SAT

Reading & Writing IV

Built for 800.

Digital SAT

BEFORE YOU BEGIN

Your Guide to 800

Choose the score you are aiming for and follow its path through the *Reading Writing Professor* series. Finish each book completely before you open the next one.

AIMING FOR

700

Two books. Learn the rules and methods first, then put them to work on every question type.

1
Reading Writing
Professor I
Start here. Learn every rule and method.

→

2
Reading Writing
Professor IV
This book. Practise every question type.

AIMING FOR

800

All four books. Finish I and IV first, the same path as 700, then go further with II and III. A perfect score leaves no room for gaps, so every book counts.

1
Reading Writing
Professor I
Start here.

→

2
Reading Writing
Professor IV
This book.

→

3
Reading Writing
Professor II
Then this.

→

4
Reading Writing
Professor III
Finish here.

			QUESTIONS	ANSWERS
11	Grammar	421 questions	917	1058
12	Transitions	194 questions	1183	1248
13	Notes	204 questions	1314	1416

1. **Practice** the questions of one type, Easy → Medium → Hard.
2. **Check** the answer key at the end of the chapter.
3. Tap Explanation › on any question, and ‹ Back to question to return.

BEFORE YOU START

How to Practice

The method from *Reading Writing Professor*. Use it on every chapter of this book.

THE SHAPE OF THE SECTION

- 54 questions, in two modules of 27.
- 32 minutes per module.
- One short passage per question.
- No penalty for a wrong answer. Never leave a blank.

Module 1 decides Module 2. Do well and you get the harder Module 2. Only that one reaches 800.

HOW YOU ACTUALLY GET BETTER

- Doing questions is not what improves you. Analysing them afterwards is.
- Twenty questions studied properly beat two hundred rushed through.
- A score goes up when the same mistake stops repeating, and that only happens on paper.

TIME EVERY PRACTICE

- Use the real time limit from the first day.
- Speed added at the end never holds. Build it from the start.

ANALYSE AFTER, NEVER BEFORE

- Finish the whole set before you look at a single answer.
- Checking as you go is not practice. It is reading.

THE FIVE-STEP ROUTINE · FOR EVERY QUESTION

1. Answer the question.
2. Write a short overview of the whole text, in your own words.
3. Write why the correct answer is correct.
4. Write why each of the other three is wrong.
5. Say it out loud, to yourself or to someone else.

- Do this for every question, not only the ones you missed. A right answer for the wrong reason will fail you later.
- The overview comes first for a reason. If you cannot say what the text is about, your reason for the answer is a guess dressed up as a reason.
- Writing it down is what turns it into a rule you can use again. Saying it out loud is what shows you whether you actually have it.

READ THREE ARTICLES A DAY

This book teaches the rules. It cannot build the reading speed the test demands; only reading does that. So while you work through these chapters, read at least three articles a day: history, science, social studies, the kinds of text the SAT actually draws on. SAT-level articles are collected at SATLeague.com.

PART I

Reading

10 question types · 1,026 questions

01	Words in Context	261 questions	6
02	Main Idea	62 questions	198
03	Main Purpose	54 questions	253
04	Function	66 questions	296
05	Structure	29 questions	353
06	Claims	144 questions	380
07	Graphs & Tables	133 questions	516
08	Cross-Text Connections	61 questions	667
09	Specific Detail	76 questions	727
10	Inference	140 questions	789

FOUR METHODS, NOT TEN

The types inside each block are solved the same way. Learn the method once and it carries to the rest of the block.

1. Words in Context · Main Idea · Main Purpose
2. Function · Structure
3. Claims · Graphs & Tables
4. Specific Detail · Cross-Text · Inference

01 Words in Context

Fill in the blank · Find the synonym

Words-in-context comes in two forms and one method covers both. Either the text has a blank and you supply the missing word, or the word is already there and you work out what it means in this sentence. Both times you are filling a gap.

261 questions | 142 Easy | 58 Medium | 61 Hard

FORM 1 · FILL THE BLANK

The common one. The gap is already in the text. The part of the sentence that explains, repeats or contradicts the blank is the whole question.

FORM 2 · MOST NEARLY MEANS

The rare one. The word is already in the text, usually an older passage. You make the gap yourself by crossing the word out. The wrong choices are usually real meanings of that word, just not the one this sentence needs.

THE STEPS

1. Read the text. Twice at most.
2. Ignore the four answer choices completely.
3. Say your own word for the gap. On most-nearly-means, cross the printed word out first and treat what is left as a blank.
4. Choose the answer closest to your word.

WHAT TO TAKE FROM THIS

- The text always tells you. Find the part that explains the blank, repeats it in other words, or sets something against it.
- Your word does not need to be elegant. *Made by hand* is good enough.
- Read the choices first and all four start to sound possible. That is why step two matters.

Questions	**7**
A. Fill in the Blank	7
B. Find the Synonym	80
Answers & explanations	**94**

A Fill in the Blank

221 questions

EASY 110 questions

Artist Marilyn Dingle's intricate, coiled baskets are _____ sweetgrass and palmetto palm. Following a Gullah technique that originated in West Africa, Dingle skillfully winds a thin palm frond around a bunch of sweetgrass with the help of a "sewing bone" to create the basket's signature look that no factory can reproduce.

ID 84b5125b

1 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) indicated by
(B) handmade from
(C) represented by
(D) collected with

The invention in 1958 of the integrated circuit (or microchip) radically altered the semiconductor industry. In fact, some historians argue that it fundamentally _____ the industry by enabling it to take advantage of mass production methods for the first time.

ID fa014d2d

2 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) overwhelmed
(B) bypassed
(C) obstructed
(D) transformed

Botanist Al Kovaleski has pointed out that maple trees already thrive in a wide variety of climates and thus may _____ changes in climate better than some other tree species do. The alterations maples may undergo in response to a changing climate are likely to be relatively small and easily achieved.

ID 5fe53347

3 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) relocate from
(B) refer to
(C) originate from
(D) adapt to

Dance choreographer Jawole Willa Jo Zollar aims to give people the opportunity to be _____ her creative process. For example, live performances of her dance *HairStories*, which debuted in 2001, featured videos of people across the United States talking about their hair and audience members sharing pictures of their interesting hairstyles.

ID d4a8f7cb

4 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) nervous about
(B) completed by
(C) delayed by
(D) involved in

The works of Chicana artist Ester Hernandez are now _____ in museums both in the United States and abroad, but the murals she contributed to as a member of Las Mujeres Muralistas early in her artistic career were displayed in outdoor public spaces across San Francisco.

ID 95f037ad

5 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) invented
(B) adjusted
(C) featured
(D) recommended

Cat and Plum Blossoms is an important work of *Nihonga*, or classical Japanese painting. Unlike Kuroda Seiki, who adopted traditional European methods such as painting with oil on canvas, Hishida Shunsō _____ traditional Japanese approaches. For instance, Hishida produced *Cat and Plum Blossoms* by applying color pigments to a silk scroll.

ID e386a11d

6 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) distrusted
(B) embraced
(C) released
(D) overlooked

In the 1990s, conservationists began planting more than 500,000 native trees in the habitat of the Azores bullfinch to boost the bird's numbers. This approach was apparently _____: the Azores bullfinch's population size increased from as few as 100 birds at the end of the 1980s to around 1,300 in 2023.

ID a1139ff8

7 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) amusing
(B) costly
(C) successful
(D) disastrous

Former astronaut Ellen Ochoa says that although she doesn't have a definite idea of when it might happen, she _____ that humans will someday need to be able to live in other environments than those found on Earth. This conjecture informs her interest in future research missions to the moon.

ID 97ab5669

8 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) demands
(B) speculates
(C) doubts
(D) establishes

A musician and member of the Quechua of Peru, Renata Flores Rivera was eager to promote the Quechua language in her music, but she was _____ speaking it. She met this challenge by asking her grandmother, a native speaker of Quechua, to help her pronounce words in her song lyrics and also by taking classes in the language.

ID 06b96bfc

9 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) prepared for
(B) inexperienced with
(C) skilled in
(D) excited about

According to botanists, a viburnum plant experiencing insect damage may develop erineum—a discolored, felty growth—on its leaf blades. A _____ viburnum plant, on the other hand, will have leaves with smooth surfaces and uniformly green coloration.

ID e1d5d5df

10 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) struggling
(B) beneficial
(C) simple
(D) healthy

Research conducted by planetary scientist Katarina Miljkovic suggests that the Moon's surface may not accurately _____ early impact events. When the Moon was still forming, its surface was softer, and asteroid or meteoroid impacts would have left less of an impression; thus, evidence of early impacts may no longer be present.

ID 9e501aaf

11 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) reflect
(B) receive
(C) evaluate
(D) mimic

Charles "Teenie" Harris was a photographer for the *Pittsburgh Courier* from 1936 to 1975. During his career he took over 70,000 photographs documenting everyday life in Pittsburgh's Black communities. The Carnegie Museum of Art maintains thousands of his photographs, carefully _____ them so that audiences can continue to view them well into the future.

ID 9cdcd902

12 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) replacing
(B) inventing
(C) preserving
(D) counting

Many ancient sculptures of people's heads are missing their noses. This is because the nose is the most _____ part of a sculpture of a person's head. It is delicate and sticks out from the rest of the sculpture, making it especially easy to break.

ID 3ec184af

13 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) recognizable
(B) fragile
(C) common
(D) sophisticated

In the 1970s, video cameras became increasingly affordable for ordinary consumers and gave Ulysses Jenkins and other artists capabilities that were previously unavailable except to television broadcasters. Jenkins recognized and took full advantage of this _____ access to powerful technology to create groundbreaking works of video art, such as *Mass of Images* (1978).

ID e3f05561

14 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) newfound
(B) delicate
(C) inevitable
(D) habitual

A brief book review cannot fully convey the _____ of Olga Tokarczuk's novel *The Books of Jacob*, with its enormous cast of characters, its complicated, wandering plot, and its page numbers that count backward (beginning at 965 and ending at 1).

ID 4a2b2535

15 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) accuracy
(B) inactivity
(C) complexity
(D) restraint

Biologist Jane Edgeloe and colleagues have located what is believed to be the largest individual plant in the world in the Shark Bay area of Australia. The plant is a type of seagrass called *Posidonia australis*, and it _____ approximately 200 square kilometers.

ID ca47273b

16 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) acknowledges
(B) produces
(C) spans
(D) advances

In the early 1800s, the Cherokee scholar Sequoyah created the first script, or writing system, for an Indigenous language in the United States. Because it represented the sounds of spoken Cherokee so accurately, his script was easy to learn and thus quickly achieved _____ use: by 1830, over 90 percent of the Cherokee people could read and write it.

ID 69a6d050

17 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) widespread
(B) careful
(C) unintended
(D) infrequent

Zygomorphic (bilaterally symmetric) flowers remain open and functional on average 1.1 days longer than actinomorphic (radially symmetric) flowers do. Ruby E. Stephens and colleagues claim that this extended period could be _____ the relatively small pool of potential pollinators available to zygomorphic flowers and the greater chance at successful pollination that remaining open affords them.

ID 7d60a322

18 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) analogous to
(B) converted by
(C) attributed to
(D) magnified by

In 1929 the *Atlantic Monthly* published several articles based on newly discovered letters allegedly exchanged between President Abraham Lincoln and a woman named Ann Rutledge. Historians were unable to _____ the authenticity of the letters, however, and quickly dismissed them as a hoax.

ID e41dfaab

19 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) validate
(B) interpret
(C) relate
(D) accommodate

Following the principles of community-based participatory research, tribal nations and research institutions are equal partners in health studies conducted on reservations. A collaboration between the Crow Tribe and Montana State University

_____ this model: tribal citizens worked

alongside scientists to design the methodology and continue to assist in data collection.

ID 4d1a9c0d

20 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) circumvents
(B) eclipses
(C) fabricates
(D) exemplifies

The equipment from the Apollo Moon landings (1969–1972), such as radiation detectors and temperature probes, remains there to this day, but the data from these missions were mostly inaccessible until a recent data-transfer project made them _____. This project has allowed researcher Seiichi Nagihara to make use of the information in investigating temperature changes on the Moon.

ID b5898291

21 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) predictable
(B) complicated
(C) representative
(D) available

The process of mechanically recycling plastics is often considered _____ because of the environmental impact and the loss of material quality that often occurs. But chemist Takunda Chazovachii has helped develop a cleaner process of chemical recycling that converts superabsorbent polymers from diapers into a desirable reusable adhesive.

ID 5effa190

22 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) resilient
(B) inadequate
(C) dynamic
(D) satisfactory

Predatory animals differ widely in how they _____ food for their young. Some leave dead prey nearby for their young to consume, some bring live prey to their young, and some feed their young directly from their own mouths.

ID a49500cc

23 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) avoid
(B) guess
(C) provide
(D) describe

Bioluminescent beetles called fireflies may seem to create flashes of light randomly, but each species of firefly actually has its own special series of repeated flashes and pauses. These unique _____ allow fireflies of the same species to find each other.

ID f3fac04f

24 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) quantities
(B) decorations
(C) patterns
(D) agreements

According to Potawatomi ecologist Robin Wall Kimmerer, the Indigenous method of harvesting *Hierochloe odorata*, or sweetgrass, by snapping the plant off at the root actually _____ wild populations: it may seem counterintuitive, she says, but this method of removal allows new sweetgrass plants to repopulate the space, with an overall increase in number and vigor.

ID 6d5ddea4

25 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) selects
(B) originates
(C) conditions
(D) replenishes

One challenge of generating electricity from ocean waves is that wave power isn't _____: it varies in unpredictable ways that pose technological and planning problems for electricity generation.

ID 4b8244ca

26 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) accidental
(B) confident
(C) expensive
(D) consistent

Visual artist Gabriela Alemán states that the bold colors of comics, pop art, and Latinx culture have always fascinated her. This passion for the rich history and colors of her Latinx community translates into the _____ artworks she produces.

ID a2835734

27 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) vivid
(B) unknown
(C) definite
(D) reserved

Ezra Pound's poetry can be hard to _____: it is dense, experimental, and so full of references and allusions that many readers have a difficult time even identifying the poems' subjects.

ID d529c1ad

28 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) comprehend
(B) dislike
(C) interrupt
(D) overlook

Bing Xie and her team have discovered that plains zebras make at least four types of vocalizations: "snorts," "soft snorts," "squeals," and "quagga quagga" calls. The researchers used machine-learning algorithms to _____ recorded vocalizations according to type, finding that snorts vary across individual zebras, while squeals are more uniform across zebra populations.

ID 089b0b41

29 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) categorize
(B) extend
(C) collapse
(D) suppress

Beginning in the 1950s, Navajo Nation legislator Annie Dodge Wauneka continuously worked to promote public health; this _____ effort involved traveling throughout the vast Navajo homeland and writing a medical dictionary for speakers of *Diné bizaad*, the Navajo language.

ID a4ca92fd

30 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) impartial
(B) offhand
(C) persistent
(D) mandatory

A team of paleontologists has found a rich fossil deposit near Gulgong, Australia. The fossils are so well preserved that the team has been able to _____ detailed information about the life forms that left them behind, such as color patterns and how they interacted with other species.

ID d91e5499

31 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) occupy
(B) hoard
(C) reserve
(D) obtain

Particle physicists like Ayana Holloway Arce and Aida El-Khadra spend much of their time _____ what is invisible to the naked eye: using sophisticated technology, they closely examine the behavior of subatomic particles, the smallest detectable parts of matter.

ID 7d84fe2b

32 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) selecting
(B) inspecting
(C) creating
(D) deciding

In recommending Bao Phi's collection *Sông I Sing*, a librarian noted that pieces by the spoken-word poet don't lose their _____ nature when printed: the language has the same pleasant musical quality on the page as it does when performed by Phi.

ID d2eb1df1

33 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) scholarly
(B) melodic
(C) jarring
(D) personal

The recent discovery of a carved wooden figure dating to around 2,000 years ago in a ditch in England was truly surprising. Wooden objects _____ survive for so long due to their high susceptibility to rot, but archaeologists suspect layers of sediment in the ditch preserved the figure by creating an oxygen-free environment.

ID cb526866

34 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) sturdily
(B) carelessly
(C) rarely
(D) simply

Due to their often strange images, highly experimental syntax, and opaque subject matter, many of John Ashbery's poems can be quite difficult to _____ and thus are the object of heated debate among scholars.

ID 83687083

35 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) delegate
(B) compose
(C) interpret
(D) renounce

The Appalachian Trail is a hiking path in the eastern United States. Much of the 2,000 mile trail passes through wilderness areas. In order to _____ those areas, the United States Congress passed the National Trails System Act in 1968, ensuring that the trail would not be sold or commercially developed.

ID 637d0878

36 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) borrow
(B) postpone
(C) protect
(D) decorate

While we can infer information about climate activity in Earth's distant past from physical evidence, we of course cannot observe past climates directly. To study early Earth's climate in action, we must _____ that climate using computer models that represent various climate conditions consistent with the physical evidence.

ID 5d2fd27d

37 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) invent
(B) simulate
(C) exaggerate
(D) preserve

In 1877, 85% of California's railways were already controlled by the Southern Pacific Railroad. The company further solidified its _____ in rail access to the state's Pacific coast when it completed the Sunset Route in 1883: running from Louisiana to Southern California, the route established the first transcontinental rail line across the southern United States.

ID afd48140

38 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) dominance
(B) creativity
(C) insignificance
(D) neutrality

During film's early years, those who worked in the industry had a vested interest in convincing the public to embrace the new medium. As Sumiko Higashi argues, some filmmakers relied on film critics to influence the public's _____ the world of cinema. Critics who drew similarities between film and traditional art forms, like drama, could help legitimize film as an art form.

Which choice completes the text with the most logical and precise word or phrase?

(A) reproduction of
(B) contribution to
(C) application to
(D) perception of

Mônica Lopes-Ferreira and others at Brazil's Butantan Institute are studying the freshwater stingray species *Potamotrygon rex* to determine whether biological characteristics such as the rays' age and sex have _____ effect on the toxicity of their venom—that is, to see if differences in these traits are associated with considerable variations in venom potency.

ID daaed806

40 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) a disconcerting
(B) an acceptable
(C) an imperceptible
(D) a substantial

Archaeologist Erika Karuzas works with the Confederated Salish and Kootenai Tribes of Montana to preserve culturally significant sites. In 2015 they decided that creating a new national trail connecting many of these sites would _____ their preservation efforts, because the US government provides some protections to national trails that aren't given to other areas.

ID 5514fd1f

41 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) inspire
(B) ignore
(C) promote
(D) reduce

Cucurbits, a group of plants that includes squash and melons, relied on mastodons to spread their seeds in the Ice Age. When these animals died out, cucurbits faced extinction in turn, having lost their means of seed dispersal. Around this time, however, the ancestors of Indigenous peoples in North America began raising cucurbits as crops, thus _____ the plants' survival.

ID bdab32fc

42 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) verifying
(B) multiplying
(C) comforting
(D) ensuring

Since the Hubble Space Telescope was launched into space in 1990, astronauts have needed to complete regular missions to repair the telescope and keep it working smoothly. Researchers hope that robots will soon be able to make these repairs. Employing robots instead of humans to make repairs will be helpful, as _____ astronauts to maintain the telescope can be expensive.

ID 631a1b64

43 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) straightening
(B) forgetting about
(C) relying on
(D) reducing

According to statistician Nassim Nicholas Taleb, the best way to predict the amount of time a nonperishable entity (such as a building or a technology) will continue to exist is to examine how long it has survived so far. In this view, an item's age is the strongest _____ how much longer it will last.

ID b92c13fa

44 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) uncertainty about
(B) indicator of
(C) motivation for
(D) criticism of

Whether Carmen Lomas Garza is creating small paintings and illustrations or large public artworks—such as *Baile*, a copper cutout of traditional Mexican dance in the San Francisco International Airport—she is _____ direct experience, drawing from memories of her childhood in Texas or details of her current surroundings in California.

ID 74ee7737

45 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) complimented by
(B) uncertain about
(C) unbothered by
(D) inspired by

In the mid-nineteenth century, some abolitionist newspapers _____ westward migration in the United States; by printing a letter that described the easy fortunes and high salaries miners could make in California during the Gold Rush, Frederick Douglass's newspaper *North Star* was one such publication that inspired readers to relocate.

ID 849bf8d7

46 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) stimulated
(B) assigned
(C) opposed
(D) disregarded

Like other tribal nations, the Muscogee (Creek) Nation is self-governing; its National Council generates laws regulating aspects of community life such as land use and healthcare, while the principal chief and cabinet officials _____ those laws by devising policies and administering services in accordance with them.

ID f7d58b53

47 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) implement
(B) presume
(C) improvise
(D) mimic

Artificially delivering biomolecules to plant cells is an important component of protecting plants from pathogens, but it is difficult to transmit biomolecules through the layers of the plant cell wall. Markita del Carpio Landry and her colleagues have shown that it may be possible to _____ this problem by transmitting molecules through carbon nanotubes, which can cross cell walls.

ID 44cc5f75

48 Mark for Review Easy Explanation ›

Which choice completes the text with the most logical and precise word or phrase?

(A) conceptualize
(B) neglect
(C) illustrate
(D) overcome

Manul cats are small, shy felines. They live mostly alone in out-of-the-way parts of Asia, such as on Mount Everest. These cats have been difficult to research because their habitats are so _____ large populations of humans.

B Find the Synonym

40 questions

EASY 32 questions

The following text is from Bram Stoker's 1897 novel *Dracula*. The narrator is being driven in a carriage through a remote region at night.

> The baying of the wolves sounded nearer and nearer, as though they were closing round on us from every side. I grew dreadfully afraid, and the horses shared my fear. The driver, however, was not in the least disturbed; he kept turning his head to left and right, but I could not see anything through the darkness.

ID 45a109a3

222 Mark for Review Easy Explanation ›

As used in the text, what does the word "disturbed" most nearly mean?

(A) Disorganized
(B) Alarmed
(C) Offended
(D) Interrupted

The following text is adapted from Nathaniel Hawthorne's 1844 short story "Drowne's Wooden Image." Drowne, a young man, is carving a wooden figure to decorate the front of a ship.

Day by day, the work assumed greater precision, and settled its irregular and misty outline into distincter grace and beauty. The general design was now obvious to the common eye.

ID 84ece3f6

The following text is adapted from José Martí's 1891 poem "At the Salon" (translated by Cecil Charles in 1898). The speaker describes a painting featuring a female figure.

From the sterile soil no ray

Of hope in a blade of green,

Nor sheltering roof is seen—

Though the skies are heavy and gray.

Ah, this is the woman fair

Who stole away my heart

In the splendid halls of art

Yester-e'en as I wandered there!

ID 6cf906fc

229 Mark for Review Easy Explanation ›

As used in the text, what does the word "sheltering" most nearly mean?

(A) Protective

(B) Restrictive

(C) Affectionate

(D) Suspicious

The following text is adapted from Sui Sin Far's 1912 short story "Mrs. Spring Fragrance." Mr. and Mrs. Spring Fragrance immigrated to the United States from China.

Mrs. Spring Fragrance was unaware that Mr. Spring Fragrance, tired with the day's business, had thrown himself down on the bamboo settee on the veranda, and that although his eyes were engaged in scanning the pages of the *Chinese World*, his ears could not help receiving the words which were borne to him through the open window.

As used in the text, what does the word "collects" most nearly mean?

(A) Increases
(B) Makes
(C) Ignores
(D) Gathers

The following text is adapted from Frances Hodgson Burnett's 1905 novel *A Little Princess*. Sara is a young student at a school in London.

> Sara not only could tell stories, but she adored telling them. When she sat or stood in the midst of a circle and began to invent wonderful things, her green eyes grew big and shining, her cheeks flushed, and, without knowing that she was doing it, she began to act and made what she told lovely or alarming by the raising or dropping of her voice.

(B) Influence
(C) Demonstrate
(D) Measure

The following text is from Claude McKay's 1922 poem "Morning Joy." The speaker is looking out a window and observing a wold, or large area of land.

> At night the wide and level stretch of wold,
>
> Which at high noon had basked in quiet gold,
>
> Far as the eye could see was ghostly white;
>
> Dark was the night save for the snow's weird light.
>
> I drew the shades far down, crept into bed;
>
> Hearing the cold wind moaning overhead
>
> Through the sad pines, my soul, catching its pain,
>
> Went sorrowing with it across the plain.

As used in the text, what does the author most nearly mean by "I couldn't be stopped"?

(A) She had a hard time sitting still.
(B) She often changed her mind.
(C) She was well liked as a child.
(D) She seemed to talk all the time.

The following text is adapted from Oscar Wilde's 1895 play *The Importance of Being Earnest*.

CECILY: Have we got to part?

ALGERNON: I am afraid so. It's a very painful parting.

CECILY: It is always painful to part from people whom one has known for a very brief space of time. The absence of old friends one can endure with equanimity. But even a momentary separation from anyone to whom one has just been introduced is almost unbearable.

(B) Courtesy
(C) Calculation
(D) Indecision

HARD 4 questions

The following text is from a 1955 translation of Samuel Beckett's 1951 novel *Molloy* (translated by the author and Patrick Bowles). In the text, Molloy has arrived at the town ramparts, an elevated walkway atop the city walls.

> And having cleared the ramparts I had to confess the sky was clearing, prior to its winding in the other shroud, night. Yes, the great cloud was ravelling, discovering here and there a pale and dying sky, and the sun, already down, was manifest in the livid tongues of fire darting towards the zenith, falling and darting again, ever more pale and languid, and doomed no sooner lit to be extinguished.

Explanations

A Fill in the Blank

221 questions

1 Correct answer **B** — Easy — Back to question

B handmade from

Choice B is the best answer because it most logically completes the text's discussion of Marilyn Dingle's baskets. In this context, to say that Dingle's baskets are "handmade from" particular plants means that Dingle creates baskets herself using those plants but without using machines. The text says that Dingle "skillfully winds" parts of palmetto palm plants around sweetgrass plants to make baskets with an appearance that "no factory can reproduce." This context suggests that Dingle's baskets are handmade from sweetgrass and palmetto palm.

Choice A is incorrect because the text describes how Dingle uses sweetgrass and palmetto palm to create her baskets, not how her baskets are "indicated by," or signified by, sweetgrass and palmetto palm. **Choice C is incorrect**. Although Dingle's baskets are described as being made using sweetgrass and palm, there's nothing in the text to suggest that the baskets are "represented by," or exemplified or portrayed by, sweetgrass and palmetto palm. Instead, the focus of the text is on Dingle's use of sweetgrass and palmetto palm and the impossibility of replicating the appearance of her baskets using machines. **Choice D is incorrect** because there's nothing in the text to suggest that Dingle's baskets are "collected with," or brought together in a group with, sweetgrass and palmetto palm. Instead, the text describes how Dingle uses those plants to make her baskets.

2 Correct answer **D** — Easy — Back to question

D transformed

Choice D is the best answer because it most logically completes the text's discussion of the invention of the integrated circuit. As used in this context, "transformed" means substantially changed in some way. The text states that the invention radically altered the semiconductor industry, with some historians claiming that it had a fundamental effect on the industry by allowing for mass production for the first time. This context conveys that the invention of the integrated circuit transformed the semiconductor industry.

Choice A is incorrect. Although the text indicates that the invention of the integrated circuit significantly affected ("radically altered") the semiconductor industry, it doesn't indicate that the invention "overwhelmed" the industry, which in this context would mean that it overcame the industry such that the industry struggled or was defeated. Instead, the text conveys that the invention's effect was positive, since it allowed the semiconductor industry to begin making use of mass production methods. **Choice B is incorrect** because it wouldn't make sense in context to say that the invention of the integrated circuit "bypassed" the semiconductor industry, which would mean it intentionally avoided the industry. The text indicates that the invention directly affected the semiconductor industry, since it made it possible for the industry to begin engaging in mass production methods. **Choice C is incorrect** because the text doesn't indicate that the invention of the integrated circuit "obstructed" the semiconductor industry, which would mean that it blocked or hindered the industry in some way. Instead, the text indicates that the invention's effect was positive, since it made it possible for the semiconductor industry to begin engaging in mass production methods.

3 Correct answer **D**

Easy

< Back to question

D adapt to

Choice D is the best answer because it most logically completes the text's discussion of how maple trees may respond to changes in climate. As used in this context, "adapt to" means to adjust to new conditions. The text first notes that maple trees already thrive in a wide variety of climates and then goes on to say that alterations maples may undergo are likely to be relatively small and easily achieved. This context supports the idea that maple trees will more easily adjust or adapt to a changing climate.

Choice A is incorrect. Although the text discusses how maple trees adjust to change, the trees do not "relocate from," or physically move from one place to another. **Choice B is incorrect** because "refer to" means to mention or allude to something, and the trees are not doing either of these actions. **Choice C is incorrect** because the text is discussing how maple trees may respond to changes in climate, not where they "originate from," or came from originally.

4 Correct answer **D**

Easy

< Back to question

D involved in

Choice D is the best answer. "Involved in" means "playing an active role in." This fits the context clues describing how Zollar includes the audience in her shows by incorporating their stories and pictures.

Choice A is incorrect. "Nervous" means "worried or anxious about." Nothing in the text suggests that people would be nervous about Zollar's creative process. **Choice B is incorrect**. "Completed by" means "made whole by." It doesn't make sense to say that Zollar's shows would make her audience complete. **Choice C is incorrect**. "Delayed by" means "made late by." Nothing in the text suggests that people would be delayed by Zollar's creative process.

5 Correct answer **C**

Easy

< Back to question

C featured

Choice C is the best answer because it most logically completes the text's discussion of Ester Hernandez's art. In this context, "featured" means shown prominently. The text focuses on where Hernandez's works have been and continue to be displayed, explaining that her early works, which consisted of murals, could be viewed in outdoor spaces in San Francisco. The central contrast developed in the text is between where her early works could be viewed and where her works can be viewed now, which is in museums across the United States and around the world. The context therefore supports the idea that Hernandez's works are now shown, or featured, in museums globally.

Choice A is incorrect because in this context "invented" would mean created something for the first time, which isn't supported since the text doesn't discuss where Hernandez creates her works or whether they're original or innovative. **Choice B is incorrect** because "adjusted" in this context would mean adapted. Although the text mentions that many of Hernandez's early works were outdoor murals and thus it may be reasonable to infer that Hernandez altered her approach to creating art so that her works could be displayed in indoor venues instead, the text makes no mention of how Hernandez's works might have been adapted for such venues. The text focuses on where Hernandez's works have been and continue to be displayed, not on how she or anyone else may have adapted, or adjusted, her works. **Choice D is incorrect** because "recommended" in this context would mean endorsed or put forth as a suggestion for something that is worth seeing. Although it may be reasonable to say that in choosing to display certain works, museum curators believe such works are worth seeing, the text doesn't discuss the reasons why museums display Hernandez's works. Instead, the text mainly develops a contrast between where Hernandez's early works could once be viewed and where her work can be viewed now.

6 Correct answer **B**

Easy

Back to question

B embraced

Choice B is the best answer because it most logically completes the text's discussion of Hishida Shunsō's painting *Cat and Plum Blossoms*. In this context, "embraced" means accepted or adopted readily. The text begins by identifying *Cat and Plum Blossoms* as an example of *Nihonga*, or classical (that is, traditional) Japanese painting. The text continues by drawing a contrast between Hishida's work and Kuroda Seiki's work, which differs from that of Hishida in its use of the traditional European method of using oil paints on canvas rather than using traditional Japanese approaches. The text then concludes with an example of one such traditional Japanese painting technique exemplified by Hishida's *Cat and Plum Blossoms*—applications of color pigments to a silk scroll—to further develop the contrast between the two artists' approaches. This context supports the idea that Hishida adopted, or embraced, traditional Japanese approaches.

Choice A is incorrect because in this context "distrusted" would mean that Hishida was skeptical of or lacked confidence in traditional Japanese approaches to painting. The text begins by stating that Hishida's painting *Cat and Plum Blossoms* is an example of *Nihonga*, or traditional Japanese painting, and then cites Hishida's application of color pigments to a silk scroll as an instance of a traditional Japanese painting technique. It therefore wouldn't make sense to say that Hishida's use of traditional Japanese painting techniques indicates his distrust, or skepticism, of them. Rather, it suggests that he embraced those techniques. **Choice C is incorrect** because saying that Hishida "released" traditional Japanese approaches to painting in this context would mean that he freed them from any restrictions. In using Hishida's application of color pigments to a silk scroll in *Cat and Plum Blossoms* as an example of a traditional Japanese approach to painting found in *Nihonga*, the text strongly implies that Hishida followed these approaches, not that he removed them from any restrictions. **Choice D is incorrect** because in this context "overlooked" would mean ignored or failed to notice. The text establishes that Hishida's painting *Cat and Plum Blossoms* is a notable work of *Nihonga*, or classical Japanese painting, that features the traditional technique of applying color pigments to a silk scroll. It wouldn't make sense to say that Hishida's use of a traditional Japanese approach to painting indicates that Hishida failed to notice those approaches.

7 Correct answer **C**

Easy

Back to question

C successful

Choice C is the best answer because it most logically completes the text's discussion of the conservationists' efforts to increase Azores bullfinch's numbers. In this context, "successful" means accomplishing a goal or purpose. According to the text, conservationists planted more than 500,000 native trees in an Azores bullfinch habitat in order to boost the bird's population size. The text then indicates that the population size did indeed grow as a result of the planted trees. Thus, in this context, the conservationists' approach of planting native trees was successful because it achieved the goal of increasing the bird's population size.

Choice A is incorrect because the text gives no indication that the conservationists' approach of planting native trees to increase Azores bullfinch's numbers was "amusing," or comical or entertaining. Instead, the approach was seriously undertaken and ultimately accomplished. **Choice B is incorrect** because the text doesn't address how much it cost to achieve the goal of planting native trees to increase Azores bullfinch's numbers. The text indicates that the approach was beneficial and successful rather than "costly," or expensive or harmful. **Choice D is incorrect**. According to the text, the conservationists' approach of planting native trees to increase Azores bullfinch's numbers was beneficial and successful rather than "disastrous," or damaging or unsuccessful.

8 Correct answer **B** Easy Back to question

B speculates

Choice B is the best answer because it most logically completes the text's discussion of Ochoa's prediction that humans will one day need to live in places other than Earth. As used in this context, "speculates" would mean puts forward an idea without firm evidence. The text states that Ochoa "doesn't have a definite idea" about when humans might need to live in other environments and characterizes Ochoa's prediction as a "conjecture," or a conclusion presented without convincing evidence. This context indicates that Ochoa speculates when she makes this prediction.

Choice A is incorrect because saying that Ochoa "demands," or insists or requires, that humans will one day need to live in other environments than Earth's would not make sense in context. The text indicates that she's unsure about the timing but hypothesizes that it will someday happen. **Choice C is incorrect** because saying that Ochoa "doubts," or questions or disbelieves, that humans will one day need to live in other environments than Earth's would not make sense in context. The text indicates that although Ochoa is unsure about the timing, she hypothesizes that humans will need to live in places other than Earth and encourages research into future travel to the moon. **Choice D is incorrect** because saying that Ochoa "establishes," or proves, that humans will one day need to live in other environments than Earth's would not make sense in context. Rather than stating that Ochoa discusses her idea with certainty and supports it with evidence, the text indicates that Ochoa is unsure about when humans might need to live in other environments.

9 Correct answer **B** Easy Back to question

B inexperienced with

Choice B is the best answer because it most logically completes the text's discussion of Renata Flores Rivera's use of Quechua in her music. In this context, "inexperienced with" means not accustomed to. The text indicates that Flores Rivera wanted to promote the Quechua language in her music and overcame a challenge by seeking help with pronunciation from her grandmother and by taking language classes. This context conveys the idea that Flores Rivera was not sufficiently familiar with Quechua to use it in her music without help. Thus, she was inexperienced with speaking the language, which she addressed by seeking help.

Choice A is incorrect because describing Flores Rivera as "prepared for"—or ready for—speaking Quechua wouldn't make sense in context. The text indicates that speaking Quechua presented a challenge, but if she were ready to speak the language, then there would be no challenge. **Choice C is incorrect** because describing Flores Rivera as "skilled in"—meaning good at or capable of—speaking Quechua wouldn't make sense in context. The text indicates that speaking Quechua presented a challenge, but if she were capable of speaking the language, then there would be no challenge. **Choice D is incorrect**. Flores Rivera was likely "excited about"—or thrilled or delighted with—speaking Quechua, but this wouldn't make sense in context. The text indicates that speaking Quechua presented a challenge, but if she were delighted with speaking the language, then there would be no challenge.

10 Correct answer **D** Easy Back to question

D healthy

Choice D is the best answer because it most logically completes the text's discussion of damage to viburnum plants. In this context, "healthy" would mean not distressed or diseased. The text states that insect damage may cause viburnum plants to be discolored and have abnormal growths. In the next sentence, the phrase "on the other hand" indicates a contrast with the description of plants suffering from damage. Thus, the context contrasts the appearance of healthy, undamaged plants with the appearance of damaged plants.

Choice A is incorrect because in this context, “struggling” would mean working against difficulties. The text first describes viburnum plants experiencing damage by insects, and the phrase “on the other hand” then establishes a contrast with that description. It wouldn’t make sense to contrast struggling viburnum plants with those being damaged by insects, because in both cases the plants would be experiencing difficulties. **Choice B is incorrect** because in this context, “beneficial” would mean producing good or helpful effects. The text doesn’t discuss how viburnum plants affect other things or suggest that the plants are helpful in some way; rather, it focuses on how viburnum plants are affected by certain conditions. **Choice C is incorrect** because in this context “simple” would mean plain or uncomplicated. The text doesn’t discuss whether certain viburnum plants are complicated or uncomplicated; rather, it focuses on how viburnum plants are affected by certain conditions.

11 Correct answer **A** Easy Back to question

A reflect

Choice A is the best answer because it most logically completes the text’s discussion of the Moon’s surface. In this context, “reflect” means show or make apparent. The text states that because the surface of the Moon was softer when the Moon was still forming than it is now, early asteroid and meteoroid impacts “would have left less of an impression” and, as a result, evidence of them may no longer exist. This context supports the idea that the surface of the Moon may not accurately show signs of early impact events.

Choice B is incorrect because it wouldn’t make sense to say that the surface of the Moon may not accurately “receive,” or acquire or experience, early impacts from asteroids or meteoroids. The text indicates that the impacts have already occurred, and it isn’t clear how the Moon’s surface could be accurate or inaccurate in experiencing them. **Choice C is incorrect** because it wouldn’t make sense to say that the surface of the Moon may not accurately “evaluate,” or determine the significance or condition of, early impacts from asteroids or meteoroids, since that would suggest that it’s possible for the Moon’s surface to make a decision of any kind. **Choice D is incorrect**. In this context, “mimic” would mean to deliberately simulate or closely imitate something. It wouldn’t make sense to say that the surface of the Moon may not accurately mimic early asteroid and meteoroid impacts, since that would suggest that it’s possible for the Moon to deliberately imitate something.

12 Correct answer **C** Easy Back to question

C preserving

Choice C is the best answer. "Preserving" means "maintaining" or "keeping in good condition," so preserving the photographs means that audiences should be able to view them for a long time.

Choice A is incorrect. "Replacing" means "putting something new in place of" the photographs. Replacing the photos will make it so that audiences can’t view them at all. **Choice B is incorrect**. "Inventing" means "creating a new idea, process, or thing." The museum can’t invent photographs that already exist. **Choice D is incorrect**. Counting the photographs will not help audiences view them well into the future.

13 Correct answer **B** Easy Back to question

B fragile

Choice B is the best answer because it most logically completes the text’s discussion of noses on ancient sculptures. In this context, "fragile" means weak or delicate. This matches the text’s description of noses on ancient sculptures, which are often missing from sculptures’ heads because they are "especially easy to break." Therefore, this context indicates that noses on ancient sculptures are the most fragile part of the sculptures’ heads.

Choice A is incorrect. In this context, "recognizable" would mean identifiable, and since the text indicates that noses are often missing from ancient statues, they therefore cannot be the most recognizable part of the statue. **Choice C is incorrect** because the text indicates that many ancient statues are missing noses, so noses wouldn't be "common," or frequent, aspects of ancient statues; they would conversely be uncommon. **Choice D is incorrect** because the text only indicates that noses on ancient statues often stick out and end up missing from the heads, which doesn't relate to the noses being "sophisticated," or knowledgeable or refined.

14 Correct answer **A** Easy Back to question

A newfound

Choice A is the best answer because it most logically completes the text's discussion of Ulysses Jenkins's video art. As used in this context, "newfound" means recently discovered or established. The text indicates that in the 1970s, video cameras became cheaper and therefore more widely available than they had been in the past. The text goes on to say that this development provided Jenkins and other artists with capabilities that they previously didn't have. As a result, Jenkins began producing groundbreaking works of video art. This context supports the idea that Jenkins took advantage of newfound access to video cameras.

Choice B is incorrect because "delicate" means fine in texture or structure or easily broken, neither of which would make sense in this context. The text doesn't focus on describing what video art looks like or whether it's breakable. **Choice C is incorrect** because "inevitable" means impossible to avoid, which wouldn't make sense in this context. The text doesn't discuss the likelihood of artists, or anyone else, gaining access to video cameras. **Choice D is incorrect** because "habitual" means doing something regularly or repeatedly. Although the text does suggest that Jenkins created multiple pieces of video art, its focus is on the fact that video cameras had only just become widely available to artists in the 1970s. Jenkins's ability to take advantage of video cameras to make art was therefore newfound, not habitual, at the time.

15 Correct answer **C** Easy Back to question

C complexity

Choice C is the best answer because it most logically completes the text's discussion of Olga Tokarczuk's novel *The Books of Jacob*. As used in this context, "complexity" means having many complicated parts that when taken as a whole are difficult to follow or explain. The text indicates that *The Books of Jacob* has a large cast of characters, a complicated and wandering plot (that is, a plot that is difficult to follow), and reverse page numbering. Together, these features make up a novel that's challenging to read and summarize. This context supports the idea that a brief book review can't do justice to the novel's complexity.

Choice A is incorrect. Although the word "accuracy," or being free from error or falsehood, can sometimes be used to describe a novel, the text doesn't discuss whether Tokarczuk's novel has this quality. Instead, the text describes the novel as having a large cast of characters, a difficult-to-follow plot, and reverse page numbering. These features suggest complexity, not accuracy. **Choice B is incorrect** because "inactivity" means being in a state of idleness or doing nothing, neither of which would make sense in this context. The text describes Tokarczuk's novel, and although it's possible the novel could portray its characters as inactive, it wouldn't make sense to describe the novel itself as such. **Choice D is incorrect** because in this context "restraint" would mean holding back or showing self-control, and the text doesn't indicate that Tokarczuk's novel has either of these qualities. In fact, the features of the novel that the text describes, such as a large cast of characters, a complicated and wandering plot, and reverse page numbering, suggest excess and complexity, not restraint.

16 Correct answer **C** Easy Back to question

C spans

Choice C is the best answer. "Spans" means "extends over a distance of" or "encompasses." Since we're talking about the world's largest plant, it makes sense to say that it "spans" about 200 square kilometers.

Choice A is incorrect. "Acknowledges" means "recognizes" or "admits the truth of." Either way, it doesn't make sense here: a plant can't "acknowledge" a distance. **Choice B is incorrect**. "Produces" can mean "makes," "causes," or "presents." But none of those definitions make sense here: a plant can't make, cause, or present a distance. **Choice D is incorrect**. This doesn't fit the logic of the text. "Advances" means "moves forward" or "progresses." But the plant isn't necessarily moving forward. Rather, the text suggests that it already covers a distance of 200 square kilometers.

17 Correct answer **A** Easy Back to question

A widespread

Choice A is the best answer because it most logically completes the text's discussion of the writing system created by Sequoyah. In this context, "widespread" means widely accepted or practiced. The text indicates that because Sequoyah's script accurately represented the spoken sounds of the Cherokee language and was easy to learn, nearly all Cherokee people were able to read and write it soon after it was created. This context demonstrates that the script was widely used by the Cherokee people.

Choice B is incorrect. In this context, "careful" would mean exercised with care and attentive concern. Although the work of creating a writing system likely involved great care, the text indicates that the system was "easy to learn," which conflicts with the idea that using this system requires a noteworthy amount of care. **Choice C is incorrect** because in this context "unintended" means not deliberate. The idea that using Sequoyah's script was unintentional conflicts directly with the claim that it was easy to learn and used by "over 90% of the Cherokee people" by 1830. In fact, because one had to learn this system, it's not clear how one could use it unintentionally. **Choice D is incorrect** because in this context "infrequent" means rare or not occurring often, which conflicts directly with the claim that "over 90% of the Cherokee people" were using Sequoyah's script by 1830.

18 Correct answer **C** Easy Back to question

C attributed to

Choice C is the best answer because it most logically completes the text's discussion of why zygomorphic flowers (those with bilateral symmetry) remain open longer than actinomorphic flowers (those with radial symmetry). In this context, "attributed to" means explained as a consequence of. The text indicates that compared with actinomorphic flowers, zygomorphic flowers have a small pool of potential pollinators and that remaining open therefore increases their chances of being pollinated successfully. This would be a reasonable explanation for why zygomorphic flowers remain open on average 1.1 days longer than actinomorphic flowers do. Thus, in context it would be most logical to say that zygomorphic flowers' extended opening period can likely be attributed to the factors discussed in the text.

Choice A is incorrect because saying that the extended period in which zygomorphic flowers remain open could be "analogous to," or comparable to, these flowers' limited pollinator pool and the fact that remaining open increases their chances of pollination wouldn't make sense in context. The text presents these factors as a possible explanation for the extended period, not as something that the extended period resembles in some way. **Choice B is incorrect** because saying that the extended period could be "converted by," or transformed by, the limited pollinator pool and the increased pollination chances wouldn't make sense in context. The text presents these factors as a possible cause of the extended period, not as forces that change the period into something else. **Choice D is incorrect** because in this context, "magnified by" would mean

exaggerated by or made more extreme or intense by, neither of which would make sense. The text presents zygomorphic flowers' limited pollinator pool and the fact that this might require remaining open for longer to increase chances of pollination as factors that could explain why these flowers remain open for extended periods; nothing in the text suggests these are factors that could exaggerate an already-extended period (that is, make the period seem greater or more important than it actually is), or that the extended period is in some way extreme or intense.

19 Correct answer **A** Easy Back to question

A validate

Choice A is the best answer because it most logically completes the text's discussion of letters allegedly exchanged between President Lincoln and Rutledge. In this context, "validate" means to confirm that something is real or correct. According to the text, it was alleged, or claimed, that the newly discovered letters had been written by Lincoln and Rutledge. The text also indicates that historians ultimately decided the letters were a hoax, or fraudulent. This context suggests that the historians couldn't confirm that the letters were authentic.

Choice B is incorrect. The text focuses on the authenticity of the letters, which were claimed to have been written by Lincoln and Rutledge and were then quickly dismissed as fraudulent by historians. Rather than conveying that the historians simply weren't able to "interpret," or explain in an understandable way, the letters' authenticity, the text suggests that the historians decided the letters lacked authenticity altogether. **Choice C is incorrect**. The text states that the historians quickly dismissed the letters claimed to have been written by Lincoln and Rutledge as fraudulent; this suggests that rather than being unable to "relate," or tell others about, the letters' authenticity, the historians were able to share what they'd decided about the letters. **Choice D is incorrect** because it wouldn't make sense to suggest that the historians couldn't "accommodate," or give consideration to, the authenticity of the letters claimed to have been written by Lincoln and Rutledge; the text states that the historians decided that the letters were fraudulent, which indicates that they *did* consider whether the letters were authentic.

20 Correct answer **D** Easy Back to question

D exemplifies

Choice D is the best answer because it most logically completes the text's discussion of the collaboration between the Crow Tribe and Montana State University. As used in this context, "exemplifies" means demonstrates. The text conveys how the Crow Tribe–Montana State University collaboration serves to illustrate the model of community-based participatory research introduced earlier in the text and expanded on later in the text.

Choice A is incorrect because referring to "circumvents," or avoids, wouldn't make sense in context. The text suggests that the Crow Tribe–Montana State University collaboration serves as an example of the principles of community-based participatory research, not that the collaboration evades this model. **Choice B is incorrect** because referring to "eclipses," or overshadows, wouldn't make sense in context. The text describes the Crow Tribe–Montana State University collaboration as an equal partnership, which indicates that it's an example of the community-based participatory research model, not that it overshadows the model. **Choice C is incorrect** because saying that the collaboration "fabricates," or creates, the model wouldn't make sense in context. The text indicates that the Crow Tribe–Montana State University collaboration serves as an example of the model, not that it created the model.

21 Correct answer **D** Easy Back to question

D available

Choice D is the best answer because it most logically completes the text's discussion of how a data-transfer project affected data from equipment from the Apollo Moon landings. In this context, "available" means accessible or able to be used. The text

explains that the Apollo equipment is still on the Moon, but the data it collected "were mostly inaccessible" until a data-transfer project was undertaken. The text then states that this project allowed a researcher to use the information that has been collected. This context makes it clear that the project made previously inaccessible data available, or accessible.

Choice A is incorrect because saying that a project made data from the Apollo equipment on the Moon "predictable" would mean that the data could be known or declared in advance, and it's not clear how that would be achieved, particularly with data that had been "mostly inaccessible" before the project. Rather than suggesting that the data-transfer project made the data predictable, the text conveys that it made the data available to be used as sources of information. **Choice B is incorrect** because the sentence indicates that data from the Apollo equipment on the Moon were "mostly inaccessible" until a recent data-transfer project did something to them, after which a researcher was able to make use of the data. This context conveys that the project made the data accessible and usable, not that it made them "complicated," or complex or difficult to understand. **Choice C is incorrect**. In this context, "representative" would mean either standing as a symbol of something or serving as a typical example from a group, and the text gives no indication that data retrieved from the Apollo equipment on the Moon was merely an example or symbolic. Rather, the text focuses on the availability and usefulness of the data, indicating that a data-transfer project enabled a researcher to use data that had previously been "mostly inaccessible."

22 Correct answer **B** Easy ‹ Back to question

B inadequate

Choice B is the best answer because it most logically completes the text's discussion about recycling plastics. In this context, "inadequate" means not satisfactory. The text indicates that the mechanical plastic-recycling process affects the environment and causes "the loss of material quality." The text contrasts that with Chazovachii's chemical plastic-recycling process, which is cleaner and produces a desirable product. The text's emphasis on the negative aspects of mechanical recycling suggests that it is inadequate in terms of environmental impact and the quality of the material the process yields.

Choice A is incorrect because in this context "resilient" would mean able to withstand difficulty and the text does not characterize the plastic-recycling process as having this quality or describe any difficulties that these processes might need to overcome. **Choice C is incorrect** because in this context "dynamic" would mean constantly changing. Although the text suggests that there have been changes in the field of recycling, as is the case with the advent of Chazovachii's chemical recycling process, there is nothing to suggest that the mechanical process itself has changed or is prone to change. **Choice D is incorrect** because in this context "satisfactory" would mean acceptable but not perfect. The text mentions only shortcomings of the mechanical process (environmental effects and lower material quality), so the text more strongly supports a negative view of this process and provides no evidence that it would be considered satisfactory.

23 Correct answer **C** Easy ‹ Back to question

C provide

Choice C is the best answer because it most logically completes the text's discussion of how predators feed their young. As used in this context, "provide" means supply or make something that's needed available. The text indicates that some predators supply prey for their young by either leaving dead prey nearby or by bringing live prey to them. Other predators, the text states, feed their young directly from their own mouths. This context supports the idea that predatory animals have various ways to provide food for their young.

Choice A is incorrect because in this context, "avoid" would mean keep away from or refrain from, neither of which would make sense in context. Nothing in the text suggests that predators refrain from food for their young. **Choice B is incorrect** because in this context, "guess" would mean speculate or suppose, and it's unclear what it would mean for predators to speculate food for their young. **Choice D is incorrect** because in this context, "describe" would mean explain, and it's unclear what it would mean for predators to explain food for their young.

24 Correct answer **C** Easy Back to question

C patterns

Choice C is the best answer because it most logically completes the text's discussion of the flashes created by fireflies. In this context, "patterns" means distinct and predictable sequences. The text indicates that although the flashes that fireflies produce appear to occur randomly—that is, without any particular sequence or rhythm—each species actually produces its own special series of flashes and pauses. Indeed, these series of flashes are so unique that fireflies can use them to find other members of their species. Therefore, this context supports the idea that fireflies produce flashes in distinct and recognizable patterns.

Choice A is incorrect because "quantities" means certain amounts or numbers of something. Although the text discusses how different firefly species produce flashes and pauses in unique sequences that help other members of their species to find them, it doesn't mention the number of flashes that are used in these sequences. **Choice B is incorrect** because in this context, "decorations" would mean things that make an object more beautiful. Although it may be reasonable to say that firefly flashes are beautiful, the text focuses on the fact that fireflies use these unique sequences of flashes to find other members of their own species, not that the flashes make fireflies more beautiful. **Choice D is incorrect** because in this context, "agreements" would refer to deals that individuals have discussed and come to a consensus about. Since fireflies aren't capable of making such agreements, it wouldn't make sense to use this word to refer to the signals they send each other with their flashes.

25 Correct answer **D** Easy Back to question

D replenishes

Choice D is the best answer because it most logically completes the text's discussion of the Indigenous method of harvesting *Hierochloe odorata.* As used in this context, "replenishes" means helps increase the population or helps it recover. The text explains that although snapping off a wild plant at the root might seem detrimental to the wild population, it actually helps *Hierochloe odorata*, increasing both their "number and vigor." This context conveys the idea that even though it seems counterintuitive, the Indigenous method of harvesting *Hierochloe odorata* actually replenishes the wild population.

Choice A is incorrect. Although a harvesting method could be used to select for certain traits in plants, it's not clear what it would mean for a harvesting method to select "wild populations" of plants. **Choice B is incorrect** because as used in this context, "originates" means creates. The text doesn't address the origin of *Hierochloe odorata*, but rather how the Indigenous harvesting method affects it. **Choice C is incorrect** because in this context, "conditions" means to influence someone or something to behave in a certain way, and the text doesn't suggest the new plants that replace the harvested ones differ in any meaningful way, or in any way that could be the result of conditioning.

26 Correct answer **D** Easy Back to question

D consistent

Choice D is the best answer because it most logically completes the text's discussion of the challenge of generating electricity from ocean waves. In this context, "consistent" means steady or unchanging over time. The text introduces a challenge and then explains that wave power varies, or changes, unpredictably in ways that cause problems for electricity generation. This context conveys that the challenge being described is a lack of consistency.

Choice A is incorrect because the text introduces a challenge and then elaborates on it by emphasizing that the unpredictable nature of variations in ocean waves causes problems, which doesn't indicate that wave power isn't "accidental," or isn't happening unintentionally. It wouldn't make sense to describe waves—a natural occurrence—as happening intentionally. **Choice B is incorrect** because "confident" means having a feeling of self-assurance, and it wouldn't make sense to describe wave power itself in terms of either having or lacking a sense of confidence. **Choice C is incorrect** because the text introduces

a challenge and then elaborates on it by emphasizing that the unpredictable nature of variations in ocean waves causes problems, which doesn't indicate that wave power isn't "expensive," or isn't costly. If anything, technological and planning problems might actually increase the expense of generating electricity from waves.

27 Correct answer **A** Easy Back to question

A vivid

Choice A is the best answer. "Vivid" can mean "colorful" or "bright-colored." This definition fits the context clues about Alemán's fascination with and passion for bold colors.

Choice B is incorrect. This doesn't fit the logic of the text. Nothing in the text indicates that Alemán's artworks are "unknown." **Choice C is incorrect**. This doesn't fit the logic of the text. "Definite" means "certain" or "decided." It wouldn't make sense to describe artwork as "definite." **Choice D is incorrect**. This doesn't fit the logic of the text. "Reserved" can either mean "slow to reveal emotions" or "booked." But the clues suggest that Alemán's artworks are boldly colorful—almost the opposite of "reserved."

28 Correct answer **A** Easy Back to question

A comprehend

Choice A is the best answer because it most logically completes the text's discussion of Ezra Pound's poetry. In this context, "comprehend" would mean to understand or grasp the meaning of something. The text describes Pound's poetry as "dense" and "experimental," with many references that readers may not understand. The text also states that many readers may not even be able to identify a poem's subject. This context clearly suggests that readers struggle to understand Pound's poetry as a result of its complexity and obscure references.

Choice B is incorrect. To say that Pound's poetry is "hard to dislike" would suggest that people generally like it, but the text doesn't focus on how likeable or enjoyable the poems are; rather, it focuses on how challenging many readers find it to understand them. **Choice C is incorrect**. To say that Pound's poetry is "hard to interrupt" would mean that it is hard to stop or break into it while it's being read or recited, but the text doesn't discuss any such breaks; instead, the text focuses on the challenge of understanding the content of Pound's poems. **Choice D is incorrect**. In this context, "overlook" would mean look past or fail to notice, so to say that Pound's poetry is "hard to overlook" would mean that it is very likely to be noticed. The text focuses on the difficulty people have in understanding Pound's poems when reading them, not how noticeable his poetry is in the first place.

29 Correct answer **A** Easy Back to question

A categorize

Choice A is the best answer because it most logically completes the text's discussion of how Bing Xie and her team analyzed plains zebra vocalizations. In this context, "categorize" means to sort into groups based on shared characteristics. The text states that Xie and her team discovered that the vocalizations of plains zebras can be grouped into at least four distinct types: "snorts," "soft snorts," "squeals," and "quagga quagga" calls. According to the text, the team also found that whereas snorts vary from zebra to zebra, squeals are more consistent across zebra populations. The text indicates that the researchers used machine-learning algorithms to arrive at these findings. This context supports the idea that the researchers used the algorithms to categorize recorded vocalizations.

Choice B is incorrect because in this context, "extend" would mean to make longer or greater in size. The text discusses the researchers' use of machine-learning algorithms to study recorded zebra vocalizations and identify patterns among the different types of calls that the researchers had recorded, not to lengthen or increase the size of the recordings. **Choice C is**

incorrect because in this context, "collapse" would mean to break down or combine into a smaller form. The text indicates that the researchers used machine-learning algorithms as part of a process that yielded findings about distinct types of zebra vocalizations, suggesting that the researchers used the algorithms to distinguish among vocalization types, not to combine them. **Choice D is incorrect** because in this context, "suppress" would mean to hold back or eliminate. The text indicates that the researchers used machine-learning algorithms as part of a process that yielded findings that zebra vocalizations can be classified into four distinct types, not that the researchers used the algorithms to hold back or eliminate the vocalizations themselves.

30 Correct answer **C** Easy Back to question

C persistent

Choice C is the best answer because it most logically completes the text's discussion of Annie Dodge Wauneka's work as a Navajo Nation legislator. As used in this context, "persistent" means existing continuously. The text states that Wauneka "continuously worked to promote public health," traveling extensively and authoring a medical dictionary; this indicates that Wauneka's effort was persistent.

Choice A is incorrect because describing Wauneka's effort related to public health as "impartial," or not partial or biased and treating all things equally, wouldn't make sense in context. The text suggests that Wauneka's continuous work was partial in one way, as she focused specifically on promoting public health throughout the Navajo homeland and to speakers of the Navajo language. **Choice B is incorrect** because the text emphasizes that Wauneka's effort to promote public health as a Navajo Nation legislator was continuous and extensive, involving wide travels and the authoring of a medical dictionary. Because this work clearly involved care and dedication, it wouldn't make sense to describe it as "offhand," or casual and informal. **Choice D is incorrect** because nothing in the text suggests that Wauneka's effort to promote public health was "mandatory," or required by law or rule, even though Wauneka was a Navajo Nation legislator. Rather than suggesting that Wauneka's effort was required for any reason, the text emphasizes the continuous and extensive nature of her work.

31 Correct answer **D** Easy Back to question

D obtain

Choice D is the best answer because it most logically completes the text's discussion of the fossil deposit. In this context, "obtain" means gain or acquire. According to the text, a team of paleontologists has found fossils that are very well preserved. For this reason, the text suggests, the paleontologists have been able to gain detailed information from the fossils, such as the color patterns of the life forms that left them behind.

Choice A is incorrect because "occupy" means engage or inhabit, neither of which would make sense in context. It's unclear what it would mean for detailed information revealed by fossils to be engaged or inhabited. **Choice B is incorrect** because the text gives no indication that the paleontologists wanted to "hoard," or collect and hide, the detailed information revealed by the well-preserved fossils. **Choice C is incorrect** because the text gives no indication that the paleontologists wanted to "reserve," or withhold, the detailed information revealed by the well-preserved fossils.

32 Correct answer **B** Easy Back to question

B inspecting

Choice B is the best answer because it most logically completes the text's discussion of the work of particle physicists. In this context, "inspecting" means viewing closely in order to examine. The text indicates that as particle physicists, Arce and El-Khadra's work involves using advanced technology to "closely examine" subatomic particles. In other words, they use technology to inspect small parts of matter that can't be seen by the naked eye.

Choice A is incorrect because nothing in the text suggests that Arce and El-Khadra spend time "selecting," or choosing, subatomic particles for some purpose; the text simply states that the particle physicists use advanced technology to see and study the behavior of those tiny parts of matter. **Choice C is incorrect** because nothing in the text suggests that Arce and El-Khadra spend time "creating" subatomic particles, or bringing them into existence; the text simply states that the particle physicists use advanced technology to see and study the behavior of those tiny parts of matter. **Choice D is incorrect**. In this context, "deciding" would mean making a final choice or judgment about something. It wouldn't make sense to say that particle physicists get to choose what is and isn't visible to the naked eye, especially when the text presents it as fact that subatomic particles are "the smallest detectable parts of matter" and would therefore be invisible. The text focuses on Arce and El-Khadra's close observation of those particles, not on any decisions they might make.

33 Correct answer **B** Easy ‹ Back to question

B melodic

Choice B is the best answer. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." That's exactly what "melodic" means.

Choice A is incorrect. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." "Scholarly" would suggest something that is academic or well-researched, which doesn't match the meaning we're looking for. **Choice C is incorrect**. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." "Jarring" would suggest the opposite: something unpleasant or discordant. **Choice D is incorrect**. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." "Personal" would suggest something that is expressive or intimate, which doesn't match the meaning we're looking for.

34 Correct answer **C** Easy ‹ Back to question

C rarely

Choice C is the best answer because it most logically completes the text's discussion of the discovery of a carved wooden figure dating to around 2,000 years ago. In this context, "rarely" means infrequently. The text states that the discovery of the figure was "truly surprising" and notes that wooden objects are highly prone to rot. This context conveys the idea that wooden objects infrequently survive for as long as the carved figure has survived.

Choice A is incorrect because "sturdily" means strongly, which wouldn't make sense in context. If wooden objects in general could strongly survive for long periods of time, then the discovery of a wooden figure that's around 2,000 years old wouldn't be surprising. **Choice B is incorrect** because "carelessly" means accidentally. The text conveys the idea that wooden objects in general don't survive for very long because they rot, not that wooden objects in general accidentally survive despite this. **Choice D is incorrect** because the text conveys the idea that wooden objects in general don't survive for very long because they rot, not that wooden objects in general "simply," or merely, survive for long periods of time. If wooden objects in general could merely survive for as long as the figure has survived, then the discovery of the figure wouldn't have been surprising.

35 Correct answer **C** Easy ‹ Back to question

C interpret

Choice C is the best answer because it most logically completes the text's discussion of John Ashbery's poems. As used in this context, "interpret" would mean decipher the meaning of. The text indicates that Ashbery's poems have many unusual features, that it's difficult to tell what exactly the poems' subject matter is, and that scholars strongly disagree about the poems. This context conveys the idea that it's difficult to interpret Ashbery's poems.

Choice A is incorrect because “delegate” means to assign someone as a representative of another person or to entrust something to someone else, neither of which would make sense in context. The text is focused only on the difficulty that readers have interpreting Ashbery’s poems due to their many unusual features; it doesn’t suggest anything about the poems being difficult to delegate. **Choice B is incorrect** because describing Ashbery’s poems as difficult to “compose,” or put together or produce, would make sense only if the text were about Ashbery’s experience of writing the poems. It could be true that it was difficult for Ashbery to compose his poems, but the text doesn’t address this; it instead discusses how readers interpret and engage with the poems. **Choice D is incorrect** because describing Ashbery’s poems as being difficult to “renounce,” or give up or refuse, wouldn’t make sense in context. The text focuses on the idea that features of Ashbery’s poems are odd or unclear and have caused heated scholarly debate. This context suggests that the poems are difficult to interpret, not that the poems are difficult to renounce.

36 Correct answer **C** Easy Back to question

C protect

Choice C is the best answer. "Protect" means "preserve" or "keep safe from." By ensuring that the wilderness areas along the Appalachian Trail can’t be sold or developed, the National Trails System Act protects them.

Choice A is incorrect. "Borrow" means "to take something with intent to return it." The text doesn’t say anything about taking and returning the wilderness that surrounds the Appalachian Trail. **Choice B is incorrect**. "Postpone" means "to put off until later." Nothing in the passage suggests that Congress wants to "postpone" the wilderness areas (and that doesn’t make sense anyway—they can postpone doing something to the wilderness areas, but they can’t postpone the areas themselves). **Choice D is incorrect**. "Decorate" means "to adorn" or "add extra items or pictures to make more attractive." No details in the text suggest that Congress wishes to make the trail fancier or more attractive.

37 Correct answer **B** Easy Back to question

B simulate

Choice B is the best answer because it most logically completes the text’s discussion of climate activity in Earth’s distant past. In this context, to “simulate” most nearly means to represent a natural process using computer models. According to the text, understanding Earth’s early climate is difficult because we cannot make direct observations of the distant past. Instead, scientists must create computer models that approximate early climate conditions, based on the physical evidence that those conditions left behind on Earth’s surface. This context supports the idea that computer models simulate Earth’s climate in the distant past.

Choice A is incorrect because scientists use existing physical evidence as a basis for developing computer models that describe what Earth’s actual past climate might have been like. The models are not being used to “invent,” or imagine, a completely fictional climate. **Choice C is incorrect** because the computer models are being used in an attempt to describe as accurately as possible what Earth’s past climate might have been like. They are not attempting to “exaggerate,” or distort, those features. **Choice D is incorrect** because the computer models do not “preserve,” or protect from deterioration, Earth’s early climate; instead, they attempt to reproduce the characteristics of that climate, based on the remaining physical evidence of that climate.

38 Correct answer **A** Easy Back to question

A dominance

Choice A is the best answer because it most logically and precisely completes the text’s discussion of the Southern Pacific Railroad. As used in this context, "dominance" means the state of being more successful than others. The text states that the

Southern Pacific Railroad already controlled 85% of California's railways in 1877, and that the Sunset Route it constructed in 1883 was the first transcontinental rail line across the southern United States. Therefore, the Southern Pacific Railroad would be more successful than other railroads in the area, and the construction of the Sunset Route would further solidify its dominance in rail access to California's coast.

Choice B is incorrect. Although the construction of the Sunset Route must have required some creativity, or use of imagination, the word "creativity" would not also encompass the fact that the Southern Pacific Railroad already controlled 85% of California's railways. The text is more focused on the railroad's control of the field and overall success rather than its imaginative thought processes. **Choice C is incorrect** because if the Southern Pacific Railroad controlled the majority of California's railways, it would not make sense to refer to its "insignificance," or the state of being unimportant. Rather, the opposite would be true. **Choice D is incorrect** because in context it would not make sense to refer to the Southern Pacific Railroad's "neutrality," or absence of strong opinion on a matter, since no opinions are mentioned. Nor would "neutrality" in the sense of impartiality in a conflict be a logical or precise choice since no conflict is explicitly described. There might be an implied conflict between the Southern Pacific Railroad and other railroads doing business in California, but that is not a conflict in which the Southern Pacific Railroad would take an impartial position.

39 Correct answer **D** Easy ‹ Back to question

D perception of

Choice D is the best answer because it most logically completes the text's discussion of the early years of film. In this context, "perception of" means understanding of or view of. The text states that people in the film industry had a personal stake ("a vested interest") in getting the public to embrace film when the medium was new and indicates that some film critics helped legitimize film as an art form—that is, that they helped to make film something people accepted as a type of art. This context conveys that it was the critics' ability to influence the public's view of the world of cinema that some early filmmakers relied on.

Choice A is incorrect because in this context, "reproduction of" would refer to a copy of something or the act of copying something, and it wouldn't make sense to describe the general public as reproducing the world of cinema, or copying film as an entire art form. **Choice B is incorrect**. In this context, "contribution to" would refer to playing a significant part in causing something to happen. Although the text indicates that people in the early film industry had reasons to want the public to embrace film, it wouldn't make sense to suggest that filmmakers relied on film critics to influence how the public contributed to the world of cinema; the text focuses on the public's view of film once the world of cinema existed (embracing it, regarding it as legitimate art) and doesn't suggest the general public was responsible for the medium's existence. **Choice C is incorrect** because in this context, "application to" would refer to putting something to direct use, and it wouldn't make sense to say that the general public needed to be used in a practical way in the world of cinema. The text focuses on the importance of the public's view of film when the medium was new but not on the idea that the public needed to be directly involved in film.

40 Correct answer **D** Easy ‹ Back to question

D a substantial

Choice D is the best answer because it most logically completes the text's discussion of the research that Lopes-Ferreira and her colleagues are conducting on the stingray species *Potamotrygon rex*. As used in this context, "a substantial" effect means an effect that is sizable or noteworthy. The text indicates that the researchers are seeking to determine whether there are "considerable variations" in the potency of stingray venom that are associated with variation in the stingrays' age and sex. This context suggests that the researchers want to find out whether stingray age and sex have a substantial effect on venom toxicity.

Choice A is incorrect because there's nothing in the text that suggests that the researchers have been studying whether the stingrays' age and sex have "a disconcerting," or an unsettling and disturbing, effect on the stingrays' venom. The text indicates that the researchers wish to determine if stingray age and sex cause large variations in the toxicity of stingray venom, not if the effect of age and sex is disconcerting. **Choice B is incorrect** because the text indicates that researchers want to find

out whether differences in stingray age and sex produce differences in stingray venom, not that the researchers want to find out whether age and sex have "an acceptable," or a satisfactory, effect on venom. The text makes no mention of what would make an effect on venom toxicity acceptable and gives no indication that the researchers are interested in that question. **Choice C is incorrect** because it wouldn't make sense in context for the researchers to be looking for "an imperceptible," or an unnoticeable, effect of age and sex on stingray venom. The text says that the researchers are trying to determine if there are "considerable variations" in venom toxicity linked to age and sex, not that the researchers are trying to find effects that they can't perceive.

41 Correct answer **C** Easy Back to question

C promote

Choice C is the best answer because it most logically completes the text's discussion of the preservation efforts undertaken by Erika Karuzas and the Confederated Salish and Kootenai Tribes of Montana. In this context, "promote" means play a part in the success or growth of something or someone. The text indicates that Karuzas and the Confederated Salish and Kootenai Tribes work to preserve culturally important sites. It goes on to say that their decision to create a national trail connecting the sites was motivated by the fact that such a trail would receive protections from the US government that the sites wouldn't otherwise receive. Thus, such a decision would promote the preservation efforts.

Choice A is incorrect because "inspire" means motivate or influence, which wouldn't make sense in context. The text establishes that Karuzas and the Confederated Salish and Kootenai Tribes of Montana work to preserve culturally significant sites and that their decision to create a new national trail occurred as a result of a desire to add protections to the sites that they wouldn't otherwise receive. Thus, creating the trail wouldn't inspire the efforts to preserve the sites; instead, it would promote the efforts. **Choice B is incorrect** because "ignore" means overlook, which wouldn't make sense in context. The text indicates that Karuzas and the Confederated Salish and Kootenai Tribes of Montana work to preserve culturally significant sites and that they decided to create a national trail connecting the sites because such a trail would receive protections from the US government that the sites wouldn't otherwise receive. Thus, the creation of the trail would promote, not ignore, the preservation efforts. **Choice D is incorrect** because "reduce" means decrease or restrict, which wouldn't make sense in context. The text indicates that Karuzas and the Confederated Salish and Kootenai Tribes of Montana work to preserve culturally significant sites and that they decided to create a national trail connecting the sites because such a trail would receive protections from the US government that the sites wouldn't otherwise receive. The decision would therefore promote, not reduce, the preservation efforts.

42 Correct answer **D** Easy Back to question

D ensuring

Choice D is the best answer because it most logically completes the text's discussion of cucurbits. In this context, "ensuring" means guaranteeing, or making sure of, the cucurbits' survival. The text states that cucurbits faced extinction in the past because their means of seed dispersal disappeared, but the ancestors of Indigenous peoples in North America began farming cucurbits around that same time, so the crops were no longer threatened. Therefore, the context supports the idea that the ancestors of Indigenous peoples in North America helped with ensuring the cucurbits' survival.

Choice A is incorrect because in this context verifying means making sure that something is accurate. In the text, the ancestors of Indigenous peoples in North America were ensuring the survival, not the accuracy of, the cucurbits. **Choice B is incorrect**. Although the cucurbit crops themselves were multiplying, or growing in number, as a result of the work of the ancestors of Indigenous peoples in North America, it wouldn't make sense in context to say that the survival of the plants was multiplying. **Choice C is incorrect** because according to the text, in raising cucurbits as crops, the ancestors of Indigenous peoples in North America were attempting to help the plants grow and survive; they weren't attempting to comfort, or free the plants from pain.

43 Correct answer **C** Easy ‹ Back to question

C relying on

Choice C is the best answer because it most logically completes the text's discussion of repairing the Hubble Space Telescope. In this context, "relying on" means depending on. The text states that astronauts have regularly had to go on missions to repair the Hubble Space Telescope but that robots might soon be able to make the repairs, which would be helpful because involving astronauts in the process is expensive. It is most reasonable to assume that it is the need to send astronauts on missions that is expensive; thus, the context suggests that employing robots for repairs will be helpful because depending on repeatedly sending humans to space is costly.

Choice A is incorrect. In this context, "straightening" would mean physically aligning or removing curves and bends. It's not clear how astronauts would be physically straightened to maintain the telescope or why that would be expensive. **Choice B is incorrect** because the text suggests that it is the ongoing involvement of astronauts—the need to send them to space regularly—that is expensive. Nothing in the text indicates that astronauts have been forgotten about or that forgetting about them would be expensive. **Choice D is incorrect**. In this context, "reducing" would most likely mean lowering in status, and nothing in the text suggests that astronauts are diminished in any way by repairing the telescope (indeed, they have regularly done repairs for years). Further, it isn't clear how a decrease in status would be expensive.

44 Correct answer **B** Easy ‹ Back to question

B indicator of

Choice B is the best answer. "Indicator" means "something that shows or suggests," which matches Taleb's argument that an item's age can suggest how much longer it will last.

Choice A is incorrect. The passage tells us that examining an item's age is the best way to predict how much longer it will last. Therefore, according to Taleb's theory, an item's age should add more certainty about how much longer it will last. **Choice C is incorrect**. A "motivation" is "a reason for doing." Items don't have feelings and motivations, so it wouldn't make sense to say that their age is a motivation for how much longer they will last. **Choice D is incorrect**. "Criticism" can mean "describing faults or problems" or "an analysis of an artistic work." Neither of these definitions makes sense here. An item's age can't criticize how much longer it will last.

45 Correct answer **D** Easy ‹ Back to question

D inspired by

Choice D is the best answer because it most logically completes the text's discussion of Carmen Lomas Garza's artistic process. In this context, "inspired by" means influenced by or motivated by. The text refers to how, regardless of the scale of the work, Garza uses her memories of Texas and details from California to create her art. If Garza is basing her work on her direct experiences, then they play a part in her artistic process. This context thus suggests that Garza's art is inspired by the experiences of her childhood in Texas and her current life in California.

Choice A is incorrect because it wouldn't make logical sense to indicate that Garza is "complimented by"—or praised by—something inanimate such as direct experience. **Choice B is incorrect** because describing Garza as "uncertain about"—or unsure or doubtful of—direct experience would suggest that she had misgivings about it. If Garza were unsure of her experiences, that would suggest that she couldn't recall them, and Garza wouldn't be able to represent direct experience in her art if she were uncertain of the memories or details. **Choice C is incorrect** because describing Garza as "unbothered by"—or uninterested in—her experience would imply the opposite of what the text suggests about Garza's artistic process. The text indicates that Garza's art comes from memories of her childhood in Texas and details of her surroundings in California.

46 Correct answer **A** Easy ‹ Back to question

A stimulated

Choice A is the best answer. "Stimulated" means "encouraged interest or increased activity in." Because the newspapers discussed the benefits of westward migration and "inspired readers to relocate," we can infer that they encouraged people to move west.

Choice B is incorrect. "Assigned" means "gave a job or duty." Newspapers do not have the power to assign people to move west, although they can encourage it. **Choice C is incorrect**. "Opposed" means "disapproved of." We can tell that this isn't the case, because the newspapers discussed "the easy fortunes and high salaries miners could make in California" and "inspired readers to relocate." **Choice D is incorrect**. "Disregarded" means "ignored." If the newspapers are writing about the west and "inspir[ing] readers to relocate," they can't be ignoring it at the same time.

47 Correct answer **A** Easy ‹ Back to question

A implement

Choice A is the best answer because it most logically completes the text's discussion of self-government among the Muscogee (Creek) Nation. In this context, "implement" means to carry out or put into effect. The text states that the National Council generates laws, while the principal chief and cabinet officials are responsible for "devising policies and administering services in accordance with" those laws. This context suggests that the principal chief and cabinet officials implement the laws: they put the laws into effect by creating policies and administering services that accord with those laws.

Choice B is incorrect because "presume" in this context would mean to assume based on incomplete information, and the text does not suggest that the principal chief and cabinet officials either made assumptions about the content of the laws or had incomplete information about them. **Choice C is incorrect** because in this context "improvise" would mean to create something without preparation, and the text does not suggest that the principal chief and cabinet officials create policies and administer services without advance preparation. **Choice D is incorrect** because nothing in the text suggests that the principal chief and cabinet officials "mimic," or imitate, the laws generated by the National Council. To mimic laws would mean to generate new laws that are imitations of existing laws, but the text indicates that the National Council, not the principal chief and cabinet officials, is responsible for generating laws. Instead of generating laws, the principal chief and cabinet officials put laws into effect by "devising policies and administering services in accordance with" the laws.

48 Correct answer **D** Easy ‹ Back to question

D overcome

Choice D is the best answer because it most logically completes the text's discussion of delivering biomolecules to plant cells. In this context, "overcome" means to succeed in dealing with an obstacle. The text suggests that although it's difficult to move biomolecules through plant cell walls, Landry and her colleagues have shown that carbon nanotubes may be useful, since they can cross cell walls. This context conveys that Landry and her colleagues think it's possible, using carbon nanotubes, to succeed in dealing with the obstacle of transmitting biomolecules to plant cells.

Choice A is incorrect because it wouldn't make sense in context to say that Landry and her colleagues have shown that it may be possible to "conceptualize," or form an idea of, the difficulty of transmitting biomolecules through the walls of plant cells. The text presents this difficulty as a known problem that Landry and her colleagues think they may have solved, not as a mysterious occurrence that they have yet to form ideas about. **Choice B is incorrect** because the text suggests that Landry and her colleagues think it may be possible to successfully deal with the problem of transmitting biomolecules through the walls of plant cells, not that Landry and her colleagues think it may be possible to "neglect," or simply to disregard and ignore the problem. **Choice C is incorrect** because it wouldn't make sense in context to say that Landry and her colleagues have

shown that it may be possible to “illustrate,” or demonstrate, the difficulty of transmitting biomolecules through the walls of plant cells by using carbon nanotubes. According to the text, carbon nanotubes allow molecules to be transmitted to plant cells—something that is otherwise difficult to do. The text therefore presents carbon nanotubes as a way of possibly solving a problem, not as a means of demonstrating the problem.

49 Correct answer **D** Easy Back to question

D distant from

Choice D is the best answer because it most logically completes the text’s discussion of manul cats. The text states that manul cats live in "out-of-the-way parts of Asia" (citing the famously remote Mount Everest as an example) and indicates that it is difficult to research the cats because of the location of their habitats. By emphasizing that the habitats are remote in relation to humans, the text conveys that being "distant from," or far from, large groups of humans makes manul cats challenging to study.

Choice A is incorrect because saying that the habitats of manul cats are "full of large populations of humans" would indicate that the cats cohabitate with many humans, which would directly contradict the text’s claim that the cats live in "out-of-the-way" areas. **Choice B is incorrect** because the missing words describe an aspect of manul cats’ habitats, or the areas where they live, and it wouldn’t make sense to say that areas could be "drawn to," or attracted by, large groups of humans. **Choice C is incorrect**. In this context, "responsible for" would mean either having an obligation to care for something or being the cause of something, and it wouldn’t make sense to say that the habitats of manul cats (the areas where the cats live) would need to care for humans or that the habitats somehow created large human populations.

50 Correct answer **B** Easy Back to question

B inexpensive

Choice B is the best answer because it most logically completes the text’s discussion of ways to detect people through walls. In this context, "inexpensive" means less costly or low in price. The passage describes two kinds of methods that can be used to "detect objects or people through walls": radar and sonar, and changes to the Wi-Fi technology used in smartphones. The word "comparatively" before the blank indicates that the best answer would be one that helps to describe a comparison between the two. Radar and sonar are described as "costly," while the method that uses Wi-Fi technology is described as "cheap"; therefore, it would be comparatively affordable, or inexpensive.

Choice A is incorrect because the text indicates that a small modification to the smartphones that many consumers already own would presumably result in consumers using that technology to detect objects or people through walls more regularly, or frequently; therefore, it would not be true that such technology would be comparatively infrequent, or uncommon. **Choice C is incorrect** because there is nothing in the text to indicate that either radar and sonar or changes to smartphone Wi-Fi technology are capable of being misunderstood or mistaken for something else; therefore, it would not make sense to describe changes to Wi-Fi smartphone technology as comparatively unmistakable, or indisputable. **Choice D is incorrect** because the text indicates that a small modification to the smartphones that many consumers already own and carry with them would be more functional or practical than radar and sonar, not more impractical, or unrealistic.

51 Correct answer **A** Easy Back to question

A a contributing factor

Choice A is the best answer because it most logically completes the text’s discussion of how logo shapes affect consumer attitudes toward brands. In this context, “a contributing factor” means an element that helps produce a particular outcome. The text indicates that researchers studied how consumers develop attitudes toward brands and found that logo shape affects those attitudes: rounded logos led consumers to view brands as “significantly more approachable” than angular logos did,

even when the brand names were the same. This context supports the idea that logo shape is a contributing factor to consumer attitudes toward brands—that is, it helps influence how consumers perceive brands.

Choice B is incorrect because describing logo shapes as "an analogous case," or an instance comparable to another instance, wouldn't make sense in this context. The text doesn't mention any factor other than logo shape, and thus the text doesn't provide another case (analogous or otherwise) against which to compare the effect of logo shape. **Choice C is incorrect** because describing logo shapes as "an overlooked effect," or a result that has been disregarded, wouldn't make sense in this context. The text is focused on describing observations about the effect of logo shape on consumer attitudes toward brands, but at no point does it suggest that this effect has been overlooked or disregarded. **Choice D is incorrect** because describing logo shapes as "a surprising paradox," or a self-contradictory finding, wouldn't make sense in this context. The finding that different logo shapes produce different consumer attitudes is straightforward and doesn't exhibit any internal contradiction.

52 Correct answer **A** Easy ‹ Back to question

A responsive

Choice A is the best answer because it most logically completes the text's discussion of oysters and ocean recordings. As used in this context, "responsive" means reacting positively. The text presents a finding and describes it as suggesting that healthy ocean sounds may encourage oyster larvae to establish a reef (a permanent home): groups of oyster larvae that heard recorded sounds of a healthy oyster reef were two times more likely to show signs of forming their own reef than groups that heard different ocean recordings were. This context conveys that the groups that heard healthy reef sounds had a more positive reaction than the other groups did—that is, they were the most responsive.

Choice B is incorrect because the text doesn't indicate that hearing sounds of a healthy oyster reef caused some groups of oyster larvae to become "inactive," or to stop engaging in work or activity. Instead, the text conveys that the groups that heard those sounds were observed engaging in activity: they were two times more likely to create a reef (a permanent home) than groups that heard different ocean sounds were. **Choice C is incorrect** because describing the groups of oyster larvae that heard sounds of a healthy oyster reef as most "liked," or regarded with pleasure, wouldn't make sense in context. The text focuses on the idea that a study found that healthy reef sounds may encourage groups of oyster larvae to form reefs (permanent homes), not on the idea that some of the groups in the study were liked more than others. **Choice D is incorrect** because the text doesn't indicate that hearing sounds of a healthy oyster reef caused some groups of oyster larvae to be "distressed," or to experience difficulty or begin to decline. Instead, the text indicates that the sounds increased the likelihood that groups of larvae would establish a reef (a permanent home), suggesting that the sounds had a positive effect on the larvae.

53 Correct answer **B** Easy ‹ Back to question

B enthusiasm for

Choice B is the best answer because it most logically completes the text's discussion of Cole's book *Blind Spot*. In this context, "enthusiasm for" means excitement about. The text explains that *Blind Spot* consists of original photographs as well as poetic prose—two elements that correspond to Cole's passions, identified in the text, for photography and the written word. This context suggests that Cole's excitement about photography and writing led him to create a book that successfully combines the two mediums.

Choice A is incorrect because describing Cole as feeling "indifference to" his two passions wouldn't make sense in context. If Cole is indifferent to his passions, that would mean he doesn't care about photography or writing—in which case they wouldn't be his passions at all. **Choice C is incorrect** because there's nothing in the text to suggest that Cole feels "concern about," or uneasiness about, his passions. The text's use of the word "culminates" indicates that *Blind Spot* represents a triumphant climax of Cole's passions, not a work that results from his sense of discomfort with photography and writing. **Choice D is incorrect** because there's nothing in the text to suggest that Cole feels "surprise at," or astonished by, his passions. The text

indicates that Cole's feeling about his passions "culminates" in a book that "evocatively" combines photographs and writing, suggesting that Cole has a long-standing and skillful relationship to his passions, not that he is startled by them.

54 Correct answer **B** Easy Back to question

B reciprocates

Choice B is the best answer because it most logically completes the text's discussion of ectomycorrhizae relationships. In this context, "reciprocates" means responds in kind or degree. The text indicates that the relationship between certain fungi and trees in some habitats is "mutually beneficial" and involves a "symbiotic exchange" in which each organism helps the other access an important nutrient. In other words, each organism provides the same kind of benefit it receives: the tree provides a nutrient (carbon) for the fungus and the fungus reciprocates by helping the tree to absorb more of another nutrient (nitrogen).

Choice A is incorrect because the text emphasizes that the relationship between certain fungi and trees in some habitats involves a "symbiotic exchange" in which each organism helps the other access an important nutrient. Nothing in the text suggests that the fungus "overreacts," or responds too strongly, by allowing the tree to be better able to absorb a beneficial nutrient. **Choice C is incorrect** because "retaliates" means responds to a harmful action with a similarly harmful action. The text indicates that the relationship between certain fungi and trees in some habitats is "mutually beneficial" and involves a "symbiotic exchange" in which each organism helps the other, not that the relationship is one in which the organisms harm one another. **Choice D is incorrect**. In this context, "deviates" would mean departs from an established course or norm. The text explains that the relationship between certain fungi and trees in some habitats involves a "symbiotic exchange" in which each organism helps the other access an important nutrient. Because the relationship involves benefits for both the fungus and the tree, it wouldn't make sense to say that the fungus deviates by helping the tree be better able to absorb a beneficial nutrient.

55 Correct answer **C** Easy Back to question

C popularize

Choice C is the best answer because it most logically completes the text's discussion of *carte de visite* photos. To "popularize" a technology is to allow it to be used and appreciated widely. The text explains that unlike the photos produced by earlier forms of photographic technology, *carte de visite* photos were inexpensive and could easily be obtained by "everyday people," who enjoyed exchanging the images. Therefore, *carte de visite* photos helped popularize photography.

Choice A is incorrect because the text indicates that instead of weakening the emerging technology of photography, *carte de visite* photos allowed it to be more widely accessed and enjoyed by people. **Choice B is incorrect**. The text establishes that large numbers of people enjoyed using *carte de visite* photos, so it can be inferred that these photos caused photography to be praised, or celebrated. However, it wouldn't make sense to say that inanimate objects—in this case, photos—had praised photography; instead, *carte de visite* consumers themselves would have praised it. **Choice D is incorrect** because the text explains that rather than isolating photography, or limiting its availability, *carte de visite* technology made photography more widely accessible to people.

56 Correct answer **B** Easy Back to question

B hinder

Choice B is the best answer because it most logically completes the text's discussion of Booker T. Whatley. In this context, "hinder" means hold back or obstruct. The text explains that Whatley encouraged farms to allow customers on site to pick their own produce for a fee. He did so despite critics' concerns that the customers would never pay to do so. This context establishes that the critics' concerns didn't hinder Whatley's efforts to promote the practice.

Choice A is incorrect. The text indicates that critics' skepticism of the idea that customers would pay to pick their own produce didn't have some effect on Whatley's promotion of the practice. The text illustrates this assertion by describing Whatley's "determined advocacy" for the practice. This context suggests that critics' concerns didn't obstruct Whatley's efforts, not that critics' concerns didn't "enhance," or increase or improve, Whatley's efforts. **Choice C is incorrect** because in this context, "misrepresent" would mean portray inaccurately, and the text includes no information relevant to the issue of how Whatley's efforts were portrayed by critics of the practice of charging customers to pick their own produce. **Choice D is incorrect**. The text indicates that critics' skepticism of the idea that customers would pay to pick their own produce didn't have some effect on Whatley's promotion of the practice. The text illustrates this assertion by describing Whatley's "determined advocacy" for the practice. This context suggests that critics' concerns didn't obstruct Whatley's efforts, not that critics' concerns didn't "aggravate," or irritate or make more severe, Whatley's efforts.

57 Correct answer **D** Easy Back to question

D original

Choice D is the best answer because it most logically completes the text's discussion of the dating of Machu Picchu. In this context, "original" means first or initial. The text indicates that Lucy Salazar and her colleagues have determined the age of Machu Picchu and that the age differs from another estimate of the site's age, explaining that the site is about 20 years older than scholars thought in 1911 when they initially encountered Machu Picchu. In other words, Salazar and her team found that the site's age differs from the first estimate.

Choice A is incorrect. The text's structure indicates that the missing word describes the estimate made by scholars when they first encountered Machu Picchu in 1911 in relation to the age determined by Salazar and her colleagues. It wouldn't make sense to suggest that the estimate by earlier scholars was "genuine," or actual and true, while the one by Salazar's team wasn't, since the text treats the finding by Salazar's team as true and as invalidating the earlier estimate ("it is approximately 20 years older than scholars thought"). **Choice B is incorrect**. The text's structure indicates that the missing word describes the estimate made by scholars when they first encountered Machu Picchu in 1911 in relation to the age determined by Salazar and her colleagues. It wouldn't make sense to suggest that the estimate by earlier scholars was "intentional," or done on purpose, while the one by Salazar's team wasn't; the text indicates that Salazar and her colleagues were deliberately using radiocarbon dating to study Machu Picchu. **Choice C is incorrect**. The text's structure indicates that the missing word describes the estimate made by scholars when they first encountered Machu Picchu in 1911 in relation to the age determined by Salazar and her colleagues. There's no reason to suggest that the estimate by earlier scholars was "independent," or not controlled by or affiliated with others, while the one by Salazar's team wasn't; there's no mention of any outside influence on the work by Salazar and her team or by scholars in 1911.

58 Correct answer **C** Easy Back to question

C imitation

Choice C is the best answer because it most logically completes the text's discussion of novelist Leon Forrest's admiration of William Faulkner's writing style. In this context, "imitation" means something that resembles or reproduces something else. The text states that Forrest admired Faulkner's style and that anyone familiar with Faulkner's style would be able to see the stylistic similarities between a particular passage in Forrest's novel *Divine Days* and Faulkner's writing, a fact that supports the idea that Forrest's novel pays tribute to Faulkner by reproducing, or imitating, Faulkner's style.

Choice A is incorrect because in this context, a "forgetting" would mean an instance in which something is overlooked or not remembered. The text emphasizes Forrest's admiration for Faulkner's style and the fact that Forrest's writing in some instances closely resembles Faulkner's stylistically. It therefore wouldn't make sense to say that in trying to pay tribute to Faulkner's style, Forrest failed to remember it. **Choice B is incorrect** because in this context, a "rejection" would mean a dismissal of something as unworthy. The text emphasizes Forrest's admiration for Faulkner's writing style, stating that parts of Forrest's writings indicate efforts to copy that style. It wouldn't make sense therefore to suggest that Forrest had rejected or dismissed Faulkner's

style as unworthy. **Choice D is incorrect** because in this context, an "opinion" would mean a view or judgment. Although the text focuses on Forrest's admiration of Faulkner, which suggests that Forrest had formed a positive judgment of Faulkner's style, the word opinion wouldn't make sense in this sentence: the sentence doesn't say that the passage from Forrest's novel expresses his view of Faulkner's style; rather, it suggests that stylistically, the passage closely resembles, or imitates, Faulkner's writing.

59 Correct answer **B** Easy Back to question

B comparable to

Choice B is the best answer because it most logically completes the text's discussion of the fossilized bones of the hominin known as Little Foot. As used in this context, "comparable to" would mean similar to. The text indicates that the relationship between the fossilized clavicle and shoulder bones of Little Foot and the clavicle and shoulder bones of "frequent climbers," such as chimpanzees and gorillas, suggests that Little Foot had adapted to moving around in trees. This context suggests that the relationship between the fossilized bones of Little Foot and the bones of chimpanzees and gorillas is one of similarity—the Little Foot fossils are likely comparable to the modern ape bones.

Choice A is incorrect because if the fossilized bones of Little Foot were "surpassed by," or exceeded by or made inferior to, the bones of modern apes that are frequent climbers, it wouldn't suggest, as the text says, that Little Foot was adapted to moving around in trees. If anything, learning that Little Foot's clavicle and shoulder bones were surpassed by those of chimpanzees and gorillas would suggest that Little Foot was poorly adapted to climbing. **Choice C is incorrect** because if Little Foot's fossilized clavicle and shoulder bones were "independent of," or not influenced by or affiliated with, the bones of modern apes that climb often, it wouldn't suggest, as the text says, that Little Foot was adapted to moving around in trees. **Choice D is incorrect** because the text indicates that Little Foot's fossilized bones date to 3.6 million years ago, so they couldn't have been "obtained from," or acquired from, the bones of modern apes.

60 Correct answer **C** Easy Back to question

C rousing

Choice C is the best answer because it most logically completes the text's discussion of the play's effect on audiences. As used in this context, "rousing" means exciting or energizing. The text indicates that critics found the play to have "the opposite effect" on audiences of what the playwrights hoped for. The critics, the text says, thought the play was wearying rather than energizing to viewers. This context supports the idea that the playwrights hoped live performances of the play would be energizing, or rousing, to audiences.

Choice A is incorrect because there's no information in the text suggesting that the playwrights hoped live performances of the play would be "multifaceted," or be varied or have many aspects. The text indicates that critics found the play to be wearying to audiences and that this was the opposite of what the playwrights hoped for. Multifaceted is not the opposite of wearying, but rousing is, which suggests that the playwrights hoped the play would be rousing. **Choice B is incorrect** because there's no information in the text suggesting that the playwrights hoped live performances of the play would be "realistic," or lifelike or sensible. The text says that critics found the play to be wearying to audiences and that this was the opposite of what the playwrights hoped for. Realistic is not the opposite of wearying, but rousing is, which suggests that the playwrights hoped the play would be rousing. **Choice D is incorrect** because there's no information in the text suggesting that the playwrights hoped live performances of the play would be subtle, or complex or understated. The text says that critics found the play to be wearying to audiences and that this was the opposite of what the playwrights hoped for. Subtle is not the opposite of wearying, but rousing is, which suggests that the playwrights hoped the play would be rousing.

61 Correct answer **A** Easy Back to question

A a suitable

Choice A is the best answer. "Suitable" means "appropriate for a particular purpose." Since the text indicates that two of the best ballet dancers of the twentieth century were Osage, we can infer that the author believes that ballet is a very suitable artform for telling Osage stories.

Choice B is incorrect. The text never suggests that Tinker-Smith's choice was determined. That would imply that Tinker-Smith initially faced some kind of obstacle or opposition, and nothing like that is mentioned in the passage. **Choice C is incorrect**. The text implies the opposite of this. "Arbitrary" means "based on random choice or whim rather than reason." But the text does give us a good reason behind the choice to tell Osage stories through ballet: two of the best ballet dancers of the twentieth century were Osage. **Choice D is incorrect**. The text never suggests that Tinker-Smith's choice was "unpredictable." Rather, the fact that two of the best ballet dancers of the twentieth century were Osage makes ballet especially appropriate for telling Osage stories.

62 Correct answer **B** Easy Back to question

B partnership

Choice B is the best answer because it most logically completes the text's discussion of the cover art of Virginia Woolf's novels. In this context, "partnership" means collaboration or joint effort. The text states that Woolf's sister Vanessa Bell was a talented painter and that Bell worked with Woolf to provide the cover art for most of Woolf's novels. Thus, this context suggests that Woolf and Bell pursued a creative partnership in order to produce several of Woolf's novels.

Choice A is incorrect because there is no indication that Woolf or Bell were undergoing a "rebellion," or revolt, against anything in particular. Instead, the text focuses on how they worked together in some aspects of the production of Woolf's novels. **Choice C is incorrect** because there is nothing in the text to indicate that Woolf or Bell made a "discovery," or encountered anything new for the first time as they worked together. The text suggests that Woolf had already written her novels and that Bell then assisted Woolf with the cover art for many of them. **Choice D is incorrect** because the text implies that Woolf and Bell had a positive relationship. According to the text, the sisters "worked closely" together to produce the cover art for many of Woolf's novels; the text doesn't mention whether while working together, Woolf and Bell had a "disagreement," or conflict.

63 Correct answer **B** Easy Back to question

B attractive to

Choice B is the best answer because it best completes the text's discussion of how viewers respond to colors. The text presents something art scholars have noted and gives the example of people tending to find paintings with blues and greens more appealing than those with yellows and oranges. This context conveys that certain colors are more "attractive to" viewers than other colors are.

Choice A is incorrect because the text indicates only that people tend to find some colors more appealing than others and gives no indication that certain colors are ever "confusing for," or puzzling to, viewers. **Choice C is incorrect** because the text discusses the relative appeal of certain colors in paintings but gives no indication that any colors would ever be "corrected by" viewers, or somehow fixed or improved by them. **Choice D is incorrect** because it wouldn't make much sense to say that some colors are more "similar to" viewers than others, which would suggest that colors and viewers are alike to different degrees. Further, the text primarily emphasizes a difference, not a similarity, in how appealing paintings tend to be based on the colors they contain.

64 Correct answer **B** Easy < Back to question

B collected

Choice B is the best answer because it most logically completes the text's discussion of the OSIRIS-REx spacecraft's contact with the asteroid 101955 Bennu. In this context, "collected" means acquired and took away. The text indicates that although the boulders on the asteroid's surface caused some unforeseen problems, OSIRIS-REx was able to gather a sample to return to Earth. This context suggests that OSIRIS-REx successfully collected a sample of 101955 Bennu.

Choice A is incorrect because in this context "attached" means connected or affixed. The text indicates that OSIRIS-REx gathered pieces of 101955 Bennu to bring to Earth; it doesn't suggest that the spacecraft attached anything to the asteroid. **Choice C is incorrect** because in this context "followed" means tracked or traveled behind and the text discusses OSIRIS-REx's brief encounter with 101955 Bennu during which the spacecraft gathered a sample to bring to Earth. The text doesn't suggest that the spacecraft tracked the sample, and it's not clear what it would mean for the spacecraft to travel behind the sample it collected. **Choice D is incorrect** because in this context "replaced" means put back or returned. The text indicates that OSIRIS-REx gathered pieces of 101955 Bennu to bring to Earth but doesn't suggest that anything was returned to the asteroid.

65 Correct answer **A** Easy < Back to question

A synchronization

Choice A is the best answer because it most logically completes the text's discussion of a relationship between the dodder plant and its host plant. As used in this context, "synchronization" means the act of things happening at the same time. The text indicates that the dodder and its host plant flower in unison and that this synchronization occurs because the dodder makes use of a protein produced by the host shortly before flowering.

Choice B is incorrect because referring to "hibernation," or the state of being dormant or inactive, wouldn't make sense in context. The text focuses on something the dodder plant actively engages in—making use of a protein and producing flowers. **Choice C is incorrect** because stating that the dodder plant and its host engage together in "prediction," or the act of declaring or indicating something in advance, wouldn't make sense in context. Rather than indicating that the dodder plant and its host plant make a prediction about flowering activity, the text suggests that the host produces a protein as part of its regular flowering process and that the dodder then absorbs and uses that protein to flower at the same time. **Choice D is incorrect** because referring to "moderation," or the act of causing something to become less intense or extreme, wouldn't make sense in context. Although the text states that the dodder plant absorbs and uses a protein made by its host plant, it doesn't suggest that the dodder lessens the host plant's flowering activity; the two plants simply flower in unison.

66 Correct answer **B** Easy < Back to question

B introduced

Choice B is the best answer because it most logically completes the text's discussion of the contributions of the Sumerian civilization. In this context, "introduced" means brought into practice or use. The text states that the first reference to a seven-day week appears in the Sumerian *Epic of Gilgamesh*. The text presents this information about the seven-day week as an example of a concept introduced by the Sumerian civilization that persists into present-day civilizations.

Choice A is incorrect because nothing in the text suggests that the Sumerian civilization "transformed," or changed the nature of, concepts that persist into present-day civilizations. Instead, the text's presentation of a Sumerian literary work that contains the first description of the seven-day week is an example of the phenomenon described in the first half of the sentence, suggesting that the Sumerians invented many concepts that still persist. **Choice C is incorrect** because the information that a Sumerian literary work includes the first description of the seven-day week suggests that Sumerian civilization may have originated the seven-day week and other concepts that persist into present-day civilizations, not that it "inherited" the

concepts, or received them from an ancestral figure or culture. **Choice D is incorrect** because the information that Sumerian civilization produced the first description of the seven-day week is presented as an example of the phenomenon described in the first half of the sentence, suggesting that Sumerian civilization originated this and other concepts that still persist, not that the Sumerians "overlooked," or failed to notice or consider, such concepts.

67 Correct answer **A** Easy Back to question

A foundational

Choice A is the best answer because it most logically completes the text's discussion of physicist Joseph Webster's research on gravitational waves. In this context "foundational" means the basis on which something else develops. The text indicates that Webster's experiments in the 1960s and 1970s were earlier than, and "key" to, the work of later scientists in the field; thus, Webster's work was foundational to the later scientists' experiments and the eventual detection of a gravitational wave in 2015.

Choice B is incorrect because the text does not suggest that Webster's work was supplementary, or an additional element of an existing, larger project, but rather it was "the basis for" later experiments. **Choice C is incorrect** because the text does not assert that Webster's work was repetitive, or involved doing something the same way many times. Rather, the text indicates that Webster's work formed the basis for later investigations in the field of gravitational wave research. **Choice D is incorrect** because the text does not state that Webster's work was ineffective, or failed to produce the desired outcome. Rather, the text strongly implies that Webster's work was productive and extremely important to later work in the field of gravitational wave research.

68 Correct answer **D** Easy Back to question

D contradicted

Choice D is the best answer because it most logically completes the text's discussion of the initial spread of silk beyond China. In this context, "contradicted" means opposed or challenged. The text indicates that new archaeological evidence about silk use in South Asia has done something to a long-held thought about the initial spread of silk. According to the text, the new evidence reveals that people used silk in South Asia 1,000 years before the second century CE, which directly challenges the previous belief that silk first spread beyond China in the second century CE.

Choice A is incorrect because the text indicates that an archaeological finding about silk use has done something to a long-held thought about the initial spread of silk, and it wouldn't make sense to suggest that the finding could have "investigated," or examined, a belief; evidence can't examine anything. **Choice B is incorrect** because the text indicates that an archaeological finding about silk use has done something to a long-held thought about the initial spread of silk, and it wouldn't make sense to suggest that the finding could have "misinterpreted," or incorrectly understood, a belief; evidence can't try to understand anything. **Choice C is incorrect**. In this context, "anticipated" would mean expected or predicted. The text indicates that a new archaeological finding about silk use has done something to a long-held thought about the initial spread of silk, and a new finding can't predict a belief that is already established.

69 Correct answer **C** Easy Back to question

C traditional

Choice C is the best answer because it most logically completes the text's discussion of Helen Liu Fong's architectural designs. In this context, "traditional" means conventional. The text states that rather than use "standard shapes and colors," Fong pursued "innovative" and "daring" design choices in her work. Fong's style is depicted as inventive, so it therefore makes sense in this context that she avoided mainstream, traditional designs in her buildings.

Choice A is incorrect because the text indicates that Fong's work is innovative and experimental. Thus, Fong's design choices could reasonably be considered creative, or original. She likely would have pursued creative designs, not avoided them. **Choice B is incorrect** because the text indicates that Fong used "daring" hues in her designs. Thus, Fong likely would have pursued bold, or brave and vivid design choices; she wouldn't have avoided them. **Choice D is incorrect** because the text doesn't address whether Fong's designs are understandable, or reasonable or expected. The text focuses on certain characteristics of Fong's designs, not on how people received or understood them.

70 Correct answer **A** Easy Back to question

A theory

Choice A is the best answer because it most logically completes the text's discussion of a prediction about a kilonova. In this context, a "theory" is an explanation that is considered scientifically acceptable. The text states that astronomers predicted in the 1990s that a collision between a black hole and a neutron star or between two neutron stars could release a massive gamma ray burst called a kilonova, explaining that they determined this possibility based on their extensive work with existing data and simulations ("calculations and models"). In other words, the prediction was a theory—a well-supported explanation—that, as the text indicates, was later confirmed with observations in 2017.

Choice B is incorrect because the text indicates that it is the prediction made by astronomers in the 1990s that was confirmed in 2017, and a prediction of an event isn't "evidence," or proof, of that event's existence, even when the prediction is based on extensive study. Further, there would be no need for later confirmation of something that was already recognized as evidence. **Choice C is incorrect** because in this context, a "constant" is a situation or factor that doesn't change. The text indicates that it is the prediction made by astronomers in the 1990s that was confirmed in 2017, and there is no reason to describe the prediction as a constant because the text doesn't suggest that the prediction was completely unchanged over time—it addresses only the making of the prediction and its later confirmation. **Choice D is incorrect** because the text indicates that it is the prediction made by astronomers in the 1990s that was confirmed in 2017; although a prediction might be informed by an "experiment," or a controlled test, a prediction is an idea rather than a test.

71 Correct answer **D** Easy Back to question

D similarities with

Choice D is the best answer because in context, sharing "similarities with" means having some resemblance to. The text establishes a comparison between two groups of mammals, stating that although they aren't closely related, hedgehog tenrecs and true hedgehogs play similar roles in their habitats, a circumstance that has resulted in the independent development of some of the same physical traits. This context supports the idea that hedgehog tenrecs resemble, or share basic similarities with, true hedgehogs in some respects.

Choice A is incorrect because the text doesn't suggest that hedgehog tenrecs are "examples of," or representative of, true hedgehogs. The text states that despite some shared physical traits, the two groups of mammals aren't closely related; therefore, hedgehog tenrecs can't be examples of true hedgehogs. **Choice B is incorrect** because in this context, "concerns about" would mean worries about or interests in. The text focuses on the various physical traits that hedgehog tenrecs and true hedgehogs share. There's nothing in the text to suggest why hedgehog tenrecs would be worried about true hedgehogs, or why they would be interested in them. **Choice C is incorrect** because in this context, "indications of" would mean evidence of. By listing a set of traits that hedgehog tenrecs share with true hedgehogs, the text establishes a comparison between the two groups of mammals, and saying that the traits shared within one group of mammals provide evidence of another group of mammals wouldn't be an effective way to establish the similarities between the two groups.

72 Correct answer **B** Easy ‹ Back to question

B spans

Choice B is the best answer because it most logically completes the text's discussion of the *Sueño de Familia* art exhibition. In this context, "spans" means extends across or covers. The text states that the exhibition explores González's artistic heritage and features artwork by her great-grandfather, grandmother, mother, and niece. This context conveys the idea that the exhibition spans, or extends across, five generations of González's family.

Choice A is incorrect because it wouldn't make sense to say that the exhibition "borrows," or acquires, five generations of González's family. The text indicates that the exhibition features artwork by family members from five generations, not that the five generations themselves have been acquired for inclusion in the exhibition. **Choice C is incorrect** because the text indicates that the purpose of the exhibition is to highlight artwork, not to "judge," or give an opinion on, five generations of the artist's family. **Choice D is incorrect** because the text doesn't suggest that the exhibition "neglects," or gives little attention to, five generations of González's family. On the contrary, the text indicates that the exhibition is dedicated to exploring González's artistic heritage and therefore designed to bring attention to her family members and their artwork.

73 Correct answer **A** Easy ‹ Back to question

A speculate about

Choice A is the best answer. "Speculate" means "to form a theory or guess without any clear evidence." This makes sense because, due to the lack of "clear evidence," the archaeologists can only guess how the *pessoi* set might have come to be there.

Choice B is incorrect. "Dismiss" can mean "send away" or "treat as unworthy of consideration." The text implies that the archaeologists are trying to figure out the truth—they wouldn't "dismiss" what really happened. **Choice C is incorrect**. "Expand on" means "give more details about," but there aren't any details to give. Without any "clear evidence," the archaeologists can't give any more details. **Choice D is incorrect**. "Catalog" means "carefully record" or "make a list of." However, there's no "clear evidence," so there's no real information to "catalog."

74 Correct answer **A** Easy ‹ Back to question

A source

Choice A is the best answer because it most logically completes the text's discussion of the role of the general store in US rural communities during the 1800s. In this context, "source" means a place where something originates or is obtained. The text states that people would share news while socializing at the general store. This context supports the idea that the store served as a source of information in rural communities.

Choice B is incorrect because "rival" would mean competitor or opponent. The text doesn't indicate that the general store was a rival of anything. Instead, the text describes the general store as a place that enabled the sharing of information within rural communities. **Choice C is incorrect** because in this context, "condition" would mean state, circumstance, or requirement. Although the text implies that visiting the store was helpful for acquiring information since people shared news there, it wouldn't make sense to say that the general store was a condition of information. **Choice D is incorrect** because "waste" would mean something that is unused, discarded, or spent unnecessarily, which would not make sense in context. The text describes the general store as an essential part of daily life and a place for socializing and information sharing. The store was therefore a source, not a waste, of information.

75 Correct answer **B** Easy ‹ Back to question

B featured

Choice B is the best answer because it most logically completes the text's discussion of traffic signals. The text indicates that while US traffic signals now have lights of three different colors (red, yellow, and green), before some point in the 1920s they had only red and green lights. This context conveys that before three-color signals were developed, traffic lights "featured," or had as a characteristic, just two colors.

Choice A is incorrect because it wouldn't make sense to suggest that traffic signals could have ever "avoided," or stayed away from, certain colors of lights. The people who made the traffic signals might have chosen not to use certain colors, but signals themselves can't make choices. **Choice C is incorrect**. In this context, "appreciated" would mean valued or recognized with gratitude, and it wouldn't make sense to suggest that traffic signals could have ever valued or recognized anything. **Choice D is incorrect**. In this context, "disregarded" would mean ignored or treated as unworthy, and it wouldn't make sense to suggest that traffic signals could have ever ignored something or had an opinion of something's worth.

76 Correct answer **B** Easy ‹ Back to question

B recognize

Choice B is the best answer because it most logically completes the text's discussion of the purpose of the National Heritage Fellowship. In this context, "recognize" means acknowledge or honor someone officially for their achievements. The text states that the fellowship was created for "exceptional folk and traditional artists." It then provides an example of one recipient of the fellowship, circus aerialist Dolly Jacobs, who was given the fellowship "to celebrate her lifetime contributions to the arts." The fact that the fellowship is given to celebrate exceptional artists for their achievements therefore suggests that its purpose is to publicly honor, or recognize, them.

Choice A is incorrect because "startle" would mean alarm or surprise, and there's nothing in the text to suggest that Jacobs and other artists who received the National Heritage Fellowship didn't expect to receive it or were alarmed by it. It therefore wouldn't make sense to say the fellowship was created to publicly alarm or surprise exceptional artists. **Choice C is incorrect** because in this context, "familiarize" would mean make known or familiar, but the text gives no indication that Jacobs or other recipients of the National Heritage Fellowship were unknown or unfamiliar before receiving the fellowship or that the fellowship was intended to make them familiar to the public. In fact, the text describes recipients as "exceptional" and notes that Jacobs received the award "to celebrate her lifetime contributions to the arts," both of which suggest that Jacobs and other recipients were already well known in the arts world. **Choice D is incorrect** because "convey" would mean either transport or communicate something, neither of which would be logical in this context. The fellowship doesn't transport artists, and though the process of awarding the fellowship might communicate something about the artists to the general public, it would be illogical to state that the fellowship communicates the artists themselves. Rather, the fellowship honors artists for their contributions.

77 Correct answer **C** Easy ‹ Back to question

C interconnected

Choice C is the best answer because it most logically completes the text's discussion of Bali's *subak* water management system. In this context, "interconnected" would mean joined or linked together. The text describes the various components of the subak system—"terraces, canals, and water temples"—and then states that they are "joined together into a single cohesive unit." This context indicates that these elements are connected with one another in an integrated system.

Choice A is incorrect because "outmoded" would mean outdated or no longer in use. While the text does indicate that the subak system has "rich cultural, philosophical, and historical significance," the text doesn't suggest that the subak system is

obsolete or not currently used. **Choice B is incorrect** because "informal" would suggest that the subak system lacks structure or organization. The text contradicts this by describing a complex system with specific components ("terraces, canals, and water temples") that are "joined together into a single cohesive unit," indicating formal organization rather than informality. **Choice D is incorrect** because "optional" would suggest that the various elements of the subak system are not necessary or required. The text indicates the opposite by stating that these elements are "joined together into a single cohesive unit," suggesting that each component plays a necessary role in the functioning of the integrated system.

78 Correct answer **D** Easy Back to question

D suppress

Choice D is the best answer because it most logically completes the text's discussion of Georgi Vladimov's novel *Faithful Ruslan*. In this context, "suppress" means to prevent something, such as a book, from being accessed by the public. The text indicates that the novel was circulated secretly within the Soviet Union, a stratagem that was necessary because of the government's efforts to suppress the book, or prevent it from being circulated and read.

Choice A is incorrect because in this context, "replicate" would mean to copy or reproduce a book, and this meaning wouldn't make sense in the text's discussion of *Faithful Ruslan*. If the Soviet government had attempted to replicate Vladimov's novel, there would be no reason for copies to circulate "in secret," since the government would be actively making more copies available, not restricting access. **Choice B is incorrect**. Although a repressive government might well "critique" a novel, or evaluate it negatively, simply critiquing one wouldn't necessarily lead to copies of it circulating "in secret." Instead, the text suggests that the Soviet government took decisive action against *Faithful Ruslan* that necessitated its underground circulation and did not merely offer criticism of the novel. **Choice C is incorrect** because "import" means to bring a product, such as a book, into a country from elsewhere. However, the text suggests that copies of *Faithful Ruslan* were already present in the Soviet Union and that the government was trying to restrict their circulation rather than increasing access to the novel by importing copies from another country.

79 Correct answer **D** Easy Back to question

D demonstrating

Choice D is the best answer. "Demonstrating" means "showing," and the text describes how de Santana disproved a previous belief in only one species of electric eel by showing that three electric eel species actually exist.

Choice A is incorrect. Pretending that there are three species of electric eel might be a fun game for marine biologists, but it wouldn't prove the existence of more than one species. **Choice B is incorrect**. Complaining won't prove anything about eels, so de Santana could not have proved wrong the idea of only one species of electric eel by complaining about it. **Choice C is incorrect**. "Requiring" means "needing." It wouldn't make sense to say that de Santana "needed" there to be three distinct species of electric eel.

80 Correct answer **B** Easy Back to question

B efficient

Choice B is the best answer because it most logically completes the text's discussion about Kouchaki and colleagues' research into how workload affects productivity. In context, "efficient" means effective or well organized. The text indicates that, according to Kouchaki and colleagues' research, people who worked on hard tasks first were "more skilled and productive" than those who did easy tasks first. This context conveys the idea that despite their sense of accomplishment, the people who chose to do the easy tasks first were less efficient or productive than those who tackled hard tasks first.

Choice A is incorrect because there's nothing in the text to suggest that workers who do easy tasks first are less "secretive," or uncommunicative or silent, than those who do hard tasks first. Rather, the text suggests that people are less skillful or efficient if they tackle easy tasks before the hard ones. **Choice C is incorrect** because "outgoing" means openly friendly, which wouldn't make sense in this context. The text focuses on Kouchaki and colleagues' research in which people who worked on hard tasks first were "more skilled and productive" than those who did easy tasks first and were therefore less efficient. **Choice D is incorrect** because there's nothing in the text to suggest that workers who do easy tasks first are less "unsympathetic," or insensitive or unkind, than those who do hard tasks first. Rather, the text suggests that people are less skillful or efficient if they tackle easy tasks before the hard ones.

81 Correct answer **D** Easy Back to question

D depended on

Choice D is the best answer because it most logically completes the text's discussion of Arturo A. Schomburg's collection. In this context, the phrase "depended on" means relied on. The text explains that Schomburg, wanting to preserve "books, art, and other materials" created by peoples of African descent from around the world, built a large collection of these objects. The text also states that in order to obtain these items, Schomburg asked friends and colleagues who were traveling internationally to bring them back for him. This implies that he wouldn't have been able to create his collection without help. Thus, the context supports the idea that Schomburg relied on, or depended on, friends and colleagues to build his collection.

Choice A is incorrect because "admired" means respected and approved of. Although it's reasonable to expect that Schomburg respected his friends and colleagues, the text doesn't discuss any such aspect of their relationships. The text focuses instead on what Schomburg asked his friends and colleagues to do to help build his collection. **Choice B is incorrect** because "disagreed with" means held an opposing belief, and nothing in the text suggests that Schomburg and his friends or colleagues held opposing views on any subject. In fact, the text strongly implies that Schomburg's friends and colleagues supported him in his goal of preserving objects of importance for Black history and culture by bringing him such objects from around the world. **Choice C is incorrect** because "warned" means informed someone in advance about something dangerous, which wouldn't make sense in this context. Nothing in the text suggests that Schomburg thought his friends and colleagues were in any danger, let alone that he warned them of danger.

82 Correct answer **C** Easy Back to question

C reforms

Choice C is the best answer because it most logically completes the text's discussion of the early British postal system. In this context, "reforms" most nearly means attempts at improving something. The text indicates that the pay-upon-delivery postage method led to fee avoidance on the part of recipients. It then says that action was taken to improve the postal system, giving examples such as the move to having the sender pay and affixing stamps to indicate payment had been received. These represent revisions to the system intended to improve its functioning; therefore, "reforms" most logically completes the text.

Choice A is incorrect. In this context, "investigations" most nearly means attempts to understand something. And although it is plausible that an attempt to improve the postal system would involve investigations, nothing in the text provides a logical basis for understanding the example of changes like affixing stamps to letters as an investigation. **Choice B is incorrect**. In this context, "expansions" most nearly means additions to something. Although the text indicates that some new policies were adopted, nothing in the text suggests that the overall number of policies increased, which expansions would seem to entail. **Choice D is incorrect**. In this context, "possessions" most nearly means items of personal property or things that otherwise belong to, or are part of, something. The text provides no logical context for understanding changes like affixing stamps to letters as possessions.

