrounds are used in US and UK road signs, noting that the US uses them for both highways and major roadways while the UK uses them only for major roadways.

Choice A is incorrect. While the sentence does contrast US and UK road signs, the contrast focuses on the use of blue versus green backgrounds rather than on the use of green backgrounds specifically. **Choice C is incorrect**. The sentence indicates a similarity between the uses of green road signs in the US and the UK rather than contrasting them. **Choice D is incorrect**. The sentence indicates a similarity between road signs in the US and those in the UK; it doesn't contrast how green backgrounds are used in each country's signs.

185 Correct answer **B** Hard Back to question

B *Pacha, Llaqta, Wasichay: Indigenous Space, Modern Architecture, New Art*, an exhibition at the Whitney Museum of American Art, featured works by seven emerging Latino artists.

Choice B is the best answer. The sentence describes the 2018 exhibition Guerrero curated, noting that the exhibition, which was titled *Pacha, Llaqta, Wasichay: Indigenous Space, Modern Architecture, New Art*, featured the works of seven emerging Latino artists.

Choice A is incorrect. The sentence describes the exhibition Guerrero curated in 2020; it doesn't describe her 2018 exhibition. **Choice C is incorrect**. The sentence emphasizes a similarity between the two exhibitions Guerrero curated; it doesn't describe her 2018 exhibition. **Choice D is incorrect**. The sentence emphasizes a difference between the two exhibitions Guerrero curated; it doesn't describe her 2018 exhibition.

186 Correct answer **D** Hard Back to question

D According to Padmanabhan and Chen, the brain can toggle between capturing olfactory information at a given moment and tracking changes in that information over time.

Choice D is the best answer. The sentence effectively summarizes the study's findings, explaining what Padmanabhan and Chen found: that the brain can toggle between one method of processing smells (capturing information at a given moment) and another (tracking changes in information over time).

Choice A is incorrect. While the sentence mentions findings, it mainly focuses on Padmanabhan and Chen's methodology. It doesn't effectively summarize the study's findings. **Choice B is incorrect**. The sentence notes a fact about the olfactory system—that the perception of odor forms in the piriform cortex—but doesn't summarize the findings of Padmanabhan and Chen's study. **Choice C is incorrect**. The sentence presents the goal of Padmanabhan and Chen's study; it doesn't summarize the study's findings.

187 Correct answer **D** Hard Back to question

D Nissologists' different definitions can result in huge disparities in counts of islands, as the example of Sweden shows.

Choice D is the best answer. The sentence makes a generalization about nissologists' definition of an island—specifically, that the use of one definition rather than another can result in huge disparities in the number of islands counted—and supports that generalization by citing Sweden as an example.

Choice A is incorrect. The sentence introduces one definition of an island to an audience unfamiliar with nissologists; it doesn't make a generalization about nissologists' definition of an island. **Choice B is incorrect**. While the sentence synthesizes information from the notes about counts of Sweden's islands, it doesn't make and support a generalization about nissologists' definition of an island. **Choice C is incorrect**. The sentence makes an inference about islands in Sweden; it doesn't mention nissologists' definition of an island or make a generalization about it.

188 Correct answer **D** — Hard — Back to question

D The Alta conflict had a lasting impact, resulting in international attention and legal protections for Sámi rights to lands, waters, and resources.

Choice D is the best answer. It makes a generalization—the conflict had a lasting impact—and then supports it with evidence—the attention and protections were results of the conflict.

Choice A is incorrect. This choice doesn't make a generalization about the conflict. It describes a specific event from the conflict. **Choice B is incorrect**. This choice makes a generalization about the Alta conflict, but doesn't support it. **Choice C is incorrect**. This choice makes a statement about the aftermath of the conflict, but doesn't support it. The statement is also a little too specific to be a generalization.

189 Correct answer **C** — Hard — Back to question

C Locke-Rodriguez and colleagues found that FTWs using marigolds not only helped remove phosphorus from the water but also yielded market-quality blooms.

Choice C is the best answer. The sentence presents both findings from the study, noting that FTWs using marigolds both removed phosphorus from the water and yielded market-quality blooms.

Choice A is incorrect. While the sentence presents a finding from the study, the presentation is incomplete; the study found that marigolds cultivated on FTWs both removed phosphorus from the water and yielded market-quality blooms. **Choice B is incorrect**. The sentence misrepresents information in the notes. The figure of 52% refers to the amount of phosphorus removed by FTWs using marigolds when compared to the control; the marigolds' bloom yield was 65 market-quality blooms per square meter, and it was not compared to the control. **Choice D is incorrect**. The sentence misrepresents information in the notes. The FTWs using marigolds removed 52% more phosphorus from the water than did the control, not 52% of the total phosphorus. Additionally, the bloom figure is incomplete; the figure is 65 market-quality flower blooms per square meter.