83 Correct answer **B**

Easy

< Back to question

B observant

Choice B is the best answer because it most logically completes the text's discussion of Jacob Lawrence's artistic process. In this context, "observant" means watchful and perceptive. The text emphasizes that the "close attention" Lawrence paid to "all the details" of his neighborhood allowed him to reflect subtle elements of "the beauty and vitality of the Black experience" in his artwork. This context indicates that being observant of his surroundings was an important part of Lawrence's work as an artist.

Choice A is incorrect because the text gives no indication that Lawrence was "skeptical," or had an attitude of doubt in general or about particular things, let alone that skepticism was important to him as an artist. Rather than indicating that he was skeptical, the text focuses on how Lawrence paid careful attention to everything around him and reflected his observations in his artwork. **Choice C is incorrect** because the text gives no indication that Lawrence was "critical," which in this context would mean inclined to criticize harshly or unfairly. Rather than indicating that Lawrence found fault in things, the text suggests that he paid careful attention to everything around him and that his artwork reflects this careful attention. **Choice D is incorrect** because the text doesn't suggest that Lawrence was "confident," or self-assured. Rather than addressing how Lawrence felt about himself and how that feeling affected his artistic process, the text emphasizes the careful attention Lawrence paid to everything around him—attention that allowed him to capture subtle elements of a particular place and time in his artwork.

84 Correct answer **A**

Easy

< Back to question

A involuntarily

Choice A is the best answer because it most logically completes the text's discussion of diaphragm contractions and hiccups. In this context, "involuntarily" means done without any control, or by reflex. The text explains that when a person's diaphragm repeatedly contracts and results in hiccups (which may be beneficial for infants), those muscle contractions are "uncontrollable." This context indicates that the diaphragm contractions occur without the person's control.

Choice B is incorrect because it wouldn't support the logical relationship established in the text's discussion of diaphragm contractions and hiccups. The text indicates that although specific causes for hiccups haven't been identified, it may be the case that the muscle contractions that occur have an important purpose in infants. It wouldn't make sense to say that even though the contractions occur "beneficially," or with a good or helpful effect, they might play a positive role in infants' breathing regulation. **Choice C is incorrect** because the text indicates that the diaphragm contractions that result in hiccups are "uncontrollable." Because those muscle contractions are described as happening automatically and without the person's control, it wouldn't make sense to describe them as occurring "strenuously," or in a way that requires great effort or energy. **Choice D is incorrect** because the text doesn't describe the quality of the diaphragm contractions that result in hiccups beyond stating that they are "uncontrollable." Nothing in the text indicates that those muscle contractions occur "smoothly," or evenly and continuously.

85 Correct answer **B**

Easy

< Back to question

B sensitive

Choice B is the best answer because it most logically completes the text's discussion of wild rice. As used in this context, "sensitive" means vulnerable or easily affected. The text indicates that climate change is causing the lakes to get deeper, which consequently threatens the wild rice that grows in the area. The text goes on to state that deep water can cause young wild-rice plants to uproot from the bottom of the lake. This context supports the idea that the plants are sensitive to water depth during early stages of development.

Choice A is incorrect because "immune" means protected or shielded, which wouldn't make sense in this context. The text explains that deep water can cause young wild-rice plants to become uprooted and destroyed, indicating that these plants are harmed by deep water, not protected from it. **Choice C is incorrect** because "limited" means confined or restrained, which wouldn't make sense in this context. The text explains that water depth can negatively affect young wild-rice plants but doesn't suggest that water depth limits or restrains the plants. **Choice D is incorrect** because "receptive" means open or tolerant, which wouldn't make sense in this context. The text doesn't indicate that the wild-rice plants are open to or tolerant of an increase in water depth but rather the opposite: an increase in water depth can harm young wild-rice plants.

86 Correct answer **A** Easy Back to question

A traced

Choice A is the best answer because it most logically completes the text's discussion of the origins of the unique dialect of Spanish spoken in Puerto Rico. In this context, "traced" means tracked back to. The text notes that the regional variety of Spanish spoken in Puerto Rico has its roots in the language of the Taínos and in the West African language of Yoruba. This context supports the idea that the way certain vowel sounds are pronounced in the Puerto Rican dialect can be traced back to Yoruba.

Choice B is incorrect because the text presents the statement about the relationship between vowel pronunciation in the Puerto Rican dialect of Spanish and in Yoruba as an example to support the claim that African languages have contributed to the Puerto Rican dialect. It therefore wouldn't make sense to say that the pronunciation of certain vowel sounds in the Puerto Rican dialect can be "surrendered," or handed over on demand, to the pronunciation in Yoruba. **Choice C is incorrect** because the text gives no indication that the way certain vowel sounds are pronounced in the Puerto Rican dialect of Spanish has been "announced," or officially declared or proclaimed. According to the text, elements of the dialect have been inherited or borrowed from African languages, and the relationship between the pronunciation of certain vowels in the Puerto Rican dialect and in Yoruba is an example of this inheritance, suggesting that the pronunciation in the Puerto Rican dialect can be traced to Yoruba. **Choice D is incorrect** because the text presents the statement about the relationship between vowel pronunciation in the Puerto Rican dialect of Spanish and in Yoruba as an example to support the claim that African languages have contributed to the Puerto Rican dialect. It therefore wouldn't make sense to say that the pronunciation of certain vowel sounds in the Puerto Rican dialect can be "offered," or presented as a gift, to the pronunciation in Yoruba.

87 Correct answer **A** Easy Back to question

A acknowledged

Choice A is the best answer because it most logically completes the text's discussion of Nuttall's 1886 research paper. In this context, "acknowledged" means recognized as having a certain status. The text indicates that other researchers recognized Nuttall's work as groundbreaking because of its "convincing demonstration" related to the age of the ancient sculptures. In other words, the researchers recognized the groundbreaking status of Nuttall's work.

Choice B is incorrect because in this context, "ensured" would mean to have guaranteed or made sure something was the case. The text states that other researchers gave Nuttall's work recognition after it was published, but there's no indication that they contributed to the work or had any involvement that would have allowed them to make sure the work would be groundbreaking. **Choice C is incorrect** because the text doesn't suggest that other researchers "denied," or refused to admit or accept, that Nuttall's work was groundbreaking; on the contrary, it indicates that researchers praised the work, recognizing it as groundbreaking due to its "convincing demonstration" related to the age of the ancient sculptures. **Choice D is incorrect** because the text doesn't suggest that other researchers "underestimated," or undervalued, Nuttall's work; on the contrary, it indicates that researchers praised the work, recognizing it as groundbreaking due to its "convincing demonstration" related to the age of the ancient sculptures.

88 Correct answer **A** Easy ‹ Back to question

A requires

Choice A is the best answer because it most logically completes the text's discussion of environmental management along the US and Mexican border. In this context, "requires" means needs in order to perform a task. The text indicates that because ecosystems span the border, actions taken by the government on one side of the border can affect the environment in the nation on the other side of the border, which makes international cooperation crucial. In other words, because actions on one side of the US and Mexican border can affect the other side of the border, managing environmental matters along the border requires coordination between the two governments.

Choice B is incorrect because "praises" in this context would mean to express a favorable judgment, but the text doesn't describe approval expressed by anyone, and it wouldn't make sense to say that environmental management itself praises intergovernmental coordination. **Choice C is incorrect**. In this context, "reports" would mean gives an account. Although coordination between the US and Mexican governments likely would involve some sort of reporting, the text doesn't describe any such practice. **Choice D is incorrect**. In this context, "advises" would mean recommends a course of action, and although governments can advise one another, it wouldn't make sense to say that environmental management itself makes recommendations.

89 Correct answer **D** Easy ‹ Back to question

D justify

Choice D is the best answer because it most logically completes the text's discussion of the helmets found in Denmark. In this context, "justify" means confirm or give reasons for. The text indicates that scholars have long been skeptical about the supposed Viking origin of two helmets found in Denmark. The radiocarbon dating of the helmets conducted by Vandkilde and colleagues demonstrates that the helmets date from the Nordic Bronze Age, making the helmets too old to have belonged to Vikings. This context supports the idea that the scholars' skepticism is justified.

Choice A is incorrect because "anticipate" means expect or come before, neither of which would make sense in context. The text indicates that scholars have long been skeptical of the idea that the helmets belonged to Vikings. Because the skepticism has existed for a long time, Vandkilde and colleagues' research couldn't be said to anticipate it. Instead, the radiocarbon dating results justify or confirm the scholar's skepticism. **Choice B is incorrect** because "inspect" means examine or review, which wouldn't make sense in this context. Research findings are inanimate and therefore unable to inspect scholars' skepticism. The text focuses on the origin of two helmets, which some people believe belonged to Vikings. Vandkilde and colleagues found that the helmets are from the Nordic Bronze Age and therefore much older than the Vikings. This context suggests that the researchers' findings justify, not inspect, the scholars' skepticism. **Choice C is incorrect** because "reveal" means uncover or report, which wouldn't make sense in context. The text focuses on the origin of two helmets, which some people believe belonged to Vikings. Vandkilde and colleagues tested the helmets and found that they date to the Nordic Bronze Age and therefore are much older than the Vikings. This context suggests that the researchers' findings confirm or justify the scholars' skepticism, which was already known so didn't need to be revealed.

90 Correct answer **C** Easy ‹ Back to question

C impede

Choice C is the best answer. The first sentence tells us that video meetings are "less conducive to" (meaning less good for) brainstorming. This suggests that the video meeting participants' focus is bad for their creativity. "Impede" means "delay" or "prevent," which works perfectly in this context.

Choice A is incorrect. This choice is too positive to fit the context. The first sentence tells us that video meetings are "less conducive to" (meaning less good for) brainstorming. This suggests that the video meeting participants' focus is bad for their creativity. **Choice B is incorrect**. This choice doesn't make sense. The participants' intense focus on the screen is the subject of the missing verb. It wouldn't make sense to say that their over-focusing "criticizes" their creativity. **Choice D is incorrect**. "Construct" means "build" or "make," which is too positive to fit the context. The first sentence tells us that video meetings are "less conducive to" (meaning less good for) brainstorming. This suggests that the video meeting participants' focus is bad for their creativity.

91 Correct answer **B** Easy Back to question

B important

Choice B is the best answer because it most logically completes the text's discussion of Juarez. In this context, "important" means marked by significant work or consequence. The text indicates that Juarez, who was the first president of Mexico from an Indigenous community, became a certain kind of figure in Mexico's history. It then supports that claim by describing some of the "many significant accomplishments" from Juarez's long tenure in office. This context conveys that Juarez is a significant and consequential figure in Mexico's history.

Choice A is incorrect because the text focuses on Juarez's role as the first president of Mexico from an Indigenous community and on his many major accomplishments during his lengthy time in office; nothing in the text suggests that Juarez was "unpredictable," or tended to behave in ways that couldn't be predicted. **Choice C is incorrect** because nothing in the text suggests that Juarez was a particularly "secretive" figure, or that he tended to keep things private or hidden from others. Instead, the text focuses on things that are known about Juarez: that he was the first president of Mexico from an Indigenous community, that he had a lengthy tenure, and that his many major accomplishments included consolidating the national government's authority and advancing Indigenous rights. **Choice D is incorrect** because the text focuses on the idea that Juarez, who was the first president of Mexico from an Indigenous community, had many major accomplishments during his lengthy time in office. Rather than suggesting that Juarez was an "ordinary," or common and typical, figure in Mexico's history, this context conveys that Juarez was instead a notable figure.

92 Correct answer **D** Easy Back to question

D predicted

Choice D is the best answer because it most logically completes the text's discussion of the fashion resale market's continued growth. As used in this context, "predicted" means forecast, or indicated that something would happen in the future. The text indicates that the fashion resale market made a lot of money in 2019 and that some analysts expected the market to continue to grow. This context suggests that the analysts believed that the fashion resale market was going to make more money than it had already made, with the analysts indicating that revenues would more than double by 2028.

Choice A is incorrect because it wouldn't make sense in context to say that some analysts "produced," or manufactured or brought about, the increase in future revenues of the fashion resale market. The analysts themselves couldn't have brought about the future revenue growth, since, as the text suggests, they were merely in the position of drawing conclusions about future fashion resale market revenue based on 2019 revenue. **Choice B is incorrect** because the text indicates that some analysts expected the fashion resale market to continue to grow in the future, not that they "denied," or rejected, this notion. Nothing in the text supports the idea that these analysts thought the revenues wouldn't grow. **Choice C is incorrect** because the text indicates that some analysts expected the fashion resale market to continue to grow in the future, not that they "worried," or felt concerned, that revenue would significantly increase by 2028. Nothing in the text suggests that the analysts felt concerned about the increase; rather, the text suggests that the increase would represent a favorable outcome, since it would mean that the fashion resale market grew to generate even more revenue.

93 Correct answer **C**

Easy

Back to question

C extensive

Choice C is the best answer because it most logically completes the text's discussion of how Ofelia Zepeda has contributed to the field of linguistics. As used in this context, "extensive" means having a wide or considerable extent. The text indicates that Zepeda's many accomplishments in linguistics are varied, including teaching linguistics, writing poetry in more than one language, creating a grammar book, and co-founding a language institute. This context supports the idea that Zepeda's contributions to the field are extensive.

Choice A is incorrect because the sentence presents Zepeda's accomplishments as examples to support the claim made in the first part of the sentence. It wouldn't make sense to say that achievements as a professor, poet and author, and co-founder of a language institute demonstrate that Zepeda's contributions in her field are "pragmatic," or related to practical matters and not involving intellectual or artistic matters. **Choice B is incorrect** because the sentence presents Zepeda's accomplishments as a professor, poet and author, and co-founder of a language institute as examples to support the claim made in the first part of the sentence. There's no reason to believe that the positive achievements listed demonstrate that Zepeda's contributions in her field are "controversial," or have caused disputes and opposing viewpoints. **Choice D is incorrect** because in this context, "universal" would mean including or covering everything in a group. The sentence presents Zepeda's accomplishments as examples to support the claim made in the first part of the sentence, and it wouldn't make sense to say that these specific achievements—particularly as the author of a grammar book specific to the Tohono O'odham language—demonstrate that Zepeda's contributions relate to everything in the field of linguistics.

94 Correct answer **C**

Easy

Back to question

C abrupt

Choice C is the best answer because it most logically and precisely completes the text's discussion of the fossil record from the Cambrian period. In this context, "abrupt" means sudden. The text explains that the fossil record reflects the unexpected appearance and rapid diversification, or increase in variety, of animal remains during the Cambrian period. This context establishes that these remains' entry into the fossil record was sudden.

Choice A is incorrect. Although the word "explosion" appears in the name of the event marked by the fossil record change, the text never suggests that the change was "catastrophic," or disastrous. In context, "explosion" refers to the rapid diversification, or the swift increase in variety, of animal remains in the fossil record—a phenomenon that the text presents in a relatively neutral manner, without commenting on whether it was negative or positive. **Choice B is incorrect** because the text never suggests that the change toward greater diversification is "elusive," or difficult to locate, in the fossil record. Rather, the text notes that the change occurred about 541 million years ago, suggesting that scientists have indeed been able to locate it. **Choice D is incorrect** because it wouldn't make sense in context to describe the change in the fossil record as "imminent," or about to occur, since the text indicates that the change already occurred millions of years ago.

95 Correct answer **C**

Easy

Back to question

C collaboration

Choice C is the best answer because it logically and precisely completes the text's discussion of *The Mule Bone*, a play that Zora Neale Hurston and Langston Hughes wrote together. In this context, "collaboration" means working together with someone to write a literary work. The text indicates that most writers prefer to work alone and that working together destroyed the friendship between Hurston and Hughes. This establishes that *The Mule Bone* is a relatively rare example of collaboration in literature.

Choice A is incorrect because in this context, “characterization” would mean a literary work’s portrayal of characters’ psychological experiences and motivations, but the text doesn’t discuss characterization in *The Mule Bone* specifically or in collaborative works more generally. **Choice B is incorrect** because in this context, “interpretation” would mean the explanation of a literary work’s meaning or significance, but the text doesn’t discuss how readers or critics have interpreted *The Mule Bone*; instead, the text discusses how the play was written collaboratively and how the writing process affected the two authors. **Choice D is incorrect** because in this context, “commercialization” would mean writing a literary work in such a way as to ensure its commercial appeal, but the text never discusses commercial appeal as a factor in the writing of *The Mule Bone* specifically or the writing of collaborative works more generally.

96 Correct answer **C** Easy Back to question

C offered

Choice C is the best answer because it most logically completes the text’s discussion about how, for Schoenemann, a damaged trilobite fossil was informative. In context, “offered” means provided or gave. The text suggests that although it may seem counterintuitive, a broken fossilized trilobite allowed Schoenemann to observe more details of the trilobite’s eye than an intact fossilized trilobite would. This context conveys the idea that a damaged fossil offered, or provided, fresh insight into the structure of a trilobite’s eye.

Choice A is incorrect because “resolved” means determined or figured out, which wouldn’t make sense in this context. The text focuses on how Schoenemann was able to get more information from a broken fossil than an intact one. Although the damaged fossil may have allowed her to determine certain information, as an inanimate object the fossil isn’t capable of resolving anything. **Choice B is incorrect** because saying that the broken part of a trilobite fossil “adjusted,” or changed or modified, fresh insight wouldn’t make sense in this context. The text focuses on how Schoenemann was able to get more information from a broken fossil than an intact one. This context suggests that the fossil offered fresh insight, or understanding, not that it adjusted fresh insight. **Choice D is incorrect** because “directed” means managed or instructed, which wouldn’t make sense in this context. The text focuses on how Schoenemann was able to get more information from a broken fossil than an intact one. This context suggests that the fossil offered fresh insight, or understanding, not that it directed fresh insight.

97 Correct answer **B** Easy Back to question

B reputation for

Choice B is the best answer because it most logically completes the text’s discussion of Peter Edwards as a portrait painter. In this context, having a "reputation for" something means that one is widely recognized for being associated with a particular activity. The text indicates that Edwards has created "characteristic works" including "esteemed portraits" of notable figures, suggesting he is known and respected for this type of painting. This choice clearly indicates that Edwards has established recognition or fame specifically in connection with painting portraits of well-known individuals.

Choice A is incorrect because the text presents Edwards’s portrait painting in a positive manner, describing his works as "esteemed." In this context, "complaint about" would mean dissatisfaction or grievance regarding the activity of painting portraits, which contradicts the positive characterization of Edwards’s work. Nothing in the text suggests that Edwards has expressed any dissatisfaction with or objection to painting portraits of notable figures. **Choice C is incorrect** because the text gives no indication that Edwards has a "question about" painting portraits, which in this context would mean uncertainty or doubt regarding this activity. Instead, the text presents Edwards as someone who has already created multiple portrait works described as "characteristic" and "esteemed," suggesting established practice rather than uncertainty. The mention of specific examples of his portrait work further demonstrates that he is not questioning his portrait painting. **Choice D is incorrect** because the text does not suggest that Edwards has a "requirement for" painting portraits, which in this context would mean a mandatory obligation or necessary condition. Instead, the text indicates that portrait painting is something Edwards is known for doing well, not something he is obligated to do. The text describes his portrait work as "characteristic," suggesting it’s a defining feature of his artistic practice rather than an externally imposed requirement.

98 Correct answer **B** Easy ‹ Back to question

B exposure to

Choice B is the best answer. "Exposure to" means "having contact with." It makes sense that Prasad and Bainbridge were investigating whether seeing false versions of images was a cause of false visual memories. Notice how "exposure to incorrect renditions" matches the idea of "familiarity with erroneous versions," which appears later in the sentence.

Choice A is incorrect. "Compliance with" means "going along with a command or directive." False versions of images can't give commands or directives, so this doesn't apply. **Choice C is incorrect**. "Criteria" means "standards by which to judge something." It's not clear how people would come to have standards for the wrong version of an image in the first place, let alone how those standards would cause them to falsely remember the correct version. In other words, this choice would result in a confusing, unclear sentence. **Choice D is incorrect**. "Forfeiture of" means "a giving up of something." It wouldn't make sense to say that false memories of an image might be caused by giving up the wrong version of the image.

99 Correct answer **A** Easy ‹ Back to question

A instituting

Choice A is the best answer because it most logically completes the text's discussion of programs that encourage money to cycle within a community. In this context, "instituting" means initiating. The text indicates that making purchases at small local businesses can help keep money cycling within a community. The text goes on to state that some cities are establishing incentives to promote small business shopping. This context supports the idea that some cities are instituting programs to encourage this consumer behavior.

Choice B is incorrect because saying that some cities are "occupying," or forcibly holding possession or control of, programs that encourage shoppers to make purchases at small local businesses wouldn't make sense in context. The text doesn't discuss who controls these programs but instead indicates that some cities are establishing incentives that encourage shoppers to make purchases at small local businesses. Furthermore, it wouldn't make sense to say that a city is occupying a program. **Choice C is incorrect** because nothing in the text suggests that cities are "underestimating," or failing to understand the value of, programs that encourage consumers to shop at small local businesses. The text indicates that some cities are establishing incentives to encourage small business shopping, which suggests that these cities understand the value of such programs. **Choice D is incorrect** because saying that some cities are "encountering," or coming into contact with, programs that encourage consumers to shop at small local businesses wouldn't make sense in context. The text indicates that some cities are already establishing incentives to encourage shoppers to make purchases at small businesses. This context suggests that the cities are instituting the programs, not that they are encountering them.

100 Correct answer **C** Easy ‹ Back to question

C effective

Choice C is the best answer because it most logically completes the text's discussion of the ancient Inca farming method. In this context, "effective" means successful in producing a desired result. The text describes how the Inca used terraces with built-in irrigation systems to grow crops at different altitudes and then indicates that this farming method produced positive results "as evidenced by the great number and variety of crops grown at that time." The context clearly suggests that the terraced farming approach was highly productive, or effective.

Choice A is incorrect because to describe the Inca farming method as "chaotic" contradicts the text's description of a systematic approach using deliberately constructed terraces with built-in irrigation systems. Moreover, the "great number and variety of crops" yielded by this method seems unlikely to result from a disorganized, or chaotic, approach. **Choice B is incorrect** because "uniform" means consistent or the same throughout. It does not make sense in this context to describe a

farming method as highly uniform if it produced a “great number and variety of crops.” Moreover, the text indicates that Inca terrace farming was specifically designed to accommodate different crops at different altitudes, highlighting the diversity rather than uniformity of this approach. **Choice D is incorrect** because the success of the method, “as evidenced by the great number and variety of crops grown,” does not support the claim that the Inca farming method was “burdensome,” or difficult to implement or maintain. In fact, the context clearly emphasizes the advantages, rather than the burdens, of Inca terrace farming.

101 Correct answer **A** Easy Back to question

A tranquil

Choice A is the best answer because it most logically completes the text’s discussion of how kelp forests help marine animals. In this context, "tranquil" means free from disturbance, or calm. The text indicates that ocean currents are powerful and make it difficult for marine animals to hide from predators and that kelp forests slow currents down to create calmer areas. In other words, kelp forests create a more tranquil environment.

Choice B is incorrect because the text indicates that kelp forests provide shelter for marine animals, meaning they create environments that are safer, not more "dangerous." **Choice C is incorrect** because the text discusses how kelp forests affect currents in the ocean, and it isn’t clear how an ocean environment could be "imaginative," or full of imagination. **Choice D is incorrect** because the text indicates that kelp forests create a calm and safe environment, and an environment that is "surprising" would be characterized by unexpected occurrences, not calmness.

102 Correct answer **D** Easy Back to question

D influenced

Choice D is the best answer because it most logically completes the text’s discussion of painter Alma W. Thomas’s work. In this context, "influenced" means to have had an effect on something’s development. The text indicates that there is a connection between Thomas’s work and the flowers and trees in her home’s garden, giving the example of Thomas’s brushstrokes being inspired by light shining through the leaves of a tree in front of her house. This context conveys that Thomas’s work was influenced by the flowers and trees in the garden.

Choice A is incorrect because the text conveys that Thomas drew inspiration for her work from the plants in her garden, which suggests that the flowers and trees contributed positively to her work, not that they "restricted," or limited, her work. **Choice B is incorrect** because it wouldn’t make sense to suggest that flowers and trees in a garden could have "announced," or made known, a painter’s work. **Choice C is incorrect** because the text conveys that Thomas drew inspiration for her work from the plants in her garden, which suggests that the flowers and trees contributed positively to her work, not that they were a distraction. Further, it’s not clear how an artist’s work could itself be "distracted."

103 Correct answer **B** Easy Back to question

B defied

Choice B is the best answer. "Defied" means "resisted" or "deliberately disobeyed," which matches the way Klein broke from the conventions of photography in his time by including features that were generally seen as flaws.

Choice A is incorrect. "Reviewed" means "analyzed" or "evaluated," but that doesn’t really fit the context here. Klein isn’t directly providing any thoughtful examination of the conventions of photography: he’s just breaking all the rules. **Choice C is incorrect**. "Respected" can mean "admired" or "followed" (as in the case of conventions). It’s clear that Klein didn’t respect conventions, given his use of photographic features that were generally considered "flaws." **Choice D is incorrect**. "Prevented"

means "stopped," and Klein did not stop the conventions—they still existed. Instead, he made images that were seen as "flawed" under those conventions.

104 Correct answer **B** Easy ‹ Back to question

B provide

Choice B is the best answer because it most logically completes the text's discussion of the archaeologists' study of the ancient amphitheater in Switzerland. In this context, "provide" means make available or supply. The text states that the archaeologists believe that the amphitheater dates to the fourth century CE. The text goes on to say that the archaeologists discovered a coin made between 337 and 341 CE (that is, made during the fourth century CE) and building materials appropriate to the era in question. This context suggests that these discoveries provide evidence for the archaeologists' theory about the dating of the amphitheater.

Choice A is incorrect because the archaeologists' discoveries are presented as supplying evidence in favor of their theory about the dating of the amphitheater, not something that would "dismiss," or reject serious consideration of, evidence for that theory. **Choice C is incorrect** because nothing in the text suggests that the archaeologists' discoveries would "regulate," or govern or bring order to, evidence for the archaeologists' theory about the dating of the amphitheater. The discoveries are presented as supplying evidence for the archaeologists' theory, not as changing how evidence for the theory is controlled or ordered. **Choice D is incorrect** because the archaeologists' discoveries are presented as supplying evidence in favor of their theory about the dating of the amphitheater, not something that would "refuse," or be unwilling to accept, evidence for the archaeologists' theory.

105 Correct answer **C** Easy ‹ Back to question

C overlook

Choice C is the best answer because it most logically completes the text's discussion of an exhibit at the Brooklyn Public Library. In this context, "overlook" means to ignore or to miss. The text states that artist and curator Joe Baker organized an exhibit that features Lenape beadwork in historical and modern works. The text describes the exhibit as "essential viewing," suggesting that it's an important exhibit that people should make an effort to visit; this context conveys that it would be a mistake to overlook the exhibit.

Choice A is incorrect. In this context, "complicate" would mean to add difficulty, and there's no reason to think the text would need to directly caution against complicating Baker's exhibit; the text focuses on the idea that the exhibit is "essential viewing," not on the idea of a potential difficulty that could be raised. **Choice B is incorrect**. In this context, "amplify" means to increase, and there's no reason to believe the text would indicate that it would be a mistake to increase an exhibit the text describes as "essential viewing." **Choice D is incorrect** because it wouldn't make sense to say that it would be a mistake to "assemble," or put together, Baker's exhibit: the text makes it clear that the exhibit has already been put together and, further, praises the exhibit as "essential viewing."

106 Correct answer **C** Easy ‹ Back to question

C accidental

Choice C is the best answer because it most logically completes the text's discussion of Bastos's study of a wild kea parrot. In this context, "accidental" means unplanned or unintentional. The text first describes Bastos's study, which concerns a kea that is observed using small stones to preen its feathers. The text then mentions colleagues who are skeptical (that is, they have doubt) about Bastos's findings, and finally describes how Bastos and her team responded to the skepticism of those colleagues. Given that the colleagues mentioned in the text expressed skepticism regarding Bastos's findings, the best answer

choice must be one that completes the text in a manner such that the skeptics' opinion regarding the kea's use of stones disagrees with that held by Bastos and her team. Since Bastos and her team showed that the kea's use of stones was deliberate (that is, intentional), the skeptics' opinion in this context must be that the kea's use of stones was unintentional, or accidental.

Choice A is incorrect because the best answer choice is one that portrays skepticism, or doubt, of Bastos's claim that the kea's usage of stones was deliberate, or intentional. If the skeptics found the kea's usage of stones "intriguing," or fascinating, this would not be at odds with the position of Bastos and her team; in fact, it is reasonable to believe that someone who agreed that the kea's stone usage was deliberate would also find it intriguing. **Choice B is incorrect** because if the skeptics believed that the kea's usage of small stones was "obvious," or evident, this would not be contrary to the observation of Bastos and her team that the kea's usage of stones was deliberate: in fact, these opinions would be consistent with each other. **Choice D is incorrect** because if the skeptics believed that the kea's usage of small stones was "observable," or visible, this would not conflict with the claim of Bastos and her team that the kea's usage of stones was deliberate: instead, these positions would agree.

107 Correct answer **D** Easy Back to question

D creating

Choice D is the best answer because it most logically completes the text's discussion of Sam Gilliam's artworks. As used in this context, "creating" means producing or bringing something into existence. The text indicates that Gilliam is an artist who made draped canvases and, later, quilt-like paintings. This context supports the idea that Gilliam explored different styles in his art by creating special types of paintings.

Choice A is incorrect because the text indicates that Gilliam actually explored and pursued the creation of quilt-like paintings; he wasn't just "predicting," or declaring in advance, the existence of these paintings. **Choice B is incorrect** because in this context "refusing" would mean rejecting, and there is nothing in the text to suggest that Gilliam rejected his quilt-like paintings. Instead, the text indicates that he was exploring and pursuing a new art style in these paintings. **Choice C is incorrect** because in this context "hiding" would mean concealing from view, and there is nothing in the text to suggest that Gilliam attempted to conceal his quilt-like paintings. Instead, the text indicates that he was exploring and pursuing a new art style in these paintings.

108 Correct answer **A** Easy Back to question

A preventable

Choice A is the best answer because it most logically completes the text's discussion of how biodiversity loss due to invasive species can be avoided. As used in this context, "preventable" means able to be stopped or kept from happening. The text indicates that "people can take simple steps" to avoid bringing possible invasive species into new environments. It presents these steps as an example of how biodiversity loss due to invasive species is preventable.

Choice B is incorrect because it wouldn't make sense to say that a simple step like washing your shoes after traveling is an example of biodiversity loss due to invasive species being "undeniable," or something that can't be proved to be wrong. Although the text may suggest that biodiversity loss due to invasive species is something that really happens, the word that completes the text must make the first sentence into an assertion that is illustrated by the second sentence, and the second sentence illustrates the idea that biodiversity loss due to invasive species is preventable, not undeniable. **Choice C is incorrect** because it wouldn't make sense to say that a simple step like washing your shoes after traveling is an example of biodiversity loss due to invasive species being "common," or something that happens regularly. Additionally, the text doesn't provide any information about how frequently invasive species cause biodiversity loss. **Choice D is incorrect** because it wouldn't make sense to say that a simple step like washing your shoes after traveling is an example of biodiversity loss due to invasive species being "concerning," or something that is troubling or causes worry. Although the text implies that the phenomenon of biodiversity loss due to invasive species is itself a concerning phenomenon, the word that completes the text must make the

first sentence into an assertion that is illustrated by the second sentence, and the second sentence illustrates the idea that biodiversity loss due to invasive species is preventable, not concerning.

109 Correct answer **B** Easy Back to question

B preserve

Choice B is the best answer because it most logically completes the text about Latro, the main character in Gene Wolfe's novel *Soldier of the Mist*. In this context, "preserve" means save or keep from destruction or loss. The text describes Latro as a character who loses his memory whenever he sleeps. The text goes on to explain that before going to sleep, Latro records his most important memories to prevent him from forgetting, or losing, them. The context therefore supports the idea that Latro records his most important experiences in an effort to save, or preserve, his memory of them from loss.

Choice A is incorrect because "suspect" would mean mistrust, which wouldn't make sense in this context. The text emphasizes that in writing down his experiences, Latro carefully chooses those which are most important to him and thus worth remembering later, not that he is mistrustful or has reason to doubt the experiences he records. **Choice C is incorrect** because in this context, "suggest" would mean propose for consideration. The text emphasizes the fact that Latro actually records those experiences that he has decided are most important to him, not that he merely proposes which experiences to consider for inclusion in his scroll. **Choice D is incorrect** because in this context, "imagine" would either mean form a mental image of or fabricate, neither of which would logically complete the text. Although it's possible that reviewing records from previous days might enable Latro to reconstruct mental images of what has happened to him in the past, the text emphasizes the fact that Latro carefully selects and writes down his experiences so he will remember them in the future, not so that he can form mental pictures of them as he writes them down. In a similar vein, the text emphasizes that Latro is recording experiences that have actually happened to him, not that he's fabricating the experiences he records.

110 Correct answer **A** Easy Back to question

A distinct

Choice A is the best answer because it most logically completes the text's discussion of Ronyoung Kim's novel *Clay Walls*. In this context, "distinct" means clearly separate and different. The text indicates that the novel consists of three sections and that each section is narrated from the perspective of a different character. This context supports the idea that Kim's novel features three distinct perspectives.

Choice B is incorrect because describing the three perspectives in Kim's novel as "required," or demanded as necessary to be done or provided, wouldn't make sense in context. When writing a novel, a novelist is free to choose to narrate the story from any number of perspectives. There's nothing in the text to indicate that providing three perspectives was demanded of Kim. Instead, the text focuses on identifying the three different perspectives featured in Kim's novel. **Choice C is incorrect** because describing the three perspectives in Kim's novel as "unintended," or not planned as a purpose or goal, wouldn't make sense in context. Authors make deliberate choices about the perspectives they feature in their works, and the text indicates that Kim chose to incorporate three different perspectives in her novel. **Choice D is incorrect** because describing the three perspectives in Kim's novel as "unknown," or not revealed, wouldn't make sense in context. The text directly identifies the three perspectives that appear in her novel as those of Faye and her two parents, Haesu and Chun, which indicates that the novel's perspectives are in fact known.

111 Correct answer **C**

Medium

Back to question

C catalyst of

Choice C is the best answer because it most logically completes the text's discussion of science fiction's relationship to real-world technological advancements. In this context, "catalyst of" means something that prompts the development of. The text indicates that science fiction narratives have "spurred many actual innovations," giving as examples Verne's *From the Earth to the Moon* "inspiring" aerospace engineering developments and *Star Trek* "sparking" the design of early analogues of smartphones. Thus, this context supports the idea that science fiction has prompted the development of, or served as a catalyst of, real-world technological advancements.

Choice A is incorrect because saying that science fiction has served as a "constraint to," or limitation on, real-world technological advancements would contradict the text, which indicates that science fiction has inspired technological innovation rather than inhibited it. **Choice B is incorrect** because describing science fiction as a "sponsor of," or an entity who takes on responsibility for, real-world technological advancements wouldn't make sense in context. A sponsor provides material support for an undertaking, often by providing funds for the undertaking or by overseeing its management, but the text describes science fiction as inspiring or sparking ideas for innovation, not as financially backing technological development or taking direct responsibility for overseeing it. **Choice D is incorrect** because in this context, a "diversion from" would mean either a distraction from or a deviation from, which contradicts the text's examples of science fiction inspiring real-world technological advancements. It therefore wouldn't make sense to say that science fiction has distracted people from such advancements or that the innovations science fiction depicts deviate from actual innovations.

112 Correct answer **A**

Medium

Back to question

A receptive to

Choice A is the best answer because it most logically completes the text's discussion of driver attitudes toward a toll increase. In this context, "receptive to" would mean open to or willing to consider something. The text focuses on drivers who think the current toll for the Lewis and Clark Bridge is too high, suggesting that advocates for increasing that toll would have better success presenting their arguments to "a more persuadable segment of the population" rather than to those drivers. This context suggests that the drivers who strongly believe the toll is already too high are not persuadable—that is, that they are unlikely to be willing to consider the toll-increase proposal.

Choice B is incorrect because "apprised of" means informed about or made aware of something, and nothing in the text suggests that the drivers who think a toll is already too high wouldn't be informed of a proposal for an even higher toll; in fact, the text implies that advocates of the proposal would "direct their arguments" in favor of the increase to those drivers, even though they would likely be more successful focusing on people who are more open to hearing their arguments. **Choice C is incorrect**. In this context, "incensed by" would mean angered or outraged by something. The text focuses on drivers who feel that a current toll is too high, and it wouldn't make sense to suggest that those drivers would be *unlikely* to be angered by a proposal for the toll to be increased; indeed, drivers who think the toll is already too high likely would be angered by a move to raise it even higher. **Choice D is incorrect**. In this context, "cited in" would mean referred to or mentioned in something. Although it's reasonable to suggest that a proposal to raise a toll might not make any mention of drivers who think the toll is already too high, the text focuses on how those drivers and other people are likely to react to arguments in favor of the proposal, not on whether those drivers would be cited in the proposal itself.

113 Correct answer **A**

Medium

Back to question

A reduced

Choice A is the best answer because it most logically completes the text's discussion of how the flow of information between two regions of the brain may affect the ease of people's decision making. In this context, "reduced" means decreased. The text

presents the finding from a team of neuroeconomists that decision making may be connected to communication between the prefrontal cortex and the parietal cortex. In presenting this finding, the text suggests a contrast between people who tend to be more decisive and people who make decisions more slowly. According to the text, people tend to be more decisive when the flow of information between the two brain regions is intensified, or strengthened. On the other hand, this context suggests that people make choices more slowly when the flow of information between the two brain regions is decreased.

Choice B is incorrect because "evaluated" means assessed, which wouldn't make sense in context. According to the text, people tend to be more decisive when the flow of information between two brain regions is intensified, or strengthened. This suggests that people's ease of decision making varies based on the rate of information traveling between the regions, not based on an effort to assess the information. **Choice C is incorrect** because "determined" means judged or influenced, neither of which would make sense in context. According to the text, people tend to be more decisive when the flow of information between two brain regions is intensified, or strengthened. This suggests that people's ease of decision making varies based on the rate of information traveling between the regions, not based on an effort to judge or influence the information. **Choice D is incorrect** because "acquired" means developed or attained, neither of which would make sense in context. According to the text, people tend to be more decisive when the flow of information between two brain regions is intensified, or strengthened. This suggests that people's ease of decision making varies based on the rate of information traveling between the regions, not based on the development or attainment of the information.

114 Correct answer **B** Medium ‹ Back to question

B rectify

Choice B is the best answer because it most logically completes the text's discussion of how Maggie Lena Walker addressed the lack of financial services available to Black residents in Richmond, Virginia, at the turn of the twentieth century. In this context, "rectify" means to correct or remedy something undesirable. The text indicates that by chartering the St. Luke Penny Savings Bank in 1903, Walker took action to provide local Black residents with greater access to financial services like home loans and savings opportunities. This context supports the idea that she aimed to rectify the undesirable situation affecting these residents.

Choice A is incorrect because in this context, "prolong" would mean to lengthen something in time. The text indicates that at the turn of the twentieth century, Black residents in Richmond, Virginia, were faced with a lack of formal banking options. The text then states that Walker founded a new bank that provided these residents with financial services. Therefore, instead of prolonging the situation, she took steps to rectify, or correct, it. **Choice C is incorrect** because in this context, "retain" would mean to continue to have or to keep something. According to the text, at the turn of the twentieth century, Black residents in Richmond, Virginia, had few formal banking options, and Walker chartered a new institution to provide these residents with expanded financial services; therefore, she took steps to rectify, not retain, the situation. **Choice D is incorrect** because in this context, "highlight" would mean to emphasize or call attention to something, but the text indicates that Walker took concrete steps beyond merely drawing attention to the situation Black residents were facing in Richmond, Virginia, at the turn of the twentieth century. According to the text, Walker worked to rectify, or correct, the lack of formal banking options that were available to these residents by establishing a bank that provided them with home loans and savings opportunities.

115 Correct answer **B** Medium ‹ Back to question

B concede

Choice B is the best answer because it most logically completes the text's discussion of the significance of the 2014 archaeological finding at El Algar. In this context, "concede" means to admit something is true after first resisting that admission. The text indicates that some researchers believe "Bronze Age societies were ruled by men." But the Bronze Age burial of a woman at El Algar included "valuable objects signaling a high position of power," which would raise the possibility that "women may have also held leadership roles." Thus, the text is calling into question the notion that only men were leaders in these societies and speculating that people holding this view may reconsider their opinion.

Choice A is incorrect because "waive" means to refrain from insisting that something, such as a right or a requirement, be observed; the word isn't used, however, in contexts where someone acknowledges that an opinion they hold may be invalid, as is the case in the text. **Choice C is incorrect**. According to the text, the finding from the El Algar burial site undermines the view that Bronze Age societies were exclusively ruled by men. However, "refute" means to demonstrate that something is false and would not make sense in context. Lull and team's finding supports the view that women may have also held leadership roles, not that they did not participate in such roles. **Choice D is incorrect** because in this context, "require" means to demand or specify as mandatory. However, it would not make sense for contemporary researchers to demand that Bronze Age "women may have also held leadership roles."

116 Correct answer **D** Medium Back to question

D scale

Choice D is the best answer because it most logically completes the text's discussion of the *W* boson. In this context, "scale" means size or extent. The text indicates that recent measurements of the *W* boson were remarkable because they revealed the subatomic particle's mass to be much greater ("seven standard deviations higher") than had been expected based on a standard model. This context conveys not only that the measurements differed from predictions but also that the extent of the difference was very large.

Choice A is incorrect. Although the text indicates that there was a very large difference between the predicted mass and the actual measured mass of the subatomic particle, it doesn't explain the cause of, or reason behind, that difference. **Choice B is incorrect** because it wouldn't make sense to say that the measurements of the subatomic particle were notable because they differed from expectations and also because a difference existed between the measurements and what had been predicted; the text would be repeating the idea that there was a difference instead of adding to that idea. **Choice C is incorrect** because the text doesn't convey any implications of, or consequences of or conclusions drawn from, the fact that the mass of the subatomic particle differed from expectations; the context indicates only that the actual measured mass was much higher than the predicted mass.

117 Correct answer **B** Medium Back to question

B irrelevant

Choice B is the best answer because it most logically completes the text's discussion about people's tendency to dismiss claims from sources perceived as self-interested, or acting for their own advantage. In this context, "irrelevant" means not applicable to the matter at hand. The text explains that as a matter of logical reasoning, the source of a claim has nothing to do with the claim's truthfulness—a claim is either true or false in actuality, regardless of where it originates. This context suggests that even though people may distrust a claim based on its source, the source of the claim is actually irrelevant.

Choice A is incorrect because in this context, "indistinct" would mean uncertain or not clearly recognizable. Instead of suggesting that the source of a claim can't be determined with certainty, the text suggests that recognizing a source and having an opinion of it simply doesn't matter because as a matter of logic, a claim is true or false in actuality, regardless of where it originates. **Choice C is incorrect** because in this context, "indisputable" would mean impossible to question or deny. Although the text suggests that it isn't logical to assume a claim is false just because its source appears to be self-interested, it doesn't go so far as to suggest that the source of a claim can't be questioned—the text instead makes the point that from a logical standpoint, the source of a claim doesn't matter because the claim is either true or false in and of itself. **Choice D is incorrect** because in this context, "implicit" would mean suggested or understood without being directly expressed. Nothing in the text suggests that logically, the source of a claim is only suggested; instead of addressing whether sources can be directly identified, the text focuses on the idea that sources don't matter because a claim is true or false in actuality, regardless of where it originates.

118 Correct answer **B** Medium ‹ Back to question

B impenetrable

Choice B is the best answer because it most logically completes the discussion of Octavia Butler's career. In this context, "impenetrable" means impossible to enter. The text indicates that the field of science fiction was dominated by white males when Butler, a Black woman, started writing, but she published several science fiction short stories and a novel and later won a prestigious award; that is, Butler pursued science fiction writing and had success. This context suggests that Butler didn't view the genre as impossible to enter.

Choice A is incorrect. In this context, "legitimate" would mean genuinely good or valid. Nothing in the text suggests that Butler didn't think the science fiction genre was good or valid; in fact, it indicates that she pursued and made a successful career of publishing work in that field. **Choice C is incorrect**. In this context, "compelling" would mean attracting or demanding attention. The text indicates that Butler chose to write science fiction, so it wouldn't make sense to say that she didn't see the field as drawing her attention. **Choice D is incorrect**. To say that Butler didn't consider science fiction "indecipherable," or impossible to understand, would suggest that Butler did understand it. However, the text doesn't address Butler's ability to interpret works in the genre; rather, it focuses on Butler's successful pursuit of writing science fiction.

119 Correct answer **D** Medium ‹ Back to question

D reuse

Choice D is the best answer because it most logically completes the text's discussion of internal carbon recycling by red coralline algae. In this context, "reuse" means using something again rather than disposing of it as waste. The text describes scientists' surprise at "the extent of" internal carbon recycling by the algae, characterizing this finding as a departure from the more limited degree of activity that the scientists had expected to observe. The text goes on to explain that, in contrast to the scientists' expectation that "some" carbon would be affected by the activity being described, the algae were found to "reabsorb nearly 40% of the carbon dioxide they produce during calcification processes and harness it for photosynthesis," a specific example of their extensive capacity for taking in carbon and recycling, or reusing, it. Because the scientists thought the algae would use some of their own carbon dioxide again but were surprised by the extent of this activity, the context supports the idea that some reuse of carbon was expected.

Choice A is incorrect because it wouldn't be logical in context to state that some "imitation," or reproduction of something else, of carbon was expected. The text discusses the algae's reabsorption and reuse of the carbon dioxide they produce, not any process by which carbon copies or reproduces something. **Choice B is incorrect** because stating that some "supply," or available amount, of carbon was expected wouldn't fit the contrast established within the text. The text contrasts the scientists' expectations about carbon recycling in algae with their actual observations, noting that the scientists anticipated a more limited version of the recycling process they observed. This context doesn't suggest that the scientists merely anticipated the presence of some amount of carbon. **Choice C is incorrect** because it wouldn't be logical in context to state that some "examination," or careful inspection, of carbon was expected. The text isn't discussing scientists' inspection of carbon, and carbon itself isn't something that engages in inspection. Rather, the text focuses on the algae's reabsorption and reuse of the carbon dioxide they produce.

120 Correct answer **D** Medium ‹ Back to question

D competent

Choice D is the best answer because it most logically completes the text's discussion of self-control in cuttlefish. In this context, "competent" means capable. The text describes a study in which cuttlefish demonstrated an ability to exercise restraint by waiting for a favorite treat instead of eating a meal that was already available to them. That is, by delaying gratification, the cuttlefish in the study demonstrated that they were capable of, or competent at, exercising self-control.

Choice A is incorrect because nothing in the text suggests that in demonstrating self-control, cuttlefish are "awkward," or lacking skill or grace. If anything, the text indicates that cuttlefish appear to be surprisingly skilled at exercising self-control. **Choice B is incorrect** because in this context, "imaginative" would mean creative, and there's nothing in the text to suggest that cuttlefish demonstrate creativity. Instead, the text focuses on the fact that cuttlefish seem to be capable of exercising restraint and self-control. **Choice C is incorrect** because in this context, "manageable" would mean capable of being controlled. Although the text indicates that the cuttlefish in the study demonstrated restraint by waiting for a favorite treat instead of devouring a readily available meal (which suggests their ability to control themselves), it doesn't suggest that cuttlefish are thus also able to be managed or controlled by others.

121 Correct answer **C** Medium Back to question

C neglect

Choice C is the best answer because it most logically completes the text's discussion of election polling. In this context, to "neglect" would mean to disregard or pay insufficient attention to something. The text states that there have been many cases of election pollsters incorrectly predicting presidential elections and then says that neuroscientist and pollster Sam Wang notes that campaigns shouldn't react to these failures in a certain way. The text then adds that polls are valuable for informing strategists' efforts throughout campaigns, not just for predicting the outcome. This context conveys that Wang's advice is not to neglect, or disregard, polling because even though it sometimes fails to predict the winner, it can help improve campaign strategies.

Choice A is incorrect. In this context, to "distort" would mean to give a false or misleading account. Though the text states that many election pollsters have failed in their predictions in presidential elections, it gives no indication that Wang would therefore argue that campaigns shouldn't react to such polling failures by giving inaccurate accounts of election polling. Instead, the text emphasizes that polls have value beyond predicting winners, suggesting that Wang's point is that campaigns shouldn't stop polling entirely. **Choice B is incorrect** because it wouldn't make sense to suggest that Wang encourages campaigns not to "enact," or establish, election polling; the text indicates that election polling is something that already takes place and that has value for campaign strategies even if it sometimes leads to inaccurate predictions of winners, suggesting an argument in favor of continuing to use election polling. **Choice D is incorrect**. Although the text indicates that many election pollsters have failed in their predictions in presidential elections, there's no reason to think Wang would say that these failures should lead campaigns *not* to "supplement," or add to, election polling; it would be reasonable to suggest that campaigns *would* want to consider more than just election polling information if that information may lead to inaccurate predictions. Moreover, the text's main point is that polls provide some utility even if their predictions may be inaccurate, which suggests that Wang's recommendations pertain to whether campaigns should or shouldn't use polling data, not whether polling data should or shouldn't be supplemented with other kinds of information.

122 Correct answer **B** Medium Back to question

B transcending

Choice B is the best answer. Based on the text, we're looking for a word that means something similar to "mak[ing] use of insights and techniques from all those fields." "Transcending" means "going beyond," so "transcending traditional boundaries" would mean crossing into all those various fields of research, which is exactly the meaning we want.

Choice A is incorrect. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "mak[ing] use of insights and techniques from all those fields." To "epitomize" means to "be a perfect example of," so "epitomizing traditional boundaries" would mean the opposite of what we want: keeping the fields of research separate. **Choice C is incorrect**. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "mak[ing] use of insights and techniques from all those fields." "Anticipating" means "expecting" or "waiting for," and would result in a confusing sentence with an unclear meaning. **Choice D is incorrect**. This isn't a logical word choice. Based on the

text, we're looking for a word that means something similar to "mak[ing] use of insights and techniques from all those fields." "Reinforcing traditional boundaries" would mean the opposite: keeping the fields of research separate.

123 Correct answer **D** Medium Back to question

D intangible

Choice D is the best answer because it most logically completes the text's discussion of how Nia Imara facilitates the study of star formations. As used in this context "intangible" means unable to be physically handled or touched. The text states that star formations cannot be touched, and then goes on to explain that Imara created a special model to research star formations. In other words, despite the fact that real star formations are intangible, thanks to Imara, researchers can handle models of star formations to better understand them.

Choice A is incorrect because "repeatable" means can be duplicated or done again, which wouldn't make sense in context. The text indicates that the swirls of gas and dust in which stars form are untouchable, but that Nia Imara has produced interactive models of them. It would therefore be illogical to suggest that Imara believes that the formations need not be duplicated and then go on to say that she has copied them. **Choice B is incorrect** because "explicable" means explainable or understandable, which wouldn't make sense in context. The text does not suggest that Nia Imara believes that star formations can be fully explained but rather that she produced interactive models to physically study them because researchers are unable to touch them directly. **Choice C is incorrect** because "regrettable" means distressing or unfortunate, which wouldn't make sense in context. The text does not suggest that Imara believes the researchers regret the star formations or find them distressing, but rather that she uses interactive models to physically study them.

124 Correct answer **B** Medium Back to question

B ambivalence toward

Choice B is the best answer because it most logically completes the text's description of how Pico feels about the natural world. In this context, to say that Pico portrays his "ambivalence toward" nature would mean that he portrays his mixed feelings about nature. The text explains that Pico "honors the centrality of nature" and also makes it clear that he doesn't enjoy being in nature. This context suggests that Pico feels ambivalence toward nature.

Choice A is incorrect because saying that Pico portrays his "responsiveness to" nature would mean that he portrays himself as quick to react to nature, which isn't supported by the text. Instead, the text focuses on Pico's mixed feelings toward nature, describing him as both honoring nature's role in his tribe's beliefs and expressing his personal dislike for being in nature. **Choice C is incorrect** because saying that Pico portrays his "renunciation of" nature would mean that he portrays himself as rejecting nature, which isn't supported by the text. The text conveys that Pico demonstrates both positive and negative responses toward nature, not that he's giving it up completely. **Choice D is incorrect** because saying that Pico portrays his "mastery over" nature would mean that he portrays himself as having control over nature, which isn't supported by the text. The text focuses on Pico's mixed feelings about nature; nothing in the text suggests that Pico feels mastery over nature.

125 Correct answer **C** Medium Back to question

C commonalities with

Choice C is the best answer because it most logically completes the text's discussion of architectural influences among Mesoamerican cities. In this context, "commonalities with" means similarities to or shared attributes with. The text indicates that a recently discovered citadel in Tikal includes a close imitation of a famous temple in Teotihuacán (another Mesoamerican city) and other evidence of Teotihuacán influence, which suggests that the citadel possesses features that resemble

architectural features found in Teotihuacán. This context thus indicates that the Tikal citadel shows commonalities with Teotihuacán architecture.

Choice A is incorrect because there's nothing in the text that suggests that the Tikal citadel shows "refinements of," or improvements on, Teotihuacán architecture. Although the text suggests that the architecture of Teotihuacán influenced the architecture of the Tikal citadel, and although it's possible that later architectural designs could make improvements on earlier designs, the text doesn't discuss whether, in imitating Teotihuacán architecture, the Tikal citadel's builders improved on it. **Choice B is incorrect** because describing the citadel in Tikal as showing "precursors of" Teotihuacán architecture—or features that preceded and foreshadowed those of Teotihuacán architecture—would imply the opposite of what the text suggests about the relationship between the architecture found in Tikal and Teotihuacán. The text claims that the discovery of similarities between the Tikal citadel and the architecture of Teotihuacán, including a replica of a temple in Teotihuacán, provides evidence of outside influences on Tikal architecture. If the Tikal citadel was influenced by Teotihuacán architecture, then the Teotihuacán architecture must predate the citadel, not the other way around. In this context, therefore, it wouldn't make sense to say that the Tikal citadel shows precursors of Teotihuacán architecture. **Choice D is incorrect** because the text discusses how the citadel in Tikal indicates the influence of Teotihuacán architecture, which implies that the makers of the Tikal citadel likely admired aspects of Teotihuacán architecture enough to imitate it. Thus, there's no reason to think that the Tikal citadel provides evidence of the Tikal people's "animosities toward," or feelings of strong dislike or hostility toward, Teotihuacán architecture.

126 Correct answer **D** Medium ‹ Back to question

D an analogy

Choice D is the best answer. The text after the semicolon tells us that Hu "identif[ied] broad similarities between two seemingly different phenomena," comparing ants with light particles. Since an analogy seeks similarities between seemingly unrelated phenomena, this fits the context perfectly.

Choice A is incorrect. "A collaboration" refers to "an act of working with others," but what comes after the semicolon doesn't describe collaboration with other researchers. Instead, it shows a comparison between two different (but ultimately similar) scientific phenomena. **Choice B is incorrect**. "An accessory" can refer to "something added to increase attractiveness or usefulness." No accessories are described in this text. **Choice C is incorrect**. "A contradiction" means "a set of ideas or things that are opposed to or inconsistent with each other." The text describes how Hu used the similarity between ant and light particle movement to develop his method, so a word that refers to difference would not make sense here.

127 Correct answer **B** Medium ‹ Back to question

B contingent on

Choice B is the best answer because it most logically completes the text's discussion of visual balance in photography. In this context, "contingent on" means conditional upon, or determined by. The text indicates that different ways of balancing elements in a photograph convey different ideas to viewers (for example, symmetrical composition tends to emphasize similarity among elements, whereas asymmetry tends to emphasize difference). Thus, there is a strong connection between what a photograph conveys and how its elements are balanced. Therefore, what a photo conveys is contingent on how it is balanced.

Choice A is incorrect. In this context, "inhibited by" most nearly means hindered or undermined by. The text indicates that different ways of balancing elements in a photograph convey different ideas to viewers, thereby indicating a relationship between image balance and what is conveyed. Although this explanation is consistent with a photographer choosing asymmetrical balance even while intending to convey similarity (associated with symmetrical balance), there is nothing to indicate that messages generally are inhibited by balance. Rather the implication is that balance is a tool photographers can use to craft their messages. **Choice C is incorrect**. In this context, "obligated to" means duty bound toward or answerable to. In context, it would not make sense to assert that a photograph's message is obligated to how that photograph is balanced.

Choice D is incorrect. In this context, "reserved for" most nearly means solely available to someone or held aside for some purpose. The text as a whole does not support the claim that a photograph's message is reserved for how that photograph is balanced.

128 Correct answer **A** Medium Back to question

A nullify

Choice A is the best answer because it logically completes the text's discussion of imported goods and consumer prices. In this context, "nullify" most nearly means negate or undermine. The text indicates that importing goods to a country can reduce consumer prices in that country, then cautions that the costs of transporting goods within the country is also a factor. These transportation costs likely raise the prices that must be paid by people who live far from the ports of entry. Therefore, the intranational transportation costs could nullify the price advantages to consumers of importing goods.

Choice B is incorrect. In this context, "denigrate" would most nearly mean disparage or deny the importance of. Since transportation costs would not be capable of denying the importance of price advantages, it would not make sense to state that intranational transportation costs denigrate the price advantages of importing goods. **Choice C is incorrect**. In this context, "underestimate" would most nearly mean predict a lower value for, or to undervalue, someone or something. Though transportation costs might be undervalued, they cannot themselves undervalue something else, so it would not make sense to state that intranational transportation costs underestimate the price advantages of importing goods. **Choice D is incorrect**. In this context, "misconstrue" would most nearly mean misunderstand. Since transport costs are not capable of understanding, it would not make sense to claim that intranational transportation costs misconstrue the price advantages of importing goods.

129 Correct answer **B** Medium Back to question

B asserted

Choice B is the best answer. "Asserted" means "stated confidently." Eastlake "did not hesitate to publish reviews going against popular opinion," so we can assume that she was confident in sharing her opinions.

Choice A is incorrect. "Exposed" means "made visible by uncovering" and, when talking about ideas, tends to be used in relation to uncovering the truth. Eastlake was sharing an opinion, not uncovering a truth. **Choice C is incorrect**. "Discovered" means "found," but Eastlake was writing an opinion essay. She was writing her own opinion, not "discovering" a new universal truth. **Choice D is incorrect**. "Doubted" means "didn't believe in." We're told that Eastlake "questioned" the idea that photography could be fine art. Placing "doubted" in the blank would actually suggest that Eastlake argued that photos were valuable for creativity and not for information, which is the opposite of what we were told she believes.

130 Correct answer **C** Medium Back to question

C advantageous

Choice C is the best answer because it most logically completes the text's discussion of businesses being featured in *The Illustrated History of San Mateo County*. In this context, "advantageous" means beneficial or providing a favorable position. The text explains that being included in the book "suggested that a business was an important part of the community," and it can be inferred that an enhanced reputation within the local community would benefit a business, commercially or otherwise. This context supports the idea that being featured in this publication would be advantageous.

Choice A is incorrect because in this context, "risky" would suggest that being featured in *The Illustrated History of San Mateo County* might have negative consequences for a business. However, the text implies only positive outcomes since inclusion indicated importance within the local community. **Choice B is incorrect** because "misleading" would mean deceptive or deliberately giving a wrong impression, but the text doesn't indicate there was something deceptive about being featured in

The Illustrated History of San Mateo County; rather, it suggests that inclusion indicated community importance. **Choice D is incorrect** because "unremarkable" would mean common or ordinary, which doesn't make sense in context. The text suggests that inclusion in *The Illustrated History of San Mateo County* instead conferred a special status on a business by conveying its importance in the local community.

131 Correct answer **A** Medium Back to question

A indulge

Choice A is the best answer because it most logically completes the text's discussion of the Roman emperor Marcus Aurelius. In this context, "indulge" means treat with excessive leniency. The text states that according to historian Edward Gibbon, Marcus Aurelius, who was widely considered virtuous, had only a single character flaw: his mild temperament. The text suggests that because of this flaw, Marcus Aurelius had an overly permissive nature. This context, in turn, supports the idea that Marcus Aurelius treated the vices, or evils, of those around him with excessive leniency, indulging rather than punishing those vices.

Choice B is incorrect. While the text does state that Marcus Aurelius was widely considered virtuous, it gives no indication that he was inclined to "despise," or hate, others' vices. Rather, the text suggests that he showed undue tolerance for these vices because of his overly permissive nature —that is, his inclination to allow others to do as they wished. **Choice C is incorrect** because the text's description of Marcus Aurelius as overly permissive suggests that he showed undue tolerance for others' vices, not that he tried to "moderate" those vices, or lessen their intensity. **Choice D is incorrect** because the text's description of Marcus Aurelius as overly permissive suggests that he showed undue tolerance for others' vices, not that he attempted to "criticize," or speak disapprovingly of, those vices.

132 Correct answer **A** Medium Back to question

A negating

Choice A is the best answer. "Negating" means "reversing" or "making invalid." Proving that Vermeer worked with students would reverse the view of him as a solitary artist.

Choice B is incorrect. "Prefiguring" means "being an early indicator of." There already existed views of Vermeer as a solitary painter, so a new painting would not be an early indicator of those views. Rather, a painting proving that Vermeer had a student would contradict those earlier views. **Choice C is incorrect**. "Entrenching" means "solidifying." A painting proving that Vermeer had a student would not solidify views of him as solitary, but would rather contradict those views. **Choice D is incorrect**. "Substantiating" means "supporting with proof." A painting proving that Vermeer had a student would not support views of him as solitary, but would rather contradict those views.

133 Correct answer **C** Medium Back to question

C saturated with

Choice C is the best answer because it most logically completes the text's discussion of Ikeguchi's model of bicycle supply. In this context, "saturated with" means thoroughly or completely supplied with. The text explains a problem encountered by some bicycle-sharing programs: users can return bicycles to different locations than where the users picked up the bicycles to start, which can result in a mismatch between bicycle supply (that is, where the bicycles are currently located) and user demand (that is, the locations where users are hoping to pick up bicycles). The text goes on to explain that Ikeguchi developed a way to identify when this mismatch is likely to occur. This context suggests that Ikeguchi's method will show when it is likely that some locations have an insufficient supply and other locations, by implicit contrast, are saturated with bicycles.

Choice A is incorrect because nothing in the text suggests that some locations are "susceptible to," or sensitive to or easily influenced by, bicycles. The text describes the phenomenon of bicycles being redistributed away from locations where users want them, not anything about those locations being influenced by the bicycles. **Choice B is incorrect** because the text describes situations in which some locations have an insufficient supply of bicycles because the bicycles have been relocated elsewhere, which suggests that the other locations have many bicycles, not that the other locations are "contingent on," or dependent on, the bicycles. Nothing in the text suggests that the locations themselves depend on the bicycles for anything. **Choice D is incorrect** because it would not make sense in context to say that some locations are "depleted of," or empty of, bicycles while others have an insufficient supply. The text describes situations in which bicycles have been relocated such that there is a mismatch between bicycle supply and user demand—the bicycles are no longer at the locations where users want to pick them up. This means that some locations do not have enough bicycles, while other locations must have many bicycles, not be depleted of bicycles.

134 Correct answer **D** Medium Back to question

D intricate

Choice D is the best answer because it most logically completes the text's discussion of the Three Sisters intercropping system. As used in this context, "intricate" would mean made up of complexly related elements. The text indicates that in the Three Sisters system, maize, squash, and beans form a "web of relations" in which the crops interact in various ways. The text's description of these interactions—the bean vines growing on the maize stalks, the squash vines keeping weeds away, and the beans adding nutrients that the maize and squash use—provides context suggesting that this "web of relations" is intricate.

Choice A is incorrect because describing the relationship among the crops in the Three Sisters system as "indecipherable," or impossible to comprehend, would not make sense in context. Although the text presents the relationship as complex, the text's description of the role that each crop plays makes it clear that the relationship is well understood, not indecipherable. **Choice B is incorrect** because the text discusses the practical benefits that each plant in the Three Sisters system provides to other members of the system, showing that the relationship among the crops that make up the system is not "ornamental," or mainly serving a decorative purpose. **Choice C is incorrect** because describing the relationship among the crops in the Three Sisters system as "obscure," or unknown or poorly understood, would not make sense in context. Although the text presents the relationship as complex, the text's description of the role that each crop plays makes it clear that the relationship is well understood, not obscure.

135 Correct answer **B** Medium Back to question

B hampered

Choice B is the best answer because it most logically completes the text's discussion of a scientific paradox regarding water and life during Earth's early history. In this context, "hampered" means hindered or impeded. The text discusses a paradox, or a situation that seems to contradict itself, and indicates that one half of the paradox is that the presence of water is necessary to support most biochemical reactions that enable life. The contradictory idea, then, would be a case of the presence of water not supporting such reactions; this context suggests that the other half of the paradox is that when oceans covered most of the planet, the water likely hindered or impeded a biochemical process (the formation of biomolecules) that is important for all living organisms.

Choice A is incorrect. In this context, "reflected" would mean showed or gave an indication. The text focuses on a paradox, or a seemingly self-contradictory situation, having to do with the role of water in supporting life; since the first part of the paradox has to do with water usually being essential for enabling life, the second part of the paradox should have to do with water having a negative effect on life, and water being an indication of a biomolecular process important for life wouldn't be a negative thing. **Choice C is incorrect**. In this context, "imitated" would mean mimicked or copied, and it isn't clear what it would mean to say that water being present on early Earth's surface somehow copied the creation of biomolecules in living

organisms. **Choice D is incorrect**. In this context, “exploited” would mean used or took advantage of, and it isn’t clear what it would mean to say that the presence of water—the fact of water being present—on early Earth’s surface somehow took advantage of a biomolecular process occurring in living organisms.

136 Correct answer **D** Medium Back to question

D homogeneous

Choice D is the best answer because it most logically completes the text’s discussion of the art at the National Museum of the American Indian. In this context, "homogenous" means uniform or highly similar. The text explains that the painters whose works are included in this museum’s collection employ an array of artistic styles, both Native and non-Native, traditional and new. Given this high degree of stylistic diversity, it is a misconception that Native art is uniform, or homogenous.

Choice A is incorrect because the text doesn’t consider whether Native art is controversial, or causes disagreement or discussion; instead, the text discusses the stylistic diversity of the collection of the National Museum of the American Indian. **Choice B is incorrect**. Although the text indicates that some of the artists whose work is represented in the collection of the National Museum of the American Indian blend various artistic traditions into highly individual styles of their own, this is not the primary focus of the text. Instead, the text is concerned with how Native art is often mistakenly perceived as uniform, when in fact it is stylistically diverse. **Choice C is incorrect** because the text never implies that people mistakenly conceive of Native art as theoretical, or concerned with philosophical or abstract issues; instead, the text’s discussion of Native art is framed around this art’s stylistic diversity versus the misconception of it as homogenous.

137 Correct answer **D** Medium Back to question

D an oddity

Choice D is the best answer because it most logically completes the text’s discussion of the duration of gamma ray burst GRB 230307A. In this context, "an oddity" is something that is odd or unusual. The text explains that the burst lasted for 200 seconds and that other bursts generated by neutron mergers have usually lasted fewer than 2 seconds. In other words, the duration of gamma ray burst GRB 230307A was unusual.

Choice A is incorrect because the text focuses on a difference between the duration of gamma ray burst GRB 230307A and the typical duration of bursts caused by neutron mergers, not "a coincidence," or a point of correspondence, between them; the text indicates that GRB 230307A lasted much longer than what is typical of other bursts. **Choice B is incorrect**. In this context, "a reprieve" would be either a temporary relief from something or a delay of a punishment, neither of which would make sense as something that the duration of a gamma ray burst could provide to the burst itself. **Choice C is incorrect**. Although it would make sense to refer to gamma ray burst GRB 230307A itself as "an incident," or a thing that occurred, the missing word describes the duration of the burst, and it doesn’t make much sense to describe a length of time as an incident. Further, the sentence emphasizes that the burst’s duration was very unusual, not simply that the burst occurred.

138 Correct answer **A** Medium Back to question

A insurmountable

Choice A is the best answer because it most logically completes the text’s discussion of the difficulty in naming a large number of minor planets. In this context, "insurmountable" means impossible to overcome or too difficult to solve. The text establishes that coming up with distinct names for minor planets is already a difficult task that has become even more challenging because there are now more than 500,000 known minor planets. The logical conclusion is that finding unique names for such a vast number of celestial objects has become virtually impossible—or insurmountable—which explains why the majority of recently discovered minor planets receive only identification numbers instead of proper names.

Choice B is incorrect because "feasible" means possible to do or achieve, which would contradict the logic of the text. The text indicates that the task of naming minor planets has become more difficult because of their large number. The text then explains that this is why most new discoveries receive only identification numbers. If the task were feasible, there would be no reason to abandon the practice of giving proper names to minor planets in favor of using only numbers. **Choice C is incorrect** because "substantial" means considerable in size, amount, or importance. While the text does suggest that naming all minor planets would be a significant undertaking, describing the task as substantial wouldn't logically explain why the naming practice has been largely abandoned in favor of using only identification numbers. The text suggests that the task has become virtually impossible (insurmountable), not merely large or significant. **Choice D is incorrect** because "unnecessary," which means not needed, would suggest that giving proper names to minor planets serves no purpose. However, the text doesn't question the value or purpose of naming minor planets; rather, it explains that the sheer number of discoveries has made the already challenging naming task nearly impossible to complete. The text provides an example of a named minor planet (1227 Geranium), indicating that naming has been considered worthwhile but has become impractical because of the volume.

139 Correct answer **D** Medium Back to question

D consensus

Choice D is the best answer because it most logically completes the text's discussion of US forest land classifications. In this context, "consensus" means agreement. The text indicates that a percentage given in a US forest land report differs from other estimates and that this discrepancy isn't surprising, given that forest researchers regularly dispute one another's classifications of parts of US forest land as either mature or old growth. This context conveys that there is little agreement when it comes to these categories.

Choice A is incorrect because the text states that there is often dispute among forest researchers about classifications of US forest land as either mature or old growth, which directly indicates that when it comes to these categories, there is much "deliberation," or discussion and consideration, not little deliberation. **Choice B is incorrect** because the text indicates that there is often dispute among forest researchers about classifications of US forest land as either mature or old growth; this doesn't imply that there is little "vigilance," or careful attention, among researchers when it comes to these categories but rather conveys that researchers do pay attention to forest land classifications and question one another's decisions. **Choice C is incorrect** because the text indicates that there is often dispute among forest researchers about classifications of US forest land as either mature or old growth; this doesn't imply that there is little "interest," or concern, among researchers when it comes to these categories but rather conveys that researchers are concerned with forest land classifications and pay attention to one another's classifications.

140 Correct answer **D** Medium Back to question

D integral

Choice D is the best answer because it most logically completes the text's discussion of Craig Santos Perez's poetic practice in *Habitat Threshold*. In this context, "integral" means essential or fundamentally connected. The text describes Perez's "recycling" technique, in which he retains the syntactical and rhetorical structures (i.e., formal elements) of canonical poems but alters their content to address current environmental issues. The text further indicates that this technique invites readers to recognize how climate change has transformed seemingly familiar experiences—an effect that depends on the contrast between a poem's recognizable inherited form and its new content. Because meaning derives from the particular way in which form and content interact in Perez's poems, the context supports the idea that the form of these poems is integral to their meaning—in other words, form is fundamentally bound up with what the poems convey.

Choice A is incorrect because it wouldn't make sense in context to say that the form of Perez's poems is "antithetical," or directly opposed, to their meaning. The text indicates that the inherited form and the new content work together to produce the poems' effect, so the form is essential, not opposed, to the poems' meaning. **Choice B is incorrect** because it wouldn't make sense in context to say that the form of Perez's poems is "resigned," or passively accepting. "Resigned" describes an attitude

held by a person, not a relationship between a poem's form and its meaning. Moreover, the poems' form actively contributes to their meaning; it would contradict the text to suggest that the poems' form merely serves as a passive vehicle for meaning. **Choice C is incorrect** because it wouldn't make sense in context to say that the form of Perez's poems is "invulnerable," or incapable of being harmed. The text doesn't characterize the poems' meanings as threats to their form; instead, it discusses how form and meaning relate.

141 Correct answer **C** Medium Back to question

C anomaly

Choice C is the best answer. An "anomaly" is something that deviates from norms or expectations. In this case, the elkhorn coral is an anomaly because it can pass on somatic mutations, whereas most other animals can't.

Choice A is incorrect. A "hypothesis" is "a theory about something," but no theories are provided about elkhorn coral in this text, just facts. **Choice B is incorrect**. "Affinity" represents "an inclination or liking toward something." As genetic mutations tend to occur without any conscious effort, you can't really have an inclination toward passing on somatic mutations. **Choice D is incorrect**. "Corroboration" means "evidence to support or prove something." Because elkhorn coral do the opposite of what most animals do, they do not provide corroboration of the theory that somatic mutations can't be passed onto offspring. Rather, they show the opposite.

142 Correct answer **D** Medium Back to question

D dormant

Choice D is the best answer because it logically completes the text's discussion about genes related to hibernation. In this context, "dormant" means inactive. The text explains that the same genes that enable certain nonhuman mammal species to hibernate during the winter by altering their bodily processes are also found in our species but have "essentially no effect" on humans' bodily processes. In other words, these genes don't function in humans.

Choice A is incorrect because in this context, "decisive" means has the power to affect the outcome of something, but the text states that genes related to hibernation are instead inactive in humans—that is, the genes don't affect humans' bodily processes, although they are present in their bodies. **Choice B is incorrect** because in this context, "lacking" means missing, but the text states that the genes are present in humans, though inactive. **Choice C is incorrect** because "variable" means characterized by the potential to change, but the text indicates that these genes don't change in their effect on humans' bodily processes; instead, the genes are consistently inactive in humans.

143 Correct answer **A** Medium Back to question

A recognizable

Choice A is the best answer because it most logically completes the text's discussion about handedness in animals. As used in this context, "recognizable" means apparent or identifiable. The text indicates that handedness is "easy to observe in humans," but that animal-behavior researchers use special tasks to determine handedness in other animals. This context and the use of "less" before the blank indicate that compared with handedness in humans, handedness in other animals is less recognizable.

Choice B is incorrect because there's nothing in the text to suggest that handedness is less "intriguing," or fascinating, in nonhuman animals than it is in humans. The text focuses on how easy it is to observe handedness in humans as compared with other animals; the text doesn't suggest that handedness is more fascinating in humans. **Choice C is incorrect** because there's nothing in the text to suggest that handedness is less "significant," or important or meaningful, in nonhuman animals than it is in humans. The text focuses on how easy it is to observe handedness in humans as compared with other animals; the text doesn't suggest that handedness is more significant in humans. **Choice D is incorrect** because "useful," or functional or

helpful, wouldn't make sense in context. The text focuses on the ease with which researchers can determine whether an animal or person is right- or left-handed, not on how useful handedness in nonhuman animals is compared with handedness in humans.

144 Correct answer **B** Medium Back to question

B marginalize

Choice B is the best answer because it most logically completes the text's discussion of how historians have treated rank-and-file (ordinary) workers in their analyses. In this context, "marginalize" means treat as unimportant or relatively powerless within a group or society. The text explains that according to Austin McCoy, historians have tended to treat "political, business, and labor leaders" as the "major actors" involved in making changes in organized labor in the period after the Second World War. By emphasizing the contributions of these leaders, historians have in effect minimized the contributions of ordinary workers, treating them as relatively unimportant and "nearly devoid of agency," thereby marginalizing them.

Choice A is incorrect. In this context, "epitomize" would mean either serve as an ideal example of something or make into an example of something, neither of which would make sense. In stating that historians have tended to characterize political, business, and labor leaders as the primary actors responsible for changes in the post-Second World War labor movement in a manner that minimizes the influence of ordinary workers, the text suggests that historians have tended to present ordinary workers as unimportant to or uninfluential within the movement, not that historians themselves serve as examples of ordinary workers, or that historians in their analyses have made ordinary workers into examples of the changes that occurred. **Choice C is incorrect** because in this context, "extol" would mean praise highly or glorify. The text states that historians have tended to present ordinary workers as being "nearly devoid of agency," thereby minimizing their importance. It therefore wouldn't make sense to say that in doing so, historians have tended to praise or glorify them. **Choice D is incorrect** because "substantiate" would mean verify with evidence, and nothing in the text suggests that historians have verified rank-and-file workers or their contributions in their analyses. If anything, the text suggests the opposite, implying that by minimizing workers' agency in organized labor, historians have likely overlooked evidence demonstrating their influence.

145 Correct answer **C** Medium Back to question

C comprises

Choice C is the best answer because it most logically completes the text's discussion of Gardley's play. In this context, "comprises" means constitutes or makes up the totality of, and the text indicates that *The House That Will Not Stand* had an "all-female cast" that stands in some relationship to "an array of female characters" in the play. Because all cast members are female, the characters must be played by these female cast members; therefore the cast constitutes, or comprises, the collection of characters.

Choice A is incorrect. In this context, "engulfs" would mean encloses or overwhelms, and although it is fairly common to describe an actor as embodying (or personifying realistically) a character, there is nothing in the text to suggest that the cast members enclosed or overwhelmed the characters they played. **Choice B is incorrect** because in this context, "encourages" would mean inspires with courage or hope. Although the text does mention "a strong mother and several daughters dealing with individual struggles," which might suggest that there are moments of encouragement among the characters during the play, there is nothing to suggest that the cast members encouraged the characters they portrayed. **Choice D is incorrect** because, in this context, "provokes" would mean instigates or incites to anger. Nothing in the text addresses provocation or what it might mean for actors to provoke the characters they are playing.

146 Correct answer **A** Medium ‹ Back to question

A haphazard

Choice A is the best answer because it most logically completes the text's discussion of Yu's novel. In this context, "haphazard" means marked by a lack of plan or order. The text indicates that the quest featured in the novel, which involves the protagonist bouncing across time, is chaotic and causes the reader to often wonder what will happen. This context suggests that the protagonist's journey seems to be marked by a lack of order.

Choice B is incorrect because the text indicates that the journey featured in Yu's novel involves a character "ricocheting chaotically," or bouncing in a disordered way, across time and causes the reader to often wonder what will happen. It wouldn't make sense to say that a chaotic journey seems "premeditated," or characterized by forethought and planning. **Choice C is incorrect** because the text doesn't give any indication that readers regard the journey in Yu's novel as "inspirational," or as causing extraordinarily creative or brilliant thoughts or actions; instead, the text focuses on the idea that the protagonist's journey is chaotic, or disordered, and doesn't give readers a clear sense of what will happen. **Choice D is incorrect**. Rather than suggesting that the journey featured in Yu's novel is "fruitless," or has an unsuccessful outcome, the text focuses on the idea that while reading about the protagonist's chaotic movements across time, readers are often unsure of what will happen—that is, they don't know whether the protagonist will be successful in finding his father.

147 Correct answer **D** Medium ‹ Back to question

D uniform

Choice D is the best answer. The text tells us that the samples are too "small scale" to reflect the composition of the asteroid, which probably doesn't show the same variation on a large scale. This suggests that the mineral composition of the samples are unlikely to be exactly the same from sample to sample.

Choice A is incorrect. "Neglected" means "suffering a lack of proper care" or "abandoned," which doesn't work here. The text never suggests that the distribution of minerals in the samples would be neglected, so this statement doesn't logically follow. **Choice B is incorrect**. "Redundant" means "not or no longer useful or needed," which is too strong. The text doesn't suggest that the variation between the samples isn't a useful finding at all—just that we can't assume that the large-scale composition of the asteroid will show the same variation. But the composition of the samples might be useful for something else. **Choice C is incorrect**. "Ongoing" means "still in progress," which doesn't make sense: the distribution of minerals in a sample can't be "ongoing."

148 Correct answer **D** Medium ‹ Back to question

D invalidate

Choice D is the best answer because it most logically completes the text's discussion of the economist's claim about sales of personal electronic devices. In this context, "invalidate" most nearly means nullify or make invalid. The text indicates that interruptions in the supply of microchips for personal electronics "have challenged" the economist's claim that sales of personal electronics will show strong growth in the coming months. The text goes on to clarify the effect of the delays on the economist's projection, stating that the delays are very likely to extend the time frame over which the projected growth in sales will occur. This context suggests that the delays are unlikely to invalidate the economist's projection entirely—the delays will probably alter the time frame of the projection, not nullify it or make it invalid.

Choice A is incorrect because saying that the delays are unlikely to "dispute," or argue against, the economist's projection wouldn't make sense. Since the delays are an inanimate circumstance, they couldn't argue against a prediction about the sales of personal electronics. **Choice B is incorrect** because saying that the delays are unlikely to "withdraw," or remove from consideration, the economist's projection wouldn't make sense. Although the economist could withdraw her projection

because of the delays, the delays themselves couldn't withdraw her projection since they're an inanimate circumstance and thus can't choose to remove something from consideration. **Choice C is incorrect** because there's nothing in the text to suggest that the delays will "underscore," or emphasize, the economist's projection. Instead, the text suggests that the delays are likely to extend the time frame of the economist's projection but not to undermine the projection entirely.

149 Correct answer **A** Medium Back to question

A proponent of

Choice A is the best answer because it most logically completes the text's discussion of Francis Cecil Sumner. As used in this context, "proponent of" means supporter of. The text says that Sumner helped to found the psychology department at historically Black Howard University in 1930. This is evidence that Sumner supported increasing the opportunity for Black students to study psychology.

Choice B is incorrect because the phrase "supplement to," or addition to, wouldn't make sense in context. The text discusses Sumner's efforts to increase the number of Black psychology students, but it doesn't make sense to describe him as an addition to his efforts. **Choice C is incorrect** because Sumner was already an accomplished psychologist himself when he helped to found the Howard University psychology department. While Black students were the beneficiaries of his efforts—that is, they received help because of his efforts—it wouldn't make sense in this context to describe Sumner as a "beneficiary of" opportunities, because he was the one doing the helping. **Choice D is incorrect** because founding a psychology department at Howard University wouldn't be a "distraction for" Sumner's aim to increase the opportunity for Black students to study psychology—that is, it wouldn't be something that draws Sumner's attention away from that goal, but rather the opposite.

150 Correct answer **B** Medium Back to question

B fluctuations in

Choice B is the best answer because it most logically completes the text's discussion of solar energy collection and storage. In this context, "fluctuations in" means irregular changes in. The text notes that economists recommend that countries that want to rely more on solar energy (energy captured from sunlight) should attempt to expand their storage capacity. The text goes on to explain that having a large amount of stored solar energy can lessen the negative effect of "unpredictable shifts in cloud cover and haze"—that is, unpredictable changes in environmental conditions that at times limit sunlight. This context suggests that having ample solar energy stored and ready to use can mitigate the issue of fluctuations in solar energy collection caused by irregular patterns of sunlight availability.

Choice A is incorrect because in this context, "developments of solar energy collection" would most clearly refer to the creation of ways to collect solar energy (energy captured from sunlight). The text focuses on collection and the idea that having stored energy can mitigate, or make less bad, the effects of a problem caused by unpredictable changes that affect sunlight ("cloud cover and haze"); there's no reason to think that the creation of new collection methods would be viewed as a problem that would need to be mitigated. **Choice C is incorrect** because in this context, "calibrations with" would most clearly refer to precise adjustments for a particular purpose. The text focuses on the collection of solar energy (energy captured from sunlight) and the idea that having stored energy can mitigate, or make less bad, the effects of a problem caused by unpredictable changes that affect sunlight ("cloud cover and haze"); there's no reason to think that precision in something related to solar energy collection would be viewed as a problem that would need to be mitigated. **Choice D is incorrect**. The text focuses on the collection of solar energy (energy captured from sunlight) and the idea that having stored energy can mitigate, or make less bad, the effects of a problem caused by unpredictable changes that affect sunlight ("cloud cover and haze"); nothing in the text suggests that "incentives for," or rewards for, solar energy collection would be viewed as a problem that would need to be mitigated, especially in countries that want to rely more on solar energy than they already do.

151 Correct answer **B** Medium ‹ Back to question

B rudimentary

Choice B is the best answer because it most logically completes the text's discussion of single-celled organism behavior. As used in this context, "rudimentary" means basic or unsophisticated. According to the text, a study of the single-celled protozoan *Stentor roeseli* showed that the organisms can switch strategies for escaping certain stimuli, "sophisticatedly 'changing their minds'" and using new strategies should other strategies fail. This context suggests that single-celled organisms may not be limited to behaviors that are basic or rudimentary, since the study showed that single-celled protozoans can respond complexly to irritating stimuli.

Choice A is incorrect because the text doesn't suggest that single-celled organisms may not be limited to behavior that is "aggressive," or threatening. Rather, the text suggests that single-celled organisms may not be limited to behaviors that are basic, since the study of *Stentor roeseli* showed that single-celled protozoans can respond complexly to irritating stimuli. **Choice C is incorrect** because the text doesn't suggest that single-celled organisms may not be limited to behavior that is "evolving," or advancing. Rather, the text suggests that single-celled organisms may not be limited to behaviors that are basic, since the study of *Stentor roeseli* showed that single-celled protozoans can respond complexly to irritating stimuli. **Choice D is incorrect** because the text doesn't suggest that single-celled organisms may not be limited to behavior that is "advantageous," or helpful. Rather, the text suggests that single-celled organisms may not be limited to behaviors that are basic, since the study of *Stentor roeseli* showed that single-celled protozoans can respond complexly to irritating stimuli.

152 Correct answer **B** Medium ‹ Back to question

B exactitude

Choice B is the best answer because it most logically completes the text's discussion of the method the inhabitants of the Mexica empire used to track time. In this context, "exactitude" means precision. The text indicates that the Mexica used the sun's position relative to various natural landmarks to track the passage of time, explaining that such methods allowed the Mexica to accurately determine the dates of important events such as solstices. This context supports the idea that the Mexica people were able to track time with a high degree of precision, or exactitude.

Choice A is incorrect because in this context "precariousness" would mean instability, and there's nothing in the text to suggest that the method used by the Mexica people to track time was unstable or produced unstable results. Rather, the text indicates that the method yielded precise results, allowing the Mexica to accurately determine the dates of significant events. **Choice C is incorrect** because in this context "resilience" would mean persistence, and there's nothing in the text to suggest that the Mexica worked stubbornly in spite of obstacles in order to track time. **Choice D is incorrect** because in this context "inconspicuousness" would mean discreetness, and there's nothing in the text to suggest that the Mexica wanted to track time without being noticed.

153 Correct answer **D** Medium ‹ Back to question

D conform to

Choice D is the best answer because it most logically completes the text's discussion of Jemisin's writing. In this context, "conform to" means to act in accordance with something. The text suggests that in her science fiction writing, Jemisin's willingness to go against expectations and not use plots and themes that seem to follow a formula reflects how she treats the standard practices of the genre. This context conveys that Jemisin chooses not to act in accordance with those conventions.

Choice A is incorrect. In this context, "question" would mean doubt or object to. The text indicates that Jemisin is willing to go against expectations and not use formulaic plots and themes in her science fiction writing, suggesting that she may actually object to those conventions of the genre, not that she chooses not to question them. **Choice B is incorrect** because the text

indicates that in her science fiction writing, Jemisin is willing to go against expectations and not use formulaic plots and themes. Rather than suggesting that Jemisin chooses not to "react to," or act in response to, the standard practices of the genre, this context suggests that she is acting in response to such conventions by deliberately avoiding them. **Choice C is incorrect**. In this context, "perceive" would mean become aware of or understand. The text indicates that in her science fiction writing, Jemisin is willing to go against expectations and not use formulaic plots and themes. This context conveys that Jemisin is aware of and deliberately avoids those conventions of the genre, not that she chooses not to be aware of them.

154 Correct answer **B** Medium Back to question

B atypical

Choice B is the best answer because it most logically completes the text's discussion of Samuel R. Delany's character Rydra Wong. As used in this context, "atypical" would mean unrepresentative or not common. The text indicates that Wong is one of "nearly a dozen" characters in Delany's novels who are poets or writers. This context conveys that being a poet isn't an atypical occupation for a character in one of Delany's works.

Choice A is incorrect because "infallible" means to be accurate or without fault, which wouldn't make sense in context. The text focuses on the fact that Delany has written many characters who are poets and writers. This context suggests that the occupation isn't atypical for Delany, not that the occupation isn't infallible, or problematic. **Choice C is incorrect** because "lucrative" means to be profitable, which wouldn't make sense in context. If writing poet characters weren't profitable, it wouldn't be logical to explain this by citing that Delany gave many of his characters the same occupation. **Choice D is incorrect** because "tedious" means to be boring, which wouldn't make sense in context. The text focuses on the fact that Delany has written many characters who are poets and writers. This context suggests that the occupation isn't atypical for Delany, not that the occupation isn't tedious.

155 Correct answer **B** Medium Back to question

B an overtly

Choice B is the best answer because it most logically completes the text's discussion of Yaszek's introduction to her science fiction anthology. In this context "overtly" means openly or without concealment. The text draws a contrast between the lack of "deliberately signaled" political themes in woman-authored science fiction from the 1920s to the 1960s and what Yaszek notes about woman-authored science fiction from the 1970s. This contrast implies that the work from the 1970s did clearly reflect feminist political themes. In other words, the text indicates that unlike women who wrote science fiction in the 1920s to the 1960s, the women who wrote science fiction in the 1970s expressed overtly feminist themes.

Choice A is incorrect. In this context "prudently" would mean cautiously, which might plausibly describe the women who wrote science fiction from the 1920s to the 1960s, in that they tended to avoid revealing their political views; however, the text contrasts these authors with the women writing science fiction in the 1970s, thereby suggesting that the authors writing in the 1970s were not restrained in that way. **Choice C is incorrect** because in this context "cordially" would mean politely, and nothing in the text indicates that politeness was a significant factor for women writing science fiction either from the 1920s to the 1960s or in the 1970s. The text draws a contrast between the lack of "deliberately signaled" political themes in woman-authored science fiction from the 1920s to the 1960s and what Yaszek notes about woman-authored science fiction from the 1970s. It's unclear how "less deliberately signaled" politics and an increasing sense of politeness toward feminism would constitute a meaningful contrast. **Choice D is incorrect** because in this context, "inadvertently" would mean unintentionally, and nothing in the text suggests that Yaszek thought the feminist elements of the woman-authored science fiction from the 1970s arose without deliberate effort.

156 Correct answer **B** Medium ‹ Back to question

B created

Choice B is the best answer because it most logically and precisely completes the text's discussion of Jeyifous's series of images for the 2020 exhibition. In this context, "created" means produced. The text explains that Jeyifous, a photographer and neurobiologist, photographed adults who had appeared as children in posters from the 1970s, then combined those photographs with magnified images of the adults' cells—a process that resulted in what he called "micro and macro portraiture." This context suggests that Jeyifous drew on his dual interests in photography and neurobiology to produce the images for display in the exhibition.

Choice A is incorrect because there's nothing in the text to suggest that Jeyifous "validated," or corroborated, the series of images. The text describes Jeyifous's process for composing the images but doesn't describe Jeyifous making an effort to evaluate the images for their artistic or scientific legitimacy. **Choice C is incorrect** because there's nothing in the text to suggest that Jeyifous "challenged," or disputed, an aspect of the images; rather, the focus of the text is on the inspiration behind the images and the method Jeyifous used to achieve them. **Choice D is incorrect** because the text indicates that Jeyifous made the images himself using a combination of photography and magnified pictures of cells, not that he "restored," or reconditioned, the images from a deteriorated state.

157 Correct answer **B** Medium ‹ Back to question

B esteem

Choice B is the best answer because it most logically completes the text's discussion of Benjamin Franklin's popularity in France. In this context, "esteem" means high regard. The text indicates that Franklin was very popular, or highly regarded, in France, where he sought the country's support for the United States in its fight for independence, and indicates that his status helped him achieve his goal. The context therefore suggests that being held in high regard by the people likely helped Franklin convince France to help the United States.

Choice A is incorrect because the text directly indicates that it was Franklin's popularity that likely helped him convince France to help the United States, not his "thoughtfulness" (which in this context would mean either his careful reasoning and attention or his kind consideration of others' needs). **Choice C is incorrect** because the text doesn't suggest that there was any "controversy," or dispute, about Franklin's presence in France; instead, the text states that Franklin was very popular in France and directly indicates that this status likely helped him convince France to help the United States. **Choice D is incorrect** because the text directly indicates that it was Franklin's popularity that likely helped him convince France to help the United States, not his "sincerity," or his honesty.

158 Correct answer **D** Medium ‹ Back to question

D integral

Choice D is the best answer because it most logically completes the text's discussion of Steiger Butte Drum's contributions to the musical work *Natural History*. In this context, "integral" means essential or necessary to the whole. The text states that Steiger Butte Drum not only took part in the piece's creation, collaborating with composer Michael Gordon on it, but also "must be included in all performances." This context clearly indicates that the ensemble's participation is essential, or integral, to the piece, both in its creation and its performance.

Choice A is incorrect because in this context, "tangential" would mean peripheral or of little relevance to something. The text emphasizes the importance of Steiger Butte Drum's involvement in both the composition and performance of *Natural History*, indicating their role is central, not tangential. **Choice B is incorrect** because in this context, "subsequent" would mean following after or coming later than something else. The text doesn't establish a temporal sequence where the participation of Steiger

Butte Drum followed after the creation of *Natural History*; rather, it indicates that the ensemble was involved with the piece from the beginning, having worked with Michael Gordon during the creation process. **Choice C is incorrect** because in this context, "analogous" would mean similar or comparable to something else, and the text doesn't compare Steiger Butte Drum's participation in the creation and performances of *Natural History* to anything else; instead, it describes the nature and importance of the ensemble's involvement.

159 Correct answer **A** Medium Back to question

A fruitful

Choice A is the best answer because it most logically completes the text's discussion of the fossil site from which the evidence about brood care in *K. popovi* was recovered. In this context, "fruitful" means abundantly productive. The text indicates that the researchers drew their evidence from fossils found in China's Haifanggou Formation, a location that has yielded a vast diversity of fossils. The information about the site yielding a vast diversity of fossils supports the characterization of the Haifanggou Formation as particularly productive, or fruitful.

Choice B is incorrect because there is nothing in the text to support characterizing the Haifanggou Formation as a site that is particularly "unassailable," or not open to attack, question, or criticism. The text emphasizes that the site has yielded a vast diversity of fossils, suggesting that it is a particularly productive location for fossil hunters, not that it cannot be challenged. **Choice C is incorrect** because there is nothing in the text to support characterizing the Haifanggou Formation as a site that is particularly "obscure," or poorly understood or relatively unknown. In fact, the text notes that the Haifanggou Formation has yielded a vast diversity of fossils, suggesting that the site is not an obscure one. **Choice D is incorrect** because "quantified" means expressed or measured as a quantity, which does not describe the productiveness the context calls for. Although the text indicates that the Haifanggou Formation has yielded a vast diversity of fossils, that fact suggests that the site can be characterized as particularly productive, not as particularly quantified.

160 Correct answer **B** Medium Back to question

B diminish

Choice B is the best answer because it most logically completes the text's discussion of birdsong. In this context, "diminish" means reduce or lessen. The text establishes that birds sing to communicate over potentially large distances and that researchers believe that birds that live in densely vegetated habitats sing at lower frequencies than birds that live in comparatively sparsely vegetated habitats. The text then explains that researchers hold this belief due to some effect of dense vegetation on the distance that high-frequency sounds can travel. If birds sing to communicate over long distances, it would be logical to conclude that researchers believe that birds in densely vegetated habitats sing at lower frequencies than birds in relatively sparse habitats do because dense vegetation diminishes the distance that high-frequency sounds can travel.

Choice A is incorrect because nothing in the text suggests that dense vegetation can "exceed," or surpass or go beyond, the distance that high-frequency sounds can travel. The text suggests that dense vegetation reduces the distance that high-frequency sounds can travel, not that dense vegetation goes farther than that distance. **Choice C is incorrect** because it would not be sensible to say that dense vegetation can "encompass," or enclose or encircle, the distance that high-frequency sounds can travel. The distance that sounds can travel is not an object that can be enclosed or encircled by vegetation. **Choice D is incorrect** because there is no information in the text indicating that dense vegetation can "conceal," or hide or keep from being observed, the distance that high-frequency sounds travel. Instead, the text suggests that dense vegetation reduces the distance that high-frequency sounds can travel.

161 Correct answer **D** Medium ‹ Back to question

D confirm

Choice D is the best answer because it most logically completes the text's discussion of the identification of maize's wild ancestor. In this context, to "confirm" means to establish the truth or correctness of something. The text explains that maize "shows so little resemblance to any wild plant that genetic research was necessary" to establish its ancestry, which was ultimately traced to teosinte grass. This context conveys the idea that scientific verification was required to establish an ancestral relationship with certainty—that is, to confirm teosinte grass as maize's ancestor.

Choice A is incorrect because to "acquire" means to obtain or gain possession of something. Although their research likely required scientists to acquire samples of maize and teosinte grass, the text does not suggest that this was the ultimate goal of their work, which instead probed the connection between the two plants. **Choice B is incorrect** because to "develop" means to create something or to promote the growth of something, and the ancestral relationship between teosinte grass and maize already existed as a biological fact in the deep past, which scientists then verified through research; because this relationship already existed, the scientists can't be said to have either created it or encouraged its growth. **Choice C is incorrect** because to "attract" means to entice something or to bring about a relationship or connection between two things, while the ancestral relationship between teosinte grass and maize already existed as a biological fact; rather than bringing about the relationship between the two plants, the scientists instead verified the prior existence of it.

162 Correct answer **C** Medium ‹ Back to question

C confined to

Choice C is the best answer because it most logically completes the discussion of the artist Diego Velázquez's influence outside Spain. As used in this context, "confined to" means restricted to. The text says that Velázquez was the leading artist in the Spanish court during the seventeenth century, but it also notes that other painters around the world were influenced by his techniques and style. Thus, Velázquez's influence was hardly (or almost not) confined to, or restricted to, Spain.

Choice A is incorrect because if Velázquez was a leading artist in Spain, it doesn't make logical sense to claim that his influence was hardly (or almost not) derived from, or obtained from, Spain. Moreover, the other painters around the world who employed Velázquez's techniques would by definition be influenced by Spanish style. **Choice B is incorrect** because if Velázquez was a leading artist in the court of King Philip IV of Spain, then his influence must have been widely recognized, or acknowledged, rather than being hardly (or almost not) recognized. **Choice D is incorrect** because the text gives no indication that deliberately limiting Velázquez's influence outside Spain was ever considered by anyone. Thus, even if it is true that his influence was not repressed, or restrained, it doesn't make logical sense to say so in this context.

163 Correct answer **B** Medium ‹ Back to question

B adhere to

Choice B is the best answer because it most logically completes the text's discussion of bronze- and brass-casting techniques used by the Igun Eronmwon guild. In this context "adhere to" would mean to act in accordance with. The text states that although members of the Igun Eronmwon guild typically do something with techniques that have been passed down since the thirteenth century, they "don't strictly observe every tradition." By establishing a contrast with not always following traditions, the context suggests that guild members do typically adhere to traditional techniques.

Choice A is incorrect because in this context "experiment with" would mean to do something new with. Although using motors rather than manual bellows is presented as a new approach, the text establishes a contrast between what the guild members typically do with techniques that have been passed down over centuries and the idea that the members "don't strictly observe every tradition." The phrase "experiment with" wouldn't support the contrast because regularly trying new things with the

techniques would be an example of not strictly following all traditions. **Choice C is incorrect** because in this context "improve on" would mean to make better. Although using motors rather than manual bellows might be an improved approach, the text establishes a contrast between what the guild members typically do with techniques that have been passed down over centuries and the idea that the members "don't strictly observe every tradition." The phrase "improve on" wouldn't support the contrast because regularly making changes to the techniques would be an example of not strictly following all traditions. **Choice D is incorrect** because in this context "grapple with" would mean to try hard to solve a difficult problem. Although bronze- and brass-casting are likely challenging tasks, nothing in the text suggests that the guild members have any particular difficulties with the techniques passed down since the thirteenth century.

164 Correct answer **B** Medium Back to question

B complementary

Choice B is the best answer because it most logically completes the text's discussion of how seismic monitoring and orbital imaging are used to find impact craters on Mars. In this context, "complementary" means combining in such a way that each contributes something the other lacks. The text describes how two data sources work together: seismic monitoring detects vibrations that indicate the rough location of an impact, and orbital imaging is then used to examine that limited area in detail to pinpoint the exact location of the crater. Each method does something the other does not—seismic monitoring narrows the search area, while orbital imaging provides the precise location—and together they accomplish what neither could alone. This context supports the idea that the two methods' roles are complementary.

Choice A is incorrect because describing the roles of seismic monitoring and orbital imaging as "interchangeable," or able to be substituted for each other, would contradict the text. The text indicates that the two methods perform different functions in sequence (seismic monitoring narrows the area; orbital imaging pinpoints the crater), so they cannot be substituted for each other. **Choice C is incorrect** because describing the roles of seismic monitoring and orbital imaging as "exhaustive," or comprehensive in covering all possibilities, wouldn't be logical in context. The text describes how the two methods work together to perform a particular two-step task (locating new impact craters), not whether they collectively address every possible aspect of Mars research. **Choice D is incorrect** because describing the roles of seismic monitoring and orbital imaging as "redundant," or unnecessarily duplicative, would contradict the text. The text indicates that each method performs a distinct function in finding impact craters on Mars—rough localization versus precise localization—so neither method duplicates the other's contribution.

165 Correct answer **B** Hard Back to question

B dogmatic

Choice B is the best answer. A person who is "dogmatic" believes strongly that their principles and opinions are true. Because Du Bois and Locke are implied to have one "unified vision" of Black American identity that they prioritize over the "diverse perspectives" of different writers, they can be described as dogmatic.

Choice A is incorrect. "Proficient" means "skilled." Du Bois and Locke are contrasted with Johnson, but nothing in the text suggests that Johnson was not skilled at making editorial decisions. Based on the text, the three editors just have different styles; they're not necessarily more or less skilled. **Choice C is incorrect**. "Ambiguous" means "unclear" or "open to multiple interpretations." However, it's actually Johnson who encouraged multiple interpretations ("diverse perspectives"). Since Du Bois and Locke are said to "diverge" from Johnson, we can assume that the views they published were not ambiguous, but instead clear and firm (a "unified vision"). **Choice D is incorrect**. "Unpretentious" means "not trying to impress others with greater skill or importance than is actually possessed." Du Bois and Locke are contrasted with Johnson, but nothing in the text suggests that Johnson is pretentious (trying to impress others).

166 Correct answer **A** Hard Back to question

A surmised

Choice A is the best answer because it most logically completes the text's discussion of late nineteenth- and early twentieth-century household food purchases. In this context, "surmised" means formed an idea or assumption with little evidence. The text explains that certain economic historians "assumed" that large and small households spent different amounts on food per person, but that another economist found this supposition to be false based on evidence from available data. This context suggests that the economic historians made an incorrect assumption without enough consideration of evidence.

Choice B is incorrect. In this context, "contrived" would mean brought about or created through trickery. Nothing in the text suggests that the economic historians were deliberately trying to trick people with a claim about food purchasing behaviors in late nineteenth- and early twentieth-century households; the text simply suggests that they made an assumption about those behaviors that another historian believes isn't supported by the available data. **Choice C is incorrect** because the text indicates that it's Logan and not the economic historians who "questioned," or doubted, the assumption that large and small households in the late nineteenth and early twentieth centuries spent different amounts on food per person; the economic historians are the ones who made that assumption to begin with. **Choice D is incorrect** because nothing in the text suggests that some economic historians "regretted," or felt sad or remorseful about, the food purchasing behaviors of late nineteenth- and early twentieth-century households. The text focuses on the idea that the economic historians made an assumption about those behaviors that may not be supported by available data, not on the historians' emotional response to what households did in the past.

167 Correct answer **C** Hard Back to question

C independent of

Choice C is the best answer. We're told that charities that pay donors back for nuisance costs will attract a few large donors instead of many small donors. This suggests that nuisance costs are not linked to donation size.

Choice A is incorrect. This doesn't fit the logic of the text. If nuisance costs are supplemental to (meaning in addition to) donation size, that wouldn't result in charities that compensate donors for those costs attracting a few large donors over many small donors. **Choice B is incorrect**. This doesn't fit the logic of the text. If nuisance costs can predict donation size, that wouldn't necessarily result in charities that compensate donors for those costs attracting a few large donors over many small donors. **Choice D is incorrect**. This doesn't fit the logic of the text. If nuisance costs are subsumed in (meaning included in) donation size, that wouldn't result in charities that compensate donors for those costs attracting a few large donors over many small donors.

168 Correct answer **B** Hard Back to question

B corroborate

Choice B is the best answer because it most logically completes the text's discussion of a relationship between the results of randomized clinical tests of how effective common medical interventions are and the conclusions practitioners reach about such interventions in real-world settings. In this context, "corroborate" means confirm or support with evidence. The text indicates that one possible explanation for the relationship being discussed is that practitioners may overlook confounding variables—that is, additional factors other than the medical interventions being investigated that affect the observed outcomes. This means that practitioners may assume that an outcome is the direct result of a medical intervention when it is actually the result of a combination of factors. Clinical trials take steps to rule out factors other than the one being studied, so if those extra factors are actually having an effect on real-world outcomes, the trials are likely to produce conclusions different from those practitioners reach in their real-world observations. In other words, clinical trials may fail to corroborate practitioners' conclusions.

Choice A is incorrect because it wouldn't make sense to say that the results of clinical trials could "circumvent," or find a way around or bypass, conclusions practitioners reach in real-world scenarios with patients; it's possible that researchers conducting the trials might avoid engaging with practitioners' conclusions, but findings from a study can't choose to get around something. **Choice C is incorrect** because it wouldn't make sense to say that the results of clinical trials could "disseminate," or spread widely, conclusions practitioners reach in real-world scenarios with patients; the researchers conducting the trials might choose to draw attention to practitioners' conclusions, but findings from a study can't spread anything. **Choice D is incorrect** because it wouldn't make sense to say that the results of clinical trials could "implement," or put into effect, conclusions practitioners reach in real-world scenarios with patients; the researchers conducting the trials might consider practitioners' conclusions, but findings from a study can't put anything into effect.

169 Correct answer **B** — Hard — Back to question

B optimize

Choice B is the best answer because it most logically completes the text's discussion of business marketing practices. In this context, "optimize" means make the most effective possible use of available opportunities. The text indicates that though businesses typically try to promote themselves, they don't always make use of effective tools for doing so, pointing to research showing that 33 percent of restaurants failed to use a free listing service that increased revenue by 5 percent on average for restaurants that did use the service. The text therefore suggests that by foregoing a free and effective marketing tool, some businesses aren't making the best use of, or optimizing, marketing opportunities.

Choice A is incorrect because in this context, "adorn" would mean decorate or enhance the appearance of, and there's nothing in the text to suggest that by failing to use a free and effective promotional tool, some businesses aren't enhancing the appearance of their own marketing. The example in the text illustrates that some businesses aren't utilizing an effective marketing opportunity, not that they aren't improving the appearance of their marketing. **Choice C is incorrect** because in this context, "endorse" would mean openly approve or recommend, and the text's discussion of the fact that some businesses have overlooked an effective marketing tool doesn't support the idea that those businesses therefore don't approve of their own marketing. **Choice D is incorrect** because in this context, saying that businesses don't "counteract" their marketing would suggest that they don't actively undermine it or make it ineffective. The text begins by stating that businesses typically try to promote themselves but then continues to imply that some businesses fail to take advantage of good opportunities to do so, citing the example of businesses that failed to use a free and effective marketing tool. Though it's possible that those businesses that did use the site therefore didn't unintentionally counteract their own marketing, the first sentence conveys that the text's focus is on things that some businesses do and that some businesses don't do when trying to promote themselves, and it wouldn't make sense to say that any businesses would actively try to undermine their own marketing in pursuit of that goal.

170 Correct answer **D** — Hard — Back to question

D notional

Choice D is the best answer because it most logically completes the text's discussion of Theia and the origin of the Moon. In this context, "notional" means theoretical or only an idea. The text indicates that although something was once true of Theia, the protoplanet one theory holds collided with Earth and created debris that became the Moon, researchers now claim to have identified pieces of it deep in Earth's mantle. In other words, having direct evidence of Theia is a new development. This context suggests that before evidence was found, Theia was only theoretical—that is, that it was notional.

Choice A is incorrect because the text doesn't suggest that Theia, a protoplanet, was "desultory," which in this context would mean moving away from the matter at hand; indeed, the text focuses on the "big whack" theory of the origin of the Moon and indicates that Theia is a central part of that theory. **Choice B is incorrect** because the text makes the point that something was true of Theia until recently and suggests that this has changed now that researchers believe they have found pieces of the protoplanet deep in Earth's mantle. It wouldn't make sense to say that Theia was actually "spurious," or false, until researchers

found direct evidence of the protoplanet. (Although Theia's existence might not have been certain, it would not have been false simply because there was no evidence of it.) **Choice C is incorrect** because the text makes the point that something was true of Theia until recently and suggests that this has changed now that researchers believe they have found pieces of the protoplanet deep in Earth's mantle. It wouldn't make sense to say that Theia was "veritable," or real, before researchers found direct evidence of its existence: the evidence would instead confirm that Theia was real.

171 Correct answer **B** Hard Back to question

B conjectures

Choice B is the best answer because it most logically completes the text's discussion of pre-Mariner 2 ideas about Venus. In this context, "conjectures" means guesses or inferences formed without sufficient evidence. The text indicates that before the successful 1962 flyby, Earth-based observations of Venus had produced "very little information" because of the planet's thick atmosphere. The limited scope of astronomers' earlier knowledge of Venus is also emphasized by the text's description of their ideas as being "little more than" something before the flyby. This context conveys that before Mariner 2 flew close to Venus, astronomers lacked the evidence needed for their ideas about the planet to be much more than conjectures, or guesses.

Choice A is incorrect. In this context, "summations" would be final conclusions reached by putting all information together. Because the text emphasizes that very *little* information about Venus was available before the 1962 flyby, it wouldn't make sense to describe astronomers' pre-Mariner 2 ideas about Venus as summations; the text suggests that astronomers didn't have enough information to draw solid conclusions about Venus. **Choice C is incorrect**. In this context, "conclusions" would be reasoned final judgments or outcomes. Because the text emphasizes that very *little* information about Venus was available before the 1962 flyby, it wouldn't make sense to describe astronomers' pre-Mariner 2 ideas about Venus as conclusions; the text suggests that astronomers didn't have what they would have needed to make informed judgments about Venus. **Choice D is incorrect** because it wouldn't make sense to describe astronomers' pre-Mariner 2 ideas about Venus as "exemplifications," or examples that illustrate something; people's ideas about a subject are the ideas themselves, not illustrations. Further, the text emphasizes that the astronomers had little information before 1962, suggesting they didn't have much to work with to form examples.

172 Correct answer **A** Hard Back to question

A repudiates

Choice A is the best answer because it most logically completes the text's discussion of Sterlin Harjo's approach to representing Native characters on television. As used in this context, "repudiates" means rejects or refuses to have anything to do with. The text indicates that television shows tend to depict Native characters as living long ago, but that Harjo's series *Reservation Dogs* focuses on Native teenagers in the present day, representing a "rejection" of the typical approach to depicting Native characters. This context thus indicates that Harjo repudiates television's general tendency regarding Native characters.

Choice B is incorrect because the text describes Harjo's "rejection" of the typical approach to representing Native characters on television, so it wouldn't make sense to say that Harjo "proclaims," or declares or affirms, television's general tendency regarding Native characters. Harjo is described as refusing to follow the pattern of depicting Native characters in the distant past, not as proclaiming that pattern. **Choice C is incorrect** because the text describes television's tendency to represent Native characters in the distant past as something that is already occurring, not as something that Harjo "foretells," or predicts will happen in the future. The text is focused on Harjo's "rejection" of this pattern, not on any predictions he may have about it. **Choice D is incorrect** because saying that Harjo "recants" something would mean that he withdraws a previously held belief, and it wouldn't make sense to say that Harjo recants television's tendency to represent Native characters as living in the past. No beliefs previously held by Harjo are mentioned. Additionally, a tendency isn't a belief and thus isn't something that can be recanted.

173 Correct answer **D**

Hard

Back to question

D a modest

Choice D is the best answer because it most logically completes the text's discussion of Polynesian languages. In this context, "modest" means relatively limited or small. The text begins with a statement about the array, or number, of consonant sounds in these languages. It then gives examples of one Polynesian language that has nine consonants and one that has eight consonants before noting that the global median number of consonants per language is more than twenty-two; in other words, the numbers of consonants in the Polynesian examples are well below the global median number. This context conveys that the text is making the point that the Polynesian languages have a modest array of consonant sounds.

Choice A is incorrect. In this context, "unvarying" would mean unchanging. The text focuses on comparing the typical numbers of consonant sounds in Polynesian languages to the global median number of consonants per language, not on conveying that the number of consonant sounds in Polynesian languages typically doesn't vary; the text makes no mention of the number of consonants changing within a language or language group. **Choice B is incorrect** because the text is focused on the quantity of consonant sounds in Polynesian languages, not the idea that those consonants are "musical," or pleasantly harmonious and like music; the text discusses only the numbers of consonants in Polynesian languages and the global median number of consonants per language, not the way consonants sound. **Choice C is incorrect**. In this context, "exclusive" would mean limited to a single group. The text discusses the typical numbers of consonant sounds in Polynesian languages and gives two examples of languages with consonant numbers below the global median number of consonants per language, but it doesn't suggest that the array, or number, of consonant sounds in Polynesian languages is exclusive to those languages—that is, that Polynesian languages are the only ones with eight to nine consonants.

174 Correct answer **C**

Hard

Back to question

C an exhaustive

Choice C is the best answer because it most logically completes the text's discussion of historical evidence about ancient Egypt under the reign of the pharaoh Hatshepsut. In this context, "an exhaustive" account would be a thorough one. The text states that much of the evidence from her reign was purposely destroyed—in other words, there is a lack of surviving records. This context conveys that unless there are major new archaeological discoveries, an exhaustive account of Hatshepsut's reign is unlikely.

Choice A is incorrect because in this context, "an imaginative" account would be an account based on imagination, or ideas and speculation, rather than facts. The text indicates that much of the evidence of Hatshepsut's reign was deliberately destroyed, and a lack of evidence actually makes it more likely that accounts will be imaginative to some degree and not strictly factual. **Choice B is incorrect** because in this context, "a superficial" account would be one that is lacking in depth or concerned only with what is obvious. The text indicates that most evidence of Hatshepsut's reign was purposely destroyed, which suggests that accounts of that time are likely already somewhat superficial, since there is little information available to support deeper knowledge. Further, it would be illogical to suggest that discovering major new evidence would make it more likely that accounts would be superficial. **Choice D is incorrect** because "a questionable" account would be one likely to be challenged or doubted, and since the text suggests that little evidence of Hatshepsut's reign has survived, accounts of that time probably involve some speculation and thus may already be open to doubt. Further, it would be illogical to suggest that discovering major new evidence would make it more likely that accounts would be questionable.

175 Correct answer **B**

Hard

Back to question

B mediated by

Choice B is the best answer because it most logically completes the text's discussion of residential mobility decisions. In this context, "mediated by" means influenced or affected by something. The text establishes that increasing household spending

power (an economic factor) produced "mixed effects" on mobility decisions. The text then explains that residential choices are "not fully reducible to economic factors," which means that these decisions don't simply rely on how much money is available to spend on a residential move but on other factors as well. According to the text, noneconomic considerations, such as access to social networks, also play a significant role. Thus, "mediated by" accurately captures this relationship where noneconomic factors influence what might otherwise be purely economic decisions.

Choice A is incorrect because "transposed with" would suggest that economic and noneconomic factors are being switched or interchanged when making residential mobility decisions, which wouldn't make logical sense in this context. The text indicates that these factors coexist and jointly influence such decisions. **Choice C is incorrect**. The phrase "decoupled from" means separated or disconnected from, which would suggest that economic factors are completely separate from noneconomic factors. This would contradict the text's main point that residential mobility decisions involve multiple factors being considered simultaneously rather than in isolation. **Choice D is incorrect** because "antecedent to," which means something prior or earlier, would indicate that noneconomic factors come before economic ones in time or sequence. The text doesn't establish this chronological relationship. Instead, the text indicates that economic factors (household spending power) and noneconomic factors (access to social networks) simultaneously influence residential mobility decisions.

176 Correct answer **B** Hard ‹ Back to question

B prudent

Choice B is the best answer because it most logically completes the text's discussion of how stock-market investors regard diversification. In this context, "prudent" means showing sensible judgment. The text defines diversification as the practice of spreading investment funds across many different companies and industries and explains that this practice "protects investors from major losses" when a particular company or sector loses value. This context supports the idea that diversification is regarded as prudent—that is, as a sensible strategy because of the financial protection it provides.

Choice A is incorrect because describing diversification as "contentious," or likely to cause disagreement, would contradict the text, which presents diversification as a practice valued by investors for its protective benefits, not as one that prompts dispute. **Choice C is incorrect** because describing diversification as "unworkable," or unable to function effectively, would contradict the text, which indicates that diversification successfully protects investors from major losses. **Choice D is incorrect** because describing diversification as "optimistic," or expressing confidence in a positive outcome, wouldn't make sense in context. The text presents diversification as a defensive strategy designed to limit losses, not as one expressing confidence about future gains.

177 Correct answer **D** Hard ‹ Back to question

D an arduous

Choice D is the best answer because it most logically completes the text's discussion of the creation of *The Adventures of Prince Achmed.* In this context, "arduous" means that the process is marked by great labor or effort. According to the text, the creation of the 1926 animated film *The Adventures of Prince Achmed* took three years and was a painstaking process. Since the process was so long and required great efforts by Lotte Reiniger and her team, the creation of the film was therefore an arduous process.

Choice A is incorrect because the text doesn't indicate that the creation of Reiniger's film was "a haphazard," or disorganized, process. In fact, the text suggests that the creation process was quite meticulous and the team worked hard together to produce the envisioned effects. **Choice B is incorrect**. While the text does suggest that the creation of Reiniger's film was a long and difficult process, it doesn't suggest that the process was "a contentious" one, or one causing controversy or argument. The text suggests that the team worked together to produce the envisioned effects. **Choice C is incorrect** because rather than describing the process of creating the film as "ineffectual," or not having the effect it was intended to have, the text describes the process as ultimately successful despite the difficulty it involved.

178 Correct answer **D** Hard Back to question

D concentrated among

Choice D is the best answer because it most logically completes the text's discussion of the relationship between habitat latitude and body shape in saltwater fish species. In this context, "concentrated among" means largely confined to. The text sets up a contrast between tropical species, which are generally characterized by a single shape—deep-bodied forms—and polar and temperate species, which are "highly dispersed across the morphological spectrum" (meaning they exhibit a wide range of body shapes). This context supports the idea that tropical species are concentrated among deep-bodied physical forms—that is, largely confined to this single morphological category rather than spread across many.

Choice A is incorrect because saying that tropical species are "authenticated by," or proven genuine by, deep-bodied physical forms wouldn't make sense. Instead, the text describes the typical morphology (body shape) of tropical fish species and how that differs from the typical morphologies of polar and temperate fish species. **Choice B is incorrect** because saying that tropical species are "habituated to," or accustomed through repeated exposure to, deep-bodied physical forms wouldn't make sense. Instead, the text describes the typical morphology (body shape) of tropical fish species and how that differs from the typical morphologies of polar and temperate fish species. **Choice C is incorrect** because saying that tropical species are "contemporary with," or existing at the same time as, deep-bodied physical forms indicates that the species exist at the same time as their body shapes do, which, if it is a meaningful statement at all, is at best trivially true and unrelated to the text's discussion of the typical morphology (body shape) of tropical fish species and how that differs from the typical morphologies of polar and temperate fish species.

179 Correct answer **D** Hard Back to question

D variable

Choice D is the best answer because it most logically completes the text's discussion of the sounds made by güiros. In this context, "variable" means able to change. The text begins by explaining that güiros are instruments made out of hollowed gourds with ridges cut into their sides and that players scrape the ridges with wooden sticks to produce sounds. The text goes on to say that güiros' sounds can change depending on gourd thickness, the distance between ridges, and the types of strokes the player uses, thus supporting the idea that the sounds created by these instruments are variable.

Choice A is incorrect because "overlooked" means not being seen or noticed, and there is nothing in the text to suggest that the sounds produced by güiros are overlooked or not noticed. **Choice B is incorrect** because in this context, "powerful" would mean having a great ability to produce an effect. While it's possible that the sounds produced by güiros have a strong effect on listeners, the text doesn't discuss this aspect of their sounds. **Choice C is incorrect** because "routine" means usual and unvarying, and there is nothing in the text to suggest that the sounds produced by güiros are unvarying. In fact, the text describes how the sounds produced by güiros can differ based on several factors.

180 Correct answer **A** Hard Back to question

A stymie

Choice A is the best answer because it most logically completes the text's discussion of the consequences of raising the age at which retirees begin receiving government funds. The text indicates that raising the age for these funds is usually discussed in terms of effects on fund recipients but that Andria Smythe is instead considering the effects on working family members who care for retirees. Smythe notes that raising the age for the funds would increase the length of time retirees are dependent on financial assistance from working family members. This is suggested to have an effect on wealth creation for those workers, and most logically, that effect would be disadvantageous. Thus, "stymie," which means to prevent or greatly hinder, is the most logical choice in context.

Choice B is incorrect because in this context, "compound" would most nearly mean multiply or greatly enhance. The text indicates that raising the age at which retirees are eligible for government funds will increase the amount of time retirees are dependent on working family members for financial support. This would likely have a negative rather than a positive effect on wealth creation. **Choice C is incorrect** because in this context, "disparage" would most nearly mean criticize or defame. Nothing in the text suggests that raising the age at which retirees are eligible for government funds would defame wealth creation among working adults. **Choice D is incorrect** because in this context, "outstrip" would most nearly mean to exceed, and nothing in the text indicates that the financial support provided to retirees would exceed the amount of wealth these workers can create. The text does suggest that workers providing funds to retirees works against those workers' wealth accumulation, but not that the support to retirees exceeds the workers' accumulated wealth.

181 Correct answer **B** Hard Back to question

B innocuous

Choice B is the best answer because it most logically completes the text's discussion of Ward and colleagues' findings. As used in this context, "innocuous" means mild or unharmful. The text describes the vibration and warming that Ward and colleagues used to alleviate itching as "harmless applications" and goes on to contrast these applications with another stimulus that actually offers more relief even though it seems to be stronger and "less benign." This context conveys the idea that vibration and warming were innocuous stimuli.

Choice A is incorrect because the text focuses on a distinction between harmless stimuli and those that seem to be less benign. Nothing in the text suggests that any of the treatments are "deceptive," or misleading; indeed, even the less effective ones are described as offering some relief. **Choice C is incorrect** because the text focuses on the amount of relief from itching offered by harmless stimuli and those that seem to be less benign. The text doesn't suggest that any of these stimuli are "novel," or original and new; heat, vibration, and electricity aren't new inventions. **Choice D is incorrect** because it wouldn't make sense to describe an application of vibration or warming as "impractical," or not suitable for use. The text indicates that these harmless applications are useful in that they offer at least some temporary relief.

182 Correct answer **B** Hard Back to question

B discern

Choice B is the best answer because it most logically completes the text's discussion of the utility of the Oase 1 fossil to paleoanthropologists. As used in this context, "discern" means to detect or recognize something, especially something hidden or obscure. The text indicates that the Oase 1 fossil can help paleoanthropologists recognize patterns in the evolutionary process and shed light on ("illuminate") the period in which Oase 1 lived. Thus, the fossil will enable researchers to gain insights into, or discern, facts that are still not well understood.

Choice A is incorrect because in this context, "exploit" would suggest that the paleoanthropologists are using "steps in the evolution of hominids," which does not make logical sense. Rather, the text is about how the Oase 1 fossil could help paleoanthropologists learn about hominid evolution and the Pleistocene epoch more generally. **Choice C is incorrect** because in this context, "prioritize" would suggest that either the paleoanthropologists are placing more importance on "steps in the evolution of hominids" than they are on something else not identified in the text or that they are placing these steps in some sort of order. Rather, the text is about how the Oase 1 fossil could help paleoanthropologists learn about hominid evolution and the Pleistocene epoch more generally. **Choice D is incorrect** because to say that paleoanthropologists could "yield" or generate "steps in the evolution of hominids" doesn't make sense. The researchers may develop new insights into those evolutionary steps, but they do not create those steps themselves. Rather, the context makes it clear that they are detecting or discovering patterns based on their study of the Oase 1 fossil.

183 Correct answer **A** — Hard — Back to question

A inertia

Choice A is the best answer because it most logically completes the text's discussion of when the subscription model benefits retailers. In this context, "inertia" means a tendency to remain inactive or unchanged. The text describes a subscription model in which consumers continue to pay recurring fees unless they actively cancel and indicates that retailers profit when consumers fail to cancel even after they have stopped valuing the subscription. The text reinforces this by stating that sellers profited from canceling customers' "passivity in the interim"—that is, the period during which those customers had ceased valuing their subscriptions but had not yet acted to cancel. This context supports the idea that the model benefits retailers when consumer inertia is high—that is, when consumers tend to remain inactive rather than take action to cancel.

Choice B is incorrect because saying that the subscription model benefits retailers when consumer "decisiveness," or quick and firm action, is high would contradict the text. The text indicates that retailers profit from consumer "passivity"—the failure to act—and decisive consumers would presumably cancel subscriptions promptly once they stopped valuing them, eliminating the retailers' benefit. **Choice C is incorrect** because saying that the subscription model benefits retailers when consumer "evasion," or active avoidance, is high wouldn't make sense in this context. Evasion implies deliberate action to avoid something, but the text describes consumers as passive—they fail to cancel not because they actively avoid doing so but because they don't take action at all. **Choice D is incorrect** because saying that the subscription model benefits retailers when consumer "turnover," or the rate at which customers are replaced by new ones, is high would contradict the text. The text indicates that retailers profit when consumers continue paying without canceling, which means retailers benefit from retaining consumers, not from a high rate of consumer replacement.

184 Correct answer **D** — Hard — Back to question

D inconsequential to

Choice D is the best answer because it most logically completes the text's discussion of the twelfth-century Islamic philosopher Ibn Rushd. As used in this context, "inconsequential to" means not significant to. According to the text, Ibn Rushd's works were primarily available in Spain, where he lived, far from central areas of the Muslim world, a fact that could support the conclusion that his influence on Muslim contemporaries was limited. The text implies, however, that recent scholarship has shown that his works still had an impact on other Muslim philosophers of his time. This context supports the idea that his works weren't inconsequential to Islamic thought in this period.

Choice A is incorrect because the issue under consideration in the text is whether other Muslim philosophers of Ibn Rushd's time had access to his works, not whether his works were "controversial among," or causing dispute among, other philosophers. **Choice B is incorrect**. The text implies that other Muslim philosophers of Ibn Rushd's era were aware of his works, not that they were "antagonistic toward," or hostile toward, them. There is no suggestion that Ibn Rushd's writings elicited hostility from his contemporaries. **Choice C is incorrect** because in this context, "imitated by" would mean followed as a model by. Although the text implies that Ibn Rushd's works were at least somewhat available in regions that were at the center of Islamic thought during the period, it doesn't specifically address in what ways his works influenced contemporary Muslim philosophers. Thus, the text doesn't support the idea that other philosophers modeled their own works after Ibn Rushd's works.

185 Correct answer **C** — Hard — Back to question

C buttress

Choice C is the best answer because it most logically completes the text's discussion of the legitimacy of the reigns of French monarchs such as Hugh Capet and Henry I. As used in this context, "buttress" means to strengthen or defend. The text indicates that regardless of whether a French monarch's reign was significant or uneventful, each monarch faced questions about his right to the throne. The text goes on to say that in order to understand the path of a French monarch's reign, it's

important to understand what contributed to the monarch's ability to "hold the throne." This context suggests that French monarchs such as Hugh Capet and Henry I had to buttress, or defend, their right to be monarch.

Choice A is incorrect because it wouldn't make sense in context to discuss factors that enabled a monarch to "disengage," or withdraw his right to the French throne. The text focuses on an examination of people who reigned as French monarchs, not on people who didn't choose to rule. **Choice B is incorrect** because it wouldn't make sense in context to discuss factors that enabled a monarch to "annotate," or add notes to or explain, his right to the French throne. Nothing in the text suggests that the monarchs were writing notes about their right to the throne; instead, faced with questions about the legitimacy of their reign, the monarchs defended their right. **Choice D is incorrect**. Saying that a monarch who is faced with questions about the legitimacy of his reign was able to "reciprocate" his right to the French throne would mean that he either returned his right to the throne or that he responded in kind to the challenge. Neither of these meanings would make sense in context because the text focuses on people who did reign as French monarchs and defended their right to do so.

186 Correct answer **C** Hard Back to question

C supposition

Choice C is the best answer because it most logically completes the text's discussion of testing hypotheses regarding usage by means of text corpora. In this context, "supposition" refers to an assumption or hypothesis that is not yet proven. The text explains that text corpora can be used for "empirical testing of hypotheses regarding the frequency of typical word usage" and then provides a specific example of using corpus analysis to support a claim about the word "get." The word "supposition" precisely conveys this idea of an assumption or hypothesis about word frequency that can then be tested against empirical data.

Choice A is incorrect because it wouldn't make sense to say that someone has a "recognition" that the word "get" has a high incidence in English. Recognition implies acknowledging something already established as true or valid, but the text indicates that corpus analysis is needed to support the claim about "get," suggesting its high frequency wasn't already established or previously known. **Choice B is incorrect** because it wouldn't make sense to say that someone has a "scheme" that the word "get" has a high incidence in English. A scheme is a plan or systematic arrangement, but the context indicates what's needed is a preliminary hypothesis that can be tested with corpus data, not a plan related to word frequency. **Choice D is incorrect** because it wouldn't make sense to say that someone has a "synopsis" that the word "get" has a high incidence in English. A synopsis is a summary or outline, but the text is discussing an initial hypothesis about word frequency that requires testing, not a condensed statement of existing information.

187 Correct answer **D** Hard Back to question

D intersect

Choice D is the best answer because it most logically completes the text's discussion about the relationship between fine art and fashion. As used in this context, "intersect" means to connect or overlap. The text indicates that Jamie Okuma challenges the position held by critics because her work can be seen at an art museum and can be bought by the public from her online boutique. The text also presents the critics' view as being influenced by a perception that fine artists create works that are "timeless" and meant for exhibition, whereas fashion designers periodically produce new styles that are meant for purchase. This context suggests that the critics believe that fine art and fashion tend not to overlap—in other words, that they rarely intersect.

Choice A is incorrect because it wouldn't make sense in context to say that critics contend that fine art and fashion rarely "prevail," or prove to be triumphant or widespread. The text indicates that Okuma is an example of an artist who demonstrates that it's possible to make fine art that is also available to the public as fashion. **Choice B is incorrect** because it wouldn't make sense in context to say that fine art and fashion rarely "succumb," or surrender. The text establishes that unlike what critics believe, Okuma creates works that are in art museums and available for the public to purchase, suggesting that critics believe fine art and fashion rarely overlap, not that they rarely succumb. **Choice C is incorrect** because saying that critics believe that

fine art and fashion rarely "diverge," or disagree or move in different directions, wouldn't make sense in context. The text presents Okuma's work as both fine art and fashion, thereby undermining what the critics assert. This suggests that the critics believe that fine art and fashion rarely intersect rather than that the two rarely diverge.

188 Correct answer **C** Hard Back to question

C disparate

Choice C is the best answer because it most logically completes the text's discussion of the artistic styles that have influenced Cannon's work. As used in this context, "disparate" means distinct or dissimilar. The text indicates that a tension exists among the styles that have influenced Cannon's work and goes on to describe how those styles differ: classic European portraiture favors realism, American pop art uses vivid colors, and intertribal flatstyle rejects the use of shading and perspective to achieve depth. This context suggests that the styles that have influenced Cannon's work are disparate.

Choice A is incorrect because the text indicates that there is a tension among the influences on Cannon's artwork, so it wouldn't make sense to say that the influences are "complementary," or that they complete one another or make up for one another's deficiencies. **Choice B is incorrect** because it wouldn't make sense to characterize Cannon's influences as "unknown," or not familiar; it's clear that the influences are known because the text goes on to list them. **Choice D is incorrect** because the text indicates that there is a tension among the influences on Cannon's work, not that they are "interchangeable," or capable of being used in one another's place.

189 Correct answer **D** Hard Back to question

D surreptitiously

Choice D is the best answer because it most logically completes the text's discussion of how *The Adventures of Indiana Jones in Wenceslas Square in Prague on January 16, 1989* was originally distributed. In this context, "surreptitiously" means in a secret manner. The text describes the game as being underground and created anonymously as a way to oppose the regime of what was then Czechoslovakia. The text goes on to contrast the game's original distribution with its current broader availability. This context supports the idea that copies were originally distributed surreptitiously—that is, secretly, as would be necessary for an act of protest against an authoritarian regime.

Choice A is incorrect because saying that copies of the game were originally distributed "succinctly," or in a brief and concise manner, wouldn't make sense in this context. "Succinctly" describes the manner in which something is expressed, not the manner in which physical copies of a game are circulated. **Choice B is incorrect** because saying that copies of the game were originally distributed "dispassionately," or without emotion, wouldn't make sense in this context. The text describes the game as an act of political protest, suggesting that its creation and distribution were motivated by strong feelings about the then Czechoslovakian regime. Moreover, the text establishes the contrast between secretive distribution and open availability, not between emotional and unemotional distribution. **Choice C is incorrect** because saying that copies of the game were originally distributed "disingenuously," or in an insincere manner, wouldn't make sense in this context. The text characterizes the game as a sincere act of political protest, and the contrast the text sets up concerns secrecy ("underground" and "anonymously") versus openness ("readily available").

190 Correct answer **B** Hard Back to question

B paucity of

Choice B is the best answer because it most logically and precisely completes the text's discussion of studies of altitude's effect on blood chemistry. In this context, "paucity of" means lack of. In describing the inspiration behind Al-Sweedan and Alhaj's research, the text uses the word "though" to suggest a contrasting relationship between two types of studies: those

examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. This contrasting relationship and the text's use of the word "many" provide context suggesting that there are few, if any, examples of the second type of study, whereas there are numerous examples of the first type.

Choice A is incorrect because it wouldn't make sense in context for there to be a "quarrel about," or open disagreement about, studies of the effect on blood chemistry of living in locations below sea level. The text's use of the words "though" and "many" suggests a contrasting relationship in terms of amount between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. There's nothing in the text to suggest that the contrast between the two types of studies involves the extent to which researchers broadly agree or disagree about the contents of either type. **Choice C is incorrect** because it wouldn't make sense in context for there to be a "profusion of," or great abundance of, studies of the effect on blood chemistry of living in locations below sea level. The text's use of the words "though" and "many" suggests a contrasting relationship in terms of amount between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. Rather than logically completing this contrast, "profusion of" would indicate that the two types of studies are similar in terms of amount, with many examples existing of both types. **Choice D is incorrect** because it wouldn't make sense in context for there to be a "verisimilitude in," or appearance of truth in, studies of the effect on blood chemistry of living in locations below sea level. The text's use of the words "though" and "many" suggests a contrasting relationship in terms of amount between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. There's nothing in the text to suggest that the contrast between the two types of studies involves the extent to which either type of study presents an appearance of truth.

191 Correct answer **D** Hard ‹ Back to question

D accessible

Choice D is the best answer. When talking about a thing, "accessible" means "easy to understand." This sets up the contrast in the next sentence, which tells us that critics mostly focus on art that is "cryptic or challenging" (meaning not easy to understand).

Choice A is incorrect. This doesn't fit the logic of the text. The next sentence tells us that critics focus on art that is mysterious and challenging. If Hannock's paintings are "innovative" (meaning advanced and original), then critics probably would comment on them. **Choice B is incorrect**. This doesn't fit the logic of the text. The next sentence tells us that critics focus on art that is mysterious and challenging. If Hannock's paintings are "subversive" (meaning disruptive and revolutionary), then critics probably would comment on them. **Choice C is incorrect**. This doesn't fit the logic of the text. The next sentence tells us that critics focus on art that is mysterious and challenging. If Hannock's paintings are "profound" (meaning very deep and insightful), then critics probably would comment on them.

192 Correct answer **B** Hard ‹ Back to question

B ubiquity

Choice B is the best answer because it most logically completes the text's discussion of beads found in Middle Stone Age sites. In this context, "ubiquity" means widespread presence or commonness. The text states that archaeologists have encountered "a plethora," or an abundance, of beads made from *Tritia gibbosula* shells "in many Middle Stone Age (MSA) sites across western North Africa." In this context, the abundance of beads therefore suggests their ubiquity.

Choice A is incorrect because in this context, "heterogeneity" would mean variety or diversity among the beads. The text doesn't suggest that the beads varied significantly from one another; rather, it focuses on their widespread presence across multiple sites. Moreover, the text mentions that all the beads were "fashioned from *Tritia gibbosula* shells," suggesting consistency rather than heterogeneity. **Choice C is incorrect** because the text doesn't emphasize the beads' "expediency," or convenience or practicality. The text doesn't support the idea of convenience (there's no indication, for example, that the

beads were easy to use or make) but rather focuses on the beads' abundant presence at MSA sites. **Choice D is incorrect**. While "fecundity" can suggest abundant production, it specifically refers to fertility, and the text doesn't connect the beads to this theme. Instead, the text attributes their widespread presence to the development of symbolic behavior in humans and the natural availability of *Tritia gibbosula* during the MSA.

193 Correct answer **B** Hard Back to question

B superseded

Choice B is the best answer because it most logically completes the text's discussion of the fork fern's enormous genome. In this context, "superseded" means surpassed or exceeded by something else. The text establishes that this plant has "the largest known" genome among eukaryotes and mentions "the high biological costs of extremely large genomes," suggesting there are natural constraints that make it biologically disadvantageous to maintain such massive genetic material. This context supports the idea that it's unlikely another organism will evolve an even larger genome that would replace this plant's record—that is, its status as having the largest genome is unlikely to be superseded.

Choice A is incorrect because in this context, "protracted" would mean drawn out over time or space, and the text focuses on the record size of the New Caledonian fork fern's genome and the fact that extremely large genomes carry "high biological costs." This information suggests that the biological upper limit for genome size may have been reached and that the New Caledonian fork fern's genome is therefore unlikely to be surpassed, or superseded, not that it's unlikely to be protracted. **Choice C is incorrect** because in this context, "curtailed" would mean cut short or reduced, and the text focuses on the record size of the New Caledonian fork fern's genome and the fact that extremely large genomes carry "high biological costs." This information suggests that the biological upper limit for genome size may have been reached and that the New Caledonian fork fern's genome is therefore unlikely to be surpassed, or superseded, not that it's unlikely to be curtailed. **Choice D is incorrect** because in this context, "obviated" would mean made unnecessary or redundant, and the text focuses on the record size of the New Caledonian fork fern's genome and the fact that extremely large genomes carry "high biological costs." This information suggests that the biological upper limit for genome size may have been reached and that the New Caledonian fork fern's genome is therefore unlikely to be surpassed, or superseded, not that it's unlikely to be obviated.

194 Correct answer **C** Hard Back to question

C unimportant

Choice C is the best answer because it most logically completes the sentence about the influences on Banisadr's work. In context, "It is by no means" followed by "unimportant" conveys how it is relevant to recognize Bosch's influence on Banisadr. The text points out that the artist himself cites Bosch as an inspiration, and then goes on to claim that *The Epic of Gilgamesh* has had a more significant influence than Bosch.

Choice A is incorrect because "substantial," which means weighty or meaningful, incorrectly suggests that it wouldn't be meaningful to acknowledge Bosch's influence on Banisadr. The phrase "indeed, Banisadr himself cites Bosch as an inspiration" doesn't support this suggestion. **Choice B is incorrect** because "satisfying," which means pleasing, incorrectly suggests that it wouldn't be pleasing to acknowledge Bosch's influence on Banisadr. The phrase "indeed, Banisadr himself cites Bosch as an inspiration" doesn't support this suggestion. **Choice D is incorrect** because "appropriate," which means suitable, incorrectly suggests that it wouldn't be proper to acknowledge Bosch's influence on Banisadr. The phrase "indeed, Banisadr himself cites Bosch as an inspiration" doesn't support this suggestion.

195 Correct answer **A** Hard Back to question

A defunct

Choice A is the best answer because it most logically completes the text's discussion of artworks that were produced for exhibition on the internet. In this context, "defunct" means no longer existing or functioning. According to the text, many artworks that were produced in the mid-1990s to the early 2000s for exhibition on the internet have become inaccessible due to their reliance on certain software. As an example, the text cites Sinae Kim's *Genesis*, which relied on software that was discontinued in 2021. This context supports the idea that the software is defunct.

Choice B is incorrect because the text indicates that viewing artworks produced in the mid-1990s to the early 2000s for exhibition on the internet requires the use of software. Artists generally want their works to be seen by many people, so it wouldn't make sense for creators of internet art to require the use of software that is "arcane," or known or knowable to only a few people. Moreover, the text states that a prominent example of software used to view these artworks is Adobe Flash, which was discontinued in 2021, meaning it's now defunct. **Choice C is incorrect** because "ubiquitous" would mean found everywhere, which wouldn't make sense in this context. The text indicates that the reason why many artworks that were produced in the mid-1990s to the early 2000s for exhibition on the internet have become inaccessible has to do with the software required for viewing them. According to the text, one example of such software is Adobe Flash, which was discontinued in 2021, meaning it's now defunct. **Choice D is incorrect** because nothing in the text suggests that the software used to view artworks produced in the mid-1990s to the early 2000s for exhibition on the internet is "extraneous," or irrelevant. Instead, the text indicates that use of specific software is required to view certain artworks from this period and that the discontinuation of the software renders the works inaccessible.

196 Correct answer **B** Hard Back to question

B manifest in

Choice B is the best answer because it most logically completes the text's discussion of the Kelmscott Press's books. In this context, "manifest in" means evident or apparent from. The text states that the Kelmscott Press, which was cofounded by William Morris, produced its books using preindustrial methods. The text notes the similarity between those methods, which include the use of handmade materials and intricate ornamentation, and methods used in the creation of medieval manuscripts. This context suggests that Morris's repudiation of industrialization is apparent from, or manifest in, the methods and materials his company employed.

Choice A is incorrect because there is nothing in the text to suggest that Morris's repudiation of industrialization is "insensible to," or unaware of or lacking perception of, the use of handmade materials and intricate ornamentation in the production of the Kelmscott editions. Instead, the text suggests that the methods and materials used to produce the Kelmscott editions are evidence of Morris's repudiation of industrialization. **Choice C is incorrect** because it would not make sense to say that Morris's repudiation of industrialization was "scrutinized by," or examined closely by, the Kelmscott editions' use of handmade materials and intricate ornamentation. Although creating the Kelmscott editions may have involved examining the books closely, the text does not mention this aspect of Morris's work, and in any case, the action of using certain materials to create those editions cannot scrutinize Morris's attitude toward industrialization. **Choice D is incorrect** because the text gives no indication that Morris's repudiation of industrialization is "complicated by," or made more complex or difficult by, the Kelmscott Press's use of preindustrial methods and handcrafted elements to produce books. Instead, the text presents those methods as exemplifying Morris's repudiation of industrialization.

197 Correct answer **D** Hard Back to question

D prescribed

Choice D is the best answer because it most logically completes the text's discussion of gender roles in Shakespeare's comedies. As used in this context, "prescribed" would mean laid down as rules. The text indicates that the characters in the comedies often defy gender roles that are "socially dictated" (even if most characters do return to those roles eventually) and that scholars have been very interested in these acts of defiance. This context indicates that what the characters are rebelling against are standards of behavior prescribed by the society of the time.

Choice A is incorrect because saying that expectations about gender were "interjected," or suddenly inserted between other things, wouldn't make sense in context. There's no suggestion in the text that the issue of gender roles was inserted between other things or was an interruption in a larger discussion. **Choice B is incorrect** because the text indicates that Shakespeare depicts characters rebelling against expectations about gender that have been "socially dictated," not expectations that society has "committed," or carried out, entrusted, or promised. **Choice C is incorrect** because the text indicates that Shakespeare depicts characters rebelling against expectations about gender that have been "socially dictated," not expectations that have been "illustrated," or clarified with examples. Although it's possible for expectations about gender roles to be illustrated, there's nothing in the text to indicate that characters in Shakespeare's comedies rebel against illustrations of gender expectations.

198 Correct answer **B** Hard Back to question

B opaque

Choice B is the best answer because it most logically completes the text's discussion of Hegel's works. In this context, "opaque" means difficult to understand or unclear. The text creates a contrast between the initial impression given by Hegel's works and their influence and insight, noting that readers must "penetrate Hegel's frustratingly dense prose" to access his important ideas. This context clearly establishes that Hegel's writing is initially challenging to comprehend, or opaque.

Choice A is incorrect because "authoritative" means influential or clearly accurate. Hegel's works may be authoritative, but it wouldn't make logical sense in context to say that although his works seem authoritative, they have been influential. Instead, the text focuses on the fact that Hegel's works are challenging to read, but that working through the dense prose can be rewarding. **Choice C is incorrect** because referring to Hegel's works as "empirical," which means factual or verifiable, would suggest that they are based on observation or experience rather than theory. The text, however, doesn't address this aspect of Hegel's philosophy. Instead, it focuses on the difficulty of understanding his writing. **Choice D is incorrect** because describing Hegel's works as "facile," which means superficial or simplistic, would directly contradict the text's characterization of his writing as "frustratingly dense" and requiring effort to understand.

199 Correct answer **B** Hard Back to question

B an inducement

Choice B is the best answer because it most logically completes the text's discussion of how compensation in psychology studies may affect the applicability of results. In this context, "an inducement" means a reward offered to encourage a person to take a particular action. The text indicates that psychology researchers commonly offer rewards such as gift cards to encourage people to participate in their studies, potentially rendering the participant pool unrepresentative of the target population. This context supports the idea that participants are joining studies in response to an inducement.

Choice A is incorrect. While participants might join a study in response to "a propensity," or a natural inclination, to do so, the text isn't focused on participants' predispositions. Rather, the text is concerned with the external rewards that researchers offer to attract participants. **Choice C is incorrect** because saying that participants join studies in response to "a paradigm," or a typical model or framework, wouldn't make sense in context. The text doesn't address any such framework. Instead, it focuses

on tangible rewards that researchers offer to attract study participants. **Choice D is incorrect** because saying that participants join a study in response to "an appeasement," or a concession made to pacify a person, wouldn't make sense in context. The text describes researchers offering gift cards and other forms of compensation to attract willing study participants, not to address anyone's grievance or dissatisfaction.

200 Correct answer **B** Hard ‹ Back to question

B a straightforward

Choice B is the best answer because it most logically completes the text's description of efforts to explain the existence of planets in binary star systems. As used in this context, describing an explanation as "a straightforward" one would mean that the explanation is direct and uncomplicated. The text asserts that since it should be "nearly impossible" for planets to form in binary star systems, it's "not surprising" that there isn't a straightforward explanation for the existence of planets in such systems; the fact that one potential approach involves "complex" factors offers further contextual support for this idea.

Choice A is incorrect because it would not make sense in context to say that there isn't "a discernible" explanation—meaning an explanation capable of being perceived—for the existence of planets in binary star systems. The text discusses just such an explanation offered by Roman Rafikov and Kedron Silsbee, which indicates that their explanation can be discerned. **Choice C is incorrect** because the text emphasizes how difficult it is to explain the existence of planets in binary star systems, suggesting that the situation isn't marked by the lack of "an inconclusive" explanation—an explanation that does not resolve the issue—but rather that if any explanations have been offered, they've likely been inconclusive ones. **Choice D is incorrect** because nothing in the text suggests that there is a lack of "an unbiased," or impartial and unprejudiced, explanation for the existence of planets in binary star systems. The text indicates that it's difficult to explain the existence of planets in such systems and it describes one attempt to do so, but there is no evidence that explanations from Roman Rafikov and Kedron Silsbee or others are biased.

201 Correct answer **B** Hard ‹ Back to question

B inventive

Choice B is the best answer because it most logically completes the text's discussion of the art installation *Anthem*. In this context, "inventive" means characterized by invention and creativity. The text explains that critics' responses to the installation involved praise for Tsang's creative transformation of a space into a dynamic exhibit with huge images and lots of sound. This context conveys that the critics found the piece particularly creative.

Choice A is incorrect because the text indicates that critics praised the installation for being dynamic and including huge images and lots of sound, and it wouldn't make sense to describe such an exhibit as "restrained," or limited and not extravagant or showy. **Choice C is incorrect** because it wouldn't make sense to say that critics found the installation "inexplicable," or incapable of being explained or interpreted, since the critics were able to explain their praise for the installation's transformation of a space with huge images and lots of sound. **Choice D is incorrect** because the text focuses on the idea that critics praised Tsang for creatively transforming a space into a dynamic exhibit, not that they found the installation "mystifying," or bewildering and hard to understand. Nothing in the text suggests that the critics couldn't understand the piece.

202 Correct answer **C** Hard ‹ Back to question

C mitigate

Choice C is the best answer because it most logically completes the text's discussion of research on income inequality in the 2010s. In this context, "mitigate" means to make less severe or reduce the negative effects of something. The text first identifies a shortcoming in the research: a "myopic focus on a few countries" despite claims of "global relevance." The text then explains that researchers later gained access to new data from previously excluded regions (Africa and Eastern Europe).

This context supports the idea that with these new data, researchers would be able to reduce, or mitigate, the identified shortcoming by incorporating a broader range of geographic regions into their studies of income inequality.

Choice A is incorrect because in this context, "presuppose" would mean to assume in advance that something is true, and it wouldn't make logical sense to say that researchers later assumed as true in advance a shortcoming they had already encountered. **Choice B is incorrect** because in this context, "categorize" would mean to classify or place into groups. The text indicates that researchers did something about the shortcoming that characterized research on income inequality in the 2010s—limited geographic scope—after they gained access to new data from previously excluded regions. Categorizing a shortcoming doesn't require access to or analysis of new data; it could be done without any new information, but by analyzing new data, researchers went beyond merely categorizing the shortcoming and instead took action to address it. **Choice D is incorrect** because in this context, "validate" would mean to confirm or substantiate something. The text indicates that researchers did something about a known shortcoming of research on income inequality in the 2010s—limited geographic scope—after they gained access to new data from previously excluded regions. Confirming an already known shortcoming doesn't require access to or analysis of new data; it could be done without any new information, but by analyzing new data, researchers went beyond merely validating the shortcoming and instead took action to make the shortcoming less severe.

203 Correct answer **C** Hard Back to question

C counterfactual

Choice C is the best answer because it most logically completes the text's discussion of what people envision when making causal judgments, or judgments of cause and effect. In this context, "counterfactual" means contrary to fact. The text explains that in an experiment in which subjects judged whether one billiard ball caused or prevented another billiard ball's movement through a gate, researchers found that the subjects looked at where the target ball would have gone if the other ball hadn't been there at all—that is, the subjects pictured the path the target ball would have taken in a scenario contrary to the one they actually saw. This would be an example of people envisioning counterfactual scenarios when considering causes and effects.

Choice A is incorrect because it wouldn't make sense to describe scenarios people envision when making judgments of cause and effect as "ambivalent," or characterized by conflicting feelings. People might have conflicting feelings in response to a scenario, but a scenario itself can't have feelings. **Choice B is incorrect**. In this context, "retrospective" would mean looking back at something that occurred in the past. The text indicates that when asked to make a judgment about the movement of the target billiard ball, subjects envisioned what would have happened if only one ball had been present—that is, the text indicates that they envisioned a scenario that hadn't actually happened, not that they examined only what had already actually happened. **Choice D is incorrect**. The text indicates that in an experiment involving the interaction of two billiard balls, eye movements showed that subjects pictured the path one ball would have taken if the other hadn't been present. Because the subjects were picturing a scenario in the same context (the movement of the target billiard ball), just with a different arrangement of details (only one ball present), this wouldn't be an example of people envisioning "analogical" scenarios, or hypothetical scenarios that are comparable to the scenario in question despite having different contexts.

204 Correct answer **C** Hard Back to question

C foster

Choice C is the best answer because it most logically completes the text's discussion of Jung and her team's study of acts of kindness. In this context, "foster" means encourage or promote the development of. The text indicates that Jung and her team found that seeing a helpful (or prosocial) act makes a bystander more likely to help someone else, which can in turn inspire additional people to help others. That is, the team showed that single acts of kindness can foster additional prosocial acts across a group.

Choice A is incorrect because nothing in the text suggests that Jung and her team found that single acts of kindness "require," or depend on or make obligatory, broader prosocial (or helpful) behavior across a group. There's no suggestion in the text that individual acts of kindness can only occur if other prosocial acts have already occurred, and the text indicates only that an act

of kindness *can* inspire additional helpful acts, not that it necessarily will do so. **Choice B is incorrect** because the text focuses on a possible direct effect of individual acts of kindness, or single helpful actions, and it wouldn't make sense to suggest that actions can "remember," or hold a memory of, something. **Choice D is incorrect** because the text doesn't indicate that Jung and her team found that single acts of kindness can "discourage," or hinder, prosocial (or helpful) behavior across a group. On the contrary, the text states that Jung and her team found that seeing a helpful act makes a bystander *more* likely to help someone else, which can in turn inspire even more people to help others.

205 Correct answer **D** Hard ‹ Back to question

D engendering

Choice D is the best answer because it most logically completes the text's discussion of how rising prices affected demand for vintage cassette tapes. In this context, "engendering" means producing or causing to exist. The text indicates that the effect of a dramatic increase in the price of vintage cassettes was counterintuitive, or contrary to what would typically be expected. Generally, when prices rise, demand falls—but the text indicates that in this case, buyers who previously had no interest in cassettes "thronged the market" (that is, many of them began purchasing cassettes) because they saw the cassettes as potential investments. This context conveys that the rising prices surprisingly produced significant demand, producing many new buyers for vintage cassettes.

Choice A is incorrect because the text focuses on a rise in prices of vintage cassettes, and it wouldn't make sense to describe the price increase itself—rather than sellers of vintage cassettes—as "exploiting," or unfairly or selfishly taking advantage of, demand. Further, wanting to take advantage of new demand would be a motivation for a price increase, not a counterintuitive effect of it. **Choice B is incorrect**. In this context, "monetizing" would mean utilizing as a source of profit, and it wouldn't make sense to describe a price increase itself, rather than sellers of vintage cassettes, as using demand as a source of profit; moreover, seeking to profit when there's new demand would be a reason for price increases, not a counterintuitive effect of them. **Choice C is incorrect**. In this context, "appraising" would mean assessing the value or significance of something. The text focuses on a rise in prices of vintage cassettes, and while it would be reasonable to suggest that sellers might have appraised demand for those cassettes, it wouldn't make sense to suggest that a price increase itself could do such an assessment; moreover, an appraisal of demand would most likely precede a price increase rather than be an effect of it.

206 Correct answer **B** Hard ‹ Back to question

B homogeneous

Choice B is the best answer because it most logically completes the text's discussion of Jha and Kremen's finding about bees' foraging behavior. In this context, "homogeneous" means uniform or of the same kind. The text indicates that some models predict that the distance that bees travel when they're foraging declines as the density of flowers increases. The text goes on to say, however, that Jha and Kremen identified a circumstance in which bees don't behave this way. Specifically, if bees encounter "patches of low species richness"—that is, patches in which the flowers are largely from the same species—they'll travel beyond those patches to get varied food resources. This context thus suggests that bees don't behave as some models predict if the dense patches of flowers the bees encounter are homogeneous.

Choice A is incorrect because the text indicates that Jha and Kremen found that bees will behave differently than some models predict if the bees encounter flower patches that are not rich in species, not if the flowers are "depleted," or emptied or reduced in quality or quantity. Although it could be true that bees are likely to leave depleted patches in search of more resources, the text doesn't indicate that Jha and Kremen investigated that possibility. **Choice C is incorrect** because there's no information in the text suggesting that bees will not behave as some models predict if flowers in patches are "immature," or not fully developed. Instead, the text indicates that Jha and Kremen found that bees will behave contrary to some models' predictions if the flower patches are not rich in species. **Choice D is incorrect** because the text indicates that bees' behavior will be inconsistent with the predictions of some models if the flower patches that the bees encounter are of low species richness, not if the flowers are in patches that are "dispersed," or widely scattered. Although the text does describe bees as

leaving patches that are not rich in species to forage elsewhere, there's no suggestion that Jha and Kremen found that the distance between dense flower patches affects whether the bees behave as some models predict.

207 Correct answer **A** Hard ‹ Back to question

A demarcated from

Choice A is the best answer because it most logically completes the text's discussion of diadromous fish. In this context, "demarcated from" means separate or set apart from. The text indicates that diadromous fish differ from euryhaline fish in that diadromous fish "migrate between freshwater and marine biomes during their life," whereas euryhaline fish do not relocate to a different biome because they can tolerate higher salinity environments. Therefore, this context suggests that because of differences between their migration patterns, diadromous fish are distinct and can be demarcated from euryhaline fish.

Choice B is incorrect. Although the text states that diadromous fish migrate and relocate, the text does not suggest that diadromous fish would be "reconstituted as," or formed again as, anything new. Only their environments change and not the fish themselves. **Choice C is incorrect** because the text does not suggest that diadromous fish can be "conflated with," or combined with, euryhaline fish. Instead, the text distinguishes the two types of fish by pointing out their differences with regard to migration and tolerance for salinity. **Choice D is incorrect** because the text indicates that based on migration habits and tolerance for salinity, diadromous fish are different from euryhaline fish; so it would not make logical sense to say that diadromous fish would be "derived from," or be an extension of or result from, euryhaline fish.

208 Correct answer **C** Hard ‹ Back to question

C diverse

Choice C is the best answer because it most logically completes the text's discussion of the kinds of mammals alive during the Mesozoic era. As used in this context, "diverse" means to have a significant amount of variety. The text indicates that some scientists have suggested that Mesozoic mammals can't be characterized in a certain way, then contrasts the view put forward by those scientists with Luo's research, which shows that Mesozoic mammals "weren't all ground-dwelling insectivores" and instead were "various." This context suggests that some scientists have viewed Mesozoic mammals as being all alike, or not a very diverse group.

Choice A is incorrect because it wouldn't make sense to say that some scientists have suggested that Mesozoic mammals weren't very "predatory," or that they didn't prey on other animals, since the text establishes a contrast between what some scientists have suggested and Luo's research showing that Mesozoic mammals "weren't all ground-dwelling insectivores." This context suggests that some scientists have regarded Mesozoic mammals as all being insectivores, or animals that prey on insects, not that some scientists have suggested that Mesozoic mammals didn't prey on other animals. **Choice B is incorrect** because it wouldn't make sense to say that some scientists have suggested that Mesozoic mammals weren't very "obscure," or concealed or not well known, since the text establishes a contrast between what some scientists have suggested and Luo's research showing that Mesozoic mammals were a varied group. There's no contrast between saying that the mammals weren't concealed or well known and the mammals being varied. **Choice D is incorrect** because it wouldn't make sense to say that some scientists have suggested that Mesozoic mammals weren't very "localized," or confined to a particular area, since the text establishes a contrast between what some scientists have suggested and Luo's research showing that Mesozoic mammals were a varied group. There's no contrast between saying that the mammals weren't localized and the mammals being varied. Although the text mentions mammal fossils found in China, nothing in the discussion of Luo's research addresses the limits of Mesozoic mammal habitats.

209 Correct answer **B** Hard < Back to question

B proxies for

Choice B is the best answer because it most logically completes the text's discussion of the relationship between Martian meteorites and Mars's interior geology. In this context, "proxies for" means substitutes used to represent something else. The text describes Udry and colleagues as cautioning against a tempting line of reasoning: because the isotopic signatures (chemical fingerprints) of elements in Mars's atmosphere resemble those in Martian meteorites recovered on Earth, researchers might be inclined to treat the meteorites' geochemical properties as reasonably standing in for those of Mars's interiors. The text indicates that Udry and colleagues argue against this reasoning, noting that Mars's geology cannot be determined solely from meteorite analysis. This context conveys that it is tempting to treat the meteorites' properties as proxies for those of Mars's interiors.

Choice A is incorrect because "contrivances of" would mean things artificially devised or produced by something, and it wouldn't make sense to say that it's tempting to treat the geochemical properties of meteorites as having been artificially produced by the planet the meteorites came from; it's not clear how a planet could fabricate such properties. Further, the text is focused on the idea that it's tempting to treat the meteorites' properties as standing in for those of Mars's interiors, which likely wouldn't be the case if the meteorite's properties were considered artificial in any way. **Choice C is incorrect** because "catalysts of" something are things that trigger or accelerate its change or action. The text focuses on the idea of analyzing samples of Martian meteorites found on Earth to determine Mars's geology; this suggests that the temptation is to view the geochemical properties of the meteorites as direct evidence of those of Mars's interior, not to treat them as though they had caused changes in Mars's interior geology. **Choice D is incorrect** because "deterrents to" something would mean things that discourage or prevent it, and it wouldn't make sense to say that it's tempting to treat the geochemical properties of Martian meteorites as preventing the geochemical properties of Mars's interiors; the meteorites came from Mars and are no longer there, so their properties can't have any effect on those of the planet.

210 Correct answer **A** Hard < Back to question

A sanguine

Choice A is the best answer because it most logically completes the text's discussion of political blogs. In this context, "sanguine" means optimistic. The text begins by noting the rise of political blogs with readily identifiable ideological alignments in the early 2000s. The text then indicates that some commentators saw this as a positive development, citing a reason why (their difference from traditional news). Finally, the text goes on to contrast those commentators with others who have a negative opinion of the rise of political blogs (because they increase political polarization among their readers). This context supports the idea that the second group of commentators is less positive than the first: thus, the second group of commentators is less optimistic, or sanguine.

Choice B is incorrect because it would not make sense in this context to describe those commentators who have a negative opinion of political blogs as less "recalcitrant," or obstinately uncooperative, than those commentators who supported political blogs. **Choice C is incorrect** because the text gives no indication that those commentators who have a negative opinion of political blogs are less "misanthropic," or less contemptuous of humankind, than those commentators who have a positive opinion of political blogs—there is no indication in the text that those commentators who like political blogs would be contemptuous of humankind at all. **Choice D is incorrect** because there is no evidence that those commentators who have a negative opinion of political blogs are less "earnest," or sincere, than those who have a positive opinion of such blogs—presumably, both groups of commentators hold their beliefs with equal conviction.

211 Correct answer **B** Hard Back to question

B elasticity

Choice B is the best answer because it most logically completes the text's discussion of black swan familial structures. In this context, "elasticity" means flexibility or adaptability. The text provides examples of flexible family arrangements among black swans: successful male-female breeding pairs are known to foster other pairs' cygnets, and while they are less common, male-male pairs also successfully rear cygnets. This context therefore emphasizes the flexibility or elasticity of black swan familial structures, showing how this trait contributes to the success of the species.

Choice A is incorrect. Although close family units may show "cohesion," which refers to unity or harmony within a group, the text's focus is on the variety and adaptability of black swan family structures. The examples given—fostering other pairs' cygnets and forming male-male as well as female-male pairs—highlight flexibility rather than cohesion, emphasizing family structures that vary from the model in which a breeding pair raises its own young. **Choice C is incorrect**. While "affection," or fondness, might be present in black swan relationships, the text doesn't focus on emotional bonds but rather on the structural flexibility of black swan familial arrangements. The examples provided demonstrate adaptable breeding and rearing practices rather than affectionate behaviors. **Choice D is incorrect** because "reciprocity" would suggest mutual exchange or cooperation between parties. Although the text mentions the fostering of cygnets by different successful breeding pairs, it doesn't establish that this is based on reciprocal exchanges. The focus is instead on the flexibility of family structures and the effectiveness of these varied structures in rearing young.

212 Correct answer **C** Hard Back to question

C overshadowed by

Choice C is the best answer because it most logically completes the text's discussion of the factors that influence peoples' decisions to move to a different state. As used in this context, "overshadowed by" means to be surpassed by or caused to seem less important than other factors affecting a move. The text indicates that, according to a US tax policy expert, when people think about an interstate move, state taxes have little effect on their decisions, while employment opportunities, housing availability, and climate have a very strong effect. This context suggests that people consider these other factors to be more important than state taxes.

Choice A is incorrect because the text indicates that state taxes aren't as important a consideration as other factors when people are thinking of moving to another state. The context doesn't suggest that state taxes are "consistent with," or in agreement with these other factors. **Choice B is incorrect** because it wouldn't make sense in context to say that state taxes are "representative of," or typical of, other factors. Taxes aren't an example of employment opportunities, housing availability, and climate, which are the other factors listed in the text. **Choice D is incorrect** because it wouldn't make sense in context to say that state taxes are "irrelevant to," or unconnected or unimportant to other factors. State taxes are irrelevant to peoples' decisions, not to other factors. In other words, although the text suggests that state taxes may be irrelevant to people considering a move to another state, the other factors mentioned in the text, such as employment opportunities, are unable to have an opinion about state taxes. Furthermore, the text indicates that significant differences in state taxes have almost no effect on peoples' choices to move, but they aren't completely unimportant.

213 Correct answer **A** Hard Back to question

A opaque

Choice A is the best answer because it most logically completes the text's discussion of how online games disclose information about their data collection practices. In this context, "opaque" means that games deliberately avoid sharing clear information about data collection. The text indicates that data-privacy advocates are working to "expand online players' knowledge of data collection practices" and improve players' ability to navigate privacy settings. The fact that advocates are

working to expand players' knowledge about data collection and privacy settings implies that players currently lack clear information about these aspects of the games. This context therefore supports the idea that online games are often quite unclear, or opaque, about what data they collect and why.

Choice B is incorrect because describing online games as being "abrasive," or harsh and irritating, about their data collection practices wouldn't make sense in context. The text focuses on the clarity of the information about data collection that games share with players, not on the tone or manner in which this information is communicated. **Choice C is incorrect** because describing the games as "ambivalent," or having mixed feelings, about their data collection practices wouldn't make sense in context. The text isn't discussing the game companies' attitudes toward their own practices; it's discussing the extent to which information about those practices is communicated to players. **Choice D is incorrect** because describing online games as "outspoken," or frank and forthright, about their data collection practices would contradict the text. If the games were forthright about data collection, data-privacy advocates wouldn't need to work to expand players' awareness of this aspect of gaming. Instead, the text emphasizes the challenge of obtaining clear information about data collection in online games.

214 Correct answer **D** Hard ‹ Back to question

D exploited

Choice D is the best answer because it most logically completes the text's discussion of using magnetism to detect stress in buried metal pipes. In this context, "exploited" means made productive use of. The text indicates that the magnetic fields of some metals change under stress and that Saleem and colleagues showed that it is possible to measure those changes from a distance, thereby demonstrating that the integrity of underground metal pipes can be evaluated without having to unearth them. This context thus indicates that Saleem and colleagues made productive use of, or exploited, this tendency of the metals' magnetic fields.

Choice A is incorrect because in this context, "hypothesized" would mean made a tentative assumption to be evaluated in a study or experiment. Although Saleem and colleagues may have had one or more hypotheses for these experiments, the text presents the information about the tendency of some metals' magnetic fields to change under stress as a known fact that the researchers made productive use of, not as a hypothesis to be evaluated. The text after the colon indicates that the researchers were not evaluating whether such changes occur but whether those changes can be measured at a distance. **Choice B is incorrect** because in this context, "discounted" would mean downplayed or ignored, but the text does not suggest that Saleem and colleagues minimized or ignored the tendency of the magnetic fields of some metals to change under stress. Rather, the text indicates that this tendency is the basis for Saleem and colleagues' method of assessing the pipes' integrity. **Choice C is incorrect** because nothing in the text indicates that Saleem and colleagues "redefined," or reevaluated or reformulated, the tendency of some metals' magnetic fields to change under stress. Instead, the text indicates that the researchers made use of that tendency to demonstrate that it is possible to evaluate the integrity of underground pipes without unearthing them.

215 Correct answer **C** Hard ‹ Back to question

C ambiguity

Choice C is the best answer because it most logically completes the text's discussion of Gabriela González and team's detection of gravitational waves. In this context, "ambiguity" means uncertainty or doubtfulness. The text explains that although skeptics had thought that direct evidence of gravitational waves would be too faint to be detected, researchers led by González claimed that a chirping sound captured by Laser Interferometer Gravitational-Wave Observatory antennas nevertheless provided such evidence. The text goes on to say that detailed statistical analysis confirmed the observation of gravitational waves with a high degree of confidence—that is, with near certainty—a finding that helped to preclude, or rule out, any claims that the signal's attribution to gravitational waves might be ambiguous or doubtful.

Choice A is incorrect. In this context, "inconspicuousness" would mean the quality of being unnoticeable or difficult to detect. Although the text indicates that skeptics had doubted whether gravitational waves could be observed directly because of their

presumed faintness (which suggests that gravitational waves were expected to be difficult to detect), the blank portion of the text isn't referring to the possibility that gravitational waves are unnoticeable or undetectable. Instead, the focus of the last sentence is González's team's observation of a chirping sound that they attributed to gravitational waves, and it wouldn't make sense to say that through statistical analysis, they ruled out the possibility that the sound they observed was undetectable. Rather, the skeptical view presented in the text suggests that there could be some ambiguity about the source of the chirping, but statistical analysis virtually eliminated this uncertainty. **Choice B is incorrect** because in this context, "discretion" would mean good judgment, and it wouldn't make sense to say that an event, such as the detection of gravitational waves, would show judgment, much less that the event's capacity to exercise good judgment would be precluded by statistical analysis confirming its attribution. **Choice D is incorrect** because in this context, "probability" would mean likelihood, and the text states that statistical analysis, which confirmed the signal with a high degree of confidence, suggests the likelihood that the chirping sound was produced by gravitational waves, not that the analysis helped to preclude this likelihood.

216 Correct answer **B** — Hard — Back to question

B tenuous

Choice B is the best answer because it most logically completes the text's discussion of the author's claim about the relationship between Neanderthals and *Homo sapiens*. As used in this context, "tenuous" means lacking substance. The end of the first sentence states that the author's claim didn't consider certain key pieces of evidence—"recent archaeological discoveries"—and is therefore weak.

Choice A is incorrect because it wouldn't make sense in context to refer to the author's claim as "disorienting," or confusing. The text suggests that the author's claim is insubstantial, not that it's difficult to grasp. **Choice C is incorrect** because referring to the claim as "nuanced," or subtle, wouldn't make sense in context. According to the text, the claim is incomplete because it didn't consider certain key information about recent archaeological finds; it doesn't suggest that what's in the claim lacks precision. **Choice D is incorrect** because saying that the claim is "unoriginal," or imitative, wouldn't make sense in context. The text faults the claim because it doesn't consider certain key information about recent archaeological finds; it doesn't suggest that the author's claim lacks originality.

217 Correct answer **D** — Hard — Back to question

D latent

Choice D is the best answer because it most logically completes the text's discussion of baleen whale accessory spleens. In this context, "latent" means dormant or functionless. The text sets up a contrast between the idea that baleen whale accessory spleens appear not to have a function and the research indicating that the accessory spleen may actually have a role in supporting the whales' diving mechanisms. This context therefore conveys the idea that the assumption that baleen whale accessory spleens are latent may be incorrect.

Choice A is incorrect because it wouldn't make sense to say that the role of the accessory spleen is "replicable," or capable of being reproduced. The text indicates that the role of the accessory spleen seems to have no function, but some researchers think it does have a role; the text doesn't address whether the role of the accessory spleen could or couldn't be reproduced. **Choice B is incorrect** because suggesting that the role of the accessory spleen is "predetermined," or decided in advance, wouldn't make sense in context. Although the researchers may agree that the role of the accessory spleen or any other organ hasn't been determined in advance, the text focuses on the idea that the accessory spleen was thought to have been functionless but may in fact serve an active role for baleen whales. **Choice C is incorrect** because it's the opposite of what the context of the text is conveying. The second sentence of the text indicates that baleen whale accessory spleens may not be useless, not that they aren't "operative," or functional.

218 Correct answer **D** Hard ‹ Back to question

D peripheral

Choice D is the best answer because it most logically completes the text's discussion of the location of the province of Xoconochco within the Aztec Empire. As used in this context, "peripheral" means situated toward the outer bounds rather than the center. The text indicates that Xoconochco was located on a coast, hundreds of kilometers away from the capital of the Aztec Empire. The text also states that trade between the province and the capital required "a long overland journey." This context suggests that Xoconochco was situated toward an edge of the empire's territory rather than near its center.

Choice A is incorrect because it wouldn't make sense in context to refer to Xoconochco's location within the Aztec Empire as "unobtrusive," or not blatant or undesirably prominent; it's not clear how a province's physical location would or wouldn't be blatant. Instead of focusing on how noticeable Xoconochco's location was, the text emphasizes the province's distance from the capital of the empire, pointing out that because of this distance trade between the two required "a long overland journey." **Choice B is incorrect** because the text indicates that the province of Xoconochco was located on a coast far from the capital of the Aztec Empire, not that it was "concealed," or kept out of sight or hidden from view. Nothing in the text suggests that Xoconochco was actually hidden such that people couldn't see it, and being hidden wouldn't necessarily result in trade between the province and the capital requiring "a long overland journey." **Choice C is incorrect** because to say that Xoconochco's location within the Aztec Empire was "approximate" would mean that the location either wasn't precisely correct or was close to some other location. Neither of these meanings would make sense in context because the text indicates that Xoconochco's location is known and that it was far from the empire's capital, so there's no reason to characterize the location as either not precisely correct or close to another location.

219 Correct answer **B** Hard ‹ Back to question

B impending

Choice B is the best answer because it most logically completes the text's discussion of advance indications of solar flares. In this context the word "impending" means imminent or approaching. The text mentions a study by Leka and colleagues that found that the Sun's corona provides an advance indication of solar flares. The text then points out why such an advance indication would be useful—solar flares can interfere with communications on Earth—and concludes by describing the characteristic of the corona that gives warning of a solar flare. The text indicates that this characteristic—increased brightness in a particular region of the corona—comes before the appearance of the flare. Therefore, in context, the best answer would indicate that the flare is approaching, or impending.

Choice A is incorrect. The best answer would be one that indicates that the increased brightness of the Sun's corona precedes the appearance of the flare. But if the flare were "antecedent," or previous, then the flare would instead precede the appearance of the increased brightness of the corona, a statement that is logically inconsistent. **Choice C is incorrect**. The word "innocuous," or harmless, does not logically complete the text; since solar flares can interfere with communications on Earth, they cannot reasonably be described as innocuous. **Choice D is incorrect**. If the solar flares have an advance indication of their appearance, then there must therefore be a time before the appearance of the flares when they do not exist. But the word "perpetual," or never-ending, would in context indicate that the flare exists at the same time as the advance indication provided by the Sun's corona, which would not make logical sense.

220 Correct answer **A** Hard ‹ Back to question

A unassuming

Choice A is the best answer because it most logically completes the text's discussion of Scherezade García's mural *Blame It on the Bean: The Power of Coffee*. In this context, "unassuming" means ordinary or unremarkable. The text draws a contrast between a "casual description" of the mural's ordinary location (a coffee shop) and subject matter (three women drinking

coffee)—details that would make it seem relatively unambitious—and a characterization of the painting as a "dynamic meditation" on gender and colonialism deserving of "serious attention." This context suggests that the mural has significant depth and complexity, but a superficial description of it might make the mural seem ordinary and unremarkable—that is, unassuming.

Choice B is incorrect because in this context, "shrewd" would mean clever or astute, and there's nothing in the text to suggest that a casual yet misleading description that only mentions the apparent simplicity of the mural's location and subject matter would make the mural seem particularly clever or astute. Though it's possible that the text's assertion that the mural is a "complex, dynamic meditation" demanding "serious attention" might convey the idea that it's a particularly clever or astute—that is, shrewd—artwork, the text wouldn't suggest that a casual description that fails to account for the work's complexity would likewise characterize the work as shrewd. **Choice C is incorrect** because in this context, "incongruous" would mean unsuitable for its surroundings or internally inconsistent. The "casual description" presented in the text indicates that the painting is housed in a coffee shop and depicts women drinking coffee, which would imply that the mural may in fact be well suited to its surroundings, not that it's ill suited to its location. Moreover, none of the details mentioned in this description would suggest that the painting contains internal inconsistencies of any kind. **Choice D is incorrect** because in this context, "pretentious" would mean expressive of exaggerated importance, which wouldn't fit the contrast established in the text between a "casual description" of the painting and the work's deeper themes. Though the text argues that the painting is worthy of "serious attention," which would suggest its importance, the text doesn't suggest that the casual description would by contrast imply that the painting's importance is exaggerated. Rather, by merely mentioning the mural's relatively ordinary location and subject matter without reference to this complexity, the casual description conveys that the painting is more unassuming and understated than it actually is, not that it expresses an exaggerated self-importance.

221 Correct answer **C** Hard ‹ Back to question

C negligible

Choice C is the best answer because it most logically completes the text's discussion of the study of female participation in hunting among prehistoric peoples. In this context, "negligible" means not significant enough to be worth considering. The text says that the study challenged the accepted view of female participation in hunting among prehistoric peoples. The text goes on to say that the researchers found that "in fact, as many as half" the hunters in the groups studied were female. The phrase "in fact" establishes a contrast indicating that the finding that as many as half the hunters were female differs from the accepted view. This context suggests, then, that the accepted view is that female participation in hunting was negligible.

Choice A is incorrect because the text indicates that the study challenged the accepted view by showing that as many as half of hunters among prehistoric peoples were female, which suggests that the accepted view is that female participation was low, not that female participation was "inevitable," or unavoidable. Nothing in the text suggests that the accepted view is that prehistoric peoples could not avoid female participation in hunting. **Choice B is incorrect** because nothing in the text suggests that the accepted view of female participation in hunting among prehistoric peoples is that such participation was "satisfactory," or sufficient to meet a requirement or demand. There is no information in the text about any demands or requirements regarding female participation in hunting, let alone any information about how much female participation in hunting would be enough to satisfy those demands or requirements. Instead, the text indicates that the study challenged the accepted view by showing that as many as half the hunters in the groups studied were female, suggesting that the accepted view is that female participation in hunting was low. **Choice D is incorrect** because the text indicates that the study challenged the accepted view by showing that as many as half of hunters among the prehistoric peoples studied were female, which suggests that the accepted view is that female participation was low, not that female participation was "commonplace," or ordinary or unremarkable. Although the study under discussion suggests that female participation may have been commonplace, that study is presented as challenging the accepted view, not as reinforcing the accepted view.

B Find the Synonym

40 questions

222 Correct answer **B** — Easy — Back to question

B Alarmed

Choice B is the best answer because as used in the text, “disturbed” most nearly means alarmed. The text portrays the narrator traveling in a carriage as wolves howl in the surrounding darkness. The text contrasts the reaction of both the narrator and the horses pulling the carriage with that of the driver of the carriage: the narrator and horses are “dreadfully afraid,” but the driver is “not in the least disturbed.” In other words, the driver is not alarmed by the wolves nearby.

Choice A is incorrect. Although in some contexts, “disturbed” can mean disorganized, the text doesn’t portray a character acting in a disorganized manner; instead, the driver continues to drive the carriage, even though the horses pulling it are alarmed. **Choice C is incorrect**. Although in some contexts, “disturbed” can mean offended, the text doesn’t portray one character feeling offended, or upset, by another’s actions; instead, it contrasts the fear felt by the narrator with another character’s lack of fear. **Choice D is incorrect**. Although in some contexts, “disturbed” can mean interrupted, the text doesn’t portray an action being interrupted; indeed, the travel depicted in the scene continues despite the threat of the wolves outside the carriage.

223 Correct answer **A** — Easy — Back to question

A Acquired

Choice A is the best answer because as used in the text, “assumed” most nearly means acquired, or came to possess. The text portrays a character named Drowne carving a figure out of wood. At first “irregular and misty,” or haphazard and indistinct, the figure’s outline gradually showed “distincter grace and beauty” until the general design of the carved object “was now obvious to the common eye,” or plainly recognizable to anyone. In other words, as Drowne continued to carve, the wooden object came to possess, or acquired, greater precision, changing from an indistinct outline or shape into a graceful, beautiful, and clearly recognizable form.

Choice B is incorrect. Although in some contexts “assumed” can mean acknowledged, or recognized, it doesn’t have that meaning in this context because an inanimate object like the wooden figure can’t acknowledge its own precision. **Choice C is incorrect** because there’s nothing in the text to suggest that the wooden figure merely imitated, or mimicked, precision. Rather, the text suggests that as Drowne carved his wooden figure, it gradually became more precise. **Choice D is incorrect**. Although in some contexts “assumed” can mean speculated, or supposed based on incomplete information, it doesn’t have that meaning in this context because an inanimate object like the wooden figure can’t speculate about its own precision.

224 Correct answer **B** — Easy — Back to question

B Finishing

Choice B is the best answer because as used in the text, "completing" most nearly means finishing. In the text, the narrator conveys that the task of translating a novel has been an all-consuming one and that she hopes things will "be normal again" once she has "sent off the manuscript." In other words, the narrator is looking forward to finishing her work on the manuscript and returning to other things.

Choice A is incorrect because in this context, "completing" doesn’t mean destroying, or ruining. The narrator addresses her desire to send off the manuscript she’s focused on and her hope that things will be "normal again" once she does, conveying that she is looking forward to finishing the work, not to ruining it. **Choice C is incorrect** because in this context, "completing" doesn’t mean advertising, or publicly promoting. The narrator addresses her complete focus on the translation and her hope that things will be "normal again" once she has "sent off the manuscript," conveying that she is looking forward to finishing the

task, not to promoting the resulting manuscript. **Choice D is incorrect** because in this context, "completing" doesn't mean rejecting, or refusing or repelling. The narrator makes it clear that she is absorbed in working on the translation and plans to send off the manuscript, suggesting that instead of refusing to do the work, she is continuing to do it (even if she looks forward to things being "normal again" when she's done).

225 Correct answer **C** Easy ‹ Back to question

C Extended

Choice C is the best answer because as used in the text, "spread" most nearly means extended. The text states that the zoo is "huge," that it covers "numberless acres," and that it is large enough that a train is needed to explore it. Thus, the text's emphasis on the zoo's size suggests that the zoo extended, or stretched, over a large area of land.

Choice A is incorrect because if the zoo covers "numberless acres," then it could not reasonably be described as hidden, or concealed from view. **Choice B is incorrect** because there is nothing in the text to suggest that the zoo was discussed, or talked about. Rather, the text focuses on the zoo's large size. **Choice D is incorrect**. Although in some contexts "spread" can mean coated, it doesn't have that meaning in this context because to coat something means to apply a thin layer of a liquid substance, such as oil or paint, to a surface. Therefore, it would not be accurate to say that the zoo coated the acres on which it sits.

226 Correct answer **C** Easy ‹ Back to question

C Developed

Choice C is the best answer because as used in the text, "contracted" most nearly means developed. The text explains that Mr. Brooke has a "too rambling habit of mind," which the text likens to a disease, saying he is thought to have contracted it. To contract a disease means to acquire or develop a disease. In other words, the text indicates that Mr. Brooke is believed to have acquired, or developed, the habit of mind described in the text.

Choice A is incorrect. Although "contracted" can mean limited or restricted in some contexts, here Mr. Brooke is said to draw unpredictable conclusions, suggesting that he exhibits this "too rambling habit of mind," not that it has been somehow limited or restricted. **Choice B is incorrect**. Although the text describes Mr. Brooke's habit of mind, nothing suggests that those are his descriptions or, indeed, that he described his habit of mind at all. **Choice D is incorrect** because settled means calmed or mitigated, but here Mr. Brooke is said to draw unpredictable conclusions, suggesting that he exhibits this "too rambling habit of mind," not that it has been somehow calmed or mitigated.

227 Correct answer **C** Easy ‹ Back to question

C Inviting

Choice C is the best answer because as used in the text, "beckoning" most nearly means "inviting," or attractive. The text portrays a woman who is looking at "trees in their spring beauty." She compares them to cities, which have their own pleasures even if they do not have the "easy unhuman loveliness" of trees: she thinks of cities as "seductive" and "charming," both adjectives that signify something that is enticing, or attractive. Therefore, cities that are seductive and charming would also be described as inviting people closer to them.

Choice A is incorrect because there is no indication in this context that cities are "demanding," or requiring effort. **Choice B is incorrect**. Though "signaling," or communicating something, might be considered a key feature of the act of "beckoning," in the context here, "beckoning" suggests that cities have attractive qualities that naturally draw people to them. Such attractive qualities are not described by the word "signaling" alone. Therefore, "signaling" is an incorrect answer because it is

insufficiently precise. **Choice D is incorrect** because there is no reason to think in this context that the cities are "shifting," or changing shape.

228 Correct answer **D** Easy < Back to question

D Transparent

Choice D is the best answer because as used in the text, "clear" most nearly means transparent, or see-through. Muir states that the water beneath the boat "was so clear that it was almost invisible," suggesting that those on the boat were able to see through the water and easily observe plants and fish below the surface.

Choice A is incorrect. In some contexts "clear" can mean "simple," or uncomplicated, but Muir is describing the water, and water isn't typically described as either simple or complicated. Muir emphasizes the water's transparency, not its simplicity. **Choice B is incorrect**. In some contexts "clear" can mean "understandable," or reasonable or easily comprehended, but Muir is describing the water, and it doesn't make much sense to describe water as understandable. Muir emphasizes the water's transparency, not how easily the water can be understood. **Choice C is incorrect**. Although "clear" can mean "obvious," or easily seen or understood, in some contexts, Muir's description emphasizes that the water "was almost invisible" and that the boat seemed to be "sustained in the air," suggesting that the water was almost impossible to see, not that it was obvious.

229 Correct answer **A** Easy < Back to question

A Protective

Choice A is the best answer because as used in the text, "sheltering" most nearly means protective. In the text, the speaker describes a painting featuring a female figure. The speaker ultimately confesses to falling in love with the woman in the painting, who has "stole[n] away" the speaker's heart, but first the speaker describes elements of the painting's setting. These include sterile soil, barren fields with "no ray / Of hope in a blade of green"—a description that conveys a mood of melancholy and forlornness, possibly reflecting the speaker's own sadness at falling in love with an image that can't return the speaker's love. The text continues by stating that there's no "sheltering roof" in the painting, even though the "skies are heavy and gray," showing signs of an impending storm. Generally, a roof's intended purpose is to provide protection from the elements, and in this context, a roof would offer shelter and protection from the gathering storm.

Choice B is incorrect because nothing in the text suggests that a roof would be restrictive—that is, that it would limit or restrain something in some way. Although a roof would provide some cover from stormy winds and rain, it wouldn't limit the wind and rain, only deflect them. **Choice C is incorrect** because there's nothing in the text to suggest that if a "sheltering roof" were present in the painting, it would be affectionate, or loving

and tender. In the text, the immediate context in which the word "sheltering" appears refers to the absence of a roof that would provide protection from the oncoming storm depicted in the painting, not to the idea that such a shelter would be loving and tender if it were present. **Choice D is incorrect** because in this context, suspicious would mean questionable or dubious, and there's nothing in the text to suggest that if any roofs were present in the painting, they would be questionable or cause any suspicion.

230 Correct answer **D** Easy < Back to question

D Hearing

Choice D is the best answer because as used in the text, "receiving" most nearly means hearing, or perceiving sound. The text describes Mr. Spring Fragrance as he reads a newspaper, focusing on his eyes and ears. While his eyes look at the newspaper, he is unwillingly distracted by words coming through a nearby open window (that is, "his ears could not help receiving the

words"). The words are being perceived specifically by his ears and not his eyes, and ears are the organs of sense with which one hears, so therefore Mr. Spring Fragrance is hearing the words through the open window.

Choice A is incorrect because there is no indication in the text that Mr. Spring Fragrance is denying, or refusing the truth of, the words coming to him through the window. He is merely distracted by them. **Choice B is incorrect** because it wouldn't make sense to say that Mr. Spring Fragrance's ears couldn't help entering, or coming into, the words coming to him through the window. Instead, the text indicates that the opposite occurs: that is, when Mr. Spring Fragrance hears the words, they enter his ears, but his ears don't enter the words. **Choice C is incorrect** because it doesn't make sense in this context to think of Mr. Spring Fragrance as carrying the words coming to him through the window, even though the word "carry" can have a number of different meanings depending on context: for example, he is not lifting them, he is not supporting them, and he is not accepting blame for them (as one "carries the blame" for a mistake).

231 Correct answer **A** Easy Back to question

A Held up

Choice A is the best answer because as used in the text, "supported" most nearly means held up or sustained physically. The sentence describes the physical structure of the Panhandle bridge, stating it was "supported by massive sandstone pillars." This clearly refers to the structural relationship between the bridge and its pillars—the pillars physically hold up the bridge and keep it standing. The text further emphasizes the physical nature of this support by describing the pillars as "stalwart" (strong and sturdy) and noting they've been performing this function for fifty years.

Choice B is incorrect. Although in some contexts "supported" can mean "encouraged," the sandstone pillars and bridge described in the text are all inanimate objects that can't provide or receive encouragement. The text clearly describes a structural relationship between the elements of the bridge, not an emotional one. **Choice C is incorrect**. Although in some contexts "supported" has a meaning similar to "improved on," the text doesn't suggest that the sandstone pillars have enhanced or made the bridge better; rather, they simply provide the necessary physical foundation to keep the bridge standing. Thus, the sentence describes the structural elements of the bridge, not improvements made to it. **Choice D is incorrect**. Although in some contexts "supported" can mean "defended," the text doesn't present a situation in which the sandstone pillars are defending the bridge from a threat. Instead, the description focuses on the physical structure of the bridge, in which the pillars hold the bridge up and ensure its stability.

232 Correct answer **D** Easy Back to question

D Gathers

Choice D is the best answer because as used in the text, "collects" most nearly means gathers or accumulates. In the text, Gogol "collects" (or gathers) rocks and digs in the sand while strolling the beach with his father. Thus, "gathers" is the best answer.

Choice A is incorrect because in this context, "increases" would mean expands or inflates, which is not something a child could logically do to rocks. Rather, the text indicates that Gogol "collects" or gathers rocks while strolling the beach with his father. **Choice B is incorrect** because in this context, "makes" would suggest that Gogol is creating or manufacturing rocks, which doesn't make sense. Rather, the text indicates that Gogol "collects" or gathers rocks while strolling the beach with his father. **Choice C is incorrect** because in this context, "ignores" would mean disregards or avoids, but in the text Gogol "collects rocks," which indicates that he's engaging with the rocks, not ignoring them.

233 Correct answer **C** Easy ‹ Back to question

C Create

Choice C is the best answer because as used in the text, "invent" most nearly means create or make up. The text begins by stating that Sara likes to tell stories and thoroughly enjoys telling them. The rest of the text describes how she looks and acts when she invents, or creates, "wonderful things" in her stories ("what she told").

Choice A is incorrect. Although the text suggests that Sara makes up "wonderful things," nothing suggests that she does so to mislead, or intentionally deceive, others; there is no reason to assume that Sara's listeners don't know that she's creating the stories she shares. **Choice B is incorrect** because nothing in the text suggests that Sara is disguising, or trying to cover up or conceal, "wonderful things" when she tells stories; rather, she is creating them and presenting them in ways that make them "lovely or alarming" for her listeners. **Choice D is incorrect** because nothing in the text suggests that Sara is discovering, or unexpectedly finding, "wonderful things" in the stories she loves to tell; rather, that she is making things up as she tells the stories.

234 Correct answer **A** Easy ‹ Back to question

A Choose

Choice A is the best answer because as used in the text, "determine" most nearly means choose or decide. The text indicates that Mr. Ryder "had made up his mind" to ask a woman to marry him but had not yet "spoken"—that is, he had not yet asked her. The text also indicates that Mr. Ryder "decided" to throw a party for the woman and ask her during it. This context conveys that after making up his mind to propose, what Mr. Ryder had to do was determine, or choose, the time to do it.

Choice B is incorrect because in this context, "determine" doesn't mean influence, or affect or control. The text isn't indicating that Mr. Ryder is controlling time itself; such a thing isn't possible. Rather, the text conveys that after making up his mind to ask a woman to marry him, Mr. Ryder had to make another decision about his own actions by selecting a time to propose. **Choice C is incorrect**. The text focuses on Mr. Ryder's plan to ask a woman to marry him and his decision about when to ask her. This context conveys that after making up his mind to propose, Mr. Ryder had to choose the time, not that he had to demonstrate, or show, the time; it's not clear what it would mean to demonstrate a time. **Choice D is incorrect** because in this context, "determine" doesn't mean measure, or control with careful restraint. The text isn't indicating that Mr. Ryder is carefully controlling time itself; such a thing isn't possible. Rather, the text conveys that after making up his mind to ask a woman to marry him, Mr. Ryder had to make another decision about his own actions by selecting a time to propose; it's Mr. Ryder's decision that is measured, not the time he eventually chooses.

235 Correct answer **A** Easy ‹ Back to question

A Pulled

Choice A is the best answer because as used in the text, "drew" most nearly means pulled. In the text, the speaker stands at a window, looking out on a landscape at night. The speaker then "drew the shades far down, crept into bed." That is, the speaker pulled down, or lowered, the shades until they were completely shut before going to sleep.

Choice B is incorrect. Although in some contexts, "drew" can refer to draining or removing liquid, especially water, as when someone draws water from a well, in this context it refers to the speaker pulling down window shades for the night. **Choice C is incorrect**. In some contexts, "drew" can be used to describe how a person or thing inspires, or elicits, a response from someone, as when a performer draws applause from an audience. But in this context it refers to the speaker pulling down window shades for the night. **Choice D is incorrect**. Although "drew" has several meanings, including sketched, or illustrated with a pen or pencil, in this context it refers to the speaker pulling down window shades for the night.

236 Correct answer **B** Easy ‹ Back to question

B Imaginable

Choice B is the best answer because as used in the text, "conceivable" most nearly means capable of being thought of or imagined. The text describes a journey that, despite being "insignificant in distance," was "by no means an easy one" because of the variety of obstacles that "nature had determined to throw...in the way." To emphasize the difficulty of the journey, the author portrays nature as actively scheming to present travelers with every obstacle that can be thought of—i.e., every imaginable obstacle.

Choice A is incorrect because in this context, "conceivable" does not mean obvious, or evident. Instead, by referring to "every conceivable obstacle," the text suggests a wide variety of challenges by evoking all the potential difficulties nature could present, not just those that the travelers might reasonably expect or foresee. **Choice C is incorrect** because in this context, "conceivable" does not mean straightforward, or easy to negotiate. The text is not indicating that the obstacles were simple to respond to and overcome. Rather, the text suggests that a wide range of obstacles made the journey difficult. **Choice D is incorrect** because in this context, "conceivable" does not mean uninterrupted. Although the text suggests that the obstacles were frequent and numerous, it does not emphasize the obstacles' continuity; instead, the text conveys their unexpected variety and range.

237 Correct answer **A** Easy ‹ Back to question

A Gentle

Choice A is the best answer because as used in the text, "soft" most nearly means gentle. The text portrays Alice speaking about the snow falling against the window, describing it as sounding "nice" and similar to someone "kissing the window." These details most strongly suggest that Alice thinks the sound made by the snow falling against the window is gentle.

Choice B is incorrect. Although in some contexts, "gentle" can mean sensitive, or caring about others' feelings, that isn't the meaning in this context; it doesn't make sense to say that Alice thinks the sound of the snow cares about anything. **Choice C is incorrect** because the text doesn't suggest that Alice thinks the sound of the snow is shapeless, or lacks a definite shape; she isn't indicating how anything looks or feels but, rather, is describing how "nice" and gentle the snow sounds. **Choice D is incorrect** because the text doesn't suggest that Alice thinks the sound of the snow is bland, or uninteresting; rather, she notices the sound and comments on how "nice" it is.

238 Correct answer **A** Easy ‹ Back to question

A Displayed

Choice A is the best answer because as used in the text, "featured" most nearly means displayed. The text describes Nina's fascination with a framed photograph. It then goes on to describe what the photograph showed, or displayed, which is a portrait of Nina's great-great-grandmother Rosita as a young woman. Thus, the text indicates that the photograph displayed a portrait of Rosita.

Choice B is incorrect because the text identifies the person shown in the photograph as Nina's great-great-grandmother; it gives no indication that the contents of the photograph were questioned, or asked about. **Choice C is incorrect** because approved means expressed a favorable opinion of, and there's nothing to suggest that the photograph of Nina's great-great-grandmother has received approval or been viewed favorably, only that Nina is unable to stop looking at it. **Choice D is incorrect** because nothing in the text suggests that the photograph Nina is fascinated with ignored, or refused to take notice of, Nina's great-great-grandmother Rosita. Rather, the text indicates that the photograph was a portrait of Rosita.

239 Correct answer **D** Easy ‹ Back to question

D She seemed to talk all the time.

Choice D is the best answer because as used in the text, "I couldn't be stopped" most nearly means the author seemed to talk all the time. The text establishes that the author is discussing her early speaking habits, stating, "When I started to talk on my own, I couldn't be stopped." The following sentences provide context that clarifies the significance of this statement: her sister's friends "could hardly stand to ride to school" with the author because she "was loud and unrelenting." This suggests that once the author began speaking, she talked all the time—to the point of annoying others.

Choice A is incorrect because although the phrase "I couldn't be stopped" could potentially refer to physical movement, the context clearly establishes that the author is discussing her talking habits, not her inability to sit still. The text specifically mentions that she "was loud and unrelenting" and that her sister's friends disliked riding in the car with her, suggesting that the issue was excessive talking, not physical restlessness. **Choice B is incorrect** because nothing in the text suggests that the author was fickle or frequently changed her mind. In this context, the phrase "I couldn't be stopped" refers to the author's persistent talking, as signaled by her characterization as "loud and unrelenting." **Choice C is incorrect** because the text doesn't indicate that the author was popular or well liked as a child. In fact, it suggests the opposite by stating that her sister's friends "could hardly stand" to ride in the car with her. Because of her excessive talking, in other words, people found the author annoying as a child.

240 Correct answer **C** Easy ‹ Back to question

C Tolerate

Choice C is the best answer because as used in the text, "endure" most nearly means tolerate. In the text, Cecily and Algernon discuss parting, or saying goodbye. Cecily remarks on the deep pain of saying goodbye to people whom one has only known briefly and then comments on the equanimity, or calm steadiness, one experiences when separated from old friends. The text sets up an ironic contrast: one can easily tolerate, or put up with, the absence of close friends, but even a very short separation from a new acquaintance is unbearable.

Choice A is incorrect. Nothing in the text suggests that Cecily associates regret, or a feeling of sorrow, with the absence of old friends. Rather, the text sets up an ironic contrast between the feeling of calm steadiness one feels when separated from old friends and the unbearable pain of being separated from new acquaintances. **Choice B is incorrect**. Although in some contexts "endure" can mean persist, or proceed stubbornly, it doesn't have that meaning in this context because what is being endured is the absence of old friends. Whereas one can persist *despite* the absence of someone else, one can't persist the absence itself. **Choice D is incorrect** because the text doesn't convey that Cecily encourages, or urges, old friends to be absent. Although it may be that Cecily prefers new acquaintances to friends she has known for a long time, the text focuses on her feelings as a result of others' absences, not on her treatment of others.

241 Correct answer **C** Easy ‹ Back to question

C Stretching toward

Choice C is the best answer because as used in the text "reaching across to" most nearly means stretching toward. The text begins with Mrs. Wilkins stating that she wants to have one of the oranges that she's admiring. The text then indicates that Mrs. Wilkins, staying where she is, holds out a big orange to her friend. This context suggests that when the text describes Mrs. Wilkins as reaching across to the bowl of oranges, it means that she is stretching toward the bowl.

Choice A is incorrect because the text never suggests that Mrs. Wilkins is joining with, or becoming attached to, the bowl of oranges. Rather, the text indicates that she is stretching toward the bowl so she can pick out oranges for herself and her friend Rose to eat. **Choice B is incorrect** because the text never suggests that Mrs. Wilkins is gaining on, or overtaking in a

competition or race, the bowl of oranges. The text suggests instead that the bowl is sitting still on a surface and that Mrs. Wilkins is extending her arm toward the bowl so she can pick out oranges for herself and her friend Rose to eat. **Choice D is incorrect** because the text doesn't indicate that Mrs. Wilkins is arriving at the bowl of oranges. In fact, the text states that Mrs. Wilkins stays where she is when reaching across to the bowl, meaning that she remains at a distance from it.

242 Correct answer **A** Easy ‹ Back to question

A Organized

Choice A is the best answer because as used in the text, "arranged" most nearly means "organized." The text states that a welcome feature of Manchester's art galleries (as opposed to others) is that the titles of the paintings are easy to see and that a catalogue is therefore unneeded while visitors browse the art galleries. This suggests that the paintings are displayed in a systematic, or organized, way.

Choice B is incorrect. "Ranked" might mean either classified or placed in orderly rows. Neither of these meanings would necessarily imply that the names of the paintings are easy to see (even if the paintings are placed in rows, their labels might be obscured). **Choice C is incorrect** because it would not make sense in context to describe the paintings as "scheduled," or planned to take place at a certain time. **Choice D is incorrect** because if the paintings were "discussed," or talked about, this would have no bearing on whether the names of the paintings could be easily seen.

243 Correct answer **A** Easy ‹ Back to question

A Arriving at

Choice A is the best answer. The word "reaching" in this text means "to arrive" at Earth. Before, the light had been traveling across space; now, it had arrived at Earth.

Choice B is incorrect. "Consulting with" means "seeking advice or information from someone." Light is not alive, so it can't consult with Earth. **Choice C is incorrect**. It's confusing to say that starlight is "only now running to Earth," both because light doesn't literally "run" and because the text is describing the moment the light touches Earth, not the period of time when it's traveling to Earth. **Choice D is incorrect**. This might be tempting, as "clinging to" has a connotation of "sticking to." It wouldn't make sense to say that the light was "only now" clinging to Earth.

244 Correct answer **A** Easy ‹ Back to question

A Get his mother to accept

Choice A is the best answer. The expression "reconcile to" means "to cause (a person) to accept something difficult or disagreeable." The text suggests that John wants his mother to accept his desire to travel, even though she doesn't like that idea.

Choice B is incorrect. This doesn't make sense. John doesn't want his mother to apologize for his own desire to travel—he wants her to accept his desire to travel. **Choice C is incorrect**. The text doesn't suggest that John wants his mother to match his desire to travel. Rather, he wants her to accept his desire to travel even though she doesn't like it. **Choice D is incorrect**. This is tempting, because it seems to pick up on the idea of people "reconciling" after a fight, but it actually doesn't make sense. The text never suggests that John's mother was "united with" the idea of him traveling in the past—if anything, it seems like she's always been against it. Besides, it would be strange to say that a person "reunites with" a notion.

245 Correct answer **A** Easy ‹ Back to question

A Trace

Choice A is the best answer because as used in the text, "suggestion" most nearly means trace. The text portrays the narrator standing on the deck of a boat, admiring the view of nature afforded by this position: "My soul had left its body to lose itself in the wild unrestrained beauty around me," says the narrator, "and only left a trembling suggestion of its existence within me." This intense response to beauty is such that the narrator's soul seems to disengage from its body, leaving behind only a barely detectible indication of its presence there. In other words, the narrator senses only a trace of soul left in the body.

Choice B is incorrect. Although in some contexts "suggestion" can refer to an implied or indirectly expressed opinion, the text doesn't portray the narrator expressing an opinion; instead, the narrator is explaining an experience of intense emotion. **Choice C is incorrect**. While "suggestion" might be used in some contexts to refer to the tactful expression of a differing viewpoint, it doesn't refer to the dispute or difference of opinion itself. Moreover, the text doesn't portray a dispute between characters with differing viewpoints. **Choice D is incorrect**. Although in some contexts, "suggestion" might be used to refer to a politely worded command, the text doesn't portray a scenario in which someone receives such a command.

246 Correct answer **D** Easy ‹ Back to question

D Fulfills

Choice D is the best answer because as used in the text, "answers" most nearly means fulfills. In the text, Fabry and Busman claim that the robots manufactured by their company are more efficient than human workers, which they refer to as "the human machine." Fabry observes that the human machine "no longer answers the requirements of *modern engineering*." That is, human workers are incapable of meeting the rigorous needs of modern, industrialized workplaces.

Choice A is incorrect. Although in some contexts "answers" can mean explains, it doesn't have that meaning in this context because the topic under discussion is human beings' inability to perform labor efficiently, not their inability to engage in discussion or explanation. **Choice B is incorrect**. Although in some contexts "answers" can mean rebuts, or proves a claim or argument to be false, it wouldn't make sense to speak of proving requirements to be false; requirements might or might not be reasonable, but they can't be verified as truthful or untruthful, as claims or accusations can. **Choice C is incorrect**. Although in some contexts, "answers" can mean defends against criticism, or justifies, it doesn't have that meaning in this context because the opinion that Fabry expresses is that human workers can no longer fulfill the requirements of modern workplaces, not that they have ceased to justify those requirements or to defend them against criticism; indeed, there is no suggestion in the text that workers ever defended those requirements.

247 Correct answer **A** Easy ‹ Back to question

A Evidence

Choice A is the best answer because the text indicates that Fox-Foot doesn't let the group build a fire or create a canoe landing when it's time for supper. This context suggests that he doesn't want anyone who might be following the group to see any sign of them or their activities. In other words, Fox-Foot doesn't want there to be any trace, or evidence, of the group's movements ("their passing") through the area.

Choice B is incorrect because the text conveys that Fox-Foot doesn't want the group to be detected, not that he doesn't want their presence to create a blemish, or a spoiling flaw, in the area; human activity could disturb a natural environment, but the context emphasizes that Fox-Foot is instead focused on avoiding giving any sign of the group's movements through a place ("their passing") to anyone who might be following them. **Choice C is incorrect** because the text focuses on Fox-Foot's desire to avoid detection by those who might be following the group. This context conveys that Fox-Foot doesn't want to create any signs or evidence of the group moving through a place ("their passing"), not that he doesn't want to leave behind some

quantity of their presence; indeed, it isn't clear what an amount of a group's movement would be. **Choice D is incorrect** because nothing in the text suggests that the group has a sketch, or rough drawing, of their movements through that area ("their passing") that might be left behind. Rather, the context emphasizes that Fox-Foot is focused on ensuring that the group doesn't give any kind of indication of their presence, as he wants to avoid detection by anyone who might be following the group.

248 Correct answer **B** Easy Back to question

B Priced

Choice B is the best answer. The text suggests that Mrs. Adam's typical Christmas present from her husband was a vase that cost, or was "priced at," about twelve or fourteen dollars.

Choice A is incorrect. This isn't the meaning of "marked" as used here. It wouldn't make sense to say that a vase was "staged at twelve or fourteen dollars." **Choice C is incorrect**. This isn't the meaning of "marked" as used here. It wouldn't make sense to say that a vase was "stained at twelve or fourteen dollars." **Choice D is incorrect**. This isn't the meaning of "marked" as used here. It wouldn't make sense to say that a vase was "watched at twelve or fourteen dollars."

249 Correct answer **A** Easy Back to question

A Harsh

Choice A is the best answer because as used in the text, "rough" most nearly means harsh, or forceful and unpleasant. The text describes Mary's surroundings as she plays: the sun is out and there's "a little wind." To further illustrate the wind, the narrator contrasts the word "rough" with a description of the wind blowing in "delightful little gusts," suggesting that the wind is not unpleasant or harsh at all.

Choice B is incorrect. Although in some contexts "rough" objects, or objects with irregular surfaces, can sometimes be scratchy, rough doesn't mean scratchy in this context. The text explains that the wind is not rough but rather gentle, "delightful little gusts," which suggests that the use of "rough" here is referring to the degree of force of the wind. **Choice C is incorrect** because there's nothing in the text to suggest that the wind wasn't "basic," or simple and uncomplicated. Instead, the text describes the wind as blowing not roughly or harshly but in "delightful little gusts." **Choice D is incorrect** because the word "vague" means not clearly expressed or seen. Nothing in the text indicates that the wind was barely noticeable to Mary as she played outside, but rather the text states that it was delightful.

250 Correct answer **B** Easy Back to question

B An empty

Choice B is the best answer because as used in the text, a span of time is described as "a void" space, which most nearly means an empty or vacant one. In the text, the speaker describes summertime in counterintuitive terms: although nature's "surging life is at its full" during the season, the speaker feels summer to be "a time of pause, / A void and silent space between two worlds." The speaker says further that during summer, "feeling sleeps / Gathering strength" for future efforts. Thus, the speaker regards summer as an empty stretch of time, to be followed by a period of greater activity.

Choice A is incorrect. Although the text does present summer as a time of inactivity, it doesn't characterize that inactivity as useless, or as having no purpose; in fact, the speaker regards summer as a time when "feeling" gathers "strength for efforts yet to come." **Choice C is incorrect**. Although the text characterizes summer as a time "when inspiration lags, and feeling sleeps," it doesn't discuss the season's relationship to the speaker's memory or suggest that summer can easily be forgotten. **Choice D is incorrect**. In some contexts, "void" can mean devoid of, or lacking, a particular element, and such a lack could be

conceived of as incompleteness. However, the text doesn't portray summer as not being complete or whole; instead, it characterizes vacancy or inactivity as being an essential quality of the season, as experienced by the speaker.

251 Correct answer **D** Easy Back to question

D Particular

Choice D is the best answer because as used in the text, "specific" most nearly means particular. The text is referring to the particular view of the Port of Oakland as seen from a subway train as it rises from underground. This specific, or particular, view has always been special to Moss, a lifetime resident of West Oakland.

Choice A is incorrect. Although the text itself is a work of fiction, the view is something Moss can point out to his companions on the train, so the view itself is presumably not imaginary. **Choice B is incorrect**. Although this view of the Port of Oakland is significant to Moss, nothing in the text describes the view as particularly energetic as opposed to calming, for example. **Choice C is incorrect**. The point of the text is that the view of the Port of Oakland from the subway train as it rises from underground is significant to Moss, not whether it is described as being correct, which the text does not address.

252 Correct answer **C** Easy Back to question

C Easily

Choice C is the best answer because as used in the text, "simply" most nearly means easily, or involving minimal difficulty or effort. The text first provides Alice's reflections on her plan to gain access to a garden and then offers commentary on her plan by the novel's narrator. The text indicates that a reason Alice likes her plan despite not being fully thought through is that she nonetheless believes it can be efficiently arranged. In other words, the text indicates that one of the supposed benefits of Alice's plan is that it can be easily arranged.

Choice A is incorrect because the text describes how Alice's plan can be arranged, and it wouldn't make sense to say that it can be arranged "faintly," or with little strength or not strongly. Instead, the text indicates that the plan can be arranged with little difficulty. **Choice B is incorrect**. Although in some contexts "simply" can mean quickly, hastily, or hurriedly, the word "hastily" indicates that something is done too quickly. Although it may be true that Alice's plan was made in haste, the text doesn't focus on this aspect of her plan. Instead, the text focuses on the plan's seemingly good qualities, saying that Alice thinks of it as "the best," and the narrator refers to it as "excellent" and "neatly," or efficiently, arranged. **Choice D is incorrect**. Although in some contexts "simply" can mean foolishly, or lacking good sense, it doesn't have this meaning in this context. Although the text says that Alice doesn't know how to go about her plan, it begins by presenting her plan in a positive light: Alice describes her plan as "the best," and the narrator refers to the plan as "excellent" and "neatly," or efficiently, arranged.

253 Correct answer **B** Easy Back to question

B Combined

Choice B is the best answer because as used in the text, "mingled" most nearly means combined. In the text, the speaker refers to several concepts mingling together and then compares this to "the blending of" two other things (an exotic plant and the fragrance of a strange flower). This comparison conveys that the speaker views the concepts of love, April, and the gold of someone's hair as being blended together, or combined.

Choice A is incorrect because "mingled" means combined, not identified. The speaker names several concepts (love, April, and the gold color of someone's hair) and then moves to a comparison of their mingling together to "the blending of" a plant and the scent of a flower, conveying the idea that the speaker views the concepts as blended together, or combined. **Choice C is incorrect**. The text as a whole may refer to a memory, but the comparison of the mingling of several concepts (love, April, and the gold color of someone's hair) to "the blending of" a plant and the scent of a flower conveys that the speaker views

those concepts as actually blended together, or combined, and not simply remembered at the same time. **Choice D is incorrect**. The speaker refers to several concepts (love, April, and the gold color of someone's hair) and then compares the mingling together of those concepts to "the blending of" a plant and the scent of a flower; rather than suggesting that the concepts are celebrated, this comparison conveys that the speaker views the concepts as blended together, or combined.

254 Correct answer **D** Medium ‹ Back to question

D An extraordinary

Choice D is the best answer because as used in the text, "singular" most nearly means extraordinary. The text portrays an experiment in which a character rehydrates a dried rose by infusing it with moisture. After prolonged contact with the liquid, the rose begins to absorb it, undergoing an exceptional transformation: its color deepens, its previously "crushed and dried" petals shift, and the entire flower revives "from a deathlike slumber." In other words, an extraordinary change is visible in the flower.

Choice A is incorrect. Although in some contexts "singular" can mean of or relating to an individual or to a single instance of something, this usage doesn't imply loneliness or an otherwise unsatisfactory condition of isolation. Moreover, the text doesn't attribute such a condition to the rose. **Choice B is incorrect**. Although "singular" has several related meanings, none of them relate to being disagreeable or unpleasant. Moreover, the text doesn't portray the change undergone by the rose as necessarily disagreeable. **Choice C is incorrect** because "singular" means extraordinary, not acceptable. The change is portrayed as striking, not barely satisfactory.

255 Correct answer **C** Medium ‹ Back to question

C Characteristic

Choice C is the best answer. "This quality" refers to Gatsby's "resourcefulness of movement," which is described as a characteristic or trait of his.

Choice A is incorrect. This isn't what "quality" means in this context. Here, "this quality" refers to Gatsby's "resourcefulness of movement," which is described as a characteristic or trait of his. "Standard" is a synonym for a different definition of "quality": the degree of excellence of something. **Choice B is incorrect**. This isn't what "quality" means in this context. Here, "this quality" refers to Gatsby's "resourcefulness of movement," which is described as a characteristic or trait of his. "Prestige" would suggest a high status or an admirable reputation, which doesn't match that description. **Choice D is incorrect**. This isn't what "quality" means in this context. Here, "this quality" refers to Gatsby's "resourcefulness of movement," which is described as a characteristic or trait of his. "Accomplishment" would suggest an achievement, which doesn't match that description.

256 Correct answer **A** Medium ‹ Back to question

A Take into account and follow

Choice A is the best answer because as used in the text, "consider" most nearly means to take into account and follow. The text explains that Marija's job was to make sure that her sister's wedding proceeded in certain ways ("in due form") and that she loudly directed everyone's actions all day. The text then indicates that Marija was so focused on ensuring that others "conformed to the proprieties"—that is, that they behaved in appropriate ways—that she failed to "consider them herself"; that is, she didn't take standards of appropriate behavior into account and follow them in her own actions.

Choice B is incorrect. In some contexts, "consider" can mean to think about something in a positive way—which can involve admiration—but the text doesn't suggest that Marija was so busy imposing "proprieties" (standards of appropriate behavior) on others that she didn't admire and praise them herself. The context suggests it's more likely that Marija did speak positively of "due form" and "the best home traditions" while ensuring others behaved in certain ways. **Choice C is incorrect**. In some contexts, "consider" can mean to come to a decision, but the text doesn't suggest that Marija wasn't able to make a decision

for herself about the "proprieties" (standards of appropriate behavior) she ensured everyone else conformed to. Rather, the context conveys that Marija knew very clearly which behaviors others should follow as "due form" and "the best home traditions." **Choice D is incorrect**. In some contexts, "consider" can mean to have an opinion, but the text doesn't suggest that Marija wasn't able to have an opinion on the "proprieties" (standards of appropriate behavior) she was ensuring others conformed to. Rather, the context conveys that Marija had strong feelings about which behaviors were "due form" and "the best home traditions."

257 Correct answer **C** — Medium — Back to question

C Calculation

Choice C is the best answer because as used in the text, "consideration" most nearly means calculation. The text describes Osmond as someone whose every action is a "pose;" that is, he adopted a deliberate appearance crafted so subtly that an unwary observer "mistook it for impulse." The text further indicates that Osmond's tastes, studies, accomplishments, and collections "were all for a purpose," meaning each was strategically chosen to serve some intended end. The phrase "the land of consideration" thus characterizes Osmond as someone whose mental life is dominated by deliberate planning—that is, calculation.

Choice A is incorrect because "deference," meaning submissive yielding to others' wishes, wouldn't make sense in context. The text portrays Osmond as a man who carefully crafts his own image and arranges his life "for a purpose," which suggests self-direction rather than yielding to others. **Choice B is incorrect** because although "consideration" can mean courtesy, or thoughtful regard for others, this meaning wouldn't fit the text, which characterizes the calculated, purposeful nature of Osmond's behavior, not his treatment of other people. **Choice D is incorrect** because "indecision," meaning the inability to make a choice, wouldn't make sense in context. The text portrays Osmond as decisive in his self-presentation: each pose is "subtly considered," and his tastes and accomplishments serve "a purpose," indicating firm choices made in service of his aims.

258 Correct answer **B** — Hard — Back to question

B Perceptible

Choice B is the best answer because as used in the text, "manifest" most nearly means perceptible or detectable. The text indicates that the sun was "already down," meaning it was below the horizon and not directly visible. However, the sun's presence was nonetheless perceptible or manifest in the "tongues of fire" (or beams of light) that still flickered in the darkening sky.

Choice A is incorrect. Although in some contexts "manifest" can mean "realized" or "brought into being," that is not the context here. Rather, the text is about how the sun's presence was perceptible or manifest in the "darting" beams of light that could still be seen in the sky. **Choice C is incorrect**. This choice would suggest that the sun is situated, or located, in the light it emits, which is not supported by the surrounding context. Rather, the text is about how the sun's presence was perceptible or manifest in the remaining light that could still be seen in the sky. **Choice D is incorrect**. Although the text is about the decreasing light in the scene at sunset, the text's use of "manifest" is about how the sun's presence was nonetheless perceptible or manifest in the "tongues of fire" still visible in the sky as night approached.

259 Correct answer **D** — Hard — Back to question

D Providing resistance to

Choice D is the best answer because as used in the text, "disputing" most nearly means providing resistance to. The narrator is in a taxi as it drives down a street lined with so many food vendors and shoppers that the narrator describes them as "the

multitude of Paris," meaning an immense group of people. The street is essentially a large open-air market, and there are so many people pushing small wagons of goods and carrying shopping baskets that "every inch" of the taxi's progress is impeded. In other words, the people are providing resistance to the taxi's attempt to drive down the street.

Choice A is incorrect. Although in some contexts, "disputing" can mean arguing, the narrator doesn't portray the shoppers and vendors as arguing with the driver of the taxi or, indeed, arguing at all. **Choice B is incorrect**. Although in some contexts, "disputing" can mean expressing disapproval, the narrator doesn't suggest that the shoppers and vendors necessarily disapprove of the taxi's attempt to drive down the street. Instead, their combined presence along the street has the effect of impeding the taxi's progress. **Choice C is incorrect** because, as the narrator explains, both the multitude of people and the taxi are using a public space (a street) at the same time. The narrator doesn't go so far as to suggest that the people feel that they, and not the taxi, possess exclusive access to the street.

260 Correct answer **C** Hard ‹ Back to question

C Constraint

Choice C is the best answer because as used in the text, "reserve" most nearly means constraint, or repression of one's behavior or actions. The text indicates that although the narrator's landlady is ordinarily "a store-house of innocuous anecdote" who readily produces "a volume of detail" in response to questions about her acquaintances—that is, she usually tells harmless stories and is willing to share details about people she knows—she is "unexpectedly reticent," or surprisingly unwilling to speak, when it comes to Ethan Frome. The narrator then observes that the landlady doesn't appear to disapprove of Ethan, she simply seems completely reluctant to speak of him. In this context, then, "reserve" refers to the landlady's constraint—her repression of her usual willingness to share details in conversation.

Choice A is incorrect. "Modesty" can refer to being appropriate in speech or behavior, and one might consider it appropriate to decline to speak of someone, but the text gives no indication that the narrator thinks the landlady is acting out of modesty. The narrator suggests that the landlady generally isn't concerned about the appropriateness of discussing others (she's usually "a store-house of innocuous anecdote" and shares many details) and isn't holding back to avoid saying something negative about Ethan Frome (there's "no hint of disapproval"); indeed, the narrator suggests he can't tell why the landlady is so unwilling to speak of Ethan. **Choice B is incorrect** because the text never suggests that the landlady has any "misgiving," or feeling of doubt or apprehension, about Ethan Frome. In fact, the text explicitly states that there is "no hint of disapproval" in her surprising unwillingness to discuss Ethan. **Choice D is incorrect** because the narrator doesn't suggest that the landlady is acting with "composure," or calmness and control of her emotions. Instead of describing the landlady's emotional state or presenting her as calm, the narrator simply conveys her surprising unwillingness to discuss Ethan Frome.

261 Correct answer **B** Hard ‹ Back to question

B Dictate

Choice B is the best answer because as used in the text "determine" most nearly means "dictate." The text describes the relationship between the main character and those who exhibit, praise, and purchase his artwork. The text states that the main character is often asked to change his art or himself based on outside influences, and he usually acquiesces. Because the main character admits that those who support his work often shape it based on their demands, it follows that those outside influences dictate, or guide or dominate, the direction his work takes.

Choice A is incorrect because the text doesn't suggest that outside influences "conclude," or end, the main character's work. The text states that many supporters of the main character's art "demand its proliferation," not its conclusion. **Choice C is incorrect** because the text doesn't suggest that outside influences are "evaluating," or judging the main character's work. According to the text, the main character's art has already achieved great commercial success, with many people exhibiting, purchasing, and praising his work. Thus, outsiders have already supported the main character's work and are not questioning or evaluating its success or worth. They are instead influencing its initial direction. **Choice D is incorrect** because the text doesn't suggest that outside influences "select," or choose the main character's work. According to the text, the main

character's art has already achieved great commercial success, with many people exhibiting, purchasing, and praising his work. Thus, outsiders have already supported the main character's work and are not selecting it. They are instead influencing its initial direction.

02 Main Idea

Central idea of the text

Main idea asks what the text says. You need one sentence that covers the whole text, not a detail from inside it.

62 questions | 17 Easy | 27 Medium | 18 Hard

ASK YOURSELF *"What is the text's main topic?"*

THE STEPS

1. Read the text. Twice at most.
2. Ignore the four answer choices completely.
3. Answer the question above in one full sentence.
4. Choose the answer closest to your sentence.

WHAT TO TAKE FROM THIS

- A subject on its own is not an idea. *Ruth Asawa* is a subject. *Asawa built art programmes for children in her city* is a main idea.
- Every part of the text should sit under your sentence. If a whole sentence falls outside it, your sentence is too small.
- If the text turns on *but*, *however* or *although*, your sentence has to turn too.
- The last sentence often carries the idea. Look there first, but do not stop there.
- Wrong answers are usually true but too small, true but too big, or never said at all.

Questions	199
Answers & explanations	228

EASY 17 questions

Ruth Asawa was an accomplished artist who worked in many art forms, including her unique tied-wire sculptures, but she was dedicated to more than the creation of art. Asawa also wanted to bring art to children in her hometown of San Francisco, California. To that end, in 1968 she cofounded the Alvarado School Arts Workshop, which brought works of art and artists into public schools, and in 1982 she helped found a San Francisco public arts high school, which was later named after her.

ID 714e4c10

1 Mark for Review Easy Explanation ›

Which choice best states the main idea of the text?

(A) Asawa inspired many other artists to share their work with students in public schools.

(B) Asawa's unique sculptures were appreciated more by local art communities than they were nationwide.

(C) Asawa's interest in art education prompted her to create art programs for students in San Francisco.

(D) Asawa left a promising career as a sculptor to work as an art teacher in San Francisco schools.

The following text is adapted from Johanna Spyri's 1881 novel *Heidi* (translated by Elisabeth Stork in 1915). Eight-year-old Heidi and her friend's grandmother are looking at some illustrated books.

> Heidi had come and was looking with wondering eyes at the splendid pictures in the large books, that Grandmama was showing her. Suddenly she screamed aloud, for there on the picture she saw a peaceful flock grazing on a green pasture. In the middle a shepherd was standing, leaning on his crook. The setting sun was shedding a golden light over everything. With glowing eyes Heidi devoured the scene.

ID 57485f5e

2 Mark for Review Easy Explanation ›

Which choice best states the main idea of the text?

(A) Heidi is upset until she sees a serene image of a pasture in one of Grandmama's books.

(B) Heidi is delighted and fascinated by an image she sees in one of Grandmama's books.

(C) Heidi is initially frightened by an image in one of Grandmama's books but quickly comes to appreciate its beauty.

(D) Heidi is inspecting an image in one of Grandmama's books because she has never seen a shepherd with his sheep before.

The following text is adapted from Edgar Allan Poe's 1849 story "Landor's Cottage."

> During a pedestrian trip last summer, through one or two of the river counties of New York, I found myself, as the day declined, somewhat embarrassed about the road I was pursuing. The land undulated very remarkably; and my path, for the last hour, had wound about and about so confusedly, in its effort to keep in the valleys, that I no longer knew in what direction lay the sweet village of B——, where I had determined to stop for the night.

ID e677fa6c

3 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) The narrator remembers a trip he took and admits to getting lost.

(B) The narrator recalls fond memories of a journey that he took through some beautiful river counties.

(C) The narrator describes what he saw during a long trip through a frequently visited location.

(D) The narrator explains the difficulties he encountered on a trip and how he overcame them.

Having written the impassioned call to arms "Letter to the Spanish Americans" in 1791, Peruvian intellectual Juan Pablo Viscardo y Guzmán is often considered a forerunner for the independence movements in Latin America. But Viscardo's role in history would have remained insignificant were it not for Venezuelan revolutionary Francisco de Miranda, who was handed the unpublished letter after Viscardo's death. Miranda not only helped circulate the letter, but his edits and footnotes to the text position Miranda as a central figure in the text's creation.

ID 14189fbb

4 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) The original authorship of "Letter to the Spanish Americans" is disputed by contemporary historians.

(B) The majority of the most eloquently stated arguments in "Letter to the Spanish Americans" were written by Miranda.

(C) Miranda played a crucial role in influencing the content and distribution of "Letter to the Spanish Americans."

(D) "Letter to the Spanish Americans" persuaded many people in Latin America to pursue national independence.

Bicycles were first mass-produced in the late nineteenth century throughout Europe and North America, allowing individuals remarkable freedom to travel longer distances quickly and comfortably. This freedom, coupled with the affordability of the vehicle, made the bicycle immensely popular. Individuals were able to live farther from their workplaces, easily visit neighboring towns, and participate in new leisure and sport activities. Bicycling quickly became a popular social endeavor, with enthusiasts forming local cycling clubs to enjoy these newfound activities with others.

ID 2592e0de

5 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) The widespread adoption of the bicycle in the late nineteenth century provided new opportunities for people.

(B) The affordability of the bicycle in the late nineteenth century made it the preferred way to travel.

(C) The popularity of the bicycle in the late nineteenth century gave rise to the first cycling clubs.

(D) The mass production of the bicycle in the late nineteenth century made it safer for people to use.

The following text is adapted from Ann Petry's 1946 novel *The Street*. Lutie lives in an apartment in Harlem, New York.

> The glow from the sunset was making the street radiant. The street is nice in this light, [Lutie] thought. It was swarming with children who were playing ball and darting back and forth across the sidewalk in complicated games of tag. Girls were skipping double dutch rope, going tirelessly through the exact center of a pair of ropes, jumping first on one foot and then the other.

©1946 by Ann Petry

ID 69d662af

6 Mark for Review — Easy — Explanation ›

Which choice best describes what is happening in the text?

(A) Lutie is observing the appearance of the street at a particular time of day and the events occurring on it.

(B) Lutie is annoyed by the noise of children playing games on her street.

(C) Lutie is puzzled by the rules of certain children's games.

(D) Lutie is spending time alone in her apartment because she doesn't want to interact with her neighbors.

Few animals are known to spit: among them are humans, cobras, and camels. But in January 2022 at a nature preserve in southern England, bird-watcher Clare Jacobs observed a gray seal spitting a jet of water at a white-tailed eagle flying overhead. Seals had never been seen spitting before. Biologist Sean Twiss, who studies gray seals, believes that the seal may have been attempting to scare the eagle away from a food source or that the seal may have just been playing.

ID b633cc4f

7 Mark for Review — Easy — Explanation ›

Which choice best states the main topic of the text?

(A) Bird-watching in southern England

(B) A previously unseen behavior of gray seals

(C) How white-tailed eagles defend their territory against other predators

(D) Differences between gray seals and white-tailed eagles

In 1935 Hallie Flanagan was chosen to lead the Federal Theatre Project (FTP). This project was part of the new Works Progress Administration (WPA), a program created by President Franklin D. Roosevelt to provide jobs for unemployed people during the Great Depression. As the director of the FTP, Flanagan created jobs for over 12,500 performers, designers, and other theater professionals across the country. She also kept ticket prices low for the shows they staged, which meant that many people could afford to experience theater for the first time.

ID c889e52e

8 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Jobs provided by the FTP were intended mainly for performers, designers, and other theater professionals.

(B) President Roosevelt created the WPA to provide jobs for unemployed people.

(C) During the Great Depression, many people couldn't afford to buy theater tickets.

(D) As the director of the FTP, Flanagan succeeded in creating many jobs and introducing people to theater.

NASA's *Cassini* probe has detected an unusual wobble in the rotation of Mimas, Saturn's smallest moon. Using a computer model to study Mimas's gravitational interactions with Saturn and tidal forces, geophysicist Alyssa Rhoden and colleagues have proposed that this wobble could be due to a liquid ocean moving beneath the moon's icy surface. The researchers believe other moons should be examined to see if they too might have oceans hidden beneath their surfaces.

ID 0b696a0c

9 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Rhoden and colleagues were the first to confirm that several of Saturn's moons contain hidden oceans.

(B) Research has failed to identify signs that there is an ocean hidden beneath the surface of Mimas.

(C) Rhoden and colleagues created a new computer model that identifies moons with hidden oceans without needing to analyze the moons' rotation.

(D) Research has revealed that an oddity in the rotation of Mimas could be explained by an ocean hidden beneath its surface.

The following text is adapted from Frances Hodgson Burnett's 1911 novel *The Secret Garden*. Mary, a young girl, recently found an overgrown hidden garden.

Mary was an odd, determined little person, and now she had something interesting to be determined about, she was very much absorbed, indeed. She worked and dug and pulled up weeds steadily, only becoming more pleased with her work every hour instead of tiring of it. It seemed to her like a fascinating sort of play.

ID 3a1f02b0

10 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Mary hides in the garden to avoid doing her chores.

(B) Mary is getting bored with pulling up so many weeds in the garden.

(C) Mary is clearing out the garden to create a space to play.

(D) Mary feels very satisfied when she's taking care of the garden.

Shimmering is a collective defense behavior that researchers have observed in giant honeybee colonies. When shimmering, different groups of bees flip their bodies up and down in what looks like waves. This defense is initiated when hornets hover near a colony, serving to deter the hornets from approaching the bees. Researchers hypothesize that this behavior is a specialized defense response to hornets, as it is not observed when other, larger predators approach the colony.

ID 23a7038f

11 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Researchers are unsure how giant honeybees defend against predators larger than hornets.

(B) Researchers think that shimmering in giant honeybees is a specific defense against hornets.

(C) Hornets are known to be the main predator of giant honeybees.

(D) Several different species of insects use shimmering to defend against hornets.

Microplastics are pieces of plastic that are smaller than a grain of rice. These small plastics can be found in large quantities in ocean waters. Ecologist Jessica Reichert and her team are studying the role reef-building corals have in capturing microplastics from ocean waters. Through research, her team has found that these corals may be storing up to 20 million kilograms of microplastics each year in their skeletons and tissues.

ID dc5edbf6

12 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Ecologists are interested in learning more about how certain corals build large reefs.

(B) Questions remain around the impact certain corals have on ocean ecosystems.

(C) Microplastics are small pieces of plastic that can be found in ocean waters.

(D) Ecologists predict that corals store large amounts of microplastics from ocean waters.

Psychologists wanted to test how young children think about rewards and fairness. In an experiment, two teachers handed out rewards while children (ages four to six) watched. The teachers gave out the same number of rewards, but one of them counted the rewards out loud. The children were then asked who was fairer. 73% chose the teacher who counted. The psychologists think that counting showed the children that the teacher wanted to be fair. The children may have believed that the teacher who did not count did not care about fairness.

ID d8758c3b

13 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Psychologists think children cannot understand the concept of fairness until they are six years old.

(B) An experiment found that counting out loud is the best way to teach mathematical concepts to children.

(C) Psychologists think young children expect to be rewarded when the children show that they care about fairness.

(D) An experiment showed that the way rewards are given out may affect whether young children think the situation is fair.

Scrapbooks of saved fabric pieces were commonly kept by women in the nineteenth-century United States, but few are as meticulously detailed as Hannah Ditzler Alspaugh's work. Alongside each piece of fabric, Alspaugh recorded intimate memories, such as dressmaking with her sister. Additionally, she listed the prices and how she used the fabric. Historians note that by representing fifty years of changing textures, patterns, and dress styles, the scrapbook is a record of nineteenth-century textiles and dressmaking as well as Alspaugh's life.

ID 0e3b4967

14 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) Alspaugh inspired other women to save pieces of fabric in scrapbooks and provide historical records of nineteenth-century fashions in the United States.

(B) Historians rely on fabric scrapbooks to understand how fashions changed throughout the nineteenth-century United States.

(C) Fabric scrapbooks were a popular hobby for many women in the nineteenth-century United States.

(D) Alspaugh's scrapbook provides a detailed account of her life and historical record of fashion trends in the nineteenth-century United States.

Arthropods—brine shrimp, hawk moths, and many other invertebrate animals—have a nervous system made up of a brain, nerve cord, and other nerves. Researchers have gained insights about this system in ancient arthropods from traces found in various fossils. For example, in a study of two fossils of the extinct arthropod species *Mollisonia symmetrica*, Javier Ortega-Hernández, James Weaver, and team observed clear signs of a nerve cord. They also saw possible indications of a synganglion, a brain-like mass of nerves. Researchers hope to identify more features of the nervous systems of prehistoric arthropods as additional fossils are found.

ID ee41d7e0

15 Mark for Review — Easy — Explanation ›

Which choice best states the main idea of the text?

(A) There are several similarities between the brains of hawk moths and the brains of brine shrimp.

(B) Fossil evidence can contribute to the understanding of the nervous system in ancient arthropods.

(C) Newly discovered fossils suggest that ancient hawk moths and ancient brine shrimp had spines.

(D) Researchers need to focus on finding more fossils of ancient arthropods.

When Kenyan writer Ngũgĩ wa Thiong'o, who had previously published four novels in English, began writing in his native language, Gĩkũyũ, in the 1970s, several fellow writers and critics cautioned that doing so might make his works inaccessible outside his own community. Some noted that Kiswahili—widely spoken in Kenya and elsewhere in Africa—would be a more practical choice. Rejecting their arguments, Ngũgĩ went on to author dozens of acclaimed works in Gĩkũyũ that have been translated into a total of more than thirty languages.

ID f2208f98

16 Mark for Review Easy Explanation ›

Which choice best states the main idea of the text?

(A) The reaction to Ngũgĩ's rejection of English illustrates that some literary experts believe that fame is most easily gained by writing in a widely understood language, such as Gĩkũyũ.

(B) Although Ngũgĩ insisted on publishing his first works in Gĩkũyũ, they have since been translated into many other languages.

(C) Although Ngũgĩ's decision to write in Gĩkũyũ was met with some skepticism, it didn't prevent him from achieving literary success.

(D) In the 1970s, Ngũgĩ became convinced that literature ought to be written in authors' native languages, and he proceeded to publish many works in Gĩkũyũ.

The following text is from Edith Nesbit's 1902 novel *Five Children and It*. Five young siblings have just moved with their parents from London to a house in the countryside that they call the White House.

> It was not really a pretty house at all; it was quite ordinary, and mother thought it was rather inconvenient, and was quite annoyed at there being no shelves, to speak of, and hardly a cupboard in the place. Father used to say that the ironwork on the roof and coping was like an architect's nightmare. But the house was deep in the country, with no other house in sight, and the children had been in London for two years, without so much as once going to the seaside even for a day by an excursion train, and so the White House seemed to them a sort of Fairy Palace set down in an Earthly Paradise.

ID 1e85caa9

17 Mark for Review Easy Explanation ›

Which choice best states the main idea of the text?

(A) Although their parents believe the house has several drawbacks, the children are enchanted by it.

(B) The children don't like the house nearly as much as their parents do.

(C) Each member of the family admires a different characteristic of the house.

(D) The house is beautiful and well built, but the children miss their old home in London.

MEDIUM 27 questions

Believing that living in an impractical space can heighten awareness and even improve health, conceptual artists Madeline Gins and Shusaku Arakawa designed an apartment building in Japan to be more fanciful than functional. A kitchen counter is chest-high on one side and knee-high on the other; a ceiling has a door to nowhere. The effect is disorienting but invigorating: after four years there, filmmaker Nobu Yamaoka reported significant health benefits.

ID d73a908a

18 Mark for Review Medium Explanation ›

Which choice best states the main idea of the text?

(A) Although inhabiting a home surrounded by fanciful features such as those designed by Gins and Arakawa can be rejuvenating, it is unsustainable.

(B) Designing disorienting spaces like those in the Gins and Arakawa building is the most effective way to create a physically stimulating environment.

(C) As a filmmaker, Yamaoka has long supported the designs of conceptual artists such as Gins and Arakawa.

(D) Although impractical, the design of the apartment building by Gins and Arakawa may improve the well-being of the building's residents.

Biologists have predicted that birds' feather structures vary with habitat temperature, but this hadn't been tested in mountain environments. Ornithologist Sahas Barve studied feathers from 249 songbird species inhabiting different elevations—and thus experiencing different temperatures—in the Himalayan Mountains. He found that feathers of high-elevation species not only have a greater proportion of warming downy sections to flat and smooth sections than do feathers of low-elevation species, but high-elevation species' feathers also tend to be longer, providing a thicker layer of insulation.

ID 602b47c7

19 Mark for Review Medium Explanation ›

Which choice best states the main idea of the text?

(A) Barve's investigation shows that some species of Himalayan songbirds have evolved feathers that better regulate body temperature than do the feathers of other species, contradicting previous predictions.