190 Correct answer **C** — Hard — Back to question

C Using a novel digital imaging technique, Tan revealed hundreds of images hidden on the walls of Angkor Wat, a Cambodian temple.

Choice C is the best answer. The sentence effectively presents Tan's research to an audience unfamiliar with Angkor Wat, explaining the results of the research and identifying Angkor Wat as a temple in Cambodia.

Choice A is incorrect. While the sentence presents Tan's research, it fails to explain what Angkor Wat is for an audience unfamiliar with the temple. **Choice B is incorrect**. The sentence emphasizes the role that decorrelation stretch analysis played in Tan's research; it doesn't present the research, which would require specifying where it was conducted. **Choice D is incorrect**. While the sentence explains what Angkor Wat is, it fails to present Tan's research.

191 Correct answer **A** — Hard — Back to question

A Thomas Rogers and F. Leland Russell, researchers at Wichita State University, wanted to know if woodland expansion is related to changes in climate.

Choice A is the best answer. The sentence effectively emphasizes the aim, or goal, of the research study (in other words, what the researchers hoped to learn from the study): Rogers and Russell wanted to know if woodland expansion is related to changes in climate.

Choice B is incorrect. The sentence emphasizes the researchers' findings; it doesn't emphasize the aim of the study. **Choice C is incorrect**. The sentence emphasizes the results of the study; it doesn't emphasize the aim. **Choice D is incorrect**. The sentence emphasizes the methodology of the study; it doesn't emphasize the aim.

192 Correct answer **C** Hard Back to question

C Docked programs are more resource-intensive than dockless programs, but they avoid some of the latter's organizational challenges.

Choice C is the best answer. The sentence compares some disadvantages of docked and dockless bike-share programs, explaining that while docked programs are more resource-intensive (requiring significant space and money), dockless programs have greater organizational challenges.

Choice A is incorrect. The sentence compares dockless programs to docked programs, noting an advantage of docked programs: they offer order and consistency. It doesn't compare disadvantages of the two types of programs. **Choice B is incorrect**. The sentence compares dockless programs to docked programs, noting an advantage of dockless programs: they are easy and inexpensive to implement. However, it misrepresents information from the notes, stating that dockless programs are less flexible than docked programs. In addition, it doesn't compare disadvantages of the two types of programs. **Choice D is incorrect**. The sentence emphasizes an advantage of dockless programs, then makes a general statement that applies to both types of programs; it doesn't compare disadvantages of the two types of programs.

193 Correct answer **A** Hard Back to question

A Due to their insufficient yield or purity, CTAB 2X and Pplant were deemed by the researchers to be less effective than Pbact.

Choice A is the best answer. The sentence emphasizes the significance of a similarity between CTAB 2X and Pplant, noting that both were deemed less effective than Pbact due to their insufficient yield or purity. According to the notes, the researchers concluded that Pbact was the most effective kit because it was the only one with both a sufficiently high yield and a purity ratio close to 1.8. Since Pbact was the only kit to meet both criteria, it follows that CTAB 2X and Pplant each fell short on at least one critical measure.

Choice B is incorrect. The sentence presents a similarity between two of the kits (Pbact and Pplant), but in doing so, it misrepresents information from the notes. The researchers deemed Pbact the most effective kit overall, not one with an insufficient yield. **Choice C is incorrect**. While the sentence identifies a similarity between CTAB 2X and Pplant (that both had a DNA yield above 10 and a purity ratio above 1.4), it doesn't emphasize the significance of that similarity. **Choice D is incorrect**. The sentence presents a similarity between the CTAB 2X and Pbact kits, but in doing so, it misrepresents information from the notes. CTAB 2X had a purity ratio of 2.2, while Pbact had a purity ratio of 1.6, so they were not equal in purity.

194 Correct answer **B** Hard Back to question

B Seeking to understand how ducklings swimming in a line behind their mother save energy, Zhiming Yuan used computer simulations to study the effect of the mother duck's wake.

Choice B is the best answer. The sentence presents both the study and its methodology (that is, the researcher's approach to the problem), explaining that Yuan used computer simulations to study the effect of the mother duck's wake on the ducklings' energy expenditure.

Choice A is incorrect. The sentence describes the findings of Yuan's study; it doesn't present the study and its methodology. **Choice C is incorrect**. While the sentence provides general information about Yuan's study, it doesn't present the study's

methodology. **Choice D is incorrect**. The sentence describes the findings of Yuan's study; it doesn't present the study and its methodology.