(B) Barve found an association between habitat temperature and feather structure among Himalayan songbirds, lending new support to a general prediction.

(C) Barve discovered that songbirds have adapted to their environment by growing feathers without flat and smooth sections, complicating an earlier hypothesis.

(D) The results of Barve's study suggest that the ability of birds to withstand cold temperatures is determined more strongly by feather length than feather structure, challenging an established belief.

A contraction of “you all,” the pronoun “y’all” has long been used as a plural version of “you” in the South and in Black communities around the US. In recent decades, most other English-speaking communities in the US have begun to use “y’all.” What explains its rise in popularity? Many varieties of English have no pronoun that specifically addresses more than one person and instead must use “you” to address both one person and more than one. But “y’all” always refers to two or more people. As a result, it conveys the speaker’s meaning more precisely than “you” can.

ID 11c68ded

20 Mark for Review — Medium — Explanation ›

Which question does the text most directly attempt to answer?

(A) How many other plural versions of the pronoun “you” are there in English, besides “y’all”?

(B) Why has the pronoun “y’all” become more widely used in the US?

(C) When was the first recorded use of the pronoun “y’all” in the English language?

(D) Is “y’all” commonly used in English-speaking regions of the world besides the US?

In 1934 physicist Eugene Wigner posited the existence of a crystal consisting entirely of electrons in a honeycomb-like structure. The so-called Wigner crystal remained largely conjecture, however, until Feng Wang and colleagues announced in 2021 that they had captured an image of one. The researchers trapped electrons between two semiconductors and then cooled the apparatus, causing the electrons to settle into a crystalline structure. By inserting an ultrathin sheet of graphene above the crystal, the researchers obtained an impression—the first visual confirmation of the Wigner crystal.

ID 66c47028

21 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Researchers have obtained the most definitive evidence to date of the existence of the Wigner crystal.

(B) Researchers have identified an innovative new method for working with unusual crystalline structures.

(C) Graphene is the most important of the components required to capture an image of a Wigner crystal.

(D) It’s difficult to acquire an image of a Wigner crystal because of the crystal’s honeycomb structure.

Philadelphia’s Black Pearl Chamber Orchestra, founded by Jeri Lynne Johnson, performs classical music, from well-known compositions by Beethoven to contemporary works by Jessie Montgomery. For the orchestra’s iConduct! program, Johnson invites community members to learn some basic elements of conducting and then experience conducting the Black Pearl orchestra themselves.

ID 5325b3cc

22 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) The Black Pearl orchestra performs music from all over the world but mostly performs music composed by Philadelphians.

(B) Johnson founded the Black Pearl orchestra to perform classical music by contemporary artist Jessie Montgomery.

(C) The Black Pearl orchestra gives community members the chance to both listen to and participate in classical music performance.

(D) Johnson has community members conduct an orchestra to demonstrate how difficult the task is.

For centuries, the widespread acknowledgment of the involvement of the cerebellum—a dense brain structure in vertebrates—in coordinating motor control in humans has hindered recognition of other possible functions of the structure. Neuroscience research from the last two decades now suggests that the cerebellum regulates emotion and social behavior, and recent research by Ilaria Carta and colleagues has identified a pathway connecting the cerebellum to a center for motivation and reward processing known as the ventral tegmental area (VTA).

ID 96802cc0

23 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) The recent verification of a pathway between the VTA and the cerebellum confirms the cerebellum's long-suspected role in motor coordination.

(B) Recent advances in the field of neuroscience have challenged widely accepted claims about the function of a pathway connecting the VTA and the cerebellum.

(C) The cerebellum has primarily been thought to regulate motor functioning, but in recent years neuroscience researchers have been uncovering additional functions.

(D) Technological limitations have historically hindered the study of the cerebellum, but the recent development of new technologies has led to greater insights into its functions.

In West Africa, jalis have traditionally been keepers of information about family histories and records of important events. They have often served as teachers and advisers, too. New technologies may have changed some aspects of the role today, but jalis continue to be valued for knowing and protecting their peoples' stories.

ID b7d51f84

24 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Even though there have been some changes in their role, jalis continue to preserve their communities' histories.

(B) Although jalis have many roles, many of them like teaching best.

(C) Jalis have been entertaining the people within their communities for centuries.

(D) Technology can now do some of the things jalis used to be responsible for.

To dye wool, Navajo (Diné) weaver Lillie Taylor uses plants and vegetables from Arizona, where she lives. For example, she achieved the deep reds and browns featured in her 2003 rug *In the Path of the Four Seasons* by using Arizona dock roots, drying and grinding them before mixing the powder with water to create a dye bath. To intensify the appearance of certain colors, Taylor also sometimes mixes in clay obtained from nearby soil.

ID dc3ea63e

25 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Reds and browns are not commonly featured in most of Taylor's rugs.

(B) Taylor draws on local resources in the approach she uses to dye wool.

(C) Taylor finds it difficult to locate Arizona dock root in the desert.

(D) *In the Path of the Four Seasons* is widely acclaimed for its many colors and innovative weaving techniques.

At over a thousand pages across two volumes, *The Fifty-Year Mission*, compiled by Edward Gross and Mark A. Altman, is presented as the "complete, uncensored, unauthorized oral history" as told by the people behind the media franchise *Star Trek*. The work aspires to be comprehensive by, for example, including accounts from cast and crew members of every *Star Trek* television series and film to date. But while *The Fifty-Year Mission* is clearly a unique and valuable resource, it has a shortcoming common among oral histories: it lacks a clear authorial point of view that could otherwise unite the various accounts into a cohesive whole.

ID 2573d64b

26 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) The compilers of *The Fifty-Year Mission* had lofty goals for their oral history of the *Star Trek* franchise, but the published work lacks information about many key events in the franchise's history.

(B) *The Fifty-Year Mission* includes more accounts from people involved with *Star Trek* television shows than it does from people involved with *Star Trek* films.

(C) The large amount of material compiled into *The Fifty-Year Mission* is surprising given that many of the people involved in the *Star Trek* franchise did not participate in the oral history project.

(D) *The Fifty-Year Mission* represents a worthwhile attempt to thoroughly recount the history of the *Star Trek* franchise, but its approach has an important limitation.

In present-day Chiapas, Mexico, archaeologist Robert Rosenswig, remote-sensing specialist Ricardo López-Torrijos, and colleagues have located 41 smaller settlements surrounding the ancient Mesoamerican city of Izapa. The researchers have concluded that these settlements were culturally linked to Izapa because each of the settlements is the same age and configured in the same manner as Izapa, with a pyramid to the north and a plaza to the south. Their shared structural orientation suggests that residents of the settlements likely performed some of the same cultural ceremonies as residents in Izapa did.

ID 04dff083

27 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Researchers have determined that the arrangement of Izapa's structures was based on those of other nearby settlements.

(B) Cultural ceremonies in Izapa seem to have played a more important role for its residents than those in smaller, surrounding settlements did.

(C) Although archaeologists have learned much about Izapa over years of research, they have only recently found the smaller settlements that surrounded it.

(D) Researchers have inferred that Izapa was related to the smaller settlements that surrounded it based in part on the similarity of their construction.

The painter María Izquierdo played an important role in the development of twentieth-century Mexican art, but her work has never been well-known in the United States except among art historians. One reason for Izquierdo's relative obscurity is the enormous popularity of some of her peers. In particular, the painters Frida Kahlo and Diego Rivera have so captivated the interest of US audiences that Izquierdo and other Mexican artists from the period often get overlooked, despite the high quality of their work.

ID a59245a1

28 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Izquierdo's work is not as well-known in the United States as it should be because Kahlo and Rivera draw so much of the public's attention.

(B) During Izquierdo's lifetime, her paintings were displayed in galleries in the United States much more frequently than paintings by Kahlo and Rivera were.

(C) Izquierdo painted some of the same subjects that Kahlo and Rivera painted but used different techniques than they used.

(D) Few of Izquierdo's works are in galleries today because she produced only a small number of paintings.

The following text is from Ahmet Hamdi Tanpinar's 1961 novel *The Time Regulation Institute* (translated from the Turkish in 2014 by Maureen Freely and Alexander Dawe). The narrator was once involved with the Time Regulation Institute, a fictional bureaucracy that regulates the time of Turkey's clocks.

> I may be the most humble and absurd man in the world and, as my wife says, the most slovenly creature you may ever meet—that is, before the founding of our institute—but I did come to know a truly great man who possessed a natural genius for invention. I spent years at his side. I watched the way he worked. I witnessed how an idea would suddenly catch fire in his mind and take shape, like a tree sprouting shoots and branches, before coming into being.

©2014 by Maureen Freely and Alexander Dawe

29 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) A person was fortunate enough to have found love despite his obvious shortcomings.

(B) An exceptionally talented person professes humility to avoid intimidating others.

(C) A person appreciates the extensive time he passed in the company of someone he deeply admired.

(D) A truly brilliant person lets ideas mature in his mind before expressing them aloud.

A subject of much speculation, distinctive sets of parallel ridges mark the icy crust of Europa, Jupiter's smallest moon. Researchers now claim that the ridges' formation mechanism mirrors that of a strikingly similar pair on Greenland's ice sheet. There, surface water seeped through fissures in the sheet and formed a water pocket that subsequently disrupted the overlying ice, forcing fragments of it upward and outward into peaks, as the pocket froze and expanded. Although Europa lacks liquid surface water, the same process could be driven by the moon's subsurface ocean.

ID 995d55fd

30 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Researchers think that the ridges on Europa and the ridges in Greenland may have been formed by the same process even though Europa, unlike Greenland, doesn't have liquid water on its surface.

(B) The primary difference between the ridges on Europa and the ridges in Greenland is that unlike the Europa ridges, the Greenland ridges are parallel.

(C) The pair of ridges found on Greenland's ice sheet appear to have formed long before the recently discovered sets of ridges on Europa formed.

(D) Researchers don't understand why Europa is marked by so many sets of ridges when the moon doesn't have any liquid water on its surface that could have collected and expanded under the icy crust.

NASA's Aspera mission, led by Carlos Vargas, will investigate the circumgalactic medium (CGM), the huge swaths of low-density gas that fill and surround galaxies. Specifically, the team will focus on portions of the gas that exist in a "warm-hot" phase: these portions haven't previously been observable but are thought to fuel new star formation and hold most of the mass that makes up a galaxy. Using a telescope capable of revealing these parts of the CGM, the Aspera mission should help answer long-standing questions about how galaxies emerge, change, and even interact.

ID 12030076

31 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) As the leader of NASA's Aspera mission, Vargas will be the first person to investigate the makeup of the CGM.

(B) Although galaxies that are surrounded by the CGM have been studied, researchers have been unable to directly observe low-density gas in the CGM in the "warm-hot" phase.

(C) Researchers don't yet have a complete understanding of the process of galaxy evolution but have raised the possibility that galaxies interact with each other at times.

(D) The Aspera mission is expected to produce the first direct observations of CGM gas in the "warm-hot" phase, which likely has an important role in the evolution of galaxies.

Many intellectual histories of the Black Power movement of the 1960s and 1970s rely heavily on essays and other explicitly ideological works as primary sources, a tendency that can overrepresent the perspectives of a small number of thinkers, most of whom were male. Historian Ashley D. Farmer has shown that expanding the array of primary sources to encompass more types of print material—including political cartoons, advertisements, and artwork—leads to a much better understanding of the movement and the crucial and diverse roles that Black women played in shaping it.

ID f8befe75

32 Mark for Review — Medium — Explanation ›

Which choice best describes the main idea of the text?

(A) Farmer's methods and research have enriched the historical understanding of the Black Power movement and Black women's contributions to it.

(B) Before Farmer's research, historians had largely ignored the intellectual dimensions of the Black Power movement.

(C) Other historians of the Black Power movement have criticized Farmer's use of unconventional primary sources.

(D) The figures in the Black Power movement whom historians tend to cite would have agreed with Farmer's conclusions about women's roles in the movement.

In many of his sculptures, artist Richard Hunt uses broad forms rather than extreme accuracy to hint at specific people or ideas. In his first major work, *Arachne* (1956), Hunt constructed the mythical character Arachne, a weaver who was changed into a spider, by welding bits of steel together into something that, although vaguely human, is strange and machine-like. And his large bronze sculpture *The Light of Truth* (2021) commemorates activist and journalist Ida B. Wells using mainly flowing, curved pieces of metal that create stylized flame.

ID 3f05e40f

33 Mark for Review — Medium — Explanation ›

Which choice best states the text's main idea about Hunt?

(A) He often depicts the subjects of his sculptures using an unrealistic style.

(B) He uses different kinds of materials depending on what kind of sculpture he plans to create.

(C) He tends to base his art on important historical figures rather than on fictional characters.

(D) He has altered his approach to sculpture over time, and his works have become increasingly abstract.

The following text is adapted from Guy de Maupassant's nineteenth-century short story "The Trip of Le Horla" (translated by Albert M. C. McMaster, A. E. Henderson, Mme. Quesada, et al.). The narrator is part of a group traveling in a hot-air balloon at night.

> The earth no longer seems to exist, it is buried in milky vapors that resemble a sea. We are now alone in space with the moon, which looks like another balloon travelling opposite us; and our balloon, which shines in the air, appears like another, larger moon, a world wandering in the sky amid the stars, through infinity. We no longer speak, think nor live; we float along through space in delicious inertia. The air which is bearing us up has made of us all beings which resemble itself, silent, joyous, irresponsible beings, peculiarly alert, although motionless.

ID d5c2a4d4

34 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) The narrator feels a growing sense of isolation even though his companions are nearby during the balloon ride.

(B) The narrator and his companions are completely absorbed in the change in perspective they gain while riding in the balloon.

(C) The narrator and his companions are troubled by the disorienting effects of the altitude while riding in the balloon.

(D) The narrator is pleasantly surprised by his companions' unrestrained enthusiasm about the sensation of riding in the balloon.

The recovery of a 1,000-year-old Chinese shipwreck in the Java Sea near present-day Indonesia has yielded a treasure trove of artifacts, including thousands of small ceramic bowls. Using a portable X-ray fluorescence analyzer tool, Lisa Niziolek and her team were able to detect the chemical composition of these bowls without damaging them. By comparing the chemical signatures of the bowls with those of the materials still at old Chinese kiln sites, Niziolek and her team can pinpoint which Chinese kilns likely produced the ceramic bowls.

ID ad680167

35 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Because of a new technology, researchers can locate and recover more shipwrecks than they could in the past.

(B) Researchers have been able to identify the location of a number of Chinese kilns in operation 1,000 years ago.

(C) With the help of a special tool, researchers have determined the likely origin of bowls recovered from a shipwreck.

(D) Before the invention of portable X-ray fluorescence, researchers needed to take a small piece out of an artifact to analyze its components.

The following text is adapted from Christina Rossetti's 1881 poem "Monna Innominata 2."

I wish I could remember that first day,

First hour, first moment of your meeting me,

If bright or dim the season, it might be

Summer or Winter for [all] I can say;

So unrecorded did it slip away,

So blind was I to see and to foresee,

So dull to mark the budding of my tree

That would not blossom yet for many a May.

ID adbcbce0

36 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) The speaker celebrates how the passage of time has strengthened a relationship that once seemed unimportant.

(B) Because the speaker did not anticipate how important a relationship would become, she cannot recall how the relationship began, which she regrets.

(C) As the anniversary of the beginning of an important relationship approaches, the speaker feels conflicted about how best to commemorate it.

(D) After years of neglecting a once valuable relationship, the speaker worries it may be too late for her to salvage the relationship.

Archaeologists have discovered a runestone in Norway that may contain the earliest example of written words in Scandinavia. Carbon dating at the discovery site revealed that the stone was likely carved between 1 and 250 CE. Runologist Kristel Zilmer believes the stone will be helpful in learning more about the use of runic alphabets in early Iron Age Scandinavia.

ID 8fb67890

37 Mark for Review — Medium — Explanation ›

Which choice best states the main topic of the text?

(A) Battles of the Iron Age

(B) A runestone found in Norway

(C) A new method for dating rock samples

(D) The research interests of Kristel Zilmer

To understand how Paleolithic artists navigated dark caves, archaeologist Mª Ángeles Medina-Alcaide and her team tested different lighting methods in a cave in Spain using replicas of artifacts found in European caves with art. They used three different Paleolithic light sources—torches, animal-fat lamps, and fireplaces—determining that each likely had a specific purpose. For instance, the team learned that the animal-fat lamps were less useful than torches while walking because the lamps didn't illuminate the cave floor.

ID 6540a976

38 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Medina-Alcaide and her team's study demonstrated that fireplaces were essential to the creators of Paleolithic cave art.

(B) Medina-Alcaide and her team discovered that Paleolithic cave artists in Spain used animal-fat lamps more often than they used torches.

(C) Medina-Alcaide and her team were reluctant to draw many conclusions from their study because of the difficulty they had replicating light sources based on known artifacts.

(D) Medina-Alcaide and her team tested Paleolithic light sources and learned some details about how Paleolithic artists traveled within dark caves.

In a study of new technology adoption, Davit Marikyan et al. examined negative disconfirmation (which occurs when experiences fall short of one's expectations) to determine whether it could lead to positive outcomes for users. The team focused on established users of "smart home" technology, which presents inherent utilization challenges but tends to attract users with high expectations, often leading to feelings of dissonance. The researchers found that many users employed cognitive mechanisms to mitigate those feelings, ultimately reversing their initial sense of disappointment.

ID d2e0cba5

39 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Research suggests that most users of smart home technology will not achieve a feeling of satisfaction given the utilization challenges of such technology.

(B) Although most smart home technology is aimed at meeting or exceeding users' high expectations, those expectations in general remain poorly understood.

(C) Research suggests that users with high expectations for a new technology can feel content with that technology even after experiencing negative disconfirmation.

(D) Although negative disconfirmation has often been studied, little is known about the cognitive mechanisms shaping users' reactions to it in the context of new technology adoption.

The following text is adapted from Jack London's 1903 novel *The Call of the Wild*. Buck is a sled dog living with John Thornton in Yukon, Canada.

Thornton alone held [Buck]. The rest of mankind was as nothing. Chance travellers might praise or pet him; but he was cold under it all, and from a too demonstrative man he would get up and walk away. When Thornton's partners, Hans and Pete, arrived on the long-expected raft, Buck refused to notice them till he learned they were close to Thornton; after that he tolerated them in a passive sort of way, accepting favors from them as though he favored them by accepting.

ID 7ffae38a

40 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Buck has become less social since he began living with Thornton.

(B) Buck mistrusts humans and does his best to avoid them.

(C) Buck has been especially well liked by most of Thornton's friends.

(D) Buck holds Thornton in higher regard than any other person.

To protect themselves when being attacked, hagfish—jawless marine animals that resemble eels—will release large quantities of slimy, mucus-like threads. Because these threads are unusually strong and elastic, scientist Atsuko Negishi and her colleagues have been trying to recreate them in a lab as an eco-friendly alternative to petroleum-based fibers that are often used in fabrics. The researchers want to reproduce the threads in the lab because farming hagfish for their slime would be expensive and potentially harmful to the hagfish.

ID 409058ee

41 Mark for Review — Medium — Explanation ›

Which choice best states the text's main idea?

(A) The slimy threads that hagfish release might help researchers create a new kind of fabric.

(B) Hagfish have inspired researchers to develop a new petroleum-based fabric.

(C) Hagfish are not well suited to being raised in captivity.

(D) The ability of hagfish to slime their attackers compensates for their being jawless.

Culinary anthropologist Vertamae Smart-Grosvenor may be known for her decades of work in national public television and radio, but her book *Vibration Cooking: or, the Travel Notes of a Geechee Girl* is likely her most influential project. The 1970 book, whose title refers to Smart-Grosvenor's roots in the Low Country of South Carolina, was unusual for its time. It combined memoir, recipes, travel writing, and social commentary and challenged notions about conventions of food and cooking. Long admired by many, the book and its author have shaped contemporary approaches to writing about cuisine.

ID b62cb782

42 Mark for Review — Medium — Explanation ›

Which choice best describes the main idea of the text?

(A) Smart-Grosvenor's unconventional book *Vibration Cooking: or, the Travel Notes of a Geechee Girl* is an important contribution to food writing.

(B) Smart-Grosvenor held many different positions over her life, including reporter and food writer.

(C) Smart-Grosvenor's groundbreaking book *Vibration Cooking: or, the Travel Notes of a Geechee Girl* didn't receive the praise it deserved when it was first published in 1970.

(D) Smart-Grosvenor was a talented chef whose work inspired many people to start cooking for themselves.

Businesses selling clothing and other fashion items face obstacles in trying to forecast how much product to order: tastes and styles change quickly, while manufacturing clothing takes a significant amount of time. Researchers Youran Fu and Marshall Fisher have found that combining sellers' own data with information gathered from social media can dramatically improve the accuracy of such forecasts—by 24 to 57 percent in the cases they directly studied. Better predictions mean demand is easier to meet without retailers becoming overstocked.

ID 923ebfe3

43 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) Using multiple data sources can enhance the ability of sellers in the fashion industry to anticipate demand.

(B) Social media is revolutionizing how both sellers and researchers view the fashion industry.

(C) Becoming overstocked is the main preoccupation of sellers trying to forecast demand for fashion items.

(D) Retailers can use their own data to accurately predict how tastes and styles are evolving.

Online surveys are a common tool researchers use to collect information. These surveys are usually designed for use on personal computers (PCs), but more people are using smartphones to complete them than they are PCs. This shift in device usage may change how participants interact with online surveys. When researchers Jean Philippe Décieux and Philipp E. Sischka investigated, they found that PC users were more likely to multitask while taking surveys than smartphone users were, but PC users were also more likely to complete the surveys.

ID dd412b31

44 Mark for Review — Medium — Explanation ›

Which choice best states the main idea of the text?

(A) People are choosing to take online surveys on smartphones more often than they are on PCs because smartphones are convenient.

(B) Researchers are investigating why survey completion rates are higher on PCs than they are on smartphones, despite increased multitasking on PCs.

(C) Researchers prefer online surveys to other ways of collecting information because they think online survey results are more reliable.

(D) A study shows that the type of device people use to complete online surveys affects how they interact with these surveys.

HARD 18 questions

Many literary theorists distinguish between *fabula*, a narrative's content, and *syuzhet*, a narrative's arrangement and presentation of events. In the film *The Godfather Part II*, the *fabula* is the story of the Corleone family, and the *syuzhet* is the presentation of the story as it alternates between two timelines in 1901 and 1958. But literary theorist Mikhail Bakhtin maintained that *fabula* and *syuzhet* are insufficient to completely describe a narrative—he held that systematic categorizations of artistic phenomena discount the subtle way in which meaning is created by interactions between the artist, the work, and the audience.

ID 1ba5ad7a

45 Mark for Review

Hard

Explanation ›

Which choice best states the main idea of the text?

(A) Literary theorist Mikhail Bakhtin argued that there are important characteristics of narratives that are not fully encompassed by two concepts that other theorists have used to analyze narratives.

(B) Literary theorist Mikhail Bakhtin claimed that meaning is not inherent in a narrative but is created when an audience encounters a narrative so that narratives are interpreted differently by different people.

(C) The storytelling methods used in *The Godfather Part II* may seem unusually complicated, but they can be easily understood when two concepts from literary theory are utilized.

(D) Narratives that are told out of chronological order are more difficult for audiences to understand than are narratives presented chronologically.

Elizabeth Asiedu has identified a negative correlation between the share of developing countries' economies derived from natural-resource extraction and those countries' receipts of foreign investment. This may appear counterintuitive—resource extraction requires initial investments (in extractive technology, for instance) at scales best met by multinational corporations—but Asiedu notes that natural-resource industries' boom-bust cycle can destabilize local currencies and increase developing countries' vulnerability to external shocks, creating levels of uncertainty to which foreign investors are typically averse.

ID 70aacc03

46 Mark for Review

Hard

Explanation >

Which choice best states the main idea of the text?

(A) Although it may seem surprising that foreign investment declines in developing countries as natural-resource extraction makes up a larger share of those countries' economies, that decline happens because resource extraction requires initial investments too large for foreign investors to supply.

(B) Although developing countries tend to become less dependent on foreign investment as natural-resource industries make up a larger share of their economies, this change may not occur if the boom-bust cycle of those industries destabilizes local currencies or increases countries' vulnerability to external shocks.

(C) Although one might expect that foreign investment would increase as natural-resource extraction makes up a larger share of developing countries' economies, the opposite happens because heavy reliance on natural resources can lead to unattractive conditions for investors.

(D) Although foreign investors tend to avoid initial investments in natural-resource industries in developing countries, foreign investment may increase significantly as those industries stabilize and the risks associated with them decline.

Several scholars have argued that conditions in England in the late ninth through early eleventh centuries—namely, burgeoning literacy amid running conflicts between England's Anglo-Saxon kingdoms and Danish invaders—were especially conducive to the production of the Old English epic poem *Beowulf*, and they have dated the poem's composition accordingly. It is not inconceivable that *Beowulf* emerged from such a context, but privileging contextual fit over the linguistic evidence of an eighth- or even seventh-century composition requires a level of justification that thus far has not been presented.

ID f7bd14de

47 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Although there are some grounds for believing that *Beowulf* was composed between the late ninth and early eleventh centuries, advocates for that view tend to rely on evidence that has been called into question by advocates for an earlier date.

(B) Although several scholars have dated *Beowulf* to the late ninth through early eleventh centuries, others have argued that doing so privileges a controversial interpretation of the social conditions of the period.

(C) Although *Beowulf* fits well with the historical context of England in the late ninth through early eleventh centuries, it fits equally well with the historical context of England in the seventh and eighth centuries.

(D) Although the claim of a late ninth- through early eleventh-century composition date for *Beowulf* has some plausibility, advocates for the claim have not compellingly addressed evidence suggesting an earlier date.

In their 2022 paper, Christos Dimopoulos et al., having granted that the existence of antigravity—in which antimatter and matter repel rather than attract each other—lacked affirmative experimental support, rightly argued that such antigravity was worth considering on theoretical grounds given that evidence against it was similarly lacking. But a 2023 report by an international team of researchers details the first direct ballistic observations of antihydrogen atoms under gravity inside a CERN particle accelerator. Corresponding most closely to predictions under gravitational attraction, these observations were thoroughly inconsistent with antigravity.

ID 35b46381

48 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Antihydrogen ballistics observations were conducted at CERN to test specific conclusions about antigravity presented in the 2022 paper by Dimopoulos et al.

(B) Although theoreticians were justified in studying antigravity before the release of the 2023 report, the report's findings suggest that the rationale for theoretical consideration offered in the 2022 paper by Dimopoulos et al. is no longer applicable.

(C) The theoretical approach represented in the 2022 paper by Dimopoulos et al. assumed that unambiguous proof of antigravity would not be achievable, but the results in the 2023 report undermine that assumption.

(D) Before 2023, researchers' inordinate focus on theoretical considerations hindered the development of the experimental regimen for direct antihydrogen ballistics observations.

Modern dog breeds are largely the result of 160 years of owners crossbreeding certain dogs in order to select for particular physical appearances. Owners often say that some breeds are also more likely than others to have particular personality traits—basset hounds are affectionate; boxers are easy to train—but Kathleen Morrill and colleagues found through a combination of owner surveys and DNA sequencing of 2,000 dogs that while physical traits are predictably heritable among purebred dogs, behavior varies widely among dogs of the same breed.

ID d0f51067

49 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Dog breeds would not exist without many years of human intervention in dogs' reproduction.

(B) Research fails to confirm a commonly held belief about dog breeds and behavior.

(C) The dog breeds most popular among owners have often changed over the past 160 years.

(D) A study of dog breeds is notable for its usage of both opinion surveys and DNA sequencing.

The following text is adapted from William Shakespeare's 1597 play *The Tragedy of King Richard III*. Richard is reflecting on the recent arrest of his brother, the Duke of Clarence, on suspicion of treason against King Edward IV. Derby, Hastings, Buckingham, Rivers, Dorset, and Grey are also members of the English nobility.

RICHARD: I do the wrong, and first begin to brawl.

The secret mischiefs that I set [flowing]

I lay unto the grievous charge of others.

Clarence, whom I indeed have cast in darkness,

I do beweep to many simple [gullible people],

Namely, to Derby, Hastings, Buckingham;

And tell them 'tis the Queen and her allies

That stir the King against the Duke my brother.

Now they believe it, and withal whet me

To be revenged on Rivers, Dorset, Grey.

ID 8d88740e

50 Mark for Review — Hard — Explanation ›

Which choice best describes what happens in the text?

(A) Richard describes having wept as he informed Derby, Hastings, and Buckingham that the queen and her allies convinced the king to act against Clarence, and says that the earnestness of his grief caused them to accept his version of events.

(B) Richard attributes Clarence's troubles to both his own secret plotting and the distrust of Clarence that the queen and her allies Derby, Hastings, and Buckingham have planted in the king's mind.

(C) Richard indicates that he has pretended to be aggrieved about Clarence's situation and has proclaimed it to be the fault of the queen and her allies, but in reality, he has caused the hostility the king feels toward Clarence.

(D) Richard acknowledges that his mischievous nature has spurred him to commit misdeeds in the past, including instigating enmity between the king and Clarence, but he reports that he has hitherto not lost the trust of the queen and her allies.

Conservationists worldwide are working to protect ecosystems from habitat destruction and biodiversity loss, and in many cases, initiatives that rely on natural features or processes can help address such challenges. In response to a rapidly dwindling population of blueback salmon, the Quinault Indian Nation (a tribe in Washington State) partnered with the conservation organization Wild Salmon Center to restore naturally occurring logjams in the Quinault River. The logjams create shady pools where the blueback salmon can rest and spawn, thus promoting blueback population recovery.

ID 23ecf625

51 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) A partnership between the Quinault Indian Nation and Wild Salmon Center shows the importance of collaborative approaches to preserving biodiversity.

(B) Nature-based approaches can be effective ways to achieve conservation goals.

(C) As indicated by a recent project, logjams help the blueback salmon thrive and reproduce.

(D) Scientists now realize that nature-based conservation methods offer better long-term solutions to environmental issues than methods that are not nature-based do.

The following text is from Milan Kundera's 1984 novel *The Unbearable Lightness of Being* (translated by Michael Henry Heim in 1984). Karenin is a dog that belongs to Tomas and Tereza.

> Karenin was not overjoyed by the move to Switzerland [from Prague]. Karenin hated change. Dog time cannot be plotted along a straight line; it does not move on and on, from one thing to the next. It moves in a circle like the hands of a clock, which—they, too, unwilling to dash madly ahead—turn round and round the face, day in and day out following the same path. In Prague, when Tomas and Tereza bought a new chair or moved a flower pot, Karenin would look on in displeasure. It disturbed his sense of time. It was as though they were trying to dupe the hands of the clock by changing the numbers on its face.

©1984 by Milan Kundera. Translation ©1984 by Harper & Row, Publishers, Inc.

ID 7f0be746

52 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) As a dog, Karenin possesses a sense of time that involves a strong preference for predictability and an aversion to disruption.

(B) After he's moved to a new home, Karenin's negative response to changes has become more pronounced.

(C) Similar to Tomas and Tereza, Karenin comprehends time as circular rather than as a straightforward progression.

(D) As is the case for other dogs, Karenin's sense of time seems to accelerate depending on the objects and places that surround him.

Philosophers note that many people have an intuitive sense that while we ought not to lie, there may be circumstances in which lying is permissible. If this intuition is correct and we lack an inviolable duty to speak truthfully, what grounds opposition to lying in the first place? Japa Pallikkathayil has advanced one answer by appealing to a duty to respect others' agential interests: the possession of false beliefs constrains agency, and thus we ought not to impede the formation of true beliefs unless doing so prevents a greater constraint on someone's agency or an otherwise impermissible end.

ID e80ba20d

53 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) One potential means of justifying opposition to lying is Pallikkathayil's argument that we have an obligation to respect other people's agency that entails a commitment to truthfulness except in certain circumstances.

(B) Many people have an intuitive sense that lying is permissible in some circumstances but lack a principled way to identify those circumstances, and Pallikkathayil's argument may provide a means of resolving that problem.

(C) Pallikkathayil's argument suggests that if we have a duty to respect other people's agential interests and if possession of false beliefs constrains agency, then we have an inviolable duty to speak truthfully.

(D) Pallikkathayil's argument shows that if our intuition that circumstances may make lying permissible is correct, then it is unclear whether there are any grounds for an opposition to lying in the first place.

The following text is adapted from William Shakespeare's 1609 poem "Sonnet 27." The poem is addressed to a close friend as if he were physically present.

Weary with toil, I [hurry] to my bed,

The dear repose for limbs with travel tired;

But then begins a journey in my head

To work my mind, when body's work's expired:

For then my thoughts—from far where I abide—

[Begin] a zealous pilgrimage to thee,

And keep my drooping eyelids open wide,

ID 16025337

54 Mark for Review — Hard — Explanation ›

What is the main idea of the text?

(A) The speaker is asleep and dreaming about traveling to see the friend.

(B) The speaker is planning an upcoming trip to the friend's house.

(C) The speaker is too fatigued to continue a discussion with the friend.

(D) The speaker is thinking about the friend instead of immediately falling asleep.

Electronic music pioneer Wendy Carlos is credited with the music for three feature films: *A Clockwork Orange* (1971), *The Shining* (1980), and *Tron* (1982). However, her musical score for *A Clockwork Orange* is mostly made up of her arrangements of Ludwig van Beethoven's work. Also, almost all the music that she and Rachel Elkind composed for *The Shining* was unused by director Stanley Kubrick. It did not appear in the film. Of the three films, *Tron* is the one in which audiences can hear the most of Carlos's original compositions.

ID 2df56712

55 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Of the three films for which Carlos is credited, *Tron* features the most original music from her.

(B) The director of *The Shining* used most of the music that Carlos composed for it.

(C) Beethoven is widely considered to be a more important composer than Carlos.

(D) Carlos is a notable innovator among film composers in the 1970s and 1980s.

Eighteenth-century economist Adam Smith is famed for his metaphor of the invisible hand, which he putatively used to illustrate a robust model of how individuals produce aggregate benefits by pursuing their own economic interests. Note "putatively": as Gavin Kennedy has shown, Smith deploys this metaphor only once in his economic writings—to make a narrow point about the then-dominant economic theory of mercantilism—and it was largely ignored until some twentieth-century economists eager to secure an intellectual pedigree for their views elevated it to a fully-fledged paradigm.

ID 881ba6f1

56 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Although Smith is famed for his metaphor of the invisible hand, the metaphor was largely ignored until economists in the twentieth century came to realize that the metaphor was a robust model that anticipated their own views.

(B) Some twentieth-century economists gave Smith's metaphor of the invisible hand a significance it does not have in Smith's work, but it is nevertheless a useful model of how individuals produce aggregate benefits by pursuing their own economic interests.

(C) Smith's metaphor of the invisible hand has been interpreted as a model of how individuals acting in their own interest produce aggregate benefits, but it was intended as a subtle critique of the economic theory of mercantilism.

(D) The reputation of Smith's metaphor of the invisible hand is not due to the importance of the metaphor in Smith's work but rather to the promotion of the metaphor by some later economists for their own ends.

In their meta-analysis of research on advergames (video games developed to promote products or services), Zeph M.C. van Berlo et al. confirm that such games, though they can elicit player interest, may not facilitate subsequent recall of product and brand information. This phenomenon can be explained by the finite nature of cognitive capacity as it is articulated in Annie Lang's limited capacity model of motivated mediated message processing. In this case, players' cognitive resources are directed foremost toward the advergame's mechanics, leaving little or no capacity for encoding and storing the information the advertiser intends to be salient.

ID 7aa510fb

57 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) The limited capacity model of motivated mediated message processing developed by Lang provides a means of explaining the finding by van Berlo et al. that players may not readily recollect the brand and product information embedded in advergames.

(B) Research by van Berlo et al. corroborates Lang's conclusion that because people predominantly focus on game mechanics when playing video games, it is difficult for advergames to communicate brand and product information in ways that are highly memorable.

(C) The meta-analysis by van Berlo et al. reveals that higher engagement in advergame mechanics is linked to lower effectiveness in persuading players to purchase particular brands and products.

(D) Although the limited capacity model of motivated mediated message processing developed by Lang suggests otherwise, advergames can succeed as marketing tools, provided that they achieve a balance between game mechanics and the promotion of a brand or product.

Studies of ocean wave breaking have predominantly focused on traveling waves (those propagating along the horizontal plane), so Mark McAllister et al. utilized a circular wave tank to produce and study spike waves, axisymmetric standing waves that can erupt vertically when traveling waves propagating in opposing directions intersect. Traveling waves break when wave steepness (height-to-length ratio) passes a critical threshold; breaking thus constrains wave height. McAllister et al. found that spike waves can exceed that constraint, as other factors than just steepness (e.g., jet stability and cavity shape) mediate spike-wave breaking.

ID 251e5281

58 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Previous studies have suggested that steepness mediates breaking in traveling waves, but the study by McAllister et al. shows that jet stability and cavity shape may also influence breaking in such waves.

(B) The process of breaking limits the height of traveling waves, but the study by McAllister et al. suggests that spike waves can exceed those limits if their height-to-length ratio reaches a critical threshold.

(C) McAllister et al. suggest that spike waves can form when traveling waves propagating in opposing directions intersect and that spike waves tend to be higher than traveling waves.

(D) The study by McAllister et al. suggests that when traveling waves intersect in specific ways, the resulting wave may be higher than would be expected based on the properties of traveling waves.

Through adaptive radiation, multiple species of *Tetragnatha*—a genus of orb-weaving spiders—have significantly diversified their web architecture over a relatively short timescale. To investigate whether the material properties of *Tetragnatha* silk have been similarly affected by this evolutionary process, Angela M. Alicea-Serrano et al. examined the chemical composition of both the radial (non-sticky threads extending from the center) and capture (sticky threads that hold prey) silks that form the web as well as tested the tensile strength and viscosity of samples collected from three *Tetragnatha* species at two sites in the Hawaiian archipelago. The team found significant interspecies variation in these biomaterials.

ID 024eb2ec

59 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Research reveals that web architecture among species of *Tetragnatha* spiders has likely diversified more rapidly than the material properties of *Tetragnatha*'s silk have.

(B) Research suggests that the material properties of silk from species of *Tetragnatha* spiders have diversified during adaptive radiation.

(C) A study indicates that variations in web architecture among species of *Tetragnatha* spiders can likely be explained by corresponding variations in the material properties of their silks.

(D) A study shows that adaptive radiation can explain interspecies variation in the web architecture of *Tetragnatha* spiders but not in the material properties of the spiders' silk.

Artificial leaves are a developing renewable energy technology that mimics the process of photosynthesis in plants. These devices are silicon-based solar cells coated in chemical catalysts that activate reactions that split water molecules into hydrogen and oxygen gas. The technology, while generating lots of interest, is not yet commercially viable as a large-scale energy source. To meet this challenge, scientists from many fields are researching ways to store, transport, and distribute the energy the devices produce while other scientists are working to improve the cost and efficiency of the devices.

ID 6762772f

60 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) Continued research and development in artificial-leaf technology is needed before the devices can be widely used as an energy source.

(B) The recent increase in the commercial use of artificial leaves as an energy source has encouraged many scientists to research ways to improve the technology.

(C) Artificial leaves split water molecules into oxygen and hydrogen gas using catalysts more efficiently than plants do using the process of photosynthesis.

(D) Artificial leaves were developed to mimic the natural process of photosynthesis in plants in order to store energy for long-term commercial use.

The following text is Vita Sackville-West's circa 1920 poem "Evening." Spars are ships' masts, moorings are ropes that hold docked ships in place, and a riding-light is a light that a ship shines when it is anchored.

When little lights in little ports come out,

Quivering down through water with the stars,

And all the fishing fleet of slender spars

Range at their moorings, veer with tide about;

When race of wind is stilled and sails are furled,

And underneath our single riding-light

The curve of black-ribbed deck gleams palely white,

And slumbrous waters pool a slumbrous world;

—Then, and then only, have I thought how sweet

Old age might sink upon a windy youth,

Quiet beneath the riding-light of truth,

Weathered through storms, and gracious in retreat.

ID b69d821d

61 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) The tranquility of a port in the evening can incline a person to appreciate the stillness of old age.

(B) The difficulty of bringing a ship into port is apt training for dealing with the types of struggles encountered in old age.

(C) A person who leads a long life that is varied and active may find it difficult to stay in a calm place.

(D) The contrast between the peacefulness of a port at night and its activity during the day reflects the contrast between the calm of old age and the vibrancy of youth.

Some animal-behavior studies involve observing wild animals in their natural habitat, and some involve capturing wild animals and observing them in a laboratory. Each approach has advantages over the other. In wild studies, researchers can more easily presume that the animals are behaving normally, and in lab studies, researchers can more easily control factors that might affect the results. But if, for example, the results from a wild study and a lab study of Western scrub-jays (*Aphelocoma californica*) contradict each other, one or both of the studies must have failed to account for some factor that was relevant to the birds' behavior.

ID a3fb5e77

62 Mark for Review — Hard — Explanation ›

Which choice best states the main idea of the text?

(A) When the results of a natural-habitat study and those from a lab study of a wild animal such as the Western scrub-jay conflict, the study in the natural habitat is more likely than the lab study to have accurate results.

(B) Studying wild animals such as the Western scrub-jay in both their natural habitat and lab settings is likely to yield conflicting results that researchers cannot fully resolve.

(C) Wild animals such as the Western scrub-jay can be effectively studied in their natural habitat and in the lab, but each approach has drawbacks that could affect the accuracy of the findings.

(D) Differing results between natural-habitat and lab studies of wild animals such as the Western scrub-jay are a strong indication that both of the studies had design flaws that affected the accuracy of their results.

Explanations

1 Correct answer **C** — Easy — Back to question

C Asawa's interest in art education prompted her to create art programs for students in San Francisco.

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by establishing Ruth Asawa as an artist who worked in several art forms but emphasizes that she was interested in art for reasons other than her desire to create it. The text mentions two ways in which Asawa brought art to children through public schools: cofounding the Alvarado School Arts Workshop in 1968 and helping found a public arts high school in 1982. Thus, the main idea is that Asawa's interest in art education motivated her to establish arts programs for students in San Francisco.

Choice A is incorrect because the text doesn't mention Asawa inspiring other artists to share their work with students. While the text does note that the Alvarado School Arts Workshop brought works of art and artists into public schools, it doesn't state that Asawa motivated these artists. **Choice B is incorrect** because the text makes no comparison between local and national appreciation of Asawa's sculptures. While the text does mention that Asawa created unique tied-wire sculptures and was connected to San Francisco, it does not contrast her local and national critical receptions. **Choice D is incorrect**. Although the text emphasizes Asawa's educational initiatives, it doesn't state or imply that she abandoned her career as a sculptor to work as an art teacher. Instead, the text portrays her educational work as a complement to her career as a successful artist.

2 Correct answer **B** — Easy — Back to question

B Heidi is delighted and fascinated by an image she sees in one of Grandmama's books.

Choice B is the best answer because it most effectively states the main idea of the text, which is that Heidi is delighted and fascinated by an image she sees in one of Grandmama's books. In the text, Heidi screams upon first seeing the picture of the green pasture. In another context, such a reaction might suggest fear, but here the reaction is followed by descriptions of an image that's peaceful rather than scary. The text goes on to describe Heidi's eyes as "glowing" and states that she "devoured the scene," suggesting that the image delights and fascinates her so much that she wants to examine every detail. Together, these descriptions suggest that Heidi is thrilled and intrigued by the image in the book.

Choice A is incorrect because there's nothing in the text to suggest that Heidi is upset before seeing the peaceful image of the green pasture. Before Heidi sees that image, the text describes her as "looking with wondering eyes at the splendid pictures" in

the book, suggesting that Heidi is intrigued, not that she's unhappy. **Choice C is incorrect**. Although Heidi screams upon first seeing the image, the text's description of the image and Heidi's other reactions to it suggest that she is screaming with delight, not fear. The text describes the images in the book as "splendid" and the particular image that causes her to scream as peaceful rather than frightening. It also describes Heidi's eyes as "glowing" and states that she "devoured the scene," suggesting that the image of the green pasture delights and fascinates her so much that she wants to examine every detail. **Choice D is incorrect** because it's unclear from the text whether Heidi has ever seen a shepherd with his sheep before. The text merely suggests that she is delighted and fascinated by the image of the shepherd and his sheep.

3 Correct answer **A** Easy Back to question

A The narrator remembers a trip he took and admits to getting lost.

Choice A is the best answer. The narrator is "embarrassed" about the route he took, which ends up leaving him lost and confused about how to get to his destination for the evening.

Choice B is incorrect. This choice doesn't match the passage. The narrator is embarrassed, rather than fond, and he doesn't describe the beauty of the place. **Choice C is incorrect**. This choice doesn't match the passage. We don't know from this excerpt whether or not the narrator has visited this part of New York multiple times. **Choice D is incorrect**. This choice doesn't match the passage. The narrator doesn't explain how he overcame being lost in this excerpt.

4 Correct answer **C** Easy Back to question

C Miranda played a crucial role in influencing the content and distribution of "Letter to the Spanish Americans."

Choice C is the best answer. The text describes how Miranda circulated, edited, and added footnotes to "Letter to the Spanish Americans," and it claims that the letter and its author would have "remained insignificant" if it weren't for Miranda's efforts.

Choice A is incorrect. The text only says that Viscardo wrote the letter and that Miranda edited it: it never suggests that the original authorship of the letter is up for debate. **Choice B is incorrect**. This contradicts the text. The text says that Miranda edited and footnoted the letter, but it identifies Viscardo as the letter's author. It also never identifies certain arguments as more eloquent than others. **Choice D is incorrect**. This is outside the scope of the text. The paragraph describes Miranda's role in the creation and distribution of the letter, but it doesn't get into the effects of the letter on other people.

5 Correct answer **A** Easy Back to question

A The widespread adoption of the bicycle in the late nineteenth century provided new opportunities for people.

Choice A is the best answer. The text discusses how the mass production of bicycles in the late nineteenth century allowed people to travel longer distances, live farther from their workplaces, visit neighboring towns, and participate in new activities and social clubs. All of these are new opportunities that were provided by the widespread adoption of the bicycle.

Choice B is incorrect. The text never says this. It does say that the bicycle was "affordable," and that the "freedom to travel longer distances quickly and comfortably" made the bicycle "popular," but it never says that the bicycle was more popular than any other way of traveling (like cars or trains or horses). **Choice C is incorrect**. This is a detail mentioned in the text, but not the main idea. Cycling clubs are only one of the new opportunities that arose from the popularity of the mass-produced bicycle. A "main idea" should capture more of the information in the text. **Choice D is incorrect**. The text never says this. It doesn't mention the safety of the mass-produced bicycle at all.

6 Correct answer **A** Easy ‹ Back to question

A Lutie is observing the appearance of the street at a particular time of day and the events occurring on it.

Choice A is the best answer because it most accurately states what is happening in the text. The narrator notes that Lutie thinks the street looks nice in the light of the sunset. The narrator goes on to describe what Lutie can see in the street: children playing ball or tag and girls skipping rope. Thus, what is happening in the text is that Lutie is observing the appearance of the street at a particular time of day and the events occurring on it.

Choice B is incorrect. Although Lutie is observing children playing games on her street, the text doesn't suggest that she is annoyed by the noise of the games. Instead, the text says that Lutie thinks the street looks nice in the light of the sunset. **Choice C is incorrect**. Although Lutie is observing children playing games on her street, the text doesn't suggest that she is puzzled by the rules of the games. **Choice D is incorrect** because there is no evidence in the text that Lutie doesn't want to interact with her neighbors or that she is in her apartment alone. All the text indicates about Lutie is that she is watching the events on the street and thinks the street looks nice in the light of the sunset.

7 Correct answer **B** Easy ‹ Back to question

B A previously unseen behavior of gray seals

Choice B is the best answer because it most accurately states the main topic of the text. The text begins by noting that few animals are known to spit, and then it focuses on Clare Jacobs's January 2022 observation of a gray seal spitting water at a white-tailed eagle. The text explicitly notes that this behavior had never before been observed in seals, highlighting that this was a previously unseen behavior. The text concludes with biologist Sean Twiss's hypotheses about why the seal might have been spitting. Thus, the main topic is the observation of a previously unseen behavior (spitting) of gray seals.

Choice A is incorrect because while the text does mention bird-watcher Clare Jacobs making an observation in southern England, bird-watching itself is not the main topic. The reference to bird-watching is incidental to the central focus of the novel behavior of a gray seal spitting water at an eagle. **Choice C is incorrect** because the text only mentions a white-tailed eagle as the target of a seal's spitting behavior; it doesn't provide any information about how these eagles typically behave when defending territory or interacting with other predators. **Choice D is incorrect** because the text doesn't discuss differences between gray seals and white-tailed eagles. While both animals are mentioned, the text is focused on the seal's unusual spitting behavior rather than comparing the two animals in any way.

8 Correct answer **D** Easy ‹ Back to question

D As the director of the FTP, Flanagan succeeded in creating many jobs and introducing people to theater.

Choice D is the best answer because it most accurately states the main idea of the text. The text begins by stating that Flanagan was chosen in 1935 to lead the Federal Theatre Project (FTP), which was part of a program created by President Franklin D. Roosevelt. The text then explains that as the director of the FTP, Flanagan created jobs for more than 12,500 theater professionals and ensured that ticket prices stayed low so that many people could afford to experience theater for the first time. Thus, the main idea of the text is that as the FTP's director, Flanagan succeeded in creating many jobs and introducing people to theater.

Choice A is incorrect. The text does suggest that jobs provided by the FTP were intended mainly for theater professionals, but this isn't the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, with the text's main point being that Flanagan succeeded in creating many jobs and introducing people to theater. **Choice B is incorrect**. The text does state that President Roosevelt created the WPA to provide jobs for unemployed people, but this is supporting information, not the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, which was part of the WPA, and the text's main point is that Flanagan succeeded in creating many jobs and introducing people to theater. **Choice C is incorrect**.

It's true that many people couldn't afford to buy theater tickets during the Great Depression, but this isn't the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, with the text's main point being that Flanagan succeeded in creating many jobs and introducing people to theater.

9 Correct answer **D** Easy Back to question

D Research has revealed that an oddity in the rotation of Mimas could be explained by an ocean hidden beneath its surface.

Choice D is the best answer. The study isn't definitive, but it says that Mimas's wobbly rotation could be explained by the hidden ocean.

Choice A is incorrect. This choice goes too far beyond the information in the text. Rhoden's team proposed that one moon of Saturn could have a liquid ocean beneath its surface, and that other moons should also be examined, but no one has confirmed anything. **Choice B is incorrect**. This choice conflicts with the text. Research has identified at least one sign—the unusual wobble in Mimas's rotation—that might be due to a hidden ocean beneath its surface. **Choice C is incorrect**. This choice doesn't reflect the text. The computer model studies "gravitational interactions," which seem to account for the wobbly rotation of Mimas.

10 Correct answer **D** Easy Back to question

D Mary feels very satisfied when she's taking care of the garden.

Choice D is the best answer because it most accurately states the main idea of the text. The text describes Mary's activities in an overgrown hidden garden, saying that she was "very much absorbed" and was "only becoming more pleased with her work every hour" rather than getting tired of it. She also thinks of garden activities as a "fascinating sort of play." Thus, the main idea of the text is that Mary feels very satisfied when taking care of the garden.

Choice A is incorrect because the text never makes any mention of Mary's chores. **Choice B is incorrect** because the text indicates that Mary finds pulling up weeds to be fascinating, not boring. **Choice C is incorrect** because Mary thinks of garden activities in and of themselves as play, not as something necessary to do to create a space to play.

11 Correct answer **B** Easy Back to question

B Researchers think that shimmering in giant honeybees is a specific defense against hornets.

Choice B is the best answer. The text describes a study about how giant honeybees use shimmering to defend against hornets, but not other predators. The researchers conclude that shimmering could be a specialized defense response to hornets.

Choice A is incorrect. The text says that giant honeybees don't appear to use shimmering against other, larger predators. However, it never suggests that researchers don't know which other defenses giant honeybees do use for those predators. **Choice C is incorrect**. The text says that hornets are one predator of giant honeybees, but it doesn't say that hornets are the main predator of giant honeybees. This choice also fails to mention "shimmering," which is a major focus of the text. **Choice D is incorrect**. The text only discusses the shimmering of giant honeybees—it doesn't discuss other insects' defense responses at all.

12 Correct answer **D**

Easy

‹ Back to question

D Ecologists predict that corals store large amounts of microplastics from ocean waters.

Choice D is the best answer. The text describes a study about how reef-building corals capture microplastics from ocean waters, which found that these corals are storing 20 million kilograms of microplastics in their skeletons and tissues.

Choice A is incorrect. While the researchers are studying "reef-building corals," the focus of their study isn't how the corals build the reefs. Rather, they're studying how corals may be storing microplastics from ocean waters. **Choice B is incorrect**. The text doesn't mention any unanswered questions about the impact of corals on ocean ecosystems—rather, the study assesses one interaction between corals and microplastics. **Choice C is incorrect**. The text does say this, but it's a detail—not the main idea. The main idea of the text is about the study that found that corals may be storing microplastics from ocean waters in their skeletons and tissues.

13 Correct answer **D**

Easy

‹ Back to question

D An experiment showed that the way rewards are given out may affect whether young children think the situation is fair.

Choice D is the best answer. The text describes a study assessing how children think of rewards and fairness and its results. It concludes that the children in the study may have thought that a teacher who counted out loud when giving rewards cared more about fairness than a teacher who did not count out loud.

Choice A is incorrect. The children in the study are described as being "four to six," and the text doesn't mention any differences among the different ages. **Choice B is incorrect**. The experiment wasn't about teaching math—rather, it was about how counting out loud affected the children's perception of fairness. **Choice C is incorrect**. The experiment doesn't focus on whether the children care about fairness, and the text never mentions the children's expectations of being rewarded.

14 Correct answer **D**

Easy

‹ Back to question

D Alspaugh's scrapbook provides a detailed account of her life and historical record of fashion trends in the nineteenth-century United States.

Choice D is correct. The text describes how Alspaugh's scrapbook is both a record of her life and a historical record of nineteenth-century textiles and dressmaking.

Choice A is incorrect. The text says that it was common for American women to keep scrapbooks of fabric pieces in the nineteenth century, and it says that Alspaugh was one of these women. However, it never says that other women were inspired by Alspaugh. **Choice B is incorrect**. This is too general and too strong. The text says that Alspaugh's scrapbook is a historical record of nineteenth-century textiles and dressmaking, but it never says that historians rely on such scrapbooks in general to understand how fashions changed throughout that time period. This choice also fails to even mention Alspaugh, who is the real focus of the text. **Choice C is incorrect**. The text does say this, but it's a detail—not the main idea. The text is mainly about one woman's scrapbook (Alspaugh's), and this choice doesn't even mention her.

15 Correct answer **B**

Easy

‹ Back to question

B Fossil evidence can contribute to the understanding of the nervous system in ancient arthropods.

Choice B is the best answer because it most accurately states the main idea of the text. The text states that researchers have used fossils to learn about the nervous systems of ancient arthropods. It then provides a specific example of researchers

studying fossils of *Mollisonia symmetrica* and finding evidence of a nerve cord and possibly a synganglion (a brain-like mass of nerves). The text concludes by noting that researchers hope to discover more features of prehistoric arthropods' nervous systems "as additional fossils are found." Thus, the main idea of the text is that fossil evidence can contribute to the understanding of the nervous system in ancient arthropods.

Choice A is incorrect because the text doesn't compare the brains of hawk moths and brine shrimp. These animals are merely mentioned as examples of arthropods in the opening sentence, and the text doesn't go on to discuss any similarities between their brains. **Choice C is incorrect** because the text discusses nervous systems, not spines, in ancient arthropods, and it doesn't specifically mention findings about ancient hawk moths or brine shrimp. **Choice D is incorrect**. While the text concludes by noting that researchers aim to discover additional characteristics of prehistoric arthropods' nervous systems as more fossils are uncovered, this statement doesn't suggest that researchers need to focus on finding more fossils. Rather, it simply indicates that researchers expect to learn more about this topic as additional fossils are discovered. Moreover, the statement is just a detail that supports the main idea; it's not the main idea itself.

16 Correct answer **C** Easy Back to question

C Although Ngũgĩ's decision to write in Gĩkũyũ was met with some skepticism, it didn't prevent him from achieving literary success.

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by explaining that Kenyan writer Ngũgĩ wa Thiong'o had published four novels in English before he began writing in his native language, Gĩkũyũ, in the 1970s. The text then explains that fellow writers and critics were skeptical of this decision, warning that the choice to publish in his native language, which the text implies isn't widely understood, would limit his readership. The text concludes by stating that despite those warnings, Ngũgĩ proceeded to publish several acclaimed novels in Gĩkũyũ that were translated into several languages, suggesting that Ngũgĩ's works in Gĩkũyũ achieved literary success in the forms of critical recognition and a wide international readership. Thus, the main idea is that although Ngũgĩ's decision to write in Gĩkũyũ was met with some skepticism, this choice didn't prevent him from achieving literary success.

Choice A is incorrect because it contradicts the description of Gĩkũyũ provided in the text. Rather than indicating that Gĩkũyũ is a widely understood language, as this choice claims, the text states that colleagues cautioned Ngũgĩ that writing in Gĩkũyũ instead of English "might make his works inaccessible outside his own community." Furthermore, the text contrasts the choice of Gĩkũyũ with another alternative to English, Kiswahili, which the text indicates is "a more practical choice" given that it is "widely spoken in Kenya and elsewhere in Africa." **Choice B is incorrect** because it contradicts information in the text. Although the text states that the novels Ngũgĩ published in Gĩkũyũ were later translated into other languages, the text explicitly states that Ngũgĩ had previously published four novels in English before he began writing in Gĩkũyũ in the 1970s. Thus, his first works were published in English, not Gĩkũyũ. **Choice D is incorrect**. The text doesn't address what motivated Ngũgĩ's choice to publish in his native Gĩkũyũ, and nothing in the text suggests that he intended for other authors to follow his example.

17 Correct answer **A** Easy Back to question

A Although their parents believe the house has several drawbacks, the children are enchanted by it.

Choice A is the best answer. The text lists complaints about the house made by the mother and father, but then it says that the children thought the house was a "Fairy Palace" and "Earthly Paradise."

Choice B is incorrect. The text states the opposite of this. It describes how the mother and father dislike the house and says the children think the house seems like paradise. **Choice C is incorrect**. This isn't what the text says. Only the children are said to admire the house; mother and father both complain about the house. **Choice D is incorrect**. The text states the opposite of this. It tells us the house was ugly and poorly built ("an architect's nightmare") and suggests the children were tired of London.

18 Correct answer **D**

Medium

Back to question

D Although impractical, the design of the apartment building by Gins and Arakawa may improve the well-being of the building's residents.

Choice D is the best answer because it most accurately states the main idea of the text. According to the text, conceptual artists Gins and Arakawa have designed an apartment building that is disorienting because of several unconventional elements, such as uneven kitchen counters and "a door to nowhere." The text goes on to suggest that there may be benefits to this kind of design because filmmaker Yamaoka lived in the apartment building for four years and reported health benefits. Thus, although the design is impractical, it may improve the well-being of the apartment building's residents.

Choice A is incorrect. Although the text mentions that Yamaoka lived in the apartment for four years, it doesn't address how long someone can beneficially live in a home surrounded by fanciful features or whether doing so can be sustained. **Choice B is incorrect**. Although the text mentions the potential benefits of living in a home with disorienting design features, it doesn't suggest that this is the most effective method to create a physically stimulating environment. **Choice C is incorrect** because the text refers to Yamaoka to support the claim that Gins and Arakawa's apartment building design may be beneficial, but the text doesn't indicate that Yamaoka supports the designs of other conceptual artists.

19 Correct answer **B**

Medium

Back to question

B Barve found an association between habitat temperature and feather structure among Himalayan songbirds, lending new support to a general prediction.

Choice B is the best answer because it most accurately states the main idea of the text. The first sentence of the text introduces the prediction that the structures of birds' feathers vary with habitat temperature and notes that this prediction hadn't been tested in mountain environments. The rest of the text focuses on a study by Barve, an ornithologist. The text indicates that Barve studied feathers of 249 songbird species in habitats at different elevations—and, therefore, different temperatures (as the text establishes that elevation affects temperature)—in the Himalayan Mountains. The text then explains that Barve found that compared to feathers of low-elevation species, feathers of high-elevation species have a greater proportion of warming sections and are of a length that provides more insulation—in other words, feather structure varies with elevation-driven temperature differences. Thus, the main idea of the text is that Barve found an association between habitat temperature and feather structure among Himalayan songbirds and that this finding supports a general prediction that hadn't previously been tested in mountain environments.

Choice A is incorrect because the text specifically focuses on Barve's finding of a relationship between feather structure and elevation—which corresponds to temperature differences—and not on the broader claim that some birds have feathers better suited to regulating body temperature than others, without reference to a consistent pattern. Moreover, Barve's finding supports the prediction presented in the text (that feather structures vary with habitat temperature), and there's no indication that it contradicts any other predictions. **Choice C is incorrect** because the text doesn't indicate that Barve found that songbird species have adapted to their environment by growing feathers without flat and smooth sections; his finding of different proportions of such sections in feathers depending on elevation suggests that they do have flat and smooth sections. Moreover, Barve's finding supports the prediction presented in the text (that feather structures vary with habitat temperature), and there's no indication that it complicates any other earlier hypothesis. **Choice D is incorrect** because the text doesn't mention a comparison of the effects of feather structure and feather length; in fact, the text suggests that length is part of feather structure, since Barve's finding concerning structure addresses proportions of warming downy sections and insulation-providing length. Moreover, the text doesn't refer to an established belief, presenting instead a prediction that hadn't been tested in mountain environments before Barve conducted his study.

20 Correct answer **B** Medium ‹ Back to question

B Why has the pronoun “y’all” become more widely used in the US?

Choice B is the best answer because it presents a question that the text is attempting to answer: why has the pronoun "y’all" become more widely used in the US? The text begins by explaining where and how the plural pronoun "y’all" originated and then goes on to state that its use has been rising in popularity, even in areas outside of its place of origin. The text then attributes this rise in popularity to the fact that many varieties of English do not have a pronoun to address more than one person, and thus "you" must function as both a singular and plural pronoun.

Choice A is incorrect because while the text states that "y’all" is used as a plural of "you" in English, it does not discuss other plural forms of the word. **Choice C is incorrect** because while the text discusses the general origins of the pronoun "y’all," it does not state when the use of the pronoun was first recorded in the English language. **Choice D is incorrect** because though the text addresses the use of the pronoun "y’all" within English-speaking communities in the US, it does not address its use outside of that geographic area.

21 Correct answer **A** Medium ‹ Back to question

A Researchers have obtained the most definitive evidence to date of the existence of the Wigner crystal.

Choice A is the best answer because it most accurately states the main idea of the text. According to the text, Eugene Wigner hypothesized that a crystal could exist that would be composed of electrons and have a honeycomb-like shape. The text goes on to say that the existence of the Wigner crystal remained unconfirmed until Feng Wang and colleagues were able to make an impression of one using two semiconductors and an ultrathin sheet of graphene. Thus, the main idea is that researchers have obtained the most definitive evidence to date of the existence of the Wigner crystal.

Choice B is incorrect because the text focuses on one kind of crystal—the Wigner crystal— and doesn’t discuss crystalline structures in general. And although the text conveys that Wang and colleagues figured out a way to capture an image of a Wigner crystal, it doesn’t address the idea of applying this approach to other types of crystals. **Choice C is incorrect** because the text describes in general the process Wang and colleagues followed to obtain an impression of the Wigner crystal; it doesn’t address the relative importance of each component in that process. **Choice D is incorrect** because the text doesn’t state that researchers had a hard time getting an impression of the Wigner crystal because of its honeycomb structure. Nothing in the text indicates why it took so long to prove the existence of this crystal or take an impression of it.

22 Correct answer **C** Medium ‹ Back to question

C The Black Pearl orchestra gives community members the chance to both listen to and participate in classical music performance.

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by stating that the Black Pearl orchestra performs classical music, and then goes on to explain that the orchestra offers an iConduct! program. According to the text, this program offers community members the opportunity to learn some basics about conducting and then apply what they learn by conducting the orchestra themselves. Thus, the main idea of the text is that community members can both listen to and participate in a classical music performance.

Choice A is incorrect. Although the text states that the Black Pearl orchestra is based in Philadelphia, it doesn’t indicate that most of the music it plays was composed by Philadelphians. **Choice B is incorrect**. Although the text does state that Johnson founded the Black Pearl orchestra, this is just a detail and not the main focus of the text. Moreover, while the text does say that the orchestra sometimes plays music by Montgomery, it doesn’t assert that the orchestra was founded solely for the purpose of performing Montgomery’s work. **Choice D is incorrect**. Although the text explains that community members are invited to

conduct the Black Pearl orchestra after participating in the iConduct! program, the text doesn't indicate that Johnson allows community members to do this for the specific purpose of showing how difficult the task is.

23 Correct answer **C** Medium ‹ Back to question

C The cerebellum has primarily been thought to regulate motor functioning, but in recent years neuroscience researchers have been uncovering additional functions.

Choice C is the best answer. The text says that the cerebellum has long been thought to regulate motor functioning, but new research shows that it may also have other functions—including regulating emotion and social behavior and some connection to motivation and rewards processing.

Choice A is incorrect. The VTA is described as "a center for motivation and reward processing," and the discovery of the pathway between the VTA and the cerebellum supports the theory that the cerebellum is involved in functions other than motor coordination. **Choice B is incorrect**. The text says that recent research has identified this pathway, but it doesn't discuss any previous "widely accepted claims" about the pathway's function. The "widespread acknowledgement" mentioned early in the passage is about the cerebellum alone, not its connection to the VTA. **Choice D is incorrect**. The text never discusses any technological limitations or any new technologies.

24 Correct answer **A** Medium ‹ Back to question

A Even though there have been some changes in their role, jalis continue to preserve their communities' histories.

Choice A is the best answer because it best states the main idea of the text. According to the text, jalis' traditional role has been to maintain information about families' histories and significant events. The text goes on to say that although technological changes have altered jalis' role somewhat, jalis are still valued for preserving the histories of their communities.

Choice B is incorrect because the text says nothing about jalis' views of the various tasks they perform. There is no information to support the idea that many jalis prefer teaching to other tasks. **Choice C is incorrect** because the text doesn't describe jalis as being sources of entertainment. Rather, jalis are presented as valued sources of knowledge. Additionally, the text gives no indication of how long jalis have been serving their communities. **Choice D is incorrect** because the main focus of the text is on jalis' role and their continued value despite the effects of technology, not on what technology can now do. Although the text indicates that jalis' role has changed as a result of technological changes, the text doesn't present any specific information about technology performing tasks that jalis once performed.

25 Correct answer **B** Medium ‹ Back to question

B Taylor draws on local resources in the approach she uses to dye wool.

Choice B is the best answer. It best states the main idea of the text. The text opens with the statement that Taylor uses local plants and vegetables to dye wool. The rest of the text describes how she does this.

Choice A is incorrect. This doesn't state the main idea of the text. The text only mentions one rug: *In the Path of the Four Seasons*, in which reds and browns *are* featured. It never mentions whether or not these colors are featured in her other rugs. **Choice C is incorrect**. This doesn't state the main idea of the text. The text never says that Taylor finds it difficult to locate Arizona dock roots. **Choice D is incorrect**. This doesn't state the main idea of the text. The text never says that *In the Path of the Four Seasons* is widely acclaimed. Rather, it discusses the rug to illustrate the point made earlier in the passage: that Taylor uses local plants and vegetables to dye wool.

26 Correct answer **D**

Medium

‹ Back to question

D *The Fifty-Year Mission* represents a worthwhile attempt to thoroughly recount the history of the *Star Trek* franchise, but its approach has an important limitation.

Choice D is the best answer because it most accurately states the main idea of the text. According to the text, Gross and Altman's book is a "valuable resource" because it's a "complete, uncensored, unauthorized oral history" that features accounts from people involved with "every *Star Trek* television series and film" made. However, the text also points out an inherent shortcoming of the oral history approach used by the book's creators: the lack of an authorial voice that could unify the many accounts into a coherent narrative. Thus, the text's main idea is that while the book's attempt at presenting a comprehensive oral history of the *Star Trek* franchise is a worthwhile one, the approach the creators selected has an important limitation.

Choice A is incorrect. While the goal of the book's creators (providing a comprehensive history of the *Star Trek* franchise) could be described as lofty, the text's criticism of the book is focused on the shortcomings of the oral history form, not on events in the *Star Trek* franchise that were not reflected in the book. **Choice B is incorrect** because the text doesn't suggest that the book includes more accounts from people involved with television shows than with films. In fact, the text explicitly states that the book includes accounts from people involved with "every *Star Trek* television series and film" ever made. **Choice C is incorrect** because the text doesn't indicate that many people involved with the *Star Trek* franchise failed to participate in the book's oral history project. The only mention of the scope of participation states that the book includes accounts "from cast and crew members of every *Star Trek* television series and film to date." This information implies a high level of participation from relevant individuals, not a lack of participation.

27 Correct answer **D**

Medium

‹ Back to question

D Researchers have inferred that Izapa was related to the smaller settlements that surrounded it based in part on the similarity of their construction.

Choice D is the best answer because it most accurately states the main idea of the text. The text indicates that Rosenswig, López-Torrijos, and colleagues concluded that there is a cultural link between the city of Izapa and the 41 smaller settlements they located around the city. According to the text, the researchers reached this conclusion because Izapa and the settlements are of the same age and configuration in that all have a pyramid to the north and a plaza to the south. Thus, the main idea of the text is that researchers have inferred that Izapa was related to the smaller settlements that surrounded it based in part on the similarity of their construction.

Choice A is incorrect. Although the text discusses a similarity between how structures in Izapa and nearby settlements are arranged, the text doesn't indicate that the arrangement in Izapa is based on those of the nearby settlements. **Choice B is incorrect**. Although the text mentions that residents of Izapa and its surrounding settlements may have performed the same cultural ceremonies, the text doesn't discuss the ceremonies' importance for the residents. **Choice C is incorrect**. Although the text describes findings about Izapa, it doesn't specify how much archaeologists have learned about Izapa over the years. Additionally, while the text indicates that the discovery of the 41 smaller settlements surrounding Izapa was made in present-day Chiapas and thus may be of recent date, this is a detail in the text, not its main idea.

28 Correct answer **A**

Medium

‹ Back to question

A Izquierdo's work is not as well-known in the United States as it should be because Kahlo and Rivera draw so much of the public's attention.

Choice A is the best answer because it most accurately states the main idea of the text. The text begins by stating that María Izquierdo was an important figure in the history of twentieth-century Mexican art, but despite her importance, her work hasn't received widespread recognition in the United States. According to the text, one reason for this is that Frida Kahlo and Diego Rivera are so famous in the US that they overshadow other important Mexican artists, including Izquierdo. Thus, the main idea

of the text is that Izquierdo's work is less well known in the US than it should be because Kahlo and Rivera draw most of the public's attention.

Choice B is incorrect because the text doesn't discuss the appearance of Izquierdo's paintings in galleries in the US during her lifetime, nor does it suggest that her paintings were displayed more frequently than paintings by Kahlo or Rivera were. Instead, the text focuses on the fact that Izquierdo has been overlooked in the US because of Kahlo's and Rivera's greater popularity. **Choice C is incorrect** because the text doesn't discuss either the subject matter of Izquierdo's paintings or the techniques she used, nor does it compare these aspects of her paintings with those of Kahlo's and Rivera's paintings. **Choice D is incorrect** because the text doesn't mention how many of Izquierdo's paintings appear in galleries today, nor does it state that she produced only a small number of paintings.

29 Correct answer **C** — Medium — Back to question

C A person appreciates the extensive time he passed in the company of someone he deeply admired.

Choice C is the best answer because it most accurately describes the main idea of the text: a person appreciates the extensive time he passed in the company of a man he deeply admired. The speaker says that he spent "years" (a long period of time) in the company of a "truly great man" with "a natural genius for invention." These phrases indicate the speaker's feelings of admiration.

Choice A is incorrect because though the text indicates that the speaker feels professional admiration for the "truly great man," the text does not indicate that the speaker feels love for him; nor does the text indicate that the speaker's humility, absurdity, and slovenly nature proved to be an obstacle to this professional relationship. **Choice B is incorrect** because though the speaker describes himself as humble, the text does not indicate that he is exceptionally talented; nor does the text indicate that the "truly great man" professes humility or is concerned with whether he intimidates others. **Choice D is incorrect** because the text does not indicate how either the speaker or the "truly great man" express their ideas.

30 Correct answer **A** — Medium — Back to question

A Researchers think that the ridges on Europa and the ridges in Greenland may have been formed by the same process even though Europa, unlike Greenland, doesn't have liquid water on its surface.

Choice A is the best answer because it accurately states the main idea of the text. The text focuses on formations of parallel ice ridges on Jupiter's moon Europa that are said to be formed by the same mechanism that formed a parallel set of ridges on Greenland's ice sheet. The text indicates that in Greenland, water on the surface seeps to the lower portion of the ice sheet, resulting in uplift that creates the ridges, and it states that although Europa lacks liquid water on its surface, the same process could be driven by an ocean below Europa's surface. In other words, the main idea of the text is that parallel ridges in the ice on Europa and Greenland are likely caused by similar processes even though in Greenland the process begins with liquid water on the surface while Europa lacks liquid water on the surface.

Choice B is incorrect because the text states outright that the ridges on Europa are parallel and furthermore refers to Greenland's ridges as "strikingly similar" to those on Europa. **Choice C is incorrect** because the text makes no mention of when any of the ice ridges formed, either separately or relative to one another. **Choice D is incorrect** because the text does not indicate any uncertainty about the reason for the ice ridges on Europa and, in fact, clearly states that researchers now claim to know the mechanism that created the ridges.

31 Correct answer **D** Medium Back to question

D The Aspera mission is expected to produce the first direct observations of CGM gas in the "warm-hot" phase, which likely has an important role in the evolution of galaxies.

Choice D is the best answer because it most accurately states the main idea of the text. The text begins by mentioning NASA's Aspera mission, which will investigate the low-density gas that makes up the circumgalactic medium (CGM). According to the text, this mission will focus on a portion of the CGM's gas that exists in a "warm-hot" phase; this "warm-hot" gas has not been previously observed, but it is thought to make up most of the mass of galaxies and play a part in star formation. Finally, the text mentions a telescope capable of examining this previously unobservable "warm-hot" gas: the Aspera mission will use this telescope in the hope of answering questions about galaxy formation and change. Therefore, the main idea of the text is that the Aspera mission is likely to produce the first direct observations of CGM gas in the "warm-hot" phase, which likely has an important role in the evolution of galaxies.

Choice A is incorrect. Although this choice mentions the Aspera mission, names its leader, and generally states the mission's purpose, it does not reference the "warm-hot" gas or fully convey the reason why the Aspera mission is significant. **Choice B is incorrect**. Although this choice mentions the "warm-hot" gas that makes up a portion of the CGM, it does not reference the Aspera mission or describe its importance. The text also does not mention that galaxies surrounded by the CGM have been studied. **Choice C is incorrect**. Although this choice describes a problem related to the CGM that researchers have been attempting to solve and presents the speculation of those researchers, it does not mention the Aspera mission or describe its purpose.

32 Correct answer **A** Medium Back to question

A Farmer's methods and research have enriched the historical understanding of the Black Power movement and Black women's contributions to it.

Choice A is the best answer. It best describes the main idea of the text. The text starts by saying that historians of the Black Power movement are too reliant on openly ideological works, which were written mostly by men, as sources. The text then describes Farmer's research: she has shown that including other kinds of sources leads to a better understanding of the Black Power movement and the role Black women played in it.

Choice B is incorrect. This doesn't describe the main idea of the text. In fact, it conflicts with the text. The text says that historians have relied on "essays and other explicitly ideological works," which suggests that they *have* studied at least some of the intellectual dimensions of the Black Power movement. **Choice C is incorrect**. This doesn't describe the main idea of the text. The text never mentions how other historians of the Black Power movement view Farmer's use of unconventional sources. In fact, the text itself argues in favor of Farmer's research, claiming that it has led to a "much better understanding of the movement." **Choice D is incorrect**. This doesn't describe the main idea of the text. The text never mentions what any figures in the Black Power movement thought about women's roles in the movement.

33 Correct answer **A** Medium Back to question

A He often depicts the subjects of his sculptures using an unrealistic style.

Choice A is the best answer because it most accurately states the main idea of the text. According to the text, many of Richard Hunt's sculptures "use broad forms rather than extreme accuracy"—in other words, they are more abstract than realistic. To illustrate Hunt's abstract approach, the text characterizes his sculpture of Arachne as "vaguely human" and his work in honor of Ida B. Wells as "using mainly flowing, curved pieces of metal that create stylized flame." Thus, the main idea is that Hunt often depicts the subjects of his sculptures using an unrealistic style.

Choice B is incorrect. Although the text indicates that one of Hunt's sculptures is made of steel and another of bronze, there is no mention of why he chose these materials. **Choice C is incorrect** because the text says nothing about how Hunt chose the subjects for his sculptures. Furthermore, of the two examples provided in the text, only Ida B. Wells is an important historical figure; Arachne is a "mythical character." **Choice D is incorrect** because the text says nothing about how Hunt's style changed over time. In fact, although the two examples of Hunt's work discussed in the text were created 65 years apart, they are both described as heavily stylized rather than realistic, which may suggest that some aspects of Hunt's style haven't changed over that time.

34 Correct answer **B** Medium Back to question

B The narrator and his companions are completely absorbed in the change in perspective they gain while riding in the balloon.

Choice B is the best answer because it most accurately states the main idea of the text. The narrator describes the view he and his companions have from the balloon: the earth lies beneath "milky vapors," and the balloon itself looks like another moon. The narrator goes on to explain how the people riding in the balloon are affected by the ride, explaining that they are immersed in the experience: floating along in "delicious inertia," or inactivity, like "silent, joyous, irresponsible beings." Thus, the main idea is that the narrator and his companions are completely absorbed in the change in perspective they gain while riding in the balloon.

Choice A is incorrect because the narrator never describes himself as feeling isolated from his companions; instead, he characterizes riding in the balloon as an experience he is sharing with them. And although he does imply a sense of isolation, it is isolation from those on the ground, as when he says of himself and his companions, "We are now alone." **Choice C is incorrect** because the narrator doesn't suggest that he or his companions are troubled by the effects of the balloon ride. Instead, he describes himself and his companions as "joyous" and the experience of floating in the balloon as "delicious." **Choice D is incorrect** because nothing in the text suggests that the narrator is surprised by his companions' response to the balloon ride. In fact, the text indicates that the narrator and his companions are having the same experience: they're described as "silent" and "motionless," rather than as having unrestrained enthusiasm.

35 Correct answer **C** Medium Back to question

C With the help of a special tool, researchers have determined the likely origin of bowls recovered from a shipwreck.

Choice C is the best answer because it most accurately states the main idea of the text. According to the text, thousands of ceramic bowls were found in a recovered Chinese shipwreck. The text goes on to say that Niziolek and her team used a special tool, a portable X-ray fluorescence analyzer, to determine the bowls' chemical signatures. Comparing these chemical signatures with the chemical signatures of materials they had collected from old Chinese kiln sites, the text says, allowed the researchers to identify which kilns had produced the bowls. In other words, the researchers determined the bowls' origin.

Choice A is incorrect. Although the text indicates that the researchers used technology in the form of a portable X-ray fluorescence analyzer, it doesn't specifically state that this technology is new. In addition, the text says that Niziolek and her team used the tool to determine the chemical composition of bowls that were found in a Chinese shipwreck, not to locate and recover the shipwreck itself. There's no indication in the text that a new technology can help researchers locate and recover shipwrecks. **Choice B is incorrect** because the text indicates that the researchers collected materials from old kiln sites for chemical comparison with the ceramic bowls, which means that the researchers must have already known the location of those kiln sites. Rather than identifying the location of the kilns, the researchers determined which kilns in operation 1,000 years ago had likely produced the bowls that were found in the shipwreck. **Choice D is incorrect**. Although the text says that using a portable X-ray fluorescence analyzer tool enabled Niziolek and her team to analyze artifacts in the form of ceramic bowls without damaging them, the text doesn't discuss how researchers analyzed artifacts before this tool was invented. Moreover, the point that the bowls were left undamaged isn't the text's main idea. Rather, it's a detail that's provided to develop the main idea, which is that the researchers used a special tool to determine where the bowls had been produced.

36 Correct answer **B** Medium ‹ Back to question

B Because the speaker did not anticipate how important a relationship would become, she cannot recall how the relationship began, which she regrets.

Choice B is the best answer. The speaker says that they wish they could remember when they first met someone, but they can't remember the meeting at all, because they didn't know at the time that the relationship would "blossom" later on.

Choice A is incorrect. The speaker does say that the relationship has "blossomed" over time, but only briefly at the end—and they don't really "celebrate" that fact. Rather, the text has a more regretful tone: it's about how the speaker can't remember first meeting this person, and they wish they could. **Choice C is incorrect**. The speaker doesn't mention an anniversary—in fact, the speaker can't remember when they met the person they're talking about. **Choice D is incorrect**. The speaker doesn't say that they neglected the relationship. In fact, the speaker suggests that the relationship has become very important to them—that's why the speaker wishes that they could remember their first meeting.

37 Correct answer **B** Medium ‹ Back to question

B A runestone found in Norway

Choice B is the best answer because it most accurately states the main topic of the text. The text begins by stating that archaeologists in Norway have discovered what may be the oldest known runestone (a stone with an inscription in the runic alphabets used in the region in ancient times). According to the text, the object was created between 1 and 250 CE. The text then mentions a researcher who comments on the runestone's significance to the study of runic alphabets. Thus, the main focus throughout the text is a runestone found in Norway.

Choice A is incorrect because the text mentions the Iron Age only to indicate the era when the runestone was created and when runic alphabets were in use; there's no discussion of battles during this era. **Choice C is incorrect** because the text mentions the carbon dating method just once and does so only to indicate the age of the runestone; moreover, the text doesn't suggest that this method is new. **Choice D is incorrect**. Although the text indicates that Zilmer is a runologist, or a scholar of runestones, it does so in a single sentence, so Zilmer's scholarly interests are therefore not a primary focus of the text.

38 Correct answer **D** Medium ‹ Back to question

D Medina-Alcaide and her team tested Paleolithic light sources and learned some details about how Paleolithic artists traveled within dark caves.

Choice D is the best answer because it most accurately states the main idea of the text. The text indicates that archaeologist Mª Ángeles Medina-Alcaide and her team used replicas of Paleolithic light sources to understand how Paleolithic artists moved through dark caves. The researchers learned, for example, that torches were more helpful for moving through caves than animal-fat lamps were. Thus, the main idea of the text is that Medina-Alcaide and her team tested Paleolithic light sources and learned some details about how Paleolithic artists traveled within dark caves.

Choice A is incorrect because the text doesn't address the usefulness of fireplaces for Paleolithic cave artists; it only mentions fireplaces briefly as one of the three lighting methods the researchers tested. **Choice B is incorrect** because the text doesn't discuss how often Paleolithic cave artists used each kind of light source tested. Although the text does compare animal-fat lamps with another lighting method, the point of that comparison is that animal-fat lamps were less useful than torches when walking, not that one method was used more often than another. **Choice C is incorrect** because the text doesn't discuss either how difficult it was for Medina-Alcaide and her team to replicate light sources or how the team felt about drawing conclusions from their study. Instead, the text reveals that the team was able to conclude that each light source likely had a distinct purpose.

39 Correct answer **C** Medium Back to question

C Research suggests that users with high expectations for a new technology can feel content with that technology even after experiencing negative disconfirmation.

Choice C is the best answer. The passage begins by describing the study, and concludes with its results: "many users employed cognitive mechanisms to mitigate those feelings [of negative disconfirmation]."

Choice A is incorrect. This is the opposite of what the text claims. Rather, the researchers found that "many users" reversed "their initial sense of disappointment." **Choice B is incorrect**. This choice doesn't reflect the text. What the expectations of smart home tech users are is not discussed. **Choice D is incorrect**. This choice doesn't reflect the text. How often these topics have been studied is not mentioned.

40 Correct answer **D** Medium Back to question

D Buck holds Thornton in higher regard than any other person.

Choice D is the best answer because it most accurately states the main idea of the text. After establishing that Buck views most people "as nothing," the text explains that Buck won't acknowledge people other than Thornton unless they appear friendly toward Thornton, and even then he's only reluctantly accepting. Thus, the text focuses on the idea that Thornton has a special status in Buck's mind, with Buck holding him in higher regard than other people.

Choice A is incorrect because the text conveys that Buck isn't social with people other than Thornton but doesn't address Buck's life or temperament before he lived with Thornton. **Choice B is incorrect** because the text conveys that Buck doesn't really care about people other than Thornton and is aloof toward them. However, there's no indication that Buck mistrusts and avoids people generally; indeed, he accepts Thornton, who is a human. **Choice C is incorrect** because the text refers to random travelers praising and petting Buck and Thornton's partners giving Buck favors, but there's no indication that any of these people are Thornton's friends or that they have a particular fondness for Buck.

41 Correct answer **A** Medium Back to question

A The slimy threads that hagfish release might help researchers create a new kind of fabric.

Choice A is the best answer. The text first describes hagfish slime and its properties, then it transitions to talking about the possibilities of using lab-made equivalents to use in eco-friendly fabrics.

Choice B is incorrect. The text says the opposite of this choice. The researchers are developing an alternative to petroleum-based fabric. **Choice C is incorrect**. This choice is too narrow to be the main point of the text. Only one line describes how farming would be "potentially harmful" to the hagfish. **Choice D is incorrect**. This choice isn't supported by the text. We don't know from the text whether being jawless makes the hagfish more vulnerable.

42 Correct answer **A** Medium Back to question

A Smart-Grosvenor's unconventional book *Vibration Cooking: or, the Travel Notes of a Geechee Girl* is an important contribution to food writing.

Choice A is the best answer because it most accurately states the main idea of the text. The text describes the book *Vibration Cooking: or, the Travel Notes of a Geechee Girl* as Smart-Grosvenor's "most influential project" and as "unusual for its time." The text also notes that the book and author have influenced contemporary approaches to writing about food and cooking.

Therefore, the text mainly conveys that *Vibration Cooking: or, the Travel Notes of a Geechee Girl* is an unconventional and important contribution to food writing.

Choice B is incorrect. Although the text mentions that Smart-Grosvenor worked in national public television and radio and was a food writer, these details aren't the main focus. Rather than focusing on Smart-Grosvenor's various jobs, the text focuses specifically on one specific book she wrote. **Choice C is incorrect**. Although the text suggests that *Vibration Cooking: or, the Travel Notes of a Geechee Girl* was groundbreaking, it doesn't suggest that the book didn't receive praise when it was published. In fact, the text states that the book is "long admired." **Choice D is incorrect** because the text states that Smart-Grosvenor was a culinary anthropologist and that her book influenced later approaches to food writing but doesn't indicate that Smart-Grosvenor or her book influenced people to begin cooking for themselves.

43 Correct answer **A** Medium Back to question

A Using multiple data sources can enhance the ability of sellers in the fashion industry to anticipate demand.

Choice A is the best answer because it most accurately states the main idea of the text. The text explains that fashion retailers face challenges in forecasting product demand due to rapidly changing tastes and lengthy manufacturing times. It then presents research by Fu and Fisher showing that combining retailers' own data with social media information significantly improves forecast accuracy. The text concludes by noting that better predictions help retailers meet demand without becoming overstocked. Thus, the main idea is that using multiple data sources (retailers' own data combined with social media information) can enhance fashion retailers' ability to anticipate demand.

Choice B is incorrect because the text doesn't claim that social media is revolutionizing, or fundamentally changing, how sellers and researchers view the fashion industry. The text never addresses the way the fashion industry is viewed; rather, it discusses a practical approach sellers in the industry can take to better match production with demand. **Choice C is incorrect**. Although avoiding overstocking is mentioned as a benefit of an approach that can help fashion sellers better predict demand, the text doesn't focus on overstocking or characterize it as the main concern of sellers. Rather, the text is focused on discussing the approach itself. **Choice D is incorrect** because the text suggests that fashion sellers encounter obstacles when using their own data to try to forecast demand as tastes and styles change; the text focuses on the idea that instead of using their own data alone, retailers should combine their own data with social media information to more accurately forecast demand.

44 Correct answer **D** Medium Back to question

D A study shows that the type of device people use to complete online surveys affects how they interact with these surveys.

Choice D is the best answer because it most accurately states the main idea of the text. The text opens by noting that online surveys are usually designed for PCs but that more people now use smartphones to take them—a shift, the text proposes, that may affect how participants interact with the surveys. The text then describes study findings—PC users were more likely to multitask but also more likely to complete surveys than smartphone users were—as evidence to illustrate the overall point that device type does indeed change how participants behave when responding to surveys. Thus, the text as a whole conveys the idea that according to a study, the type of device people use to complete online surveys affects how they interact with these surveys.

Choice A is incorrect. Although the text notes that more people are using smartphones than PCs for surveys, it doesn't indicate why people are making this choice, much less suggest that convenience is a factor in this shift. The text focuses on the consequences of the shift in device usage, not on its causes. **Choice B is incorrect**. Although the text reports that PC users were more likely to complete surveys than smartphone users were despite also being more likely to multitask while taking the surveys, it doesn't frame the study as an inquiry into the reasons for these differences in completion rates. Instead, the text presents these findings to illustrate how device type affects survey participants' interactions with online surveys. **Choice C is incorrect**. Although the text states that online surveys are commonly used in research, the text doesn't discuss whether

researchers prefer online surveys over other data collection methods, nor does it indicate that online surveys are more reliable than alternative methods. Rather, the text focuses on how different devices affect the way participants interact with online surveys.

45 Correct answer **A** — Hard — Back to question

A Literary theorist Mikhail Bakhtin argued that there are important characteristics of narratives that are not fully encompassed by two concepts that other theorists have used to analyze narratives.

Choice A is the best answer because it most accurately states the main idea of the text. The text begins by explaining that many literary theorists rely on the concepts of *fabula* (a narrative's content) and *syuzhet* (a narrative's arrangement and presentation of events) and illustrates these concepts by explaining how they can be applied to the film *The Godfather Part II*. The text then discusses how Mikhail Bakhtin, a literary theorist, argued that *fabula* and *syuzhet* can't fully describe a narrative, since systematic categorizations such as these fail to account for all the ways in which interactions between the artist, the work, and the audience produce meaning. Thus, the main idea is that Bakhtin argued that there are important characteristics of narratives that are not fully encompassed by two concepts that other theorists have used to analyze narratives.

Choice B is incorrect because according to the text, Mikhail Bakhtin believed that meaning was created through the interactions of the artist, narrative, and audience, not simply through the interaction between the audience and narrative; moreover, the text doesn't address whether Bakhtin focused on the ways in which different people interpret narratives differently. **Choice C is incorrect**. Although the text implies that the storytelling methods used in *The Godfather Part II* are complicated, it discusses the film only to illustrate how the concepts of *fabula* and *syuzhet* may be applied to a narrative. The film's storytelling methods aren't the primary focus of the text. **Choice D is incorrect**. The text discusses *The Godfather Part II*, whose narrative doesn't adhere to a single chronological order, only to illustrate the concepts of *fabula* (a narrative's content) and *syuzhet* (a narrative's arrangement and presentation of events). The primary focus of this text isn't the structure of this film or of other narratives that are told out of chronological order; moreover, the text doesn't consider whether such structures make it harder for audiences to understand narratives.

46 Correct answer **C** — Hard — Back to question

C Although one might expect that foreign investment would increase as natural-resource extraction makes up a larger share of developing countries' economies, the opposite happens because heavy reliance on natural resources can lead to unattractive conditions for investors.

Choice C is the best answer because it accurately states the main idea of the text. According to the text, contrary to what some might expect, foreign investment is typically lower in developing countries whose economies are more dependent on natural-resource extraction. The text explains that high reliance on natural-resource extraction can subject a developing country to economic shocks that can destabilize the local currency and introduce economic uncertainty that tends to keep investors away. In other words, although we may think otherwise, foreign investors are less willing to invest in projects in developing countries whose economies are heavily dependent on natural-resource extraction because those economies tend to exhibit instability that investors want to avoid.

Choice A is incorrect. The text does indicate that foreign investment is typically lower in developing countries whose economies are more dependent on natural-resource extraction; the text further indicates that natural-resource extraction requires substantial initial investments (to acquire things like required technologies) for which there are fewer investors willing to participate at this stage than one might think. But the text does not implicate the cost of these initial investments as a reason why foreign investment is less widely available than some might think. **Choice B is incorrect**. The text indicates that greater dependence on natural-resource extraction makes a developing country less appealing to foreign investors because of associated economic instability. Rather than arguing that the goal of developing countries is to become less dependent on foreign investment, as the phrasing of choice B suggests, the text focuses only on why foreign investors become less involved with such countries, which suggests that more investment would be preferable. **Choice D is incorrect**. Although the text indicates that natural-resource extraction requires substantial initial investments (to acquire things like required technologies)

and that there are fewer likely investors willing to participate at this stage than one might think, the text does not address what investors are likely to do over time as the industry stabilizes itself.

47 Correct answer **D** Hard Back to question

D Although the claim of a late ninth- through early eleventh-century composition date for *Beowulf* has some plausibility, advocates for the claim have not compellingly addressed evidence suggesting an earlier date.

Choice D is the best answer because it most accurately states the main idea of the text. The text states that some scholars have dated the composition of *Beowulf* to the late ninth through early eleventh centuries due to the poem's fit with that period's historical context. The text goes on to say that while it is "not inconceivable that *Beowulf* emerged from such a context"—that is, it is possible that *Beowulf* was composed during the late ninth through eleventh centuries—there is linguistic evidence that the poem was composed earlier, in the seventh or eighth century. According to the text, favoring the historical context over the linguistic evidence requires justification that scholars have not yet supplied. In other words, the text suggests that scholars who favor the later composition date need to explain why the poem's fit with historical context should take precedence over the linguistic evidence, but they have not yet done so. Thus, the main idea of the text is that while there is some plausibility to the later composition date, advocates for the later date have not compellingly addressed evidence suggestive of an earlier date.

Choice A is incorrect because the text says that scholars who date the poem to the late ninth through early eleventh centuries have failed to account for the linguistic evidence that the poem may have been composed earlier, not that the evidence those scholars cite in favor of their view is unreliable or that anyone has cast doubt on that evidence. In other words, the text does not suggest that there are problems with the evidence cited by advocates of the later composition date, only that there is other evidence of an earlier composition date that those advocates need to consider. **Choice B is incorrect** because nothing in the text suggests that those scholars who date the poem to the late ninth through early eleventh centuries are giving priority to a controversial view of the social conditions at that time. The text makes no reference to any controversy about how scholars interpret that historical period. Instead, the text suggests that scholars who date the poem on the basis of its fit with the historical context of England in the late ninth through early eleventh centuries have failed to account for linguistic evidence that the poem may have been composed earlier. **Choice C is incorrect** because the text says nothing about how well the poem fits the historical context of England in the seventh and eighth centuries, let alone that it fits that historical context as well as it fits the historical context of the late ninth through early eleventh centuries. Rather, the text says that there is linguistic evidence that the poem may have been composed in the seventh or eighth century.

48 Correct answer **B** Hard Back to question

B Although theoreticians were justified in studying antigravity before the release of the 2023 report, the report's findings suggest that the rationale for theoretical consideration offered in the 2022 paper by Dimopoulos et al. is no longer applicable.

Choice B is the best answer because it most accurately states the main idea of the text. The text begins by acknowledging that in 2022, Dimopoulos et al. were justified in arguing for antigravity on theoretical grounds because although there was no experimental evidence supporting its existence at that time, there was no evidence contradicting its existence either. The text then introduces the 2023 report describing an experiment that produced observations "thoroughly inconsistent with antigravity." Thus, the main idea is that while the study of antigravity was theoretically justified before the 2023 report (due to lack of evidence against it), the report's findings undermine the rationale for such theoretical consideration since there is now evidence against this hypothetical phenomenon.

Choice A is incorrect. Although antihydrogen ballistics observations were conducted at CERN, the text provides no evidence that they were conducted to test conclusions in Dimopoulos et al.'s 2022 paper. Rather, the text presents the 2023 report as new evidence that contradicts the existence of the hypothetical phenomenon that Dimopoulos et al. had considered. **Choice C is incorrect** because the text doesn't suggest that Dimopoulos et al. assumed that unambiguous proof of antigravity would be unattainable. Rather, the text states that they argued antigravity was worth considering theoretically because evidence against it was lacking at that time. At the same time, the results in the 2023 report do not undermine but strengthen the idea that the

proof of antigravity might not be achievable. **Choice D is incorrect** because the text doesn't suggest that there was an "inordinate focus on theoretical considerations" before 2023 or that such a focus hindered the development of experimental methods. In fact, the text describes Dimopoulos et al.'s position regarding the theoretical consideration of antigravity as "rightly argued," indicating approval of their approach given the absence of experimental evidence at that time.

49 Correct answer **B** — Hard — Back to question

B Research fails to confirm a commonly held belief about dog breeds and behavior.

Choice B is the best answer because it most accurately states the main idea of the text. The text indicates that dog owners typically claim that some dog breeds are "more likely than others to have particular personality traits." In other words, the text points out that a commonly held belief about dog breeds is that their personality traits are heritable. The text then states that Kathleen Morrill and colleagues undertook research about dog trait heritability and found that "behavior varies widely among dogs of the same breed." Because Morrill and colleagues found evidence for variability rather than consistency in the behavior of dogs of the same breed, the statement that research fails to uphold a commonly held belief about dog breeds and behavior accurately reflects the main idea of the text.

Choice A is incorrect. Although the text mentions that humans have long intervened in dogs' reproduction by intentionally crossbreeding certain dogs, it doesn't argue that such intervention is essential to the existence of dog breeds. **Choice C is incorrect** because the text doesn't discuss the popularity of any dog breeds; breeds are mentioned as having certain traits, but the text says nothing about the popularity of these breeds or traits. **Choice D is incorrect**. Although the text briefly mentions that Morrill and colleagues conducted a study about dog traits using both surveys and DNA sequencing, this is not the main focus of the text. The text concerns the study's results about the heritability of dog traits, not the particular methodology used by Morrill and colleagues.

50 Correct answer **C** — Hard — Back to question

C Richard indicates that he has pretended to be aggrieved about Clarence's situation and has proclaimed it to be the fault of the queen and her allies, but in reality, he has caused the hostility the king feels toward Clarence.

Choice C is the best answer because it accurately describes what happens in the text. Richard admits he committed "the wrong" and blames others for his own "secret mischiefs." He reveals that he has "cast [Clarence] in darkness" (that is, caused his imprisonment) but feigns grief—"I do beweep"—before "many simple [gullible people]," namely Derby, Hastings, and Buckingham. He tells them that the queen and her allies are the

ones who turned the king against Clarence. Richard's use of "beweep" and his labeling of his audience as gullible confirm that his grief is a performance. Thus, Richard pretends to be aggrieved and blames the queen while actually being responsible for Clarence's predicament.

Choice A is incorrect because it characterizes Richard's grief as earnest, claiming that his sincere grief moved others to accept his claims. However, Richard admits his wrongdoing and calls his audience "simple [gullible people]," making clear that they were deceived by a calculated performance rather than persuaded by genuine emotion. Rather than being sincere, Richard's weeping is part of a deliberate scheme to blame the queen and her allies for what he did. **Choice B is incorrect** because Richard does not attribute any portion of Clarence's troubles to the queen; he reveals that he "cast [Clarence] in darkness" and merely tells others the queen is responsible. Additionally, Derby, Hastings, and Buckingham are not identified as the queen's allies; rather, Rivers, Dorset, and Grey are implied to be the queen's allies. **Choice D is incorrect** because the text does not address whether Richard has maintained the trust of the queen and her allies. Instead, Richard tells Derby, Hastings, and Buckingham that the queen is to blame for Clarence's troubles, and they in turn urge him to seek revenge on Rivers, Dorset, and Grey, who are implied to be the queen's allies. The speech focuses on Richard's manipulation of others, not on his standing with the queen.

51 Correct answer **B** Hard Back to question

B Nature-based approaches can be effective ways to achieve conservation goals.

Choice B is the best answer because it best states the main idea of the text: that nature-based approaches can be effective for achieving conservation goals. The text indicates that in many cases where conservationists are trying to protect ecosystems, their methods depend on natural processes or features. The text then gives an example of this phenomenon, a project with the Quinault Indian Nation that allowed logjams to form naturally in a river, creating spawning habitats for blueback salmon.

Choice A is incorrect. Although the text does suggest that the partnership with the Quinault Indian Nation was beneficial, this is not the central aim of the text; the text primarily argues that nature-based approaches to conservation can be effective. **Choice C is incorrect**. Although the text indicates that logjams are helpful to blueback salmon, the example of the blueback salmon project is included to illustrate the larger point made earlier in the text: that nature-based approaches to conservation are often effective. **Choice D is incorrect**. There is no evidence in the text to support a direct comparison of the efficacy of nature-based conservation approaches to other types of approaches. The text merely indicates that nature-based approaches can often be effective.

52 Correct answer **A** Hard Back to question

A As a dog, Karenin possesses a sense of time that involves a strong preference for predictability and an aversion to disruption.

Choice A is the best answer because it most accurately states the main idea of the text. The text begins by stating that Tomas and Tereza's dog Karenin felt disrupted by a recent move because of his dislike of change. The text then goes on to suggest that this is because the way a dog experiences time differs from the way humans experience time: time for a dog doesn't move linearly, going "on and on, from one thing to the next," but instead moves circularly, "like the hands of a clock." That is, time for a dog is experienced as a cyclical pattern characterized by routine and predictability, with each day "following the same path." The text then concludes by providing examples of seemingly insignificant changes in routine that profoundly "disturbed [Karenin's] sense of time," causing him to feel displeasure. Thus, the main idea of the text is that Karenin's sense of time as a dog involves a strong preference for predictability and an aversion to disruption.

Choice B is incorrect. Although the text emphasizes Karenin's displeasure with the recent move to a new home, it doesn't suggest that the move has made his negative responses more pronounced than they once were. Rather, in accounting for Karenin's displeasure with the move to Switzerland, the text explains that Karenin generally has a negative response to any kind of change. **Choice C is incorrect** because the text doesn't suggest that Karenin comprehends time similarly to how Tomas and Tereza comprehend it. On the contrary, the text strongly implies a contrast between dogs' circular experience of time with the way humans experience time as a straightforward progression that can be "plotted on a straight line." **Choice D is incorrect** because the text provides no indication that a change in the places and objects surrounding Karenin causes him to feel as though time is accelerating. Although the text does use the language of "dash[ing] madly ahead" in relation to time, the phrase appears in the context of a comparison illustrating how dogs experience time: time for a dog moves just as the hands of a clock do, in a circle and "unwilling to dash madly ahead"—that is, always in a regular and predictable way.

53 Correct answer **A** Hard Back to question

A One potential means of justifying opposition to lying is Pallikkathayil's argument that we have an obligation to respect other people's agency that entails a commitment to truthfulness except in certain circumstances.

Choice A is the best answer because it most accurately states the main idea of the text. The text begins by noting a common intuition that lying might sometimes be permissible, which raises the question of what is the reason for being against lying. The text then presents Pallikkathayil's answer to this question: we have a duty to respect others' agential interests (that is, we have

an obligation to allow people to exercise their free will in order to best serve their own ends), false beliefs constrain agency (the implication here being that people who are deceived about what is true are impeded in acting in their own best interests), and so we should not hinder the formation of true beliefs (we should not deliberately deceive a person) unless doing so prevents a greater limitation on someone's agency or prevents some otherwise impermissible end (for example, it might be morally permissible to lie to someone in the rare circumstance where a false belief would lead a person to act in their own best interest, and where they would not do so if they knew the truth). Thus, the main idea of the text is that Pallikkathayil offers a potential justification for opposing lying based on respecting agency, while still allowing for exceptions in specific circumstances.

Choice B is incorrect because the text doesn't focus on people's lack of a principled way to identify circumstances where lying is permissible or indicate that Pallikkathayil's argument resolves this specific problem. Rather, the text presents Pallikkathayil's argument that lies limit agency but may be permitted in very specific situations (to prevent a greater limitation on someone's agency or an otherwise unacceptable outcome) as one of a number of possible arguments about why lies are undesirable but sometimes permissible. **Choice C is incorrect** because it directly contradicts the text. Pallikkathayil's argument, as described in the text, wouldn't lead to an "inviolable duty to speak truthfully." On the contrary, the text explicitly states that Pallikkathayil's position is that interfering with people developing accurate beliefs is wrong, except when such interference prevents either a more significant limitation on someone's agency or an outcome that would be unacceptable for other reasons. This indicates that Pallikkathayil's argument allows for some exceptions to the duty to speak truthfully, making it not inviolable. **Choice D is incorrect** because Pallikkathayil's argument doesn't suggest that if it is permissible to lie in at least some circumstances, then it is unclear whether there are good reasons for opposing lying in any circumstances. Instead, the text presents Pallikkathayil as offering a specific ground

for opposing lying (respecting others' ability to act in their own best interests) while qualifying that assertion by presenting a situation in which lying might sometimes be morally permissible.

54 Correct answer **D** — Hard — Back to question

D The speaker is thinking about the friend instead of immediately falling asleep.

Choice D is the best answer it most accurately states the main idea of the text. The speaker describes going to bed for "repose" (rest) but finding that his thoughts are focused on the friend the speaker is addressing, and the thoughts are keeping the speaker awake.

Choice A is incorrect because the speaker isn't asleep; the thoughts about the friend are keeping the speaker awake. **Choice B is incorrect** because the speaker isn't talking about taking a literal trip; rather, the speaker uses the metaphor of a journey to describe internal thoughts. **Choice C is incorrect** because the speaker isn't having a discussion with the friend.

55 Correct answer **A** — Hard — Back to question

A Of the three films for which Carlos is credited, *Tron* features the most original music from her.

Choice A is the best answer because it best states the main idea of the text. The text indicates that Wendy Carlos scored three feature films: *A Clockwork Orange*, *The Shining*, and *Tron*. It also indicates that Carlos's work on *A Clockwork Orange* consisted primarily of electronic arrangements of Beethoven compositions and that very little of what she and Rachel Elkind composed for *The Shining* was used in the film. But the soundtrack for *Tron* consists largely of music composed by Carlos, so it contains more of her original music than do the soundtracks for the other two films. Thus, the main idea of the text is that of the three films for which Carlos is credited, *Tron* features the most original music from her.

Choice B is incorrect because it directly contradicts the text's claim that "very little of what she and Rachel Elkind composed for *The Shining* was used in the film." **Choice C is incorrect** because the text doesn't address the perceived quality of different composers, instead, it discusses how much of Carlos's original work was used in each of the three films she scored. **Choice D**

is incorrect because it doesn't relate to any of the major themes of the text: the work Wendy Carlos did for three feature films, how much of that work was composed by Carlos, and how much of her original work was ultimately used in the film.

56 Correct answer **D** Hard ‹ Back to question

D The reputation of Smith's metaphor of the invisible hand is not due to the importance of the metaphor in Smith's work but rather to the promotion of the metaphor by some later economists for their own ends.

Choice D is the best answer because it most accurately states the main idea of the text. The text explains that economist Adam Smith's famous metaphor of the invisible hand was putatively (that is, widely assumed but not proven) intended to illustrate a robust model (a consistently accurate generalization) of how individuals pursuing their own economic interests can create broader benefits for the population. The text then emphasizes the lack of affirmative evidence for this idea by calling out the term "putatively," and explaining that, according to Gavin Kennedy, Smith used the metaphor only once in his works, in reference to specific circumstances related to the now-outdated economic view known as mercantilism, and that the metaphor didn't garner much attention until economists in the twentieth century held it up as a paradigm (a theoretical framework in the field) and thereby implied that Smith shared some of their views on economics. By emphasizing "putatively," the text implies that there is no independent reason to believe that Smith would agree with the metaphor's use outside of the specific context for which he wrote it and that, therefore, the twentieth-century economists who used it did so to support their own views without regard for the metaphor's importance to Smith's work.

Choice A is incorrect. Although the text indicates that Smith's metaphor was largely ignored until some twentieth-century economists revived it and bolstered its status, the text suggests that the later economists used Smith's metaphor to self-servingly boost their own work while ignoring the original context in which Smith wrote it. Moreover, the statement in this choice fails to reflect the text's emphasis on Smith's limited use of the metaphor in his work. **Choice B is incorrect**. Although the text indicates that some twentieth-century economists altered the significance of Smith's metaphor, the text doesn't suggest that the metaphor is a "useful model" of how aggregate benefits arise from individuals' selfish actions, let alone that this usefulness is unaffected by taking the metaphor out of its original context. **Choice C is incorrect**. Although the text indicates that Smith's metaphor was intended as a model of how individuals acting in their own interest produce aggregate benefits and it was written within the context of the now-outdated economic theory of mercantilism, these points are subordinate to the primary idea in the text, which is that Smith's use of the metaphor was tightly constrained but twentieth-century economists ignored the original context so that they could use the metaphor to suggest, without support, that Smith would agree with their economic views.

57 Correct answer **A** Hard ‹ Back to question

A The limited capacity model of motivated mediated message processing developed by Lang provides a means of explaining the finding by van Berlo et al. that players may not readily recollect the brand and product information embedded in advergames.

Choice A is the best answer because it most accurately states the main idea of the text. The text begins by presenting van Berlo et al.'s finding that advergames—video games intended to promote a specific product or service—can be engaging to players but "may not facilitate subsequent recall of product and brand information," ultimately limiting their effectiveness as advertisements. The text then suggests that Lang's limited capacity model of motivated mediated message processing, which characterizes cognitive capacity as finite, can explain or account for van Berlo et al.'s finding: specifically, players' attention is "directed foremost toward the advergame's mechanics" instead of toward the advertising information. The main idea of the text is therefore that Lang's model provides a means of explaining van Berlo et al.'s finding.

Choice B is incorrect because it mischaracterizes the relationship between Lang's model and van Berlo et al.'s finding. The text presents Lang's model as a broad theoretical framework about cognitive capacity that can explain van Berlo et al.'s finding. The text doesn't indicate that Lang drew conclusions specific to video games that van Berlo et al. then corroborated. **Choice C is incorrect** because it mischaracterizes the findings of the meta-analysis by van Berlo et al. Although Lang's model suggests that engagement in advergame mechanics occurs at the expense of recalling advertising information, the text doesn't indicate

that van Berlo et al. offered this explanation for their finding. The text merely states that van Berlo et al. found that advergames "can elicit player interest" but "may not facilitate subsequent recall of product and brand information." In addition, the text doesn't discuss whether players' ability to recall advertising content ultimately affects their purchasing behavior. **Choice D is incorrect**. Although the text presents Lang's model as an explanation of why advergames may not succeed in promoting recall of advertising information, the text doesn't suggest that advergames can succeed as marketing tools if they balance mechanics and promotion. The text doesn't propose a design solution to the limitations of advergames or suggest that these limitations can be overcome.

58 Correct answer **D** — Hard — Back to question

D The study by McAllister et al. suggests that when traveling waves intersect in specific ways, the resulting wave may be higher than would be expected based on the properties of traveling waves.

Choice D is the best answer because it most accurately states the main idea of the text. The text begins by explaining that most studies of ocean wave breaking have focused on traveling waves (those that move horizontally) but that McAllister et al. studied spike waves, which form when traveling waves moving in opposing directions intersect. The text establishes that while traveling waves break when their steepness exceeds a critical threshold (limiting their height), McAllister et al. found that spike waves can exceed these constraints because factors like jet stability and cavity shape can mitigate the effects of steepness. Thus, the main idea of the text is that spike waves resulting from traveling waves intersecting in specific ways can reach heights greater than what would be expected based on the general properties of traveling waves.

Choice A is incorrect because it misrepresents the information in the text; the text indicates that McAllister et al. showed that jet stability and cavity shape (along with steepness) influence breaking in spike waves, not in traveling waves. Further, the information about specific influences is not the main focus of the text. **Choice B is incorrect** because it misrepresents the information in the text; the text indicates that McAllister et al. found that spike waves can pass the steepness threshold at which traveling waves break because factors like jet stability and cavity shape affect the breaking of spike waves, not because they've simply reached a critical threshold of steepness. **Choice C is incorrect**. Although the text does explain that spike waves can form when traveling waves intersect, it presents this as a known fact that McAllister et al.'s study was based on, not as something the researchers suggested. Further, the text indicates that spike waves can exceed a threshold that limits traveling wave height but doesn't focus on the idea that spike waves typically are higher than traveling waves.

59 Correct answer **B** — Hard — Back to question

B Research suggests that the material properties of silk from species of *Tetragnatha* spiders have diversified during adaptive radiation.

Choice B is the best answer because it most accurately states the main idea of the text. The text notes that *Tetragnatha* spiders have diversified their web architecture, or web design, through adaptive radiation and that Alicea-Serrano et al. investigated whether silk material properties were also affected by this process. After examining chemical composition, tensile strength, and viscosity of silks from three *Tetragnatha* species, the team found significant interspecies variation in these material properties, meaning that there were observable differences in these traits across the studied species. In the context of the study's research question, this finding suggests that the material properties of silk from species of *Tetragnatha* spiders have indeed diversified during adaptive radiation, which is the main idea of the text.

Choice A is incorrect because the text doesn't compare the rate of diversification in web architecture to the rate of diversification in silk properties. Although the text notes that web architecture diversified "over a relatively short timescale," it doesn't make a corresponding temporal claim about silk properties or suggest that one changed more rapidly than the other. **Choice C is incorrect** because the study investigated silk properties as a separate question, not as an explanation for differences in web architecture. The researchers discussed in the text investigated whether silk properties were "similarly affected" by adaptive radiation, not whether they caused the variations in web design. **Choice D is incorrect** because it contradicts the findings described in the text. The study found "significant interspecies variation" in silk biomaterials,

suggesting that adaptive radiation did affect the properties of *Tetragnatha* spiders' silk rather than showing that adaptive radiation cannot explain silk variation.

60 Correct answer **A** Hard ‹ Back to question

A Continued research and development in artificial-leaf technology is needed before the devices can be widely used as an energy source.

Choice A is the best answer because it most accurately states the main idea of the text. According to the text, artificial leaves are a renewable energy technology that's in development and generating interest. The text goes on to state that artificial-leaf technology "is not yet commercially viable as a large-scale energy source" and that scientists from several fields are doing additional research to refine the technology. Thus, the main idea is that continued research and development in artificial-leaf technology is needed before the devices can be widely used as an energy source.

Choice B is incorrect. While the text does state that scientists from many fields are researching artificial leaves, they're doing so to address the fact that the leaves are not yet commercially viable, rather than in response to an increase in commercial use. **Choice C is incorrect**. Although the text does explain that artificial leaves help split water molecules into oxygen and hydrogen gas using catalysts, it doesn't argue that this process is more efficient than photosynthesis. This is merely a detail of the text and not the main idea, which is about the additional research needed to improve the cost and efficiency of these artificial leaves. **Choice D is incorrect**. Although the text indicates that artificial leaves mimic photosynthesis in plants, this is an incidental detail in support of the main idea that additional research is needed to make artificial leaves commercially viable.

61 Correct answer **A** Hard ‹ Back to question

A The tranquility of a port in the evening can incline a person to appreciate the stillness of old age.

Choice A is the best answer because it best states the main idea of the text. The speaker describes an evening scene observed from a boat: "little lights in little ports come out" and are reflected in the water's surface "with the stars," fishing boats are moored, "sails are furled" (rolled up), and the riding-light is shining. The speaker emphasizes the calmness of the scene, noting that the "race of wind is stilled" and the atmosphere is sleepy ("slumbrous waters pool a slumbrous world"), and then indicates that the calmness prompts thoughts of how old age might be "sweet" and "quiet" and "gracious in retreat" after "a windy youth" with "storms." Thus, the main idea is that the tranquility of a port in the evening can lead a person to appreciate the potential stillness of old age.

Choice B is incorrect because the speaker isn't discussing the difficulty of bringing a ship into port but describing the calmness of the port at night. And rather than suggesting that old age involves struggles, the speaker suggests that after "a windy youth" with "storms" to be weathered, old age will be "sweet," "quiet," and "gracious"—that is, old age will be tranquil like a port at night. **Choice C is incorrect** because the speaker isn't suggesting that a person who has lived a varied and active life might find it difficult to stay in a calm place in old age. On the contrary, the speaker suggests that after a "windy youth" with "storms," old age can be welcomed as something "sweet," "quiet," and "gracious," just like a calm port at night. **Choice D is incorrect**. Although the speaker does touch on the idea of a "windy youth" followed by "sweet old age," the speaker doesn't tie that idea to a contrast between daytime activity and nighttime peacefulness at a port. The speaker doesn't address any activity during the day at a port, only briefly mentioning that the "race of wind is stilled" at the end of the day, and instead focuses on the tranquility of the port at night and how it prompts thoughts of "quiet" and "gracious" old age.

62 Correct answer C

Hard

Back to question

C Wild animals such as the Western scrub-jay can be effectively studied in their natural habitat and in the lab, but each approach has drawbacks that could affect the accuracy of the findings.

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by explaining that wild animals can be studied in their natural habitat or in a laboratory setting, with each setting offering unique advantages to researchers. The text then highlights an instance in which Western scrub-jays were studied in both settings but with conflicting results, indicating that one or both studies may have failed to account for the disadvantages of its research setting. Thus, the main idea of the text is that while wild animals can be effectively studied in natural or lab settings, there are drawbacks to each that need to be considered to ensure accurate results.

Choice A is incorrect because the text does not position one study setting (natural or lab) as superior to the other; rather, the text states that each one has advantages over the other. **Choice B is incorrect**. The text provides a hypothetical example of two studies in different environments with conflicting results, but this single example cannot be extrapolated to a general claim about the likelihood that results of studies in different environments will conflict. Additionally, the text does not assert anything about how researchers can or cannot resolve conflicting study results. **Choice D is incorrect** because the text does not state that discrepancies between natural-habitat and lab-based animal behavior studies are due to both of the designs being flawed. Rather, the text states that the conflict in results can be the consequence of one or both of the studies having failed to account for some factor.

03 Main Purpose

Why the author wrote the text

Main purpose asks what the text does. Not the content, the job.

54 questions | 20 Easy | 21 Medium | 13 Hard

ASK YOURSELF *"Why did the author write it?"*

THE STEPS

1. Read the text. Twice at most.
2. Ignore the four answer choices completely.
3. Answer the question above as a verb and then an object.
4. Choose the answer closest to what you said.

WHAT TO TAKE FROM THIS

- Purpose choices almost always open with a verb: to describe, to explain, to present, to illustrate, to emphasise, to argue, to compare.
- Check the verb first. *To argue* needs the text to take a side. *To compare* needs two things weighed against each other. *To summarize a change* needs a before and an after.
- Then check the object. Most wrong answers get one of the two right and the other wrong.
- Main idea is what the text says. Main purpose is what it does. Read the stem before you pick.
- In stories and poems the purpose is usually plain: to show how a character reacts, to convey a feeling, to describe a place.

Answers & explanations 275

EASY 20 questions

In 1973, poet Miguel Algarín started inviting other writers who, like him, were Nuyorican—a term for New Yorkers of Puerto Rican heritage—to gather in his apartment to present their work. The gatherings were so well attended that Algarín soon had to rent space in a cafe to accommodate them. Thus, the Nuyorican Poets Cafe was born. Moving to a permanent location in 1981, the Nuyorican Poets Cafe expanded its original scope beyond the written word, hosting art exhibitions and musical performances as well. Half a century since its inception, it continues to foster emerging Nuyorican talent.

ID ff97fd53

1 Mark for Review Easy Explanation ›

Which choice best describes the overall purpose of the text?

(A) To explain what motivated Algarín to found the Nuyorican Poets Cafe

(B) To situate the Nuyorican Poets Cafe within the cultural life of New York as a whole

(C) To discuss why the Nuyorican Poets Cafe expanded its scope to include art and music

(D) To provide an overview of the founding and mission of the Nuyorican Poets Cafe

In 2007, computer scientist Luis von Ahn was working on converting printed books into a digital format. He found that some words were distorted enough that digital scanners couldn't recognize them, but most humans could easily read them. Based on that finding, von Ahn invented a simple security test to keep automated "bots" out of websites. The first version of the reCAPTCHA test asked users to type one known word and one of the many words scanners couldn't recognize. Correct answers proved the users were humans and added data to the book-digitizing project.

ID 9421ed62

2 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To discuss von Ahn's invention of reCAPTCHA

(B) To explain how digital scanners work

(C) To call attention to von Ahn's book-digitizing project

(D) To indicate how popular reCAPTCHA is

The following text is adapted from George Bernard Shaw's 1912 play *Pygmalion*. Henry Higgins has just arrived at the house of his mother (Mrs. Higgins). She is expecting her friends to visit soon.

MRS. HIGGINS: I'm serious, Henry. You offend all my friends: they stop coming whenever they meet you.

HIGGINS: Nonsense! I know I have no small talk; but people don't mind.

MRS. HIGGINS: Oh! don't they? Small talk indeed! What about your large talk? Really, dear, you mustn't stay.

ID fb8b56bc

3 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To describe what Henry's mother does when she goes out with her friends

(B) To show that Henry's mother wants him to leave

(C) To present a detailed account of what Henry's home looks like

(D) To explain why Henry often visits his mother

The following text is adapted from Charles Dickens's 1854 novel *Hard Times*. Coketown is a fictional town in England.

[Coketown] contained several large streets all very like one another, and many small streets still more like one another, inhabited by people equally like one another, who all went in and out at the same hours, with the same sound upon the same pavements, to do the same work, and to whom every day was the same as yesterday and tomorrow, and every year the counterpart of the last and the next.

ID 6f5fc289

4 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To emphasize the uniformity of both the town and the people who live there

(B) To explain the limited work opportunities available to the town's residents

(C) To reveal how the predictability of the town makes it easy for people lose track of time

(D) To argue that the simplicity of life in the town makes it a pleasant place to live

The following text is adapted from Louisa May Alcott's 1869 novel *An Old-Fashioned Girl*. Polly, a teenager, is visiting her friend Fanny.

> Fanny's friends did not interest Polly much; she was rather afraid of them [because] they seemed so much older and wiser than herself, even those younger in years. They talked about things of which she knew nothing and when Fanny tried to explain, she didn't find them interesting; indeed, some of them rather shocked and puzzled her.

ID ea971260

5 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To portray Polly's reaction to Fanny's friends

(B) To identify the topics Polly talks about with Fanny's friends

(C) To explain how Fanny met some of her friends

(D) To illustrate how Fanny's friends feel about Polly

San Francisco is known for the colorful murals painted on many of its buildings. The densest collection of murals is found on Balmy Alley in the Mission District neighborhood. In the 1970s, Latina artists painted vivid scenes of community life on walls along this block. As the original murals have faded, later generations of artists have painted new ones over them. As a result, Balmy Alley has become a living showcase of San Francisco's artistic spirit, with its murals reflecting changes in the cultural life of the city.

ID c8603ed7

6 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To compare the Balmy Alley murals to other murals in San Francisco

(B) To offer an overview of the history and importance of the Balmy Alley murals

(C) To urge people to protect the murals of San Francisco from decay

(D) To describe the rise of mural painting in San Francisco beginning in the 1970s

The following text is from Georgia Douglas Johnson's 1922 poem "Benediction."

Go forth, my son,
Winged by my heart's desire!
Great reaches, yet unknown,
Await
For your possession.
I may not, if I would,
Retrace the way with you,
My pilgrimage is through,
But life is calling you!

ID 9c759a09

7 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To express hope that a child will have the same accomplishments as his parent did

(B) To suggest that raising a child involves many struggles

(C) To warn a child that he will face many challenges throughout his life

(D) To encourage a child to embrace the experiences life will offer

Archaeologists studying the ancient city of Pompeii in Italy recently discovered a well-preserved food shop known as a *thermopolium*. The site contains food remains, artworks, and decorations. These items give researchers a better understanding of what daily life in Pompeii may have been like. For example, the archaeologists found a ceramic jar that they believe likely contained a meat and seafood stew.

ID e5ca7687

8 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To compare ancient artworks with modern ones

(B) To discuss the political system of Italy

(C) To present a recent archaeological discovery

(D) To describe a region's climate

In most building demolitions, the building materials are destroyed and sent to landfills. City officials in Portland, Oregon, wanted to reduce this waste. The officials passed a law requiring demolition companies to deconstruct some buildings instead. Deconstruction involves carefully taking buildings apart piece by piece. Damage to the materials is avoided so that they can be reused in new constructions. A 2019 study found that 27 percent of materials from deconstructions in Portland were able to be reused. The remaining materials were processed for recycling instead of going to a landfill.

ID a2dd51c1

9 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To explain an effort made by the city of Portland to reduce demolition waste and some results of that effort

(B) To show that popular support for measures that reduce demolition waste has increased since 2019

(C) To argue that building deconstruction is not as effective as other measures at reducing demolition waste

(D) To discuss laws aimed to reduce demolition waste in Portland and compare them to similar laws in other cities

The following text is from Holly Goldberg Sloan's 2017 novel *Short*.

> More than two years ago my parents bought a piano from some people who were moving to Utah. Mom and Dad gave it to my brothers and me for Christmas. I had to act really happy because it was such a big present, but I pretty much hated the thing from the second it was carried into the hallway upstairs, which is right next to my bedroom. The piano glared at me. It was like a songbird in a cage. It wanted to be set free.

©2017 by Holly Goldberg Sloan

ID 48e4021d

10 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) It explains why the narrator always wanted a piano close to her bedroom.

(B) It establishes how the narrator feels about the piano.

(C) It suggests that the narrator's brothers are talented piano players.

(D) It describes the event that led the narrator's parents to buy a piano.

Built in the 1970s, Raccoon Mountain is a pumped-storage hydropower facility (a "water-battery") located in the United States along the Tennessee River. When energy demand is low, excess power from the regional electric utility's nuclear plants is used to pump water (from a lower reservoir filled from the Tennessee River) up a shaft to the summit lake, where the water is stored as gravitational potential energy. When energy demand peaks, the water drains down from the summit lake, spinning turbines and generating upward of 1,700 megawatts of power—enough to power one million homes for twenty hours.

ID a086c2cb

11 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To point out the differences between two methods of energy generation

(B) To explain the basics of how a specific energy technology works

(C) To encourage regional electric utilities to build energy storage facilities

(D) To discuss the benefits of a new energy technology

Animals use many objects as tools to achieve goals more easily. Such goals include grooming, finding food, and protecting themselves. For a long time, people thought tool use was unique to primates. Dolphins and other animals, though, have busted the myth that tool use requires hands. Inventively, dolphins use sponges to protect their noses from scratches when foraging on the seafloor. Palm cockatoos also get creative. They use leaves to pad their beaks when opening nuts.

ID 47904792

12 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To question the belief that birds are intelligent

(B) To compare tool use in humans with tool use in palm cockatoos

(C) To establish that tool use doesn't indicate intelligence

(D) To argue that a variety of animals use tools

The following text is adapted from Charles Chesnutt's 1899 short story "Mars Jeems's Nightmare." The narrator and his wife have recently moved to the southern United States, and Julius is their carriage driver.

> Julius [was] very useful when we moved to our new residence. He had a thorough knowledge of the neighborhood, was familiar with the roads and the watercourses, knew the qualities of the various soils and what they would produce, and where the best hunting and fishing were to be had. He was a marvelous hand in the management of horses and dogs.

ID e5da61f1

13 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To compare the narrator's reaction to a new home with his wife's reaction

(B) To give an example of Julius's knowledge about soil

(C) To show that the narrator and Julius often hunt and fish together

(D) To explain different ways in which Julius was helpful

The following text is from Bram Stoker's 1911 novel *The Lair of the White Worm*. Adam is meeting his great-uncle Richard at a port.

> The meeting so auspiciously begun proceeded well. Adam, seeing that the old man was interested in the novelty of the ship, suggested that he should stay the night on board, and that he would himself be ready to start at any hour and go anywhere that the other suggested. This affectionate willingness to fall in with his own plans quite won the old man's heart. He warmly accepted the invitation, and at once they became not only on terms of affectionate relationship, but almost like old friends.

ID edbc6cca

14 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) It states the reasons why Adam and his great-uncle Richard decide to sleep on the ship rather than finding lodging on land.

(B) It showcases how Adam's flexibility and consideration strengthen his relationship with his great-uncle Richard.

(C) It describes why Adam and his great-uncle Richard are excited for their upcoming journey on the ship.

(D) It contrasts great-uncle Richard's wary first impressions of Adam with his ultimate affection toward him.

Jackie Ormes's *Torchy Brown in Dixie to Harlem* (1937–38) was the first comic strip by a Black woman to appear in a widely read newspaper. The strip tells the story of Torchy, a young woman who leaves Mississippi to become a performer in New York City. Torchy's story reflects the experience of the Great Migration (1910–1970), when millions of Black Americans left the South in search of opportunities in other parts of the United States. *Torchy Brown* thus shows how Ormes used comics to comment humorously on issues affecting Black Americans, which she continued to do throughout her career.

ID 0ed94d4c

15 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To show how Ormes's *Torchy Brown* inspired other Black women to write comic strips in the 1930s

(B) To illustrate how the subjects Ormes addressed in her comic strips changed over the course of her career

(C) To give an example of how Ormes presented the experiences of Black Americans in her comic strips

(D) To claim that several characters in *Torchy Brown* were based on people that Ormes knew personally

The following text is adapted from Jason Reynolds's 2016 novel *Ghost*. The narrator, who is in middle school, is at a bus stop.

> I just go there [to the bus stop] to look at the people working out. See, the gym across the street has this big window—like the whole wall is a window—and they have those machines that make you feel like you walking up steps and so everybody just be facing the bus stop, looking all crazy like they're about to pass out. And trust me, there ain't nothing funnier than that. So I check that out for a little while like it's some kind of movie: *The About to Pass Out Show*, starring stair-stepper person one through ten.

©2016 by Jason Reynolds

ID 1d9a09c0

16 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To give a reason why the narrator is excited to start middle school

(B) To describe an activity that the narrator finds amusing

(C) To explain a problem that the narrator has overcome

(D) To discuss a movie that the narrator saw in a theater

Jazz tap is a dance form that was first developed in African American communities. Jazz tap was heavily influenced by jazz music, which became widely popular in the United States in the 1920s. Tap dancers were inspired by jazz music's quick rhythms and by the way jazz musicians would make up melodies as they played. As jazz music continued to develop in the 1930s and 1940s, jazz tap evolved with it. Because of jazz music's influence, jazz tap quickly developed into a dance form that was very different from earlier kinds of tap dance.

ID be947479

17 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) It explains why audiences prefer some kinds of music over others.

(B) It discusses the development of a dance form.

(C) It describes how to play a musical instrument.

(D) It emphasizes the popularity of a famous dancer.

The following text is adapted from Jean Webster's 1912 novel *Daddy-Long-Legs.* The narrator is a young college student writing letters detailing her weekly experiences.

> [The college is] organizing the Freshman basket-ball team and there's just a chance that I shall make it. I'm little of course, but terribly quick and wiry and tough. While the others are hopping about in the air, I can dodge under their feet and grab the ball.

ID d563bf65

18 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To compare basketball with other sports

(B) To provide details of how to play basketball

(C) To state how players will be chosen for the basketball team

(D) To explain why the narrator thinks she might make the basketball team

Understanding juvenile sea turtles' migratory patterns is crucial for conservation efforts. While adult sea turtles are well studied, little is known about juveniles during their oceanic stage, when they spend most of their time in the open ocean. To learn about this stage, researchers tagged and released six juvenile green sea turtles (*Chelonia mydas*) into the eastern Caribbean Sea. Their findings revealed that the majority of the turtles passively drifted with ocean currents throughout the region. However, two individuals swam against the currents, possibly in search of foraging grounds off the coast of South America.

ID e19e8478

19 Mark for Review Easy Explanation ›

Which choice best states the main purpose of the text?

(A) To describe successful conservation efforts for sea turtles

(B) To summarize research on an understudied stage of sea turtle development

(C) To compare the behavior of adult and juvenile sea turtles during migration

(D) To suggest reasons why some juvenile sea turtles swim against the ocean currents

The following text is adapted from Pam Muñoz Ryan's 2020 novel *Mañanaland*. In the village where Max lives, there is an old fortress called La Reina. Children in the village say that the fortress is haunted.

> For as long as he could remember, Max had begged Papá [his father] to take him to see La Reina and the ruins up close. He'd be a hero among his friends if he was the first boy to cross the haunted gates! Just because Papá didn't believe in ghosts didn't mean they weren't there. Maybe this summer Papá would finally take him. He *was* almost twelve.
>
> ©2020 by Pam Muñoz Ryan

ID d5600e74

20 Mark for Review Easy Explanation ›

Which choice best describes the overall purpose of the text?

(A) To portray how proud Max's father is of Max

(B) To explain why Max doesn't want to grow up yet

(C) To criticize Max for disliking summer

(D) To show how much Max wants to visit La Reina

MEDIUM 21 questions

A study by Dr. Paul Hanel and colleagues concluded that people are more likely to behave politely when listening to ideas they disagree with if they think about values before they engage in a discussion. Study participants were assigned to one of two groups. The experimental group spent a few minutes writing about one of their personal values before they had a group discussion on a controversial topic. And the control group spent a few minutes writing about a drink (tea, milk, etc.) before their group discussion on that topic. Hanel and colleagues found that the experimental group's discussion was more civil than the control group's discussion was.

ID 2af2016f

21 Mark for Review Medium Explanation ›

Which choice best describes the main purpose of the text?

(A) To describe a widely held belief and how a study's results support that belief

(B) To argue that researchers were surprised by the results of a certain study

(C) To suggest ways to improve a certain study's experimental design

(D) To explain a study's conclusion and how a research team arrived at that conclusion

Early in the Great Migration of 1910–1970, which involved the mass migration of Black people from the southern to the northern United States, political activist and *Chicago Defender* writer Fannie Barrier Williams was instrumental in helping other Black women establish themselves in the North. Many women hoped for better employment opportunities in the North because, in the South, they faced much competition for domestic employment and men tended to get agricultural work. To aid with this transition, Barrier Williams helped secure job placement in the North for many women before they even began their journey.

ID b13378c8

22 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To introduce and illustrate Barrier Williams's integral role in supporting other Black women as their circumstances changed during part of the Great Migration

(B) To establish that Barrier Williams used her professional connections to arrange employment for other Black women, including jobs with the *Chicago Defender*

(C) To demonstrate that the factors that motivated the start of the Great Migration were different for Black women than they were for Black men

(D) To provide an overview of the employment challenges faced by Black women in the agricultural and domestic spheres in the southern United States

In 1154, Muhammad al-Idrisi completed a collection of maps of the lands known to medieval Arabic and European scholars. This collection was titled *Al-Kitāb al-Rujārī* (*The Book of Roger*), after the Norman king Roger II who hired him to create it. To create the collection, al-Idrisi consulted Arabic and Greek maps and interviewed travelers about the lands they visited. He included these travelers' stories alongside the map illustrations.

ID 7d8224f9

23 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To discuss the benefits of studying mapmaking

(B) To explain how travelers created maps

(C) To describe a collection of medieval maps and how it was created

(D) To compare medieval Arabic and Greek mapmaking techniques

Composer Florence Price won first place for her score Symphony in E Minor at the 1932 Wanamaker Foundation Awards. The piece was performed the following year by the Chicago Symphony Orchestra, a significant recognition of its quality. Price continued to compose many musical pieces throughout her career, blending traditional Black spirituals with classical European Romantic musical traditions. In recent years, Price's concertos and symphonies have been performed and recorded by several major orchestras, further preserving her work for others to enjoy.

ID e929fe98

24 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To provide examples of Price's importance as a composer

(B) To argue that more major orchestras should perform Price's compositions

(C) To describe the musical styles that inspired many of Price's symphonies

(D) To compare Price's scores with those of classical European composers

Though Chloé Zhao's films are fictional, she incorporates real events into them in a documentary-like style and casts nonprofessional actors who reside in the places that she aims to portray. She also encourages these actors, whether they are teenagers living on the Pine Ridge Indian Reservation or adults who travel the country for work, to put as much of themselves into their roles as possible. Her approach adds powerful resonance to films that explore the highly personal experiences of place and home, and often the difficult decision to stay or leave.

ID 735b0776

25 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To argue that Chloé Zhao's films are best understood as documentaries

(B) To discuss how Chloé Zhao's background in documentary filmmaking has influenced her storytelling style in films

(C) To emphasize that Chloé Zhao's decisions during the filmmaking process reinforce the themes of her films

(D) To summarize how Chloé Zhao's style of filmmaking changed over the course of her career

The following text is adapted from Paul Laurence Dunbar's 1902 novel *The Sport of the Gods*. Joe and some of his family members have recently moved to New York City.

> [Joe] was wild with enthusiasm and with a desire to be a part of all that the metropolis meant. In the evening he saw the young fellows passing by dressed in their spruce clothes, and he wondered with a sort of envy where they could be going. Back home there had been no place much worth going to, except church and one or two people's houses.

ID 2b085bc6

26 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) It illustrates a character's reaction to a new environment.

(B) It explains why a character has traveled to a city.

(C) It compares a character's thoughts about an event at two different times of day.

(D) It presents a character feeling regret over leaving home.

The following text is from Paul Laurence Dunbar's 1913 poem "The Poet and His Song."

> A song is but a little thing,
>
> And yet what joy it is to sing!
>
> In hours of toil it gives me zest,
>
> And when at eve I long for rest;
>
> When cows come home along the bars,
>
> And in the fold I hear the bell,
>
> As Night, the shepherd, herds his stars,
>
> I sing my song, and all is well.

ID 213a25d1

27 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To convey how engaging in song makes the speaker feel

(B) To compare the speaker to a singing shepherd

(C) To portray the speaker's excitement about farming

(D) To describe the pieces of music the speaker enjoys hearing

The following text is from the 1924 poem "Cycle" by D'Arcy McNickle, who was a citizen of the Confederated Salish and Kootenai Tribes.

There shall be new roads wending,
A new beating of the drum—
Men's eyes shall have fresh seeing,
Grey lives reprise their span—
But under the new sun's being,
Completing what night began,
There'll be the same backs bending,
The same sad feet shall drum—
When this night finds its ending
And day shall have come.....

ID c4900368

28 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To consider how the repetitiveness inherent in human life can be both rewarding and challenging

(B) To question whether activities completed at one time of day are more memorable than those completed at another time of day

(C) To refute the idea that joy is a more commonly experienced emotion than sadness is

(D) To demonstrate how the experiences of individuals relate to the experiences of their communities

The following text is adapted from Etsu Inagaki Sugimoto's 1925 memoir *A Daughter of the Samurai*. As a young woman, Sugimoto moved from feudal Japan to the United States.

> The standards of my own and my adopted country differed so widely in some ways, and my love for both lands was so sincere, that sometimes I had an odd feeling of standing upon a cloud in space, and gazing with measuring eyes upon two separate worlds. At first I was continually trying to explain, by Japanese standards, all the queer things that came every day before my surprised eyes; for no one seemed to know the origin or significance of even the most familiar customs, nor why they existed and were followed.

ID c0e1b70a

29 Mark for Review Medium Explanation ›

Which choice best describes the main purpose of the text?

(A) To convey the narrator's experience of observing and making sense of differences between two cultures she embraces

(B) To establish the narrator's hope of forming connections with new companions by sharing customs she learned as a child

(C) To reveal the narrator's recognition that she is hesitant to ask questions about certain aspects of a culture she is newly encountering

(D) To emphasize the narrator's wonder at discovering that the physical distance between two countries is greater than she had expected

In the late 1800s, Spanish-language newspapers flourished in cities across Texas. San Antonio alone produced eleven newspapers in Spanish between 1890 and 1900. But El Paso surpassed all other cities in the state. This city produced twenty-two newspapers in Spanish during that period. El Paso is located on the border with Mexico and has always had a large population of Spanish speakers. Thus, it is unsurprising that this city became such a rich site for Spanish-language journalism.

ID 2d77660e

30 Mark for Review — Medium — Explanation ›

Which choice best states the main purpose of the text?

(A) To compare Spanish-language newspapers published in Texas today with ones published there during the late 1800s

(B) To explain that Spanish-language newspapers thrived in Texas and especially in El Paso during the late 1800s

(C) To argue that Spanish-language newspapers published in El Paso influenced the ones published in San Antonio during the late 1800s

(D) To explain why Spanish-language newspapers published in Texas were so popular in Mexico during the late 1800s

Researchers have long hypothesized that woolly mammoths were hunted to extinction in North America by humans using spears with grooved tips known as Clovis points. One anthropologist set out to test this hypothesis. Using a mechanical spear-thrower, he launched spears with Clovis points into mounds of clay—substitutes for the animals' large bodies. The projectiles generally penetrated only a few inches into the clay, an amount insufficient to have harmed most woolly mammoths. This led the anthropologist to conclude that hunters using spears with Clovis points likely weren't the principal drivers of the extinction.

ID af43b0bd

31 Mark for Review — Medium — Explanation ›

Which choice best states the main purpose of the text?

(A) To argue for the significance of new findings amid an ongoing debate among researchers

(B) To discuss the advantages and disadvantages of the method used in an experiment

(C) To summarize two competing hypotheses and a major finding associated with each one

(D) To describe an experiment whose results cast doubt on an established hypothesis

Space scientists Anna-Lisa Paul, Stephen M. Elardo, and Robert Ferl planted seeds of *Arabidopsis thaliana* in samples of lunar regolith—the surface material of the Moon—and, serving as a control group, in terrestrial soil. They found that while all the seeds germinated, the roots of the regolith-grown plants were stunted compared with those in the control group. Moreover, unlike the plants in the control group, the regolith-grown plants exhibited red pigmentation, reduced leaf size, and inhibited growth rates—indicators of stress that were corroborated by postharvest molecular analysis.

ID 4eee64fa

32 Mark for Review — Medium — Explanation ›

Which choice best states the main purpose of the text?

(A) It describes an experiment that addressed an unresolved question about the extent to which lunar regolith resembles terrestrial soils.

(B) It compares two distinct methods of assessing indicators of stress in plants grown in a simulated lunar environment.

(C) It presents evidence in support of the hypothesis that seed germination in lunar habitats is an unattainable goal.

(D) It discusses the findings of a study that evaluated the effects of exposing a plant species to lunar soil conditions.

The following text is from Sarah Orne Jewett's 1899 short story "Martha's Lady." Martha is employed by Miss Pyne as a maid.

> Miss Pyne sat by the window watching, in her best dress, looking stately and calm; she seldom went out now, and it was almost time for the carriage. Martha was just coming in from the garden with the strawberries, and with more flowers in her apron. It was a bright cool evening in June, the golden robins sang in the elms, and the sun was going down behind the apple-trees at the foot of the garden. The beautiful old house stood wide open to the long-expected guest.

ID a2be625e

33 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To convey the worries brought about by a new guest

(B) To describe how the characters have changed over time

(C) To contrast the activity indoors with the stillness outside

(D) To depict the setting as the characters await a visitor's arrival

The following text is adapted from Louise Erdrich's 2020 novel *The Night Watchman*. Louis Pipestone is collecting signatures for a petition from fellow members of the Turtle Mountain Band of Chippewa on the tribe's reservation in North Dakota.

> Louis Pipestone tended the petition like a garden. He kept it with him at all times. In town, his eyes sharpened when he noticed a tribal member who hadn't yet signed. Wherever they were—at the gas pump, mercantile [general store], at Henry's [Café], on the road, or outside the clinic and hospital—Louis cornered them. If they were waiting for a baby to be born, he'd have them sign. If they were laughing, if they were arguing. If they were taking a child home from school, they signed.

©2020 by Louise Erdrich

ID d9e55268

34 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To suggest that some tribal members refuse to sign the petition because they dislike Louis Pipestone

(B) To show that attitudes toward the petition within the tribal community change over time

(C) To demonstrate that most tribal members are enthusiastic about signing the petition

(D) To portray Louis Pipestone's strong commitment to collecting signatures for the petition

In many agricultural environments, the banks of streams are kept forested to protect water quality, but it's been unclear what effects these forests may have on stream biodiversity. To investigate the issue, biologist Xingli Giam and colleagues studied an Indonesian oil palm plantation, comparing the species richness of forested streams with that of nonforested streams. Giam and colleagues found that species richness was significantly higher in forested streams, a finding the researchers attribute to the role leaf litter plays in sheltering fish from predators and providing food resources.

ID 1782cdd7

35 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) It discusses research intended to settle a debate about how agricultural yields can be increased without negative effects on water quality.

(B) It explains the differences between stream-protection strategies used in oil palm plantations and stream-protection strategies used in other kinds of agricultural environments.

(C) It describes findings that challenge a previously held view about how fish that inhabit streams in agricultural environments attempt to avoid predators.

(D) It presents a study that addresses an unresolved question about the presence of forests along streams in agricultural environments.

The following text is from Lucy Maud Montgomery's 1908 novel *Anne of Green Gables*. Anne, an eleven-year-old girl, has come to live on a farm with a woman named Marilla in Nova Scotia, Canada.

Anne reveled in the world of color about her.

"Oh, Marilla," she exclaimed one Saturday morning, coming dancing in with her arms full of gorgeous boughs, "I'm so glad I live in a world where there are Octobers. It would be terrible if we just skipped from September to November, wouldn't it? Look at these maple branches. Don't they give you a thrill—several thrills? I'm going to decorate my room with them."

"Messy things," said Marilla, whose aesthetic sense was not noticeably developed. "You clutter up your room entirely too much with out-of-doors stuff, Anne. Bedrooms were made to sleep in."

ID 19688783

36 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To demonstrate that Anne has a newly developed appreciation of nature

(B) To describe an argument that Anne and Marilla often have

(C) To emphasize Marilla's disapproval of how Anne has decorated her room

(D) To show that Anne and Marilla have very different personalities

The following text is adapted from Susan Glaspell's 1912 short story "'Out There.'" An elderly shop owner is looking at a picture that he recently acquired and hopes to sell.

It did seem that the picture failed to fit in with the rest of the shop. A persuasive young fellow who claimed he was closing out his stock let the old man have it for what he called a song. It was only a little out-of-the-way store which subsisted chiefly on the framing of pictures. The old man looked around at his views of the city, his pictures of cats and dogs, his flaming bits of landscape. "Don't belong in here," he fumed.

And yet the old man was secretly proud of his acquisition. There was a hidden dignity in his scowling as he shuffled about pondering the least ridiculous place for the picture.

ID aa7fc89b

37 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To reveal the shop owner's conflicted feelings about the new picture

(B) To convey the shop owner's resentment of the person he got the new picture from

(C) To describe the items that the shop owner most highly prizes

(D) To explain differences between the new picture and other pictures in the shop

A team investigating frugivorous (fruit-eating) birds found that their feeding patterns vary depending on where they live within their habitat range. At the geographic boundaries of their natural range, these birds become highly selective, choosing fruits that closely match their beak size to maximize energy intake while minimizing effort. However, this fruit-selection strategy doesn't occur at elevation boundaries (the highest and lowest altitudes of their range). In these areas, other factors, such as territorial competition among species, have a stronger influence on feeding patterns.

ID 72bae7f4

38 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To describe research methods that can be used to study the habitat preferences of frugivorous birds

(B) To present research findings concerning how location within a habitat affects the feeding patterns of frugivorous birds

(C) To discuss how competition among frugivorous bird species influences their habitat boundaries

(D) To explain why habitat boundaries are more important than beak size in determining the feeding patterns of frugivorous birds

By combining Indigenous and classical music, Cree composer and cellist Cris Derksen creates works that reflect the diverse cultural landscape of Canada. For her album *Orchestral Powwow*, Derksen composed new songs in the style of traditional powwow music that were accompanied by classical arrangements played by an orchestra. But where an orchestra would normally follow the directions of a conductor, the musicians on *Orchestral Powwow* are led by the beat of a powwow drum.

ID ae2b3112

39 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To examine how Derksen's musical compositions blend cultures

(B) To argue that Derksen should be recognized for creating a new style of music

(C) To describe the difficulties Derksen encountered when producing her album

(D) To establish a contrast between Derksen's classical training and her Cree heritage

The following text is from Betty Smith's 1943 novel *A Tree Grows in Brooklyn*. Francie, a young girl, visits the library often.

> Francie thought that all the books in the world were in that library and she had a plan about reading all the books in the world. She was reading a book a day in alphabetical order and not skipping the dry ones. She remembered that the first author had been Abbott. She had been reading a book a day for a long time now and she was still in the B's. Already she had read about bees and buffaloes, Bermuda vacations and Byzantine architecture. For all her enthusiasm, she had to admit that some of the B's had been hard going. But Francie was a reader.

©1947 by Betty Smith

ID 7a0e31ea

40 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To illustrate Francie's enjoyment of an unusual topic

(B) To explain why Francie prefers reading over other activities

(C) To portray Francie's determination to meet a goal

(D) To describe a book that Francie greatly admires

Today composer Scott Joplin is mainly celebrated for his catchy ragtime pieces "Maple Leaf Rag" and "The Entertainer." However, by overlooking his less famous works, listeners will miss the full range of Joplin's creativity. For instance, his waltz "Pleasant Moments" and his opera *Treemonisha* skillfully blend ragtime and classical music. These masterpieces deserve as much fame as Joplin's biggest hits.

ID 1090b367

41 Mark for Review Medium Explanation ›

Which choice best states the main purpose of the text?

(A) To describe the similarities and differences between ragtime music and opera

(B) To argue that more attention should be given to Joplin's lesser-known works

(C) To encourage music lovers to listen to music by many different composers

(D) To explain how Joplin learned to compose and perform ragtime music

HARD 13 questions

The field of study called affective neuroscience seeks instinctive, physiological causes for feelings such as pleasure or displeasure. Because these sensations are linked to a chemical component (for example, the release of the neurotransmitter dopamine in the brain when one receives or expects a reward), they can be said to have a partly physiological basis. These processes have been described in mammals, but Jingnan Huang and his colleagues have recently observed that some behaviors of honeybees (such as foraging) are also motivated by a dopamine-based signaling process.

ID 82cb7dda

42 Mark for Review Hard Explanation ›

What choice best describes the main purpose of the text?

(A) It describes an experimental method of measuring the strength of physiological responses in humans.

(B) It illustrates processes by which certain insects can express how they are feeling.

(C) It summarizes a finding suggesting that some mechanisms in the brains of certain insects resemble mechanisms in mammalian brains.

(D) It presents research showing that certain insects and mammals behave similarly when there is a possibility of a reward for their actions.

Studying late nineteenth- and early twentieth-century artifacts from an agricultural and domestic site in Texas, archaeologist Ayana O. Flewellen found that Black women employed as farm workers utilized hook-and-eye closures to fasten their clothes at the waist, giving themselves a silhouette similar to the one that was popular in contemporary fashion and typically achieved through more restrictive garments such as corsets. Flewellen argues that this sartorial practice shows that these women balanced hegemonic ideals of femininity with the requirements of their physically demanding occupation.

ID d4732483

43 Mark for Review Hard Explanation ›

Which choice best states the main purpose of the text?

(A) To describe an unexpected discovery that altered a researcher's view of how rapidly fashions among Black female farmworkers in late nineteenth- and early twentieth-century Texas changed during the period

(B) To discuss research that investigated the ways in which Black female farmworkers in late nineteenth- and early twentieth-century Texas used fashion practices to resist traditional gender ideals

(C) To evaluate a scholarly work that offers explanations for the impact of urban fashion ideals on Black female farmworkers in late nineteenth-and early twentieth-century Texas

(D) To summarize the findings of a study that explored factors influencing a fashion practice among Black female farmworkers in late nineteenth-and early twentieth-century Texas

In 2020, rap artist and professor A.D. Carson published the first peer-reviewed rap album about his experiences with Black masculinity called “i used to love to dream.” Typically in peer review, experts evaluate scholarly articles prior to publication. For Carson’s album, dubbed a “mixtap/e/ssay,” peer review involved both scholars and rap artists. In combining elements of a mixtape album with scholarly essays that connect Carson’s lyrics to historical and contemporary contexts for listeners both inside and outside academia, Carson’s album helped redefine how scholarship is created and shared.

ID d9915c15

44 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) To compare the relative public impact of scholarly articles and albums

(B) To capture one scholar’s opinion of a new rap album

(C) To explain why a certain rap album is particularly innovative

(D) To describe how each step of the peer review process unfolds

The following text is from George Marion McClellan’s 1895 poem “Eternity.”

My spirit swoons, and all my senses cry

For Ocean’s breast and covering of the sky.

Rock me to sleep, ye waves, and outward bound,

Just let me drift far out from toil and care,

Where lapping of the waves shall be the sound,

Which mingled with the winds that gently bear

Me on between a peaceful sea and sky,

To make my soothing slumberous lullaby.

ID 5f56fdec

45 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) To illustrate the increasing intensity of the speaker’s desire to escape ongoing hardship by gliding on the ocean

(B) To contrast the demands of the speaker’s everyday life with the serenity of being rocked to sleep by the ocean

(C) To convey the speaker’s longing for the ocean to impart a sense of inner tranquility

(D) To justify the speaker’s qualms about being transported by the ocean to a quiet destination

The following text is from Charlotte Brontë’s 1847 novel *Jane Eyre*. Jane, the narrator, works as a governess at Thornfield Hall.

I went on with my day’s business tranquilly; but ever and anon vague suggestions kept wandering across my brain of reasons why I should quit Thornfield; and I kept involuntarily framing advertisements and pondering conjectures about new situations: these thoughts I did not think to check; they might germinate and bear fruit if they could.

ID 03c9f327

46 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) To convey a contrast between Jane’s outward calmness and internal restlessness

(B) To emphasize Jane’s loyalty to the people she works for at Thornfield Hall

(C) To demonstrate that Jane finds her situation both challenging and deeply fulfilling

(D) To describe Jane’s determination to secure employment outside of Thornfield Hall

The following text is adapted from Herman Melville's 1857 novel *The Confidence-Man*. Humphry Davy was a prominent British chemist and inventor.

> Years ago, a grave American savant, being in London, observed at an evening party there, a certain coxcombical fellow, as he thought, an absurd ribbon in his lapel, and full of smart [banter], whisking about to the admiration of as many as were disposed to admire. Great was the savant's disdain; but, chancing ere long to find himself in a corner with the jackanapes, got into conversation with him, when he was somewhat ill-prepared for the good sense of the jackanapes, but was altogether thrown aback, upon subsequently being [informed that he was] no less a personage than Sir Humphry Davy.

ID b0f7541b

47 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) It portrays the thoughts of a character who is embarrassed about his own behavior.

(B) It presents an account of a misunderstanding.

(C) It offers a short history of how a person came to be famous.

(D) It explains why one character dislikes another.

Some studies have suggested that posture can influence cognition, but we should not overstate this phenomenon. A case in point: In a 2014 study, Megan O'Brien and Alaa Ahmed had subjects stand or sit while making risky simulated economic decisions. Standing is more physically unstable and cognitively demanding than sitting; accordingly, O'Brien and Ahmed hypothesized that standing subjects would display more risk aversion during the decision-making tasks than sitting subjects did, since they would want to avoid further feelings of discomfort and complicated risk evaluations. But O'Brien and Ahmed actually found no difference in the groups' performance.

ID c61a7c4a

48 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) It argues that research findings about the effects of posture on cognition are often misunderstood, as in the case of O'Brien and Ahmed's study.

(B) It presents the study by O'Brien and Ahmed to critique the methods and results reported in previous studies of the effects of posture on cognition.

(C) It explains a significant problem in the emerging understanding of posture's effects on cognition and how O'Brien and Ahmed tried to solve that problem.

(D) It discusses the study by O'Brien and Ahmed to illustrate why caution is needed when making claims about the effects of posture on cognition.

Dubautia carrii is a species in a family of plants known collectively as the silversword alliance, all of which grow only on the Hawaiian Islands. Members of this alliance exhibit an extraordinary range of phenotypes, with some species maturing into vines and others into shrubs and trees. All species in the alliance descended from a single ancestral tarweed plant that arrived on the islands around 5 million years ago. The tarweed's descendants diversified into distinct species as they adapted to live in the wide variety of habitats found on the Hawaiian Islands.

ID 65406d2c

49 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) To indicate the specific tarweed ancestor of all plants that grow on the Hawaiian Islands and explain why the plants have such varied physical characteristics

(B) To describe the specific habitat where *Dubautia carrii* are found and identify other plants that share a common ancestor with them

(C) To describe the silversword alliance and explain how the plant family became so varied

(D) To advance the claim that all plants on the Hawaiian Islands are part of the silversword alliance and list possible ancestors of the plants that make up the alliance

A number of Indigenous politicians have been elected to the United States Congress since 2000 as members of the country's two established political parties. In Canada and several Latin American countries, on the other hand, Indigenous people have formed their own political parties to advance candidates who will advocate for the interests of their communities. This movement has been particularly successful in Ecuador, where Guadalupe Llori, a member of the Indigenous party known as Pachakutik, was elected president of the National Assembly in 2021.

ID 975b0602

50 Mark for Review — Hard — Explanation ›

Which choice best states the main purpose of the text?

(A) To trace the history of an Indigenous political movement and speculate about its future development

(B) To argue that Indigenous politicians in the United States should form their own political party

(C) To highlight two approaches to achieving political representation for Indigenous people

(D) To consider how Indigenous politicians in the United States have influenced Indigenous politicians in Canada and Latin America

During Rome's republican period, which ended in the first century BCE, libraries were predominantly owned by wealthy individuals who tightly controlled access to their book collections. The first public library became available in Rome in 28 BCE and was soon followed by one commissioned by Emperor Augustus. As modern scholar Fabio Fernandes notes, however, these two traditions aren't as distinct as they seem, as both the emperor and the private library owners viewed their libraries as extensions of their personal patronage, just on vastly differing scales.

ID 0b5ecf0e

51 Mark for Review Hard Explanation ›

Which choice best states the main purpose of the text?

(A) To give a brief overview of public access to libraries throughout Rome's republican period

(B) To contend that early imperial leaders in Rome wielded too much influence over libraries

(C) To assert that private and early public libraries in ancient Rome had an essential similarity

(D) To call into question the notion that private Roman libraries disappeared during the first century BCE

The following text is adapted from Jane Austen's 1814 novel *Mansfield Park*. The speaker, Tom, is considering staging a play at home with a group of his friends and family.

We mean nothing but a little amusement among ourselves, just to vary the scene, and exercise our powers in something new. We want no audience, no publicity. We may be trusted, I think, in choosing some play most perfectly unexceptionable; and I can conceive no greater harm or danger to any of us in conversing in the elegant written language of some respectable author than in chattering in words of our own.

ID 0a04cac5

52 Mark for Review Hard Explanation ›

Which choice best states the main purpose of the text?

(A) To offer Tom's assurance that the play will be inoffensive and involve only a small number of people

(B) To clarify that the play will not be performed in the manner Tom had originally intended

(C) To elaborate on the idea that the people around Tom lack the skills to successfully stage a play

(D) To assert that Tom believes the group performing the play will be able to successfully promote it

Pteropods are small swimming snails with thin, delicate calcium carbonate shells. These animals are thought to be especially vulnerable to ocean acidification due to calcium carbonate's susceptibility to dissolution at lower pH values. Victoria L. Peck and colleagues recently found that the periostracum (a protective coating on pteropods' outer shells) prevents this dissolution when intact. Moreover, the team was surprised to discover that even when the periostracum is breached, pteropods can still mitigate damage by rebuilding the inner shell wall.

ID a1d2c4d0

53 Mark for Review Hard Explanation ›

Which choice best describes the main purpose of the text?

(A) To call for additional research on biological mechanisms that improve pteropod survival rates

(B) To discuss a conclusion drawn in a study of calcium carbonate's role in protecting the periostracum of pteropods

(C) To address some of the ways ocean acidification has altered pteropod behavior over time

(D) To present findings that suggest that a concern about the effects of ocean acidification on pteropod shells may be unwarranted

The following text is from John Dryden's 1697 translation of Virgil's poem the *Aeneid*, written in the first century BCE. Queen Dido has just heard the Trojan hero Aeneas recount a sad tale.

> But anxious cares already seiz'd the queen:
>
> She fed within her veins a flame unseen;
>
> The hero's valor, acts, and birth inspire
>
> Her soul with love, and fan the secret fire.
>
> His words, his looks, imprinted in her heart,
>
> Improve the passion, and increase the smart.

ID ad4f7362

54 Mark for Review

Hard

Explanation >

Which choice best states the main purpose of the text?

(A) To indicate that Dido is hiding her skepticism of Aeneas's account

(B) To emphasize that Dido has been deeply affected by Aeneas's story

(C) To imply that Dido engages both emotionally and intellectually with Aeneas

(D) To suggest that Dido is worried that Aeneas might discover a secret she is keeping from him

Explanations

1 Correct answer **D** — Easy — Back to question

D To provide an overview of the founding and mission of the Nuyorican Poets Cafe

Choice D is the best answer. The text presents a brief history of the Nuyorican Poets Cafe, from how it got started in the '70s, to its expansion in the '80s, to its ongoing mission today.

Choice A is incorrect. This isn't the overall purpose. The text never mentions Algarín's motivations. **Choice B is incorrect**. This isn't the overall purpose. The text never discusses the cultural life of New York as a whole. **Choice C is incorrect**. This is too narrow. One sentence mentions that the Nuyorican Poets Cafe expanded its scope to include art and music, but this is only one point in the broader history of the Nuyorican Poets Cafe, which is the overall focus of the text.

2 Correct answer **A** — Easy — Back to question

A To discuss von Ahn's invention of reCAPTCHA

Choice A is the best answer because it most accurately states the main purpose of the text. After providing a brief introduction to computer scientist Luis von Ahn, the text focuses on discussing how von Ahn's digitization work led to the invention of a digital security test known as reCAPTCHA.

Choice B is incorrect because the text doesn't address how digital scanners work. **Choice C is incorrect**. Although the text mentions von Ahn's book-digitizing project, that information is provided as a detail, not as the main purpose of the text. **Choice D is incorrect** because the text doesn't provide any indication of reCAPTCHA's popularity; instead, it describes reCAPTCHA's origin.

3 Correct answer **B** — Easy — Back to question

B To show that Henry's mother wants him to leave

Choice B is the best answer because it most accurately states the main purpose of the text, which is to show that Henry's mother, Mrs. Higgins, wants Henry to leave her house. In the text, Mrs. Higgins complains that Henry offends all her friends

and that they stop coming when he's also visiting. She then tells him directly, "you mustn't stay." The overall exchange conveys Mrs. Higgins's intention for Henry to leave so as not to drive away her friends with his behavior.

Choice A is incorrect because the text doesn't indicate what Henry's mother does when she's out with her friends. Instead, it focuses on what goes on when Henry and her friends visit her at the same time, indicating that since her friends find Henry's company disagreeable, she wishes him to leave before they arrive. **Choice C is incorrect** because the text doesn't contain an account of what Henry's home looks like. The setting is established as the house of Henry's mother, and the dialogue focuses solely on her wish that Henry should depart before her friends arrive. **Choice D is incorrect** because the text doesn't mention how often Henry visits his mother nor does it provide any explanation for why he visits his mother. Instead, it indicates that she thinks her friends dislike Henry and that she therefore wants him to depart before they arrive.

4 Correct answer **A** Easy Back to question

A To emphasize the uniformity of both the town and the people who live there

Choice A is the best answer. The author describes Coketown as having streets that are all very similar and residents who live similarly and do the same work. This repetition of similarities emphasizes how everything in Coketown is alike.

Choice B is incorrect. While the text mentions that all the residents "do the same work," it never explains what that work is or why everyone does it. Besides, the idea that they all do the same work is just one of several similarities among the townspeople described in the text. **Choice C is incorrect**. While the last sentence states that "every day was the same as yesterday and tomorrow, and every year the counterpart of the last and the next," it never suggests that people actually "lose track of time." This is also too narrow to be the main idea, since time is just one of many aspects of Coketown that the text describes as always being the same. **Choice D is incorrect**. The text never mentions whether life is simple in Coketown, and the town sounds as though it's probably a pretty dull place to live, rather than a pleasant one.

5 Correct answer **A** Easy Back to question

A To portray Polly's reaction to Fanny's friends

Choice A is the best answer because it most accurately describes the main purpose of the text, which is to show how Polly reacted to some of Fanny's other friends. The text describes Polly as being frightened of Fanny's friends because they seemed "much older and wiser" to her and elaborates that they "talked about things of which" Polly was unfamiliar, uninterested, and shocked. Thus, the main purpose of the text is to describe Polly's impressions of Fanny's other friends.

Choice B is incorrect because the text does not provide any of the topics Polly discussed with Fanny's friends, stating only that Polly found the topics unfamiliar, uninteresting, and shocking. **Choice C is incorrect** because the text says nothing about how Fanny and her other friends first met. **Choice D is incorrect** because the focus of the text is on Polly's feelings about Fanny's other friends, not on the other friends' feelings about Polly.

6 Correct answer **B** Easy Back to question

B To offer an overview of the history and importance of the Balmy Alley murals

Choice B is the best answer because it best states the main purpose of the text. The text begins by briefly stating that San Francisco is known for its murals, then transitions to a discussion of a single collection of murals, which is found on Balmy Alley in the city's Mission District. The text explains that the murals in this area were originally created in the 1970s, then observes that they have changed over time: as some have faded through the decades, others have been painted in their place. The text ends by emphasizing that these murals are significant because they reflect San Francisco's artistic spirit and cultural life. Therefore, the text provides an overview of the history and importance of the Balmy Alley murals.

Choice A is incorrect. Although it can be inferred from the text that there are murals in other areas of San Francisco besides Balmy Alley, the text doesn't specifically discuss murals in other areas or compare the murals of Balmy Alley to those in other areas. **Choice C is incorrect**. By observing that some of the murals of Balmy Alley have been replaced due to fading, the text implies that murals can decay, but it never urges readers to protect this specific collection of murals—or any murals elsewhere in San Francisco, for that matter. Indeed, by describing the ever-changing murals of Balmy Alley as "a living showcase of San Francisco's artistic spirit," the text emphasizes the positive aspects of the fact that the original Balmy Alley murals have faded and been replaced with new murals. **Choice D is incorrect** because the text doesn't describe the rise of mural painting in San Francisco generally or note when this occurred. The only historical development of the 1970s mentioned in the text is the origin of the murals in a specific area of the city: Balmy Alley in the Mission District.

7 Correct answer **D** Easy Back to question

D To encourage a child to embrace the experiences life will offer

Choice D is the best answer because it accurately states the text's main purpose. The poem begins with the speaker urging a child to "go forth" with her encouragement ("my heart's desire"). The speaker goes on to suggest that new experiences ("Great reaches, yet unknown") lie ahead for the son that "life is calling" him to seek out. Thus, the main purpose is to encourage a child to embrace the experiences available to him in his life.

Choice A is incorrect because the speaker encourages the child to pursue new experiences ("Great reaches") without knowing exactly what those experiences will be ("yet unknown") or suggesting that they should match the speaker's own accomplishments. **Choice B is incorrect** because the speaker focuses on positive possibilities for her son ("Great reaches, yet unknown") and her enthusiastic encouragement to embrace those possibilities ("life is calling you!"), while there is no mention of raising a child or associated struggles. **Choice C is incorrect** because the speaker frames the possibilities for her son in a positive light when she says that "great reaches, yet unknown" are waiting for him, and this positive outlook for the son is consistent throughout the text.

8 Correct answer **C** Easy Back to question

C To present a recent archaeological discovery

Choice C is the best answer because it most accurately describes the main purpose of the text. The text states that archaeologists recently discovered a well-preserved food shop, or *thermopolium*, in Pompeii, Italy. The text then further describes the contents of the discovery and provides an example of what was found. Thus, the overall purpose of the text is to present a recent archaeological discovery.

Choice A is incorrect. Although the text states that archaeologists found ancient artworks, it doesn't compare these artworks to modern ones or to any other artworks. **Choice B is incorrect**. Although the archaeological discovery discussed in the text was made in Italy, the text doesn't provide any information about politics or government in Italy. **Choice D is incorrect** because the text doesn't discuss the climate where the archaeological discovery was made or in any other region.

9 Correct answer **A** Easy Back to question

A To explain an effort made by the city of Portland to reduce demolition waste and some results of that effort

Choice A is the best answer. The author first describes a Portland law aimed at reducing demolition waste, and then goes on to explain that 27% of materials from building deconstructions were able to be reused and the rest were recycled.

Choice B is incorrect. The text never discusses the popularity of the law. **Choice C is incorrect**. The text never compares building deconstruction to other measures designed to reduce demolition waste. **Choice D is incorrect**. The text never mentions laws in cities other than Portland, Oregon.

10 Correct answer **B** Easy Back to question

B It establishes how the narrator feels about the piano.

Choice B is the best answer because it most effectively states the main purpose of the text, which is to establish the narrator's feelings about the piano. In the text, the narrator reveals that she "had to act really happy" about the piano even though she "pretty much hated the thing" as soon as it was placed upstairs near her bedroom. The narrator also describes the piano as glaring at her and compares it to a caged bird that wants to be set free. These details establish the narrator's feelings about the piano, suggesting that she dislikes it.

Choice A is incorrect because the text doesn't state that the narrator wanted a piano near her bedroom. In fact, she "hated the thing" from the start and felt that it glared at her. These details express dislike, not desire. **Choice C is incorrect** because the text doesn't state that the narrator's brothers are talented piano players. The only information provided in the text about the narrator's brothers is that they were also given the piano. **Choice D is incorrect** because the text states only that the narrator's parents bought the piano for the children from people who were moving. The text doesn't give any information about what made the parents decide to buy a piano in the first place.

11 Correct answer **B** Easy Back to question

B To explain the basics of how a specific energy technology works

Choice B is the best answer because it most accurately describes the main purpose of the text, which is to explain the basics of how a specific energy technology works. The text introduces Raccoon Mountain as a pumped-storage hydropower facility built in the 1970s and then explains how it operates: during periods of low demand, excess power pumps water up to a lake at the mountain's summit, and when demand for energy peaks, the water flows back down, spinning turbines along the way to generate electricity. The text provides some additional details, like the name of the water source, but the overall focus is on explaining the basics of how pumped-storage hydropower works.

Choice A is incorrect because the text focuses on one method of energy generation—pumped-water hydropower—and briefly mentions another type of energy generation (nuclear plants) only to identify it as a source of power for the pumping process. The text never makes any comparison between the two methods. **Choice C is incorrect** because the text simply gives a factual description of how Raccoon Mountain, a pumped-storage hydropower facility, operates; it never suggests that more energy storage facilities should be built, whether by regional utilities or by any other entity. **Choice D is incorrect** because the text doesn't present pumped-storage hydropower as a new technology; it indicates that Raccoon Mountain was built in the 1970s, meaning that, rather than being new, this facility is approximately 50 years old.

12 Correct answer **D** Easy Back to question

D To argue that a variety of animals use tools

Choice D is the best answer because it most accurately states the main purpose of the text. The text first states that animals make use of objects as tools to help them achieve different goals. The text then explains that although people used to think only primates use tools, tool use by dolphins (aquatic mammals) and palm cockatoos (birds) has shown that primates are not the only animals that use tools. Thus, the main purpose of the text is to argue that a variety of animals, not just primates, use tools.

Choice A is incorrect because the text doesn't mention intelligence at all, focusing just on the idea that animals use tools. Further, the text mentions one kind of bird (palm cockatoos) only as an example of a non-primate that uses tools and describes its use of tools as creative, not unintelligent. **Choice B is incorrect**. Although the text mentions tool use in primates (a group that includes humans) and in palm cockatoos, it doesn't compare humans' tool use with palm cockatoos' tool use. The text mentions palm cockatoos only as one example out of the variety of animals that use tools and never directly mentions tool use in humans. **Choice C is incorrect** because the text discusses tool use but never makes any mention of intelligence. Rather than establishing that tool use doesn't indicate intelligence, the text describes certain tool use as inventive and creative.

13 Correct answer **D** Easy Back to question

D To explain different ways in which Julius was helpful

Choice D is the best answer because it most accurately describes the main purpose of the text, which is to explain different ways in which Julius was helpful. The text begins with the narrator stating that Julius was very helpful to him and his wife when they moved to their new residence. The narrator then provides a list of examples to illustrate Julius's helpfulness. For instance, the narrator states that Julius was familiar with the neighborhood's roads, which suggests that he was helpful in navigating them, and that Julius helped manage the horses and dogs. The text's many examples of Julius's usefulness reinforce just how helpful he was and in how many different ways.

Choice A is incorrect because the text doesn't portray either the narrator's or his wife's reaction to their new home. Rather, the text focuses on how Julius was useful to the narrator and his wife in their new home. **Choice B is incorrect**. Although the text states that Julius was knowledgeable about the soil, this is one of several supporting details that illustrate how helpful Julius was. Moreover, the text merely states that Julius was knowledgeable about soil; it doesn't provide an example of that knowledge. **Choice C is incorrect** because there's nothing in the text to suggest the frequency with which the narrator and Julius hunted and fished together. In fact, it's unclear from the text whether the narrator and Julius hunted and fished together at all. The text merely indicates that Julius knew the best places to hunt and fish—a detail that supports the text's main purpose by conveying Julius's usefulness.

14 Correct answer **B** Easy Back to question

B It showcases how Adam's flexibility and consideration strengthen his relationship with his great-uncle Richard.

Choice B is the best answer because it most accurately describes the main purpose of the text, which is to showcase how Adam's flexibility and consideration strengthen his relationship with his great-uncle Richard. The text begins by stating that the meeting between the two characters is proceeding well and then describes Adam's thoughtful behavior: noticing his great-uncle's interest in the ship, Adam suggests staying on board overnight and expresses willingness to accommodate his great-uncle's schedule and destination preferences. The text goes on to describe the positive effect of Adam's thoughtfulness and flexibility, indicating that Adam's "affectionate willingness" to accommodate Richard's preferences "quite won the old man's heart." The text concludes by suggesting that Adam's ability to anticipate his great-uncle's wishes and willingness to accommodate them result in the rapid development of affection and intimacy between them, stating that they soon became "almost like old friends." Therefore, the text's main purpose is to demonstrate how Adam's flexibility and consideration strengthened his and his great-uncle's relationship.

Choice A is incorrect. Although the text explains Adam's reason for suggesting that Richard spend the night on the ship rather than finding lodging on land (which is that Adam perceives Richard's interest in the ship), this isn't the text's main purpose. Rather, Adam's suggestion about where to sleep for the night serves as an example of the consideration Adam shows toward Richard, and the text mentions it mainly to explain how an affectionate relationship developed so quickly between them. Moreover, the text only states that Adam encourages Richard to stay on the ship; it doesn't specify where Adam plans to spend the night. **Choice C is incorrect** because the text doesn't describe why Adam and his great-uncle Richard are excited about their journey. While the text mentions that Adam is willing to "start at any hour and go anywhere," it provides no details about any planned journey, its destination, or even whether they will be continuing by ship or some other mode of transportation, nor

does the text mention anything about either character's feelings of excitement about their plans. We learn only that Adam is accommodating about potential travel plans, not that either character is particularly eager about the journey itself. The text's main focus is on Adam and Richard's developing relationship, not on any anticipated travel experiences. **Choice D is incorrect** because the text doesn't show a contrast between initial wariness and later affection. On the contrary, the text begins by stating that the meeting between Adam and his great-uncle Richard has begun in an "auspicious," or promising, manner and is "proceed[ing] well," suggesting that Richard's impression is positive from the outset. There's no indication of any initial suspicion, caution, or reserve on Richard's part that later changes to affection. Instead, the text

describes a consistently positive interaction that deepens from a good first impression into a stronger, more familiar relationship because of Adam's considerate behavior.

15 Correct answer **C** Easy ‹ Back to question

C To give an example of how Ormes presented the experiences of Black Americans in her comic strips

Choice C is the best answer. The text describes how *Torchy Brown* depicted the experiences of a young Black woman experiencing America's Great Migration. It further states that Ormes continued to use comics throughout her career to humorously comment on important issues impacting Black Americans.

Choice A is incorrect. The text never mentions other Black women comic strip writers. **Choice B is incorrect**. The text never mentions any changes in the subjects Ormes addressed. **Choice D is incorrect**. The text never mentions the inspiration for characters in *Torchy Brown*.

16 Correct answer **B** Easy ‹ Back to question

B To describe an activity that the narrator finds amusing

Choice B is the best answer because it most accurately describes the main purpose of the text. The text describes how the narrator watches people working out at a gym through a window near a bus stop. The narrator says that "there ain't nothing funnier" than watching people try to work out on the stair climber machine. Thus, the main purpose of the text is to describe an activity that the narrator finds amusing.

Choice A is incorrect because the text isn't about the narrator beginning middle school. The text describes how the narrator finds people working out at a gym amusing and makes no mention of school life. **Choice C is incorrect** because the text doesn't mention any problems that the narrator currently has or has overcome. It just describes how the narrator finds watching people work out amusing. **Choice D is incorrect** because the narrator invents the made-up movie mentioned in the text. The text doesn't indicate that the narrator has seen a movie in a theater. The focus of the text is on the narrator watching people at the gym, not watching a movie.

17 Correct answer **B** Easy ‹ Back to question

B It discusses the development of a dance form.

Choice B is the best answer because it best describes the main purpose of the text. The text indicates where and when jazz tap first developed (in African American communities in the 1920s) and what influenced it (the quick rhythms and improvisations in jazz music) and then explains that it evolved alongside jazz music in the 1930s and 1940s, resulting in a very different form of tap dance than had existed before. Therefore, the main purpose of the text is to discuss jazz tap's development.

Choice A is incorrect. Although the text indicates that jazz music became widely popular in the US in the 1920s and describes some of jazz music's qualities, the text never explains why audiences prefer some kinds of music—jazz or otherwise—over

others. **Choice C is incorrect** because the text never mentions any musical instruments and doesn't describe how to play one. **Choice D is incorrect** because the text discusses jazz tap generally and never identifies a particular dancer, famous or otherwise.

18 Correct answer **D** Easy Back to question

D To explain why the narrator thinks she might make the basketball team

Choice D is the best answer because it most accurately describes the main purpose of the text. In the first sentence of the text, the narrator states that she thinks there's a chance she will become part of the basketball team at her college. She goes on to explain that she is "quick" and "tough." Based on these characteristics, she thinks she has a chance to join the team. Thus, the main purpose of the text is to explain why the narrator thinks she might make the basketball team.

Choice A is incorrect because the text focuses solely on basketball and doesn't mention any other kinds of sports. **Choice B is incorrect** because the text doesn't describe aspects of the game of basketball. Instead, it provides the narrator's reasoning for thinking that she might make her school basketball team. **Choice C is incorrect**. Although the narrator explains why she thinks she will be chosen for the basketball team at her school, the text doesn't go into the general decision-making process or the requirements for being picked for the team.

19 Correct answer **B** Easy Back to question

B To summarize research on an understudied stage of sea turtle development

Choice B is the best answer because it most accurately states the main purpose of the text. The text begins by noting that little is known about juvenile sea turtles during their oceanic stage, establishing this as an understudied area. The text then describes a study in which researchers tagged and released six juvenile green sea turtles and reports the findings: most turtles drifted passively with currents, while two swam against them. Therefore, the main purpose of the text is to summarize research on an understudied stage of sea turtle development.

Choice A is incorrect because although the text mentions that understanding migratory patterns is important for conservation, it does not describe any conservation efforts, successful or otherwise; instead, the text summarizes research findings about a stage of sea turtle development. **Choice C is incorrect**. Although the text notes that adult sea turtles are well studied while juveniles are not, it does not compare the migratory behavior of adults and juveniles; instead, the text focuses solely on findings about juvenile turtles. **Choice D is incorrect**. Although the text briefly mentions that two turtles swam against currents and speculates that they may have done so in search of foraging grounds, this is a single detail within the text's broader summary of the study, not the main purpose of the text as a whole.

20 Correct answer **D** Easy Back to question

D To show how much Max wants to visit La Reina

Choice D is the best answer because it most accurately describes the overall purpose of the text. The text indicates that "for as long as he could remember," Max had "begged" his father to take him to La Reina. This point is later emphasized in the text by indicating that "this summer" his father might "finally take" Max to visit La Reina. Thus, the purpose of the text as a whole is to show how much Max wants to visit La Reina.

Choice A is incorrect. The text does not discuss Papa's feelings toward Max. Rather, it mentions that Max has long wanted Papa to take him to La Reina and that, unlike Max and some other children, Papa does not believe that La Reina is haunted. **Choice B is incorrect**. The text mentions that Max is "almost twelve" at the time, which suggests anticipation of growing up

rather than refusal to. **Choice C is incorrect**. The text indicates that Max hopes to visit La Reina during the current summer, but nothing suggests that Max dislikes summer.

21 Correct answer **D** — Medium — Back to question

D To explain a study's conclusion and how a research team arrived at that conclusion

Choice D is the best answer because it most accurately describes the main purpose of the text, which is to explain a study's conclusion and how researchers involved in the study arrived at that conclusion. The text begins by summarizing the main conclusion of the study conducted by Paul Hanel and colleagues: when confronted with ideas they disagree with in discussions about controversial topics, people are more likely to respond politely if they think about their personal values before engaging in such discussions. The text then goes on to describe the design of Hanel and colleagues' experiment. By comparing interactions between members of an experimental group (who had been prompted to write about their personal values beforehand) to those between members of a control group (who had been prompted to write about a beverage), the team found that people in the experimental group behaved more civilly, or politely, than people in the control group did during discussions about a controversial topic. This finding led to the conclusion described at the beginning of the text.

Choice A is incorrect. Although the text discusses the results of a study, it doesn't provide any indication that the conclusion the study supported —that when facing disagreement, people behave more politely when they have thought about their values —is a belief that is widely held. **Choice B is incorrect** because the text doesn't indicate that the researchers found the results of their study to be surprising, or contrary to what they expected. In fact, there's no indication provided in the text about how the researchers felt about the study's results or that the results should be considered surprising. **Choice C is incorrect**. Although the text discusses the experimental design of a study, it doesn't suggest any improvements to that design; instead, it focuses on how the design enabled the researchers to draw a particular conclusion.

22 Correct answer **A** — Medium — Back to question

A To introduce and illustrate Barrier Williams's integral role in supporting other Black women as their circumstances changed during part of the Great Migration

Choice A is the best answer because it most accurately describes the text's purpose, which is to discuss the important role Barrier Williams played in supporting many other Black women as they relocated to the northern United States during the early years of the Great Migration. After introducing Barrier Williams, the text describes how she helped find jobs for other Black women, who in many cases relocated in search of better employment prospects than the South could offer at the time. The text indicates that by doing so, she eased these women's transition as their circumstances changed.

Choice B is incorrect. Although the text mentions Barrier Williams's work as a political activist and writer for the *Chicago Defender*, it doesn't discuss any professional connections she made in these roles or indicate that she used any such connections in her work to secure employment for other Black women. **Choice C is incorrect**. Although the text discusses a factor that caused many women to relocate during the Great Migration, their difficulty finding employment in the South, the text doesn't indicate that this factor motivated the start of the Great Migration. Moreover, the text doesn't discuss the factors that motivated Black men to migrate. **Choice D is incorrect**. Although the text mentions the difficult employment prospects for Black women in the domestic and agricultural sectors in the South during the Great Migration, the text's main purpose isn't to provide an overview of the employment challenges Black women faced in these sectors. Rather, it provides this information to show that Barrier Williams played a crucial role in supporting many Black women who relocated to the North by helping them achieve one of their main goals, securing a job.

23 Correct answer **C** Medium Back to question

C To describe a collection of medieval maps and how it was created

Choice C is the best answer because it most accurately states the main purpose of the text, which is to describe a collection of medieval maps and how it was created. The text begins by mentioning Muhammad al-Idrisi's collection of maps of lands known to medieval Arabic and European scholars. It then states that the Norman king Roger II hired al-Idrisi to create the collection and details al-Idrisi's methods of creation: consulting Arabic and Greek maps and interviewing travelers. In short, the text presents a collection of medieval maps and then goes on to describe how that collection came to be.

Choice A is incorrect because the text describes a collection of maps and the process of creating that collection but does not discuss the benefits of studying mapmaking in general. **Choice B is incorrect** because though the text mentions that al-Idrisi interviewed travelers, the text does not describe how those travelers created maps. **Choice D is incorrect** because though the text mentions that al-Idrisi consulted Arabic and Greek maps, the text does not offer a comparison of Arabic and Greek mapmaking techniques.

24 Correct answer **A** Medium Back to question

A To provide examples of Price's importance as a composer

Choice A is the best answer. The text provides an overview of Florence Price's importance by describing her success at the 1932 Wanamaker Foundation Awards, her blending of Black spirituals and classical European Romantic musical traditions, and the recent performances and recordings of her concertos and symphonies by major orchestras.

Choice B is incorrect. The text does mention that Price's compositions have been performed and recorded by major orchestras, but it doesn't argue that more orchestras should do so. **Choice C is incorrect**. The text does mention the blending of Black spirituals and classical European Romantic musical traditions, but only briefly, as part of a broader overview of Price's career. **Choice D is incorrect**. The text mentions Price's blending of Black spirituals with classical European Romantic musical traditions, but it doesn't directly compare Price's scores with those of classical European composers.

25 Correct answer **C** Medium Back to question

C To emphasize that Chloé Zhao's decisions during the filmmaking process reinforce the themes of her films

Choice C is the best answer because it most accurately states the main purpose of the text. The text begins by describing Zhao's filmmaking decisions: incorporating real events, casting nonprofessional actors from the locations she portrays, and encouraging those actors to bring personal experiences to their roles. The text then states that this approach "adds powerful resonance" to films that explore themes of place, home, and the decision to stay or leave. Therefore, the main purpose of the text is to emphasize that Zhao's filmmaking decisions reinforce the themes of her films.

Choice A is incorrect because the text explicitly states that Zhao's films are fictional. Although the text states that Zhao uses a "documentary-like style," it does not suggest that the films are best understood as documentaries, or nonfiction movies. Instead, the text describes how her approach strengthens her films' themes. **Choice B is incorrect** because the text does not discuss whether Zhao has a background in documentary filmmaking. The text does not mention her background. Instead, the text describes Zhao's filmmaking approach and its effect on her films' themes. **Choice D is incorrect** because the text does not address changes in Zhao's filmmaking style over time; instead, it describes her consistent approach and how that approach reinforces her films' themes.

26 Correct answer **A**

Medium

Back to question

A It illustrates a character's reaction to a new environment.

Choice A is the best answer because it most accurately describes the main purpose of the text. The narrator describes how Joe responds to being in "the metropolis": he's excited and "wild with enthusiasm." He also envies the young fellows who walk by because, dressed as they are, they look as if they have somewhere special to go. The text contrasts this new place with the place Joe comes from, where apparently there wasn't as much to do. Thus, the main purpose of the text is to illustrate Joe's reaction to a new environment.

Choice B is incorrect because the text makes no reference to why Joe has moved. The narrator indicates that Joe is enthusiastic about being in a city, but there's no explanation provided for the move. **Choice C is incorrect** because the text makes no reference to how Joe thinks about an event. The narrator describes young men passing by in the evening and then recalls places worth going to at home—church and a few people's houses—but there's no explicit comparison made nor is a time of day mentioned for these events back home. **Choice D is incorrect** because the text doesn't support the idea that Joe feels regret over leaving home. Instead, Joe is described as "wild with enthusiasm" at being in the city. Joe's home is mentioned, but only to compare it unfavorably with the city.

27 Correct answer **A**

Medium

Back to question

A To convey how engaging in song makes the speaker feel

Choice A is the best answer because is accurately states the main purpose of the text. The text begins by declaring that although a song is "but a little thing," or seemingly insignificant, singing it brings joy and gives the speaker of the text "zest," or excitement, in "hours of toil." The remainder of the text explores the idea that as night is falling, singing allows the speaker to feel that "all is well." Thus, the main purpose of the text is to convey how engaging in song makes the speaker feel.

Choice B is incorrect. Although the text mentions a shepherd, it neither indicates that the shepherd is singing nor does it compare the shepherd to the speaker. **Choice C is incorrect**. The text indicates that the speaker works hard, engaging in "hours of toil," and it can be inferred that the speaker likely lives in a rural area, since cows and a cowbell can be heard nearby. However, the text does not suggest that the speaker is a farmer or feels excited about farming. Moreover, the shepherd in the text is not a literal reference to someone who herds sheep but instead a figurative description of the moon as the shepherd of the stars. **Choice D is incorrect** because in the text, the speaker is singing a song, not listening to others sing one. Moreover, the text describes the feelings that the speaker has when singing a song, not the song itself.

28 Correct answer **A**

Medium

Back to question

A To consider how the repetitiveness inherent in human life can be both rewarding and challenging

Choice A is the best answer because it accurately states the main purpose of the text. The text begins by discussing the promise of the future, with positive references to renewal such as "new roads," "new beating of the drum," and "fresh seeing." But with the "new sun," the text continues, there will still be "the same backs bending" and "the same sad feet" drumming, indicating that these difficulties will follow people into this new day. The poem thus considers both the rewards and challenges associated with the repetitiveness of human life.

Choice B is incorrect because the text doesn't say anything about how memorable activities are, let alone compare the memorability of activities completed at different times of the day. **Choice C is incorrect**. Although the text contrasts hope with difficulty, it does not compare the relative frequency of joyful feelings with that of sad feelings. **Choice D is incorrect** because the text makes no distinction between the experiences of individuals and the experiences of their communities.

29 Correct answer **A** Medium Back to question

A To convey the narrator's experience of observing and making sense of differences between two cultures she embraces

Choice A is the best answer because it most accurately describes the main purpose of the text. The narrator asserts that she loves both her "own" country (Japan) and her "adopted country" (the United States) even though the two countries differ "widely." She also indicates that, at first, she would try to explain unfamiliar experiences that she had in the United States using the standards ingrained in her from growing up in Japan. Thus, the main purpose of the text is to convey the narrator's experience of observing and making sense of the differences between two cultures she embraces.

Choice B is incorrect because the text makes no reference to possible companions. Although the text does indicate that the narrator sometimes used the cultural framework she acquired growing up in Japan to explain some experiences she's had, there is no suggestion that this was in service of making friends. And although "no one seemed to know" strongly implies that the narrator has interacted with other people in the United States, there is no indication that these conversations involved her discussing Japanese customs. **Choice C is incorrect** because nothing in the text suggests that the narrator was hesitant to ask questions. In fact, the narrator indicates that "no one seemed to know the origin" of various customs, which provides evidence that, rather than being hesitant, she sought information from several people. **Choice D is incorrect** because the text makes no reference to the physical distance between Japan and the United States. Although the narrator indicates that the two countries differ "widely" and likens them to "two separate worlds," these descriptions relate to cultural aspects of the countries and the narrator's feelings about the two countries, not the physical distance between them.

30 Correct answer **B** Medium Back to question

B To explain that Spanish-language newspapers thrived in Texas and especially in El Paso during the late 1800s

Choice B is the best answer because it most accurately describes the main purpose of the text. The text begins by stating that there were many Spanish-language newspapers in cities across Texas in the late 1800s, citing San Antonio as a city that produced eleven such newspapers. The text then goes on to note that in El Paso, there were twenty-two newspapers published in Spanish in the late 1800s, more than any other Texas city. The text then concludes by explaining that the reason for this large number of Spanish-language newspapers was likely El Paso's location near Mexico and its large population of Spanish speakers. Therefore, the main purpose of the text is to explain that Spanish-language newspapers thrived in Texas cities, especially in El Paso, in the late 1800s.

Choice A is incorrect because the text doesn't discuss Spanish-language newspapers published in Texas today, let alone compare them with newspapers that were published in the 1800s. **Choice C is incorrect**. Although the text characterizes El Paso as a particularly rich site for Spanish-language journalism in the late 1800s, the text doesn't discuss whether newspapers published in El Paso influenced the newspapers published in other cities across Texas, including San Antonio. **Choice D is incorrect** because the text doesn't mention whether Spanish-language newspapers published in Texas were also widely read in Mexico. The text only focuses on the popularity of Spanish-language newspapers within Texas, and especially in El Paso.

31 Correct answer **D** Medium Back to question

D To describe an experiment whose results cast doubt on an established hypothesis

Choice D is the best answer because it most accurately states the main purpose of the text, which is to describe an experiment whose results cast doubt on an established hypothesis. The text begins by noting that researchers have long believed that woolly mammoths were hunted to extinction in North America by humans using spears with Clovis points. The text then describes an experiment conducted by an anthropologist to test this hypothesis. According to the text, the results of the experiment led the anthropologist to conclude that hunters using spears with Clovis points likely weren't the primary cause

of the extinction. The anthropologist's results cast doubt on the long-held hypothesis presented at the beginning of the text and suggest that woolly mammoths may have become extinct in North America due to some other cause.

Choice A is incorrect because there's nothing in the text to suggest that researchers have been involved in an ongoing debate. On the contrary, the text suggests that most researchers agree on the cause of the woolly mammoth's extinction in North America. **Choice B is incorrect** because the text never mentions any advantages or disadvantages of the method used in the experiment, focusing instead on the results achieved using that method. **Choice C is incorrect** because the text addresses only one hypothesis, that mammoths were hunted to extinction in North America by humans using spears with Clovis points. Rather than present a competing hypothesis, the text explains how one anthropologist designed an experiment to test this long-held hypothesis.

32 Correct answer **D** Medium Back to question

D It discusses the findings of a study that evaluated the effects of exposing a plant species to lunar soil conditions.

Choice D is the best answer. The text describes an experiment wherein space scientists compared plant growth in terrestrial and lunar soil conditions. It then discusses the findings of the study, including the fact that all the seeds germinated but that the plants grown in lunar soil exhibited signs of stress.

Choice A is incorrect. The text doesn't address this question, and never describes any specific characteristics of either soil. It merely describes the outcome of an experiment that exposed a plant species to lunar soil conditions. **Choice B is incorrect**. The text never compares methods of assessing indicators of stress—instead, it simply mentions several stress indicators observed in the study (red pigmentation, reduced leaf size, and inhibited growth rates). **Choice C is incorrect**. The text doesn't present any evidence that we could never achieve seed germination in lunar habitats, and in fact states that the seeds in the lunar soil did germinate.

33 Correct answer **D** Medium Back to question

D To depict the setting as the characters await a visitor's arrival

Choice D is the best answer because it most accurately reflects the main purpose of the text. The text portrays Miss Pyne as awaiting the arrival of a carriage while Martha brings strawberries and flowers from the garden into the house. The text also describes the surroundings of the scene, stating that Miss Pyne looks "stately and calm," the evening is bright and cool, and birds are singing in the garden as the sun sets. Then the last sentence states that the house was "wide open to the long-expected guest," which strongly suggests that Miss Pyne's anticipation and Martha's activities were in preparation for the guest who is expected to arrive in the carriage. Thus, the text depicts the setting and conveys what these characters are doing as they await the arrival of their visitor.

Choice A is incorrect because there is nothing in the text to indicate that the characters feel any worry about the guest's arrival. The text indicates that the guest was "long-expected," but characterizing Miss Pyne as "stately and calm" conflicts with the idea that the characters are worried about the guest. **Choice B is incorrect** because the text describes a moment in time when two characters are awaiting the arrival of a visitor rather than an extended period over which characters could be seen changing. **Choice C is incorrect**. Although the text describes the activity indoors (Miss Pyne sitting calmly), it describes a higher level of activity, not stillness, outside (Martha bringing fruit and flowers and birds singing).

34 Correct answer **D** Medium Back to question

D To portray Louis Pipestone's strong commitment to collecting signatures for the petition

Choice D is the best answer because it most accurately states the text's main purpose. The text indicates that Louis always had his petition with him, asked everyone he encountered to sign it if they hadn't already, and lists several comical

circumstances in which he might try to get someone to sign. Thus, the main purpose of the text is to illustrate Louis's dedicated focus on getting people to sign the petition.

Choice A is incorrect. Although the text suggests that Louis was aggressive in seeking signatures for the petition—for example, saying that he "cornered" people—nothing in the text addresses how those people feel toward Louis, let alone that they are refusing his request. **Choice B is incorrect** because, other than portraying Louis's commitment to gathering signatures, the text doesn't discuss community members' attitudes toward Louis or the petition. **Choice C is incorrect** because the text never mentions the attitudes of the people Louis approaches toward the petition, but the text does indicate that he "cornered" prospective signatories, strongly suggesting that their enthusiasm was neither needed nor considered.

35 Correct answer **D** Medium Back to question

D It presents a study that addresses an unresolved question about the presence of forests along streams in agricultural environments.

Choice D is the best answer. The author first describes an unresolved question: what effect do bank forests have on stream biodiversity? Then the author presents a study that answers the question: bank forests increase stream biodiversity.

Choice A is incorrect. This isn't the main purpose of the text. The text never mentions agricultural yields. **Choice B is incorrect**. This isn't the main purpose of the text. The text never mentions other kinds of agricultural environments. **Choice C is incorrect**. This isn't the main purpose of the text. The text never mentions any previously held view about how fish in these streams try to avoid predators.

36 Correct answer **D** Medium Back to question

D To show that Anne and Marilla have very different personalities

Choice D is the best answer because it most accurately describes the main purpose of the text. The text begins by noting that Anne "reveled in the world of color about her"—that is, she takes great delight in colorful things. It then relates a scene when she enthusiastically enters the house with autumn foliage and announces that she will decorate her room with it. The focus of the text then shifts to Marilla, who has an undeveloped "aesthetic sense," or appreciation of beauty, as can be seen when she dismisses the maple leaves as "messy things" and criticizes Anne for cluttering her room with objects from outside. This episode thus illustrates that Anne and Marilla differ in their appreciation of beauty and, more generally, in their basic character: Anne is exuberant and joyful, while Marilla is stern and critical. Therefore, the purpose of the text is to show that Anne and Marilla have very different personalities.

Choice A is incorrect because the text presents Anne's appreciation of nature as a basic personality trait, not as a newfound enthusiasm, and never indicates how recently she developed that appreciation. **Choice B is incorrect**. Although the text portrays Anne and Marilla as having different personalities and attitudes toward natural beauty and home decoration, it doesn't show them engaging in an argument about this difference or suggest that they often argue about it. **Choice C is incorrect**. Although the text does indicate that Marilla disapproves of how Anne plans to decorate her room, Marilla's disapproval is a supporting detail that serves to develop her personality, which the text as a whole contrasts with Anne's personality.

37 Correct answer **A** Medium Back to question

A To reveal the shop owner's conflicted feelings about the new picture

Choice A is the best answer because it most accurately describes the main purpose of the text. The text begins by stating that the new picture "failed to fit in" with the other items that the shop owner has. The text goes on to illustrate that point by describing the other pictures the shop owner has, indicating that the shop owner is fuming because he doesn't think the new

picture belongs in the store. In the second paragraph, however, the text indicates that the shop owner is "secretly proud of his acquisition." The main purpose of the text is thus to reveal the shop owner's conflicted feelings about the new picture.

Choice B is incorrect because the text doesn't suggest that the shop owner resents the young man who sold him the new picture; in fact, the text gives no indication of the owner's feelings about the young man at all. **Choice C is incorrect**. Although the text indicates that the new picture is different from the other items in the shop, there's no suggestion that the shop owner prizes either the new picture or the pictures of the city, pets, and landscapes more than he prizes any other items. **Choice D is incorrect** because the text doesn't describe what the new picture looks like; rather, the text identifies some of the other kinds of images that the shop owner has and states that they're different from the new picture without explaining how they're different.

38 Correct answer **B** Medium Back to question

B To present research findings concerning how location within a habitat affects the feeding patterns of frugivorous birds

Choice B is the best answer because it most accurately states the main purpose of the text. The text begins by introducing research on variation in frugivorous birds' feeding patterns based on the specific part of their habitat range the birds occupy. The text then explains that birds at the geographic edges of their range feed selectively based on beak size, whereas birds at altitude-based boundaries feed based on local competition with other species. Therefore, the main purpose of the text is to present research findings concerning how location within a habitat affects the feeding patterns of frugivorous birds.

Choice A is incorrect. Although the text does discuss studying habitats of frugivorous birds, it doesn't address specific research methods. **Choice C is incorrect**. Although the text mentions territorial competition as a factor affecting the feeding patterns of frugivorous birds at elevation boundaries, nothing in the text suggests that such competition affects the boundaries of those birds' habitats. **Choice D is incorrect**. Although the text mentions beak size as a key factor shaping frugivorous birds' feeding patterns at the geographic boundaries of the birds' natural range, it doesn't compare the relative importance of different factors or indicate that habitat boundaries matter more than beak size. Instead, the text presents findings showing that different types of boundaries—geographic and elevational—are associated with different influences on feeding patterns.

39 Correct answer **A** Medium Back to question

A To examine how Derksen's musical compositions blend cultures

Choice A is the best answer because it most accurately describes the main purpose of the text, which is to discuss how Derksen's compositions incorporate elements from both Indigenous and classical music. After introducing Derksen, the text describes how the songs Derksen composed for her album *Orchestral Powwow* feature aspects of the two musical traditions. Specifically, the text notes that Derksen wrote songs in the style of traditional powwow music but accompanied them with classical arrangements played by an orchestra that followed the beat of a powwow drum rather than the directions of a conductor. In this way, Derksen's compositions blend different cultures.

Choice B is incorrect because although the text suggests that Derksen's songs contain innovative elements since they blend styles from two different musical traditions, it doesn't discuss whether her compositions constitute a new style of music, let alone whether Derksen should be recognized for creating a new style of music. **Choice C is incorrect** because the text doesn't mention any difficulties Derksen encountered when producing her album. Rather, the text describes how the songs on the album exemplify how Derksen combines music from two different cultures. **Choice D is incorrect** because although the text mentions Derksen's Cree heritage and suggests that she relies on knowledge of both Indigenous and classical music when she composes her songs, it doesn't discuss her musical training. Additionally, the text is primarily focused on how Derksen combines different cultural traditions, not on contrasting Derksen's training with her heritage.

40 Correct answer **C**

Medium

< Back to question

C To portray Francie's determination to meet a goal

Choice C is the best answer because it most accurately describes the main purpose of the text, which is to portray Francie's determination to reach her goal of reading all the books in the world. The text indicates that to achieve this aim, Francie works systematically and persistently: she reads all the books in the library in alphabetical order and devotes much time and effort to the project, finishing one book per day over a long period of time. The text then suggests that even though she progresses slowly ("she was still in the B's") and that she struggled with some books ("some of the B's had been hard going"), she doesn't give up because she thinks of herself as "a reader." These details show Francie's resolve.

Choice A is incorrect. Although the text mentions several topics (bees and buffaloes, Bermuda vacations, and Byzantine architecture) that Francie has read about, it doesn't indicate that any of these topics are unusual or that she especially enjoyed reading about one of these topics in particular. If anything, the text suggests that she may have found some of these topics to be dull, saying that she even read the "dry ones"—that is, the boring books—and that some of the books were "hard going," meaning they were difficult to get through. **Choice B is incorrect** because the text doesn't discuss Francie's involvement in other activities, only her dedication to reading. Although it's possible that Francie dedicates herself to reading because she prefers it to other activities, the text doesn't indicate whether this is the case. **Choice D is incorrect**. Although the text mentions one author (Abbott) whose book Francie has read as well as several topics (bees and buffaloes, Bermuda vacations, and Byzantine architecture) she has encountered, the text doesn't say whether Francie admires any of the books she's read so far. Instead, the text focuses on the time and effort she devotes to reaching her goal of reading all the books in the world—even ones she doesn't enjoy.

41 Correct answer **B**

Medium

< Back to question

B To argue that more attention should be given to Joplin's lesser-known works

Choice B is the best answer because it best states the main purpose of the text, which is to make a case for the importance of Scott Joplin's less famous works. The text begins by introducing Joplin's most popular works and then goes on to assert that gaining a full understanding of Joplin's creativity requires a consideration of his lesser-known pieces as well. The text concludes by characterizing the lesser-known works "Pleasant Moments" and *Treemonisha* as masterpieces that deserve to be famous. These details indicate that the text's main purpose is to argue that more attention should be given to Joplin's lesser-known works.

Choice A is incorrect. Although the text discusses some of the ragtime music and an opera that Joplin composed, it does not compare the two types of music in general. Instead, the text argues that Joplin's lesser-known works, including his opera, deserve as much attention as his more famous ragtime pieces receive. **Choice C is incorrect** because the text discusses only Joplin's music and does not ask music lovers to listen to a variety of composers. Instead, the text encourages listeners to pay attention to Joplin's lesser-known works in order to gain a full understanding of his creativity. **Choice D is incorrect** because the text does not discuss how Joplin learned to compose and perform ragtime music. Instead, the text focuses on Joplin's less famous works and makes a case for their importance.

42 Correct answer **C**

Hard

< Back to question

C It summarizes a finding suggesting that some mechanisms in the brains of certain insects resemble mechanisms in mammalian brains.

Choice C is the best answer because it most accurately describes the main purpose of the text, which is to summarize a finding suggesting that some mechanisms in the brains of certain insects resemble mechanisms in mammalian brains. The text begins by explaining that feelings such as pleasure and displeasure are linked to chemical processes in the brain, such as the release of dopamine when one receives a reward. The text then indicates that such processes have been seen in mammals but

that researchers have recently observed similar processes involving dopamine in honeybees. Taken together, this information serves to sum up the discovery that some mechanisms in the brains of certain insects may resemble mechanisms linked to feelings such as pleasure and displeasure in mammals.

Choice A is incorrect because the text doesn't describe any experiments or experimental methods. Instead, the text describes a phenomenon that has been observed in mammals and then presents the recent observations of Huang and colleagues that this phenomenon is also seen in honeybees. **Choice B is incorrect** because there's nothing in the text to suggest that certain insects can express how they're feeling through particular processes. The text does indicate that certain honeybee behaviors such as foraging are linked to dopamine, but it doesn't suggest that these behaviors enable honeybees to communicate feelings or sensations. **Choice D is incorrect** because the text presents research showing that certain honeybee behaviors such as foraging are linked to dopamine and therefore may be motivated by similar mechanisms to those in mammalian brains, not that honeybees and mammals behave similarly when there is the possibility of reward for their actions.

43 Correct answer **D** Hard < Back to question

D To summarize the findings of a study that explored factors influencing a fashion practice among Black female farmworkers in late nineteenth-and early twentieth-century Texas

Choice D is the best answer. The text provides an overview of a scholarly work discussing the fashion practices of Black female farmworkers in late 19th- and early 20th-century Texas, and how these practices were influenced by both the fashion ideals of the time and the demands of farmwork.

Choice A is incorrect. The text never discusses the rate of fashion change among Black female farmworkers. The text also never categorizes Flewellen's findings as "unexpected." **Choice B is incorrect**. The text actually explains that Black female farmworkers were trying to achieve traditional feminine ideals, not resist them. **Choice C is incorrect**. The text doesn't evaluate a scholarly work but rather simply describes it. Furthermore, the text is focused on "agricultural and domestic" fashion, not urban fashion as this choice suggests.

44 Correct answer **C** Hard < Back to question

C To explain why a certain rap album is particularly innovative

Choice C is the best answer because it best describes the main purpose of the text, which is to explain why a certain rap album is particularly innovative. The text mentions rap artist and professor A.D. Carson, who published "the first peer-reviewed rap album." The text also describes the unusual process of having the work evaluated by both scholars and rap artists before its release, and details how the album combines elements of a mixtape album with elements of scholarly essays. All of these characteristics of the album and the way in which it was developed help to demonstrate the album's novelty.

Choice A is incorrect because though the text mentions an album that combines elements of scholarly essays and mixtapes, it does not compare the relative public impact of scholarly articles and albums. **Choice B is incorrect** because the text does not present the opinion of a scholar regarding the rap album. **Choice D is incorrect** because though the text mentions that the album was peer reviewed, it does not detail the steps of the review.

45 Correct answer **C** Hard < Back to question

C To convey the speaker's longing for the ocean to impart a sense of inner tranquility

Choice C is the best answer because it most accurately states the main purpose of the text, which is to convey the speaker's longing for the ocean to impart a sense of inner tranquility, or peace. The text begins by expressing the speaker's strong desire to be on the ocean, appealing directly to the waves to rock the speaker to sleep. The poem then describes the "slumberous lullaby" formed by the sound of the waves and the winds on which the speaker wishes to be carried "gently…between a

peaceful sea and sky." All these details serve to emphasize the speaker's desire for the ocean to give them a sense of inner tranquility.

Choice A is incorrect. Given the poem's expression of a longing to achieve tranquility by drifting on the ocean, it can be inferred that the speaker desires to escape something unpleasant in daily life. However, the poem doesn't refer directly to any such hardship—ongoing or otherwise. And since the poem doesn't establish that the speaker is experiencing a desire to escape ongoing hardship, it can't be said that such a desire increases in intensity. **Choice B is incorrect**. The speaker does express a desire for the serenity of being rocked to sleep by the ocean, and it can be inferred that this desire is a response to demands that make the speaker's daily life stressful. However, the poem doesn't refer directly to such demands or contrast them with the tranquility of drifting on the ocean. **Choice D is incorrect** because the text doesn't suggest the speaker has any qualms, or reservations, about being transported by the ocean. On the contrary, the speaker actively desires to "drift far out" and be carried by the waves and wind. Moreover, the poem doesn't suggest that this drifting would have any particular destination.

46 Correct answer **A** — Hard — ‹ Back to question

A To convey a contrast between Jane's outward calmness and internal restlessness

Choice A is the best answer because it most accurately describes the main purpose of the text, which is to show that while Jane calmly goes about her daily tasks, she is experiencing internal agitation about possibly seeking a new job. At the start of the text, Jane says, "I went on with my day's business tranquilly," indicating that she is outwardly calm. This outward calmness is then contrasted with her intense internal restlessness, as Jane says that thoughts of leaving her job keep running through her mind, that she is "involuntarily framing advertisements" (meaning that she can't stop herself from thinking up potential listings for jobs), and that she often wonders what new "situations" (or jobs) would be like.

Choice B is incorrect because the text gives no indication of Jane's feelings, either positive or negative, about the people she works for at Thornfield Hall. And rather than emphasizing that Jane feels particularly loyal to her employers, the text focuses on her constant consideration of leaving her job. **Choice C is incorrect** because the text gives no indication that Jane finds her current situation fulfilling, or satisfying. Given that much of the text is focused on Jane's thoughts about possibly leaving her job for a new one, it might be the case that she finds her situation challenging, but there is no evidence in the text that Jane also finds that situation satisfying—she says nothing positive about her current job at all, in fact. **Choice D is incorrect** because the text describes Jane as wondering about getting a new job, not as determined to definitely do so. Jane keeps thinking about reasons why she "should" quit her current job (indicating that she hasn't yet decided to) and imagining possible new situations she could find, but she says at the end of the text that these thoughts "might germinate and bear fruit if they could," meaning that the thoughts haven't yet led to a decision—that Jane isn't yet determined to get a new job somewhere else.

47 Correct answer **B** — Hard — ‹ Back to question

B It presents an account of a misunderstanding.

Choice B is the best answer. The text tells a story of a first impression that turned out to be wrong: a serious American savant was dismissive of a goofy-looking, wisecracking guest at a British party, and then was shocked to learn that the guest was actually a prominent British chemist and inventor.

Choice A is incorrect. This is too strong and too narrow. Only at the very end is the savant "thrown aback" by the fact that the man was Sir Humphry Davy—he's not "embarrassed about his own behavior." **Choice C is incorrect**. This isn't the main purpose. The text never provides the history of how Sir Humphry Davy came to be famous. Nor does it provide any history for the American savant. **Choice D is incorrect**. This is too narrow. It doesn't include the second half of the text, where the savant gets into a conversation with the man and then finds out that the man is Sir Humphry Davy.

48 Correct answer **D**

Hard

< Back to question

D It discusses the study by O'Brien and Ahmed to illustrate why caution is needed when making claims about the effects of posture on cognition.

Choice D is the best answer because it most accurately describes the main purpose of the text. The text notes that although some studies have suggested that posture may have an effect on cognition, this phenomenon should not be overstated. In other words, the text begins by urging caution and restraint when discussing the effects of posture on cognition, implying that even though some studies have shown posture to affect cognition, we should not assume that posture always affects cognition or does so in a strong way. The text goes on to discuss O'Brien and Ahmed's study as a "case in point" (that is, as an example of the point made previously). According to the text, O'Brien and Ahmed hypothesized that since standing is more cognitively demanding than sitting, standing subjects in their experiment would respond differently to decision-making tasks than sitting subjects would, which would show an effect of posture on cognition. What the researchers actually found, however, was that the standing and sitting subjects performed the same—posture did not affect cognition. By presenting a circumstance in which posture does not appear to affect cognition, the discussion of O'Brien and Ahmed's study shows why it is important not to overstate the phenomenon. The purpose of the text, therefore, is to discuss O'Brien and Ahmed's study to illustrate why caution is needed when making claims about posture's effects on cognition.

Choice A is incorrect because the text discusses O'Brien and Ahmed's study as an example of why caution is needed when discussing posture's effects on cognition, not as an example of how research findings related to posture and cognition are often misunderstood. Although the text does warn against misunderstanding the scope of the relationship between posture and cognition that has been reported in some previous studies, O'Brien and Ahmed's study is not one of those studies, and there is no suggestion that anyone has misunderstood O'Brien and Ahmed's findings. **Choice B is incorrect** because the text makes no mention of the methods used in previous studies of the effects of posture on cognition. Although the text does urge caution when discussing posture's effects on cognition, it does not critique the results of studies that suggested that posture can affect cognition. Instead, the text suggests that such results should not be exaggerated or taken too broadly. **Choice C is incorrect** because although the text implies that overstating posture's effects on cognition would be a problem, nothing in the text suggests

that O'Brien and Ahmed share that view or that they attempted to solve that problem. O'Brien and Ahmed are presented as hypothesizing that posture would affect cognition in their study, not as trying to resolve the problem the text describes.

49 Correct answer **C**

Hard

< Back to question

C To describe the silversword alliance and explain how the plant family became so varied

Choice C is the best answer because it most accurately describes the main purpose of the text, which is to describe the family of plants known as the silversword alliance and explain why the plants came to exhibit "an extraordinary range of phenotypes." The text introduces the silversword alliance as a family of plants unique to the Hawaiian Islands, presenting those that mature into vines and those that mature into shrubs and trees as examples of different phenotypes. The text concludes by explaining that these plants are all descendants of "a single ancestral tarweed plant" that arrived 5 million years ago in the Hawaiian Islands, where a "wide variety of habitats" drove the plant's descendants to adapt and thus differentiate themselves, diversifying into a group of related but distinct species with different physical characteristics.

Choice A is incorrect. Although the text explains why the plants within the silversword alliance have varied physical characteristics, the text doesn't suggest that tarweed is the ancestor of all plants on the Hawaiian Islands. The text states instead that all members of the silversword alliance descend from a single tarweed ancestor. **Choice B is incorrect** because while *Dubautia carrii* is mentioned as an example of a species in the silversword alliance, no details about its particular habitat are provided. And although the text indicates that the Hawaiian Islands are home to "a wide variety of habitats," it doesn't describe the specific habitat where *Dubautia carrii* is found. The text discusses the silversword alliance as a whole rather than focusing on *Dubautia carrii* or any one species within this family. **Choice D is incorrect**. Although the silversword alliance is only found on the Hawaiian Islands and includes "an extraordinary range of phenotypes," the text doesn't claim that all plants

on the Hawaiian Islands are part of the alliance. Furthermore, the text indicates that these plants all "descended from a single ancestral tarweed plant," not that there are multiple possible candidates for that ancestor plant.

50 Correct answer **C** — Hard — Back to question

C To highlight two approaches to achieving political representation for Indigenous people

Choice C is the best answer because it most accurately describes the main purpose of the text, which is to illustrate two approaches that Indigenous politicians have taken to achieve political representation for their communities. The text begins by explaining that one approach is exemplified by Indigenous politicians in the United States who, in an effort to ensure that the interests of their communities are represented in government, joined preexisting political parties and were subsequently elected to Congress. The text goes on to highlight a second approach adopted by Indigenous leaders in Canada and several Latin American countries: rather than joining established political parties, many Indigenous politicians in these countries have instead formed their own parties to promote candidates for office who support causes that are important to their communities.

Choice A is incorrect because the text's focus is on the contrasting approaches adopted by different Indigenous political movements in different countries; thus, it isn't accurate to say that the text traces the history of one political movement. Moreover, the text only discusses examples from 2000 to 2021, a relatively short period of time; therefore, it provides very little in the way of discussion of larger historical developments, nor does it make any predictions about how these movements might continue to develop in the future. **Choice B is incorrect** because the text never urges Indigenous politicians in the US to alter their strategy of striving for representation through the established political parties, nor does it suggest that this strategy is inferior to that of Indigenous politicians in Canada and Latin America, who have formed their own parties. In fact, the text notes that both strategies have resulted in the election of Indigenous politicians to national governments. **Choice D is incorrect** because the text never suggests that Indigenous politicians in the US have influenced those in Canada and Latin America; instead, it stresses how Indigenous politicians' approach toward achieving representation in the US government has differed from the approach Indigenous politicians have taken to achieve representation in national governments elsewhere in the Americas.

51 Correct answer **C** — Hard — Back to question

C To assert that private and early public libraries in ancient Rome had an essential similarity

Choice C is the best answer because it most accurately describes the main purpose of the text. The text describes two types of libraries in first-century BCE Rome—private libraries controlled by wealthy individuals, and the public libraries like that commissioned by Emperor Augustus—and then notes that "these two traditions aren't as distinct as they seem." It explains that both private-library owners and the emperor saw their libraries as "extensions of their personal patronage, just on vastly differing scales," because the emperor's patronage extended to the whole citizenry of Rome. Thus, both private and public libraries in ancient Rome were fundamentally tied to relevant principles of patronage.

Choice A is incorrect because the text mentions that Rome's republican period only to say that it "ended in the first century BCE," thus it doesn't support any conclusions about possible occurrences "throughout Rome's republican period." **Choice B is incorrect**. The text neither discusses "early imperial leaders in Rome," nor whether their level of influence was appropriate. Rather it discusses the end of "Rome's republican period" in relation to libraries, who created them, and who got to use them without passing judgment on propriety. **Choice D is incorrect**. Although the text indicates that Rome's republican period "ended in the first century BCE," a period that also saw the first public library come into use (28 BCE), nothing in the text suggests that private libraries disappeared at that time.

52 Correct answer **A**

Hard

Back to question

A To offer Tom's assurance that the play will be inoffensive and involve only a small number of people

Choice A is the best answer because it most accurately portrays the main purpose of the text. At the beginning of the text, Tom asserts that he and the other people staging the play are doing so only for "a little amusement among ourselves" and aren't interested in attracting an audience or any attention with the production. Then, Tom promises that the play they chose is modest and appropriate, and he further reasons that using the well-written prose of "some respectable author" is better than using their own words. Overall, the main purpose of the text is to convey Tom's promise that the play will be inoffensive and involve only a few people.

Choice B is incorrect because the text doesn't indicate that Tom had earlier intentions for the play's performance or that anything has changed since the group first decided to stage a play. Instead, the text focuses on how harmless the entire endeavor will be. **Choice C is incorrect**. Although Tom mentions that using the words of a "respectable author" will be better than using their own words, he never addresses the idea that the people around him generally aren't skilled enough to stage a play. **Choice D is incorrect** because in the text Tom specifically says that they "want no audience, no publicity," which indicates that they don't plan on promoting the play at all.

53 Correct answer **D**

Hard

Back to question

D To present findings that suggest that a concern about the effects of ocean acidification on pteropod shells may be unwarranted

Choice D is the best answer because it most accurately describes the main purpose of the text, which is to present findings that suggest a previously held concern about the effects of ocean acidification on pteropod shells may be unwarranted. The text introduces the concern that pteropods are thought to be particularly vulnerable to ocean acidification, or lower pH levels, due to the susceptibility of their calcium carbonate shells to dissolution at lower pH levels. However, the text then describes findings from a recent study that suggest this concern may be unjustified, insofar as the protective periostracum coating on a pteropod's shell prevents dissolution, and even when the coating is breached, a pteropod can rebuild the inner shell wall, reducing the damage.

Choice A is incorrect because the text doesn't call for additional research or suggest that more research is needed on biological mechanisms that improve pteropod survival rates. Instead, the text discusses a recent study showing that pteropods may not be as vulnerable to ocean acidification as is feared. **Choice B is incorrect** because the study discussed in the text doesn't address calcium carbonate's role in protecting the periostracum of pteropods. According to the text, the study addresses the periostracum's role in protecting pteropods' calcium carbonate shells from dissolution due to ocean acidification. **Choice C is incorrect** because the text doesn't address how ocean acidification has altered pteropod behavior over time. Instead, the text focuses on the potential effects of ocean acidification on pteropods' shells and the mechanisms protecting against those effects.

54 Correct answer **B**

Hard

Back to question

B To emphasize that Dido has been deeply affected by Aeneas's story

Choice B is the best answer because it most accurately describes the main purpose of the text, which is to foreground Queen Dido's strong emotional response to Aeneas's story. Throughout, the text emphasizes how deeply the queen is affected by both Aeneas's tale and persona. At the outset, the speaker explicitly states that "anxious cares...seiz'd the queen" and then uses the metaphor of fire ("within her veins a flame unseen" and "secret fire") to evoke the warmth of Dido's feelings for Aeneas. In addition, the line "His words, his looks, imprinted in her heart" suggests the deep impression that Aeneas's story makes on Dido, eliciting passion for him ("improv[ing] the passion") and empathy for his suffering ("increas[ing] the smart").

Choice A is incorrect because there's no indication in the text that Dido is skeptical of Aeneas's account, much less that she's trying to conceal that skepticism. On the contrary, the text shows her being moved by his words and developing feelings for him. **Choice C is incorrect**. While the text mentions that Dido is impressed by Aeneas's "valor, acts, and birth," which might suggest (but doesn't necessarily entail) intellectual engagement, the text doesn't represent Dido's engagement with Aeneas in a manner that suggests a balance between emotion and intellect. Rather, the text primarily emphasizes her emotional response—specifically her attraction to Aeneas and her emotional investment in his story, indicating that his "valor, acts, and birth inspire / Her soul with love, and fan the secret fire" and that his words and looks elicit passion and empathy. **Choice D is incorrect** because the text doesn't suggest that Dido is worried about Aeneas discovering a secret she is concealing from him. Though the text begins by mentioning Dido's "anxious cares," this refers to her growing passion for Aeneas and pity for his suffering, not to worry about a secret she is concealing. The text's reference to a "flame unseen" and "secret fire" points to Dido's growing feelings for Aeneas that

develop as he recounts his tale, not to a secret that existed before their encounter; moreover, the text provides no indication that Dido is worried Aeneas might discover these feelings.

04 Function

The role of a sentence or underlined portion

Part of the text is underlined. It may be a whole sentence, a clause, or a few words in brackets. The question asks what job that part does for the text as a whole.

66 questions | 23 Easy | 20 Medium | 23 Hard

ASK YOURSELF *"Why do we need it?"*

THE STEPS

1. Read the text.
2. Focus on the underlined portion.
3. Ask why we need it. Is it explaining a finding? Clearing up a misunderstanding? Giving the opposite idea?
4. Choose the answer closest to what you said.

WHAT TO TAKE FROM THIS

- The usual jobs: it defines a word, gives an example, gives background, describes the method, explains a finding, supports a claim, sets up a contrast, or states the problem the rest of the text answers.
- Brackets and dashes almost always explain a word. Look at what comes straight before them.
- The stem says *in the text as a whole*, so you still read all of it. A sentence has no job on its own.
- A choice can be true about the text and still be wrong, because it names another sentence's job.
- Partly wrong is all wrong. If any part of a choice is not in the text, the whole choice is out.

Questions 297

Answers & explanations 327

EASY 23 questions

The following text is from Srimati Svarna Kumari Devi's 1894 novel *The Fatal Garland* (translated by A. Christina Albers in 1910). Shakti is walking near a riverbank that she visited frequently during her childhood.

> She crossed the woods she knew so well. The trees seemed to extend their branches like welcoming arms. They greeted her as an old friend. Soon she reached the river-side.

ID c966ad55

1 Mark for Review Easy Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It suggests that Shakti feels uncomfortable near the river.

(B) It indicates that Shakti has lost her sense of direction in the woods.

(C) It emphasizes Shakti's sense of belonging in the landscape.

(D) It conveys Shakti's appreciation for her long-term friendships.

Ordinary soap bubbles usually exist for a minute or less before popping due to either a rupture forced by gravity-induced drainage or the evaporation of the liquid from which the bubble is composed. But physicist Aymeric Roux and colleagues discovered ways to mitigate these factors, resulting in bubbles that can last for a year or more. For example, glycerol tends to adhere to water molecules, so a bubble with a shell that contains both water and glycerol is able to draw additional water molecules from the surrounding air and thereby compensate for evaporation.

ID eaea6f8f

2 Mark for Review Easy Explanation ›

Which choice best states the purpose of the underlined portion in the text as a whole?

(A) It describes the effects of a process devised by researchers that increases the longevity of an object discussed in the text.

(B) It details the circumstances that prompted the research discussed in the text.

(C) It presents a reason why the phenomenon discussed in the text that the researchers wanted to avoid will inevitably occur.

(D) It mentions a method discussed in the text that researchers intend to test in future experiments.

Researchers have found a nearly 164,000-year-old molar from a member of the archaic human species known as Denisovans in a cave in Laos, suggesting that Denisovans lived in a wider range of environments than indicated by earlier evidence. Before the discovery, Denisovans were thought to have lived only at high altitudes in relatively cold climates in what are now Russia and China, but the discovery of the tooth in Laos suggests that they may have lived at low altitudes in relatively warm climates in Southeast Asia as well.

ID 066a3295

3 Mark for Review — Easy — Explanation ›

Which choice best states the function of the underlined portion in the text as a whole?

(A) It dismisses as untrue the research presented in the previous sentence.

(B) It defines a term used in the description that follows in the rest of the sentence.

(C) It emphasizes the main goal of the research introduced in the previous sentence.

(D) It provides context that clarifies the significance of the information that follows in the rest of the sentence.

Historians Tiya Miles and Roy E. Finkenbine have both documented the assistance Indigenous peoples gave to Black freedom seekers leaving the South before the US Civil War. Much of the historical evidence of this help comes from Indigenous oral traditions and from autobiographies written by the freedom seekers. One such narrative is Jermain Loguen's autobiography, which tells about how Neshnabé (Potawatomi) villagers offered him food, lodging, and directions during his 1835 journey from Tennessee to Canada.

ID e13171c4

4 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence?

(A) It provides an example of an autobiography that describes help given by an Indigenous people to a Black freedom seeker.

(B) It shows why Loguen decided to write in great detail about his experiences traveling from Tennessee to Canada in his autobiography.

(C) It argues that autobiographies are particularly important sources of information about geography in the United States before the Civil War.

(D) It suggests that most historians believe that Neshnabé villagers were more successful in assisting freedom seekers than other people were.

The following text is adapted from Cynthia Kadohata's 2004 novel *Kira-Kira*.

> [Uncle Katsuhisa] was as loud as my father was quiet. Even when he wasn't talking, he made a lot of noise, clearing his throat and sniffing and tapping his fingers.

©2004 by Cynthia Kadohata

ID c502943e

5 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence?

(A) It lists the kinds of topics Uncle Katsuhisa enjoys discussing.

(B) It suggests that Uncle Katsuhisa dislikes meeting new people.

(C) It contrasts Uncle Katsuhisa with the narrator's father.

(D) It describes a conversation between the narrator and the narrator's father.

Some bird species don't raise their own chicks. Instead, adult females lay their eggs in other nests, next to another bird species' own eggs. Female cuckoos have been seen quickly laying eggs in the nests of other bird species when those birds are out looking for food. After the eggs hatch, the noncuckoo parents will typically raise the cuckoo chicks as if they were their own offspring, even if the cuckoos look very different from the other chicks.

ID 2aaee77f

6 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It introduces a physical feature of female cuckoos that is described later in the text.

(B) It describes the appearance of the cuckoo nests mentioned earlier in the text.

(C) It offers a detail about how female cuckoos carry out the behavior discussed in the text.

(D) It explains how other birds react to the female cuckoo behavior discussed in the text.

In the past, historians who wanted to examine Frederick Douglass's diary and other personal papers had to visit the Library of Congress in Washington, DC, to view them on microfilm (film containing scaled-down reproductions of documents). But traveling to the library often added time and costs to research projects. Now, by going to the library's website, researchers can access digitized versions of Douglass's papers without physically going anywhere.

ID 29741ebc

7 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It gives information about a famous person.

(B) It explains the meaning of a word.

(C) It describes a debate among historians.

(D) It summarizes an unexpected finding.

The majority of plastics today wind up in landfills or are, at best, recycled into materials that have a very limited range of applications. To address this problem, chemist Guoliang Liu and colleagues designed a reactor that melts polyethylene and polypropylene—two widely used plastics—into a wax. The wax can then be transformed into a surfactant (a chemical compound usable as a detergent). With this promising new method, plastic waste could be turned into a range of useful cleaning products.

ID d2a90d4f

8 Mark for Review — Easy — Explanation ›

Which choice best states the function of the underlined portion of the text?

(A) It clarifies the meaning of a scientific term.

(B) It describes an environmental concern.

(C) It explains the significance of a scientific discovery.

(D) It identifies a result that confused the team.

The following text is from Ameen Rihani's 1921 poem "The Wanderer."

I wander among the hills of alien lands

Where Nature her prerogative resigns

To Man; where Comfort in her shack reclines

And all the arts and sciences commands.
But in my soul

The eastern billows roll—

I hear the voices of my native strands.

ID 809addda

9 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined lines in the text as a whole?

(A) It establishes that the speaker's enthusiasm about current travels conflicts with the growing urge to return home.

(B) It illustrates the speaker's uncertainty about maintaining strong links with relatives in distant places.

(C) It conveys the speaker's sense of feeling a pull toward home while traveling in an unfamiliar place.

(D) It reveals that upon returning after an extended absence, the speaker longs for the way a location once felt.

The following text is adapted from Akwaeke Emezi's 2019 novel *Pet*. Jam is a teenager who lives with her father, Aloe, and her mother, Bitter, who is a painter.

Bitter finished the painting in the dark morning of a day—it was well past midnight when Jam heard the studio door creak open. She stared into the velvet black of her room and listened to her mother's footsteps walking in her [mother] and Aloe's bedroom. There was a weight thrumming through the floorboards in a low song, and that was how Jam knew the painting was done. Bitter's feet were singing the news.

©2019 by Akwaeke Emezi

ID 271a5017

10 Mark for Review — Easy — Explanation ›

Which choice best states the function of the underlined sentence in the text as a whole?

(A) It indicates that Jam is more interested in music than in art.

(B) It adds to the idea that Bitter's footsteps reveal something to Jam.

(C) It indicates that Bitter always sings when working on a painting.

(D) It describes Aloe's reaction upon seeing the painting for the first time.

The following text is from Joan Didion's memoir *The Year of Magical Thinking*. In the text, the author discusses her home life.

> [I]n California we heated our houses by building fires. We built fires even on summer evenings, because the fog came in. Fires said we were home, we had drawn the circle, we were safe through the night.

©2005 by Joan Didion

ID ea9dfe27

11 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It illustrates that a fire provides comfort beyond physical warmth.

(B) It summarizes the information that came before it in the text.

(C) It explains that the house remains cold even in summer.

(D) It suggests that the author feels comfortable in her home with or without a fire.

The following text is adapted from Oscar Wilde's 1897 nonfiction work *De Profundis*.

> People whose desire is solely for self-realisation never know where they are going. They can't know. In one sense of the word it is of course necessary to know oneself: that is the first achievement of knowledge. But to recognise that the soul of a man is unknowable, is the ultimate achievement of wisdom. The final mystery is oneself. When one has weighed the sun in the balance, and measured the steps of the moon, and mapped out the seven heavens star by star, there still remains oneself. Who can calculate the orbit of his own soul?

ID a68239ed

12 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined question in the text as a whole?

(A) It reinforces the text's skepticism about the possibility of truly achieving self-knowledge.

(B) It speculates that some readers will share the doubts expressed in the text about the value of self-knowledge.

(C) It cautions readers that the text's directions for how to achieve self-knowledge are hard to follow.

(D) It concedes that the definition of self-knowledge advanced in the text is unpopular.

In the early days of television in the 1940s, many people thought that US television programs would rely on the financial support of ad agencies and commercial sponsors, much like radio did. But advertisers hesitated to jump into a new space, particularly at a time when the manufacturing of new television sets was stalled due to the US's involvement in World War II. Broadcasters, like the National Broadcasting Company (NBC), needed to persuade advertisers to support their programming despite not knowing whether there would be a robust television audience to begin with.

ID 97ca2cda

13 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined phrase in the text as a whole?

(A) It compares the beginnings of radio programming with the beginnings of television programming in the United States.

(B) It identifies a specific reason behind some advertisers' hesitance to support television.

(C) It describes how broadcasters attempted to convince advertisers to support television.

(D) It explains why a type of television programming was popular at the time.

Oral histories—whether they consist of interviews or recordings of songs and stories—can offer researchers a rich view of people's everyday experiences. For her book about coal mining communities in Kentucky during the twentieth century, Karida Brown therefore relied in part on interviews with coal miners and their families. By doing so, she gained valuable insights into her subjects' day-to-day lives.

ID 7d075fc5

14 Mark for Review Easy Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It provides a little-known geographical fact about Kentucky.

(B) It argues that Karida Brown is an expert on United States politics.

(C) It presents a major historical event that took place in the twentieth century.

(D) It describes how Karida Brown benefited from incorporating oral history in her book.

Were penguins always flightless? Theresa Cole and her team argue that penguins could fly at some point, but that they lost that ability more than 60 million years ago as they adapted to marine life. After examining various penguin fossils and genetic information, the researchers concluded that over time penguins developed underwater vision, blood oxygenation, and bone density better suited for swimming than flying. Thus, environmental conditions might have driven penguins to change from flyers to swimmers.

ID 1b5d4e3e

15 Mark for Review Easy Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It defines a scientific term used in the sentence that follows.

(B) It contradicts a description in the sentence that follows.

(C) It provides an answer to the question in the previous sentence.

(D) It notes that the question in the previous sentence has not been researched.

The following text is from Reyna Grande's 2012 memoir *The Distance Between Us*. In the text, Grande reflects on a time when she and her older sister Mago were children. A Barbie is a type of doll.

> I begged Mago to come play with me. She wasn't as interested in my Barbie as she had been just two months before, which made me sad because that was the only thing Mago had envied me for. Usually, it was me doing the envying. After I pestered her relentlessly, she finally put her notebook down and came over to me.
>
> ©2012 by Reyna Grande

ID ac5bf490

16 Mark for Review Easy Explanation ›

Which choice best describes the function of the underlined portion in the text?

(A) It indicates Grande's unhappiness over Mago's disinterest in Grande's doll.

(B) It expresses Grande's anger over Mago's refusal to spend time with her.

(C) It presents an example of how Mago and Grande generally played together as children.

(D) It provides a reason for why Mago is unwilling to play with Grande.

In the 1950s, scientists didn't know much about the ocean floor. Many scientists at the time believed that the ocean floor was mostly flat. But geologist Marie Tharp and her research partner, Bruce Heezen, proved that this idea was wrong. Using sonar data collected from the Atlantic Ocean, Tharp and Heezen showed that the floor was filled with canyons, mountains, and valleys.

ID b3e145e4

17 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It identifies a scientific belief that Tharp and Heezen showed to be wrong.

(B) It describes the design of Tharp and Heezen's experiment.

(C) It emphasizes a disagreement between Tharp and Heezen.

(D) It presents data to support a claim that Tharp and Heezen made.

Streams and rivers carry soil and rocks from one location to another. But there is another way for these geological materials to move. Scientists call this process "aeolian transport." In aeolian transport, winds move small particles of soil or rock over potentially great distances. Geologist Melisa Diaz and her team studied dust in Antarctica to find out if it was moved by aeolian transport. They discovered that the dust matched geological material in Australia. Aeolian transport had carried it from one continent to another, across thousands of miles of open ocean.

ID fcc328c6

18 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It presents Melisa Diaz's remarks about difficulties that her team encountered.

(B) It introduces a scientific term that is used in the discussion that follows.

(C) It emphasizes the surprising nature of the findings that are presented.

(D) It explains the difference between two kinds of geological material.

In 1801, a Blackfoot chief named Ac Ko Mok Ki drew a finely detailed map of the Upper Missouri region. This work demonstrates a vast amount of topographic knowledge, as the map features specific names of mountains and rivers, as well as the first-known sketch of the drainage network of the Missouri River. The map is especially notable because Ac Ko Mok Ki also included details about the numerous tribes that lived in the area.

ID 1c6b1fa0

19 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It emphasizes Ac Ko Mok Ki's desire to represent other tribes on the map.

(B) It explains how Ac Ko Mok Ki developed an interest in mapmaking.

(C) It identifies some reasons why the map is impressive.

(D) It details how the map was used for hunting and trading purposes.

Genetic studies have led researchers to suggest that turtles are most closely related to the group that includes modern crocodiles. But studies of fossils have suggested instead that turtles are most closely related to other groups, such as the one that contains modern snakes. However, many of the fossil studies have relied on incomplete data sets. For a 2022 investigation, biologist Tiago R. Simões and colleagues examined more than 1,000 reptile fossils collected worldwide. From this large data set, they found clear agreement with the results of the genetic studies.

ID 02e49a0c

20 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence?

(A) It offers an overview of the tools scientists use to examine fossils.

(B) It describes a limitation of some studies about the origin of turtles.

(C) It summarizes previous research on the evolution of crocodiles.

(D) It criticizes a widely held belief about genetic studies of reptiles.

Wakako Yamauchi is best known for *And the Soul Shall Dance*, her 1977 play about a Japanese American family in Southern California. The play is based on a short story Yamauchi had published three years earlier. Adapting the story wasn't easy. Theater relies on dialogue between characters, but the original story features little dialogue and instead describes its characters' silent thoughts. To transform the story into a play, Yamauchi created situations where characters reveal their thoughts by speaking them aloud during conversations with each other.

ID 662892ad

21 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It offers information about how Yamauchi adapted her short story into a play.

(B) It argues that Yamauchi's play influenced later playwrights.

(C) It explains why Yamauchi's short story is better known than the play adaptation is.

(D) It describes how Yamauchi chose the actors who performed in the play.

Horizontal gene transfer occurs when an organism of one species acquires genetic material from an organism of another species through nonreproductive means. The genetic material can then be transferred "vertically" in the second species—that is, through reproductive inheritance. Scientist Atma Ivancevic and her team have hypothesized infection by invertebrate parasites as a mechanism of horizontal gene transfer between vertebrate species: while feeding, a parasite could acquire a gene from one host, then relocate to a host from a different vertebrate species and transfer the gene to it in turn.