195 Correct answer **D** — Hard — Back to question

D Though some of the languages differed in number of syllables spoken per second, all 17 conveyed information at roughly the same rate.

Choice D is the best answer. The sentence presents an overview of the study's findings, noting that, for some of the languages (the examples of Spanish and Vietnamese are given in the notes), the number of syllables spoken per second varied, while the amount of information conveyed per second remained roughly constant across all 17 languages.

Choice A is incorrect. While the sentence describes one of the metrics the study assessed, it doesn't present any of the study's findings. **Choice B is incorrect**. While the sentence compares specific findings about two of the languages studied, it doesn't provide an overview of the study's findings across all 17 languages. **Choice C is incorrect**. The sentence compares specific findings about two of the languages studied; it doesn't provide an overview of the study's findings across all 17 languages. It also misrepresents the information from the notes about Spanish's information rate.

196 Correct answer **C** — Hard — Back to question

C Although Hedgeman worked behind the scenes to make sure a woman speaker was included, Bates was the sole woman to speak at the march.

Choice C is the best answer. The sentence compares the two women's contributions to the march: Hedgeman worked behind the scenes to make sure a woman speaker was included, whereas Bates actually spoke at the event.

Choice A is incorrect. While it acknowledges that the two women both contributed to the march, it doesn't indicate what Hedgeman did, so no comparison is made. **Choice B is incorrect**. While the sentence provides information about the two women, it doesn't mention anything about Bates's contribution to the march. **Choice D is incorrect**. While the sentence indicates that the two women both fought for civil rights, it doesn't compare their individual contributions to the march.

197 Correct answer **B** — Hard — Back to question

B As a sestina, "Towards Autumn" contains thirty-nine lines and six end words—in this case, *daughter*, *friend*, *bread*, *mother*, *lover*, and *myself*—that alternate in a set pattern.

Choice B is the best answer. The sentence uses the poem "Towards Autumn" to illustrate the form of a sestina, explaining that a sestina's thirty-nine lines all end in one of six alternating words and showcasing that poem's specific end words.

Choice A is incorrect. The sentence identifies both of Hacker's poems as sestinas; it doesn't use one of the poems to illustrate the form of a sestina. **Choice C is incorrect**. While the sentence appears to use the poem "Forage Sestina" to illustrate a feature of the sestina form, it misrepresents the information in the notes. According to the notes, "Forage Sestina" doesn't use these six end words; it uses six other words instead. **Choice D is incorrect**. While the sentence uses the poem "Towards Autumn" as an example of one of Hacker's sestinas, it misrepresents the information in the notes. According to the notes, "Towards Autumn" doesn't use these six end words; it uses six other words instead.

198 Correct answer **B** — Hard — Back to question

B In her study, Torres sought to determine how ocean temperature affects where blue whales forage for krill in the South Taranaki Bight region.

Choice B is the best answer. The sentence emphasizes the aim, or goal, of the research study, noting that Torres sought to determine how ocean temperature affects where blue whales forage for krill.

Choice A is incorrect. The sentence emphasizes the results of the study, noting what Torres found at the end; it doesn't emphasize the aim, or goal, of the study, which is what Torres sought at the beginning. **Choice C is incorrect**. The sentence makes a claim about the study's results; it doesn't emphasize the aim, or goal, of the study. **Choice D is incorrect**. The sentence indicates the location of Torres's study; it doesn't emphasize the aim, or goal, of the study.

199 Correct answer **D** — Hard — Back to question

D Exoplanet names have diverse origins, a fact that can be seen in the cases of Phobetor, a name drawn from Greek mythology, and Mastika, which means "gem" or "jewel" in Malay.

Choice D is the best answer. The sentence makes and supports a generalization about exoplanets, noting that the names of exoplanets have diverse origins and supporting this with the examples of the origins of "Phobetor" and "Mastika."

Choice A is incorrect. The sentence misrepresents information from the notes, implying that there are multiple exoplanets with the same names. Additionally, the sentence provides no support for its generalization. **Choice B is incorrect**. The sentence contrasts the masses of two specific exoplanets; it doesn't make and support a generalization about exoplanets. **Choice C is incorrect**. The sentence makes and supports a generalization about stars, not exoplanets.

200 Correct answer **C** — Hard — Back to question

C The predicted shift to large-scale commercial farming may not hold true for rice farms in Thailand, where, according to Promkhambut et al., rice farms have remained small as they've modernized.