ID e7247766

22 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It explains why parasites are less susceptible to horizontal gene transfer than their hosts are.

(B) It clarifies why some genes are more likely to be transferred horizontally than others are.

(C) It contrasts how horizontal gene transfer occurs among vertebrates with how it occurs among invertebrates.

(D) It describes a means by which horizontal gene transfer might occur among vertebrates.

The following text is from Louise Erdrich's 1986 novel *The Beet Queen*. The narrator discusses her relationship with her young niece, Dot. Celestine, the narrator's sister-in-law, is Dot's mother.

> Dot was as impatient with babyhood as I. She tried at once to grow out of it. Celestine never saw that, because she, and only she, took pleasure in Dot's helpless softness. Only Celestine was saddened by her daughter's fierce progress. Day by day, Dot grew stronger. In her shopping-cart stroller she exercised to exhaustion, bouncing for hours to develop her leg muscles.

©1986 by Louise Erdrich

ID 764331f8

23 Mark for Review — Easy — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It offers a detail that shows how Dot is growing stronger.

(B) It expresses hope that Celestine will mature psychologically.

(C) It explores some of the narrator's psychological characteristics.

(D) It indicates how sad Celestine is by describing a behavior she engages in.

MEDIUM 20 questions

Archeological excavation of Market Street Chinatown, a nineteenth-century Chinese American community in San Jose, California, provided the first evidence that Asian food products were imported to the United States in the 1800s: bones from a freshwater fish species native to Southeast Asia. *Jinshanzhuang*—Hong Kong–based import/export firms—likely coordinated the fish's transport from Chinese-operated fisheries in Vietnam and Malaysia to North American markets. This route reveals the (often overlooked) multinational dimensions of the trade networks linking Chinese diaspora communities.

ID 236fee8e

24 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It explains why efforts to determine the country of origin of the items mentioned in the previous sentence remain inconclusive.

(B) It provides information that helps support a claim about a discovery's significance that is presented in the following sentence.

(C) It traces the steps that were taken to locate and recover the objects that are described in the previous sentence.

(D) It outlines a hypothesis that additional evidence discussed in the following sentence casts some doubt on.

The Bayeux Tapestry, from eleventh-century France, depicts 75 scenes over 250 feet of fabric. It was likely produced by workers embroidering in sections and then joining the resulting panels together. It's plausible that the workshop that produced the tapestry had never produced one so large, and some researchers claim that a close examination of the joins—the places where the panels are stitched together—suggests that the workers developed and refined their joining process over the course of production. For example, the first join the workers completed exhibits a clear misalignment of the borders of the two panels, whereas the later joins are virtually invisible.

ID cef79fb9

25 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It identifies the people and events depicted in the Bayeux Tapestry.

(B) It supports an argument about the workers who produced the Bayeux Tapestry.

(C) It compares the Bayeux Tapestry with other tapestries from eleventh-century France.

(D) It describes how researchers determined where the Bayeux Tapestry was produced.

Yawn contagion occurs when one individual yawns in response to another's yawn. Studies of this behavior in primates have focused on populations in captivity, but biologist Elisabetta Palagi and her colleagues have shown that it can occur in wild primate populations as well. In their study, which focused on a wild population of gelada monkeys (*Theropithecus gelada*) in Ethiopia, the researchers further reported that yawn contagion most commonly occurred in males and across different social groups instead of within a single social group.

ID 47598085

26 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the first sentence in the text as a whole?

(A) It defines a phenomenon that is discussed in the text.

(B) It introduces a problem that is examined in the text.

(C) It makes a claim that is challenged in the text.

(D) It presents a hypothesis that is evaluated in the text.

On painter William H. Johnson's return to the United States in 1938 after a decade in Europe, his style underwent an abrupt transformation. Turning away from landscapes painted in an expressionist style—a style that often involves using fluid, distorted shapes and thick, textured brushstrokes to express the artist's subjective experience of reality—Johnson began painting portraits of Black Americans in a bold new way. Evocative of African sculpture and American and Scandinavian folk art, these portraits feature flat, deliberately oversimplified figures in a vibrant but limited color palette.

ID 4c4db685

27 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It elaborates on the previous sentence's statement about a transitional moment in Johnson's artistic career.

(B) It provides information about Johnson's travels in support of a claim about his artistic influences, which is advanced in the following sentence.

(C) It recounts a moment in Johnson's personal life that enabled the success of his subsequent career, which is summarized in the following sentence.

(D) It presents evidence that calls into question the previous sentence's characterization of Johnson's artistic development.

Very little is known about the role nocturnal insects, such as moths, play in flower pollination because it is difficult to monitor insects at night. To address this problem, a team of scientists used time-lapse cameras to record pollinator visits to red clover all day and night. The recordings showed that while most pollinator visits were by bumblebees, one-third of visits were by moths. Additionally, flowers that were visited by both moths and bees produced more seeds than flowers that were only visited by bees.

ID 617a8a10

28 Mark for Review — Medium — Explanation ›

Which choice best states the function of the underlined sentence?

(A) To describe an approach a team of scientists used to study pollinators

(B) To question a claim scientists make about pollinators

(C) To explain why moths prefer red clover to other flowers

(D) To announce an unexpected research finding about red clover

In Jane Austen's novel *Mansfield Park*, an almost imperceptible smile from potential suitor Henry Crawford causes the protagonist Fanny Price to blush; her embarrassment grows when she suspects that he is aware of it. This moment—in which Fanny not only infers Henry's mental state through his gestures, but also infers that *he* is drawing inferences about *her* mental state—illustrates what literary scholar George Butte calls "deep intersubjectivity," a technique for representing interactions between consciousnesses through which Austen's novels derive much of their social and psychological drama.

ID aa5897b8

29 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It states a claim about Austen's skill at representing psychological complexity that is reinforced by an example presented in the following sentence.

(B) It advances an interpretation of an Austen protagonist who is contrasted with protagonists from other Austen novels cited in the following sentence.

(C) It describes a recurring theme in Austen's novels that is the focus of a literary scholar's analysis summarized in the following sentence.

(D) It provides a synopsis of an interaction in an Austen novel that illustrates a literary concept discussed in the following sentence.

Alternative-history fiction is a subgenre of science fiction in which plots center on "what if?" questions. What if India had started the Industrial Revolution? What if Soviet cosmonauts had been first to land on the moon? Speculative counterfactuals like these can be great fodder for stories, but they're also commonly deployed by academic historians to better understand factors influencing historical events. Well-realized and coherent alternative-history stories can thus complement historians' speculations about the past.

ID 2ec0e43e

30 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It illustrates how academic historians have influenced writers of alternative-history fiction.

(B) It acknowledges counterfactual questions that academic historians have largely overlooked.

(C) It provides examples of the types of scenarios addressed in alternative-history fiction.

(D) It indicates specific ideas that were first raised by writers of alternative-history fiction and that subsequently inspired scholarship by academic historians.

Chile's Atacama Desert is one of the driest places on Earth. Mary Beth Wilhelm and other astrobiologists search for life, or its remains, in this harsh place because the desert closely mirrors the extreme environment on Mars. The algae and bacteria found in Atacama's driest regions may offer clues about Martian life. By studying how these and other microorganisms survive such extreme conditions on Earth, Wilhelm's team hopes to determine whether similar life might have existed on Mars and to develop the best tools to look for evidence of it.

ID cf9a00e0

31 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) To contrast the conditions in the Atacama Desert with those on Mars

(B) To explain why many life-forms cannot survive in the Atacama Desert

(C) To indicate why astrobiologists choose to conduct research in the Atacama Desert

(D) To describe certain limitations to conducting scientific study in the Atacama Desert

The following text is from Virginia Woolf's 1919 novel *Night and Day*. The text describes a gathering of young artists and intellectuals.

> One person after another rose, and, as with an ill-balanced axe, attempted to hew out his conception of art a little more clearly, and sat down with the feeling that, for some reason which he could not grasp, his strokes had gone awry. As they sat down they turned almost invariably to the person sitting next them, and rectified and continued what they had just said in public.

ID c6bd3447

32 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined portions in the text as a whole?

(A) To demonstrate individuals' puzzlement over the reputation of a certain artwork

(B) To highlight the physical effort involved in individuals' construction of large-scale works of art

(C) To draw attention to individuals' discontent with the group's conversation about art

(D) To emphasize the extent of individuals' struggles to articulate thoughts on art

Generally it takes Tule geese about four days to migrate south for the winter. From their summer breeding grounds in Cook Inlet, Alaska, the birds begin by flying over the Gulf of Alaska, keeping about 100 miles from the Canadian shore. They pause to rest on the Pacific Ocean, then fly toward Summer Lake, Oregon, before finally arriving at their winter destination of Sacramento Valley, California. In 2020, however, it took the geese over twice as long to make their way from Cook Inlet to Sacramento Valley. According to researchers, the reason was airborne pollutants.

ID 422c5068

33 Mark for Review Medium Explanation ›

Which choice best states the function of the underlined portion in the text as a whole?

(A) It illustrates a change in Tule geese's usual flight behavior.

(B) It suggests an explanation for why Tule geese breed in Alaska.

(C) It describes part of the Tule geese's typical winter migration journey.

(D) It compares Tule geese to other birds that migrate south for the winter.

People tend to assume that being happy is the ideal emotional state and should be an ongoing aspiration; recently, however, research has suggested that it is at times beneficial to embrace negative emotions. To test whether anger can contribute to problem-solving abilities, researcher Heather Lench led an experiment in which participants were randomly assigned to view images designed to create an emotional condition—either neutral or one of anger, amusement, desire, or sadness. When asked to then solve a series of challenging puzzles, the participants in the anger condition had greater success than those in the other conditions.

ID dbb56a02

34 Mark for Review Medium Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It describes a general psychological tendency that the study discussed in the text was designed to explain.

(B) It explains an assumption underlying the hypothesis investigated in the study discussed in the text.

(C) It notes a generally accepted belief that is called into question by a finding of the experiment outlined in the text.

(D) It suggests a psychological basis for the behaviors of the participants in the experiment reported in the text.

For his 1986 album *Keyboard Fantasies*, Beverly Glenn-Copeland wrote songs grounded in traditional soul and folk music, then accompanied them with futuristic synthesizer arrangements featuring ambient sounds and complex rhythms. The result was so strange, so unprecedented, that the album attracted little attention when first released. In recent years, however, a younger generation of musicians has embraced the stylistic experimentation of *Keyboard Fantasies*. Alternative R&B musicians Blood Orange and Moses Sumney, among other contemporary recording artists, cite the album as an influence.

ID 74446089

35 Mark for Review Medium Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It urges contemporary musicians to adopt the unique sound of *Keyboard Fantasies.*

(B) It responds to criticism of *Keyboard Fantasies* by some younger musicians.

(C) It offers examples of younger musicians whose work has been impacted by *Keyboard Fantasies.*

(D) It contrasts *Keyboard Fantasies* with the recordings of two younger musicians.

The following text is from Charlotte Forten Grimké's 1888 poem "At Newport."

Oh, deep delight to watch the gladsome waves
Exultant leap upon the rugged rocks;
Ever repulsed, yet ever rushing on—
Filled with a life that will not know defeat;
To see the glorious hues of sky and sea.
The distant snowy sails, glide spirit like,
Into an unknown world, to feel the sweet
Enchantment of the sea thrill all the soul,
Clearing the clouded brain, making the heart
Leap joyous as it own bright, singing waves!

ID 749f3334

36 Mark for Review Medium Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It portrays the surroundings as an imposing and intimidating scene.

(B) It characterizes the sea's waves as a relentless and enduring force.

(C) It conveys the speaker's ambivalence about the natural world.

(D) It draws a contrast between the sea's waves and the speaker's thoughts.

When ancient oak planks were unearthed during subway construction in Rome, Mauro Bernabei and his team examined the growth rings in the wood to determine where these planks came from. By comparing the growth rings on the planks to records of similar rings in oaks from Europe, the team could trace the wood to the Jura region of France, hundreds of kilometers from Rome. Because timber could only have been transported from distant Jura to Rome by boat, the team's findings suggest the complexity of Roman trade routes.

ID 54c6128b

37 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It presents a conclusion about Roman trade routes based on the team's findings.

(B) It questions how the team was able to conclude that the planks were used to build a boat.

(C) It explains why the planks were made from oak rather than a different kind of wood.

(D) It describes common methods used in Roman subway construction.

Industrial activity is often assumed to be a threat to wildlife, but that isn't always so. Consider the silver-studded blue butterfly (*Plebejus argus*): as forest growth has reduced grasslands in northern Germany, many of these butterflies have left meadow habitats and are now thriving in active limestone quarries. In a survey of multiple active quarries and patches of maintained grassland, an ecologist found silver-studded blue butterflies in 100% of the quarries but only 57% of the grassland patches. Moreover, butterfly populations in the quarries were four times larger than those in the meadows.

ID 590f0ad2

38 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It challenges a common assumption about the species under investigation in the research referred to in the text.

(B) It introduces discussion of a specific example that supports the general claim made in the previous sentence.

(C) It suggests that a certain species should be included in additional studies like the one mentioned later in the text.

(D) It provides a definition for an unfamiliar term that is central to the main argument in the text.

The people of medieval Europe have traditionally been seen as uninterested in cleanliness and hygiene, but modern research has shown that this is largely a myth. According to historian Eleanor Janega, most medieval towns in Europe had at least one public bathhouse, which often offered both full-immersion baths and—more affordably—steam baths. While such amenities were available mainly to town dwellers, regular bathing in rivers and streams or daily sponge baths at home were common practices throughout medieval Europe.

ID e23f50b9

39 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined portion?

(A) It asserts that in medieval Europe steam baths were more popular in rural areas than in urban ones.

(B) It describes a limitation of earlier historians' studies of medieval European bathing habits.

(C) It concedes that not all people in medieval Europe had access to public bathhouses.

(D) It explains why Janega decided to study the popularity of public bathhouses in medieval Europe.

The following text is from Herman Melville's 1854 novel *The Lightning-rod Man*.

The stranger still stood in the exact middle of the cottage, where he had first planted himself. His singularity impelled a closer scrutiny. A lean, gloomy figure. Hair dark and lank, mattedly streaked over his brow. His sunken pitfalls of eyes were ringed by indigo halos, and played with an innocuous sort of lightning: the gleam without the bolt. The whole man was dripping. He stood in a puddle on the bare oak floor: his strange walking-stick vertically resting at his side.

ID 48555763

40 Mark for Review — Medium — Explanation ›

Which choice best states the function of the underlined sentence in the overall structure of the text?

(A) It elaborates on the previous sentence's description of the character.

(B) It introduces the setting that is described in the sentences that follow.

(C) It establishes a contrast with the description in the previous sentence.

(D) It sets up the character description presented in the sentences that follow.

Part of the Atacama Desert in Peru has surprisingly rich plant life despite receiving almost no rainfall. Moisture from winter fog sustains plants once they're growing, but the soil's tough crust makes it hard for seeds to germinate in the first place. Local birds that dig nests in the ground seem to be of help: they churn the soil, exposing buried seeds to moisture and nutrients. Indeed, in 2016 Cristina Rengifo Faiffer found that mounds of soil dug up by birds were far more fertile and supported more seedlings than soil in undisturbed areas.

ID 8bc66f89

41 Mark for Review Medium Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It elaborates on the idea that the top layer of Atacama Desert soil forms a tough crust.

(B) It describes the process by which seeds are deposited into Atacama Desert soil.

(C) It identifies the reason particular bird species dig nests in Atacama Desert soil.

(D) It explains how certain birds promote seed germination in Atacama Desert soil.

The following text is from H.D.'s 1916 poem "Mid-Day." In the poem, the speaker is on a path in an outdoor setting.

A slight wind shakes the seed-pods—

my thoughts are spent

as the black seeds.

My thoughts tear me,

I dread their fever.

I am scattered in its whirl.

I am scattered like

the hot shrivelled seeds.

ID 03eeecf3

42 Mark for Review Medium Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It illustrates a change in the natural environment that the speaker implies is responsible for the growing misgivings described in the text.

(B) It establishes an example of consistency in the natural landscape that the speaker then contrasts with the unpredictability of human emotions.

(C) It presents an observation of an occurrence in the natural world that the speaker then expands on to convey a sense of a turbulent interior state.

(D) It evokes the ordinariness of an event in nature to suggest that the critical self-evaluation the speaker engages in is a common pursuit.

The following text is from Annie Dillard's 1987 autobiographical novel *An American Childhood*. The narrator is a young girl living in Pittsburgh.

> I walked. My mother had given me the freedom of the streets as soon as I could say our telephone number. I walked and
> memorized the neighborhood. I made a mental map and located myself upon it. At night in bed I rehearsed the small world's
> scheme and set challenges: Find the store using backyards only. Imagine a route from the school to my friend's house.

©1987 by Annie Dillard

ID d168e7c5

43 Mark for Review — Medium — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It describes the narrator trying to memorize her telephone number.

(B) It provides examples of what the narrator thinks about at night.

(C) It gives directions to the narrator's favorite local store.

(D) It portrays the narrator's relationship with her mother.

HARD 23 questions

"How lifelike are they?" Many computer animators prioritize this question as they strive to create ever more realistic environments and lighting. Generally, while characters in computer-animated films appear highly exaggerated, environments and lighting are carefully engineered to mimic reality. But some animators, such as Pixar's Sanjay Patel, are focused on a different question. Rather than asking first whether the environments and lighting they're creating are convincingly lifelike, Patel and others are asking whether these elements reflect their films' unique stories.

ID ca50de52

44 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined question in the text as a whole?

(A) It reflects a primary goal that many computer animators have for certain components of the animations they produce.

(B) It represents a concern of computer animators who are more interested in creating unique backgrounds and lighting effects than realistic ones.

(C) It conveys the uncertainty among many computer animators about how to create realistic animations using current technology.

(D) It illustrates a reaction that audiences typically have to the appearance of characters created by computer animators.

Astronomers are confident that the star Betelgeuse will eventually consume all the helium in its core and explode in a supernova. They are much less confident, however, about when this will happen, since that depends on internal characteristics of Betelgeuse that are largely unknown. Astrophysicist Sarafina El-Badry Nance and colleagues recently investigated whether acoustic waves in the star could be used to determine internal stellar states but concluded that this method could not sufficiently reveal Betelgeuse's internal characteristics to allow its evolutionary state to be firmly fixed.

ID e818241b

45 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the second sentence in the overall structure of the text?

(A) It describes a serious limitation of the method used by Nance and colleagues.

(B) It presents the central finding reported by Nance and colleagues.

(C) It identifies the problem that Nance and colleagues attempted to solve but did not.

(D) It explains how the work of Nance and colleagues was received by others in the field.

Guadalupe Romero Villanueva et al. conducted radiocarbon analysis of paint used in rock art at the Patagonian archaeological site Cueva Huenul 1, revealing that images of a comblike motif date to as early as 8,000 years ago, predating other paintings in the region by several millennia. The motif was subsequently reproduced multiple times at the site over the next 3,000 years, a period coinciding with extremely arid conditions and slightly negative population growth. The motif may therefore have functioned to help preserve cultural knowledge during a time of ecological and demographic stress.

ID 153aaae2

46 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It identifies a consideration that factored into an interpretation of the rock art at Cueva Huenul 1 that is presented in the text.

(B) It provides context that informs the text's claim about why the peoples of Patagonia chose Cueva Huenul 1 as a culturally significant site.

(C) It emphasizes the historical conditions that explain why production of the painted motif described in the text abruptly ceased after 3,000 years of continued use.

(D) It explains the environmental circumstances that account for the rarity of rock art dating to the same period as the motif discussed in the text.

According to historian Vicki L. Ruiz, Mexican American women made crucial contributions to the labor movement during World War II. At the time, food processing companies entered into contracts to supply United States armed forces with canned goods. Increased production quotas conferred greater bargaining power on the companies' employees, many of whom were Mexican American women: employees insisted on more favorable benefits, and employers, who were anxious to fulfill the contracts, complied. Thus, labor activism became a platform for Mexican American women to assert their agency.

ID ac9a3a26

47 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It elaborates on a claim about labor relations in a particular industry made earlier in the text.

(B) It offers an example of a trend in the World War II–era economy discussed earlier in the text.

(C) It notes a possible exception to the historical narrative of labor activism sketched earlier in the text.

(D) It provides further details about the identities of the workers discussed earlier in the text.

In response to concerns that some recent financial crises were exacerbated by consumers misunderstanding risks associated with credit cards, loans, and other financial products, policymakers in many countries have instituted risk-disclosure requirements on sellers of those products. Enrique Seira et al. investigated a variety of risk-disclosure messages sent to thousands of credit card customers and found that the messages had only small and short-lived effects on behavior. Seira et al. asserted that such effects may nevertheless be worth pursuing, given the negligible cost of messaging.

ID 662ebff2

48 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It notes a factor that led Seira et al. to not dismiss risk-disclosure messaging altogether despite their evidence of its limited utility.

(B) It acknowledges a type of risk-disclosure messaging that Seira et al. may not have fully accounted for in their study.

(C) It describes a consideration that explains why Seira et al. recommended risk-disclosure messaging even though its effects may be small relative to its costs.

(D) It points out a circumstance that Seira et al. conceded may make risk-disclosure messaging more effective than their study suggests.

The following text is from Rachel Heng's 2023 novel *The Great Reclamation*. Ah Boon is fishing off the coast of Singapore.

> When he pulled up the nets, they contained only one kind of fish—black pomfrets, the flat diamonds of their bodies slick in the morning light. This uniformity did not surprise him; over the years, he'd learned that the waters here were temperamental. They could be relied upon for a good catch, but from time to time threw up only prawns or squid, and other times colorful varieties of fish that weren't even supposed to be found in this region. He'd grown to accept the unpredictability, embracing it as a game to be played, like the reading of tea leaves or the grooves of a palm.

©2023 by Rachel Heng

ID 37c481f8

49 Mark for Review — Hard — Explanation ›

Taken together, the three underlined portions most clearly serve which function in the text as a whole?

(A) They provide examples of what Ah Boon most frequently catches in the area.

(B) They illustrate the changeable nature of the fishing grounds where Ah Boon is.

(C) They emphasize the wide variety of sea creatures that Ah Boon has caught on this particular fishing trip.

(D) They underscore Ah Boon's lack of surprise at seeing sea creatures that aren't usually found in the region.

The following text is adapted from Herman Melville's 1855 novel *Israel Potter*. Israel is a young man wandering through New England during the late eighteenth century.

> He hired himself out for three months; at the end of that time to receive for his wages two hundred acres of land lying in New Hampshire. [...] His employer proving false to the contract in the matter of the land, and there being no law in the country to force him to fulfil it, Israel—who, however brave-hearted, and even much of a dare-devil upon a pinch, seems nevertheless to have evinced, throughout many parts of his career, a singular patience and mildness—was obliged to look round for other means of livelihood than clearing out a farm for himself in the wilderness.

ID cf46f239

50 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It implies that Israel treasures a particular characteristic of his personality when that characteristic should usually be regarded as a flaw.

(B) It suggests that if not for a certain aspect of his character, Israel might not have been as easily thwarted in his ambition to establish a farm.

(C) It shows why Israel would not have been able to undertake the enormous amount of labor necessary to run a farm even if he had owned the necessary property.

(D) It explains why, when the situation requires it, Israel is able to undertake courageous acts that others would generally avoid.

The following text is from Joseph Conrad's 1907 novel *The Secret Agent: A Simple Tale.* Mr. Verloc is navigating the London streets on his way to a meeting.

Before reaching Knightsbridge, Mr. Verloc took a turn to the left out of the busy main thoroughfare, uproarious with the traffic of swaying omnibuses and trotting vans, in the almost silent, swift flow of hansoms [horse-drawn carriages]. Under his hat, worn with a slight backward tilt, his hair had been carefully brushed into respectful sleekness; for his business was with an Embassy. And Mr. Verloc, steady like a rock—a soft kind of rock—marched now along a street which could with every propriety be described as private.

ID df46a2ee

51 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined phrase in the text as a whole?

(A) It qualifies an earlier description of Mr. Verloc.

(B) It emphasizes an internal struggle Mr. Verloc experiences.

(C) It contrasts Mr. Verloc with his surroundings.

(D) It reveals a private opinion Mr. Verloc holds.

Individual elephants and Arctic herbivores such as caribou tend to have fixed geographic ranges throughout their lifetimes, which had prompted some researchers to speculate that the Arctic woolly mammoth, an extinct elephantid, might have exhibited similar behavior. Mammoth tusks grew in sequential layers, incorporating ingested minerals and organics, and so each ivory stratum reflects the ratio of strontium isotopes ($^{87}Sr/^{86}Sr$) in the local environment; thus, the sequence of strata shows where the animal roamed during life. Recent analysis of the strontium ratios in the strata of one Arctic woolly mammoth tusk in relation to the geographic distribution of strontium ratios in the environment shows the animal's range begin to expand as it reached sexual maturity, only to contract again in its final 1.5 years.

ID a2f64e58

52 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined statement in the text as a whole?

(A) It discusses a characteristic shared by certain animals in order to explain why researchers raised a possibility that turned out not to be supported by data described later in the text.

(B) It illustrates a pattern of behavior among certain animals in order to present a theory about exceptions to that pattern that is weakened by a finding described later in the text.

(C) It describes a similarity in the behavior of certain animals in order to show why a method described later in the text did not reveal whether another animal also showed that behavior.

(D) It introduces a trait shared by certain animals in order to contextualize a hypothesis about the origin of that trait that is advanced later in the text.

The following text is from Edith Wharton's 1905 novel *The House of Mirth*. Lily Bart and a companion are walking through a park.

Lily had no real intimacy with nature, but she had a passion for the appropriate and could be keenly sensitive to a scene which was the fitting background of her own sensations. The landscape outspread below her seemed an enlargement of her present mood, and she found something of herself in its calmness, its breadth, its long free reaches. On the nearer slopes the sugar-maples wavered like pyres of light; lower down was a massing of grey orchards, and here and there the lingering green of an oak-grove.

ID 39857700

53 Mark for Review — Hard — Explanation >

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It creates a detailed image of the physical setting of the scene.

(B) It establishes that a character is experiencing an internal conflict.

(C) It makes an assertion that the next sentence then expands on.

(D) It illustrates an idea that is introduced in the previous sentence.

Historians have argued that a crucial component of the Civil Rights Movement's success in the 1960s was the Southern Christian Leadership Conference's Citizen Education Program (CEP), which invited promising activists from across the South to its one-week training sessions in Dorchester, Georgia. Led by experienced organizers such as Dorothy Cotton and Septima Clark, CEP attendees—more than 7,000 in all—participated in workshops on topics ranging from public speaking to legal doctrine before returning home and using their newly acquired knowledge to spearhead local civil rights initiatives.

ID 2e744883

54 Mark for Review — Hard — Explanation >

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It underscores the extent of the CEP's impact on the Civil Rights Movement of the 1960s.

(B) It illustrates the CEP organizers' efforts to educate participants on a wide variety of topics.

(C) It suggests that CEP attendees held a diverse array of opinions about the Southern Christian Leadership Conference's political philosophy.

(D) It establishes that criticism of the CEP was limited to a few individuals in the Southern Christian Leadership Conference.

The following text is from William Shakespeare's circa 1611 play *The Winter's Tale*. Camillo has been away from his home in Sicily and serves in the court of Polixenes, the king of Bohemia. He has asked Polixenes for permission to return to Sicily.

POLIXENES: I pray thee, good Camillo, be no more

importunate. 'Tis a sickness denying thee anything,

a death to grant this.

CAMILLO: It is fifteen years since I saw my country.

Though I have for the most part been aired abroad,

I desire to lay my bones there. Besides, the penitent

king, my master, hath sent for me, to whose feeling sorrows I might be some allay—or I o'erween [presume] to think so—which is another spur to my departure.

ID 0f2933b9

55 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It establishes Camillo's hope that Polixenes will be comforted knowing that Camillo isn't departing at his own discretion.

(B) It suggests that Camillo feels compelled to persuade Polixenes that Camillo's decision to leave the court is justified.

(C) It conveys Camillo's recognition that one benefit his presence may afford the king of Sicily is merely speculative.

(D) It bolsters the idea that Camillo's primary motivation to return home is his concern for the king of Sicily's well-being in his absence.

A study by a team including finance professor Madhu Veeraraghavan suggests that exposure to sunshine during the workday can lead to overly optimistic behavior. Using data spanning from 1994 to 2010 for a set of US companies, the team compared over 29,000 annual earnings forecasts to the actual earnings later reported by those companies. The team found that the greater the exposure to sunshine at work in the two weeks before a manager submitted an earnings forecast, the more the manager's forecast exceeded what the company actually earned that year.

ID 3e6ad72d

56 Mark for Review — Hard — Explanation ›

Which choice best states the function of the underlined sentence in the overall structure of the text?

(A) To summarize the results of the team's analysis

(B) To present a specific example that illustrates the study's findings

(C) To explain part of the methodology used in the team's study

(D) To call out a challenge the team faced in conducting its analysis

The following text is adapted from Zora Neale Hurston's 1921 short story "John Redding Goes to Sea." John is a child who lives in a town in the woods.

Perhaps ten-year-old John was puzzling to the folk there in the Florida woods for he was an imaginative child and fond of day-dreams. The St. John River flowed a scarce three hundred feet from his back door. On its banks at this point grow numerous palms, luxuriant magnolias and bay trees. On the bosom of the stream float millions of delicately colored hyacinths. [John Redding] loved to wander down to the water's edge, and, casting in dry twigs, watch them sail away down stream to Jacksonville, the sea, the wide world and [he] wanted to follow them.

ID 5336f2e4

57 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It provides an extended description of a location that John likes to visit.

(B) It reveals that some residents of John's town are confused by his behavior.

(C) It illustrates the uniqueness of John's imagination compared to the imaginations of other children.

(D) It suggests that John longs to experience a larger life outside the Florida woods.

Technological advances have prompted companies to increasingly rely on automation to streamline production. Armin Granulo and colleagues, however, found that for products with higher symbolic value (those viewed as contributing to individual self-expression), consumers prefer products made by humans rather than by robots, likely because human-made products are more strongly associated with uniqueness. When considering automation, therefore, companies—especially those specializing in products of symbolic value—should weigh trade-offs between efficiency gains and consumer preferences.

ID c762ca58

58 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It presents evidence supporting the text's argument that consumers prefer products with high symbolic value over products with low symbolic value.

(B) It refers to a finding presented in the previous sentence to recommend that companies that value product quality reconsider automating their production processes.

(C) It illustrates the need for additional research to evaluate the claim in the previous sentence that automation affects how consumers rate product uniqueness.

(D) It emphasizes that a research finding discussed in the text has practical implications that are particularly relevant for businesses making a certain class of product.

The following text is adapted from *Indian Boyhood*, a 1902 memoir by Ohiyesa (Charles A. Eastman), a Santee Dakota writer. In the text, Ohiyesa recalls how the women in his tribe harvested maple syrup during his childhood.

Now the women began to test the trees—moving leisurely among them, axe in hand, and striking a single quick blow, to see if the sap would appear. The trees, like people, have their individual characters; some were ready to yield up their life-blood, while others were more reluctant. Now one of the birchen basins was set under each tree, and a hardwood chip driven deep into the cut which the axe had made. From the corners of this chip—at first drop by drop, then more freely—the sap trickled into the little dishes.

ID 570970cd

59 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It portrays the range of personality traits displayed by the women as they work.

(B) It foregrounds the beneficial relationship between humans and maple trees.

(C) It demonstrates how human behavior can be influenced by the natural environment.

(D) It elaborates on an aspect of the maple trees that the women evaluate.

Several studies have found negligible electoral consequences for governments that impose fiscal austerity measures, yet some European governments recently suffered electorally due to their austerity programs. Evelyne Huebscher and colleagues attribute this incongruity to governments' tendency—not followed in the recent European cases—to implement austerity programs strategically to avoid electoral costs (e.g., setting spending cuts to take effect only after the next election), which has obscured the inherent political risks of austerity measures in the election data scholars have examined.

ID df45f0eb

60 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It explains a discrepancy between what has been observed in study settings and what has been observed in real-world settings that the text goes on to assert is attributable to the studies not using real-world data.

(B) It identifies a conflict between research findings and recent events that the text goes on to suggest is a consequence of a complicating factor in the data used to generate those findings.

(C) It presents a long-standing divergence in research findings that the text goes on to say is due to different groups of researchers using data that derive from different electoral circumstances.

(D) It describes a recent exception to a general pattern in research findings that the text goes on to explain is a result of researchers underestimating the significance of inconsistencies in the data they've analyzed.

Scholarly accounts of the Chicano movement—a movement that advocated for the social, political, and cultural empowerment of Mexican Americans and reached its zenith in the 1960s and 1970s—tend to focus on the most militant, outspoken figures in the movement, making it seem uniformly radical. Geographer Juan Herrera has shown, however, that if we shift our focus toward the way the movement manifested in comparatively low-profile neighborhood institutions and projects, we see participants espousing an array of political orientations and approaches to community activism.

ID 1f2d6173

61 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It presents a trend in scholarship on the Chicano movement that the text claims has been reevaluated by researchers in light of Herrera's work on the movement's participants.

(B) It identifies an aspect of the Chicano movement that the text implies was overemphasized by scholars due to their own political orientations.

(C) It describes a common approach to studying the Chicano movement that, according to the text, obscures the ideological diversity of the movement's participants.

(D) It summarizes the conventional method for analyzing the Chicano movement, which the text suggests creates a misleading impression of the effectiveness of neighborhood institutions and projects.

Typically, synthetic leather is petroleum based, but materials scientists searching for an ecologically sustainable alternative have used various bacteria that secrete linear chains of glucose, forming a dense mesh of cellulose called a pellicle, which is leatherlike except in color. The standard process for dyeing leather generates substantial wastewater and other undesirable byproducts, so adopting such a regimen would run counter to the ecological promise of the pellicle approach. To address this, Kenneth T. Walker and colleagues worked to modify *Komagataeibacter rhaeticus* bacteria to produce a pellicle with embedded pigmentation cells, thereby allowing the pellicle to "dye" itself from the inside.

ID de059199

62 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) To concede that the researchers' main goal as described in the text will be challenging to achieve due to the standard coloring approach being impractical for use on a pellicle

(B) To indicate the characteristic of conventional synthetic leathers that makes those leathers poorly suited to achieve the researchers' main goal as presented in the text

(C) To describe a consideration that led the researchers to employ an alternative approach to coloring a pellicle that allowed them to achieve their main goal as presented in the text

(D) To illustrate how the researchers adapted the pellicle approach to overcome a potential impediment to their main goal as presented in the text

Curious about how people visually perceive objects in their dreams, Stephen LaBerge and team recruited lucid dreamers—people aware that they're dreaming as it's happening—for a research study. These participants were reliably able to signal when they had entered a dream state; the team then observed participants' eye movements as they slept. The smoothness with which participants' eyes tracked objects in their dreams closely matched how sighted people who are awake visually track objects around them, suggesting to the team that the brain perceives dream objects as the product of something other than pure imagination.

ID 93ce86d0

63 Mark for Review — Hard — Explanation ›

Which choice best states the function of the underlined portion in the text as a whole?

(A) To offer key evidence that undermines LaBerge and team's initial hypothesis

(B) To show the unexpected result that led LaBerge and team to change the focus of their study

(C) To illustrate an important real-world implication of LaBerge and team's main finding

(D) To identify a comparable circumstance that helps justify LaBerge and team's conclusion

In 2023 literary scholar Jeremy Douglass cautioned technology investors and enthusiasts who predict conventional books' ultimate displacement by newer forms of media. Douglass observed that the concept of an "interactive" text is much older than technologists assume, extending back to the first time readers scratched notes into a text's margins. In addition, newer media, such as video games, haven't replaced older forms of entertainment, such as comic books, but rather exist alongside them. Douglass believes that rather than supplanting books, technology is simply making new forms of expression possible.

ID cce2f8dc

64 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined portion in the text as a whole?

(A) It challenges the stance of the investors and enthusiasts who are mentioned earlier in the text.

(B) It explains the basis for the claim made by the technologists mentioned in the text.

(C) It suggests that academics are better suited than investors to see the potential uses of contemporary interactive texts.

(D) It provides a historical anecdote about the technological challenges involved in reading the earliest interactive texts.

The mimosa tree evolved in East Asia, where the beetle *Bruchidius terrenus* preys on its seeds. In 1785, mimosa trees were introduced to North America, far from any *B. terrenus*. But evolutionary links between predators and their prey can persist across centuries and continents. Around 2001, *B. terrenus* was introduced in southeastern North America near where botanist Shu-Mei Chang and colleagues had been monitoring mimosa trees. Within a year, 93 percent of the trees had been attacked by the beetles.

ID 6bc0ba75

65 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the third sentence in the overall structure of the text?

(A) It states the hypothesis that Chang and colleagues had set out to investigate using mimosa trees and *B. terrenus*.

(B) It presents a generalization that is exemplified by the discussion of the mimosa trees and *B. terrenus*.

(C) It provides context that clarifies why the species mentioned spread to new locations.

(D) It offers an alternative explanation for the findings of Chang and colleagues.

The 1967 release of Harold Cruse's book *The Crisis of the Negro Intellectual* isolated him from almost all other scholars and activists of the American Civil Rights Movement—though many of those thinkers disagreed with each other, he nonetheless found ways to disagree with them all. He thought that activists who believed that Black people such as himself should culturally assimilate were naïve. But he also sharply criticized Black nationalists such as Marcus Garvey who wanted to establish independent, self-contained Black economies and societies, even though Cruse himself identified as a Black nationalist.

ID 9b01bcf4

66 Mark for Review — Hard — Explanation ›

Which choice best describes the function of the underlined sentence in the text as a whole?

(A) It describes a direction that Cruse felt the Civil Rights Movement ought to take.

(B) It indicates that Cruse's reputation as a persistent antagonist of other scholars is undeserved.

(C) It describes a controversy that Cruse's work caused within the Black nationalist movement.

(D) It helps explain Cruse's position with respect to the community of civil rights thinkers.

Explanations

1 Correct answer **C** — Easy — Back to question

C It emphasizes Shakti's sense of belonging in the landscape.

Choice C is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The first sentence of the text states that Shakti knows the woods she is walking in well. The next sentence, which is underlined, emphasizes Shakti's familiarity with, and sense of security within, the woods by describing how the tree branches are friendly and "welcoming," as they are depicted as extending open arms to her. The remainder of the text also shows that Shakti is comfortable and content in the woods by describing her as "an old friend" of the trees. Thus, the function of the underlined portion is to emphasize Shakti's sense of belonging in the wooded landscape that she visits.

Choice A is incorrect because the text and underlined portion suggest that Shakti is comfortable, not uncomfortable, in her surroundings: the trees around her are described as welcoming and reassuring. Moreover, the underlined portion discusses Shakti's feelings in the forest, not the river, since she hasn't reached the river yet. **Choice B is incorrect** because the text and underlined portion emphasize Shakti's familiarity with the woods. The trees are inviting, and she feels like "an old friend" to the woods, so she isn't lost or confused there. **Choice D is incorrect** because the third sentence uses the phrase "as an old friend" figuratively in reference to Shakti's sense of familiarity with the landscape, not in reference to her long-standing friendships with other people, and the text and underlined portion never discuss her feelings about such friendships.

2 Correct answer **A** — Easy — Back to question

A It describes the effects of a process devised by researchers that increases the longevity of an object discussed in the text.

Choice A is the best answer because it describes how the underlined portion of the sentence functions in the text as a whole. The text begins by discussing ordinary soap bubbles, objects that usually exist for less than a minute before popping due to either evaporation or gravity-induced drainage. The text then goes on to mention work by researchers Aymeric Roux and colleagues, who have discovered how to increase the longevity of bubbles by altering their chemical composition. Finally, the underlined portion of the text describes how this process works: since the bubble contains both water and glycerol, it can draw water molecules from the surrounding air to replace those lost to evaporation. Therefore, the underlined portion of the

sentence describes the effects of a process devised by researchers that increases the longevity of an object described in the text.

Choice B is incorrect because the circumstance that prompted the research is discussed in the first sentence of the text, not the underlined portion. **Choice C is incorrect** because the underlined portion of the text does not address why soap bubbles must eventually rupture. Rather, it explains how the longevity of soap bubbles can be extended. **Choice D is incorrect** because the underlined portion of the text does not mention any future experiments.

3 Correct answer **D** Easy Back to question

D It provides context that clarifies the significance of the information that follows in the rest of the sentence.

Choice D is the best answer. The text describes how a new discovery expands our understanding of Denisovans. The underlined portion describes what we used to believe about Denisovans, which helps the reader understand the significance of the discovery of the molar: it suggests that they lived in more places than we'd previously thought.

Choice A is incorrect. The underlined portion doesn't do this. Instead, it explains what we used to believe about Denisovans before the discovery —it doesn't dismiss the new discovery as false. **Choice B is incorrect**. The underlined portion doesn't do this. No term is defined here. **Choice C is incorrect**. The underlined portion doesn't do this. The text never tells us what the "goal" of the research was, just what its discovery was.

4 Correct answer **A** Easy Back to question

A It provides an example of an autobiography that describes help given by an Indigenous people to a Black freedom seeker.

Choice A is the best answer. The previous sentence broadly mentions "autobiographies written by the freedom seekers." This sentence identifies Loguen's autobiography as a specific example.

Choice B is incorrect. The sentence never explains why Loguen chose to write about his experiences. **Choice C is incorrect**. The previous sentence identifies autobiographies as useful sources of historical information about a specific topic, but not for "information about geography." The underlined sentence provides details of one autobiography as an example of a source of information about that specific topic (interactions between Indigenous people and Black freedom seekers). **Choice D is incorrect**. The text never discusses other specific people who helped freedom seekers, and therefore can't make a comparison between the Neshnabé and anyone else.

5 Correct answer **C** Easy Back to question

C It contrasts Uncle Katsuhisa with the narrator's father.

Choice C is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The underlined sentence establishes a difference between Uncle Katsuhisa and the narrator's father by describing Uncle Katsuhisa as "loud" and the narrator's father as "quiet." The text then elaborates on that contrast, describing some ways Uncle Katsuhisa is very noisy even when he isn't speaking.

Choice A is incorrect because the text doesn't indicate what kinds of topics Uncle Katsuhisa enjoys discussing, only that he is loud even when he isn't speaking. **Choice B is incorrect** because the text never indicates how Uncle Katsuhisa feels about meeting new people, only how loud he is. **Choice D is incorrect** because the text never describes a conversation occurring between any people; it refers to talking only when stating that Uncle Katsuhisa is loud even when he isn't speaking.

6 Correct answer **C**

Easy

Back to question

C It offers a detail about how female cuckoos carry out the behavior discussed in the text.

Choice C is the best answer because it best describes how the underlined sentence functions in the text as a whole. The first two sentences establish that birds of some species don't raise their own young; instead, they lay their eggs in the nests of birds of other species. The underlined sentence then states that female cuckoo birds engage in this behavior, having been observed specifically laying their eggs in other nests while the other birds are out finding food. According to the text, the cuckoo chicks are then raised by the other birds. Thus, the underlined sentence provides a particular detail about how female cuckoos carry out the behavior of laying eggs for other birds to raise.

Choice A is incorrect. Rather than mentioning a physical feature of female cuckoos, the underlined sentence introduces a specific behavior of female cuckoos: laying eggs in the nests of birds of other species when the other birds are away. The only reference to physical features is the last sentence's general mention of cuckoo chicks looking different from chicks of other species. **Choice B is incorrect** because the underlined sentence refers to the nests of birds other than cuckoos and doesn't describe how any nests look, cuckoo or otherwise. Instead, the sentence addresses how female cuckoos use other birds' nests. **Choice D is incorrect** because the underlined sentence describes only female cuckoo behavior (laying eggs in the nests of birds of other species when the other birds are away); it's the last sentence of the text that addresses the other birds' reaction, indicating that those birds usually raise the cuckoo chicks once they've hatched.

7 Correct answer **B**

Easy

Back to question

B It explains the meaning of a word.

Choice B is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The underlined portion is a parenthetical phrase directly following the word "microfilm," and it describes film containing small ("scaled-down") images; the placement and focus of the portion indicate that it is serving to define the term "microfilm."

Choice A is incorrect. Although the text is about accessing the writings of a famous historical figure (Douglass), the underlined portion doesn't give information about Douglass or any other person. Instead, it explains what microfilms are. **Choice C is incorrect** because the text never describes any kind of debate or disagreement; it simply describes a change in how researchers can access historical documents, with the underlined portion defining an important term. **Choice D is incorrect** because the text never makes any mention of a particular finding, unexpected or otherwise; it simply describes a change in how researchers do some of their work, with the underlined portion defining an important term.

8 Correct answer **A**

Easy

Back to question

A It clarifies the meaning of a scientific term.

Choice A is the best answer because it most accurately describes how the underlined phrase functions in the text as a whole. The text states that the wax produced by Liu and colleagues' reactor can be turned into a surfactant. The underlined phrase, which is set off with parentheses, then provides a definition for the term "surfactant," explaining that it's a chemical compound that can be used as a detergent. Thus, the underlined portion of the text functions to clarify the meaning of a scientific term.

Choice B is incorrect. Though the text as a whole focuses broadly on an environmental concern, the underlined phrase does not; it simply indicates what a surfactant is. **Choice C is incorrect**. Though the text as a whole focuses on a scientific discovery (Liu and colleagues' solution to the problem of plastic recycling), the underlined phrase does not explain its significance; it simply defines a scientific term used in the discussion. **Choice D is incorrect**. Though the text as a whole includes discussion of the result found by Liu and colleagues, the underlined phrase does not discuss it; it simply defines a scientific term used in the discussion. Additionally, at no point in the text is it mentioned that the team was confused.

9 Correct answer **C**

Easy

‹ Back to question

C It conveys the speaker's sense of feeling a pull toward home while traveling in an unfamiliar place.

Choice C is the best answer because it most accurately describes the function of the underlined lines in the text as a whole. In the opening line of the text, the speaker describes wandering in "alien lands," which establishes that the speaker is traveling in unfamiliar territory. In the underlined lines, the speaker describes "billows" (large waves) rolling in the soul, which suggests that the speaker feels inner turmoil. The underlined lines go on to associate these rolling billows with voices calling to the speaker from the speaker's "native strands," or homeland, indicating that thoughts of home are prompting the emotional experience these lines describe. Taken together, the imagery in the underlined lines thus implies that the speaker feels a deep emotional connection to, or pull toward, home while traveling in an unfamiliar place.

Choice A is incorrect. While the text's first line states that the speaker is traveling and the underlined lines indicate that the speaker experiences an emotional pull toward home, neither the underlined lines nor the text as a whole establishes an enthusiasm about the current travels that conflicts with a growing urge to return home. The text's description of the lands the speaker is traveling in focuses on their artificial quality, stating, "Nature her prerogative resigns / To Man," which doesn't suggest enthusiasm but rather a sense of detachment or even critique. **Choice B is incorrect** because the underlined lines don't address uncertainty about maintaining links with relatives in distant places. In the underlined lines, the speaker expresses a sense of connection to the speaker's homeland ("native strands") but doesn't refer to any family members the speaker may have there or to concerns about maintaining any familial ties. **Choice D is incorrect** because the poem doesn't indicate that the speaker has returned home after an absence. Rather, the speaker explicitly states, "I wander among the hills of alien lands," establishing that the current setting is a foreign place. Moreover, the underlined lines express a sense of connection with, or pull toward, a distant homeland, not a sense of longing for how that homeland or any other location once felt.

10 Correct answer **B**

Easy

‹ Back to question

B It adds to the idea that Bitter's footsteps reveal something to Jam.

Choice B is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The text establishes that Jam hears Bitter's studio door open early in the morning, when it is still dark. Jam then listens to her mother's footsteps, which seem to create a song that runs through the floorboards. The text indicates that the sound of Bitter's footsteps convey to Jam that Bitter is done painting. The underlined sentence then builds on this idea, stating explicitly that Bitter's feet sing the news of her completion of a painting. Thus, the sentence stating that "Bitter's feet were singing the news" further emphasizes that Bitter's footsteps themselves reveal information to Jam.

Choice A is incorrect because the text provides no evidence that Jam prefers music to art. While the underlined sentence uses musical imagery to describe the vibrations Jam feels, this is figurative language that is describing the footsteps' vibrations; it isn't an indication of Jam's personal interests. **Choice C is incorrect** because the text doesn't suggest that Bitter herself sings while working on paintings. The references to singing in the text are figurative descriptions of how Bitter's footsteps sound or feel to Jam, not literal statements about Bitter singing. **Choice D is incorrect** because the underlined sentence only describes Jam's perception of her mother's footsteps. It doesn't provide any details about Aloe or his reaction to the painting; in fact, the text doesn't mention Aloe seeing the painting at all.

11 Correct answer **A**

Easy

‹ Back to question

A It illustrates that a fire provides comfort beyond physical warmth.

Choice A is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The first two sentences of the text establish that in California, houses were heated by building fires year-round. The underlined portion then indicates that the fires didn't merely provide physical warmth: they also represented being "home" and feeling protected. The underlined portion thus illustrates that a fire provides comfort beyond physical warmth.

Choice B is incorrect because the underlined portion doesn't summarize information that came before it. Whereas the previous two sentences describe fires' ability to provide physical warmth to homes, the underlined portion focuses on the psychological comfort the fires offered. **Choice C is incorrect**. Although the text's second sentence mentions that fires were built in the summer because fog came in, which may have cooled the house, this detail isn't the focus of the underlined portion. Instead, the underlined portion indicates that fires were built for reasons beyond physical warmth: to create a sense of being home and safe. **Choice D is incorrect** because the underlined portion focuses on the emotional significance the author places on having a fire going inside the home. There is no indication that the author feels equally comfortable without a fire present.

12 Correct answer **A** Easy Back to question

A It reinforces the text's skepticism about the possibility of truly achieving self-knowledge.

Choice A is the best answer. The text repeatedly claims that true self-knowledge can't possibly be achieved, and this rhetorical question emphasizes that point.

Choice B is incorrect. The underlined question doesn't do this. The text never expresses doubts about the value of self-knowledge—rather, the text expresses doubts about the possibility of achieving self-knowledge. **Choice C is incorrect**. The underlined question doesn't do this. The text doesn't provide directions for how to achieve self-knowledge—rather, it claims that true self-knowledge is impossible to achieve. **Choice D is incorrect**. The underlined question doesn't do this. The text doesn't ever define self-knowledge, and popularity isn't mentioned in the text at all.

13 Correct answer **B** Easy Back to question

B It identifies a specific reason behind some advertisers' hesitance to support television.

Choice B is the best answer because it accurately describes the function of the underlined phrase in the text as a whole. According to the text, advertisers were reluctant to support television in its early days. The underlined phrase then indicates that this reluctance was partly due to the US's involvement in World War II, which hindered television production. Thus, the underlined phrase identifies a specific reason behind some advertisers' hesitance to support television.

Choice A is incorrect. The text merely mentions that television was expected to be financed through advertising, as radio was at the time. Nothing in the text compares the origins of radio and television. **Choice C is incorrect**. The underlined phrase focuses on a reason advertisers were reluctant to support television, not measures taken to convince advertisers to support television. **Choice D is incorrect**. The underlined phrase focuses on a reason advertisers were reluctant to support television, not what types of television programming were popular.

14 Correct answer **D** Easy Back to question

D It describes how Karida Brown benefited from incorporating oral history in her book.

Choice D is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The text begins by pointing out one of the advantages of oral histories: that they allow researchers to document the daily experiences of people. The text then goes on to describe how Karida Brown utilized interviews with coal miners and their families for her book about twentieth-century coal mining in Kentucky. The underlined sentence affirms that the general advantages of oral histories mentioned earlier in the text were also benefits in Brown's particular case. Thus, the underlined sentence describes how Karida Brown benefited from incorporating oral history in her book.

Choice A is incorrect because though the text mentions coal miners who live in Kentucky, the underlined sentence does not offer a geographical fact about Kentucky. **Choice B is incorrect** because the underlined sentence does not mention United States politics or that Brown is an expert in this particular area. **Choice C is incorrect**. Although the text mentions that Brown's

book revolved around coal miners during the twentieth century, the underlined sentence does not focus on a major historical event during this time.

15 Correct answer **C** Easy Back to question

C It provides an answer to the question in the previous sentence.

Choice C is the best answer because it best describes how the underlined sentence functions in the text as a whole. The text begins with a question: have penguins always been unable to fly? The underlined sentence then presents an answer that has been offered by researchers, indicating that Theresa Cole and her team believe that penguins were once able to fly but lost that ability long ago as they began living in the sea. The text then describes the research that led to that answer. Thus, the function of the underlined sentence is to provide an answer to the question in the previous sentence.

Choice A is incorrect because none of the terms used in the sentence that follows are defined in the underlined sentence; no definitions are given at all. Instead, the sentence presents Theresa Cole and her team's answer to the earlier question about penguins' ability to fly. **Choice B is incorrect** because there is no contradiction between the underlined sentence and the sentence that follows since both convey that at some point penguins underwent adaptations that limited their ability to fly and helped them swim and live in the sea. Instead of contradicting later information, the underlined sentence presents an answer to the earlier question about penguins' ability to fly. **Choice D is incorrect** because the question in the previous sentence is about penguins' ability to fly and the underlined sentence presents Theresa Cole and her team's answer to that question based on their research into penguin flight, which is described in the rest of the text.

16 Correct answer **A** Easy Back to question

A It indicates Grande's unhappiness over Mago's disinterest in Grande's doll.

Choice A is the best answer because it most accurately describes the function of the underlined portion in the text. The underlined portion ("which made me sad because that was the only thing Mago had envied me for") directly expresses Grande's unhappiness about her sister's diminished interest in her Barbie doll. The underlined text specifically identifies that Grande feels sad and explains why Mago's disinterest particularly affects her—because it was the one rare instance where her older sister had envied her, rather than the reverse.

Choice B is incorrect because the underlined portion expresses sadness, not anger. Although there is some correspondence between the emotions anger and envy and the text does indicate that Grande usually envies her sister, the underlined portion states that Grande feels sad about Mago's disinterest in Grande's Barbie, not angry about Mago's refusal to spend time with her. **Choice C is incorrect**. While the first part of the sentence that contains the underlined portion indicates that Mago has previously taken an interest in Grande's Barbie, implying that the sisters may regularly have played with the Barbie together in the past, the underlined portion doesn't provide an example of this. The underlined portion instead explains why Mago's recently developed disinterest in the Barbie saddens Grande. **Choice D is incorrect** because neither the underlined portion nor the text as a whole explains why Mago is unwilling to play with Grande. Rather than addressing Mago's motivation or reasoning, the underlined portion describes Grande's emotional reaction to Mago's disinterest in Grande's Barbie and explains why this lack of interest matters to Grande.

17 Correct answer **A** Easy Back to question

A It identifies a scientific belief that Tharp and Heezen showed to be wrong.

Choice A is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The first sentence of the text establishes that scientists didn't know much about the ocean floor in the 1950s. The second sentence, which is underlined, describes what many scientists thought at the time—that the ocean floor was mostly

flat. The remainder of the text establishes that the ocean floor is far from flat, citing research conducted by Marie Tharp and Bruce Heezen. Thus, the purpose of the underlined sentence is to identify a scientific belief that Tharp and Heezen showed to be wrong.

Choice B is incorrect. Although Tharp and Heezen's work with sonar data in the Atlantic Ocean is mentioned later in the text, the underlined sentence doesn't describe the design of their experiment. Instead, it identifies a belief held by scientists that Tharp and Heezen demonstrated to be wrong. **Choice C is incorrect** because the underlined sentence presents a belief held by many scientists in the 1950s; nowhere does the text mention a disagreement between Tharp and Heezen, whom the text describes as research partners working together to map the ocean floor. **Choice D is incorrect** because the underlined sentence doesn't present data in support of a claim; instead, it presents a scientific belief that Tharp and Heezen's work showed to be wrong.

18 Correct answer **B** Easy Back to question

B It introduces a scientific term that is used in the discussion that follows.

Choice B is the best answer because it most accurately describes the function of the underlined portion in the text as a whole. The first two sentences introduce the idea that soil and rocks can be moved from one location to another by something other than rivers and streams. The underlined sentence then states that the term used by scientists to refer to this process is "aeolian transport." The discussion that follows explains what aeolian transport is (the movement of small geological materials over potentially great distances by the wind) and describes an example of a study that found that dust particles had been moved by aeolian transport from Australia to Antarctica. Thus, the underlined portion introduces a scientific term that is used in the discussion that follows.

Choice A is incorrect because the underlined portion of the text doesn't present any remarks from Melisa Diaz, nor does it suggest that Diaz and her team encountered difficulties in their study. Instead, the phrase in quotation marks in the underlined portion simply presents a term that is used by scientists to refer to a specific process discussed in the text. **Choice C is incorrect** because nothing in either the underlined portion or the text as a whole suggests that the findings of the study presented in the text were surprising or unexpected. In fact, the text suggests that Diaz and her team wanted to see if aeolian transport could explain the appearance of certain geological materials in Antarctica, and their findings did indeed confirm the involvement of aeolian transport. **Choice D is incorrect**. Although the first sentence of the text mentions soil and rocks, which are two different kinds of geological material, the underlined portion doesn't refer to these materials, nor does it explain the difference between them. Rather, the underlined portion introduces the scientific term "aeolian transport," which is used in the discussion that follows.

19 Correct answer **C** Easy Back to question

C It identifies some reasons why the map is impressive.

Choice C is the best answer because it best describes how the underlined sentence functions in the text as a whole. The text presents information about a map drawn by Blackfoot chief Ac Ko Mok Ki in 1801. The underlined sentence states that the map "demonstrates a vast amount of topographic knowledge" and mentions that it features the "specific names of mountains and rivers" and includes the first-known sketch of the Missouri River's drainage network. These are all characteristics that indicate that the map was executed with remarkable skill. Thus, the underlined sentence identifies some reasons why the map is impressive.

Choice A is incorrect. Though the sentence after the underlined sentence in the text mentions that Ac Ko Mok Ki included information about other tribes on his map, the underlined sentence itself does not address this topic. **Choice B is incorrect** because nothing in the underlined sentence indicates how Ac Ko Mok Ki became interested in mapmaking, only that his mapmaking skills are impressive. **Choice D is incorrect** because though the underlined sentence describes several features of the map, it does not specifically describe how the map was used.

20 Correct answer **B**

Easy

‹ Back to question

B It describes a limitation of some studies about the origin of turtles.

Choice B is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The first two sentences introduce two competing views on the origins of turtles. Genetic studies place them closer to the group that includes crocodiles, while fossil studies indicate that they're more closely related to other groups, including one that contains snakes. The next sentence, which is underlined, presents a limitation with many of the studies of fossils: their reliance on "incomplete data sets." The last sentence summarizes a fossil study that used more complete data ("more than 1,000 reptile fossils"), which supported the genetics studies' conclusions about turtles. Thus, the underlined sentence mainly functions to describe a limitation of some studies about the origin of turtles.

Choice A is incorrect because the underlined sentence doesn't address the topic of the tools used by scientists to examine fossils. Instead, the sentence introduces a shortcoming of many fossil studies conducted on turtle origins. **Choice C is incorrect** because neither the underlined portion nor the text as a whole discusses the evolution of crocodiles. Modern crocodiles are mentioned earlier in the text because, according to genetic studies, they are a part of the group that turtles may be closely related to. **Choice D is incorrect**. The underlined sentence is raising an issue with fossil studies, not genetic studies, saying that fossil studies have at times relied on incomplete data. Furthermore, the sentence doesn't reference any widely held beliefs. Earlier in the text, hypotheses are mentioned that are suggested by genetic studies and fossil studies, but the underlined sentence is just introducing a limitation of some fossil studies.

21 Correct answer **A**

Easy

‹ Back to question

A It offers information about how Yamauchi adapted her short story into a play.

Choice A is the best answer because it best describes how the underlined sentence functions in the text as a whole. According to the text, it was hard for Yamauchi to adapt her short story into the play *And the Soul Shall Dance* because the story had included little dialogue, instead describing the characters' silent thoughts. The underlined sentence offers information about how Yamauchi ultimately succeeded in adapting the story into a play: it explains that Yamauchi created situations where the characters of the play could reveal their internal thoughts while speaking with each other.

Choice B is incorrect because neither the underlined sentence nor the text as a whole makes any mention of playwrights other than Yamauchi or how the play might have influenced them. **Choice C is incorrect** because the text states that Yamauchi is best known for her play *And the Soul Shall Dance*, which conveys that the play is better known than the short story it's based on is. **Choice D is incorrect** because neither the underlined sentence nor the text as a whole mentions the actors who performed in the play or Yamauchi's approach to choosing them.

22 Correct answer **D**

Easy

‹ Back to question

D It describes a means by which horizontal gene transfer might occur among vertebrates.

Choice D is the best answer. The text defines horizontal gene transfer and then gives one possibility for how it happens in vertebrates (via infection by parasites). The underlined part describes how that mechanism could work.

Choice A is incorrect. The underlined portion doesn't do this. Parasites are only described as the mechanism that does the transferring, not the species that gives or receives the genes. **Choice B is incorrect**. The underlined portion doesn't do this. The text never discusses which genes are more likely to be transferred. **Choice C is incorrect**. The underlined portion doesn't do this. The text never discusses how horizontal gene transfer occurs among invertebrates.

23 Correct answer **A**

Easy

‹ Back to question

A It offers a detail that shows how Dot is growing stronger.

Choice A is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. In the text, the narrator makes observations about her young niece, Dot, noting that Dot is making progress toward outgrowing babyhood and is growing stronger "day by day." The description of Dot purposefully exercising by "bouncing for hours" reinforces the narrator's earlier characterization of Dot. The underlined sentence thus offers a detail that shows how Dot is growing stronger.

Choice B is incorrect. While a sentence earlier in the text mentions Celestine's psychological state (sadness because Dot is growing fast), the underlined sentence doesn't focus on Celestine at all. Instead, the sentence focuses on Dot's physical activities to show that she is getting stronger. **Choice C is incorrect** because the underlined sentence describes Dot's behavior, not the narrator's psychological characteristics. While a sentence earlier in the text establishes that the narrator, like Dot, was "impatient with babyhood," the underlined sentence specifically addresses Dot's physical activities in her stroller. **Choice D is incorrect**. While an earlier sentence in the text mentions that Celestine is sad, the underlined sentence doesn't focus on how Celestine feels nor does it describe a behavior that Celestine engages in. The sentence focuses entirely on Dot's actions, describing her as "bouncing for hours" to show that she is growing stronger.

24 Correct answer **B**

Medium

‹ Back to question

B It provides information that helps support a claim about a discovery's significance that is presented in the following sentence.

Choice B is the best answer. The underlined sentence provides information about import/export firms, showing how Chinese communities across the world were connected by trade routes.

Choice A is incorrect. The underlined sentence never suggests that the countries of origin of the fish are in question—in fact, it tells us exactly where they came from. **Choice C is incorrect**. The passage never describes the steps taken to discover the fish bones described in the previous sentence. **Choice D is incorrect**. The underlined sentence doesn't outline a hypothesis but instead provides evidence. And the following sentence agrees with the underlined sentence, so we could eliminate this choice just for saying that the following sentence "casts some doubt on" the underlined one—partly wrong is all wrong.

25 Correct answer **B**

Medium

‹ Back to question

B It supports an argument about the workers who produced the Bayeux Tapestry.

Choice B is the best answer because it most accurately describes the function of the underlined sentence in the text as a whole. The text discusses the Bayeux Tapestry, making the point that the workers who produced the huge tapestry in the eleventh century might not have ever produced a tapestry so large before. The text goes on to suggest that because of this lack of previous experience, the workers developed and refined the process of joining the tapestry's panels over time as they worked. The last sentence of the text then provides an example of an observation that suggests the workers' process changed: clear misalignment of the borders of the two panels the workers joined first and virtually invisible joins completed later. Thus, the underlined sentence serves to support an argument about the workers who produced the tapestry.

Choice A is incorrect because the example given in the last sentence of the text has to do with how the panels of the Bayeux Tapestry were joined by the workers, not with what is depicted in those panels; the text never identifies any people or places depicted in the tapestry. **Choice C is incorrect** because the last sentence compares how early panels in the Bayeux Tapestry were joined with how later panels in the same tapestry were joined; it doesn't make any comparison between the Bayeux Tapestry and other tapestries from the same time in France. **Choice D is incorrect** because the last sentence doesn't address

the location where the Bayeux Tapestry was created; the first sentence of the text presents it as a given that the tapestry was created in France, but nothing in the text indicates how that origin was determined.

26 Correct answer **A** Medium ‹ Back to question

A It defines a phenomenon that is discussed in the text.

Choice A is the best answer because it most accurately describes how the first sentence functions in the text as a whole. The first sentence introduces what yawn contagion is, explaining that it occurs when an individual yawns in response to the yawn of another individual. The text goes on to describe Elisabetta Palagi and her colleagues' study of this phenomenon in a wild population of gelada monkeys. According to the text, the study showed that wild primate populations experience yawn contagion and that the behavior occurs most commonly in male monkeys and across social groups. Thus, the function of the first sentence is to define the phenomenon of yawn contagion that is discussed in the text.

Choice B is incorrect. Although the first sentence introduces the text's discussion of yawn contagion, it doesn't present this behavior, or anything else, as a problem. **Choice C is incorrect** because the first sentence doesn't present a claim but instead explains what yawn contagion is. Moreover, the text doesn't challenge anything; it's an informative text that describes the findings of a research study about yawning in wild primate populations. **Choice D is incorrect**. Although the text describes a scientific study, and most scientific studies are guided by a hypothesis, the text doesn't say what Palagi and her colleagues' hypothesis was; the text discusses their findings instead.

27 Correct answer **A** Medium ‹ Back to question

A It elaborates on the previous sentence's statement about a transitional moment in Johnson's artistic career.

Choice A is the best answer because it most accurately describes the function of the underlined sentence in the text as a whole. The first sentence of the text indicates that Johnson returned to the US in 1938 at which time his painting style suddenly changed. The second sentence is underlined and gives more detail about this stylistic change, noting that his earlier work consisted largely of landscapes in an expressionist style and his new works were highly stylized portraits of Black Americans. In other words, the function of the underlined sentence is to elaborate on a transitional moment in Johnson's painting career.

Choice B is incorrect. Although the text does mention that Johnson spent a decade in Europe, it does not discuss what other travel Johnson might have done. Furthermore, although the text mentions African, American, and Scandinavian artistic elements in Johnson's work, it does not indicate that he traveled to different locations to learn about these practices. **Choice C is incorrect** because the text does not focus on Johnson's personal life nor does it address how successful his career was in general. **Choice D is incorrect** because, rather than call it into question, the underlined sentence continues the discussion of Johnson's career by adding further relevant detail of Johnson's artistic transformation.

28 Correct answer **A** Medium ‹ Back to question

A To describe an approach a team of scientists used to study pollinators

Choice A is the best answer because it most accurately describes the function of the underlined sentence. The sentence indicates that scientists used time-lapse photography during both day and night to detect pollinators visiting red clover. Therefore, the underlined sentence has the function of describing an approach scientists used in the pollinator study discussed in the text.

Choice B is incorrect because the underlined sentence discusses equipment the scientists used to conduct their study, and the text provides nothing to suggest these elements of their experimental design could, by themselves, question claims resulting from the study. **Choice C is incorrect** because nothing in either the underlined sentence or the rest of the text addresses whether moths have a preference for red clover or any other flowers. **Choice D is incorrect**. Although the sentences

that follow the underlined sentence discuss research findings, nothing in the text suggests that these findings were unexpected. Moreover, the underlined sentence describes part of the scientists' experimental design (day and night time-lapse photography), not a finding of the scientists' study.

29 Correct answer **D** Medium Back to question

D It provides a synopsis of an interaction in an Austen novel that illustrates a literary concept discussed in the following sentence.

Choice D is the best answer. The underlined sentence provides a concrete example to ground readers' understanding of the "deep intersubjectivity" described in the next sentence as central to Austen's work.

Choice A is incorrect. There is no evaluation made of Austen's skill in this sentence, and no examples are given in the following sentence. This choice essentially flips the paragraph: it's this first sentence that provides an example. **Choice B is incorrect**. There are no other Austen protagonists mentioned in this passage, so this couldn't be the answer. **Choice C is incorrect**. The underlined sentence doesn't identify any "recurring theme," but instead simply describes one interaction from one book. This interaction exemplifies the literary technique of "deep intersubjectivity" that is introduced in the next sentence.

30 Correct answer **C** Medium Back to question

C It provides examples of the types of scenarios addressed in alternative-history fiction.

Choice C is the best answer because it best describes the function of the underlined portion in the text as a whole. The text begins by defining alternative-history fiction as a subgenre centered on "what if?" questions. The underlined portion then poses two such questions—one about India starting the Industrial Revolution and one about Soviet cosmonauts landing on the moon first. The sentence that follows refers to the two questions as "speculative counterfactuals like these," confirming that the underlined questions serve as examples. Thus, the underlined portion provides examples of the types of scenarios addressed in alternative-history fiction.

Choice A is incorrect because the underlined portion provides examples of "what if?" scenarios, not evidence of a line of influence from academic historians to fiction writers; nothing in the text addresses such a relationship. The text mentions academic historians only in the context of how alternative-history stories can supplement their work. **Choice B is incorrect** because the text states that counterfactuals like the ones presented in the underlined portion are "commonly deployed by academic historians," indicating engagement with such questions rather than neglect. Instead of acknowledging overlooked questions, the underlined portion provides examples of the types of scenarios addressed in alternative-history fiction. **Choice D is incorrect** because nothing in the text indicates that the specific questions in the underlined portion originated with fiction writers or that they subsequently inspired academic historians. Instead, the underlined portion simply illustrates the kind of "what if?" questions typical of the alternative-history fiction subgenre.

31 Correct answer **C** Medium Back to question

C To indicate why astrobiologists choose to conduct research in the Atacama Desert

Choice C is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The first sentence describes a unique location on Earth, the Atacama Desert. The next sentence, which is the underlined sentence, states that the reason why astrobiologists study life, or its remains, in this unique location is that Atacama is a harsh environment that closely resembles the extreme environment of Mars. The remainder of the text explains that the researchers hope their work in Atacama will support inquiry into life on Mars. Thus, the underlined portion functions mainly to indicate why astrobiologists choose to conduct research in the Atacama Desert.

Choice A is incorrect because to contrast two things means to show the differences between them, and the phrase "closely mirrors" in the underlined sentence indicates that the extreme environment in the Atacama Desert is similar to, not different from, that on Mars. This similarity is why, according to the underlined sentence, astrobiologists conduct research in Atacama. **Choice B is incorrect** because the underlined sentence doesn't address forms of life that are unable to survive the harsh environment of the Atacama Desert. Instead, the underlined sentence explains why astrobiologists study life, or its remains, in this environment. **Choice D is incorrect** because the underlined sentence doesn't suggest that the scientific research in the Atacama Desert is limited in any way; instead, the sentence explains that the similarity between the environments of Atacama and Mars is the reason why astrobiologists search for life, or its remains, in Atacama.

32 Correct answer **D** Medium Back to question

D To emphasize the extent of individuals' struggles to articulate thoughts on art

Choice D is the best answer because it most accurately describes the function of the underlined portions in the text as a whole. The underlined portions describe the young artists and intellectuals at the gathering as trying to "hew out," or give shape to, their views of art more clearly, but with each seeming to be using "an ill-balanced axe" and then feeling that the "strokes had gone awry." In context, the metaphorical language comparing attempts to refine concepts of art to imprecisely cutting wood with an inadequate axe serves to emphasize how much the individuals at the gathering struggled to articulate, or express, their thoughts; indeed, the text explains that the individuals couldn't quite grasp why their statements had gone awry and tended to try to rectify, or correct, them in continued discussion after they sat down.

Choice A is incorrect because the underlined portions characterize aspects of the young artists and intellectuals' attempts to present their general views of art more clearly, not their views of the reputation of a certain artwork; the text never mentions any specific artwork or its reputation. **Choice B is incorrect**. Although the underlined portions refer to a physical activity—cutting wood with an axe—the descriptions are metaphorical rather than literal. The text isn't describing people constructing works of art, large-scale or otherwise; rather, it's describing people talking at a gathering, using the idea of imprecisely cutting wood with an inadequate axe to suggest that each individual struggled when trying to present their view of art more clearly. **Choice C is incorrect**. Although the underlined portions do provide a reason for the young artists and intellectuals' discontent, the text focuses on the fact that they were each dissatisfied with their own statements, not on how they felt about the group's full conversation about art. Instead, the text explains that each individual tried to present their view of art more clearly but struggled (as if imprecisely cutting wood with an inadequate axe), couldn't grasp what went awry, and then felt the need to rectify, or correct, what they had just said. It's possible that the individuals were also discontented with the group's conversation overall, but neither the underlined portions nor the text as a whole suggest that.

33 Correct answer **C** Medium Back to question

C It describes part of the Tule geese's typical winter migration journey.

Choice C is the best answer because it best states how the underlined portion functions in the text as a whole. The first sentence states that Tule geese typically take four days to migrate south. Then in the next sentence, which contains the underlined portion, the text describes the first part of that journey, which begins with the geese flying over the Gulf of Alaska while keeping about 100 miles from the Canadian shore. The rest of the text details the remainder of the geese's typical journey and then mentions circumstances in 2020 that resulted in the geese taking an unusually long time to complete it. Thus, the underlined portion describes part of the Tule geese's typical winter migration journey.

Choice A is incorrect. Although the text concludes by stating that in 2020, Tule geese took twice as long to complete their typical migration, which suggests a change in their usual flight behavior, the underlined portion doesn't discuss this. Instead, the underlined portion describes the first part of the Tule geese's typical winter migration journey over the Gulf of Alaska. **Choice B is incorrect**. Although the sentence containing the underlined portion mentions that Tule geese breed in Alaska, the underlined portion doesn't explain why the geese breed in that location. Rather, the text mentions Alaska to explain that it's the

starting point of the Tule geese's typical winter migration. **Choice D is incorrect** because the underlined portion doesn't discuss any other birds that migrate south for the winter. In fact, the text is only concerned with the migration of Tule geese.

34 Correct answer **C** Medium ‹ Back to question

C It notes a generally accepted belief that is called into question by a finding of the experiment outlined in the text.

Choice C is the best answer because it best describes the function of the underlined portion in the text as a whole. The underlined portion states that people commonly believe happiness is the ideal emotional state. However, the text then notes that recent research suggests that negative emotions can be beneficial, as demonstrated by an experiment by Heather Lench in which participants primed to feel anger did better at solving puzzles than did those primed to feel other emotions. This finding calls into question the belief that happiness is always the ideal state. Thus, the underlined portion notes a generally accepted belief that is called into question by a finding from the experiment.

Choice A is incorrect because the study does not address why people assume happiness is ideal. Rather, the text indicates the study was designed to test whether anger can contribute to problem-solving abilities. **Choice B is incorrect** because rather than underlying the study's hypothesis that anger could be beneficial in some circumstances, the underlined portion presents the widely held belief that happiness is always preferable to negative emotions, which directly conflicts with that hypothesis. **Choice D is incorrect** because the underlined portion presents a common belief that happiness is the ideal emotional state, not an explanation for the participants' behavior in the experiment. The text reports that participants in the anger condition performed better on the puzzles but does not explain the psychological reason for this outcome.

35 Correct answer **C** Medium ‹ Back to question

C It offers examples of younger musicians whose work has been impacted by *Keyboard Fantasies.*

Choice C is the best answer because it most accurately describes the function of the underlined sentence in the text as a whole. The text's subject is Beverly Glenn-Copeland's 1986 album *Keyboard Fantasies*, notable for its innovative, experimental arrangements. According to the text, the album was not initially admired, but in recent years it has become popular among younger musicians. The underlined portion of the text mentions two of those musicians, Blood Orange and Moses Sumney, who "cite the album as an influence." Therefore, the underlined portion of the text offers examples of younger musicians whose work has been impacted by *Keyboard Fantasies*.

Choice A is incorrect because even though the underlined sentence states that Blood Orange and Moses Sumney were influenced by *Keyboard Fantasies*, it doesn't say that all other musicians should also embrace the album's experimental style. **Choice B is incorrect**. Although the text states that *Keyboard Fantasies* was not admired on its first release, the text doesn't present any criticism of the album by younger musicians: it only presents two younger musicians who cite it as an influence. **Choice D is incorrect** because the underlined sentence doesn't mention any differences between *Keyboard Fantasies* and the work of Blood Orange and Moses Sumney.

36 Correct answer **B** Medium ‹ Back to question

B It characterizes the sea's waves as a relentless and enduring force.

Choice B is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The text presents the speaker's experience of viewing the sea. In the underlined portion, the speaker focuses on the idea that the waves hitting rocks on the shore are a relentless and enduring force: they are constantly pushed back ("ever repulsed") but always return ("ever rushing on"), as though they have an energy that can't be overcome ("a life that will not know defeat").

Choice A is incorrect. Although the underlined portion characterizes the waves as a relentless force (always "repulsed" but still "rushing on" and never being defeated), the speaker doesn't suggest that the surroundings are intimidating. Instead, the

speaker presents the scene in a positive way, describing the "deep delight" of the "gladsome," or cheerful, waves and feeling "the heart / Leap joyous" while viewing the sea. **Choice C is incorrect** because the underlined portion doesn't suggest that the speaker is ambivalent, or has mixed feelings about, the natural world. Instead, it presents a single view of one part of the immediate surroundings: the speaker characterizes the sea's waves as an unstoppable force, since they are constantly pushed back but always return ("ever repulsed, yet ever rushing on"). **Choice D is incorrect**. Although the text later suggests the speaker's view of her own thoughts by referring to a "clouded brain" and a heart that leaps joyously, this reference neither occurs within the underlined portion nor establishes a clear contrast with the relentless determination of the waves. The underlined portion addresses only the speaker's view of the waves and doesn't suggest what her own thoughts might be.

37 Correct answer **A** Medium < Back to question

A It presents a conclusion about Roman trade routes based on the team's findings.

Choice A is the best answer because it most accurately describes how the underlined sentence functions in the text as a whole. The first sentence explains that Bernabei and his team studied growth rings to obtain information about the ancient oak planks found during a construction project in Rome. The next sentence presents what the researchers learned: the wood from the planks came from France's Jura region, which is far from Rome. The underlined sentence then presents the implications of the findings about the planks: the wood must have been brought to Rome by boat, a difficult task that suggests Roman trade routes were complex. Thus, the underlined sentence mainly functions to present a conclusion about Roman trade routes based on the team's findings.

Choice B is incorrect because the text doesn't suggest that the team thought the ancient planks were used in the construction of a boat, nor does the underlined sentence question that conclusion. Instead, the text states that the wood could only have been transported from Jura to Rome in a boat. **Choice C is incorrect** because the underlined sentence simply offers a conclusion drawn from the team's findings about the likely place of origin of the ancient planks; the text never mentions why oak was chosen for the planks instead of other wood. **Choice D is incorrect** because neither the underlined sentence nor the text as a whole addresses any methods that Romans used in constructing subways. Instead, the underlined sentence offers a conclusion drawn from the team's findings about the likely place of origin of the ancient wooden planks discovered.

38 Correct answer **B** Medium < Back to question

B It introduces discussion of a specific example that supports the general claim made in the previous sentence.

Choice B is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The first sentence presents the general claim that industrial activity is not always a threat to wildlife. The underlined portion of the sentence that follows suggests that the silver-studded blue butterfly is an example of wildlife thriving in areas of industrial activity: active limestone quarries. Thus, the function of the underlined portion is to introduce a specific example in support of the general claim in the previous sentence.

Choice A is incorrect. Although the first sentence indicates that "industrial activity is often assumed" to harm wildlife, in the case of the silver-studded blue butterfly the text mentions neither an assumption about this species nor any challenge to such an assumption. **Choice C is incorrect** because the text mentions only one study: the "survey." Additional studies are not mentioned in the text. **Choice D is incorrect** because neither the underlined portion nor any other portion of the text provides a definition for any of the terms used in the text's argument.

39 Correct answer **C** Medium ‹ Back to question

C It concedes that not all people in medieval Europe had access to public bathhouses.

Choice C is the best answer because it most effectively describes the function of the underlined portion. The text discusses the long-standing misconception that people in medieval Europe were uninterested in cleanliness and hygiene. As evidence that this idea is false, the text cites historian Eleanor Janega's assertion that in medieval Europe, towns usually had at least one bathhouse, where people could take immersion baths or steam baths for a fee. The underlined portion then notes that mainly town dwellers had access to these bathhouses. The remainder of the text explains that those who lacked such access were nonetheless able to bathe in outdoor waterways or take sponge baths at home. Therefore, the underlined portion concedes that some people in medieval Europe lacked access to public bathhouses.

Choice A is incorrect. The underlined portion establishes that amenities such as steam baths were mainly available to town dwellers, which suggests in turn that steam baths were largely unavailable to people in rural areas. Thus, the distinction made by the underlined portion is not between the popularity of steam baths in towns versus their lack of popularity in rural areas but instead between their presence in towns and absence in rural areas. **Choice B is incorrect**. Although the text does explain that recent historians have disproved the idea that medieval Europeans rarely bathed, it doesn't attribute that misconception to earlier historians of medieval Europe or suggest that their research was subject to limitations. Moreover, the underlined portion addresses a limitation of life in medieval Europe, not of historical research. **Choice D is incorrect** because the underlined portion doesn't address why historian Eleanor Janega decided to study the popularity of public bathhouses in medieval Europe—nor does any portion of the text. The text mentions Janega in passing, but it doesn't go into detail about why she decided to study the popularity of public bathhouses in medieval Europe.

40 Correct answer **D** Medium ‹ Back to question

D It sets up the character description presented in the sentences that follow.

Choice D is the best answer. This best states the function of the underlined sentence. The sentence basically says: "He stood out, so I looked more closely at him." Then the rest of the text describes him in detail.

Choice A is incorrect. This doesn't state the function of the underlined sentence. The previous sentence basically says: "He was still standing in the middle of the cottage"—it doesn't include any description of the character himself. **Choice B is incorrect**. This doesn't state the function of the underlined sentence. The following sentences describe the character, not the setting. **Choice C is incorrect**. This doesn't state the function of the underlined sentence. The underlined sentence basically says: "He stood out, so I looked more closely at him." The previous sentence basically says: "He was still standing in the middle of the cottage." There's no contrast between these two sentences.

41 Correct answer **D** Medium ‹ Back to question

D It explains how certain birds promote seed germination in Atacama Desert soil.

Choice D is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The first two sentences establish a natural phenomenon: there is a richness of plant life found in the Atacama Desert despite the hard soil that makes it challenging for seeds to germinate. The next sentence, which contains the underlined portion, offers a potential explanation for the phenomenon: local birds dig ground nests exposing seeds to moisture and materials in the soil necessary for germination. The last sentence summarizes a study that compared the fertileness of mounds of dirt dug up by birds to mounds that were undisturbed to support the explanation in the underlined portion. Thus, the underlined portion mainly functions to explain how certain birds promote seed germination in the Atacama Desert soil.

Choice A is incorrect because the underlined portion doesn't address the topic of the soil's tough crust or its formation. Instead, the text elaborates on the idea that local birds that build ground nests may help seeds germinate in the hard soil.

Choice B is incorrect because the underlined portion describes how some birds may support seed germination in Atacama Desert soil but doesn't describe how the seeds are deposited into the soil before germination begins. **Choice C is incorrect** because neither the underlined portion nor the text as a whole identifies a reason that a particular bird species may choose to dig ground nests in the Atacama Desert soil.

42 Correct answer **C** Medium Back to question

C It presents an observation of an occurrence in the natural world that the speaker then expands on to convey a sense of a turbulent interior state.

Choice C is the best answer because it best describes the function of the underlined portion in the text as a whole. In the text, the speaker mentions the occurrence in nature of seedpods being shaken by a slight wind. The speaker then goes on to compare the black seeds to thoughts, using language that indicates that the speaker's state of mind is unsettled (e.g., "my thoughts are spent"; "My thoughts tear me, I dread their fever"). The text concludes with a comparison between the speaker's "scattered" state of mind and the "hot shrivelled seeds." Thus, the underlined portion of the text presents an observation of an occurrence in the natural world that the speaker then expands on to convey a sense of a turbulent interior state.

Choice A is incorrect because the text does not indicate that the seedpods are the cause of the speaker's state of mind; thus, they could not be responsible for any misgivings the speaker has. **Choice B is incorrect** because the text does not contrast the natural landscape with the speaker's state of mind or describe the wind shaking the seedpods as consistent; rather, the text suggests that the state of the natural world and the speaker's state of mind are similar in that both are unsettled. **Choice D is incorrect** because there is no indication in the text that the speaker regularly engages in critical self-evaluation, only that in this particular instance the speaker's state of mind is turbulent.

43 Correct answer **B** Medium Back to question

B It provides examples of what the narrator thinks about at night.

Choice B is the best answer because it accurately describes how the underlined portion functions in the text as a whole. In the text, the narrator explains that she walks around her neighborhood, making a "mental map" of the area that she imagines herself navigating through. She then states that she rehearses "the small world's scheme"—that is, imagines moving through her mental map—and challenges herself to use the map in her mind while lying in bed at night. The underlined portion presents two such challenges (getting to the store through backyards and traveling from school to a friend's house) and thus provides examples of what the narrator thinks about at night.

Choice A is incorrect because the underlined portion makes no mention of memorizing a telephone number. Although the narrator mentions that she had to learn the home telephone number before her mother would give her permission to walk around the neighborhood, there is nothing in the underlined portion or the rest of the text about memorizing the telephone number. **Choice C is incorrect**. Although the underlined portion refers to navigation tasks like finding a route to a store only through backyards, the text contains no specific directions to any store, nor is any store identified as the narrator's favorite. **Choice D is incorrect** because the underlined portion makes no mention of the narrator's mother and doesn't address the narrator's relationship with her. Although the narrator mentions that her mother gave her permission as a child to walk around the neighborhood, there is nothing in the underlined portion or the rest of the text about the mother or her relationship to her child.

44 Correct answer **A**

Hard

‹ Back to question

A It reflects a primary goal that many computer animators have for certain components of the animations they produce.

Choice A is the best answer because it most accurately describes the function of the underlined question in the text as a whole. The text begins with the underlined question, "How lifelike are they?" The text then explains that many computer animators pose this question about the environments and lighting that they create for animated films, striving for realistic animation of those components even if the characters themselves aren't portrayed in realistic terms. The focus of the text then shifts to describe how some animators strive to create environments and lighting that reflect the film's unique stories rather than making them appear realistic. Therefore, the function of the underlined question is to reflect a primary goal that many computer animators have for certain components of the animations they produce.

Choice B is incorrect because, as the text makes clear, the underlined question is one posed by computer animators who wish to create realistic backgrounds and lighting effects, not by those who, instead, wish to create effects that reflect films' unique stories and aren't necessarily realistic; this latter group of animators is discussed later in the text. **Choice C is incorrect**. As the text explains, many computer animators strive for realistic environments and lighting, while others do not; this difference of approach relates to whether these components should be realistic, not to how realism can be achieved using current technology, and the text never suggests that animators are uncertain how to achieve it. **Choice D is incorrect** because the underlined question pertains to the perspective of computer animators, not the audience, and the text never considers audience's reactions to characters in animated films.

45 Correct answer **C**

Hard

‹ Back to question

C It identifies the problem that Nance and colleagues attempted to solve but did not.

Choice C is the best answer because it best describes how the second sentence functions in the text as a whole. The first sentence establishes something astronomers believe with some certainty: that Betelgeuse will explode in a supernova. The second sentence then introduces a problem: astronomers aren't certain *when* Betelgeuse will explode because they don't have enough information about the star's internal characteristics. Finally, the third sentence indicates that researcher Sarafina El-Badry Nance and colleagues investigated a possible method of obtaining the necessary information about Betelgeuse's internal characteristics, though they found that the method wouldn't be sufficient. Thus, the function of the second sentence is to identify the problem that Nance and colleagues attempted to solve but didn't.

Choice A is incorrect because the second sentence introduces the general problem Nance and colleagues hoped to solve, not a serious limitation of how Nance and colleagues tried to solve it. It is the third sentence that introduces Nance and colleagues, but no serious limitation of their approach to studying a method of determining internal stellar states is described. **Choice B is incorrect** because the second sentence introduces the general problem Nance and colleagues hoped to solve, not the central finding they ultimately reported. It is the third sentence that presents Nance and colleagues' conclusion that a potential method for determining internal stellar states would be insufficient. **Choice D is incorrect** because the second sentence doesn't indicate how other astronomers or astrophysicists responded to the work done by Nance and colleagues; the text doesn't address this information at all.

46 Correct answer **A**

Hard

‹ Back to question

A It identifies a consideration that factored into an interpretation of the rock art at Cueva Huenul 1 that is presented in the text.

Choice A is the best answer because it most accurately describes the function of the underlined portion in the text as a whole. The text first reports that a comblike motif at Cueva Huenul 1 dates to 8,000 years ago and was reproduced over the next 3,000 years. The underlined portion then indicates that this 3,000-year period corresponds to a span of very dry

environmental conditions and a slowly declining human population in the area. The text then suggests that the chronological overlap between use of the comblike motif and the ecological and demographic conditions might suggest that what the motif is meant to communicate is related to those specific factors. Thus, the underlined portion identifies a consideration that factored into an interpretation of the rock art at Cueva Huenul 1 that is presented in the text.

Choice B is incorrect. Although the text suggests that Cueva Huenul 1 may have been an important site because it enabled the peoples of Patagonia to preserve cultural knowledge, nothing in the text addresses why they chose the site for their paintings. **Choice C is incorrect** because the text indicates that the motif was reproduced over a period of 3,000 years (beginning 8,000 years ago) without directly addressing the cessation of its use. Furthermore, nothing in the text suggests that the motif was abandoned abruptly. **Choice D is incorrect** because nothing in the underlined portion or the text as a whole addresses the rarity of rock art during the period in question.

47 Correct answer **A** — Hard — ‹ Back to question

A It elaborates on a claim about labor relations in a particular industry made earlier in the text.

Choice A is the best answer because it best describes how the underlined portion functions in the text as a whole. The text says that the increased production quotas of food processing companies during World War II enabled employees to make better bargains in exchange for their labor. The underlined portion presents an example of this increased bargaining power: employees requested more favorable benefits, and employers complied because they were under pressure to fulfill the demanding terms of their contracts. Thus, the underlined portion of the text elaborates on a claim about labor relations in a particular industry (food processing) made earlier in the text.

Choice B is incorrect because there is no indication in the text that the economic factors that influenced food processing also influenced other parts of the economy; thus, the bargaining described in the underlined portion of the text cannot be called an example of a trend. **Choice C is incorrect** because the underlined portion supports the historical narrative of labor activism in food processing that is sketched in the text, instead of noting an exception to that narrative. **Choice D is incorrect** because while the underlined portion does discuss the demands that workers made in exchange for their labor, it does not discuss the identities of the workers.

48 Correct answer **A** — Hard — ‹ Back to question

A It notes a factor that led Seira et al. to not dismiss risk-disclosure messaging altogether despite their evidence of its limited utility.

Choice A is the best answer because it most accurately describes the function of the underlined portion in the text as a whole. The text establishes that many countries have adopted risk-disclosure requirements for financial products due to concerns that consumers don't understand the risks associated with the products. According to the text, Seira et al. found that the effects of such messaging on consumer behavior were small and temporary. The text then adds that the researchers assert that because the cost of the messaging is negligible, the approach may be worth doing even if the effects are limited. Thus, the underlined portion notes a factor—very low cost—that led the researchers to not completely dismiss risk-disclosure messaging despite their evidence of its limited utility.

Choice B is incorrect because the underlined portion doesn't refer to a particular type of risk-disclosure messaging, whether Seira et al. considered it or not; the underlined portion simply indicates that the cost of the messaging (broadly) is very low, which makes the approach worth pursuing even if its effects are limited. **Choice C is incorrect**. Although the underlined portion does describe a consideration that led the researchers to recommend risk-disclosure messaging despite the messaging's small effects on consumer behavior, it directly states that the cost of such messaging is negligible, or very low—meaning that both the effects and the costs are small, not that the effects are small only relative to the costs. **Choice D is incorrect** because there's no indication that Seira et al. suggest that risk-disclosure messaging could be more effective if it had lower costs;

rather, the underlined portion indicates that Seira et al. believe the already negligible cost of messaging makes the approach worth pursuing even if its effects are limited.

49 Correct answer **B** Hard Back to question

B They illustrate the changeable nature of the fishing grounds where Ah Boon is.

Choice B is the best answer because it most accurately describes the function that the three underlined portions serve in the text as a whole. The text states that Ah Boon's nets contained only one kind of fish and explains that he is unsurprised because the waters are "temperamental." The three underlined portions name different types of catch yielded by the waters on different occasions, demonstrating how the catch varies unpredictably. Thus, taken together, the three underlined portions illustrate the changeable nature of the waters where Ah Boon fishes.

Choice A is incorrect because the text does not indicate which types of catch are most frequent; it describes the waters as unpredictable and varying over time. Instead of illustrating frequency, the underlined portions that mention different kinds of sea creatures illustrate variability. **Choice C is incorrect** because the text states that on this particular trip, Ah Boon caught only one kind of fish—black pomfrets. The other two underlined portions refer to catches from other occasions, not from the present trip. Instead of emphasizing variety on one trip, the underlined portions illustrate the unpredictability of the waters over time. **Choice D is incorrect**. Although the text notes that Ah Boon is unsurprised by his catch of black pomfrets, only one of the three underlined portions—"colorful varieties of fish"—refers to creatures not usually found in the region. The underlined portions collectively convey the range of what Ah Boon has caught while fishing in the waters, illustrating their changeable nature rather than underscoring Ah Boon's emotional response.

50 Correct answer **B** Hard Back to question

B It suggests that if not for a certain aspect of his character, Israel might not have been as easily thwarted in his ambition to establish a farm.

Choice B is the best answer because it best describes the function of the underlined portion in the text as a whole. The text describes the failed attempt of Israel Potter to establish a farm in New England during the late eighteenth century: according to his contract, he was to receive two hundred acres in exchange for three months' work, but his employer then refused to fulfill the bargain and Israel had no recourse to law to obtain the land he was owed. Israel was therefore forced to find another means of supporting himself. To explain why Israel was particularly susceptible to his employer's dishonesty, the underlined portion states that though Israel was "brave-hearted, and even much of a dare-devil upon a pinch," he also possessed "a singular patience and mildness." In other words, Israel could be courageous in certain circumstances, but he was usually meek and disinclined to argument, from which it is reasonable to infer that Israel was often taken advantage of. Thus, the underlined portion suggests that if not for a certain aspect of his character, Israel might not have been as easily thwarted in his ambition to establish a farm.

Choice A is incorrect because although the underlined portion describes aspects of Israel's personality, it does not address how he feels about his own personality. **Choice C is incorrect** because the underlined portion addresses Israel's occasional courage and frequent meekness but does not address whether he would have the skills and resolve necessary to operate a farm if he owned sufficient property. **Choice D is incorrect**. Though the underlined portion does indicate that Israel could be courageous in certain circumstances, it does not say that he undertook acts of courage that others avoided, but rather that he was habitually meek. Even if the underlined portion did say that Israel was more courageous than most, this would not explain why he found himself under the circumstances described in the text—that is, as a consequence of his meek nature, cheated of the property to which he had a right.

51 Correct answer **A** — Hard — Back to question

A It qualifies an earlier description of Mr. Verloc.

Choice A is the best answer. The underline phrase qualifies (meaning adds limits or conditions to) the description of Mr. Verloc as "steady like a rock," adding that he is a "soft" rock.

Choice B is incorrect. In fact, the passage never mentions Mr. Verloc experiencing any internal struggles. **Choice C is incorrect**. The underlined phrase doesn't contrast Mr. Verloc with his surroundings, but is instead modifying the description of him as a rock. **Choice D is incorrect**. The underlined phrase doesn't reveal a private opinion Mr. Verloc holds: instead, it further describes his character for the reader.

52 Correct answer **A** — Hard — Back to question

A It discusses a characteristic shared by certain animals in order to explain why researchers raised a possibility that turned out not to be supported by data described later in the text.

Choice A is the best answer because it most accurately describes how the underlined statement functions in the text as a whole. The underlined statement mentions a category of animals that have a feature in common: they tend to have fixed geographic ranges throughout their lifetimes. The text then presents the speculation of some researchers that the Arctic woolly mammoth might also share this characteristic. However, an examination of the content of strontium in the strata (or layers) of a woolly mammoth tusk indicated that contrary to the researchers' hypothesis, the mammoth had an expanding range in its environment that contracted in its last 1.5 years of life. Thus, the underlined statement discusses a characteristic shared by certain animals in order to explain why researchers raised a possibility that turned out not to be supported by data described later in the text.

Choice B is incorrect. Though the underlined statement presents a pattern of behavior (the habit of certain animals of staying within a fixed geographic range), the rest of the text does not present a theory of exceptions to that pattern; rather, the researchers are merely concerned with whether one particular animal has behavior consistent with the pattern. **Choice C is incorrect**. Though the underlined statement does describe a similarity in the behavior of certain animals (their tendency to stay within a fixed geographic range), this is not done in order to show why a method described later in the text failed to show whether another animal showed that behavior; rather, the method of analysis of strata of a woolly mammoth tusk showed that the mammoth's behavior was different from that of the animals mentioned in the underlined statement. **Choice D is incorrect**. Though the underlined statement mentions a trait shared by a number of animals (their fixed geographic range), the rest of the text does not present a hypothesis regarding the origin of that trait; rather, the researchers are concerned with whether another particular animal shares that trait.

53 Correct answer **D** — Hard — Back to question

D It illustrates an idea that is introduced in the previous sentence.

Choice D is the best answer because it best describes how the underlined sentence functions in the text as a whole. The first sentence of the text establishes that Lily can be "keenly sensitive to" scenes that serve as a "fitting background" for her feelings—that is, she's very aware of when a setting seems to reflect her mood. The next sentence, which is underlined, then demonstrates this awareness: Lily views the landscape she's in as a large-scale reflection of her current mood, identifying with elements such as its calmness. Thus, the function of the underlined sentence is to illustrate an idea introduced in the previous sentence.

Choice A is incorrect because the underlined sentence describes the scene only in very general terms, referring to its calmness, breadth, and long stretches of land. It's the next sentence that adds specific details about colors, light, and various trees nearby. **Choice B is incorrect** because nothing in the underlined sentence suggests that Lily is experiencing an internal

conflict. In fact, the sentence indicates that Lily thinks the landscape reflects her own feeling of calmness. **Choice C is incorrect** because the only assertion in the underlined sentence is that Lily feels that broad aspects of the landscape, such as its calmness, reflect her current mood, and that assertion isn't expanded on in the next sentence. Instead, the next sentence describes specific details of the scene without connecting them to Lily's feelings.

54 Correct answer **A** Hard ‹ Back to question

A It underscores the extent of the CEP's impact on the Civil Rights Movement of the 1960s.

Choice A is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The first sentence of the text states that the CEP had a positive impact on the Civil Rights Movement in the 1960s. The next sentence explains that the CEP organized workshops for attendees, who later used the knowledge they gained to lead civil rights initiatives. And the underlined portion indicates the number of activists—more than 7,000—who participated in the workshops. Thus, the underlined portion provides a number that underscores the extent of the CEP's impact on the Civil Rights Movement in the 1960s.

Choice B is incorrect. Although the sentence that contains the underlined portion mentions some CEP workshop topics, the underlined portion itself addresses the number of participants in the CEP workshops, not the number of topics covered. **Choice C is incorrect**. Although the underlined portion refers to attendees of the CEP workshops, nothing in the underlined portion or the text as a whole addresses the Southern Christian Leadership Conference's philosophy or the attendees' opinions thereof. **Choice D is incorrect** because neither the underlined portion nor the text as a whole mentions any criticism of the CEP by members of the Southern Christian Leadership Conference.

55 Correct answer **C** Hard ‹ Back to question

C It conveys Camillo's recognition that one benefit his presence may afford the king of Sicily is merely speculative.

Choice C is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. In the text, Camillo explains to Polixenes that he wants to return home after his long absence and that Sicily's king has summoned him. In the underlined portion, Camillo adds that he also wants to return because he might provide comfort to the king's sorrows ("to whose feeling sorrows I might be some allay") but then clarifies that his belief about being able to comfort the king is a presumption—that is, something he thinks is true but can't be certain of. Thus, the underlined portion indicates that Camillo recognizes that one benefit his presence may offer is merely speculative.

Choice A is incorrect because the underlined portion conveys Camillo's hope that he might comfort the king of Sicily, which does suggest a personal choice contributing to Camillo's decision to leave; the idea that Camillo isn't choosing to leave is established in a different part of the text, when he says "the penitent king, my master, hath sent for me." **Choice B is incorrect** because the underlined portion doesn't suggest Camillo feels compelled to justify his decision to leave. Rather than expressing a need to persuade Polixenes that his departure is warranted, Camillo's

statement simply reveals his awareness that he assumes rather than knows with certainty that his presence will comfort the king of Sicily. **Choice D is incorrect** because nothing in the text indicates that Camillo's primary motivation for returning to Sicily is his concern for the king's well-being; Camillo mentions first that he wants to return home because he has been away for so long, then adds that the king has summoned him and that he hopes his presence will comfort the king. The underlined portion simply conveys Camillo's awareness that offering comfort is a hope rather than a certainty; it doesn't suggest that the king's well-being is his main concern.

56 Correct answer **C**

Hard

‹ Back to question

C To explain part of the methodology used in the team's study

Choice C is the best answer because it best describes how the underlined sentence functions in the text as a whole. The first sentence presents the implications of Veeraraghavan's team's study: sunshine exposure during work hours can cause overly optimistic behavior. The underlined sentence then describes the data the team consulted and how they were used (comparing predictions about earnings to what the companies actually earned), and the final sentence presents what the team found in their examination of the data. Thus, the underlined sentence mainly functions to explain part of the methodology used in the team's study.

Choice A is incorrect because the underlined sentence explains in part how the team conducted their analysis of the effect of sunshine but doesn't address what the team found; a broad summary is instead given in the other two sentences. **Choice B is incorrect** because the underlined sentence doesn't present any specific examples from the team's comparisons of 29,000 earnings predictions to actual earnings; it simply explains in part how the team conducted their analysis. **Choice D is incorrect** because the underlined sentence simply explains in part how the team conducted their analysis; the text never mentions any challenges that the team encountered in their study.

57 Correct answer **D**

Hard

‹ Back to question

D It suggests that John longs to experience a larger life outside the Florida woods.

Choice D is the best answer because it accurately describes how the underlined sentence functions in the text as a whole. The text establishes that John has a strong imagination and then goes on to describe the St. John River near John's home in the Florida woods. The underlined sentence depicts John sending twigs sailing down the river while he imagines them reaching "Jacksonville, the sea, the wide world," where he wishes he could follow. This suggests that John longs to expand his life experiences beyond the Florida woods.

Choice A is incorrect because the second and third sentences of the text provide an extended description of the riverbank where John likes to go, whereas the underlined sentence describes what John does at that location. **Choice B is incorrect** because the first sentence of the text suggests that John's behavior "was puzzling" to others around him, whereas the underlined sentence concerns the content of John's imaginings. **Choice C is incorrect** because the underlined sentence elaborates on John's imagination but doesn't mention any other children to whom John could be compared.

58 Correct answer **D**

Hard

‹ Back to question

D It emphasizes that a research finding discussed in the text has practical implications that are particularly relevant for businesses making a certain class of product.

Choice D is the best answer because it best describes the function of the underlined sentence in the text as a whole. The text begins by noting that companies increasingly depend on automation to improve production efficiency. The text then presents Granulo and colleagues' finding that consumers think it's preferable for one category of products (those "with higher symbolic value") to be human made rather than machine made. The underlined sentence highlights a practical consequence of that finding: companies, especially those specializing in such products, should balance the efficiency of automation against consumer preferences. Thus, the underlined sentence emphasizes that the research finding has practical implications that are especially relevant for businesses making a certain class of product.

Choice A is incorrect. Although the text indicates that among products with high symbolic value, people prefer those made by humans over those made by machines, it doesn't address whether products with high symbolic value are preferred over those with low symbolic value. **Choice B is incorrect** because rather than reiterate the finding in the previous sentence—that people tend to prefer "products with higher symbolic value" that are human made over those that are machine made—the underlined

sentence instead makes a recommendation to companies that sell such products to carefully consider a potential drawback of making their products with machines. **Choice C is incorrect** because nothing in the underlined sentence or the text as a whole suggests that additional research is needed to evaluate Granulo and colleagues' claim. Moreover, the researchers' finding is that consumers prefer "products with higher symbolic value" to be human made, not that automation affects consumers' ratings of how unique products are.

59 Correct answer **D** Hard ‹ Back to question

D It elaborates on an aspect of the maple trees that the women evaluate.

Choice D is the best answer because it best describes the function of the underlined sentence in the text's overall portrayal of how the women in Ohiyesa's tribe harvested maple syrup. The text states that the women used an axe to strike the maple trees in order to find out which ones would produce sap. The underlined sentence compares the trees to people, with the sap described as the trees' "life-blood." Some of the trees are ready to give out their sap, while others are unwilling to do so. Using personification, the sentence provides greater detail about the aspect of the maple trees—their potential to give sap—that the women are evaluating.

Choice A is incorrect because the personalities of the women are not discussed in the text. Although the underlined sentence does mention "individual characters," this reference is not to the women in the text but rather to the maple trees, which the sentence compares to people with individual character traits. **Choice B is incorrect** because the underlined sentence focuses on the trees' willingness or refusal to yield sap, not on the beneficial relationship between the women and the trees. Additionally, although the text does suggest that the women and their tribe benefit from the maple trees since the trees allow the women to harvest syrup, there is nothing in the text to suggest that the trees benefit from this relationship in turn. **Choice C is incorrect** because the underlined sentence is comparing maple trees to humans, not addressing the influence of the natural environment on how the actual humans in the text, the women, behave.

60 Correct answer **B** Hard ‹ Back to question

B It identifies a conflict between research findings and recent events that the text goes on to suggest is a consequence of a complicating factor in the data used to generate those findings.

Choice B is the best answer because it best describes how the underlined sentence functions in the text as a whole. The underlined sentence explains that contrary to what several studies would suggest, recent European governments suffered electorally after the launch of fiscal austerity programs. The text goes on to indicate that the researchers generated their findings from data that didn't reveal the true political risk of austerity measures because the data were based on cases in which governments had set austerity programs to take effect after the next election, a practice the European governments that recently suffered electorally didn't adhere to, thus introducing a complicating factor resulting in a conflict between the research findings and recent events.

Choice A is incorrect because the underlined sentence doesn't indicate that the discrepancy described in the text is between observations made in study settings and observations made in real-world settings. Rather, the underlined sentence indicates that the outcome of recent events is contrary to what would be expected based on the findings of several studies. Additionally, there is nothing in the text to suggest that the studies mentioned did not use real-world data; instead, the text indicates that the data used was generated under potentially different circumstances than the recent events. **Choice C is incorrect** because the underlined sentence doesn't present a long-standing divergence in research findings but rather a discrepancy between past research findings and recent events that the text goes on to attribute to researchers' use of data that didn't reveal the true political risk of austerity measures. **Choice D is incorrect** because while the underlined sentence notes that there have been some recent exceptions to a general pattern observed in several research studies, it does not go on to attribute this exception to the researchers underestimating inconsistencies in the data. Rather, the text goes on to attribute this to a circumstance (fiscal austerity measures being implemented before an election rather than after) which adds a complicating factor into the data not accounted for in past studies.

61 Correct answer **C**

Hard

‹ Back to question

C It describes a common approach to studying the Chicano movement that, according to the text, obscures the ideological diversity of the movement's participants.

Choice C is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The text begins by mentioning scholarly accounts of the Chicano movement, which the underlined portion describes as tending "to focus on the most militant, outspoken figures in the movement," making the movement as a whole seem uniformly radical. The text then indicates that the work of geographer Juan Herrera shows that focusing less on such militant figures and instead paying more attention to manifestations of the Chicano movement in less widely known neighborhood institutions and projects would reveal that the movement's participants embraced a range of political orientations and approaches. Thus, the underlined portion describes a common approach to studying the Chicano movement that, according to the text, obscures the ideological diversity of the movement's participants.

Choice A is incorrect. Though the underlined portion does present a trend in scholarship on the Chicano movement, the text does not indicate that other scholars have reevaluated their methods in light of Herrera's work. It only indicates that Herrera's work suggests that the work of those other scholars does not provide a complete picture of the Chicano movement. **Choice B is incorrect**. Though the underlined portion does identify an aspect of the Chicano movement that the text indicates has been overemphasized, the text does not discuss the political orientations of the scholars whose work is mentioned in the text. **Choice D is incorrect**. Though the underlined portion does summarize the conventional method for analyzing the Chicano movement, the rest of the text does not address the effectiveness of "comparatively low-profile neighborhood institutions and projects." Instead, the text suggests that those projects were led by people with a variety of approaches to community activism.

62 Correct answer **C**

Hard

‹ Back to question

C To describe a consideration that led the researchers to employ an alternative approach to coloring a pellicle that allowed them to achieve their main goal as presented in the text

Choice C is the best answer because it best describes the function of the underlined portion in the text as a whole. The text establishes that scientists developed a pellicle (a dense cellulose mesh) as an ecologically sustainable alternative to petroleum-based synthetic leather, noting that the pellicle is leatherlike except in color. The text then notes that the standard dyeing process for leather generates wastewater and other byproducts, and the underlined portion states that using such a process would be inconsistent with the ecological promise of the pellicle approach. The sentence that follows the underlined portion describes how Walker and colleagues addressed this problem by modifying bacteria to produce a pellicle with embedded pigmentation. Thus, the underlined portion describes a consideration—the incompatibility of standard dyeing methods with ecological aims—that led the researchers to employ an alternative coloring approach consistent with their goal of ecological sustainability.

Choice A is incorrect because the text presents the underlined portion not as a concession that the researchers' main goal, developing an ecologically sustainable alternative to synthetic leather, will be difficult to achieve, but as a reason why adopting a particular method of dyeing would be inconsistent with that goal. **Choice B is incorrect** because the underlined portion addresses a problem with the standard process for dyeing leather, not a characteristic of conventional synthetic leathers themselves. The issue identified in the underlined portion concerns the environmental impact of the standard method used to dye leather, not the petroleum-based nature of conventional synthetics. **Choice D is incorrect** because the underlined portion identifies the problem that motivated the researchers' search for an alternative method of coloring the pellicle, not the method of coloring itself. The method of modifying bacteria to embed pigmentation is described in the sentence that follows the underlined portion.

63 Correct answer **D**

Hard

< Back to question

D To identify a comparable circumstance that helps justify LaBerge and team's conclusion

Choice D is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The text first establishes that in order to investigate visual perception of objects in dreams, LaBerge and team observed the eye movements of lucid dreamers (people who are aware of their dreaming as it occurs) when these participants signaled that they were in a dream state. The underlined portion then describes a finding that rests on a comparison: the way participants' eyes tracked objects in dream states was very similar to how sighted people track real objects when awake. Finally, the text states that the team concluded from this finding that objects in dreams are perceived as more than just products of imagination—implying that the team thinks the eye movements are an indication that the brain treats dream objects as more real than imaginary. Thus, the function of the underlined portion is to identify a circumstance that is comparable to one in the study and that helps justify LaBerge and team's conclusion, presenting the close similarity of visual tracking in wakeful and dreaming scenarios as support for the implicit idea that the brain perceives dream objects not as imaginary but as somewhat or fully real objects.

Choice A is incorrect because the text never presents LaBerge and team's initial hypothesis, only what question they were interested in studying and what they found. So although the underlined portion does present evidence, that evidence doesn't serve to undermine any hypothesis in the text. **Choice B is incorrect** because the text gives no indication that LaBerge and team changed the focus of their study at any point or that the finding described in the underlined portion (or any other finding) was unexpected or surprising. **Choice C is incorrect**. Rather than illustrating an implication of the main finding by LaBerge and team, the underlined portion only presents the finding itself, stating that the team found that the movements of lucid dreamers' eyes while dreaming were very similar to those of sighted people visually tracking objects while awake. The next part of the text indicates what the finding implied to the team but still doesn't offer a real-world example as illustration.

64 Correct answer **A**

Hard

< Back to question

A It challenges the stance of the investors and enthusiasts who are mentioned earlier in the text.

Choice A is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The first sentence of the text introduces literary scholar Jeremy Douglass's warning to technology investors and enthusiasts against predicting the displacement of conventional books by newer media forms. The next sentence, which is underlined in part, presents Douglass's observation that interactive texts are hardly new; they have been available for longer than technologists assume, beginning with the first time readers wrote notes in texts' margins. Thus, the function of the underlined portion is to challenge the stance of the technology investors and enthusiasts mentioned earlier in the text. As the remainder of the text points out, newer media doesn't necessarily replace older media, but rather, as Douglass believes, leads to new forms of expression.

Choice B is incorrect because the underlined portion challenges the position taken by investors and enthusiasts; it doesn't provide context for their claims. **Choice C is incorrect** because the underlined portion doesn't mention academics or compare them to investors regarding their ability to see potential in using contemporary interactive texts; instead, the underlined portion challenges the position of investors and enthusiasts who predict that conventional books will be replaced by newer forms of media. **Choice D is incorrect** because the underlined portion doesn't address technological challenges; instead, it disputes the stance taken by investors and enthusiasts, suggesting that conventional books haven't been displaced by traditional interactions with texts, such as writing in the margins, and won't be supplanted by newer forms of media either.

65 Correct answer **B**

Hard

Back to question

B It presents a generalization that is exemplified by the discussion of the mimosa trees and *B. terrenus*.

Choice B is the best answer because it most accurately describes the function of the third sentence within the overall structure of the text. The third sentence makes a generalization, asserting that evolutionary links between predators and prey can persist across great expanses of time and distance. This generalization is exemplified by the text's discussion of the relationship between mimosa trees and *B. terrenus* beetles. When mimosa trees were introduced to North America in 1785, no *B. terrenus* beetles were present, so the relationship between the trees and the beetles that exists in their native East Asia was disrupted. When the beetles were introduced to North America more than 200 years later, however, they quickly attacked mimosa trees, illustrating the generalization that links between predators and prey "can persist across centuries and continents."

Choice A is incorrect because the third sentence doesn't indicate that Chang and colleagues were investigating any hypothesis. According to the text, Chang and colleagues were simply monitoring mimosa trees when the beetles happened to be introduced to the area. **Choice C is incorrect** because the third sentence doesn't discuss any particular species, let alone the species mentioned elsewhere in the text, nor does the sentence explain why species spread to new locations. **Choice D is incorrect** because the third sentence offers a generalization about the relationship between predators and prey, not an explanation for the findings by Chang and colleagues that's an "alternative" to an explanation presented elsewhere in the text.

66 Correct answer **D**

Hard

Back to question

D It helps explain Cruse's position with respect to the community of civil rights thinkers.

Choice D is the best answer. The text as a whole claims that Cruse disagreed with virtually all other Civil Rights scholars and activists. The underlined sentence describes one way that Cruse both did and didn't fit in with those thinkers: he criticized Black nationalists, even though he identified as one.

Choice A is incorrect. The underlined sentence doesn't do this. It describes Cruse's criticisms—it never mentions what Cruse did want the movement to do instead. **Choice B is incorrect**. This conflicts with the text, which argues that Cruse did disagree with almost all other scholars of the Civil Rights Movement. **Choice C is incorrect**. This is a step too far. The text never says that Cruse's work caused controversy within the Black nationalist movement.

05 Structure

How the text is organized

A structure question is a function question made wide. Instead of one underlined part, you work out the job of each chunk of the text, two or three sentences at a time, and match the order of those jobs.

29 questions | 8 Easy | 15 Medium | 6 Hard

THE STEPS

1. Read the first two or three sentences.
2. Work out their function.
3. Go to the answer choices and see which ones are clearly wrong.
4. Cross those out.
5. If one answer is left, choose it.
6. If more than one is left, read the whole text and find which one is right.

WHAT TO TAKE FROM THIS

- This is the only reading type where you go to the choices early. The first move usually kills two or three of them on its own.
- Common first moves: it introduces a person or thing, defines a term, states a common belief, asks a question, or describes a problem.
- Common second moves: it gives an example, explains why it matters, challenges the belief, or answers the question.
- *However*, *But* and *Still* are gifts. They tell you the second move before you read it.
- A choice dies when it names a move the text never makes, or when it is too narrow and describes one detail instead of the whole text.

EASY 8 questions

Using NASA's powerful James Webb Space Telescope (JWST), Mercedes López-Morales and colleagues measured the wavelengths of light traveling through the atmosphere of WASP-39b, an exoplanet, or planet outside our solar system. Different molecules absorb different wavelengths of light, and the wavelength measurements showed the presence of carbon dioxide (CO_2) in WASP-39b's atmosphere. This finding not only offers the first decisive evidence of CO_2 in the atmosphere of an exoplanet but also illustrates the potential for future scientific breakthroughs held by the JWST.

ID 2903a041

1 Mark for Review Easy Explanation ›

Which choice best describes the overall structure of the text?

(A) It discusses a method used by some researchers, then states why an alternative method is superior to it.

(B) It describes how researchers made a scientific discovery, then explains the importance of that discovery.

(C) It outlines the steps taken in a scientific study, then presents a hypothesis based on that study.

(D) It examines how a group of scientists reached a conclusion, then shows how other scientists have challenged that conclusion.

Companies are providing consumers with more opportunities to purchase customized products than ever before. Whether buying customized sneakers, jewelry, or clothing, consumers can participate in the design of products to meet their specific needs and tastes. In turn, companies profit too: studies have shown that consumers are willing to pay more and wait longer for a customized product. Still, it can be difficult for companies to offer customization while keeping costs low, as the standard methods of mass production may not be able to accommodate making a unique product each time.

ID 805e361d

2 Mark for Review Easy Explanation ›

Which choice best describes the overall structure of the text?

(A) It discusses several recent innovations in product manufacturing and then suggests some potential applications of those innovations.

(B) It describes a company's recent success with new products and then explains multiple factors that may have contributed to that success.

(C) It introduces a trend in consumer products and then explains how the trend both benefits and poses a challenge to companies.

(D) It presents two contrasting product-marketing techniques and then provides examples of one of those techniques.

Why do sand cats purr but lions roar? Researchers hypothesize that this difference between the two feline species may be partly due to a U-shaped bone in their throats called the hyoid. Sand cats, which are much smaller than lions, have a rigid hyoid that rumbles when the cat's larynx vibrates, resulting in a purr. By contrast, lions have a somewhat flexible hyoid, and the bone is attached to the skull with a stretchy ligament that sand cats lack. These traits allow lions and most other species of big cats to produce powerful roars. The same traits may also prevent most big cats from purring.

ID 190857f0

3 Mark for Review Easy Explanation ›

Which choice best describes the overall structure of the text?

(A) The text presents a theory about two species, then discusses facts that weaken it.

(B) The text compares the habitats of two species, then explains how those habitats are changing.

(C) The text describes a behavior shared by two species, then discusses other behaviors shared by them.

(D) The text poses a question about two species, then presents a possible answer.

Following the eradication of the gray wolf in Yellowstone National Park in 1926, the population of elk—a primary prey of the gray wolf—exceeded a healthy size for the park's ecosystem. Elk overpopulation led to overgrazing of areas that a multitude of other animals relied on for food and shelter. As scientists began to see how essential the gray wolf was to the Yellowstone food chain, ecological restoration strategies were employed to reintroduce the gray wolf to the park in 1996. The rebound effect in the park's natural ecosystem was noticed almost immediately.

ID 70612a79

4 Mark for Review Easy Explanation ›

Which choice best describes the overall structure of the text?

(A) It summarizes a problem that developed in Yellowstone National Park in the 1920s and then offers potential solutions to that problem.

(B) It mentions the elimination of the gray wolf from Yellowstone National Park and then explains why the wolf was eventually restored to the park.

(C) It presents a claim about the health of the Yellowstone National Park gray wolf population and then gives specific examples to support that claim.

(D) It explains why Yellowstone National Park allowed the eradication of the gray wolf and then discusses the consequences of reintroducing the wolf to the park.

Many films from the early 1900s have been lost. These losses include several films by the first wave of Black women filmmakers. We know about these lost movies only from small pieces of evidence. For example, an advertisement for Jennie Louise Touissant Welcome's documentary *Doing Their Bit* still exists. There's a reference in a magazine to Tressie Souders's film *A Woman's Error*. And Maria P. Williams's *The Flames of Wrath* is mentioned in a letter and a newspaper article, and one image from the movie was discovered in the 1990s.

ID 5e732e67

5 Mark for Review — Easy — Explanation ›

Which choice best describes the overall structure of the text?

(A) The text identifies a complex problem, then presents examples of unsuccessful attempts to solve that problem.

(B) The text summarizes a debate among researchers, then gives reasons for supporting one side in that debate.

(C) The text describes a general situation, then illustrates that situation with specific examples.

(D) The text discusses several notable individuals, then explains commonly overlooked differences between those individuals.

Hiroshi Senju is known worldwide for his paintings of waterfalls. These paintings are large and tend not to show the entire waterfall. Instead, Senju focuses on just the point where the falling water reaches the pool below, keeping the top of the waterfall out of view. While Senju's paintings are rooted in art movements originating in the United States, the artist uses traditional Japanese techniques and materials that make his work instantly recognizable.

ID 56ec23a0

6 Mark for Review — Easy — Explanation ›

Which choice best describes the overall structure of the text?

(A) It introduces an artist and then explains some common characteristics of well-known paintings by that artist.

(B) It explains a specific painting technique and then provides examples of artists who use the technique.

(C) It describes a famous painting and then compares it to a lesser-known painting from the same time period.

(D) It gives an opinion on an artist and then suggests multiple reasons why the artist's work has been largely overlooked.

A team of researchers discovered that Matabele ants can identify an infected wound in a member of the colony and then treat the infection by covering the wound with antimicrobial secretions that the ants produce. The team found that the mortality rate for Matabele ants with infected injuries was reduced by 90% with this treatment, and they are hopeful that this discovery could aid in the development of new antibiotics for human use.

ID 3e63fce0

7 Mark for Review — Easy — Explanation ›

Which choice best describes the overall structure of the text?

(A) It summarizes research findings on Matabele ants and then identifies an area for further research.

(B) It introduces a study of Matabele ants and then explains the research methods used in the study.

(C) It describes unique properties of Matabele ants and then speculates on how those properties evolved.

(D) It identifies an issue concerning Matabele ants and then proposes a solution to address the issue.

Catherine L. Cardelús is a researcher who studies canopy soil. Canopy soil is formed in a tree's branches (its canopy) when dead leaves and other falling things collect. This material breaks down, becoming canopy soil. Canopy soil helps preserve a healthy water cycle (how water moves through the environment) in rainforests. This benefit is one reason Cardelús is interested in the canopy soils in large choibá trees in rainforests in Costa Rica.

ID 40270820

8 Mark for Review — Easy — Explanation ›

Which choice best describes the text's overall structure?

(A) It explains a disagreement between researchers and how it was resolved.

(B) It presents an idea and mentions a researcher who disagrees with that idea.

(C) It compares the sizes of two types of trees over several years.

(D) It introduces a researcher and gives information about what she researches.

MEDIUM 15 questions

The following text is from the 1923 poem "Black Finger" by Angelina Weld Grimké, a Black American writer. A cypress is a type of evergreen tree.

I have just seen a most beautiful thing,
Slim and still,
  Against a gold, gold sky,
  A straight black cypress,
Sensitive,
Exquisite,
A black finger
Pointing upwards.
Why, beautiful still finger, are you black?
And why are you pointing upwards?

ID acb852e7

9 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) The speaker assesses a natural phenomenon, then questions the accuracy of her assessment.

(B) The speaker describes a distinctive sight in nature, then ponders what meaning to attribute to that sight.

(C) The speaker presents an outdoor scene, then considers a human behavior occurring within that scene.

(D) The speaker examines her surroundings, then speculates about their influence on her emotional state.

Mathematician Claude Shannon is widely regarded as a foundational figure in information theory. His most important paper, “A Mathematical Theory of Communication,” published in 1948 when he was employed at Bell Labs, utilized a concept called a “binary digit” (shortened to “bit”) to measure the amount of information in any signal and determine the fastest rate at which information could be transmitted while still being reliably decipherable. Robert Gallagher, one of Shannon’s colleagues, said that the bit was “[Shannon’s] discovery, and from it the whole communications revolution has sprung.”

ID b4887dae

10 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) It presents a theoretical concept, illustrates how the name of the concept has changed, and shows how the name has entered common usage.

(B) It introduces a respected researcher, describes an aspect of his work, and suggests why the work is historically significant.

(C) It names the company where an important mathematician worked, details the mathematician’s career at the company, and provides an example of the recognition he received there.

(D) It mentions a paper, offers a summary of the paper’s findings, and presents a researcher’s commentary on the paper.

The following text is from the 1895 poem “Marshlands” by Emily Pauline Johnson, a Kanienkahagen (Mohawk) writer also known as Tekahionwake.

Among the wild rice in the still lagoon,

In monotone the lizard shrills his tune.

The wild goose, homing, seeks a sheltering,

Where rushes grow, and oozing lichens cling.

Late cranes with heavy wing, and lazy flight,

Sail up the silence with the nearing night.

And like a spirit, swathed in some soft veil,

Steals twilight and its shadows o’er the swale.

Hushed lie the sedges, and the vapours creep,

Thick, grey and humid, while the marshes sleep.

ID c7265342

11 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) It names animal species found in a place, then names plant species there.

(B) It sketches a setting by presenting a series of images of nature.

(C) It makes an extended comparison of nature to human emotions.

(D) It identifies a location, then refers to a person living there.

Musician Joni Mitchell, who is also a painter, uses images she creates for her album covers to emphasize ideas expressed in her music. For the cover of her album *Turbulent Indigo* (1994), Mitchell painted a striking self-portrait that closely resembles Vincent van Gogh's *Self-Portrait with Bandaged Ear* (1889). The image calls attention to the album's title song, in which Mitchell sings about the legacy of the postimpressionist painter. In that song, Mitchell also hints that she feels a strong artistic connection to Van Gogh—an idea that is reinforced by her imagery on the cover.

ID 8963273a

12 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) It presents a claim about Mitchell, then gives an example supporting that claim.

(B) It discusses Van Gogh's influence on Mitchell, then considers Mitchell's influence on other artists.

(C) It describes a similarity between two artists, then notes a difference between them.

(D) It describes the songs on *Turbulent Indigo*, then explains how they relate to the album's cover.

The following text is from Charlotte Perkins Gilman's 1910 poem "The Earth's Entail."

No matter how we cultivate the land,

Taming the forest and the prairie free;

No matter how we irrigate the sand,

Making the desert blossom at command,

We must always leave the borders of the sea;

The immeasureable reaches

Of the windy wave-wet beaches,

The million-mile-long margin of the sea.

ID f2c48e47

13 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) The speaker argues against interfering with nature and then gives evidence supporting this interference.

(B) The speaker presents an account of efforts to dominate nature and then cautions that such efforts are only temporary.

(C) The speaker provides examples of an admirable way of approaching nature and then challenges that approach.

(D) The speaker describes attempts to control nature and then offers a reminder that not all nature is controllable.

According to Indian economist and sociologist Radhakamal Mukerjee (1889–1968), the Eurocentric concepts that informed early twentieth-century social scientific methods—for example, the idea that all social relations are reducible to struggles between individuals—had little relevance for India. Making the social sciences more responsive to Indians' needs, Mukerjee argued, required constructing analytical categories informed by India's cultural and ecological circumstances. Mukerjee thus proposed the communalist "Indian village" as the ideal model on which to base Indian economic and social policy.

ID 34d7bb25

14 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) The text recounts Mukerjee's early training in the social scientific disciplines and then lists social policies whose implementation Mukerjee oversaw.

(B) The text mentions some of Mukerjee's economic theories and then traces their impact on other Indian social scientists of the twentieth century.

(C) The text presents Mukerjee's critique of the social sciences and then provides an example of his attempts to address issues he identified in his critique.

(D) The text explains an influential economic theory and then demonstrates how that theory was more important to Mukerjee's work than other social scientists have acknowledged.

In the *Here and Now Storybook* (1921), educator Lucy Sprague Mitchell advanced the then controversial idea that books for very young children should imitate how they use language, since toddlers, who cannot yet grasp narrative or abstract ideas, seek reassurance in verbal repetition and naming. The most enduring example of this idea is Margaret Wise Brown's 1947 picture book *Goodnight Moon*, in which a young rabbit names the objects in his room as he drifts off to sleep. Scholars note that the book's emphasis on repetition, rhythm, and nonsense rhyme speaks directly to Mitchell's influence.

ID f631132b

15 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) The text outlines a debate between two authors of children's literature and then traces how that debate shaped theories on early childhood education.

(B) The text summarizes an argument about how children's literature should be evaluated and then discusses a contrasting view on that subject.

(C) The text lists the literary characteristics that are common to many classics of children's literature and then indicates the narrative subjects that are most appropriate for young children.

(D) The text presents a philosophy about what material is most suitable for children's literature and then describes a book influenced by that philosophy.

The north celestial pole (NCP)—the fixed point around which stars in the Northern Hemisphere (including the Sun) appear to rotate—is discernible only at night. Inspired by the navigational strategies of some insects and birds, researchers devised a method for locating the NCP in daytime using skylight polarization, which occurs as atmospheric particles scatter sunlight. A polarimetric camera captures images of polarization patterns, which rotate as the Sun's position in the sky changes; temporal variances across images can then be used to determine an observer's latitude and bearing relative to the NCP.

ID 5127fc1e

16 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) It illustrates how most navigational tools utilize the NCP, recounts how researchers discovered that certain animals are able to navigate without using the NCP, and then proposes that this discovery could be used to avoid problems in navigation associated with reliance on the NCP.

(B) It presents a celestial-based method of navigation, enumerates the comparative benefits of an alternative method used by certain animals that is based on an unrelated natural occurrence, and then indicates how researchers assessed the relative accuracy of the two methods.

(C) It explains how the NCP is typically located, emphasizes a key difference between how humans and certain animals use the NCP for navigation, and then suggests an alternative way of using the NCP to improve existing navigational instruments.

(D) It notes an obstacle to observing an astronomical phenomenon, mentions a navigational ability of certain animals that inspired a solution to that obstacle, and then explains how researchers used an optical device to mimic that ability.

Raymond Antrobus, an accomplished poet and writer of prose, recently released his debut spoken word poetry album, *The First Time I Wore Hearing Aids*, in collaboration with producer Ian Brennan. The album contains both autobiographical and reflective pieces combining Antrobus's spoken words with Brennan's fragmented audio elements and pieces of music to convey how people who are deaf may experience sound, both its presence and absence. Some critics suggest that the album questions the function of sound in the world, highlighting that the experience of sound is multifaceted.

ID a70cbc53

17 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) It introduces a collaborative spoken word poetry project, details the approach taken to produce the work, and then provides an example of critique the album received upon release.

(B) It mentions a collection of spoken word poems, distinguishes one poem as being an exemplar on the album, and then offers a summary of the subject matter of the whole collection.

(C) It summarizes the efforts to produce a collection of spoken word poems, presents biographies of two people who worked on the album, and speculates about the meaning behind the poetry.

(D) It connects two artists to the same spoken word poetry project, explains the extent of their collaboration on each poem, and then provides an overview of the technique used to produce the work.

The following text is from Walt Whitman's 1860 poem "Calamus 24."

I HEAR it is charged against me that I seek to destroy institutions;

But really I am neither for nor against institutions

(What indeed have I in common with them?—Or what with the destruction of them?),

Only I will establish in the Mannahatta [Manhattan] and in every city of These States, inland and seaboard,

And in the fields and woods, and above every keel [ship] little or large, that dents the water,

Without edifices, or rules, or trustees, or any argument,

The institution of the dear love of comrades.

ID 14b7dced

18 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) The speaker questions an increasingly prevalent attitude, then summarizes his worldview.

(B) The speaker regrets his isolation from others, then predicts a profound change in society.

(C) The speaker concedes his personal shortcomings, then boasts of his many achievements.

(D) The speaker addresses a criticism leveled against him, then announces a grand ambition of his.

The following text is adapted from Aphra Behn's 1689 novel *The Lucky Mistake*. Atlante and Rinaldo are neighbors who have been secretly exchanging letters through Charlot, Atlante's sister.

[Atlante] gave this letter to Charlot; who immediately ran into the balcony with it, where she still found Rinaldo in a melancholy posture, leaning his head on his hand: She showed him the letter, but was afraid to toss it to him, for fear it might fall to the ground; so he ran and fetched a long cane, which he cleft at one end, and held it while she put the letter into the cleft, and stayed not to hear what he said to it. But never was man so transported with joy, as he was at the reading of this letter; it gives him new wounds; for to the generous, nothing obliges love so much as love.

ID d69bc408

19 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) It describes the delivery of a letter, and then portrays a character's happiness at reading that letter.

(B) It establishes that a character is desperate to receive a letter, and then explains why another character has not yet written that letter.

(C) It presents a character's concerns about delivering a letter, and then details the contents of that letter.

(D) It reveals the inspiration behind a character's letter, and then emphasizes the excitement that another character feels upon receiving that letter.

The following text is adapted from Gwendolyn Bennett's 1926 poem "Street Lamps in Early Spring."

Night wears a garment
All velvet soft, all violet blue...
And over her face she draws a veil
As shimmering fine as floating dew...
And here and there
In the black of her hair
The subtle hands of Night
Move slowly with their gem-starred light.

ID 97360a00

20 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) It presents alternating descriptions of night in a rural area and in a city.

(B) It sketches an image of nightfall, then an image of sunrise.

(C) It makes an extended comparison of night to a human being.

(D) It portrays how night changes from one season of the year to the next.

Michelene Pesantubbee, a historian and citizen of the Choctaw Nation, has identified a dilemma inherent to research on the status of women in her tribe during the 1600s and 1700s: the primary sources from that era, travel narratives and other accounts by male European colonizers, underestimate the degree of power conferred on Choctaw women by their traditional roles in political, civic, and ceremonial life. Pesantubbee argues that the Choctaw oral tradition and findings from archaeological sites in the tribe's homeland supplement the written record by providing crucial insights into those roles.

ID b4d29611

21 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) It details the shortcomings of certain historical sources, then argues that research should avoid those sources altogether.

(B) It describes a problem that arises in research on a particular topic, then sketches a historian's approach to addressing that problem.

(C) It lists the advantages of a particular research method, then acknowledges a historian's criticism of that method.

(D) It characterizes a particular topic as especially challenging to research, then suggests a related topic for historians to pursue instead.

Many archaeologists assume that large-scale engineering projects in ancient societies required an elite class to plan and direct the necessary labor. However, recent discoveries, such as the excavation of an ancient canal near the Gulf Coast of Alabama, have complicated this picture. Using radiocarbon dating, a team of researchers concluded that the 1.39-kilometer-long canal was most likely constructed between 576 and 650 CE by an Indigenous society that was relatively free of social classes.

ID f6352bd3

22 Mark for Review Medium Explanation ›

Which choice best describes the overall structure of the text?

(A) It describes a common view among archaeologists, then discusses a recent finding that challenges that view.

(B) It outlines a method used in some archaeological fieldwork, then explains why an alternative method is superior to it.

(C) It presents contradictory conclusions drawn by archaeologists, then evaluates a study that has apparently resolved that contradiction.

(D) It identifies a gap in scientific research, then presents a strategy used by some archaeologists to remedy that gap.

The following text is adapted from George Eliot's 1857 short story "The Sad Fortunes of the Rev. Amos Barton." Mr. Ely is a clergyman in the town of Milby.

> By the laity of Milby and its neighbourhood [Mr. Ely] was regarded as a man of quite remarkable powers and learning, who must make a considerable sensation in London pulpits and drawing-rooms on his occasional visit to the metropolis; and by his brother clergy he was regarded as a discreet and agreeable fellow. Mr. Ely never got into a warm discussion; he suggested what might be thought, but rarely said what he thought himself; he never let either men or women see that he was laughing at them, and he never gave any one an opportunity of laughing at *him*.

ID dcd9ad50

23 Mark for Review — Medium — Explanation ›

Which choice best describes the overall structure of the text?

(A) It shows that Mr. Ely had originally been held in high regard by his friends and then details the events that caused their regard for him to subside.

(B) It implies that Mr. Ely's neighbors are more naïve in their estimation of him than people in London are and then explains why his neighbors have been so easily misled.

(C) It stresses the discrepancy between Mr. Ely's public and private conduct and then alludes to his motivation for hiding his true personality.

(D) It presents the favorable opinion of Mr. Ely that other people hold and then describes the behaviors of Mr. Ely that enable him to maintain that favorable opinion.

HARD 6 questions

Despite potential independent confirmation, the apparent detection in 2020 of phosphine (PH_3)—a gas that on Earth almost exclusively derives from biological sources—in Venus's cloud deck remains controversial, in part because Venus is thought to be uninhabitable. To evaluate such a finding's plausibility, William Bains et al. modeled multiple abiotic PH_3 pathways, including geochemical, atmospheric, and photochemical reactions, but none adequately explain the observed levels of PH_3. If Venusian PH_3 does exist, it would indicate insufficiencies in the current consensus on Venus's chemistry.

ID 8af926b1

24 Mark for Review — Hard — Explanation ›

Which choice best describes the overall structure of the text?

(A) It outlines recent efforts to confirm the presence of a particular gas in Venus's atmosphere, summarizes a research team's evaluations of those efforts' methodological shortcomings, and then explains why that team remains skeptical of the gas's future detection.

(B) It explains why the consensus view of a particular gas in Venus's atmosphere has recently become controversial, expands on a scientific team's reasons for questioning that consensus, and then suggests that future observations of Venus's atmosphere will likely be needed to settle the controversy.

(C) It introduces an unexpected observation of a particular gas in Venus's atmosphere, presents an effort to investigate possible mechanisms that could explain that observation, and then notes an implication of that investigation's findings.

(D) It compares the levels of a particular gas on Venus and Earth, sketches the chemical processes that account for differences in these levels, and then addresses some of the practical challenges of studying the presence of this gas on Venus more closely.

To produce *batik*, an Indonesian textile that originated as early as the 6th century CE, an artist creates patterns on fabric by skillfully applying wax to the surface and then dyeing it. Traditionally, the artist draws on the cloth using a canting, a pen-shaped tool that applies wax in fine lines or dots. To expedite this laborious process, the cap, a copper stamp that applies preset wax patterns, was introduced. Although the cap made the process of producing batiks much quicker, the canting is often preferred because it results in unique pieces.

ID 70e6af39

25 Mark for Review — Hard — Explanation ›

Which choice best describes the overall structure of the text?

(A) It introduces a traditional type of textile, suggests that it is a variation of an even older type of textile, and then explains a significant difference in how those types of textiles are produced.

(B) It establishes how a textile production technique originated, indicates how the technique has changed over time, and then suggests that renewed interest in the original technique is growing.

(C) It presents a method of textile production, identifies two approaches to that method, and then addresses the relative advantage of each approach.

(D) It conveys admiration of a certain style of textile, emphasizes the level of skill needed to produce the textile, and then urges broader recognition of the skill involved in producing the textile.

Changes to vegetation cover and other human activities influence carbon and nitrogen levels in soil, though how deep these effects extend is unclear. Hypothesizing that differences in land use lead to differences in carbon and nitrogen levels that are not restricted to the topsoil layer (0–30 cm deep), Chukwuebuka Okolo and colleagues sampled soils across multiple land-use types (e.g., grazing land, cropland, forest) within each of several Ethiopian locations. They found, though, that across land-use types, carbon and nitrogen decreased to comparably low levels beyond depths of 30 cm.

ID f61c22f3

26 Mark for Review — Hard — Explanation ›

Which choice best describes the overall structure of the text?

(A) It describes a phenomenon that scientists do not fully understand, explains a research team's hypothesis about that phenomenon, and then describes a finding that led the team to refine the hypothesis.

(B) It introduces an unresolved scientific question, presents a research team's hypothesis pertaining to that question, and then describes an observation made by the team that conflicts with that hypothesis.

(C) It discusses a process that scientists are somewhat unclear about, introduces competing hypotheses about that process, and then explains how a research team concluded that one of those hypotheses is likely correct.

(D) It explains a hypothesis that has been the subject of scientific debate, discusses how a research team tested that hypothesis, and then presents data the team collected that validate the hypothesis.

Vadamalai Elangovan and Ganapathi Marimuthu showed that high moonlight intensity inhibits the activity of the greater short-nosed fruit bat (*Cynopterus sphinx*), a result explicable in terms of benefits and costs: greater lunar intensity may not enable the bats to increase foraging success enough to offset the higher chance of detection by predatory owls or hawks. Most other nocturnal mammals respond to lunar intensity variations similarly to greater short-nosed fruit bats, but mongoose lemurs (*Eulemur mongoz*) display the opposite pattern, as their heavy reliance on visual foraging results in a different balance of reward and risk.

ID 4ed09415

27 Mark for Review — Hard — Explanation ›

Which choice best describes the overall structure of the text?

(A) It discusses two different responses to the same natural phenomenon, explains why one of those responses occurs, and then suggests that the other response still needs to be explained.

(B) It describes and accounts for a finding, characterizes the finding as representative of a general pattern, and then describes and accounts for an exception to that pattern.

(C) It presents and explains a study result, indicates that the result is similar to the results of many other studies, and then attributes a conflicting study result to a difference in that study's methods.

(D) It introduces an observation of a behavioral pattern, presents an explanation for the pattern, and then describes an exception to the pattern that casts doubt on that explanation.

Asteroid 6478 Gault has experienced intermittent mass loss since at least 2013, but in contrast to some other asteroids with repeated mass-loss episodes, 6478 Gault has not lost mass at its perihelion (the closest point of its orbit to the Sun), and thus the loss is not attributable to solar energy–driven ice vaporization. And as Jane X. Luu et al. point out, the singular nature of impact ejection makes it untenable as an account of multiple loss episodes of similar duration over several years. Instead, Luu et al. are likely correct that 6478 Gault is shedding mass due to rotational instability.

ID 6ae393f7

28 Mark for Review — Hard — Explanation ›

Which choice best describes the overall structure of the text?

(A) It presents a scientific observation, describes a contrast between that observation and other observations, and then explains why those other observations should not be considered credible.

(B) It describes an astronomical finding, discusses competing theories about that finding that the author regards as flawed, and then describes new evidence that supports an alternative theory.

(C) It introduces a natural phenomenon, refutes two potential explanations for that phenomenon, and then presents a third explanation for that phenomenon that the author regards as plausible.

(D) It discusses a physical process, evaluates possible causes of that process, and then states that a persuasive account of the process has yet to be put forward.

Works of moral philosophy, such as Plato's *Republic* or Aristotle's *Nicomachean Ethics*, are partly concerned with how to live a morally good life. But philosopher Jonathan Barnes argues that works that present a method of living such a life without also supplying a motive are inherently useful only to those already wishing to be morally good—those with no desire for moral goodness will not choose to follow their rules. However, some works of moral philosophy attempt to describe what constitutes a morally good life while also proposing reasons for living one.

Hard

Explanation >

Which choice best describes the overall structure of the text?

(A) It provides a characterization about a field of thought by noting two works in it and then details a way in which some works in that field are more comprehensive than others.

(B) It mentions two renowned works and then claims that despite their popularity it is impossible for these works to serve the purpose their authors intended.

(C) It summarizes the history of a field of thought by discussing two works and then proposes a topic of further research for specialists in that field.

(D) It describes two influential works and then explains why one is more widely read than the other.

1	B	2	C	3	D	4	B	5	C	6	A	7	A	8	D	9	B	10	B
11	B	12	A	13	D	14	C	15	D	16	D	17	A	18	D	19	A	20	C
21	B	22	A	23	D	24	C	25	C	26	B	27	B	28	C	29	A		

Explanations

1 Correct answer **B** — Easy — Back to question

B It describes how researchers made a scientific discovery, then explains the importance of that discovery.

Choice B is the best answer. The text begins by describing how the researchers used the JWST to detect CO_2 in WASP-39b's atmosphere. Then the text discusses the significance of this finding, both as the first evidence of CO_2 in an exoplanet's atmosphere and as an illustration of the JWST's potential for making new discoveries in general.

Choice A is incorrect. The text doesn't compare two different methods, but rather focuses on one study that used the JWST. **Choice C is incorrect**. The text doesn't present a hypothesis, but rather reports on the findings of a study. **Choice D is incorrect**. The text doesn't mention any scientists challenging the conclusion reached by López-Morales and colleagues.

2 Correct answer **C** — Easy — Back to question

C It introduces a trend in consumer products and then explains how the trend both benefits and poses a challenge to companies.

Choice C is the best answer because it presents the best description of the overall structure of the text. The text begins by stating that companies are increasingly giving consumers opportunities to customize products, allowing them to make design choices when buying certain sneakers, jewelry, and clothing. The text then indicates that although this trend benefits companies because they can successfully charge buyers more for customized products and don't have to rush production, it also poses a challenge because producing unique items may require different and more expensive methods than the ones typically used for mass production, raising the companies' costs. Thus, the text first introduces a trend in consumer products and then explains how the trend both benefits and poses a challenge to companies.

Choice A is incorrect because the text doesn't present the customization of various products as a recent innovation—the fact that there are "more opportunities" now indicates that there were opportunities before—and no other innovations, in product manufacturing or otherwise, are discussed. **Choice B is incorrect** because the text doesn't discuss any particular company or example and instead speaks broadly about the trend of companies providing customizable products. **Choice D is incorrect**. Although the text discusses companies offering something that consumers like and are willing to pay more for—the ability to customize products—it doesn't characterize this as a product-marketing technique and doesn't compare it to any other kind of offering or technique.

3 Correct answer **D**

Easy

‹ Back to question

D The text poses a question about two species, then presents a possible answer.

Choice D is the best answer because it best describes the overall structure of the text. The text begins by posing a question about two different cat species: "Why do sand cats purr but lions roar?" The remainder of the text then presents a possible answer to this question by explaining a hypothesis about differences in these cats' hyoid bone structure. The text details how sand cats have rigid hyoids that produce purring sounds when their larynx vibrates, while lions have more flexible hyoids attached to the skull with a stretchy ligament that enables roaring but may prevent purring.

Choice A is incorrect because the text doesn't present facts that weaken the theory about two cat species; rather, it asks a question about two species and then discusses a potential answer. **Choice B is incorrect** because the text doesn't discuss the habitats of sand cats and lions at all, nor does it mention any changes to their habitats. **Choice C is incorrect** because the text doesn't describe a behavior shared by the two cat species mentioned. On the contrary, it specifically focuses on the different vocalization behaviors of each species (purring versus roaring) and why those differences may exist.

4 Correct answer **B**

Easy

‹ Back to question

B It mentions the elimination of the gray wolf from Yellowstone National Park and then explains why the wolf was eventually restored to the park.

Choice B is the best answer because it most accurately describes the overall structure of the text. The text begins by stating that the gray wolf was eradicated from Yellowstone National Park in 1926. It then explains the consequences of this elimination—namely that the elk population grew too large and overgrazing occurred, negatively affecting other animals in the area. The text then states that once scientists realized the importance of the gray wolf to the Yellowstone food chain, they undertook efforts leading to the wolves' reintroduction to the park in 1996. Thus, the structure of the text can be accurately described as mentioning the elimination of the gray wolf from Yellowstone and then explaining why the wolf was later restored to the park.

Choice A is incorrect. While the text does summarize a problem associated with an event in the 1920s (the eradication of gray wolves from Yellowstone in 1926), the problems discussed arose after that event—namely, the subsequent elk overpopulation, resultant overgrazing, and then further impacts to other animals in Yellowstone. Furthermore, the text doesn't present multiple potential solutions. Instead, it describes one solution that was actually implemented: the reintroduction of gray wolves in 1996. **Choice C is incorrect** because the text doesn't make a claim about the health of the gray wolf population apart from pointing out that the wolves had been eradicated from, and then subsequently restored to, Yellowstone. Instead, the text focuses on outcomes associated with the gray wolf's eradication and reintroduction. **Choice D is incorrect**. Though the text does mention that the ecosystem of Yellowstone rebounded after the gray wolf was reintroduced in 1996, the text never explains why the park allowed the wolves to be eradicated in 1926. It simply states that this eradication occurred without elaborating on the decision-making process behind it.

5 Correct answer **C**

Easy

‹ Back to question

C The text describes a general situation, then illustrates that situation with specific examples.

Choice C is the best answer. The first three sentences describe the general situation: these early films have been lost, and we only know about them from small pieces of evidence. The rest of the text offers specific examples of the small pieces of evidence.

Choice A is incorrect. This isn't the overall structure. The fact that we only know about these lost early films from small pieces of evidence isn't presented as a "complex problem"—that's too extreme. And the examples presented are not "unsuccessful attempts" to solve it. If anything, the examples represent a success, because we discovered that these films existed in the first place. **Choice B is incorrect**. This isn't the overall structure. There's no "debate" presented in the text, so there's no "side" for

the text to support. **Choice D is incorrect**. This isn't the overall structure. The text doesn't discuss any "differences" between the filmmakers.

6 Correct answer **A** Easy Back to question

A It introduces an artist and then explains some common characteristics of well-known paintings by that artist.

Choice A is the best answer because it most effectively describes the overall structure of the text. The first sentence introduces Hiroshi Senju as an artist famous for his paintings of waterfalls. The rest of the text describes defining features of these "instantly recognizable" paintings: they are large, show only part of a waterfall, and draw from art movements in the US and from techniques and materials traditionally used in Japan. Thus, the text introduces Senju and then explains some common characteristics of his well-known paintings.

Choice B is incorrect because the text doesn't focus on a specific painting technique or name multiple artists. Instead, it focuses on describing some characteristics of works by one artist (Senju). **Choice C is incorrect** because the text doesn't describe any single famous painting or make a comparison between paintings. Instead, it describes features that are shared by multiple paintings by Senju. **Choice D is incorrect**. The text doesn't provide an opinion on Senju; it simply relates facts about him and his work. Moreover, instead of suggesting Senju's work has been largely overlooked, the text indicates that Senju is "known worldwide for his paintings."

7 Correct answer **A** Easy Back to question

A It summarizes research findings on Matabele ants and then identifies an area for further research.

Choice A is the best answer because it most accurately describes the overall structure of the text. The text first presents what researchers found from studying Matabele ants: the ants can tell when colony members have infected wounds and can largely successfully treat those infections with their antimicrobial secretions. The text then indicates that the findings about the ants could help with the future development of antibiotics for humans. Thus, the text summarizes research findings and then identifies an area for further research.

Choice B is incorrect. Although the text introduces a study about Matabele ants, it never discusses how the researchers did their work or any methods they used to produce their findings. **Choice C is incorrect**. Although the text does describe properties of Matabele ants—their ability to detect and largely successfully treat infected wounds in colony members—it never addresses evolution or how these properties might have changed. **Choice D is incorrect** because the text doesn't present anything about Matabele ants as an issue or problem to be solved. Instead, it discusses beneficial abilities the ants have (detecting and treating infected wounds) and suggests that understanding those abilities might be useful for human medicine.

8 Correct answer **D** Easy Back to question

D It introduces a researcher and gives information about what she researches.

Choice D is the best answer because it most accurately describes the overall structure of the text. The text begins by mentioning Catherine L. Cardelús, "a researcher who studies canopy soil." The text then provides information about her chosen research topic: the formation of canopy soil in tree branches, the role of canopy soil in preserving a healthy water cycle in rainforests, and Cardelús's specific interest in "the canopy soils in large choibá trees in rainforests in Costa Rica." Thus, the text introduces a researcher and then gives information about what she researches.

Choice A is incorrect because the text doesn't mention any disagreement between researchers, nor does it describe how such a disagreement was resolved. **Choice B is incorrect** because the text doesn't present an idea that Cardelús disagrees with; rather, it describes her research interests and the significance of canopy soil. **Choice C is incorrect** because the text doesn't

compare the sizes of different types of trees over time. While the text mentions "large choibá trees," it doesn't compare them to any other tree type or discuss changes in tree size over several years.

9 Correct answer **B** Medium Back to question

B The speaker describes a distinctive sight in nature, then ponders what meaning to attribute to that sight.

Choice B is the best answer because it most accurately describes the overall structure of the text. First, the speaker describes observing a "most beautiful" sight: a tree ("black cypress") standing out from the golden sky behind it, looking like a person's finger "pointing upwards" and appearing "sensitive" and "exquisite." Then the speaker wonders about the image's meaning, asking why the finger is black and why it's pointing upward. Thus, the text moves from the speaker's description of a distinctive sight in nature to her pondering about what meaning to attribute to that sight.

Choice A is incorrect because the speaker assesses a natural sight—a "black cypress" tree standing "against a gold, gold sky" like a pointed finger—but doesn't question the accuracy of her own assessment. Although she wonders why the finger, which is really a tree, is black and why it's pointing, the speaker doesn't suggest that her belief that the tree resembles a finger is wrong. **Choice C is incorrect**. Although the speaker describes seeing a "black cypress" tree standing "against a gold, gold sky" like a pointed finger, she wonders about that natural image (asking why the finger, which is really a tree, is black and why it's pointing) and doesn't give any indication that any people are present in the scene. **Choice D is incorrect**. Although the speaker examines and wonders about one thing in her surroundings—a "black cypress" tree standing "against a gold, gold sky" like a pointed finger—she doesn't address her own emotional state or consider how it's affected by her surroundings.

10 Correct answer **B** Medium Back to question

B It introduces a respected researcher, describes an aspect of his work, and suggests why the work is historically significant.

Choice B is the best answer. The text starts with a general statement that introduces Shannon, then describes a specific contribution from one of his papers, then provides a quote that illustrates just how important this contribution was.

Choice A is incorrect. This isn't the overall structure. The text only mentions very briefly, in parentheses, that "binary digit" was shortened to "bit." It doesn't go into detail about this name change, and it doesn't discuss any "common usage" of the name at all. **Choice C is incorrect**. This isn't the overall structure. Shannon's employment at Bell Labs is only mentioned once, very briefly: the text never goes into detail about his career there, and it never mentions any recognition he received there. **Choice D is incorrect**. This is too narrow. Overall, the text is about Shannon's importance in his field, not just this one paper of his.

11 Correct answer **B** Medium Back to question

B It sketches a setting by presenting a series of images of nature.

Choice B is the best answer because it best describes the overall structure of the text. The text first establishes the setting, a "still lagoon," and then goes on to provide more details about the lagoon by presenting several descriptive images of nature, including a lizard that "shrills his tune," "oozing lichens," and "thick, grey and humid" vapors.

Choice A is incorrect. Instead of simply naming species, the text presents descriptive images of nature; further, instead of naming animals and then moving on to name plants, the text refers first to a plant ("the wild rice"), then to two animals ("the lizard," "the wild goose"), then to another plant ("rushes"), and so on. **Choice C is incorrect** because the text does not draw any comparison between nature and human emotions; it does not refer to human emotions at all. **Choice D is incorrect**. While the text does begin by identifying a specific location, a "still lagoon," it makes no mention of a person living there.

12 Correct answer **A** Medium Back to question

A It presents a claim about Mitchell, then gives an example supporting that claim.

Choice A is the best answer because it accurately describes the organization of the elements within the text. The text begins with the claim that Joni Mitchell's album covers use images she creates in order to emphasize ideas embedded in her albums. It then goes on to provide an example of how Mitchell's self-portrait on the cover of *Turbulent Indigo* resembles a painting by Van Gogh, which the text indicates helps emphasize the strong connection Mitchell feels toward Van Gogh, a connection that is also expressed in the album's title song.

Choice B is incorrect because there are no references in the text to artists other than Joni Mitchell and Van Gogh. **Choice C is incorrect** because there is nothing in the text that calls attention to any similarities or differences between Joni Mitchell and Van Gogh. Instead, it mentions that Mitchell feels a strong "artistic connection" to Van Gogh. **Choice D is incorrect** because the text discusses the cover before referring to any songs, and it only references one song from the album not all the songs.

13 Correct answer **D** Medium Back to question

D The speaker describes attempts to control nature and then offers a reminder that not all nature is controllable.

Choice D is the best answer. This best describes the overall structure of the text. In the first half of the text, the speaker describes our attempts to control nature: cultivating, taming, and irrigating different kinds of land. In the second half, the speaker states that we can never tame the sea or the beach.

Choice A is incorrect. This doesn't describe the overall structure of the text. The speaker never argues that we should not interfere with nature. Rather, the speaker says that we are able to tame many different kinds of land, but we are unable to tame the sea or beaches. **Choice B is incorrect**. This doesn't describe the overall structure of the text. The speaker never describes our cultivation, taming, and irrigation of land as "temporary." Rather, the speaker says that we are able to tame many different kinds of land, but we are unable to tame the sea or beaches. **Choice C is incorrect**. This doesn't describe the overall structure of the text. The speaker never describes our cultivation, taming, and irrigation of land as an "admirable" approach to nature." Rather, the speaker says that we are able to tame many different kinds of land, but we are unable to tame the sea or beaches.

14 Correct answer **C** Medium Back to question

C The text presents Mukerjee's critique of the social sciences and then provides an example of his attempts to address issues he identified in his critique.

Choice C is the best answer. The text does indeed present Mukerjee's critique of the social sciences—that they were too Eurocentric—and then provides an example of how he attempted to address the issues he identified: by suggesting a social science model based on the Indian village.

Choice A is incorrect. The text doesn't discuss Mukerjee's early training or his oversight of the implementation of social policies at all. **Choice B is incorrect**. The text never discusses any other Indian social scientists. **Choice D is incorrect**. The text never mentions other social scientists' responses to Mukerjee's work.

15 Correct answer **D** Medium Back to question

D The text presents a philosophy about what material is most suitable for children's literature and then describes a book influenced by that philosophy.

Choice D is the best answer. The text starts by introducing Mitchell's philosophy about using simple, repetitive language in books for young children. Then it describes a book influenced by that philosophy, *Goodnight Moon*.

Choice A is incorrect. Although two authors are mentioned in the text, they both agree about the type of language that should be contained in books for young children. **Choice B is incorrect**. The text never discusses the evaluation of children's literature. It does provide one view of how children's books should be written, but never introduces a competing view. **Choice C is incorrect**. The text doesn't mention "many classics of children's literature." Instead, it describes an educational theory and identifies one example of a famous children's book that was influenced by that theory.

16 Correct answer **D** Medium Back to question

D It notes an obstacle to observing an astronomical phenomenon, mentions a navigational ability of certain animals that inspired a solution to that obstacle, and then explains how researchers used an optical device to mimic that ability.

Choice D is the best answer because it accurately describes the overall structure of the text. The text begins by pointing out an obstacle to observing the astronomical phenomenon of the NCP: the NCP is visible only at night. The text then indicates that, inspired by the ability of some insects and birds to navigate using visualizations of polarized sunlight, researchers devised a way to locate the NCP during daylight. The text then indicates that the researchers mimicked the insects' and birds' polarized-light visualization capabilities using a polarimetric camera. Thus, the text notes an obstacle to observing an astronomical phenomenon, mentions a navigational ability of certain animals that inspired a solution to that obstacle, and then explains how researchers used an optical device to mimic that ability.

Choice A is incorrect. Although it's reasonable to conjecture that humans have used the NCP for navigation, the text doesn't indicate this is the case, let alone that the NCP is relevant to a majority of navigational tools. Furthermore, the text doesn't state that researchers discovered that insects and birds navigate without the NCP; rather, it indicates that it's known that some animals navigate by using skylight polarization to locate the NCP during the day and that this knowledge inspired the method the researchers devised. **Choice B is incorrect**. Although it's reasonable to conjecture that humans have used the NCP for navigation, the text doesn't state that this is the case. Furthermore, the text discusses how some animals' use of navigational strategies based on the same celestial occurrence served as the inspiration for the researchers' polarized-light approach, not as the basis for a comparison of the relative effectiveness of animal and human methods of navigation. **Choice C is incorrect**. Although the text implies that humans have typically been able to locate the NCP visually at night and indicates that some animals use the NCP to navigate, the text doesn't state that humans use the NCP for navigation. The text therefore doesn't emphasize a difference between how humans and animals use the NCP for this purpose. Furthermore, the text doesn't suggest that existing navigational instruments will be augmented with polarimetric technologies.

17 Correct answer **A** Medium Back to question

A It introduces a collaborative spoken word poetry project, details the approach taken to produce the work, and then provides an example of critique the album received upon release.

Choice A is the best answer. The text first introduces the album as being a collaboration between Antrobus and Brennan, then describes the approach taken to produce it, then mentions how critics have said that it calls into question the function of sound.

Choice B is incorrect. While the text does mention a collection of spoken word poems, it doesn't single out one poem as being particularly noteworthy. Additionally, the text doesn't simply summarize the subject matter—it goes into detail about the

content and production of the album. **Choice C is incorrect**. The text doesn't provide biographical information about the two artists, and the text doesn't speculate about the meaning behind the poetry—instead, it relays what some critics have said about the album. **Choice D is incorrect**. The text doesn't provide just an overview of the production techniques used but instead goes into more detail about the content and audio elements of the album, as well as critical response to the album.

18 Correct answer **D** Medium ‹ Back to question

D The speaker addresses a criticism leveled against him, then announces a grand ambition of his.

Choice D is the best answer because it best describes the overall structure of the text. The speaker begins by stating that he has heard that others are accusing him of seeking to destroy institutions. The speaker then addresses this criticism by stating that he is "neither for nor against institutions." Instead, the speaker states that his ultimate goal is to instill "the institution of the dear love of comrades" everywhere in the country. Therefore, the overall structure of the text is best described as an address of criticism followed by an announcement of a grand ambition.

Choice A is incorrect. While the speaker does address an opinion of him that he believes to be untrue, he doesn't indicate that this attitude has become increasingly prevalent. The speaker also concludes by explaining his goal for the future rather than his current worldview. **Choice B is incorrect** because the text doesn't portray the speaker as isolated or regretful, and the speaker gestures toward a hope for societal change but doesn't offer an explicit prediction that it will happen. **Choice C is incorrect** because the speaker addresses a criticism of him that he believes to be false; he doesn't admit any personal shortcomings. Moreover, the speaker concludes by stating a goal he has rather than showcasing his achievements.

19 Correct answer **A** Medium ‹ Back to question

A It describes the delivery of a letter, and then portrays a character's happiness at reading that letter.

Choice A is the best answer because it most accurately describes the overall structure of the text. The narrator begins by explaining how Charlot carefully delivers Atlante's letter to Rinaldo, and then relates that Rinaldo feels "transported with joy" after reading the letter. Therefore, the overall structure of the text is best described as a description of the delivery of a letter followed by the portrayal of a character's happiness after reading the letter.

Choice B is incorrect because the text indicates that the letter has been written; there's no explanation why another character hasn't written one. In addition, the text's description of Rinaldo "in a melancholy posture" suggests that he's sad and thoughtful, not that he's desperate to receive the letter. **Choice C is incorrect**. Although the text states that Charlot won't toss the letter to Rinaldo because she doesn't want it to fall, the text doesn't refer to the contents of the letter. Instead, the text describes how happy Rinaldo feels after reading it. **Choice D is incorrect**. Although the text does describe Rinaldo's reaction to the letter, the text doesn't begin by discussing Atlante's inspiration for writing the letter. Instead, the text begins by discussing the delivery of the letter.

20 Correct answer **C** Medium ‹ Back to question

C It makes an extended comparison of night to a human being.

Choice C is the best answer because it most accurately describes the overall structure of the text. Throughout the text, the speaker characterizes nighttime as if it were a person who wears clothing ("a garment" that is "velvet soft" and "violet blue") and a veil "over her face" and who moves her hands "slowly with their gem-starred light" through her dark hair. Thus, the text is structured as an extended comparison of night to a human being.

Choice A is incorrect because the text never mentions any particular location; instead, it focuses on presenting a single description of night as a person with certain clothing and features. **Choice B is incorrect** because the text doesn't make any reference to the sun or sunrise; instead, it focuses on presenting a single image of night as a person with certain clothing and

features. **Choice D is incorrect**. Rather than describing how nighttime changes seasonally (or in any other way), the text presents a single image of night as a person with certain clothing and features.

21 Correct answer **B** Medium Back to question

B It describes a problem that arises in research on a particular topic, then sketches a historian's approach to addressing that problem.

Choice B is the best answer. The text begins by stating a problem with research on the status of Choctaw women in the 1600s and 1700s: written primary sources underestimate the power they had in their traditional roles. Then it presents one historian's solution: looking to oral tradition and archeological findings for more insight into these roles.

Choice A is incorrect. This isn't the overall structure. The text never says that research should avoid written primary sources, just that research should also use oral tradition and archeological sites as sources. **Choice C is incorrect**. This isn't the overall structure. The text never mentions the advantages of using written primary sources. **Choice D is incorrect**. This isn't the overall structure. The text never says that the status of Choctaw women during the 1600s and 1700s is too challenging to research. And it doesn't mention any other topics to research instead.

22 Correct answer **A** Medium Back to question

A It describes a common view among archaeologists, then discusses a recent finding that challenges that view.

Choice A is the best answer because it most accurately describes the overall structure of the text. The text begins by introducing an assumption held by some archaeologists that in the past large-scale engineering projects would have needed an elite class to organize the projects and the labor. Next, the text indicates that there have been some discoveries that complicate this assumption and provides an ancient canal near the Alabama Gulf Coast as an example. Finally, the text presents research findings that an ancient canal—a large-scale project—was most likely made by an Indigenous society that didn't have an elite class. Thus, the text describes a common view held by archaeologists and then presents a recent finding that challenges that view.

Choice B is incorrect. Although the text mentions that researchers used radiocarbon dating, this occurs in the last sentence and there are no other methods mentioned or evaluated. Instead, the text presents an assumption about large-scale engineering projects and then introduces research into an ancient canal off the coast of Alabama that challenges the assumption. **Choice C is incorrect** because the study doesn't present multiple contradictions that are later resolved; instead, it introduces an assumption about a society's need for elite classes to oversee large-scale engineering projects and then later challenges that assumption by introducing a study that found that a large-scale engineering project was successfully undertaken by an Indigenous society known to have been "relatively free of social classes." **Choice D is incorrect** because the text doesn't mention a gap in scientific research. Instead, it identifies an assumption made by many archaeologists about the conditions needed for societies to undertake large-scale engineering projects and then presents an example of an ancient project that undermines that assumption.

23 Correct answer **D** Medium Back to question

D It presents the favorable opinion of Mr. Ely that other people hold and then describes the behaviors of Mr. Ely that enable him to maintain that favorable opinion.

Choice D is the best answer because it best describes the overall structure of the text. The first part of the text presents the favorable opinions that others hold of Mr. Ely: the laity of Milby regard him as having "remarkable powers and learning" and assume that he also impresses people in London, while his fellow clergy see him as "a discreet and agreeable fellow." The text then goes on to describe Mr. Ely's behaviors that enable him to cultivate and preserve his positive reputation. The text conveys

that he avoids confrontations, abstaining from "warm discussion[s]" (that is, heated or contentious ones); that he avoids offending anyone by "rarely [saying] what he thought himself" and by refraining from openly ridiculing anyone; and that he doesn't give anyone any reason to ridicule or belittle his own character ("he never gave any one an opportunity of laughing at *him*"). In other words, these are all behaviors that suggest that Mr. Ely avoids doing anything that might make people dislike him or think poorly of him. Thus, the text begins by presenting the favorable view that people have of Mr. Ely and then describes the behaviors that enable him to maintain that favorable view.

Choice A is incorrect because the text doesn't describe any events that caused people's regard for Mr. Ely to diminish. Instead, the text explains that the people of Milby hold him in high regard and describes behaviors that suggest how he cultivates that regard. **Choice B is incorrect** because the text doesn't suggest that Mr. Ely's neighbors are more naïve than Londoners are or that they've been misled. Although the text suggests that Mr. Ely is very guarded in his outward behavior and conceals from people when he may be internally mocking them, which might suggest that people know him less well than they think they do, there's nothing in the text to suggest that Londoners are less naïve and therefore less easily misled than Mr. Ely's neighbors are. The text states that the people of Milby believe Mr. Ely to be "remarkable" and that they assume that people in London must find him so, too; it doesn't say anything about what Londoners actually think of him. **Choice C is incorrect**. While the text discusses Mr. Ely's public conduct at length, describing the ways in which he carefully cultivates an agreeable public persona, the text doesn't discuss how Mr. Ely behaves in private at all; it therefore wouldn't be accurate to say that the text begins by emphasizing a discrepancy

between his public and private conduct. Furthermore, although the text concludes with examples illustrating that Mr. Ely typically doesn't share his true thoughts, indicating that he may be hiding aspects of his true personality when in public, and although the text as a whole conveys the idea that Mr. Ely benefits from this behavior, which might hint at his motives for doing so, the text doesn't conclude by alluding to those motives. Instead, the text merely concludes with a description of the behaviors he engages in to win his neighbors' and colleagues' approval.

24 Correct answer **C** — Hard — < Back to question

C It introduces an unexpected observation of a particular gas in Venus's atmosphere, presents an effort to investigate possible mechanisms that could explain that observation, and then notes an implication of that investigation's findings.

Choice C is the best answer because it most accurately describes the overall structure of the text. The text begins by discussing the detection of phosphine gas in Venus's atmosphere, indicating that it is unexpected because on Earth, phosphine derives from biological sources, and Venus is thought to be uninhabitable, thereby lacking in biological sources. The text then presents the effort by Bains et al. to determine whether one or more abiotic (nonbiological) pathways could explain the observed levels of phosphine on Venus, noting that none could. Finally, the text notes an implication: if phosphine exists on Venus, its presence would indicate that our current understanding of chemical processes on Venus that could produce it is inadequate. Thus, the text introduces an unexpected observation about Venus's atmosphere, presents an effort to investigate mechanisms related to that observation, and notes an implication of that effort's findings.

Choice A is incorrect. The text starts by mentioning that phosphine has been detected in Venus's atmosphere. Rather than discuss whether the presence of phosphine on Venus can be confirmed, the text focuses on the efforts of one team of researchers, Bains et al., who are trying to explain the observed amount of phosphine on Venus. Furthermore, the text doesn't suggest that the research team was skeptical about the presence of phosphine on Venus. **Choice B is incorrect** because, rather than indicating a consensus view about the phosphine detected on Venus, the text focuses on the fact that the detection "remains controversial," a framing that suggests the controversy is not a new phenomenon. The text also doesn't suggest that future atmospheric observations would be needed to settle the controversy. There is no consensus view about the presence of phosphine on Venus. **Choice D is incorrect** because the text does not compare levels of phosphine on Venus with levels on Earth, nor does it address practical challenges of studying the gas on Venus.

25 Correct answer **C** — Hard — Back to question

C It presents a method of textile production, identifies two approaches to that method, and then addresses the relative advantage of each approach.

Choice C is the best answer because it most accurately describes the overall structure of the text. The text begins by describing batik fabric and the method for producing it—designs are applied in wax on the fabric, after which the fabric is dyed. The text then indicates that a "canting" (a pen-shaped tool) is traditionally used to apply the wax finely in lines or dots, and that "the cap" (a copper stamp of an entire pattern) is another, faster way to apply the wax design. Finally, the text states that the cap has the advantage of making batik production quicker, whereas a canting tends to produce a more unique design, which often makes a batik created using a canting more desirable than a mass-produced one. Thus, the text presents a method of textile production, identifies two approaches to that method, and addresses the relative advantage of each approach.

Choice A is incorrect. Although the text describes making the textile batik with a canting and with the cap, both approaches are for making the same type of textile (batik). No other type of textile is mentioned in the text. **Choice B is incorrect**. Although the text indicates when batik originated (perhaps the 6th century CE), it doesn't describe how it originated. And although the text indicates that a batik created using a canting "is often preferred" over mass-produced batiks, nothing in the text suggests that this preference is a recent trend. **Choice D is incorrect**. Although the text indicates that the batik artists "skillfully" apply the wax designs that create the batik patterns, the overall discussion in the text describes factual aspects of the process of batik production without seeming to advocate for greater recognition of the art form.

26 Correct answer **B** — Hard — Back to question

B It introduces an unresolved scientific question, presents a research team's hypothesis pertaining to that question, and then describes an observation made by the team that conflicts with that hypothesis.

Choice B is the best answer because it most accurately describes the overall structure of the text. The text begins by explaining that human activities influence carbon and nitrogen levels in soil, but how deeply these effects are seen in the soil remains an unresolved question. Next, the text summarizes Okolo and colleagues' hypothesis regarding this question—which is that the different effects on carbon and nitrogen levels associated with different types of land use would also be observed below the topsoil layer—and then briefly explains the methods they used to test this hypothesis. Finally, the text states that the researchers found that at depths below the topsoil layer, carbon and nitrogen decreased to similarly low levels across all land-use types, a finding that conflicts with the team's hypothesis presented earlier in the text. Thus, the text introduces an unresolved scientific question, presents a research team's hypothesis pertaining to that question, and then describes an observation that the team made that conflicted with their hypothesis.

Choice A is incorrect. Although the text introduces a phenomenon (the fact that human activities influence carbon and nitrogen levels in the soil) that isn't fully understood by scientists and explains a research team's hypothesis about the phenomenon, the text doesn't describe how the team refined their hypothesis when a research finding contradicted it. **Choice C is incorrect** because the text doesn't discuss a process at all; rather, it poses an unsolved scientific question and presents a hypothesis that Okolo and colleagues tested to answer that question. Moreover, the text only describes one hypothesis; it doesn't mention any competing hypotheses, nor does it suggest that Okolo's team was able to determine which hypothesis was correct. **Choice D is incorrect** because the text doesn't begin by presenting a hypothesis that is under scientific debate; rather, it presents a question that scientists have been unable to answer and then introduces a hypothesis formulated by Okolo and colleagues. While the text does explain how Okolo's team tested their hypothesis, the text goes on to say that their data conflicted with their hypothesis, not that the data validated, or supported, their hypothesis.

27 Correct answer **B**

Hard

< Back to question

B It describes and accounts for a finding, characterizes the finding as representative of a general pattern, and then describes and accounts for an exception to that pattern.

Choice B is the best answer because it most accurately describes the overall structure of the text. The text begins by describing a study's finding about greater short-nosed fruit bats—namely, that high moonlight intensity inhibits the bats' activity—and also accounts for that finding, stating that this occurs because the potential increase in foraging success that greater lunar intensity enables doesn't offset these bats' increased vulnerability to predators (whose vision is also implied to become more acute under intense moonlight). The text goes on to characterize this finding as representative of a general pattern, stating that many nocturnal mammals behave similarly in response to changes in lunar intensity. The text concludes by describing an exception to this pattern, explaining that mongoose lemurs display an opposite tendency because they rely heavily on visual foraging. This strategy presumably would allow them to derive more benefit from greater lunar intensity than many other nocturnal mammals would, resulting in a "different balance of reward and risk" than exists for other nocturnal mammals. Therefore, the overall structure of the text is best described as a description and account of a finding, a characterization of that finding as representative of a pattern, and then a description and account of an exception to that pattern.

Choice A is incorrect. Although the text discusses two different responses to variations in moonlight intensity, explaining that as moonlight intensity increases, greater short-nosed fruit bats and many other nocturnal mammals decrease their foraging activity but mongoose lemurs increase their foraging activity, it doesn't leave one of these responses unexplained. The text accounts for both the typical response to increased lunar intensity (reduced activity due to predation risk) and the exception (increased activity due to a reliance on visual foraging) by making reference to a cost-benefit framework. **Choice C is incorrect**. Although the text presents a study's finding about the effect of increased lunar intensity on greater short-nosed fruit bats' activity before going on to contrast this behavior with the fact that mongoose lemurs display the opposite response to increased lunar intensity, the text doesn't explicitly invoke other studies and doesn't attribute this difference in observed behavior to the fact that the study of greater short-nosed fruit bats used different methods than studies of mongoose lemurs did. Rather, the text explains that the different observed behaviors can be attributed to differences in species' foraging strategies. **Choice D is incorrect**. Although the

text characterizes the behavior of mongoose lemurs in response to increased lunar intensity as an exception to a pattern of behavior observed in other nocturnal mammal species, this exception doesn't cast any doubt on the explanation that is offered for the general pattern observed among other species. Instead, the text uses the same cost-benefit framework to explain why increased lunar intensity is associated with decreased activity by greater short-nosed fruit bats and other nocturnal mammals but with increased activity by mongoose lemurs.

28 Correct answer **C**

Hard

< Back to question

C It introduces a natural phenomenon, refutes two potential explanations for that phenomenon, and then presents a third explanation for that phenomenon that the author regards as plausible.

Choice C is the best answer because it most accurately describes the overall structure of the text. The text begins by introducing the natural phenomenon of intermittent mass loss with regard to Asteroid 6478 Gault and notes that it curiously has not lost mass at its perihelion like other asteroids typically do. The text then refutes "solar energy–driven ice vaporization" and "the singular nature of impact ejection" as two possible explanations for Asteroid 6478 Gault's intermittent mass loss. Finally, the text presents Luu et al.'s explanation that "6478 Gault is shedding mass due to rotational instability," which the author says is "likely correct." Thus, the overall structure of the text is that it introduces a natural phenomenon, refutes two potential explanations for that phenomenon, and then presents a third explanation for that phenomenon that the author regards as plausible.

Choice A is incorrect because the text doesn't distinguish between multiple observations. It focuses on the single observation that Asteroid 6478 Gault is losing mass and evaluates multiple explanations for the phenomenon. The text also asserts that Luu et al.'s explanation is credible and "likely correct." **Choice B is incorrect** because the text describes a natural phenomenon, not

a specific astronomical finding. In addition, although the text does note flawed reasons for Asteroid 6478 Gault's intermittent mass loss, it doesn't mention that Asteroid 6478 Gault's intermittent mass loss is based on new evidence. **Choice D is incorrect**. Although the text does evaluate explanations for the cause of Asteroid 6478 Gault's intermittent mass loss, the text also asserts that Luu et al.'s explanation that they have put forth is persuasive and "likely correct."

29 Correct answer **A** Hard Back to question

A It provides a characterization about a field of thought by noting two works in it and then details a way in which some works in that field are more comprehensive than others.

Choice A is the best answer. The text starts by stating what moral philosophy is concerned with and naming two examples of works in the field. Then it describes a shortcoming of some works in that field (they say how but not why), and finally it states that other works try to avoid that shortcoming (by including both how and why to live a morally good life).

Choice B is incorrect. This is too extreme. The text never mentions whether the two works are popular or not, and it never argues that these works don't serve their intended purpose of describing how to live a morally good life. Rather, the text claims that works of moral philosophy that don't include both how and why to be moral are not useful to readers who don't already want to be moral. **Choice C is incorrect**. This isn't the overall structure. The text never discusses the history of moral philosophy at all, and it doesn't propose any topic for further research. **Choice D is incorrect**. This isn't the overall structure. The text never discusses which of the two works is more widely read.

06 Claims

Textual evidence: support, weaken, illustrate

A claim question hands you a claim and four candidates. Three of them are about the right subject and still do not do the job. Working out what the job is, before you read them, is the whole question.

144 questions | 24 Easy | 49 Medium | 71 Hard

FORM 1 · ILLUSTRATE

The claim is about a novel or a poem, and you pick the quotation that shows it happening, not one that mentions the subject.

FORM 2 · SUPPORT

The claim is a conclusion or a hypothesis, and you pick the finding that makes it more likely to be true.

FORM 3 · WEAKEN

The rare one. Same work backwards: the finding that makes the claim less likely.

THE ONE THING THEY SHARE

In all three forms you decide what the right answer would have to do before you read any of the four. Read them first and every one of them will look relevant, because every one of them is about the same subject. That is the design.

THE STEPS

1. Read the text and find the claim inside it.
2. Say what the right answer would have to do, before you read any of the four.
3. Cross out candidates that are about something else.
4. Choose the one that does the job.

WHAT TO TAKE FROM THIS

- Illustrate means show, not mention. A quotation can be about the right character and still show nothing about the claim.
- If the claim is about a feeling, the quotation has to contain that feeling, not just the person who has it.
- Poems work the same way. Find the line where the thing the claim describes actually happens.

EASY 24 questions

Ochre sea stars live in tidal pools along the shoreline of the Pacific Ocean. At night, they move to higher shore levels in search of prey. But scientists Corey Garza and Carlos Robles noticed that ochre sea stars stayed at lower levels at night after heavy rains. Garza and Robles hypothesized that a layer of fresh water formed by rainfall was a barrier to the sea stars. To test their hypothesis, the scientists did an experiment. They placed some sea stars in a climbable tank of seawater and other sea stars in a similar tank of seawater with a layer of fresh water on top. Then, the scientists watched the sea stars' behavior at night.

ID 3091f805

1 Mark for Review

Easy

Explanation >

Which finding from the experiment, if true, would most directly support Garza and Robles's hypothesis?

(A) None of the sea stars climbed to the tops of the tanks, but sea stars in the tank with only seawater moved around the bottom of the tank more than sea stars in the other tank did.

(B) Sea stars in the tank with only seawater climbed to the top of the tank, but sea stars in the other tank stopped climbing just below the layer of fresh water.

(C) Both groups of sea stars climbed to the tops of the tanks, but sea stars in the tank with only seawater climbed more slowly than sea stars in the other tank did.

(D) Sea stars in the tank with only seawater mostly stayed near the bottom of the tank, but sea stars in the other tank climbed into the layer of fresh water.

O Pioneers! is a 1913 novel by Willa Cather. In the novel, Cather portrays Alexandra Bergson as having a deep emotional connection to her natural surroundings: _____

ID 0770b53d

2 Mark for Review Easy Explanation ›

Which quotation from *O Pioneers!* most effectively illustrates the claim?

(A) "She had never known before how much the country meant to her. The chirping of the insects down in the long grass had been like the sweetest music. She had felt as if her heart were hiding down there, somewhere, with the quail and the plover and all the little wild things that crooned or buzzed in the sun. Under the long shaggy ridges, she felt the future stirring."

(B) "Alexandra talked to the men about their crops and to the women about their poultry. She spent a whole day with one young farmer who had been away at school, and who was experimenting with a new kind of clover hay. She learned a great deal."

(C) "Alexandra drove off alone. The rattle of her wagon was lost in the howling of the wind, but her lantern, held firmly between her feet, made a moving point of light along the highway, going deeper and deeper into the dark country."

(D) "It was Alexandra who read the papers and followed the markets, and who learned by the mistakes of their neighbors. It was Alexandra who could always tell about what it had cost to fatten each steer, and who could guess the weight of a hog before it went on the scales closer than John Bergson [her father] himself."

"To You" is an 1856 poem by Walt Whitman. In the poem, Whitman suggests that readers, whom he addresses directly, have not fully understood themselves, writing, _____

ID 6f626ae5

3 Mark for Review Easy Explanation ›

Which quotation from "To You" most effectively illustrates the claim?

(A) "You have not known what you are, you have slumber'd upon yourself / all your life, / Your eyelids have been the same as closed most of the time."

(B) "These immense meadows, these interminable rivers, you are immense / and interminable as they."

(C) "I should have made my way straight to you long ago, / I should have blabb'd nothing but you, I should have chanted nothing / but you."

(D) "I will leave all and come and make the hymns of you, / None has understood you, but I understand you."

"We Are Marching" is a 1921 poem by Carrie Law Morgan Figgs. In the poem, the speaker predicts future success: _____

ID 6df33868

4 Mark for Review Easy Explanation ›

Which quotation from "We Are Marching" most effectively illustrates the claim?

(A) "Can't you hear the sound of feet?"

(B) "You who are out just get in line."

(C) "We have answered duty's call."

(D) "We shall never know defeat."

The Minneapolis Institute of Art in Minneapolis, Minnesota, has over 90,000 works of art. Digital images of thousands of those works have been put online through the museum's website and the Google Arts & Culture project. One of the images is of *Mississippi Delta*, a drawing by Siah Armajani. In a paper, a student claims that putting a work from the museum online increases the number of people who experience that work.

ID 0fc0a773

5 Mark for Review Easy Explanation ›

Which finding, if true, would most directly support the underlined claim?

(A) The Minneapolis Institute of Art has several works by Siah Armajani.

(B) Many people who have been to Minneapolis say that the Minneapolis Institute of Art is worth visiting.

(C) *Mississippi Delta* has been praised by some art critics.

(D) Each year, more people access the online image of *Mississippi Delta* than visit the Minneapolis Institute of Art in person.

"Aunt Sue's Stories" is a 1926 poem by Langston Hughes. In the poem, the speaker indicates that the stories Aunt Sue tells are based on Aunt Sue's personal experiences, saying that _____

ID 0a77c362

6 Mark for Review Easy Explanation ›

Which choice most effectively uses a quotation from "Aunt Sue's Stories" to illustrate the claim?

(A) dark shadows "cross and recross / Aunt Sue's stories."

(B) a listening child "knows that Aunt Sue / Never got her stories out of any book at all, / But that they came / Right out of her own life."

(C) the stories are told during "Summer nights on the front porch."

(D) the people in the stories "Mingle themselves softly / In the flow of old Aunt Sue's voice, / Mingle themselves softly."

Biologists have generally believed that the diet of jaguars consists mostly of land-based mammals, but researchers studying a population of jaguars living in the Brazilian Pantanal, a tropical wetland, claim that jaguars can survive on a diet of more fish and aquatic reptiles than mammals.

ID 5f6adeee

7 Mark for Review Easy Explanation ›

Which finding, if true, would most directly support the researchers' claim?

(A) Aquatic reptile and fish remains were detected more often than were mammal remains in an analysis of jaguar waste matter found in the area.

(B) Exceptionally high numbers of yacare caiman, an aquatic reptile, were found living in the area.

(C) Aquatic prey like the reptiles and fish in the area provide a source of omega-3 fatty acids that aren't often found in land mammals.

(D) When jaguars in the area preyed on mammals, they tended to prefer semiaquatic ones like capybaras.

Many scientists have believed that giraffes are solitary creatures, preferring to spend their time alone instead of with others. But observations of giraffes and their behavior in recent years has suggested that these animals may be more social than we once thought. For example, scientists Zoe Muller and Stephen Harris claim that giraffes may even help each other care for one another's newborns.

ID 40578580

8 Mark for Review Easy Explanation ›

Which finding, if true, would most directly support Muller and Harris's conclusion?

(A) Female giraffes have been observed feeding young giraffes that aren't their direct offspring.

(B) Confrontations between a younger and an older male giraffe are frequently observed.

(C) Some female giraffes have been observed sniffing and licking their newborn offspring.

(D) Giraffes are able to make sounds but are rarely observed communicating with others.

Treasure Island is an 1883 novel by Robert Louis Stevenson. When the narrator was a child, his father ran a hotel. A mysterious sailor came to stay at the hotel. The narrator was frightened of the sailor, as can be seen when the narrator says, _____

ID 2a5aa08a

9 Mark for Review Easy Explanation ›

Which quotation from *Treasure Island* most effectively illustrates the claim?

(A) "I remember [the sailor] as if it were yesterday, as he came plodding to the inn door, his sea-chest following behind him in a hand-barrow."

(B) "[The sailor] was a very silent man by custom. All day he hung round the cove or upon the cliffs with a brass telescope."

(C) "All the time he lived with us [the sailor] made no change whatever in his dress but to buy some stockings from a hawker. One of the [corners] of his hat having fallen down, he let it hang from that day forth, though it was a great annoyance when it blew."

(D) "How [the sailor] haunted my dreams, I need scarcely tell you. On stormy nights, when the wind shook the four corners of the house and the surf roared along the cove and up the cliffs, I would see him in a thousand forms, and with a thousand diabolical expressions."

"Valia" is a 1907 short story by Leonid Andreyev. In the story, the author emphasizes that the setting where the character Valia is reading is nearly silent: _____

ID 628e1305

10 Mark for Review Easy Explanation ›

Which quotation from "Valia" most effectively illustrates the claim?

(A) "The hand in which he carried his book was getting stiff with cold, but he would not ask his mother to take the book from him."

(B) "Valia was reading a huge, very huge book, almost half as large as himself."

(C) "Valia approached the window and examined the toys."

(D) "Everything in the room was quiet, so quiet that the only thing to be heard was the rustling of the pages he turned."

Janet Echelman is a sculptor and fiber artist. She has installed giant sculptures all over the world. Echelman uses bright and flowing materials, which mimic the wind. However, while her sculptures appear as delicate as a breeze, they are actually very durable.

ID 38d75269

11 Mark for Review — Easy — Explanation ›

Which quotation from an article about Echelman's sculptures, if true, would most effectively illustrate the underlined claim?

(A) "Echelman uses a special program that makes a 3D model of the sculpture."

(B) "The first part of planning a new sculpture is done using paper and pencil, and then a digital program is used to finalize the design."

(C) "The materials that Echelman uses to build her sculptures are both flexible and strong."

(D) "Each sculpture is designed to reflect local landmarks from the area in which it is eventually installed."

"Banking Coal" is a 1922 poem by Jean Toomer. The poem describes a fire being lit and maintained. In the poem, the speaker praises the person who built the fire: _____

ID b238a07a

12 Mark for Review — Easy — Explanation ›

Which quotation from "Banking Coal" most effectively illustrates the claim?

(A) "I've seen them set to work, each in his way, / Though all with shovels and with ashes."

(B) "Whoever it was who brought the first wood and coal / To start the Fire, did his part well."

(C) "Sometimes the fire left alone / Would die..."

(D) "Whereupon they'd crawl in hooded night-caps / Contentedly to bed."

Researchers Narelle Haworth and Amy Schramm studied bicycling behavior in Queensland, Australia. Haworth and Schramm asked adult bike riders questions about their level of experience, reasons for riding a bike, and route preferences. The researchers claim that experienced riders who mainly bike to work tend to prefer routes that reduce their travel time.

ID ac7166f7

13 Mark for Review Easy Explanation ›

Which survey response from a bike rider in Queensland would best support the underlined claim?

(A) "I have a bike, but I don't ride it very often. When the weather is nice, I sometimes use my bike to go into town to do some shopping."

(B) "I just got a new bike, and I'm looking forward to going on rides with my friends soon."

(C) "I bike to my job every day. There's a nice bike path that goes through a park, but I use the bike lane on the main road because it's faster."

(D) "I usually bike to work, but I'm taking the bus now because my bike has a broken part that needs to be fixed."

"The Rock and the Sea" is an 1893 poem by Charlotte Perkins Gilman. In the poem, a rock is portrayed as intending to confront and restrain the sea: _____

ID 47f2cddd

14 Mark for Review Easy Explanation ›

Which quotation from "The Rock and the Sea" most effectively illustrates the claim?

(A) "I am the Rock. Black midnight falls; / The terrible breakers rise like walls; / With curling lips and gleaming teeth / They plunge and tear at my bones beneath."

(B) "I am the Sea. I hold the land / As one holds an apple in his hand, / Hold it fast with sleepless eyes, / Watching the continents sink and rise."

(C) "I am the Rock, presumptuous Sea! / I am set to encounter thee. / Angry and loud or gentle and still, / I am set here to limit thy power, and I will!"

(D) "I am the Sea. The earth I sway; / Granite to me is potter's clay; / Under the touch of my careless waves / It rises in turrets and sinks in caves."

Just Patty is a 1911 novel by Jean Webster. Patty and her friends have just been informed that they will no longer be roommates while at school. Patty talks to Mrs. Trent, the head of the school, about the situation. The narrator presents Patty as trying hard to convince Mrs. Trent to allow the group to continue sharing a room: _____

ID e1ee5f5c

15 Mark for Review Easy Explanation ›

Which quotation from *Just Patty* most effectively illustrates the claim?

(A) "[Mrs. Trent's] lips twitched. It was a fact, deplored by her assistants, that her sense of humour frequently ran away with her sense of justice."

(B) "[Mrs. Trent] nodded dismissal, and the three of them found themselves in the hall again. They looked at one another for a moment of blank silence."

(C) "Patty's eyes suddenly brightened. She seized [her friends] by [the] elbow and shoved them into the empty schoolroom."

(D) "Patty did use all the diplomacy at her command. Having dwelt touchingly upon their long friendship, and their sorrow at being separated, she passed lightly to the matter of their new roommates."

Hip-hop pedagogy is a form of teaching that's gaining popularity across school subjects. It involves incorporating hip-hop and rap music into lessons as well as using hip-hop elements when teaching other subject matters. For example, Quan Neloms's students look for college-level vocabulary and historical events in rap songs. Researchers claim that in addition to developing students' social justice awareness, hip-hop pedagogy encourages student success by raising students' interest and engagement.

ID 26ee16ba

16 Mark for Review Easy Explanation ›

Which finding, if true, would most strongly support the underlined claim?

(A) Students tend to be more enthusiastic about rap music than they are about hip-hop music.

(B) Students who are highly interested in social justice issues typically don't sign up for courses that incorporate hip-hop and rap music.

(C) Educators report that they enjoy teaching courses that involve hip-hop and rap music more than teaching courses that don't.

(D) Courses that incorporate hip-hop and rap music are among the courses with the highest enrollment and attendance rates.

Many trees produce growth rings as they age, with each ring in a tree's trunk representing one year in the tree's life. This often makes it fairly easy to determine how old a tree was when it was cut down. To do so, you look at the tree stump and count the dark rings you see. But a researcher claims that this method often can't be used to identify the age of olive trees.

ID 73c091d2

17 Mark for Review — Easy — Explanation ›

Which detail, if true, would most directly support the researcher's claim?

(A) The oldest olive tree in the world is likely over 1,100 years old.

(B) Narrow growth rings can suggest that an olive tree experienced harsh conditions.

(C) Many olive trees have growth rings that are difficult to see.

(D) Olive trees thrive in areas with hot, dry summers.

Among the most visited art museums in the world, the Galleria dell'Accademia in Florence had approximately 1.7 million visitors in 2019. The Galleria dell'Accademia also offers virtual tours that art lovers can view online for free. Although there were initial concerns that people who viewed the virtual tours would then consider an in-person visit unnecessary, museum administrators claim that their surveys of in-person visitors show that those concerns were unjustified.

ID 98fd50f2

18 Mark for Review — Easy — Explanation ›

Which statement, if true, would most directly support the administrators' claim?

(A) Many surveyed visitors to the Galleria dell'Accademia indicated that the virtual tours convinced them to plan an in-person visit.

(B) Most surveyed visitors to the Galleria dell'Accademia indicated that they were unaware of the virtual tours before their first in-person visit.

(C) Most surveyed visitors to the Galleria dell'Accademia indicated that they lived somewhere other than Florence.

(D) Many surveyed visitors to the Galleria dell'Accademia indicated that they would likely view the virtual tours in order to reminisce about their in-person visit.

"The Mountain" is a 1914 poem by Robert Frost. In the poem, the speaker visits a town next to a mountain. The speaker claims to feel protected by the mountain, saying _____

ID abbea24d

19 Mark for Review — Easy — Explanation ›

Which quotation from "The Mountain" most effectively illustrates the claim?

(A) "A dry ravine emerged under boughs / Into the pasture."

(B) "The mountain stood there to be pointed at."

(C) "I felt it like a wall / Behind which I was sheltered from a wind."

(D) "I crossed the river and swung round the mountain."

Happy House is a 1920 novel by Jane Abbott. The narrator presents a young woman as being unimpressed with the house she is visiting:

_____

ID 72c7dafd

20 Mark for Review — Easy — Explanation ›

Which quotation from *Happy House* most effectively illustrates the claim?

(A) "Her first feeling was of disappointment; in the square lines of the house there was little claim to beauty."

(B) "Someone had opened one of the blinds so here there was more light."

(C) "The door, built squarely in the middle of the house, opened almost directly upon a stone-flagged path that led in a straight line to the road."

(D) "She tip-toed through the hall and opened the door on the right."

Olms are salamanders that live in underwater caves. Scientists once thought that olms stay in their caves all their lives. However, Raoul Manenti and team claim that olms regularly come to the surface to perform important activities such as finding food.

ID 0021d326

21 Mark for Review — Easy — Explanation ›

Which finding, if true, would most strongly support the underlined claim?

(A) Researchers determine that olms don't breed often.

(B) Researchers confirm that olms live in only a few cave systems.

(C) Researchers discover that earthworms from surface soils are a major part of olms' diet.

(D) Researchers learn that olms' brains differ from other salamanders' brains.

"The Bet" is an 1889 short story by Anton Chekhov. In the story, a banker is described as being very upset about something: _____

ID 3f7f35ea

22 Mark for Review Easy Explanation ›

Which quotation from "The Bet" most effectively illustrates the claim?

(A) "Then the banker cautiously broke the seals off the door and put the key in the keyhole."

(B) "It struck three o'clock, the banker listened; everyone was asleep in the house and nothing could be heard outside but the rustling of the chilled trees."

(C) "The banker, spoilt and frivolous, with millions beyond his reckoning, was delighted at the bet."

(D) "When [the banker] got home he lay on his bed, but his tears and emotion kept him for hours from sleeping."

Over the course of the 1900s, more and more Native Hawaiians spoke English instead of the Hawaiian language. To preserve their language, Native Hawaiian teachers founded the ʻAha Pūnana Leo preschool in 1984. They spoke Hawaiian while teaching, and their Native Hawaiian students were soon able to understand and speak it themselves. The school was a huge success. Eventually it opened locations around Hawaiʻi and started teaching Hawaiian to elementary and high school students too. Thanks to ʻAha Pūnana Leo, the number of young people who speak the language has increased.

ID c088a9a9

23 Mark for Review Easy Explanation ›

Which statement, if true, would most directly support the underlined claim?

(A) Fewer than fifty children could speak Hawaiian when ʻAha Pūnana Leo was founded, but now more than 2,000 students at ʻAha Pūnana Leo speak it.

(B) Roughly 680,000 Native Hawaiian people lived in the United States in 2020, and a little less than half of them lived in Hawaiʻi.

(C) Hawaiian is very similar to other languages that are spoken on the Polynesian Islands of the Pacific Ocean, including Tahitian, Samoan, and Māori.

(D) Besides Native Hawaiians, tens of thousands of people from other Pacific Islander communities live in Hawaiʻi today, including over 37,000 Samoans.

Scientists have long believed that giraffes are mostly silent and communicate only visually with one another. But biologist Angela Stöger and her team analyzed hundreds of hours of recordings of giraffes in three European zoos and found that giraffes make a very low-pitched humming sound. The researchers claim that the giraffes use these sounds to communicate when it's not possible for them to signal one another visually.

ID c384987b

24 Mark for Review Easy Explanation ›

Which finding, if true, would most directly support Stöger and her team's claim?

(A) Giraffes have an excellent sense of vision and can see in color.

(B) The giraffes only produced the humming sounds at night when they couldn't see one another.

(C) Wild giraffes have never been recorded making humming sounds.

(D) Researchers observed other animals in European zoos humming.

MEDIUM 49 questions

Fish whose DNA has been modified to include genetic material from other species are known as transgenic. Some transgenic fish have genes from jellyfish that result in fluorescence (that is, they glow in the dark). Although these fish were initially engineered for research purposes in the 1990s, they were sold as pets in the 2000s and can now be found in the wild in creeks in Brazil. A student in a biology seminar who is writing a paper on these fish asserts that their escape from Brazilian fish farms into the wild may have significant negative long-term ecological effects.

ID 29f5c8c2

25 Mark for Review Medium Explanation ›

Which quotation from a researcher would best support the student's assertion?

(A) "In one site in the wild where transgenic fish were observed, females outnumbered males, while in another the numbers of females and males were equivalent."

(B) "Though some presence of transgenic fish in the wild has been recorded, there are insufficient studies of the impact of those fish on the ecosystems into which they are introduced."

(C) "The ecosystems into which transgenic fish are known to have been introduced may represent a subset of the ecosystems into which the fish have actually been introduced."

(D) "Through interbreeding, transgenic fish might introduce the trait of fluorescence into wild fish populations, making those populations more vulnerable to predators."

Male túngara frogs make complex calls to attract mates, but their calls also attract frog-biting midges, insects that feed on the frogs' blood. Researchers Ximena Bernal and Priyanka de Silva wondered if the calls alone are sufficient for midges to locate the frogs or if midges use carbon dioxide emitted by frogs as an additional cue to their prey's whereabouts, like mosquitoes do. In an experiment, the researchers placed two midge traps in a túngara frog breeding area. One trap played recordings of túngara frog calls and the other released carbon dioxide along with playing the calls. Bernal and de Silva concluded that carbon dioxide does not serve as an additional cue to frog-biting midges.

ID 60c6b64d

26 Mark for Review — Medium — Explanation ›

Which finding from the experiment, if true, would most directly support Bernal and de Silva's conclusion?

(A) Only a small number of midges were found in the traps, though the majority were found in the trap that played calls and released carbon dioxide.

(B) Midges entered the trap that released carbon dioxide and played calls only during or immediately after periods of carbon dioxide release.

(C) More midges were found in the trap that only played calls than in the trap that played calls and released carbon dioxide.

(D) The trap that released carbon dioxide and played calls attracted few midges when carbon dioxide concentrations were low but attracted many midges when carbon dioxide concentrations were high.

"Loon Point" is a 1912 poem by Amy Lowell. In the poem, which presents a nighttime scene on a body of water, Lowell describes an element of nature as an active participant in the experience, writing, _____

ID 1f3be847

27 Mark for Review — Medium — Explanation ›

Which quotation from "Loon Point" most effectively illustrates the claim?

(A) "Through the water the moon writes her legends / In light, on the smooth, wet sand."

(B) "Softly the water ripples / Against the canoe's curving side."

(C) "Or like the snow-white petals / Which drop from an overblown rose."

(D) "But the moon in her wayward beauty / Is ever and always the same."

Accomplished printmaker and sculptor Elizabeth Catlett (1915–2012) used her art to explore the Black experience in the United States. In a paper for an art history class, a student claims that Catlett had a particular talent for unifying various artistic traditions and styles in her work.

ID 7cbb9764

28 Mark for Review — Medium — Explanation ›

Which quotation from a scholar describing Catlett's work would best support the student's claim?

(A) "In *Mother and Child*, a sculpture of two Black figures, Catlett used an ancient Indigenous sculpting technique and combined the visual aesthetic of modern Mexican muralists with that of German artist Kathe Kollwitz."

(B) "In her collage *New Generation*, Catlett overlaid fabric onto the canvas to represent the clothing of a father and his toddler, positioned to evoke classic images of a mother and child."

(C) "Created in 1968, Catlett's sculpture *Black Unity*, a stylized fist sculpted from mahogany and measuring two feet across, remains an important piece and has received renewed and well-deserved attention in recent years."

(D) "One series of Catlett's prints, made by the artist using the linoleum cut method, depicts several notable African American women, including Harriet Tubman and Sojourner Truth."

A student is examining a long, challenging poem that was initially published in a quarterly journal without explanatory notes, then later republished in a stand-alone volume containing only that poem and accompanying explanatory notes written by the poet. The student asserts that the explanatory notes were included in the republication primarily as a marketing device to help sell the stand-alone volume.

ID 94ca8ebd

29 Mark for Review — Medium — Explanation ›

Which statement, if true, would most directly support the student's claim?

(A) The text of the poem as published in the quarterly journal is not identical to the text of the poem published in the stand-alone volume.

(B) Many critics believe that the poet's explanatory notes remove certain ambiguities of the poem and make it less interesting as a result.

(C) The publishers of the stand-alone volume requested the explanatory notes from the poet in order to make the book attractive to readers who already had a copy of the poem in a journal issue.

(D) Correspondence between the poet and the publisher reveals that the poet's explanatory notes went through several drafts.

Studies have demonstrated that positive feedback enhances real-world exercise performance and exercisers' psychological experience of physical activity. Nicole Trewick and team tested their prediction that positive feedback would produce analogous results among participants cycling on a stationary bike in a virtual reality environment. After monitoring participants' pedaling rate and heart rate to determine the effects on their physical endurance (e.g., their ability to sustain a certain target pedaling and heart rate) of feedback (positive, negative, or neutral) delivered at regular intervals, the researchers used participants' questionnaire responses to assess their psychological experience of the task.

ID b0b40727

30 Mark for Review — Medium — Explanation ›

Assuming participants had similar baseline fitness levels, which finding from the study, if true, would most strongly suggest that positive feedback had the predicted psychological effect but not the predicted physical effect?

(A) Compared with participants who received positive feedback, participants who received neutral feedback reported lower enjoyment of the activity on average but maintained their heart and pedaling rates for longer durations than participants who received negative feedback.

(B) Compared with participants who received positive or neutral feedback, participants who received negative feedback reported lower enjoyment of the activity on average but maintained their heart and pedaling rates for longer durations.

(C) Compared with participants who received negative feedback, participants who received neutral feedback reported similar levels of enjoyment of the activity on average but maintained their heart and pedaling rates for shorter durations than participants who received positive feedback.

(D) Compared with participants who received negative or neutral feedback, participants who received positive feedback reported greater enjoyment of the activity on average but maintained their heart and pedaling rates for approximately similar durations.

Roasted green chiles are a popular ingredient in Southwestern cuisine, but the traditional roasting method of burning propane is not environmentally friendly. To see if solar power could provide a better alternative, engineer Kenneth Armijo and his team roasted batches of green chiles using between 38 and 42 heliostats, which are devices that concentrate sunlight. The team was successful in reaching the same roasting temperature used in traditional propane roasting, but they found that propane yielded faster results. While the fastest solar-roasted green chiles took six minutes, batches using propane took only four. Armijo hypothesizes that they can reduce the roasting time for solar-roasted green chiles by using more heliostats.

ID 85439572

31 Mark for Review — Medium — Explanation ›

Which finding, if true, would most directly support Armijo's hypothesis?

(A) The temperature inside the roasting drum is distributed more evenly when roasting green chiles with solar power than with propane.

(B) Attempts to roast green chiles using 50 heliostats yields results in fewer than six minutes.

(C) Green chile connoisseurs prefer the flavor of solar-roasted green chiles over the flavor of propane-roasted green chiles.

(D) The skins of solar-roasted green chiles are easier to peel than the skins of propane-roasted green chiles.

Baltimore, Maryland, has installed engineered structures along 71% of its shoreline to protect infrastructure from wave erosion and other hazards, a practice known as shoreline hardening. To evaluate the responses of waterbirds to two types of hardening structures—riprap and bulkheads—Diann Prosser et al. surveyed waterbird communities consisting of the tundra swan, the great blue heron, and 62 other species at different sites in the Chesapeake Bay on the US East Coast. Utilizing the Index of Waterbird Community Integrity (IWCI), on which a high score corresponds to high community integrity, the researchers found that bulkheads are more strongly negatively correlated with waterbird community integrity than is riprap.

ID 356ad646

32 Mark for Review — Medium — Explanation ›

Which finding, if true, would most directly illustrate the researchers' finding?

(A) The difference in average IWCI scores for waterbird communities at Stony and Old Road, two sites with a higher percentage of shoreline consisting of bulkheads than of riprap, was statistically insignificant.

(B) Waterbird communities at Old Road, a site with a relatively high percentage of shoreline consisting of bulkheads, had lower average IWCI scores than did waterbird communities at Miles, a site with a relatively high percentage of shoreline consisting of riprap.

(C) Waterbird communities at Curtis, a site with a high percentage of shoreline consisting of bulkheads and riprap, had lower average IWCI scores than did waterbird communities at Onancock, a site with a low percentage of shoreline consisting of bulkheads and riprap.

(D) Waterbird communities at Curtis, a site with equal percentages of shoreline consisting of bulkheads and riprap, had higher average IWCI scores than did waterbird communities at Miles, a site with different percentages of shoreline consisting of bulkheads and riprap.

Sandra Cisneros's 1984 novella *The House on Mango Street* made a lasting impact on US literature. Its depiction of Mexican American culture inspired later authors to examine their own heritage within their fictional works. Also influential was the book's portrayal of the main character, Esperanza, during a pivotal year of her youth. This insightful depiction of a preteen girl encouraged authors who, like Cisneros herself, are Latina to use fictional works to examine experiences from their own youth.

ID a13541c0

33 Mark for Review — Medium — Explanation ›

Which statement, if true, would most strongly support the claim in the underlined sentence?

(A) In interviews, a number of Latina authors say that *The House on Mango Street* inspired them to write about their own adolescence in their novels.

(B) In published writings, several prominent authors who are not Latina say that reading *The House on Mango Street* influenced their approach to writing fiction.

(C) The *House on Mango Street* has sold over six million copies and is one of the most commonly read books among high school and university students in the US.

(D) Since 1984, new novels about young Latina characters by Latina authors have often been compared to *The House on Mango Street*.

Rivers rich in sediment appear yellow, while increases in red algae make rivers appear red. To track things like the sediment or algae content of large US rivers, John R. Gardner and colleagues used satellite data to determine the dominant visible wavelengths of light measured for various segments of these rivers. The researchers classified wavelengths of 495 nanometers (nm) and below as red, wavelengths between 495 and 560 nm as blue, and wavelengths of 560 nm and above as yellow. The researchers concluded that for the Missouri River, segments flowing into lakes tend to carry more sediment than those flowing out of lakes.

ID dd72993d

34 Mark for Review Medium Explanation ›

Which finding, if true, would most directly support the researchers' conclusion?

(A) The segments of the Missouri River that had higher levels of chlorophyll-a, which contributes to the green color of photosynthetic organisms, have dominant wavelengths of light between 490 and 560 nm.

(B) In lakes through which segments of the Missouri River pass, the dominant wavelength of light tended to be above 560 nm near the lakes' shores and below 560 nm in the lakes' centers.

(C) The majority of the segments of the Missouri River were found to have dominant wavelengths of light significantly higher than 560 nm.

(D) Segments of the Missouri River flowing into lakes typically had dominant wavelengths of light above 560 nm, while segments flowing out of lakes typically had dominant wavelengths below 560 nm.

"Mrs. Spring Fragrance" is a 1912 short story by Sui Sin Far. In the story, Mrs. Spring Fragrance, a Chinese immigrant living in Seattle, is traveling in California. In letters to her husband and friend, she demonstrates her concern for what's happening at her home in Seattle while she is away: _____

ID 25176ff8

35 Mark for Review Medium Explanation ›

Which quotation from Mrs. Spring Fragrance's letters most effectively illustrates the claim?

(A) "My honorable cousin is preparing for the Fifth Moon Festival, and wishes me to compound for the occasion some American 'fudge,' for which delectable sweet, made by my clumsy hands, you have sometimes shown a slight prejudice."

(B) "Next week I accompany Ah Oi to the beauteous town of San José. There will we be met by the son of the Illustrious Teacher."

(C) "Forget not to care for the cat, the birds, and the flowers. Do not eat too quickly nor fan too vigorously now that the weather is warming."

(D) "I am enjoying a most agreeable visit, and American friends, as also our own, strive benevolently for the accomplishment of my pleasure."

Plants like potatoes, tomatoes, and soybeans are susceptible to bacterial wilt disease caused by the bacteria *Ralstonia solanacearum*. A multinational team of scientists led by Zhong Wei studied whether other microbes in the soil might influence the degree to which plants are affected by the disease. The team sampled soil surrounding individual tomato plants over time and compared the results of plants that became diseased with those that remained healthy. They concluded that the presence of certain microbes in the soil might explain the difference between healthy and diseased plants.

ID 67b59a67

36 Mark for Review Medium Explanation ›

Which finding, if true, would most directly support the team's conclusion?

(A) The soil surrounding healthy plants contained significantly higher concentrations of microbes known to inhibit *Ralstonia solanacearum* than the soil surrounding diseased plants did.

(B) The soil surrounding the plants contained high concentrations of *Ralstonia solanacearum* regardless of whether the plants were affected by wilt disease.

(C) The soil surrounding healthy plants tended to have significantly higher moisture levels than the soil surrounding diseased plants did.

(D) By the end of the experiment, over half the plants had been affected by wilt disease regardless of differences in the types and concentrations of microbes in the surrounding soil.

The Land of Enchantment is a 1906 travel book by Lilian Whiting. In the book, which describes the experience of traveling through the southwestern United States by train, Whiting reflects on the escape from everyday life that such a journey provides: _____

ID 5fb6ed10

37 Mark for Review Medium Explanation ›

Which quotation from *The Land of Enchantment* most effectively illustrates the claim?

(A) "The opportunities and advantages already offered and constantly increasing are greater than would at first be considered possible."

(B) "The social and the picturesque charm of the long journey is singularly enhanced by the leisurely stops made for refreshment."

(C) "The real journey begins, of course, at Chicago, and as these trains leave in the evening the traveller fares forth in the seclusion of his berth."

(D) "One experiences a certain sense of detachment from ordinary day and daylight duties that is exhilarating."

"Looking Back on Girlhood" is an 1892 short story by Sarah Orne Jewett. In the story, the narrator explains that she prefers her hometown to other places she has visited: _____

ID 57303718

38 Mark for Review — Medium — Explanation >

Which quotation from "Looking Back on Girlhood" most effectively illustrates this claim?

(A) "There is always something fresh, something to be traced or discovered, something particularly to be remembered."

(B) "Two large rivers join just below the village at the head of tide-water, and these, with the great inflow from the sea, make a magnificent stream, bordered by lovely green fields that slope gently to long lines of willows at the water's edge."

(C) "I have had a good deal of journeying in my life, and taken great delight in it, but I have never taken greater delight than in my rides and drives and tramps and voyages within the borders of my native town."

(D) "There is never-ending pleasure in making one's self familiar with such a region."

As a monthly newsletter formed in 1969 by a group of Asian American students at the University of California, Los Angeles, *Gidra* helped raise awareness about social and political issues concerning the Asian American community on campus and at large. The newsletter had an expansive reach for a publication of its kind: around 4,000 copies were published each month. A student writing a history paper, however, hypothesizes that *Gidra*'s influence cannot be measured by the number of newsletters published monthly alone.

ID e7dc27dc

39 Mark for Review — Medium — Explanation >

Which finding, if true, would most directly support the student's hypothesis?

(A) The students who initially formed *Gidra* each contributed financially to its creation.

(B) In addition to covering current events, *Gidra* also featured works of art and literature.

(C) *Gidra* was initially based out of the Asian American Studies Center at UCLA.

(D) People would often give their copies of *Gidra* to others once they had finished reading an issue.

"Mr. Cornelius Johnson, Office-Seeker" is a 1900 short story by Paul Laurence Dunbar. In the story, the narrator describes Mr. Cornelius Johnson's appearance as conveying his exaggerated sense of his importance:

ID 29cde5fa

40 Mark for Review Medium Explanation ›

Which quotation from "Mr. Cornelius Johnson, Office-Seeker" most effectively illustrates the claim?

(A) "He carried himself always as if he were passing under his own triumphal arch."

(B) "The grey Prince Albert was scrupulously buttoned about his form, and a shiny top hat replaced the felt of the afternoon."

(C) "It was a beautiful day in balmy May and the sun shone pleasantly on Mr. Cornelius Johnson's very spruce Prince Albert suit of grey as he alighted from the train in Washington."

(D) "Mr. Cornelius Johnson always spoke in a large and important tone."

Many insects are iridescent, or have colors that appear to shimmer and change when seen from different angles. Scientists have assumed that this feature helps to attract mates but could also attract predators. But biologist Karin Kjernsmo and a team had the idea that the shifting appearance of colors might actually make it harder for other animals to see iridescent insects. To test this idea, the team put beetle forewings on leaves along a forest path and then asked human participants to look for them. Some of the wings were naturally iridescent. Others were painted with a nonchanging color from the iridescent spectrum, such as purple or blue.

ID 03e5cf33

41 Mark for Review Medium Explanation ›

Which finding, if true, would most directly support the team's idea?

(A) On average, participants found most of the purple wings and blue wings and far fewer of the iridescent wings.

(B) On average, participants found the iridescent wings faster than they found the purple wings or blue wings.

(C) Some participants reported that the purple wings were easier to see than the blue wings.

(D) Some participants successfully found all of the wings on the leaves.

There Is Confusion is a 1924 novel by Jessie Redmon Fauset. In the novel, the narrator portrays the character Joanna as someone who admires ambition in other people to the exclusion of all other qualities: _____

ID ed586475

42 Mark for Review Medium Explanation ›

Which quotation from *There Is Confusion* most effectively illustrates the claim?

(A) "Joanna was mightily interested in people who had a 'purpose' in life. Otherwise not at all."

(B) "Indeed from the very beginning Joanna showed her preference for her father."

(C) "Joanna was like her father not only so far as ambition was concerned but also in her willingness to work."

(D) "She had a good sense of logic, a strong power of concentration, and a remarkably retentive and visualizing memory."

"Often Rebuked, Yet Always Back Returning" is an 1846 poem by Emily Brontë. The poem conveys the speaker's determination to experience the countryside around her: _____

ID 81af81d4

43 Mark for Review Medium Explanation ›

Which quotation from the poem most effectively illustrates the claim?

(A) "Often rebuked, yet always back returning / To those first feelings that were born with me, / And leaving busy chase of wealth and learning /For idle dreams of things which cannot be."

(B) "I'll walk, but not in old heroic traces, / And not in paths of high morality, / And not among the half-distinguished faces, / The clouded forms of long-past history."

(C) "I'll walk where my own nature would be leading: / It vexes me to choose another guide: / Where the grey flocks in ferny glens are feeding; /Where the wild wind blows on the mountain side."

(D) "To-day, I will seek not the shadowy region; / Its unsustaining vastness waxes drear; / And visions rising, legion after legion, / Bring the unreal world too strangely near."

"Ad recall" measures how memorable an advertising campaign is. To provide advertisers with information about their ads' memorability, a social media site regularly surveys users about whether they remember ads they had recently interacted with on the site. In a study that drew on this survey data, advertising researcher Kristen Sussman and colleagues noted that different kinds of social media interactions involve different levels of cognitive engagement: commenting on or sharing a post is more cognitively demanding than is clicking on embedded links or on a "like" button. The researchers hypothesized that interactions indicating high levels of cognitive engagement with ad content would result in relatively high levels of ad recall.

ID 8af0c099

44 Mark for Review — Medium — Explanation ›

Which finding, if true, would most directly support the researchers' hypothesis?

(A) Users who interacted with an ad were much more likely to do so by clicking on the ad's "like" button than they were to interact with the ad in any other way.

(B) Users who interacted with an ad were significantly more likely to purchase the advertised product at the time they saw the ad than were users who saw the ad but did not interact with it.

(C) Compared with users who clicked on links in an ad, users who commented on that same ad were significantly more likely to remember seeing the ad when surveyed two days later.

(D) Although users who shared an ad were highly likely to remember details from the ad when surveyed two days later, those same users tended to forget those details when surveyed again a week later.

External shopping cues are a type of marketing that uses obvious messaging—a display featuring a new product, for example, or a "buy one, get one free" offer—to entice consumers to make spontaneous purchases. In a study, data scientist Sam K. Hui and colleagues found that this effect can also be achieved with a less obvious cue: rearranging a store's layout. The researchers explain that trying to find items in new locations causes shoppers to move through more of the store, exposing them to more products and increasing the likelihood that they'll buy an item they hadn't planned on purchasing.

ID f2b3b53b

45 Mark for Review — Medium — Explanation ›

Which response from a survey given to shoppers who made a purchase at a retail store best supports the researchers' explanation?

(A) "I needed to buy some cleaning supplies, but they weren't in their regular place. While I was looking for them, I saw this interesting notebook and decided to buy it, too."

(B) "I didn't buy everything on my shopping list today. I couldn't find a couple of the items in the store, even though I looked all over for them."

(C) "The store sent me a coupon for a new brand of soup, so I came here to find out what kinds of soup that brand offers. I decided to buy a few cans because I had the coupon."

(D) "This store is larger than one that's closer to where I live, and it carries more products. I came here to buy some things that the other store doesn't always have."

"On Virtue" is a 1766 poem by Phillis Wheatley. Wheatley addresses the poem directly to the quality of virtue, imploring it to assist her in reaching a future goal: _____

ID 25290c8d

46 Mark for Review Medium Explanation ›

Which quotation from "On Virtue" most effectively illustrates the claim?

(A) "Attend me, *Virtue*, thro' my youthful years! / O leave me not to the false joys of time! / But guide my steps to endless life and bliss."

(B) "I cease to wonder, and no more attempt / Thine height t'explore, or fathom thy profound."

(C) "O thou bright jewel in my aim I strive / To comprehend thee. Thine own words declare / Wisdom is higher than a fool can reach."

(D) "But, O my soul, sink not into despair, / *Virtue* is near thee, and with gentle hand / Would now embrace thee, hovers o'er thine head."

Many music streaming services also function as social media platforms: by giving users the option to follow friends and share curated playlists or information about their listening history, these platforms allow people to convey their music preferences and listening activities directly to their social networks. In a 2023 study, researcher Michael James Walsh interviewed frequent users of a popular music streaming platform to investigate how its social media dimensions shape their listening habits. Walsh found that these dimensions tended to make study participants feel more mindful of how their listening activities may be perceived, which in turn influenced how they managed those activities.

ID d52fca9f

47 Mark for Review Medium Explanation ›

Which quotation from a music streaming platform user would best illustrate Walsh's finding?

(A) "When I create playlists or choose songs to listen to, I often pick songs that I think the friends who are following me might be interested in listening to, rather than what I might actually prefer listening to in that moment."

(B) "Because the predictions the platform makes about what new songs I might like depend on my past listening habits, at times its recommendations can feel overly repetitive and unvarying."

(C) "The social aspects of music streaming make it really easy to create a sense of a shared listening experience with my friends, even if we aren't in the same room."

(D) "Listening to music through a streaming platform feels a lot more passive, since I don't need to make any deliberate choices about what music I'm going to consume, like I do when buying digital downloads or records and CDs."

"Lines Written in Early Spring" is a 1798 poem by William Wordsworth. In the poem, the speaker describes having contradictory feelings while experiencing the sights and sounds of a spring day: _____

ID 9e5ce27c

48 Mark for Review Medium Explanation ›

Which quotation from "Lines Written in Early Spring" most effectively illustrates the claim?

(A) "Through primrose-tufts, in that sweet bower, / The periwinkle trail'd its wreathes; / And 'tis my faith that every flower / Enjoys the air it breathes."

(B) "The budding twigs spread out their fan, / To catch the breezy air; / And I must think, do all I can, / That there was pleasure there."

(C) "The birds around me hopp'd and play'd: / Their thoughts I cannot measure, / But the least motion which they made, / It seem'd a thrill of pleasure."

(D) "I heard a thousand blended notes, / While in a grove I [sat] reclined, / In that sweet mood when pleasant thoughts / Bring sad thoughts to the mind."

In the early 1970s, art historian Michael Baxandall created an approach to viewing art called the "period eye," which explains how to look at art through the lens of its historical period. Baxandall argued that it is critical that art historians understand and communicate the original social and cultural contexts of older works of art so that it is clear what the artists intended and how the pieces would have been understood by their original viewers. Since it was first introduced, Baxandall's period eye has significantly influenced the practice of art history.

ID 10455a19

49 Mark for Review Medium Explanation ›

Which statement, if true, would most strongly support the claim in the underlined sentence?

(A) Art historians working today have largely rejected the idea, common among Baxandall's predecessors, that artists' intentions should influence how artworks are interpreted.

(B) For some historical periods, it is difficult for art historians to reconstruct how the original viewers of artworks understood what artists' intentions for their works were.

(C) Numerous art historians of the late twentieth century and twenty-first century have focused their scholarship on how various artworks were interpreted at the time of their creation.

(D) Many art historians working before the 1970s produced detailed analyses of the social and cultural contexts of older artworks, though few extended that approach to artworks produced in their own lifetimes.

"When Dawn Comes to the City" is a 1922 poem by Claude McKay, who immigrated to the United States from the island nation of Jamaica as an adult. The poem conveys McKay's contrasting feelings about New York City—his adopted home in the US—and his home country: _____

ID 99fdf71c

50 Mark for Review Medium Explanation ›

Which quotation from "When Dawn Comes to the City" most effectively illustrates the claim?

(A) "A lonely newsboy hurries by, / Humming a recent ditty; / Red streaks strike through the gray of the sky, / The dawn comes to the city [New York City]."

(B) "Dark figures start for work; / I watch them sadly shuffle on, / 'Tis dawn, dawn in New York. / But I would be on the island of the sea, / In the heart of the island of the sea."

(C) "And the shaggy Nannie goat is calling, calling, calling / From her little trampled corner of the long wide lea / That stretches to the waters of the hill-stream falling / Sheer upon the flat rocks joyously!"

(D) "The tired cars go grumbling by, / The moaning, groaning cars, / And the old milk carts go rumbling by / Under the same dull stars."

"John of God, the Water-Carrier" is a 1913 short story by María Cristina Mena. In the story, the narrator presents John as being a hard worker who is fully dedicated to his job as water carrier, or *aguador*: _____

ID 194dd448

51 Mark for Review Medium Explanation ›

Which quotation from "John of God, the Water-Carrier" most effectively illustrates the claim?

(A) "Very happy, he would jog home, the heavy silver pieces in his leather pockets making a discreet and dulcet '*trink-trak*' between his jugs and his body."

(B) "He learned that the city *aguador* may not blow his whistle to halt the traffic while he gravely crosses the street, but must wait for the passing of many vehicles, some with horses and some outlandishly without."

(C) "From early morn to the fall of the afternoon he would go from fountain to fountain and from portal to portal, his lean body so accustomed to bending that he never thought of straightening it, his head bowed as if in prayer."

(D) "When his first jugs had worn out—the sweet-scented, porous red clay becomes perforated in time—he had buried them to their necks in the corner where he slept, and they were now his treasury."

A researcher conducted an experiment inspired by studies suggesting that people may benefit from feeling frightened in certain circumstances, such as when watching scary movies or visiting haunted attractions. The researcher recruited several participants and had them walk through a local haunted house attraction. Immediately after exiting the attraction, each participant completed a survey about their experience. Based on the survey responses, the researcher claims that feeling frightened in controlled situations can boost a person's mood and confidence.

ID 08b28c1a

52 Mark for Review Medium Explanation ›

Which quotation from a participant would best illustrate the researcher's claim?

(A) "After I came out of the haunted house, I felt very accomplished and less stressed."

(B) "My friends kept laughing as we were walking through the haunted house."

(C) "The haunted house was scary at first, but I knew everyone was just acting, so I felt less scared after a few minutes."

(D) "The sense of relief I felt at the end of the haunted house was similar to the feelings I have when I finish a scary movie."

"Odalie" is an 1899 short story by Alice Dunbar-Nelson. In the story, a young woman named Odalie attends the annual Mardi Gras carnival in New Orleans, where she lives with her guardian Tante Louise. Dunbar-Nelson portrays Odalie as eager to escape the monotony of her everyday life:

_____

ID c6b470bb

53 Mark for Review Medium Explanation ›

Which quotation from "Odalie" most effectively illustrates the claim?

(A) "Mardi Gras was a tiresome day, after all, she sighed, and Tante Louise agreed with her for once."

(B) "In the old French house on Royal Street, with its quaint windows and Spanish courtyard green and cool, and made musical by the plashing of the fountain and the trill of caged birds, lived Odalie in convent-like seclusion."

(C) "When one is shut up in a great French house with a grim sleepy tante and no companions of one's own age, life becomes a dull thing, and one is ready for any new sensation."

(D) "It was Mardi Gras day at last, and early through her window Odalie could hear the jingle of folly bells on the [participants'] costumes, the tinkle of music, and the echoing strains of songs."

East Australian humpback whales migrate up to 10,000 kilometers each year to reach their breeding grounds. Researchers long believed that migrating whales live only on the extra energy they stored up during the feeding season. But marine biologist Vanessa Pirotta and her team aren't so sure. They analyzed 20 years of observations of the migrating whales made by citizen scientists (members of the public who help collect data for scientific research). The team claims that the whales may not live only on their stored energy during migration.

ID a9390104

54 Mark for Review — Medium — Explanation ›

Which finding, if true, would most directly support the team's claim?

(A) Citizen scientists have observed many different types of marine animals feeding alongside the whales.

(B) Citizen scientists have made many observations of the whales feeding as they migrate to their breeding grounds.

(C) Citizen scientists have made more observations of the whales migrating to their breeding grounds than of the whales returning to their feeding grounds.

(D) Citizen scientists have recently begun to observe the whales migrating to their breeding grounds earlier in the year.

The Post Office is a 1912 play by Rabindranath Tagore, originally written in Bengali. The character Amal is a young boy who imagines that the people he sees passing the window of his home are carefree even when engaged in work or chores, as is evident when he says to the daughter of a flower seller, _____

ID 39de2206

55 Mark for Review — Medium — Explanation ›

Which quotation from *The Post Office* most effectively illustrates the claim?

(A) "I see, you don't wish to stop; I don't care to stay on here either."

(B) "Oh, flower gathering? That is why your feet seem so glad and your anklets jingle so merrily as you walk."

(C) "I'll pay when I grow up—before I leave to look for work out on the other side of that stream there."

(D) "Wish I could be out too. Then I would pick some flowers for you from the very topmost branches right out of sight."

Jan Gimsa, Robert Sleigh, and Ulrike Gimsa have hypothesized that the sail-like structure running down the back of the dinosaur *Spinosaurus aegyptiacus* improved the animal's success in underwater pursuits of prey species capable of making quick, evasive movements. To evaluate their hypothesis, a second team of researchers constructed two battery-powered mechanical models of *S. aegyptiacus*, one with a sail and one without, and subjected the models to a series of identical tests in a water-filled tank.

ID 5d6ab069

56 Mark for Review Medium Explanation ›

Which finding from the model tests, if true, would most strongly support Gimsa and colleagues' hypothesis?

(A) The model with a sail took significantly less time to complete a sharp turn while submerged than the model without a sail did.

(B) The model with a sail displaced significantly more water while submerged than the model without a sail did.

(C) The model with a sail had significantly less battery power remaining after completing the tests than the model without a sail did.

(D) The model with a sail took significantly longer to travel a specified distance while submerged than the model without a sail did.

"To You" is an 1856 poem by Walt Whitman. In the poem, Whitman suggests that he deeply understands the reader, whom he addresses directly, writing, _____

ID 2ef8e367

57 Mark for Review Medium Explanation ›

Which quotation from "To You" most effectively illustrates the claim?

(A) "Your true soul and body appear before me."

(B) "Whoever you are, now I place my hand upon you, that you be my poem."

(C) "I should have made my way straight to you long ago."

(D) "Whoever you are, I fear you are walking the walks of dreams."

Pulitzer Prize–winning writer Héctor Tobar has built a multifaceted career as both a journalist and an author of short stories and novels. In an essay about Tobar's work, a student claims that Tobar blends his areas of expertise by applying journalism techniques to his creation of works of fiction.

ID 1d08c7ee

58 Mark for Review Medium Explanation ›

Which quotation from a literary critic best supports the student's claim?

(A) "For one novel, an imagined account of a real person's global travels, Tobar approached his subject like a reporter, interviewing people the man had met along the way and researching the man's own writings."

(B) "Tobar got his start as a volunteer for *El Tecolote*, a community newspaper in San Francisco, and wrote for newspapers for years before earning a degree in creative writing and starting to publish works of fiction."

(C) "Many of Tobar's notable nonfiction articles are marked by the writer's use of techniques usually associated with fiction, such as complex narrative structures and the incorporation of symbolism."

(D) "The protagonist of Tobar's third novel is a man who wants to be a novelist and keeps notes about interesting people he encounters so he can use them when developing characters for his stories."

A museum curator is writing a biographical statement about Trinidadian-born Chinese dancer, choreographer, and teacher Dai Ailian for a new exhibit on Chinese dance. The curator claims that some of the pieces Dai created shortly after arriving in mainland China in 1941, such as the solo dance *Yao Drum*, reflect a desire to represent the dances of local communities Dai visited during her travels through China.

ID 08ff903e

59 Mark for Review Medium Explanation ›

Which quotation from a work by a dance historian would be the most effective evidence for the curator to include in support of this claim?

(A) "There is no sound or music accompanying Dai's movements in *Yao Drum*, aside from the sounds of drumsticks beating against a drum and against each other."

(B) "Unlike some of the works Dai created in the early 1940s, *Yao Drum* does not feature a narrative structure, humorous elements, or references to real-life events."

(C) "*Yao Drum* was inspired by a ceremonial dance Dai witnessed during her time performing field research among the Yao people in the province of Guizhou in 1941 or 1942."

(D) "*Yao Drum* is notable for its intense physicality, with Dai performing sharp jumps, swift turns, and dramatic sweeps of her legs through the air as she moves in circles on the stage."

Water flowing around an obstruction creates vortices (patterns of swirls) of varying size; by detecting the vortices, fish can determine the size and position of the obstruction. Testing by Yuzo R. Yanagisuru, Otar Akanyeti, and James C. Liao using models of three head shapes—narrow (low ratio of width to length), intermediate, and wide (high ratio of width to length)—showed that for medium-sized vortices, fish with wide heads would be least able to distinguish between vortices and general turbulence in the water. A second research team has therefore hypothesized that in low-visibility conditions, wider-headed fish will be less likely than narrower-headed fish to detect obstructions.

ID 31ad8024

60 Mark for Review — Medium — Explanation ›

Which finding, if true, would most directly support the second research team's hypothesis?

(A) A study using obstructions that created medium-sized vortices in low-visibility conditions found that the bristlemouth (*Chaetostoma yurubiense*), which has a relatively wide head, bumped into more than half of the obstructions.

(B) A study using obstructions that created medium-sized vortices in low-visibility conditions found that some specimens of dusky smooth-hound (*Mustelus canis*), which has a relatively narrow head, bumped into the obstructions more often than other specimens of the same fish did.

(C) A study using obstructions that created medium-sized vortices in low-visibility conditions found that the wider-headed bristlemouth (*Chaetostoma yurubiense*) bumped into obstructions more often than the narrower-headed dusky smooth-hound (*Mustelus canis*) did.

(D) A study using obstructions that created medium-sized vortices in low-visibility conditions found that the narrower-headed dusky smooth-hound (*Mustelus canis*) bumped into the obstructions just as often as the wider-headed bristlemouth (*Chaetostoma yurubiense*) did.

"The Yellow Wallpaper" is an 1892 short story by Charlotte Perkins Gilman. In the story, the narrator expresses mixed feelings about her surroundings: _____

ID d5d3ea31

61 Mark for Review — Medium — Explanation ›

Which quotation from "The Yellow Wallpaper" most effectively illustrates the claim?

(A) "This wallpaper has a kind of sub-pattern in a different shade, a particularly irritating one, for you can only see it in certain lights, and not clearly then."

(B) "By moonlight—the moon shines in all night when there is a moon—I wouldn't know it was the same paper."

(C) "I'm really getting quite fond of the big room, all but that horrid [wall]paper."

(D) "The color is repellant, almost revolting; a smouldering, unclean yellow, strangely faded by the slow-turning sunlight."

An Ideal Husband is an 1895 play by Oscar Wilde. In the play, which is a satire, Wilde suggests that a character named Lady Gertrude Chiltern is perceived as both extremely virtuous and unforgiving, as is evident when another character says _____

ID 16a4a83b

62 Mark for Review Medium Explanation ›

Which quotation from *An Ideal Husband* most effectively illustrates the claim?

(A) "Lady Chiltern is a woman of the very highest principles, I am glad to say. I am a little too old now, myself, to trouble about setting a good example, but I always admire people who do."

(B) "Do you know, [Lady Chiltern], I don't mind your talking morality a bit. Morality is simply the attitude we adopt towards people whom we personally dislike."

(C) "[Lady Chiltern] does not know what weakness or temptation is. I am of clay like other men. She stands apart as good women do—pitiless in her perfection—cold and stern and without mercy."

(D) "Lady Chiltern, you are a sensible woman, the most sensible woman in London, the most sensible woman I know."

American fashion designer Patrick Kelly was known for his love of colorful buttons. Many of his signature dresses feature bold assortments of buttons throughout the garment. In a paper, a fashion design student claims that Kelly's use of buttons as decoration was inspired by his childhood observations of the styles and actions of the women in his family.

ID 0113152f

63 Mark for Review Medium Explanation ›

Which quotation from a work by a historian would be the most effective evidence for the student to include in support of this claim?

(A) "Although some of the assortments of buttons appear to be mismatched pieces scattered randomly throughout Kelly's dresses, his most famous designs feature carefully crafted patterns of matching buttons."

(B) "Many of Kelly's contemporaries were inspired by his designs to incorporate buttons, as well as zippers and snaps, as decorative items in their work."

(C) "Kelly's grandmother, who would repair clothing when he was a child, frequently added mismatched buttons to the clothes to draw attention away from any flaws in the garments."

(D) "Kelly was destined to be a designer from a young age: he learned how to sew clothing from his aunt Bertha, and his love of drawing was developed by his mother."

In addition to her technical skill and daring feats, American stunt pilot Bessie Coleman was also known for dazzling the crowds that came to watch her air shows in the 1920s with her exuberant personality. During her career, she was careful and purposeful about how she crafted her public persona. An aviation researcher has claimed that Coleman intentionally defied social norms of the time by how she chose to present herself to the public.

ID f38b40ac

64 Mark for Review Medium Explanation ›

Which quotation from an article about Coleman would most directly support the aviation researcher's claim?

(A) "For her air shows, Coleman frequently used the Curtiss JN-4, or 'Jenny,' which at that time was one of the most well-known types of planes."

(B) "While Coleman was beloved by spectators for her charisma, she had a more complicated relationship with her managers and staff, who at times found her behavior too impulsive and demanding."

(C) "Coleman once considered leaving her career as a stunt pilot to focus her efforts on giving speeches, which she felt would better support her public image."

(D) "Although female pilots were typically expected to wear traditional but impractical attire that included dresses or skirts, photographs of Coleman show her wearing pants and leather jackets."

Born in 1891 to a Quechua-speaking family in the Andes Mountains of Peru, Martín Chambi is today considered to be one of the most renowned figures of Latin American photography. In a paper for an art history class, a student claims that Chambi's photographs have considerable ethnographic value—in his work, Chambi was able to capture diverse elements of Peruvian society, representing his subjects with both dignity and authenticity.

ID 9aa5efc4

65 Mark for Review Medium Explanation ›

Which finding, if true, would most directly support the student's claim?

(A) Chambi took many commissioned portraits of wealthy Peruvians, but he also produced hundreds of images carefully documenting the peoples, sites, and customs of Indigenous communities of the Andes.

(B) Chambi's photographs demonstrate a high level of technical skill, as seen in his strategic use of illumination to create dramatic light and shadow contrasts.

(C) During his lifetime, Chambi was known and celebrated both within and outside his native Peru, as his work was published in places like Argentina, Spain, and Mexico.

(D) Some of the peoples and places Chambi photographed had long been popular subjects for Peruvian photographers.

Puerto Rico is an island in the Caribbean Sea. Indigenous people there started raising guinea pigs about 1,700 years ago. Guinea pigs had originally been domesticated much earlier in both Colombia and Peru. So were guinea pigs brought to Puerto Rico from Colombia or from Peru? Ancient Caribbean trade routes connected Puerto Rico with Colombia but not with Peru. Therefore, guinea pigs in Puerto Rico probably came from Colombia and descended from Colombian guinea pigs.