Choice C is the best answer. The sentence makes a claim about the applicability of the farm-size transition hypothesis—the prediction that smaller farms will amalgamate into larger-scale commercial farms as a response to the economic pressures of modernization—to Thailand, noting that the hypothesis may not hold true for Thailand. It supports the claim with the argument from Promkhambut et al. that Thailand's rice farms have remained small despite modernizing.

Choice A is incorrect. While the sentence makes a claim about the applicability of the farm-size transition hypothesis to Thailand, it mischaracterizes information from the notes: Promkhambut et al. argue that, despite modernizing in response to economic pressures, rice farms in Thailand have not expanded in size. **Choice B is incorrect**. The sentence connects a claim from Masters et al. to the farm-size transition hypothesis; it doesn't make and support a claim about the applicability of the hypothesis to Thailand, specifically. **Choice D is incorrect**. While the sentence makes a claim about the applicability of the farm-size transition hypothesis to Thailand, it doesn't support the claim.

201 Correct answer **D** — Hard — Back to question

D By depicting experiences of the Beothuk that occurred around Beothuk Lake, Shanawdithit's maps reflect Indigenous cartography's emphasis on "experienced space, or place" rather than the landscape alone.

Choice D is the best answer. The sentence accomplishes both parts of the goal. It describes Shanawdithit's approach by noting that she depicted experiences of the Beothuk that occurred around Beothuk Lake, and it explains the significance of

that approach by connecting it to Indigenous cartography's emphasis on "experienced space, or place."

Choice A is incorrect. While the sentence places Shanawdithit's maps within the broader tradition of Indigenous cartography, it doesn't describe her specific approach to mapmaking or explain its significance. **Choice B is incorrect**. While the sentence does describe Shanawdithit's approach to mapmaking, it misrepresents information in the notes when explaining the significance of that approach. "Depicting space as universal [and] homogenized" is described as a Western convention, not a convention of Indigenous cartography. **Choice C is incorrect**. While the sentence mentions Shanawdithit's maps as an example of Indigenous cartography, it focuses primarily on the broader tradition rather than describing Shanawdithit's specific approach and explaining its significance.

202 Correct answer **C** Hard ‹ Back to question

C According to Stewart, a "clash of cultures" between Athens and Sparta caused the conflict, not Athens's rise.

Choice C is the best answer. Using a quotation from Stewart, the sentence challenges Thucydides's explanation that the rise of Athens caused the conflict, suggesting that it was instead caused by a "clash of cultures."

Choice A is incorrect. While the sentence uses a quotation, the quotation doesn't challenge Thucydides's explanation of the conflict. **Choice B is incorrect**. While the sentence mentions that Stewart challenged Thucydides's explanation of the conflict, it doesn't use a quotation to challenge Thucydides's explanation: the quoted word "inevitable" is from Thucydides. **Choice D is incorrect**. While the sentence appears to refute Thucydides's explanation, it does so in a way that misrepresents the information in the notes; Allison's Thucydides trap theory is based on Thucydides's explanation of the conflict. Thus, Allison's theory affirms, rather than challenges, Thucydides's explanation.

203 Correct answer **A** Hard ‹ Back to question

A Researchers wanted to know which factors influence lizard egg clutch size because such factors have been well studied in birds but not in lizards.

Choice A is the best answer. The sentence emphasizes the aim of the research study by highlighting what the researchers conducting the study wanted to know—specifically, which factors influence clutch size among lizards.

Choice B is incorrect because the sentence emphasizes what researchers determined at the end of the study, not what the study's aim was. **Choice C is incorrect** because the sentence emphasizes a finding from the research study, not the aim of the study. **Choice D is incorrect** because the sentence emphasizes the research study's methodology, not its aim.

204 Correct answer **C** Hard ‹ Back to question

C The NCAI's advocacy was key to the passing of Public Law 96-638, legislation formally acknowledging Indigenous tribes' right to self-governance.

Choice C is the best answer. The sentence directly identifies an accomplishment of the NCAI: that its advocacy was key to the passing of Public Law 96-638, which formally acknowledged Indigenous tribes' right to self-governance.

Choice A is incorrect. The sentence provides information about the NCAI's founding and its first president, but it doesn't identify an accomplishment of the organization. **Choice B is incorrect**. The sentence describes the NCAI's founding, but it doesn't identify an accomplishment of the organization. **Choice D is incorrect**. The sentence misrepresents the information in the notes: the US Congress, not the NCAI, passed the Indian Self-Determination and Education Assistance Act.

LAST WORDS

A Note from SAT League

This book was created by **Bobur**, the founder of SAT League, for one reason: to help students.

OUR MOTTO

Fail Better.

Learn from your failures. They are the best teachers you will ever have.

We hope this book helps millions of students, at the very least.