ID d76ea360

66 Mark for Review Medium Explanation ›

Which finding, if true, would most directly weaken the underlined claim?

(A) Ancient guinea pigs in Puerto Rico were genetically less similar to ancient guinea pigs in Colombia than to ancient guinea pigs in Peru.

(B) Guinea pigs are common in ancient Puerto Rican art, especially in pottery.

(C) Modern breeds of guinea pigs don't look like images of guinea pigs in ancient art from Puerto Rico, Colombia, and Peru.

(D) The guinea pig population of ancient Colombia was much larger than the guinea pig population of ancient Peru.

Although most songbirds build open, cupped nests, some species build domed nests with roofs that provide much more protection. Many ecologists have assumed that domed nests would provide protection from weather conditions and thus would allow species that build them to have larger geographic ranges than species that build open nests do. To evaluate this assumption, a research team led by evolutionary biologist Iliana Medina analyzed data for over 3,000 species of songbirds.

ID dc47c2ac

67 Mark for Review Medium Explanation ›

Which finding from Medina and her colleagues' study, if true, would most directly challenge the assumption in the underlined sentence?

(A) Species that build open nests tend to have higher extinction rates than species that build domed nests.

(B) Species that build open nests tend to be smaller in size than species that build domed nests.

(C) Species that build open nests tend to use fewer materials to build their nests than species that build domed nests do.

(D) Species that build open nests tend to have larger ranges than species that build domed nests.

The Milky Way galaxy is composed of millions of stars in a relatively flat structure containing a thin disk and a thick disk. Based on computer simulations and analysis of data on the brightness, position, and chemical composition of about 250,000 stars in the thick disk (collected from two telescopes, one in China and one orbiting in space), astrophysicists Maosheng Xiang and Hans-Walter Rix claim that the thick disk of the Milky Way formed in two distinct phases rather than a single one.

ID 7fdba7ad

68 Mark for Review Medium Explanation ›

Which finding, if true, would most directly support the researchers' claim?

(A) The telescopes used by the researchers have detected stars of similar ages in galaxies other than the Milky Way.

(B) There's an age difference of about 2 billion years between certain stars in the thick disk.

(C) The thin disk contains about twice as many stars that can be seen from Earth as the thick disk does.

(D) The stars in the Milky Way tend to have very similar chemical compositions.

Some residents in a neighborhood in Atlanta recently founded a community garden inside a local park. The residents agreed to volunteer to take care of the garden together. Students at a local high school surveyed some of the volunteers as part of a project to understand the impact of the new garden. The students concluded that the new garden benefited the community overall by fostering connections and relationships between the volunteers and other residents of the neighborhood who weren't volunteering at the garden.

ID 7254379e

69 Mark for Review Medium Explanation ›

Which quotation from a survey respondent would best illustrate the students' conclusion?

(A) "Our first challenge was deciding what plants would be most suitable to the climate and soil here in Atlanta. We needed plants that could survive the hot and humid summers."

(B) "We're lucky to have a few expert gardeners living in the neighborhood. Some volunteers and I have gone to them a few times with questions, and they've been eager to help us and to learn more about the project."

(C) "I love getting the opportunity to be outside and around nature, especially on days when the weather is nice."

(D) "My favorite thing about the garden is the feeling of pride I get when I walk by each day. As I see the plants growing, I feel good knowing I had a small part in creating this beautiful space in the neighborhood."

In 1967 the US Congress created the Corporation for Public Broadcasting, which in turn created National Public Radio (NPR). NPR began producing and distributing high-quality news and cultural programming to affiliate stations across the United States in 1971. In a research paper, a student claims that the Corporation for Public Broadcasting and NPR were inspired by the British Broadcasting System (BBC), which had been established in the 1920s.

ID b4cda84d

70 Mark for Review — Medium — Explanation ›

Which quotation from a work by a historian would be the most effective evidence for the student to include in support of this claim?

(A) "Although the BBC had begun as a private corporation, politicians successfully argued to make it a public company because they believed a public broadcaster could help build national unity in the aftermath of World War I."

(B) "For many decades, the BBC had no competition since it held Britain's only broadcasting license, whereas in the United States, the Corporation for Public Broadcasting launched NPR in a broadcasting market already filled with competitors."

(C) "Congress's embrace of publicly funded broadcasting reflected a common belief among US politicians that the role of government was not only to ensure people's safety and liberty but also to enrich people's lives in other ways."

(D) "The goal of the BBC was to support British democracy by promoting an informed citizenry, and US legislators believed that ensuring access to high-quality programming could do the same for democracy in the United States."

Hedda Gabler is an 1890 play by Henrik Ibsen. As a woman in the Victorian era, Hedda, the play's central character, is unable to freely determine her own future. Instead, she seeks to influence another person's fate, as is evident when she says to another character, _____

ID fbb84fb0

71 Mark for Review — Medium — Explanation ›

Which quotation from a translation of *Hedda Gabler* most effectively illustrates the claim?

(A) "Then what in heaven's name would you have me do with myself?"

(B) "I want for once in my life to have power to mould a human destiny."

(C) "Then I, poor creature, have no sort of power over you?"

(D) "Faithful to your principles, now and for ever! Ah, that is how a man should be!"

In the 1970s, a roughly 60,000-year-old piece of hyena bone marked with nine notches was discovered at a site in western France once inhabited by Neanderthals. Although many believe that only modern humans developed systems for notating numbers, one archaeologist asserts that this artifact may be a sign that Neanderthals also recorded numerical information. The notches on the bone are unevenly spaced but approximately parallel, and microscopic analysis reveals that they were made with a single stone tool; according to the archaeologist, this suggests that the notches were all made at one time by one individual as a means of counting something.

ID 73d457b6

72 Mark for Review Medium Explanation ›

Which finding, if true, would most directly weaken the underlined claim?

(A) Parallel lines are a common feature in modern humans' early systems for recording numerical information.

(B) More than nine approximately parallel notches made with a different stone tool are present on another artifact found at a site in western France.

(C) It would have taken careful effort to make evenly spaced lines on bone with the stone tools typically used by Neanderthals.

(D) Decorative art discovered at another Neanderthal site in western France primarily features patterns of unevenly spaced parallel lines.

"Ghosts of the Old Year" is an early 1900s poem by James Weldon Johnson. In the poem, the speaker describes experiencing an ongoing cycle of anticipation followed by regretful reflection: _____

ID 87023f34

73 Mark for Review Medium Explanation ›

Which quotation from "Ghosts of the Old Year" most effectively illustrates the claim?

(A) "What does this brazen tongue declare, / That falling on the midnight air / Brings to my heart a sense of care / Akin to fright?"

(B) "The snow has ceased its fluttering flight, / The wind sunk to a whisper light, / An ominous stillness fills the night, / A pause—a hush."

(C) "It tells of many a squandered day, / Of slighted gems and treasured clay, / Of precious stores not laid away, / Of fields unreaped."

(D) "And so the years go swiftly by, / Each, coming, brings ambitions high, / And each, departing, leaves a sigh / Linked to the past."

HARD 71 questions

The interiors of many temples in the ancient Middle East needed to satisfy a precise set of acoustic demands: the sounds of chants and hymns should travel with clarity, while profound silences should be fully felt and appreciated. In a research paper, a student claims that the users of one such temple were aware of how the materials that were used within the structure could affect sound quality and that they deliberately applied this knowledge to influence how sound was experienced in the space.

ID 2903668a

74 Mark for Review Hard Explanation ›

Which quotation from a work by a historian would most directly support the student's claim?

(A) "Many researchers believe that the central chamber of the temple had a high ceiling, a feature that has since become essential to the acoustic design of modern concert halls."

(B) "The innermost room of the temple was likely among the quietest spaces in the interior of the temple."

(C) "The acoustic environment of the temple was best suited for music that eschewed ornamentation in favor of simple melodies, harmonies, and rhythms."

(D) "During special occasions, curtains were placed inside the temple to minimize reverberation and confine the sound to designated locations."

Although many transposons, DNA sequences that move within an organism's genome through shuffling or duplication, have become corrupted and inactive over time, those from the long interspersed nuclear elements (LINE) family appear to remain active in the genomes of some species. In humans, they are functionally important within the hippocampus, a brain structure that supports complex cognitive processes. When the results of molecular analysis of two species of octopus—an animal known for its intelligence—were announced in 2022, the confirmation of a LINE transposon in *Octopus vulgaris* and *Octopus bimaculoides* genomes prompted researchers to hypothesize that that transposon family is tied to a species' capacity for advanced cognition.

ID 22e4d633

75 Mark for Review Hard Explanation ›

Which finding, if true, would most directly support the researchers' hypothesis?

(A) The LINE transposon in *O. vulgaris* and *O. bimaculoides* genomes is active in an octopus brain structure that functions similarly to the human hippocampus.

(B) The human genome contains multiple transposons from the LINE family that are all primarily active in the hippocampus.

(C) A consistent number of copies of LINE transposons is present across the genomes of most octopus species, with few known corruptions.

(D) *O. vulgaris* and *O. bimaculoides* have smaller brains than humans do relative to body size, but their genomes contain sequences from a wider variety of transposon families.

Jean-Bernard Caron and colleagues recently discovered a cache of jellyfish fossils in the Burgess Shale, a site in the Canadian Rockies that is rich in fossils from the Cambrian period (over 500 million years ago). Caron and colleagues claim that these are the oldest jellyfish fossils ever discovered. In the past twenty years, two sites in China and the United States have yielded fossils of a similar age that some experts believe are most likely jellyfish due to their shapes and the appearance of projecting tentacles. But Caron and colleagues argue that the apparent tentacles are in fact the comb rows of ctenophores, gelatinous animals that are only distantly related to jellyfish.

ID 0d7f4966

76 Mark for Review — Hard — Explanation ›

Which statement, if true, would most directly weaken the claim by Caron and colleagues about the fossils found in China and the United States?

(A) Sites in the Canadian Rockies from later periods than the Cambrian period have yielded fossils that have been conclusively identified as ctenophore fossils.

(B) The fossils found in China and the United States are so poorly preserved that though they cannot be conclusively identified as jellyfish, they cannot be conclusively identified as ctenophores either.

(C) While ctenophore fossils have been discovered in China and the United States, they have never been discovered in the Burgess Shale.

(D) The fossils discovered by Caron and colleagues in the Burgess Shale were better preserved than the fossils discovered by other researchers in China and the United States.

The ancient Greek concept of "mimesis," a term used in the works of Plato, Aristotle, and other Greek philosophers in discussions of representational art—visual, performance, or literary art that aims to depict the real world—is a foundational concept of the Western philosophy of aesthetics. Mimesis is typically translated as "imitation" in modern editions of ancient Greek texts, but scholar Stephen Halliwell warns that this is overly reductive: "imitation" implies that art merely copies—and is thus by definition entirely derivative of—a reality that exists outside and prior to the work of art, and translating "mimesis" thusly obscures the multifaceted ways in which the ancient Greeks understood the relationship between art and reality.

ID 068f939b

77 Mark for Review — Hard — Explanation ›

Which statement, if true, would most directly support the claim by Halliwell presented in the text?

(A) One of the earliest appearances of mimesis's root word, *mimos*, can be found in an ancient Greek tragedy in reference to dramatic impersonation, and the *mim-* root came to be generally associated with the musical and poetic arts by the fifth century BCE.

(B) Both Plato's and Aristotle's theorizations of mimesis examine the psychological effects that works of art induce in the viewer or listener.

(C) Although several of Plato's earliest philosophical works discuss aesthetic ideas, the term "mimesis" doesn't appear in Plato's discussions of art until *Cratylus*, a relatively late work.

(D) Although Plato's writings typically characterize representational art as an inferior reflection of the physical world, Aristotle suggests that mimesis can refer to art's capacity to envision hypothetical conditions that could, but don't yet, exist.

Almost all works of fiction contain references to the progression of time, including the time of day when events in a story take place. In a 2020 study, Allen Kim, Charuta Pethe, and Steven Skiena claim that an observable pattern in such references reflects a shift in human behavior prompted by the spread of electric lighting in the late nineteenth century. The researchers drew this conclusion from an analysis of more than 50,000 novels spanning many centuries and cultures, using software to recognize and tally both specific time references—that is, clock phrases, such as 7 a.m. or 2:30 p.m.—and implied ones, such as mentions of meals typically associated with a particular time of day.

ID 98d0a5d7

78 Mark for Review — Hard — Explanation ›

Which finding from the study, if true, would most directly support the researchers' conclusion?

(A) Novels published after the year 1800 include the clock phrase 10 a.m. less often than novels published before the year 1800 do.

(B) Novels published after 1880 contain significantly more references to activities occurring after 10 p.m. than do novels from earlier periods.

(C) Among novels published in the nineteenth century, implied time references become steadily more common than clock phrases as publication dates approach 1900.

(D) The time references of noon (12 p.m.) and midnight (12 a.m.) are used with roughly the same frequency in the novels.

Although Eastern North Pacific (ENP) gray whales generally migrate between their wintering waters along the coast of Mexico and their foraging waters in the Arctic, a subset of this population—known as the Pacific Coast Feeding Group (PCFG)—forages along the coastlines of Northern California (USA) and British Columbia (Canada) instead. Interestingly, individuals in this subset reach smaller maximum sizes than other ENP whales do, despite having similar pre-maximum growth rates. Researchers hypothesize that this difference may be an adaptation to distinct resource opportunities in the PCFG foraging range.

ID ebe1eabd

79 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' claim regarding the size of PCFG whales?

(A) The average body size of PCFG whales observed along the coasts of Northern California and British Columbia has remained relatively steady in recent decades, while the average body size of ENP whales in the main group has slightly decreased.

(B) When present along the coasts of Northern California and British Columbia, PCFG whales tend to forage in rocky kelp beds at shallow depths inaccessible to whales as large as those in the ENP main group.

(C) When foraging along the coasts of Northern California and British Columbia, PCFG whales are in closer proximity to major ports and urban populations than ENP whales in the main group are when foraging in Arctic waters.

(D) Certain crustacean prey species available along the coasts of Northern California and British Columbia where PCFG whales tend to forage are not available in the Arctic waters where ENP whales in the main group forage.

While attending school in New York City in the 1980s, Okwui Enwezor encountered few works by African artists in exhibitions, despite New York's reputation as one of the best places to view contemporary art from around the world. According to an arts journalist, later in his career as a renowned curator and art historian, Enwezor sought to remedy this deficiency, not by focusing solely on modern African artists, but by showing how their work fits into the larger context of global modern art and art history.

ID 94c54577

80 Mark for Review

Hard

Explanation >

Which finding, if true, would most directly support the journalist's claim?

(A) As curator of the Haus der Kunst in Munich, Germany, Enwezor organized a retrospective of Ghanaian sculptor El Anatsui's work entitled *El Anatsui: Triumphant Scale*, one of the largest art exhibitions devoted to a Black artist in Europe's history.

(B) In the exhibition *Postwar: Art Between the Pacific and the Atlantic, 1945–1965*, Enwezor and cocurator Katy Siegel brought works by African artists such as Malangatana Ngwenya together with pieces by major figures from other countries, like US artist Andy Warhol and Mexico's David Siqueiros.

(C) Enwezor's work as curator of the 2001 exhibition *The Short Century: Independence and Liberation Movements in Africa, 1945–1994* showed how African movements for independence from European colonial powers following the Second World War profoundly influenced work by African artists of the period, such as Kamala Ibrahim Ishaq and Thomas Mukarobgwa.

(D) Enwezor organized the exhibition *In/sight: African Photographers, 1940 to the Present* not to emphasize a particular aesthetic trend but to demonstrate the broad range of ways in which African artists have approached the medium of photography.

Mosasaurs were large marine reptiles that lived in the Late Cretaceous period, approximately 100 million to 66 million years ago. Celina Suarez, Alberto Pérez-Huerta, and T. Lynn Harrell Jr. examined oxygen-18 isotopes in mosasaur tooth enamel in order to calculate likely mosasaur body temperatures and determined that mosasaurs were endothermic—that is, they used internal metabolic processes to maintain a stable body temperature in a variety of ambient temperatures. Suarez, Pérez-Huerta, and Harrell claim that endothermy would have enabled mosasaurs to include relatively cold polar waters in their range.

ID 3d91c973

81 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support Suarez, Pérez-Huerta, and Harrell's claim?

(A) Mosasaurs' likely body temperatures are easier to determine from tooth enamel oxygen-18 isotope data than the body temperatures of nonendothermic Late Cretaceous marine reptiles are.

(B) Fossils of both mosasaurs and nonendothermic marine reptiles have been found in roughly equal numbers in regions known to be near the poles during the Late Cretaceous, though in lower concentrations than elsewhere.

(C) Several mosasaur fossils have been found in regions known to be near the poles during the Late Cretaceous, while relatively few fossils of nonendothermic marine reptiles have been found in those locations.

(D) During the Late Cretaceous, seawater temperatures were likely higher throughout mosasaurs' range, including near the poles, than seawater temperatures at those same latitudes are today.

Economists have demonstrated that herding—in which individuals converge on the same action by imitating the economic decisions of one or more peers—occurs among investors. Investigating whether herding also occurs among nations in matters of economic policy, Maru Etta-Nkwelle examined changes in the foreign currency reserves of emerging economies in various world regions in the years following the widespread financial crisis of 1997. Etta-Nkwelle posited that herding would manifest in regional peer countries converging on the same foreign currency accumulation rate regardless of each country's observable circumstances. She found that Asian countries showed evidence of herding but African countries did not.

ID 7575e417

82 Mark for Review — Hard — Explanation ›

Based on the text, which finding, if true, would best account for the discrepancy Etta-Nkwelle observed?

(A) The majority of the currency held in reserves by the African countries was foreign currency, whereas the majority of the currency held in reserves by the Asian countries was domestic currency.

(B) Most of the African countries belonged to international economic unions that set individual foreign-currency accumulation policies for each member, whereas the Asian countries were largely free to set their own policies.

(C) The 1997 financial crisis resulted in immediate declines in many of the African countries' foreign currency reserves, whereas the crisis had few short-term effects on the foreign currency reserves of most of the Asian countries.

(D) The African countries tended to accumulate a variety of foreign currencies for their reserves, whereas the Asian countries tended to favor a single foreign currency for their reserves.

Linguist Deborah Tannen has cautioned against framing contentious issues in terms of two highly competitive perspectives, such as pro versus con. According to Tannen, this debate-driven approach can strip issues of their complexity and, when used in front of an audience, can be less informative than the presentation of multiple perspectives in a noncompetitive format. To test Tannen's hypothesis, students conducted a study in which they showed participants one of three different versions of local news commentary about the same issue. Each version featured a debate between two commentators with opposing views, a panel of three commentators with various views, or a single commentator.

ID 71904085

83 Mark for Review — Hard — Explanation ›

Which finding from the students' study, if true, would most strongly support Tannen's hypothesis?

(A) On average, participants perceived commentators in the debate as more knowledgeable about the issue than commentators in the panel.

(B) On average, participants perceived commentators in the panel as more knowledgeable about the issue than the single commentator.

(C) On average, participants who watched the panel correctly answered more questions about the issue than those who watched the debate or the single commentator did.

(D) On average, participants who watched the single commentator correctly answered more questions about the issue than those who watched the debate did.

In 1534 CE, King Henry VIII of England split with the Catholic Church and declared himself head of the Church of England, in part because Pope Clement VII refused to annul his marriage to Catherine of Aragon. Two years later, Henry VIII introduced a policy titled the Dissolution of the Monasteries that by 1540 had resulted in the closure of all Catholic monasteries in England and the confiscation of their estates. Some historians assert that the enactment of the policy was primarily motivated by perceived financial opportunities.

ID 04cbeca3

84 Mark for Review — Hard — Explanation ›

Which quotation from a scholarly article best supports the assertion of the historians mentioned in the text?

(A) "At the time of the Dissolution of the Monasteries, about 2 percent of the adult male population of England were monks; by 1690, the proportion of the adult male population who were monks was less than 1 percent."

(B) "A contemporary description of the Dissolution of the Monasteries, Michael Sherbrook's *Falle of the Religious Howses*, recounts witness testimony that monks were allowed to keep the contents of their cells and that the monastery timber was purchased by local yeomen."

(C) "In 1535, the year before enacting the Dissolution of the Monasteries, Henry commissioned a survey of the value of church holdings in England—the work, performed by sheriffs, bishops, and magistrates, began that January and was swiftly completed by the summer."

(D) "The October 1536 revolt known as the Pilgrimage of Grace had several economic motives: high food prices due to a poor harvest the prior year; the Dissolution of the Monasteries, which closed reliable sources of food and shelter for many; and rents and taxes throughout Northern England that were not merely high but predatory."

O Pioneers! is a 1913 novel by Willa Cather. In the novel, Cather depicts Alexandra Bergson as a person who takes comfort in understanding the world around her:

ID c83e0b43

85 Mark for Review — Hard — Explanation ›

Which quotation from *O Pioneers!* most effectively illustrates the claim?

(A) "She looked fixedly up the bleak street as if she were gathering her strength to face something, as if she were trying with all her might to grasp a situation which, no matter how painful, must be met and dealt with somehow."

(B) "She had never known before how much the country meant to her. The chirping of the insects down in the long grass had been like the sweetest music. She had felt as if her heart were hiding down there, somewhere, with the quail and the plover and all the little wild things that crooned or buzzed in the sun. Under the long shaggy ridges, she felt the future stirring."

(C) "Alexandra drove off alone. The rattle of her wagon was lost in the howling of the wind, but her lantern, held firmly between her feet, made a moving point of light along the highway, going deeper and deeper into the dark country."

(D) "Alexandra drew her shawl closer about her and stood leaning against the frame of the mill, looking at the stars which glittered so keenly through the frosty autumn air. She always loved to watch them, to think of their vastness and distance, and of their ordered march. It fortified her to reflect upon the great operations of nature, and when she thought of the law that lay behind them, she felt a sense of personal security."

Neural networks are computer models intended to reflect the organization of human brains and are often used in studies of brain function. According to an analysis of 11,000 such networks, Rylan Schaeffer and colleagues advise caution when drawing conclusions about brains from observations of neural networks. They found that when attempting to mimic grid cells (brain cells used in navigation), while 90% of the networks could accomplish navigation-related tasks, only about 10% of those exhibited any behaviors similar to those of grid cells. But even this approximation of grid-cell activity has less to do with similarity between the neural networks and biological brains than it does with the rules programmed into the networks.

ID dd1757fd

86 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the claim in the underlined sentence?

(A) The rules that allow for networks to exhibit behaviors like those of grid cells have no equivalent in the function of biological brains.

(B) The networks that do not exhibit behaviors like those of grid cells were nonetheless programmed with rules that had proven useful in earlier neural-network studies.

(C) Neural networks can often accomplish tasks that biological brains do, but they are typically programmed with rules to model multiple types of brain cells simultaneously.

(D) Once a neural network is programmed, it is trained on certain tasks to see if it can independently arrive at processes that are similar to those performed by biological brains.

Born in Chile in 1917, artist and ethnomusicologist Violeta Parra was a pioneer in the *nueva canción chilena* (Chilean New Song) movement that emerged in the late 1950s and then spread throughout Latin America, Portugal, and Spain as *nueva canción*. Parra traveled all over Chile compiling extensive records of authentic folk music as well as recipes, proverbs, and other facets of cultural history. These records formed the foundation for the early movement's revival of traditional Chilean folk forms in new songs that represented modern realities of the working class and strongly advocated for social change. As the movement spread beyond Chile, the breadth of musical traditions incorporated into its foundation also expanded.

ID 3a489e1e

87 Mark for Review — Hard — Explanation ›

Which detail about songs associated with *nueva canción*, if true, would best illustrate the underlined claim?

(A) Many feature political commentary addressing contemporary issues that stemmed from shared experiences of European colonization in Latin American countries.

(B) Many demonstrate the stylistic influence of *corrido*, a genre of narrative songs from Mexico that had come to be characterized by political themes in the early 1800s.

(C) Many were written with parts meant to be played on the *quena*, a traditional flute used across Andean countries, including Chile.

(D) Many were produced by Argentinian artists in the late 1950s, with others by artists in additional Latin American countries first emerging soon after.

As media consumption has become increasingly multiplatform and socially mediated, active news acquisition has diminished in favor of an attitude known as "news finds me" (NFM), in which people passively rely on their social networks and ambient media environments for information about current events. Homero Gil de Zúñiga and Trevor Diehl examined data on a representative group of adults in the United States to determine participants' strength of NFM attitude, political knowledge, and political interest. Although no major election took place sufficiently near the study for Gil de Zúñiga and Diehl to identify causality between NFM and voting behavior, they did posit that NFM may reduce voting probability through an indirect effect.

ID 64cd7321

88 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the idea advanced by Gil de Zúñiga and Diehl?

(A) NFM attitude tends to increase in strength as major elections approach, and people are significantly more likely to vote in major elections than in minor elections.

(B) NFM attitude has a strong negative effect on political knowledge and interest, and there is known to be a strong positive correlation between political knowledge and interest and the likelihood of voting.

(C) Political interest is known to have a strong positive effect on likelihood of voting but shows only a weak positive effect on political knowledge, and NFM attitude shows little correlation with either political knowledge or political interest.

(D) The likelihood of voting increases as political knowledge increases, and the relationship between NFM attitude and political knowledge tends to strengthen as the size of people's social networks increases.

Although it's clear that Mars once had liquid water on its surface, astronomers have debated whether the evidence of ancient water reflects a prolonged phase of warm, wet conditions—the so-called wet and warm scenario—or a brief period of melting in an otherwise consistently frozen environment. Researchers Benjamin T. Cardenas and Michael P. Lamb recently added to this debate by using data from NASA and the Mars Orbiter Laser Altimeter to map the topography of what is now a large basin in Mars's northern hemisphere. Cardenas and Lamb concluded that the wet and warm scenario is likely correct.

ID 0c622cfb

89 Mark for Review — Hard — Explanation ›

Which finding about the basin, if true, would most directly support Cardenas and Lamb's conclusion?

(A) Its dimensions and shape indicate that it is unlikely to have formed as the result of an asteroid or comet impact.

(B) It has features suggesting that it once held an ocean that underwent gradual sea-level changes over an extended time.

(C) Its physical characteristics are most consistent with it having formed as a result of a massive but short-lived influx of liquid water.

(D) It is surrounded by channels that could have been formed either by running water or by flowing lava.

Declining fishing technology costs and overexploitation of near-shore fishing grounds have made isolated oceanic reefs, which often lack regulatory protections, increasingly attractive to commercial and sport fishers. A team led by Octavio Aburto-Oropeza surveyed the biomass density and species composition of two isolated reefs: Alacranes, a protected (fishing prohibited) reef 135 kilometers from the Yucatan Peninsula, and Bajos del Norte, an unprotected reef 25 kilometers farther out to sea. Species at the highest level of the trophic pyramid constituted 34% of the biomass at Alacranes and 10% of the biomass at Bajos del Norte. Aburto-Oropeza and colleagues attribute this difference to the two reefs' difference in regulatory status.

ID 81430e26

90 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support Aburto-Oropeza and colleagues' explanation?

(A) Total biomass at Alacranes is much greater than total biomass at Bajos del Norte, though the reefs' biomass densities are similar.

(B) Some of the species that compose the highest trophic level at Bajos del Norte are not found at Alacranes.

(C) It is somewhat more expensive for commercial and sport fishers to reach Bajos del Norte than it is to reach Alacranes.

(D) Commercial and sport fishers tend to disproportionately remove species at the highest trophic level.

In the 1980s, many musicians and journalists in the English-speaking world began to draw attention to music from around the globe—such as mbaqanga from South Africa and quan họ from Vietnam—that can't be easily categorized according to British or North American popular music genres, typically referring to such music as "world music." While some scholars have welcomed this development for bringing diverse musical forms to prominence in countries where they'd previously been overlooked, musicologist Su Zheng claims that the concept of world music homogenizes highly distinct traditions by reducing them all to a single category.

ID 09f9edb0

91 Mark for Review — Hard — Explanation ›

Which finding about mbaqanga and quan họ, if true, would most directly support Zheng's claim?

(A) Mbaqanga and quan họ developed independently of each other and have little in common musically.

(B) Mbaqanga is significantly more popular in the English-speaking world than quan họ is.

(C) Mbaqanga and quan họ are now performed by a diverse array of musicians with no direct connections to South Africa or Vietnam.

(D) Mbaqanga and quan họ are highly distinct from British and North American popular music genres but similar to each other.

Having demonstrated that the power conversion efficiency of new perovskite photovoltaic cells is nearly indistinguishable from that of cells recycled multiple times, Xun Xiao and colleagues evaluated the levelized cost of electricity (LCOE)—a measure of cost per produced electricity unit that incorporates materials acquisition costs as well as operating costs—for power plants utilizing each type of cell. With a modeled 15-year cell lifetime, the LCOE of plants using new cells was 4.99 cents per kilowatt-hour, whereas that of plants using cells recycled three times was 4.05 cents per kilowatt-hour. Moreover, the LCOE differential grew from 18.8% to 31.3% when the modeled cell lifetime was reduced by two-thirds.

ID 8e22efd9

92 Mark for Review — Hard — Explanation ›

Based on the text, which choice, if true, most coherently and directly accounts for the observation presented in the underlined sentence?

(A) Cells can be recycled multiple times without a significant decrease in power conversion efficiency, and thus recycling cells more frequently does not change the LCOE for plants using recycled cells.

(B) Although potentially less expensive than producing new cells, recycling cells does incur costs, and thus reducing cell lifetimes entails greater cumulative costs.

(C) Securing new cell materials is more expensive than recycling cell materials, and thus more frequent cell replacement entails greater disparity in cumulative costs.

(D) As the modeled cell lifetime decreases, plant operating costs increase, and thus the LCOE for plants using new cells diverges from that of plants using recycled cells.

Sense and Sensibility is an 1811 novel by Jane Austen. In the novel, Austen describes Marianne Dashwood's ability to persuade others of the rightness of her artistic judgments, as is evident when Marianne visits with John Willoughby, a potential suitor: _____

ID c538954d

93 Mark for Review — Hard — Explanation ›

Which quotation from *Sense and Sensibility* most effectively illustrates the claim?

(A) "Above all, when she heard him declare, that of music and dancing he was passionately fond, she gave him such a look of approbation as secured the largest share of his discourse to herself for the rest of his stay."

(B) "Their taste was strikingly alike. The same books, the same passages were idolized by each—or if any difference appeared, any objection arose, it lasted no longer than till the force of her arguments and the brightness of her eyes could be displayed."

(C) "It was only necessary to mention any favourite amusement to engage her to talk. She could not be silent when such points were introduced, and she had neither shyness nor reserve in their discussion."

(D) "They speedily discovered that their enjoyment of dancing and music was mutual, and that it arose from a general conformity of judgment in all that related to either. Encouraged by this to a further examination of his opinions, she proceeded to question him on the subject of books."

Archaeologist Petra Vaiglova, anthropologist Xinyi Liu, and their colleagues investigated the domestication of farm animals in China during the Bronze Age (approximately 2000 to 1000 BCE). By analyzing the chemical composition of the bones of sheep, goats, and cattle from this era, the team determined that wild plants made up the bulk of sheep's and goats' diets, while the cattle's diet consisted largely of millet, a crop cultivated by humans. The team concluded that cattle were likely raised closer to human settlements, whereas sheep and goats were allowed to roam farther away.

ID ec93e52c

94 Mark for Review — Hard — Explanation ›

Which finding, if true, would most strongly support the team's conclusion?

(A) Analysis of the animal bones showed that the cattle's diet also consisted of wheat, which humans widely cultivated in China during the Bronze Age.

(B) Further investigation of sheep and goat bones revealed that their diets consisted of small portions of millet as well.

(C) Cattle's diets generally require larger amounts of food and a greater variety of nutrients than do sheep's and goats' diets.

(D) The diets of sheep, goats, and cattle were found to vary based on what the farmers in each Bronze Age settlement could grow.

Archaeologists have held that the Casarabe culture, which emerged in the southwestern Amazon basin in the first millennium CE, was characterized by a sparse, widely distributed population and little intervention in the surrounding wilderness. Recently, however, archaeologist Heiko Prümers and colleagues conducted a study of the region using remote-sensing technology that enabled them to create three-dimensional images of the jungle-covered landscape from above, and the researchers concluded that the Casarabe people developed a form of urbanism in the Amazon basin.

ID 39e440e4

95 Mark for Review — Hard — Explanation ›

Which finding about the remote-sensing images, if true, would most directly support Prümers and colleagues' conclusion?

(A) They show shapes consistent with widely separated settlements of roughly equal small size surrounded by uncultivated jungle.

(B) They show shapes consistent with long-distance footpaths running from Casarabe territories to large cities outside the region inhabited by the Casarabe people.

(C) They show shapes consistent with scattered small farms created by clearing jungle areas near sources of fresh water.

(D) They show shapes consistent with monumental platforms and dense central settlements linked to smaller settlements by a system of canals and roadways.

In a research paper, a student criticizes some historians of modern African politics, claiming that they have evaluated Patrice Lumumba, the first prime minister of what is now the Democratic Republic of the Congo, primarily as a symbol rather than in terms of his actions.

ID 3f4ab688

96 Mark for Review — Hard — Explanation ›

Which quotation from a work by a historian would best illustrate the student's claim?

(A) "Lumumba is a difficult figure to evaluate due to the starkly conflicting opinions he inspired during his life and continues to inspire today."

(B) "The available information makes it clear that Lumumba's political beliefs and values were largely consistent throughout his career."

(C) "Lumumba's practical accomplishments can be passed over quickly; it is mainly as the personification of Congolese independence that he warrants scholarly attention."

(D) "Many questions remain about Lumumba's ultimate vision for an independent Congo; without new evidence coming to light, these questions are likely to remain unanswered."

Psychologists Dacher Keltner and Jonathan Haidt have argued that experiencing awe—a sensation of reverence and wonder typically brought on by perceiving something grand or powerful—can enable us to feel more connected to others and thereby inspire us to act more altruistically. Keltner, along with Paul K. Piff, Pia Dietze, and colleagues, claims to have found evidence for this effect in a recent study where participants were asked to either gaze up at exceptionally tall trees in a nearby grove (reported to be a universally awe-inspiring experience) or stare at the exterior of a nearby, nondescript building. After one minute, an experimenter deliberately spilled a box of pens nearby.

ID 5d122d45

97 Mark for Review — Hard — Explanation ›

Which finding from the researchers' study, if true, would most strongly support their claim?

(A) Participants who had been looking at the trees helped the experimenter pick up significantly more pens than did participants who had been looking at the building.

(B) Participants who helped the experimenter pick up the pens used a greater number of positive words to describe the trees and the building in a postexperiment survey than did participants who did not help the experimenter.

(C) Participants who did not help the experimenter pick up the pens were significantly more likely to report having experienced a feeling of awe, regardless of whether they looked at the building or the trees.

(D) Participants who had been looking at the building were significantly more likely to notice that the experimenter had dropped the pens than were participants who had been looking at the trees.

Many governments that regularly transfer money to individuals—to provide supplemental incomes for senior citizens, for example—have long done so electronically, but other countries typically have distributed physical money and have only recently developed electronic transfer infrastructure. Researchers studied the introduction of an electronic transfer system in one such location and found that recipients of electronic transfers consumed a different array of foods than recipients of physical transfers of the same amount did. One potential explanation for this result is that individuals conceive of and allocate funds in physical money differently than they conceive of and allocate funds in electronic form.

ID 156ff681

98 Mark for Review — Hard — Explanation ›

Which finding from the study, if true, would most directly weaken the potential explanation?

(A) Recipients of electronic transfers typically spent their funds at a slower rate than recipients of physical transfers did.

(B) Nearly every recipient of an electronic transfer withdrew the entire amount in physical money shortly after receiving the transfer.

(C) Recipients of physical transfers tended to purchase food about as frequently as recipients of electronic transfers did.

(D) Some recipients of physical transfers received small amounts of money relatively frequently, while others received large amounts relatively infrequently.

Icebergs generally appear to be mostly white or blue, depending on how the ice reflects sunlight. Ice with air bubbles trapped in it looks white because much of the light reflects off the bubbles. Ice without air bubbles usually looks blue because the light travels deep into the ice and only a little of it is reflected. However, some icebergs in the sea around Antarctica appear to be green. One team of scientists hypothesized that this phenomenon is the result of yellow-tinted dissolved organic carbon in Antarctic waters mixing with blue ice to produce the color green.

ID 8545ccfe

99 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly weaken the team's hypothesis?

(A) White ice doesn't change color when mixed with dissolved organic carbon due to the air bubbles in the ice.

(B) Dissolved organic carbon has a stronger yellow color in Antarctic waters than it does in other places.

(C) Blue icebergs and green icebergs are rarely found near each other.

(D) Blue icebergs and green icebergs contain similarly small traces of dissolved organic carbon.

Boldly mixing elements of poetry, fiction, drama, philosophy, and manifesto, Puerto Rican writer Giannina Braschi creates cross-genre literature that explores themes such as immigration and independence. Her works have inspired responses from individuals across different fields and in a wide range of formats, from musical compositions and a comic book to architecture and furniture design. In an essay, a student asserts that the production of these diverse creations by others is reflective of Braschi's own approach to crafting literature.

ID e946a32e

100 Mark for Review — Hard — Explanation ›

Which quotation from a scholarly review of Braschi's work best supports the student's claim?

(A) "Braschi is the focus of a 2020 collection of essays in which fifteen scholars from seven different countries delved into the linguistic and structural patterns of her writings."

(B) "Braschi's eagerness to push boundaries and blend genres within literature invites us to consider how other art forms might also engage with literature."

(C) "Before settling in New York City, where she would go on to become a college professor, Braschi studied both literature and philosophy in several cities around the world."

(D) "In addition to her creative literary works, Braschi has produced academic pieces analyzing writings by Miguel de Cervantes, Federico García Lorca, and other authors."

Early Earth is thought to have been characterized by a stagnant lid tectonic regime, in which the upper lithosphere (the outer rocky layer) was essentially immobile and there was no interaction between the lithosphere and the underlying mantle. Researchers investigated the timing of the transition from a stagnant lid regime to a tectonic plate regime, in which the lithosphere is fractured into dynamic plates that in turn allow lithospheric and mantle material to mix. Examining chemical data from lithospheric and mantle-derived rocks ranging from 285 million to 3.8 billion years old, the researchers dated the transition to 3.2 billion years ago.

ID d696eafa

101 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' conclusion?

(A) Among rocks known to be older than 3.2 billion years, significantly more are mantle derived than lithospheric, but the opposite is true for the rocks younger than 3.2 billion years.

(B) Mantle-derived rocks older than 3.2 billion years show significantly more compositional diversity than lithospheric rocks older than 3.2 billion years do.

(C) There is a positive correlation between the age of lithospheric rocks and their chemical similarity to mantle-derived rocks, and that correlation increases significantly in strength at around 3.2 billion years old.

(D) Mantle-derived rocks younger than 3.2 billion years contain some material that is not found in older mantle-derived rocks but is found in older and contemporaneous lithospheric rocks.

Barchester Towers is an 1857 novel by Anthony Trollope. In the novel, Trollope's portrayal of Dr. Proudie underscores the character's exaggerated sense of his own abilities: _____

ID dc87adf4

102 Mark for Review — Hard — Explanation ›

Which quotation from *Barchester Towers* most effectively illustrates the claim?

(A) "It must not…be taken as proved that Dr. Proudie was a man of great mental powers, or even of much capacity for business, for such qualities had not been required in him."

(B) "[Dr. Proudie] was comparatively young, and had, as he fondly flattered himself, been selected as possessing such gifts, natural and acquired, as must be sure to recommend him to a yet higher notice."

(C) "[Dr. Proudie's] residence in the metropolis, rendered necessary by duties thus entrusted to him, his high connexions, and the peculiar talents and nature of the man, recommended him to persons in power."

(D) "[Dr. Proudie] was certainly possessed of sufficient tact to answer the purpose for which he was required without making himself troublesome."

An archaeological team led by Piotr Bieliński and Sultan al-Bakri found remnants of a 4,000-year-old Bronze Age board game at a site in Oman. Little is left of the game except a stone board, which is carved with a grid and has places to hold game pieces. Some scholars claim that the game was largely played by traders.

ID 3bfcb73b

103 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the scholars' claim?

(A) Other examples of the game dating to the same period have been found in the remains of several homes in the region, including in one home that may have belonged to a trader.

(B) Similar games have been found in other sites dating to the same period that were connected to the site in Oman via trade routes.

(C) The other known examples of the game dating to the same period have been found along routes that seem to have been used primarily by traders at the time.

(D) Remnants of other goods have been found at the site in Oman that probably also reached the location through trade.

In the "language nest" model of education, Indigenous children learn the language of their people by using it as the medium of instruction and socialization at pre-K or elementary levels. In their 2016 study of a school in an Anishinaabe community in Ontario, Canada, scholars Lindsay Morcom and Stephanie Roy (who are Anishinaabe themselves) found that the model not only imparted fluency in the Anishinaabe language but also enhanced students' pride in Anishinaabe culture overall. Given these positive effects, Morcom and Roy predict that the model increases the probability that as adults, former students of the school will transmit the language to younger generations in their community.

ID df91532e

104 Mark for Review — Hard — Explanation ›

Which finding, if true, would most strongly support the researchers' prediction?

(A) Anishinaabe adults who didn't attend the school feel roughly the same degree of cultural pride as the former students of the school feel.

(B) After transferring to the school, new students experience an increase in both fluency and academic performance overall.

(C) As adults, former students of the school are just as likely to continue living in their community as individuals who didn't attend the school.

(D) As they complete secondary and higher education, former students of the school experience no loss of fluency or cultural pride.

When digging for clams, their primary food, sea otters damage the roots of eelgrass plants growing on the seafloor. Near Vancouver Island in Canada, the otter population is large and well established, yet the eelgrass meadows are healthier than those found elsewhere off Canada's coast. To explain this, conservation scientist Erin Foster and colleagues compared the Vancouver Island meadows to meadows where otters are absent or were reintroduced only recently. Finding that the Vancouver Island meadows have a more diverse gene pool than the others do, Foster hypothesized that damage to eelgrass roots increases the plant's rate of sexual reproduction; this, in turn, boosts genetic diversity, which benefits the meadows' health overall.

ID 8584f3ce

105 Mark for Review Hard Explanation ›

Which finding, if true, would most directly undermine Foster's hypothesis?

(A) At some sites in the study, eelgrass meadows are found near otter populations that are small and have only recently been reintroduced.

(B) At several sites not included in the study, there are large, well-established sea otter populations but no eelgrass meadows.

(C) At several sites not included in the study, eelgrass meadows' health correlates negatively with the length of residence and size of otter populations.

(D) At some sites in the study, the health of plants unrelated to eelgrass correlates negatively with the length of residence and size of otter populations.

The variety of species with adaptations to produce toxins is matched by the variety of uses of those toxins: northern stargazers, for example, use toxins for defense, whereas tiger snakes use toxins for predation and skeleton shrimp use toxins for intraspecific competition. In fact, a species may have adaptations enabling it to produce a toxin with multiple uses. Finding that the venom used by the Panamanian scorpion *Centruroides granosus* to subdue prey also inhibits growth of the pathogenic bacteria *Escherichia coli*, Dumas Gálvez and colleagues conclude that the particular form of venom production observed in *C. granosus* may have propagated through the species because it mitigates risk during feeding in addition to enhancing predation success.

ID 44da37eb

106 Mark for Review Hard Explanation ›

Which finding, if true, would most directly support Gálvez and colleagues' conclusion?

(A) *E. coli* does not appear to be virulent for *C. granosus* even when transmitted from prey captured without the use of venom.

(B) *E. coli* is frequently found in species preyed on by *C. granosus* and can survive exposure to the digestive juices of *C. granosus*.

(C) *C. granosus* appears to be chemically sensitive to prey infected with *E. coli* and tends to favor uninfected individuals.

(D) Exposure to *C. granosus* venom also inhibits the growth of nonpathogenic bacteria species common in the native environment of *C. granosus*.

Several studies of sediment (e.g., dirt, pieces of rock, etc.) in streams have shown an inverse correlation between sediment grain size and downstream distance from the primary sediment source, suggesting that stream length has a sorting effect on sediment. In a study of sediment sampled at more than a dozen sites in Alpine streams, however, geologists Camille Litty and Fritz Schlunegger found that cross-site variations in grain size were not associated with differences in downstream distance, though they did not conclude that downstream distance is irrelevant to grain size. Rather, they concluded that sediment influx in these streams may have been sufficiently spatially diffuse to prevent the typical sorting effect from being observed.

ID a44bbd6b

107 Mark for Review — Hard — Explanation ›

Which finding about the streams in the study, if true, would most directly support Litty and Schlunegger's conclusion?

(A) The streams regularly experience portions of their banks collapsing into the water at multiple points upstream of the sampling sites.

(B) The streams contain several types of sediment that are not typically found in streams where the sorting effect has been demonstrated.

(C) The streams mostly originate from the same source, but their lengths vary considerably due to the different courses they take.

(D) The streams are fed by multiple tributaries that carry significant volumes of sediment and that enter the streams downstream of the sampling sites.

Matthew D. Rocklage and team examined whether consumer ratings of movies can predict box office success. The team considered both numeric star ratings and written reviews in their research. To analyze the written reviews, the team measured the emotionality—the degree to which a written review expresses an emotional reaction—of user reviews on a movie rating website, assigning each review an emotionality score. After reviewing this research, a student argues that the emotionality of movie reviews is unrelated to a movie's success at the box office.

ID 2584bcfb

108 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly weaken the student's conclusion?

(A) Movies that had the highest average emotionality scores received the lowest average star ratings on the movie rating website.

(B) The average emotionality score of a movie's reviews was a positive predictor of that movie's box office earnings.

(C) More than half of the movies that the team examined received an average star rating of 3 out of 5 stars.

(D) The movies that were most successful at the box office tended to have high average star ratings.

Political scientists who favor the traditional view of voter behavior claim that voting in an election does not change a voter's attitude toward the candidates in that election. Focusing on each US presidential election from 1976 to 1996, Ebonya Washington and Sendhil Mullainathan tested this claim by distinguishing between subjects who had just become old enough to vote (around half of whom actually voted) and otherwise similar subjects who were slightly too young to vote (and thus none of whom voted). Washington and Mullainathan compared the attitudes of the groups of subjects toward the winning candidate two years after each election.

ID 5b74feb9

109 Mark for Review — Hard — Explanation ›

Which finding from Washington and Mullainathan's study, if true, would most directly weaken the claim made by people who favor the traditional view of voter behavior?

(A) Subjects' attitudes toward the winning candidate two years after a given election were strongly predicted by subjects' general political orientation, regardless of whether subjects were old enough to vote at the time of the election.

(B) Subjects who were not old enough to vote in a given election held significantly more positive attitudes towards the winning candidate two years later than they held at the time of the election.

(C) Subjects who voted in a given election held significantly more polarized attitudes toward the winning candidate two years later than did subjects who were not old enough to vote in that election.

(D) Two years after a given election, subjects who voted and subjects who were not old enough to vote were significantly more likely to express negative attitudes than positive attitudes toward the winning candidate in that election.

Under normal atmospheric pressure at Earth's surface, water molecules form a tetrahedral network stabilized by hydrogen bonds between adjacent molecules. Extreme high pressure, such as can be found in deep ocean waters, destabilizes these bonds and compresses water's structure, allowing water molecules within organisms to permeate proteins and impede crucial biological functions; yet deep-sea organisms known as piezophiles have adapted to extreme pressure. Studies have found a positive correlation between the depths that various piezophiles inhabit and concentrations of a compound called trimethylamine N-oxide (TMAO) in their muscle tissues, which has led a team of researchers to hypothesize that TMAO reduces water's compressibility.

ID 0198240a

110 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' hypothesis?

(A) Water molecules are found to be impervious to TMAO even when the water molecules' tetrahedral configuration has been distorted by high pressure.

(B) Examination of TMAO's molecular structure shows that TMAO molecules retain their shape even as pressure increases.

(C) A positive correlation is found between concentrations of TMAO and the rate at which water's molecular structure compresses as pressure increases.

(D) Analysis of water's molecular structure under high pressure reveals that hydrogen bonds are more stable when TMAO is present than when it is not.

Researchers hypothesized that a decline in the population of dusky sharks near the mid-Atlantic coast of North America led to a decline in the population of eastern oysters in the region. Dusky sharks do not typically consume eastern oysters but do consume cownose rays, which are the main predators of the oysters.

ID c2c61e7d

111 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' hypothesis?

(A) Declines in the regional abundance of dusky sharks' prey other than cownose rays are associated with regional declines in dusky shark abundance.

(B) Eastern oyster abundance tends to be greater in areas with both dusky sharks and cownose rays than in areas with only dusky sharks.

(C) Consumption of eastern oysters by cownose rays in the region substantially increased before the regional decline in dusky shark abundance began.

(D) Cownose rays have increased in regional abundance as dusky sharks have decreased in regional abundance.

King Lear is a circa 1606 play by William Shakespeare. In the play, the character of King Lear attempts to test his three daughters' devotion to him. He later expresses regret for his actions, as is evident when he _____

ID 825dc766

112 Mark for Review — Hard — Explanation ›

Which choice most effectively uses a quotation from *King Lear* to illustrate the claim?

(A) says of himself, "I am a man / more sinned against than sinning."

(B) says during a growing storm, "This tempest will not give me leave to ponder / On things would hurt me more."

(C) says to himself while striking his head, "Beat at this gate that let thy folly in / And thy dear judgement out!"

(D) says of himself, "I will do such things— / What they are yet, I know not; but they shall be / The terrors of the earth!"

In the twentieth century, ethnographers made a concerted effort to collect Mexican American folklore, but they did not always agree about that folklore's origins. Scholars such as Aurelio Espinosa claimed that Mexican American folklore derived largely from the folklore of Spain, which ruled Mexico and what is now the southwestern United States from the sixteenth to early nineteenth centuries. Scholars such as Américo Paredes, by contrast, argued that while some Spanish influence is undeniable, Mexican American folklore is mainly the product of the ongoing interactions of various cultures in Mexico and the United States.

ID 0240d11c

113 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support Paredes's argument?

(A) The folklore that the ethnographers collected included several songs written in the form of a *décima*, a type of poem originating in late sixteenth-century Spain.

(B) Much of the folklore that the ethnographers collected had similar elements from region to region.

(C) Most of the folklore that the ethnographers collected was previously unknown to scholars.

(D) Most of the folklore that the ethnographers collected consisted of *corridos*—ballads about history and social life—of a clearly recent origin.

In vertical inheritance, parents pass genes to their offspring, but in horizontal transfer (HT), one species, often bacteria, passes genetic material to an unrelated species. In a 2022 study, herpetologist Atsushi Kurabayashi and his team investigated HT in multicellular organisms—namely, snakes and frogs in Madagascar. The team detected *BovB*—a gene transmitted vertically in snakes—in many frog species. The apparent direction of gene transfer seems counterintuitive because frogs usually don't survive encounters with snakes and so wouldn't be able to transmit the newly acquired gene to offspring, but the team concluded that *BovB* is indeed transmitted from snakes to frogs, either directly or indirectly, via HT.

ID 63e7799d

114 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the team's conclusion?

(A) *BovB* can be transmitted across frog species through HT.

(B) Parasites known to feed on species of snakes and frogs in which the *BovB* gene occurs also carry *BovB*.

(C) *BovB* cannot be reliably transmitted from a snake species to bacteria that are usually encountered by frog species.

(D) Frog species with *BovB* show few discernible advantages as compared with frog species that do not carry *BovB*.

Biologist Valentina Gómez-Bahamón and her team have investigated two subspecies of the fork-tailed flycatcher bird that live in the same region in Colombia, but one subspecies migrates south for part of the year, and the other doesn't. The researchers found that, due to slight differences in feather shape, the feathers of migratory forked-tailed flycatcher males make a sound during flight that is higher pitched than that made by the feathers of nonmigratory males. The researchers hypothesize that fork-tailed flycatcher females are attracted to the specific sound made by the males of their own subspecies, and that over time the females' preference will drive further genetic and anatomical divergence between the subspecies.

ID 860803dd

115 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support Gómez-Bahamón and her team's hypothesis?

(A) The feathers located on the wings of the migratory fork-tailed flycatchers have a narrower shape than those of the nonmigratory birds, which allows them to fly long distances.

(B) Over several generations, the sound made by the feathers of migratory male fork-tailed flycatchers grows progressively higher pitched relative to that made by the feathers of nonmigratory males.

(C) Fork-tailed flycatchers communicate different messages to each other depending on whether their feathers create high-pitched or low-pitched sounds.

(D) The breeding habits of the migratory and nonmigratory fork-tailed flycatchers remained generally the same over several generations.

Neurobiologists Laura Cuaya, Raúl Hernández-Pérez, and colleagues investigated the language detection abilities of eighteen dogs. The researchers monitored the brain activity of Joey (an Australian shepherd), Mini (a mixed breed), and other dogs while the animals listened to three recordings: one of *The Little Prince* being read in Spanish, the second in Hungarian, and a third made up of short, randomly selected fragments of the first two, scrambled so that they didn't resemble human speech. Each dog was familiar with either Spanish or Hungarian, but not both. The team concluded that differences in dogs' anatomical features may affect their ability to distinguish speech from nonspeech.

ID 4a07be59

116 Mark for Review — Hard — Explanation ›

Which finding from the study, if true, would most directly support the team's conclusion?

(A) Long-headed dogs accustomed to hearing Spanish tended to show more brain activity when hearing Spanish than long-headed dogs accustomed to hearing Hungarian showed when hearing Hungarian.

(B) Compared with shorter-headed dogs, longer-headed dogs showed a greater difference in brain activity when hearing either Spanish or Hungarian than when hearing the scrambled recording.

(C) The pattern of brain activity that long-headed dogs showed when hearing the scrambled recording was different from the pattern of brain activity that short-headed dogs showed when hearing the language they were accustomed to.

(D) Compared with shorter-headed dogs, longer-headed dogs showed a greater difference in brain activity when hearing the language they were accustomed to than when hearing the other language.

Richard II is a play from the 1590s by William Shakespeare. Although King Richard has been vanquished by his cousin Henry Bolingbroke, he intimates that he is not entirely ready to show subservience to his cousin, saying, _____

ID 4ef17800

117 Mark for Review — Hard — Explanation ›

Which quotation from *Richard II* most effectively illustrates the claim?

(A) "I have no name, no title,— / No, not that name was given me at the font,— / But 'tis usurp'd:— Alack the heavy day, / That I have worn so many winters out, / And know not now what name to call myself!"

(B) "Alack, why am I sent for to a king, / Before I have shook off the regal thoughts / Wherewith I reign'd? I hardly yet have learn'd / To insinuate, flatter, bow, and bend my knee."

(C) "Still my griefs are mine. / You may my glories and my state depose, / But not my griefs; still am I king of those."

(D) "Am I both priest and clerk? Well then, amen. / God save the King! although I be not he; / And yet, amen, if heaven do think him me."

"The Poet Walt Whitman" is an 1887 essay by José Martí, a Cuban author and political activist, originally written in Spanish. In the essay, Martí explores the value of literature, arguing that a society's spiritual well-being depends on the character of its literary culture: _____

ID 20583752

118 Mark for Review — Hard — Explanation ›

Which quotation from a translation of "The Poet Walt Whitman" most effectively illustrates the claim?

(A) "Poetry, which brings together or separates, which fortifies or brings anguish, which shores up or demolishes souls, which gives or robs men of faith and vigor, is more necessary to a people than industry itself, for industry provides them with a means of subsistence, while literature gives them the desire and strength for life."

(B) "Every society brings to literature its own form of expression, and the history of the nations can be told with greater truth by the stages of literature than by chronicles and decades."

(C) "Where will a race of men go when they have lost the habit of thinking with faith about the scope and meaning of their actions? The best among them, those who consecrate Nature with their sacred desire for the future, will lose, in a sordid and painful annihilation, all stimulus to alleviate the ugliness of humanity."

(D) "Listen to the song of this hardworking and satisfied nation; listen to Walt Whitman. The exercise of himself exalts him to majesty, tolerance exalts him to justice, and order to joy."

The linguistic niche hypothesis (LNH) posits that the exotericity of languages (how prevalent non-native speakers are) and grammatical complexity are inversely related, which the LNH ascribes to attrition of complex grammatical rules as more non-native speakers adopt the language but fail to acquire those rules. Focusing on two characteristics that are positive indices of grammatical complexity, fusion (when new phonemes arise from the merger of previously distinct ones) and informativity (languages' capacity for meaningful variation), Olena Shcherbakova and colleagues conducted a quantitative analysis for more than 1,300 languages and claim the outcome is inconsistent with the LNH.

ID b28dc26d

119 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support Shcherbakova and colleagues' claim?

(A) Shcherbakova and colleagues' analysis showed a slightly negative correlation between grammatical complexity and fusion and between grammatical complexity and informativity.

(B) Shcherbakova and colleagues' analysis showed a slightly negative correlation between grammatical complexity and exotericity.

(C) Shcherbakova and colleagues' analysis showed a slightly positive correlation between grammatical complexity and fusion.

(D) Shcherbakova and colleagues' analysis showed a slightly positive correlation between fusion and exotericity and between informativity and exotericity.

"The Young Girl" is a 1920 short story by Katherine Mansfield. In the story, the narrator takes an unnamed seventeen-year-old girl and her younger brother out for a meal. In describing the teenager, Mansfield frequently contrasts the character's pleasant appearance with her unpleasant attitude, as when Mansfield writes of the teenager, _____

ID 37e15265

120 Mark for Review — Hard — Explanation ›

Which quotation from "The Young Girl" most effectively illustrates the claim?

(A) "I heard her murmur, 'I can't bear flowers on a table.' They had evidently been giving her intense pain, for she positively closed her eyes as I moved them away."

(B) "While we waited she took out a little, gold powder-box with a mirror in the lid, shook the poor little puff as though she loathed it, and dabbed her lovely nose."

(C) "I saw, after that, she couldn't stand this place a moment longer, and, indeed, she jumped up and turned away while I went through the vulgar act of paying for the tea."

(D) "She didn't even take her gloves off. She lowered her eyes and drummed on the table. When a faint violin sounded she winced and bit her lip again. Silence."

A student is writing a paper about *One Night in Miami...*, a 2020 film directed by Regina King and written by Kemp Powers. Powers adapted the film's screenplay from his 2013 play, which he wrote after learning about a 1964 meeting that took place in Miami, Florida, between four prominent figures of the Civil Rights movement: Malcolm X, Muhammad Ali, Jim Brown, and Sam Cooke. The student claims that although Powers was inspired by this meeting, the film is best understood not as a precise retelling of historical events but rather as a largely imagined but informed representation of them.

ID f9c4bdab

121 Mark for Review — Hard — Explanation ›

Which quotation from an article about *One Night in Miami...* would be the most effective evidence for the student to include in support of this claim?

(A) "When Powers learned of the meeting, he initially planned to write a much longer work about its four famous participants rather than focusing on the meeting itself."

(B) "*One Night in Miami...* received numerous awards and nominations, including an Academy Award nomination for Powers for Best Adapted Screenplay."

(C) "Powers has described *One Night in Miami...* as the story of four friends encouraging and supporting one another while engaged in a crucial political debate about how best to achieve equality for Black people in the United States."

(D) "Powers could find only the most superficial historical details about the meeting, so he read extensively about the four individuals and their thinking at the time in an effort to portray what might have happened between them."

In subtropical Asia, *Apis dorsata* (giant honeybee) plays an essential role in pollinating a wide variety of crops and wild plants. To study how different agricultural land covers affect the species, Rika Raffiudin and colleagues monitored the foraging activity of the bees as well as the pollen content of the honey from *A. dorsata* colonies at two sites in Indonesia: Kampar, characterized by its surrounding monoculture farms (growing a single crop), and Kerinci, a forest-agriculture site where multiple crops, including hot peppers and coffee, are grown nearby. The researchers concluded that a lack of crop variety may reduce total pollen collection by *A. dorsata*.

ID 6eb0223c

122 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' conclusion?

(A) Pollen in honey samples from Kampar bee colonies was predominantly sourced from a single plant species, whereas pollen in honey samples from Kerinci bee colonies was sourced from multiple different plant species.

(B) In one Kerinci bee colony, a greater proportion of bees returned to their nests with pollen than returned without pollen, whereas the inverse was observed in a second Kerinci bee colony.

(C) Significantly fewer bees were observed engaging in foraging activities with the crops surrounding Kerinci than with the crops surrounding Kampar.

(D) Honey samples from Kerinci bee colonies contained significantly higher concentrations of pollen than honey samples from Kampar bee colonies did.

The Intertropical Convergence Zone (ITCZ), a band of clouds that encircles Earth in the tropics and is a major rainfall source, shifts position in response to temperature variations across Earth's hemispheres. Data from Huagapo Cave in Peru suggest the ITCZ shifted south during the Little Ice Age (circa 1300–1850), but a shift as far into South America as Huagapo should have led to dry conditions in Central America, which is inconsistent with climate models. To resolve the issue, geologist Yemane Asmerom and colleagues collected data from Yok Balum Cave in Central America and compared them with the Huagapo data. They concluded that during the Little Ice Age, the ITCZ may have expanded northward and southward rather than simply shifted.

ID b32c4b3a

123 Mark for Review — Hard — Explanation ›

Which finding from Asmerom and colleagues' study, if true, would most directly support their conclusion?

(A) Neither the Yok Balum data nor the Huagapo data show significant local variations in temperature during the Little Ice Age.

(B) Both the Yok Balum data and the Huagapo data show increased temperatures and prolonged dry conditions during the Little Ice Age.

(C) The Yok Balum data show prolonged dry conditions during the same portions of the Little Ice Age in which the Huagapo data show heightened levels of rainfall.

(D) The Yok Balum data and the Huagapo data show strongly correlated patterns of high rainfall during the Little Ice Age.

Electra is a circa 420–410 BCE play by Sophocles, translated in 1870 by R.C. Jebb. Electra, who is in mourning for her dead father and her long-absent brother, is aware of the intensity of her grief but believes it to be justified: _____

ID af9e3240

124 Mark for Review — Hard — Explanation ›

Which quotation from *Electra* most effectively illustrates the claim?

(A) "O thou pure sunlight, and thou air, earth's canopy, how often have ye heard the strains of my lament, the wild blows dealt against this bleeding breast, when dark night fails!"

(B) "Send to me my brother; for I have no more the strength to bear up alone against the load of grief that weighs me down."

(C) "I know my own passion, it escapes me not; but, seeing that the causes are so dire, will never curb these frenzied plaints, while life is in me."

(D) "But never will I cease from dirge and sore lament, while I look on the trembling rays of the bright stars, or on this light of day."

Archaeologist Weiwei Wang and her colleagues analyzed footed grinding slabs and other food-preparation tools excavated from Óc Eo, a Southeast Asian port city that flourished between the first and sixth centuries CE. Wang and colleagues recovered microscopic remnants of turmeric and other spices from the surfaces of the tools. Turmeric is native to South Asia, more than a thousand miles west of Óc Eo, and the researchers showed that the footed grinding slabs at Óc Eo are very similar to footed grinding slabs common throughout South Asia from around 500 BCE to 300 CE. Wang and colleagues' findings therefore indicate that there must have been a trade link, whether direct or indirect, between the two regions.

ID 2398ffbf

125 Mark for Review — Hard — Explanation ›

Which finding, if true, would directly weaken the conclusion about Wang and her colleagues' findings that is presented in the text?

(A) Some of the spices recovered from Óc Eo are native to the Maluku Islands, which are located approximately 2,000 miles southeast of Óc Eo.

(B) In the first through third centuries CE, there was a significant migration of people from South Asia to Southeast Asia.

(C) Other types of artifacts originating in South Asia and dating to the first through sixth centuries CE have been found throughout Southeast Asia.

(D) The people of Óc Eo and several communities in South Asia regularly traded with people in the region that is now the Southeast Asian country of Malaysia no later than the first century CE.

In the mountains of Brazil, *Barbacenia tomentosa* and *Barbacenia macrantha*—two plants in the Velloziaceae family—establish themselves on soilless, nutrient-poor patches of quartzite rock. Plant ecologists Anna Abrahão and Patricia de Britto Costa used microscopic analysis to determine that the roots of *B. tomentosa* and *B. macrantha*, which grow directly into the quartzite, have clusters of fine hairs near the root tip; further analysis indicated that these hairs secrete both malic and citric acids. The researchers hypothesize that the plants depend on dissolving underlying rock with these acids, as the process not only creates channels for continued growth but also releases phosphates that provide the vital nutrient phosphorus.

ID 6536183b

126 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' hypothesis?

(A) Other species in the Velloziaceae family are found in terrains with more soil but have root structures similar to those of *B. tomentosa* and *B. macrantha*.

(B) Though *B. tomentosa* and *B. macrantha* both secrete citric and malic acids, each species produces the acids in different proportions.

(C) The roots of *B. tomentosa* and *B. macrantha* carve new entry points into rocks even when cracks in the surface are readily available.

(D) *B. tomentosa* and *B. macrantha* thrive even when transferred to the surfaces of rocks that do not contain phosphates.

In countries with right-hand traffic, drivers who want to make a left turn at a traffic intersection with stoplights have to wait for either a gap in oncoming traffic or a designated left-turn signal to turn green. At busy intersections, this often causes a backup of vehicles waiting to turn left or being prevented from proceeding by left-turning vehicles in front of them. Transportation researcher Vikash V. Gayah claims that in urban areas eliminating the option to turn left at busy intersections—both with and without dedicated left-turn signals—would improve traffic flow and, as a result, reduce overall travel times even if such a restriction would require drivers to sometimes travel a slightly longer distance.

ID 2644644a

127 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researcher's claim?

(A) In a town that installed left-turn signals at all busy intersections, seven out of ten survey respondents agreed with the statement "the streets in my community are easier to navigate by motor vehicle than before."

(B) A traffic study of intersections in a large city shows that on average drivers wait longer to make a left turn at intersections without left-turn signals than at intersections with such signals.

(C) After a city eliminated left turns at busy intersections, a package-delivery company reports that its drivers have been able to reach more addresses in the city daily, on average, and therefore deliver more packages there annually.

(D) Statistics reveal that school buses in a city that eliminated left turns at most intersections took on average two minutes longer to complete their routes after the restriction took effect than they did before.

Art collectives, like the United States- and Vietnam-based collective The Propeller Group or Cuba's Los Carpinteros, are groups of artists who agree to work together: perhaps for stylistic reasons, or to advance certain shared political ideals, or to help mitigate the costs of supplies and studio space. Regardless of the reasons, art collectives usually involve some collaboration among the artists. Based on a recent series of interviews with various art collectives, an arts journalist claims that this can be difficult for artists who are often used to having sole control over their work.

ID 7f293254

128 Mark for Review — Hard — Explanation ›

Which quotation from the interviews best illustrates the journalist's claim?

(A) "The first collective I joined included many amazingly talented artists, and we enjoyed each other's company, but because we had a hard time sharing credit and responsibility for our work, the collective didn't last."

(B) "We work together, but that doesn't mean that individual projects are equally the work of all of us. Many of our projects are primarily the responsibility of whoever originally proposed the work to the group."

(C) "Having worked as a member of a collective for several years, it's sometimes hard to recall what it was like to work alone without the collective's support. But that support encourages my individual expression rather than limits it."

(D) "Sometimes an artist from outside the collective will choose to collaborate with us on a project, but all of those projects fit within the larger themes of the work the collective does on its own."

Gorgets, or necklaces with large pendants, have been part of the ceremonial attire of tribes from the US Southeast for centuries. One of the oldest examples, the Fairfield Gorget, was found in Fairfield, Missouri, in 1958. Its overall design resembles that of other art from the region during the Mississippian period (900–1600 CE). Yet the image on the gorget is of a jaguar—a species whose range doesn't extend to Missouri. Jaguar images are common in ancient Mexican art, and Mexico lies squarely in the species' range. Therefore, some scholars argue that long-distance trade in Mexican art objects brought the imagery to Missouri, where a local artist could have adopted it and incorporated it into the Fairfield Gorget.

ID 4d38c2ea

129 Mark for Review — Hard — Explanation ›

Which finding, if true, would most strongly support the underlined explanation?

(A) The Fairfield Gorget is dated not to the Mississippian period but instead to the earlier Woodland period, which ended around 900 CE.

(B) The range of the jaguar is shown to have expanded dramatically after the Mississippian period came to a close around 1600 CE.

(C) An ancient Mexican art object is found at a site that dates to the Mississippian period and is close to where the Fairfield Gorget was found.

(D) Certain works by present-day artists from Southeastern tribes reflect outside cultural influences, including contemporary Mexican art.

"Poetry" is a 1919 poem by Marianne Moore. The poem highlights an ambivalence toward poetry as the speaker acknowledges its merits while also expressing a sense of displeasure, writing

_____

ID 66fd248a

130 Mark for Review — Hard — Explanation ›

Which quotation from "Poetry" most effectively illustrates the claim?

(A) "nor is it valid / to discriminate against 'business documents and / school-books'; all these phenomena are important."

(B) "One must make a distinction / however: when dragged into prominence by half poets, the result is not / poetry"

(C) "when [poems] become so derivative as to become unintelligible, the / same thing may be said for all of us—that we / do not admire what / we cannot understand."

(D) "Reading [poetry], however, with a perfect contempt for it, one discovers that there is in / it after all, a place for the genuine."

A student performs an experiment testing her hypothesis that a slightly acidic soil environment is more beneficial for the growth of the plant *Brassica rapa parachinensis* (a vegetable commonly known as choy sum) than a neutral soil environment. She plants sixteen seeds of choy sum in a mixture of equal amounts of coffee grounds (which are highly acidic) and potting soil and another sixteen seeds in potting soil without coffee grounds as the control for the experiment. The two groups of seeds were exposed to the same growing conditions and monitored for three weeks.

ID 9c407117

131 Mark for Review — Hard — Explanation >

Which finding, if true, would most directly weaken the student's hypothesis?

(A) The choy sum planted in the soil without coffee grounds were significantly taller at the end of the experiment than the choy sum planted in the mixture of soil and coffee grounds.

(B) The choy sum grown in the soil without coffee grounds weighed significantly less at the end of the experiment than the choy sum grown in the mixture of soil and coffee grounds.

(C) The choy sum seeds planted in the soil without coffee grounds sprouted significantly later in the experiment than did the seeds planted in the mixture of soil and coffee grounds.

(D) Significantly fewer of the choy sum seeds planted in the soil without coffee grounds sprouted plants than did the seeds planted in the mixture of soil and coffee grounds.

Initially observed in 2017, the interstellar object 'Oumuamua is the first object of its kind to be seen in our solar system. Researchers have been puzzled because its acceleration cannot be entirely explained by the gravitational pull of nearby bodies: there must be a nongravitational influence on its velocity and trajectory. Some previously suggested explanations for this nongravitational acceleration involve mechanisms that are unlikely or unrealistic, such as geometric effects from 'Oumuamua being potentially composed of several spatially separated bodies. Now, Jennifer Bergner and colleagues propose that the nongravitational acceleration is due to the gaseous expulsion of entrapped hydrogen from 'Oumuamua's water-rich icy body.

ID 6d69ab93

132 Mark for Review — Hard — Explanation >

Which statement, if true, would most strongly support the claim made by Bergner and colleagues about the cause of 'Oumuamua's acceleration?

(A) Existing proposed models of outgassing from 'Oumuamua include the direct conversion of nitrogen or carbon monoxide from a solid to a gaseous state without becoming liquid, but these models have theoretical or observational inconsistencies.

(B) 'Oumuamua's trajectory is inconsistent with a nongravitational acceleration that would be caused by the release of hydrogen gas resulting from the processing of water ice (H_2O), but the interstellar object's observable properties can be explained if it has a significant component of molecular hydrogen ice (H_2).

(C) Since nongravitational accelerations of interstellar objects are several orders of magnitude weaker than gravitational accelerations, deviation from behavior that could be fully attributed to gravitational pull has been detected on a limited number of objects similar to 'Oumuamua.

(D) Exposure to interstellar cosmic radiation can result in the formation of embedded pockets of hydrogen gas in water ice; moreover, when traveling through the solar system, 'Oumuamua experienced warming sufficient to alter its icy structure and allow for outgassing.

A student in a political science course is writing a paper on Aristotle's *The Politics*, in which Aristotle offers his opinion on political instability and gives advice on how constitutions can be preserved. Aristotle observes that different forms of government can fall in different ways—for example, oligarchies might grant power to military leaders during wartime who refuse to relinquish that power during peacetime—but some methods of preserving order apply across all forms of government. The student claims that in particular Aristotle asserts that in a healthy state obedience to law must be as close to absolute as possible and that even minor infractions should not be ignored.

ID eaf22802

133 Mark for Review

Hard

Explanation ›

Which quotation from a philosopher's analysis of *The Politics* would best support the student's claim?

(A) "When constructing his argument regarding the characteristics of a well-functioning government, Aristotle asserts that 'Transgression creeps in unperceived and at last ruins the state,' illustrating this idea with a comparison to frequent small expenditures slowly and almost imperceptibly chipping away at a fortune until it is ultimately depleted."

(B) "When Aristotle writes on the necessity of avoiding corruption in government, he proposes that 'every state should be so administered and so regulated by law that its magistrates cannot possibly make money.' In particular, he thinks oligarchies are particularly susceptible to corruption through bribery."

(C) "When Aristotle considers the health of constitutions, he states that 'Constitutions are preserved when their destroyers are at a distance, and sometimes also because they are near, for the fear of them makes the government keep in hand the constitution.' He holds that rulers who wish to see constitutions preserved must continually remind the populace of the dangers that would result from a constitutional collapse."

(D) "When contrasting different forms of government, Aristotle holds that 'oligarchies may last, not from any inherent stability in such forms of government, but because the rulers are on good terms both with the unenfranchised and with the governing classes.' That is, oligarchic leaders who wish to hold on to power will introduce members of disenfranchised classes into government in a participatory role."

Founded in 1965 and originally established as a cultural extension of the United Farm Workers—a union representing many Mexican American agricultural workers at the time—the theater troupe El Teatro Campesino has achieved recognition as a source of inspiration for subsequent Chicano theater companies and as a contributor to the dramatic arts. In an article about the company, a theater historian posits that a significant stylistic influence on El Teatro's early performances was the audience-mediated slapstick comedy of *carpa* theater, vaudeville-style shows popular in Mexico and the US Southwest in the 1920s and '30s.

ID 33b1b285

134 Mark for Review — Hard — Explanation ›

Which quotation from the article would best illustrate the theater historian's claim?

(A) "The company presented *actos*, short comedy sketches, that often relied on exaggerated physical humor to groups of agricultural workers, whose reactions—enthusiastic cheers of appreciation and, occasionally, loud boos of disapproval—promoted improvisation."

(B) "The company was focused on the reality of the present situation and discovered that humor was often found in that reality; consequently, comedy became a tool to convey social critique while entertaining and inspiring audiences."

(C) "The company relied heavily on satire, humor, and references to contemporary popular culture as well as a make-do aesthetic—often referred to as *rasquache*—that reflected not only the troupe's limited financial resources but also its sociopolitical message."

(D) "The members of the company, which in addition to founder Luis Valdez consisted entirely of nonprofessional actors, traveled into farm fields, where they, with minimal props and costumes, performed comedy in the form of brief humorous vignettes."

A member of the Otomi, an Indigenous people in Central Mexico, Octavio Medellín immigrated to the United States as a child, and his sculpture bears the impress of traditions on both sides of the border: US-based modernist sculpture, Mexican modernist painting, Otomi art, and the ancient sculpture of other Mexican Indigenous peoples, including the Maya. In his 1950 masterpiece *History of Mexico*, Medellín fuses these influences into a style so idiosyncratic that it resists efforts to view his work through the lens of nationality or cultural identity. Artists, he insisted, should strive for individual expression, even as they draw inspiration from their heritage and the communities where they live and work.

ID 378c66d5

135 Mark for Review — Hard — Explanation ›

Which quotation from an art critic most directly challenges the underlined claim in the text?

(A) "Although a number of ancient Indigenous artistic traditions pictured human forms in profile, the forms populating the surface of *A History of Mexico* suggest a specifically Maya influence."

(B) "In *A History of Mexico*, the synthesis of ancient and modernist traditions functions as a stylistic parallel to the work's subject matter: a survey of centuries of Mexican history."

(C) "Many critics focus on Indigenous influences in *A History of Mexico* and other key works by Medellín to the exclusion of influences from non-Indigenous art."

(D) "While *A History of Mexico* features modernist motifs, it relies primarily on angular human forms in profile—a staple of Maya sculpture—and thus invites classification as Indigenous art."

In Diné (Navajo) culture, *ikaah* (sandpaintings) are created and then erased as part of sacred healing ceremonies lasting no more than a few days, but Diné *hataałii* (chanter, healer, cultural guide) Fred Stevens developed fixatives to preserve desacralized sandpaintings. While on a US-sponsored cultural ambassadorial trip in Europe and the Americas in the 1960s, Stevens produced several such sandpaintings and gave them to cultural institutions. This may seem in tension with the role of cultural ambassador—how could static objects authentically represent an inherently ephemeral and dynamic practice?—but such a view is itself overly object-focused and neglects how Stevens strove to convey exactly those characteristics of *ikaah* as a cultural practice.

ID ca9dc00f

136 Mark for Review

Hard

Explanation ›

Which quotation from an art historian would most directly support the claim made in the text?

(A) "While Stevens's ambassadorial sandpaintings are undoubtedly educative for audiences that have little exposure to Diné culture, they should not be confused with authentic *ikaah*, which cannot be extricated from a practice that is intentionally and necessarily transitory nor condensed into a single persistent object."

(B) "The most compelling way to reconcile the apparent tension between the temporary and performative nature of *ikaah* and the persistent and static nature of Stevens's ambassadorial sandpaintings is to recognize that Stevens was an ambassador not only of Diné culture but of a US art culture that tended to value permanent works over ephemeral ones."

(C) "Stevens's ambassadorial sandpaintings are best understood not as self-contained objects but as reminders of the public creations of the sandpaintings, during which Stevens conducted appropriate *ikaah* rituals and encouraged viewers to closely track his movements and subtle shifts in the sand throughout the process."

(D) "It is important to recall Stevens's own actions as a gift-giver—a temporary and performative role—of the sandpaintings, for by taking those actions, Stevens publicly enacted the transmission of knowledge of both traditional *ikaah* practices and cutting-edge chemistry (in the form of the preservative additives), a hybrid that reflects the dynamism of Diné culture."

The Souls of Black Folk is a 1903 book by W.E.B. Du Bois. In the book, Du Bois suggests that upon hearing Black folk songs, he felt an intuitive and sometimes unexpected sense of cultural recognition: _____

ID 783d1388

137 Mark for Review Hard Explanation ›

Which quotation from *The Souls of Black Folk* most effectively illustrates the claim?

(A) "[Black folk music] still remains as the singular spiritual heritage of the nation and the greatest gift of the Negro people."

(B) "Ever since I was a child these songs have stirred me strangely. They came out of the South unknown to me, one by one, and yet at once I knew them as of me and of mine."

(C) "Caricature has sought again to spoil the quaint beauty of the music, and has filled the air with many debased melodies which vulgar ears scarce know from the real. But the true Negro folk-song still lives in the hearts of those who have heard them truly sung and in the hearts of the Negro people."

(D) "The songs are indeed the siftings of centuries; the music is far more ancient than the words, and in it we can trace here and there signs of development."

Given that stars and planets initially form from the same gas and dust in space, some astronomers have posited that host stars (such as the Sun) and their planets (such as those in our solar system) are composed of the same materials, with the planets containing equal or smaller quantities of the materials that make up the host star. This idea is also supported by evidence that rocky planets in our solar system are composed of some of the same materials as the Sun.

ID 0045c234

138 Mark for Review Hard Explanation ›

Which finding, if true, would most directly weaken the astronomers' claim?

(A) Most stars are made of hydrogen and helium, but when cooled they are revealed to contain small amounts of iron and silicate.

(B) A nearby host star is observed to contain the same proportion of hydrogen and helium as that of the Sun.

(C) Evidence emerges that the amount of iron in some rocky planets is considerably higher than the amount in their host star.

(D) The method for determining the composition of rocky planets is discovered to be less effective when used to analyze other kinds of planets.

In a series of experiments, Julio Sevilla and Claudia Townsend showed that manipulating the space between products in store displays can influence consumers' views of those products. Participants in several of the experiments regarded the same products in the same (generic) retail settings as significantly more valuable when the product-to-space ratio was low than when it was high. But in one of the experiments, Sevilla and Townsend arranged the same jewelry with different levels of intervening space at an upscale retailer (Tiffany & Co.) and a relatively inexpensive retailer (Forever 21). The result of this experiment suggests that a store context associated with inexpensive products may moderate the effect Sevilla and Townsend observed in their other experiments.

ID 09775cbf

139 Mark for Review — Hard — Explanation ›

Which finding from the experiment with Tiffany & Co. and Forever 21, if true, would most directly support the conclusion presented in the text?

(A) At Tiffany & Co., participants judged jewelry spaced far apart to be substantially more valuable than jewelry spaced close together, but at Forever 21, participants judged jewelry spaced far apart to be only slightly more valuable than jewelry spaced close together.

(B) At both Tiffany & Co. and Forever 21, participants judged jewelry spaced far apart to be less valuable than jewelry spaced close together, but the difference in perceived value was significantly greater at Tiffany & Co. than at Forever 21.

(C) Participants judged jewelry spaced far apart at Tiffany & Co. to be similar in value to jewelry spaced far apart at Forever 21, but participants judged jewelry spaced close together at Tiffany & Co. to be more valuable than jewelry spaced close together at Forever 21.

(D) When jewelry was spaced far apart, participants judged the jewelry at Tiffany & Co. to be more valuable than the jewelry at Forever 21, but when jewelry was spaced close together, participants judged the jewelry at Tiffany & Co. to be less valuable than the jewelry at Forever 21.

The novelist Toni Morrison was the first Black woman to work as an editor at the publishing company Random House, from 1967 to 1983. A scholar asserts that one of Morrison's likely aims during her time as an editor was to strengthen the presence of Black writers on the list of Random House's published authors.

ID 4fc9a13a

140 Mark for Review — Hard — Explanation ›

Which finding, if true, would most strongly support the scholar's claim?

(A) The percentage of authors published by Random House who were Black rose in the early 1970s and stabilized throughout the decade.

(B) Black authors who were interviewed in the 1980s and 1990s were highly likely to cite Toni Morrison's novels as a principal influence on their work.

(C) The novels written by Toni Morrison that were published after 1983 sold significantly more copies and received wider critical acclaim than the novels she wrote that were published before 1983.

(D) Works that were edited by Toni Morrison during her time at Random House displayed stylistic characteristics that distinguished them from works that were not edited by Morrison.

The presence of other individuals of the same species has been observed to mitigate stress in highly social mammals. To investigate whether this phenomenon, known as social buffering, also occurs in reptiles, researchers led by Chelsea E. Martin monitored stress responses in wild southern Pacific rattlesnakes (*Crotalus helleri*) in three experimental treatments: when alone, with a rope, and with a companion *C. helleri*. The researchers compared the percent change between baseline and peak heart rate in response to a (harmless) disturbance, with higher values indicating higher stress levels.

ID 9c199797

141 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the idea that social buffering occurs among *C. helleri*?

(A) The average percent change in heart rate was lower among *C. helleri* with a companion than among solitary *C. helleri* and *C. helleri* with a rope.

(B) Average peak heart rates were highest among solitary *C. helleri*, but no differences were observed in average peak heart rates between *C. helleri* with a companion and *C. helleri* with a rope.

(C) *C. helleri* with a companion displayed a lower average baseline heart rate and lower average peak heart rate than did solitary *C. helleri* or *C. helleri* with a rope.

(D) Solitary *C. helleri* had higher average baseline heart rates than did *C. helleri* in the other treatments, but the average percent change in heart rate was smaller among solitary *C. helleri* than among *C. helleri* with a companion.

Black beans (*Phaseolus vulgaris*) are a nutritionally dense food, but they are difficult to digest in part because of their high levels of soluble fiber and compounds like raffinose. They also contain antinutrients like tannins and trypsin inhibitors, which interfere with the body's ability to extract nutrients from foods. In a research article, Marisela Granito and Glenda Álvarez from Simón Bolívar University in Venezuela claim that inducing fermentation of black beans using lactic acid bacteria improves the digestibility of the beans and makes them more nutritious.

ID 8391a002

142 Mark for Review — Hard — Explanation ›

Which finding from Granito and Álvarez's research, if true, would most directly support their claim?

(A) When cooked, fermented beans contained significantly more trypsin inhibitors and tannins but significantly less soluble fiber and raffinose than nonfermented beans.

(B) Fermented beans contained significantly less soluble fiber and raffinose than nonfermented beans, and when cooked, the fermented beans also displayed a significant reduction in trypsin inhibitors and tannins.

(C) When the fermented beans were analyzed, they were found to contain two microorganisms, *Lactobacillus casei* and *Lactobacillus plantarum*, that are theorized to increase the amount of nitrogen absorbed by the gut after eating beans.

(D) Both fermented and nonfermented black beans contained significantly fewer trypsin inhibitors and tannins after being cooked at high pressure.

ALSOL is a microcredit program in Mexico that makes small loans to female entrepreneurs who lack the collateral and credit history to secure financing from conventional banks. Borrowers use their business proceeds to repay loans in equal weekly installments and incur no penalty for missed payments other than lack of access to larger loans. Economists Gustavo Barboza and Sandra Trejos analyzed ALSOL data and found that rural borrowers, who mostly make and sell handicrafts, miss payments more often than urban borrowers do, partly because they sell their goods less frequently than they could. Barboza and Trejos claim that this behavior reflects strategic decisions that enable rural women to increase their profits per unit sold.

ID 4987f743

143 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support Barboza and Trejos's claim?

(A) Many marketplaces require entrepreneurs to pay marketplace operators a fixed percentage of each day's proceeds in exchange for permission to sell goods there.

(B) Rural entrepreneurs can typically sell their goods for higher prices in cities than in their home areas, but the number of people selling competing goods tends to be higher in cities.

(C) Due to the lower costs they incur, rural entrepreneurs tend to require smaller initial loans than urban entrepreneurs do.

(D) The cost to rural entrepreneurs to bring their goods to towns with marketplaces is high but largely independent of the number of goods they bring.

Many archaeologists will tell you that categorizing excavated fragments of pottery by style, period, and what objects they belong to relies not only on standard criteria, but also on instinct developed over years of practice. In a recent study, however, researchers trained a deep-learning computer model on thousands of images of pottery fragments and found that it could categorize them as accurately as a team of expert archaeologists. Some archaeologists have expressed concern that they might be replaced by such computer models, but the researchers claim that outcome is highly unlikely.

ID 124fdcd7

144 Mark for Review — Hard — Explanation ›

Which finding, if true, would most directly support the researchers' claim?

(A) In the researchers' study, the model was able to categorize the pottery fragments much more quickly than the archaeologists could.

(B) In the researchers' study, neither the model nor the archeologists were able to accurately categorize all the pottery fragments that were presented.

(C) A survey of archaeologists showed that categorizing pottery fragments limits the amount of time they can dedicate to other important tasks that only human experts can do.

(D) A survey of archaeologists showed that few of them received dedicated training in how to properly categorize pottery fragments.

Explanations

1 Correct answer **B** — Easy — ‹ Back to question

B Sea stars in the tank with only seawater climbed to the top of the tank, but sea stars in the other tank stopped climbing just below the layer of fresh water.

Choice B is the best answer because it presents a finding that, if true, would support Garza and Robles's hypothesis that a layer of fresh water forms a barrier to ochre sea stars. The text explains that the sea stars tend to move to higher shore levels at night in search of prey, but after a heavy rain, the sea stars stay at lower shore levels. Garza and Robles hypothesize that rainfall results in a layer of fresh water that the sea stars don't cross. To determine whether fresh water forms a barrier to sea stars, Garza and Robles observed how sea stars behaved in a tank of only seawater and in a tank of seawater with a layer of fresh water on top. If the sea stars climbed to the top of the tank with only seawater but stopped climbing just below the layer of fresh water in the other tank, that would suggest that fresh water does indeed serve as a barrier to the sea stars, thereby supporting Garza and Robles's hypothesis.

Choice A is incorrect because finding that sea stars in the tank with only seawater moved around the bottom of the tank more than sea stars in the other tank did but that none of the stars in either tank climbed to the top would be irrelevant to Garza and Robles's hypothesis. Such a finding would reveal nothing about whether fresh water serves as a barrier to sea stars. **Choice C is incorrect** because finding that sea stars climbed to the top of both tanks would weaken, not support, Garza and Robles's hypothesis, since it would indicate that the layer of fresh water wasn't a barrier to the sea stars. **Choice D is incorrect** because finding that sea stars in the tank with only seawater mostly stayed near the bottom of the tank but sea stars in the other tank

climbed into the layer of fresh water wouldn't support Garza and Robles's hypothesis. Instead, such a finding would suggest that the layer of fresh water wasn't a barrier to the sea stars, thereby weakening Garza and Robles's hypothesis.

2 Correct answer **A** Easy Back to question

A "She had never known before how much the country meant to her. The chirping of the insects down in the long grass had been like the sweetest music. She had felt as if her heart were hiding down there, somewhere, with the quail and the plover and all the little wild things that crooned or buzzed in the sun. Under the long shaggy ridges, she felt the future stirring."

Choice A is the best answer because it presents the quotation that most directly illustrates the claim that Cather portrays Alexandra as having a deep emotional connection to her natural surroundings. This quotation states that the country meant a great deal to Alexandra and then goes on to detail several ways in which her natural surroundings affect her emotionally: the insects sound like "the sweetest music," she feels as though "her heart were hiding" in the grass "with the quail and the plover," and near the ridges she feels "the future stirring."

Choice B is incorrect because the quotation doesn't suggest that Alexandra had a deep emotional connection to her natural surroundings but instead describes how she interacts with the people around her to learn more about crops, poultry, and experiments with clover hay. **Choice C is incorrect** because the quotation doesn't suggest that Alexandra has a deep emotional connection to her natural surroundings but instead describes her nighttime departure in a wagon. The quotation says nothing about Alexandra's emotional state. **Choice D is incorrect** because the quotation doesn't convey Alexandra's deep emotional connection to her natural surroundings; instead, this quotation describes how well she understands the markets and livestock.

3 Correct answer **A** Easy Back to question

A "You have not known what you are, you have slumber'd upon yourself / all your life, / Your eyelids have been the same as closed most of the time."

Choice A is the best answer because it presents the quotation that most directly illustrates the claim that Whitman's poem suggests that its readers haven't fully understood themselves. This quotation makes that point directly by saying to readers, "You have not known what you are." The quotation goes on to reinforce this point using a metaphor of sleep, saying that readers have "slumber'd" and that their "eyelids have been the same as closed most of the time."

Choice B is incorrect because this quotation doesn't suggest that readers haven't fully understood themselves but instead characterizes readers as "immense" and "interminable." Although immense and interminable things can be difficult to understand, this quotation doesn't make that point. **Choice C is incorrect** because this quotation doesn't suggest that readers haven't fully understood themselves but instead conveys the speaker's regret over not having celebrated readers sooner. In fact, this quotation says nothing at all about readers themselves—it's focused solely on the speaker's feelings about readers. **Choice D is incorrect** because this quotation doesn't suggest that readers haven't fully understood themselves; instead, this quotation makes the point that the speaker has understood readers and is determined to create "hymns" about them.

4 Correct answer **D** Easy Back to question

D "We shall never know defeat."

Choice D is the best answer because it most effectively illustrates the claim that the speaker in the poem "We Are Marching" predicts future success. To say that someone will "never know" an experience—like defeat, or being unsuccessful—is to indicate that they will never personally have that experience. Thus, when the speaker says that the marching group "shall never know defeat," the speaker is predicting that the group will experience only success in the future.

Choice A is incorrect because the quotation presents a question about an activity already taking place (marching), not a statement about future success. The speaker is asking if the sound of marching feet is being heard. **Choice B is incorrect** because the quotation directs an immediate action instead of making a prediction about the future. The speaker is telling people to "get in line," or to join the march that's already happening. **Choice C is incorrect** because the quotation describes a past action instead of making a prediction about the future. The speaker is stating that those in the march have "answered duty's call"—that is, that they have acted out of a sense of duty.

5 Correct answer **D** Easy Back to question

D Each year, more people access the online image of *Mississippi Delta* than visit the Minneapolis Institute of Art in person.

Choice D is the best answer because it presents a finding that, if true, would most directly support the student's claim that putting a work online increases the number of people who experience it. The text states that the Minneapolis Institute of Art has more than 90,000 artworks. It goes on to explain that images of a subset of these works can be viewed online, such as an image of Armajani's drawing *Mississippi Delta*. The text then presents a student's claim that online images of art can increase the number of people who experience the work. If more people view Armajani's drawing online than they do in person, this finding would support the student's claim about the benefits of putting a work from the museum online. Thus, this finding would most directly support the claim because, if it were true, more people would view *Mississippi Delta* online than would visit the entire museum in person.

Choice A is incorrect because information about the museum having several works by Armajani wouldn't address the student's claim about how putting artworks online affects the number of people who experience them. The quantity of works by one artist that are held in a museum collection wouldn't support a claim about audience size or the impact of online accessibility. **Choice B is incorrect** because opinions about the museum would only relate to the institution's reputation. This finding wouldn't provide information about online accessibility or whether digital images increase the number of people who view specific artworks. **Choice C is incorrect** because critics' praise for *Mississippi Delta* wouldn't address the student's claim about how online access increases the number of people who can experience a work. Although positive comments from art critics could affect interest in an artwork, this finding wouldn't provide information about how many people experience the work or whether online accessibility increases that number.

6 Correct answer **B** Easy Back to question

B a listening child "knows that Aunt Sue / Never got her stories out of any book at all, / But that they came / Right out of her own life."

Choice B is the best answer because it most effectively illustrates the speaker of the poem's claim that the stories Aunt Sue tells are based on Aunt Sue's personal experiences. In the quotation, the speaker conveys the listening child's point of view that Aunt Sue's stories originate from her personal experiences and are not taken from books or other external sources. The listening child explicitly contrasts two possible sources for Aunt Sue's stories: a book (whose potentially fictitious stories are implied to be written by someone else) or "her own life." By having the child confidently assert that Aunt Sue "never got her stories out of any book at all," the speaker indicates that Aunt Sue's stories are instead informed by her lived experiences.

Choice A is incorrect because it describes an element or image that recurs within Aunt Sue's stories rather than indicating that these stories have a real-life basis. The reference to dark shadows that "cross and recross" the stories functions as imagery on a literal, visual level and may also evoke figurative darkness, but this detail by itself doesn't suggest that the stories are based on Aunt Sue's personal experiences. **Choice C is incorrect** because it identifies the setting of Aunt Sue's storytelling rather than describing the real-life basis of the stories themselves. The quotation states that Aunt Sue tells her stories on "summer nights on the front porch," which establishes when and where the storytelling occurs; however, no information is provided about the origins of the stories that Aunt Sue tells within this setting. **Choice D is incorrect** because it describes the movement or circulation of characters in the stories as Aunt Sue speaks rather than establishing that these stories have a real-life basis. The quotation primarily evokes the sounds of Aunt Sue's voice and the seemingly easy "flow" of this voice in her storytelling.

Although the characters who "mingle...in the flow of old Aunt Sue's voice" are to some extent created or animated by her voice, no information is provided about the characters themselves or their relationship to Aunt Sue's actual experiences.

7 Correct answer **A** Easy ‹ Back to question

A Aquatic reptile and fish remains were detected more often than were mammal remains in an analysis of jaguar waste matter found in the area.

Choice A is the best answer because it presents a finding that, if true, would support the researchers' claim about the diets of jaguars in the Brazilian Pantanal. The text notes that jaguars generally eat land-based mammals, but researchers claim that jaguars in the Pantanal can survive on a diet that includes more fish and aquatic reptiles than mammals. Finding that the remains of aquatic reptiles and fish appear more often in these jaguars' waste than the remains of mammals do would support the researchers' claim, since it would suggest that fish and aquatic reptiles are a more significant part of the jaguars' diet than mammals are.

Choice B is incorrect because finding that a particular aquatic reptile exists in high numbers in the area would not support the researchers' claim about the jaguars' diet. The mere presence of many aquatic reptiles nearby does not mean that the jaguars eat those reptiles, let alone survive on more aquatic reptiles and fish than mammals. **Choice C is incorrect**. Although finding that aquatic reptiles and fish can provide nutrients that land mammals typically do not provide could help explain why some animals eat those reptiles and fish, it would not indicate whether the jaguars in particular eat those reptiles and fish and thus would not support the researchers' claim. **Choice D is incorrect** because finding that when preying on mammals, jaguars prefer semiaquatic mammals, such as capybaras, would be irrelevant to the researchers' claim that the jaguars can survive on a diet of more fish and aquatic reptiles than mammals. The type of mammals the jaguars tend to eat does not indicate anything about whether fish and aquatic reptiles are part of the jaguars' diet.

8 Correct answer **A** Easy ‹ Back to question

A Female giraffes have been observed feeding young giraffes that aren't their direct offspring.

Choice A is the best answer. If female giraffes feed nonoffspring young, that's direct evidence that "giraffes may even help each other care for one another's newborns."

Choice B is incorrect. Confrontations between males doesn't tell us anything about whether giraffes help each other care for newborns. **Choice C is incorrect**. While this option does mention newborn offspring, it only discusses a mother's behavior toward her own child, not another giraffe's child. **Choice D is incorrect**. Whether or not giraffes are observed communicating with each other doesn't tell us anything about whether they help each other care for newborns.

9 Correct answer **D** Easy ‹ Back to question

D "How [the sailor] haunted my dreams, I need scarcely tell you. On stormy nights, when the wind shook the four corners of the house and the surf roared along the cove and up the cliffs, I would see him in a thousand forms, and with a thousand diabolical expressions."

Choice D is the best answer because it most effectively illustrates the claim that the narrator was frightened of the sailor. The quotation describes the sailor haunting the narrator's dreams, appearing in "a thousand forms" with "a thousand diabolical expressions." This vivid imagery conveys the intense psychological fear the narrator experienced when thinking about the sailor. Furthermore, the quotation evokes the narrator's terror and dread by describing a stormy night setting with wind shaking the house and a roaring surf.

Choice A is incorrect because this quotation does not provide any details to suggest that the narrator was afraid of the sailor. It simply describes the narrator's memory of the sailor arriving at the inn with his sea chest. **Choice B is incorrect** because this

quotation does not effectively illustrate the claim that the narrator was frightened of the sailor. The quotation provides several details about the sailor, including that it was his custom to remain silent. However, the quotation does not relate these details to the narrator's experience of being frightened of the sailor. **Choice C is incorrect** because this quotation focuses on aspects of the sailor's appearance and dress. There is no connection made in the quotation between these physical details and the narrator's sense of being frightened of the sailor.

10 Correct answer **D** Easy ‹ Back to question

D "Everything in the room was quiet, so quiet that the only thing to be heard was the rustling of the pages he turned."

Choice D is the best answer because it presents a quotation that illustrates the author's emphasis on the near silence of the setting where the character Valia is reading. In the quotation, the author highlights the near silence of the setting by twice using the word "quiet" to describe the room. The author also calls attention to the fact that Valia is reading in a nearly silent setting by noting that the only sound to be heard is that of the pages being turned.

Choice A is incorrect because this quotation suggests that Valia is in a chilly setting that causes his hand to become cold, not that he's in a nearly silent setting. **Choice B is incorrect** because this quotation emphasizes the size of the book Valia is reading, not the setting where he's reading it. **Choice C is incorrect** because this quotation describes Valia approaching a window and looking at toys, not reading in a quiet setting.

11 Correct answer **C** Easy ‹ Back to question

C "The materials that Echelman uses to build her sculptures are both flexible and strong."

Choice C is the best answer because it presents the quotation that most effectively illustrates the claim that Echelman's sculptures appear delicate but are in fact quite durable. The text explains that Echelman's sculptures include flowing shapes that mimic the wind. If it is true that the materials she uses are both flexible and strong, that would help explain why the works are durable even though they appear delicate.

Choice A is incorrect because the claim in the text is not about how Echelman models her work before sculpting. **Choice B is incorrect** because the claim in the text is not about the planning and design phases of Echelman's work. **Choice D is incorrect** because the claim in the text is not about how the sculptures relate to their locations.

12 Correct answer **B** Easy ‹ Back to question

B "Whoever it was who brought the first wood and coal / To start the Fire, did his part well."

Choice B is the best answer because it presents a quotation that effectively illustrates the claim that the speaker in the poem praises the person who built the fire. In the quotation, the speaker explicitly refers to the builder of the fire—the one "who brought the first wood and coal / To start the Fire"—and offers praise, stating that this person "did his part well."

Choice A is incorrect. Although the quotation describes seeing people working with shovels and ashes, which can be associated with tending a fire, it doesn't mention the building of the fire or single out any person for praise. **Choice C is incorrect**. Although the quotation refers to the fire, it describes the fire dying when left alone, not the starting of the fire or the person who built it. **Choice D is incorrect** because the quotation makes no reference to the fire and doesn't praise anyone; it simply states that people got into bed contentedly in nightcaps.

13 Correct answer **C** Easy ‹ Back to question

C "I bike to my job every day. There's a nice bike path that goes through a park, but I use the bike lane on the main road because it's faster."

Choice C is the best answer because it presents a response that best supports the underlined claim that experienced riders who mainly bike to work tend to prefer routes that reduce their travel time. The bike rider responds that they bike to work every day and that they use the bike lane because it is faster; thus, it is reasonable to assume that they are an experienced rider who prefers routes that reduce their travel time to work.

Choice A is incorrect because this response does not address the claim. The claim is about experienced riders preferring to take routes that reduce their travel time on the way to work; however, this response is from an inexperienced rider who is discussing biking for personal reasons. **Choice B is incorrect** because this response is not related to the underlined claim. The response from this rider does not establish the level of experience they have with riding, nor does it state that the rider uses a bike to get to work. **Choice D is incorrect**. Although this response is from an experienced rider who mainly bikes to work, the response also mentions that the rider's bike is broken, which is not related to any route preference.

14 Correct answer **C** Easy ‹ Back to question

C "I am the Rock, presumptuous Sea! / I am set to encounter thee. / Angry and loud or gentle and still, / I am set here to limit thy power, and I will!"

Choice C is the best answer because it most effectively uses a quotation from "The Rock and the Sea" to illustrate the claim that the poem portrays a rock that is intent on confronting and restraining the sea. In the quotation, the rock is presented as addressing the sea, saying "I am set to encounter thee" and "I am set here to limit thy power, and I will!" These statements suggest that the rock plans to oppose the sea and keep it from becoming too powerful.

Choice A is incorrect because this quotation doesn't express the rock's intentions to confront and restrain the sea; instead, it describes how the rock perceives the sea's "terrible breakers," or waves, that crash onto the rock and tear at it. **Choice B is incorrect** because it doesn't present the rock's intentions. Instead, it presents the point of view of the sea and its perceived power over the land. **Choice D is incorrect** because this quotation doesn't convey the rock's intentions. Instead, it expresses the sea's thoughts about how much stronger it is than the rock, stating that granite, which is usually a hard substance, is soft like clay to the powerful sea.

15 Correct answer **D** Easy ‹ Back to question

D "Patty did use all the diplomacy at her command. Having dwelt touchingly upon their long friendship, and their sorrow at being separated, she passed lightly to the matter of their new roommates."

Choice D is the best answer because the quotation directly illustrates Patty trying hard to convince Mrs. Trent to allow the group to continue sharing a room. The phrase "Patty did use all the diplomacy at her command" explicitly shows her making a determined effort to be persuasive. The quotation further details Patty's specific tactics: she "dwelt touchingly upon their long friendship, and their sorrow at being separated." These details illustrate the claim by suggesting that Patty carefully crafted and delivered an emotional appeal to Mrs. Trent about the effects of changing the group's rooming situation.

Choice A is incorrect because although the quotation describes a reaction by Mrs. Trent, it does not reveal anything about the events or conversation that might have prompted this reaction. Instead of depicting Patty's efforts to be persuasive during such a conversation, the quotation focuses on Mrs. Trent's character traits; specifically, it describes the relationship between her "sense of humour" and her "sense of justice." While the latter trait may be relevant to Patty's situation, the quotation doesn't show the extent of her efforts to convince Mrs. Trent to reconsider the change in rooming arrangements. **Choice B is incorrect** because this quotation describes the reaction of a group of three students immediately after an encounter with Mrs. Trent. It shows the outcome of an implied conversation but does not provide any evidence about the topic or nature of the conversation

itself, and therefore does not illustrate Patty's efforts during a conversation to convince Mrs. Trent to change her mind about the rooming situation. **Choice C is incorrect** because although this quotation suggests that Patty can be assertive (she abruptly grabbed her friends and "shoved them into the empty schoolroom"), it doesn't show Patty asserting herself by trying to convince Mrs. Trent to reconsider the proposed rooming arrangements. The quotation doesn't allude to Mrs. Trent or to Patty's desire to continue sharing a room with a group of friends.

16 Correct answer **D** Easy Back to question

D Courses that incorporate hip-hop and rap music are among the courses with the highest enrollment and attendance rates.

Choice D is the best answer. Enrollment and attendance are logical ways to measure whether students are interested and engaged. High enrollment and attendance suggests a high level of interest and engagement.

Choice A is incorrect. This choice doesn't support the claim. Students' preferences between hip-hop and rap aren't relevant to the claim, which is focused on whether or not students like classes that use hip-hop pedagogy (which includes the educational use of both hip-hop and rap). **Choice B is incorrect**. This choice doesn't support the claim. While the first part of the sentence discusses social justice, the underlined claim focuses on student success, which is unrelated. **Choice C is incorrect**. This choice doesn't support the claim. This tells us about teacher enjoyment, which isn't relevant to a claim about student interest and engagement.

17 Correct answer **C** Easy Back to question

C Many olive trees have growth rings that are difficult to see.

Choice C is the best answer because it presents a detail that, if true, would most directly support the researcher's claim about the difficulty of determining olive tree age by ring counting. The text explains that for many trees, counting the dark rings visible in a tree stump is a reliable method for determining the tree's age. However, if olive trees have growth rings that are difficult to see, it would be hard to count the individual rings. Therefore, the ring-counting method would be challenging or impossible to use for olive trees. This directly supports the researcher's claim that the ring-counting method often can't be used for olive trees because it identifies a specific characteristic of olive trees that could render this approach impracticable.

Choice A is incorrect because the probable age of the oldest olive tree doesn't explain why counting rings wouldn't work for determining olive tree age. The older age of some olive trees might make counting more tedious but doesn't pose an insurmountable obstacle to adopting the method. The researcher's claim is about the feasibility of the ring-counting method for olive trees, not about the potential impracticality of employing this method for particularly long-lived trees. **Choice B is incorrect** because the fact that narrow growth rings might indicate harsh growing conditions has no direct bearing on the claim that counting rings often can't be used to determine olive tree age. It is possible that growth rings that are too narrowly spaced might be difficult to count, but the researcher's claim relates to the inapplicability of the ring-counting method to olive trees in general rather than to olive trees that have experienced harsh conditions. Moreover, as long as they are visible, even narrow growth rings might permit the ring-counting method to be used to determine tree age. **Choice D is incorrect** because the ideal climate conditions for olive trees don't explain why counting rings wouldn't work as a method for determining their age. While growing conditions might affect ring formation patterns, the simple fact that olive trees thrive in hot, dry environments doesn't directly address why the conventional method of counting rings would be ineffective for determining their age.

18 Correct answer **A**

Easy

‹ Back to question

A Many surveyed visitors to the Galleria dell'Accademia indicated that the virtual tours convinced them to plan an in-person visit.

Choice A is the best answer because it presents a finding that, if true, would most directly support the museum administrators' claim that concerns about virtual tours replacing in-person visits were unjustified. The text explains that after the Galleria dell'Accademia began offering online tours, there were concerns that if people viewed these virtual tours, they would consider an in-person visit to be unnecessary. The finding that many visitors who were surveyed indicated that the virtual tours actually convinced them to plan an in-person visit directly contradicts these concerns. Rather than deterring in-person visits, virtual tours actively encouraged them, providing strong support for the administrators' claim that the initial concerns were unfounded.

Choice B is incorrect. The finding that most surveyed visitors were unaware of the virtual tours before their first in-person visit wouldn't directly address whether virtual tours affect decisions about in-person visits. This finding would only indicate that these particular visitors didn't have the opportunity to be influenced by virtual tours when making their decision to visit. **Choice C is incorrect** because the geographic location of visitors wouldn't address the impact of virtual tours on people's decisions to visit the museum in person. Whether visitors live in Florence or elsewhere would suggest nothing about whether virtual tours influenced their choice. This information is irrelevant to the administrators' claim about the relationship between virtual tours and in-person visits. **Choice D is incorrect** because visitors' intentions to view virtual tours after their in-person visit wouldn't address the initial concerns that virtual tours might make in-person visits seem unnecessary. This finding indicates that some visitors plan to use virtual tours as a way to remember their visit, but it provides no information about whether virtual tours influenced their decision to visit in person in the first place, which is what the administrators' claim addresses.

19 Correct answer **C**

Easy

‹ Back to question

C "I felt it like a wall / Behind which I was sheltered from a wind."

Choice C is the best answer because it most effectively uses a quotation from "The Mountain" to illustrate the claim that the speaker feels protected by the mountain. In the quotation, the speaker recounts that the mountain felt like a wall that offers shelter from the wind. That the speaker felt sheltered by the mountain suggests that it offered the speaker a sense of being protected.

Choice A is incorrect because this quotation doesn't express the speaker's feeling of being protected by the mountain. Instead, it notes that the speaker has seen a dry ravine and a pasture. **Choice B is incorrect** because this quotation doesn't express the speaker's feeling of being protected by the mountain. Instead, it simply states that there is a mountain, which is meant to be viewed. **Choice D is incorrect** because this quotation doesn't express the speaker's feeling of being protected by the mountain. Instead, it indicates that the speaker has gone around the mountain.

20 Correct answer **A**

Easy

‹ Back to question

A "Her first feeling was of disappointment; in the square lines of the house there was little claim to beauty."

Choice A is the best answer because it most effectively uses a quotation from *Happy House* to illustrate the claim that the young woman is unimpressed with the house she is visiting. In the quotation, it says the young woman's "first feeling was of disappointment" and that "there was little claim to beauty" when referring to the house. This disappointment and the overall lack of beauty in the house suggest that the young woman isn't impressed by the house she is visiting.

Choice B is incorrect because the quotation doesn't describe what the young woman thinks about the house. Instead, it indicates that there is more light because window blinds have been opened. **Choice C is incorrect** because the quotation describes a door and a path outside of the house but doesn't include anything to indicate the young woman's feelings about

the house. **Choice D is incorrect** because the quotation states what the young woman did in the house ("tip-toed through the hall" and "opened the door"), but it doesn't show what she thinks about it.

21 Correct answer **C** Easy Back to question

C Researchers discover that earthworms from surface soils are a major part of olms' diet.

Choice C is the best answer because it presents a finding that, if true, would most strongly support Manenti and team's claim that olms regularly come to the surface to find food. The text explains that scientists previously believed olms remained in their underwater caves throughout their lives, but Manenti's team claims that olms actually surface regularly to perform important activities like finding food. Since earthworms from surface soils would not be present in underwater caves, the finding that such earthworms constitute a major part of olms' diet would provide compelling evidence that olms regularly leave their underwater cave environment to obtain food from the surface, thus supporting the underlined claim.

Choice A is incorrect because information about olms' breeding frequency wouldn't support the claim about their leaving their underwater habitats to obtain food. While breeding patterns might be relevant to understanding olm behavior in general, this finding doesn't address whether olms surface to find food, which is the specific behavior that the underlined claim addresses. **Choice B is incorrect** because learning that olms live in only a few cave systems wouldn't support the claim about their regular visits to the surface. This finding would provide information about the geographic distribution of olm habitats but wouldn't address whether olms leave these caves to find food or perform other activities on the surface. **Choice D is incorrect** because the differences between olms' brains and other salamanders' brains have no clear connection to olms' movement beyond their underwater habitats or to their feeding habits. A finding about the uniqueness of olms' brains wouldn't address whether olms leave their caves to find food or support Manenti and team's claim about olms' motivation for coming to the surface.

22 Correct answer **D** Easy Back to question

D "When [the banker] got home he lay on his bed, but his tears and emotion kept him for hours from sleeping."

Choice D is the best answer because it most effectively uses a quotation from "The Bet" to illustrate the claim that the banker was very upset about something. The quotation indicates that the banker shed tears, which suggests that he was likely unhappy about something, and that his emotions were so strong that they kept him from sleeping for hours. These details suggest that the banker was very upset.

Choice A is incorrect because this quotation mainly describes the banker cautiously unlocking a door; it doesn't suggest that he was particularly upset about anything. **Choice B is incorrect** because this quotation doesn't mention whether the banker was experiencing any particularly strong negative feelings; instead, the quotation focuses on the quietness of the setting. **Choice C is incorrect** because this quotation states that the banker was feeling "delighted," not that he was upset.

23 Correct answer **A** Easy Back to question

A Fewer than fifty children could speak Hawaiian when ʻAha Pūnana Leo was founded, but now more than 2,000 students at ʻAha Pūnana Leo speak it.

Choice A is the best answer because it presents a statement that, if true, would most directly support the claim that the number of young people who speak Hawaiian has increased because of the ʻAha Pūnana Leo school. The text explains that Native Hawaiian teachers founded the school to help preserve the Hawaiian language by teaching it to children at a time when an increasing number of Native Hawaiians were speaking English instead. If it is true that when ʻAha Pūnana Leo was founded fewer than fifty children could speak Hawaiian and that now over 2,000 students at the school can speak it, that would directly demonstrate that the school's efforts have led to a greater number of young people speaking Hawaiian.

Choice B is incorrect because information about the total number and location of Native Hawaiian people in a single year wouldn't reveal anything about the number of young speakers of Hawaiian (particularly since the text indicates that not all Native Hawaiians speak Hawaiian) or about the effect of the 'Aha Pūnana Leo school on that number, so it wouldn't have any bearing on the text's claim. **Choice C is incorrect** because the fact that Hawaiian is similar to Tahitian, Samoan, Māori, and other languages of the Polynesian Islands wouldn't reveal anything about the number of young speakers of Hawaiian or the effect of the 'Aha Pūnana Leo school on that number, so it wouldn't have any bearing on the text's claim. **Choice D is incorrect** because information about non–Native Hawaiian people from Pacific Islander communities living in Hawai'i today wouldn't reveal anything about the number of young speakers of Hawaiian or the effect of the 'Aha Pūnana Leo school on that number, so it wouldn't have any bearing on the text's claim.

24 Correct answer B

Easy

Back to question

B The giraffes only produced the humming sounds at night when they couldn't see one another.

Choice B is the best answer because it presents a finding that, if true, would support Stöger and her team's claim that giraffes use humming to communicate when they cannot signal to one another visually. The text indicates that scientists have long thought that giraffes produce little sound and exclusively rely on visual signals to communicate with one another. The text goes on to say, however, that Stöger and her team have recorded giraffes in three European zoos making a low-pitched humming sound, which the team claims the giraffes use to communicate when they cannot see each other. If the giraffes produced these sounds when visual communication was impossible and never produced them otherwise, that would support Stöger and her team's claim about the circumstance in which giraffes make the sound.

Choice A is incorrect because finding that giraffes have excellent vision and can see in color would have no bearing on Stöger and her team's claim that giraffes produce a low-pitched humming noise to communicate when they cannot communicate visually. As presented in the text, Stöger and her team's claim is restricted to circumstances in which giraffes cannot signal one another visually; if the giraffes are unable to signal visually, their sense of vision is irrelevant to their communication. **Choice C is incorrect** because finding that wild giraffes have never been recorded making humming noises would not support Stöger and her team's claim about the function of the humming noise that the researchers recorded from the giraffes in European zoos. The text provides no information about whether researchers have even attempted to record low-pitched humming in wild giraffes, so nothing can be concluded about the implications of the lack of such recordings. **Choice D is incorrect** because finding that other animals in European zoos had been observed humming would not support Stöger and her team's claim, since it would not indicate anything about why giraffes produce humming sounds. Different species could produce similar sounds for different purposes, so scientists could not conclude anything about the function of giraffe humming from a finding that some other animals in zoos also hum.

25 Correct answer D

Medium

Back to question

D "Through interbreeding, transgenic fish might introduce the trait of fluorescence into wild fish populations, making those populations more vulnerable to predators."

Choice D is the best answer because this quotation would best support the student's assertion that the escape of transgenic fish from Brazilian fish farms into the wild may have significant negative long-term ecological effects. The text explains that transgenic fish have DNA that includes genetic material from other species, that some transgenic fish have genes from jellyfish that make them glow in the dark, and that glow-in-the-dark transgenic fish can now be found in the wild in Brazilian creeks. The quotation indicates why the escape of these fish may have negative long-term ecological effects: glow-in-the-dark transgenic fish might introduce fluorescence into wild fish populations by breeding with wild fish, causing wild fish to glow in the dark and thereby allowing predators to prey on them much more easily.

Choice A is incorrect because this quotation doesn't mention any negative effects of the introduction of fluorescent transgenic fish into the wild. The quotation merely compares the ratio of females to males at two sites in the wild where transgenic fish have been observed. **Choice B is incorrect** because this quotation doesn't support the idea that the escape of fluorescent transgenic fish from Brazilian fish farms may have significant negative long-term ecological effects. Rather, the quotation

suggests that more research is needed to understand the effects. **Choice C is incorrect** because this quotation supports the idea that transgenic fish may be present in more ecosystems than has been observed; it doesn't address whether the presence of fluorescent transgenic fish affects these ecosystems.

26 Correct answer **C** Medium Back to question

C More midges were found in the trap that only played calls than in the trap that played calls and released carbon dioxide.

Choice C is the best answer because it presents a finding that, if true, would most directly support the researchers' conclusion that carbon dioxide does not serve as an additional cue to frog-biting midges regarding the location of male túngara frogs. The text begins by stating that the mating call of the male túngara frogs also attracts frog-biting midges, which prey on the frogs' blood. Researchers Bernal and de Silva were curious if the mating calls were sufficient signals for the midges to locate the frogs or if midges also used carbon dioxide emitted by the frogs to locate their prey. The text then details the procedure the researchers used to investigate their question and summarizes their conclusion—that carbon dioxide does not serve as an additional cue to the midges. Thus, if more midges were found in the researchers' trap that only played calls than in the trap that played calls and released carbon dioxide, it follows that the frog calls seem sufficient without the carbon dioxide cue. This finding supports the researchers' conclusion that carbon dioxide does not serve as an additional cue to frog-biting midges.

Choice A is incorrect because finding that the majority of frog-biting midges were found in the traps that both played the mating call and released carbon dioxide would present evidence that directly refutes the researchers' conclusion—that carbon dioxide does not serve as an additional cue to the frog-biting midges regarding the location of túngara frogs. **Choice B is incorrect** because if the midges entered the trap that played calls and released carbon dioxide only during or immediately after carbon dioxide was released, that would suggest that the midges used the carbon dioxide as a way to locate their prey, a finding that would contradict the researchers' conclusion that carbon dioxide was not an additional cue to the midges. **Choice D is incorrect** because a trap attracting larger numbers of midges with high carbon dioxide concentrations than a trap with low carbon dioxide concentrations suggests that carbon dioxide might serve as an additional cue to the midges as to the location on the frogs, a finding contrary to the researchers' conclusion.

27 Correct answer **A** Medium Back to question

A "Through the water the moon writes her legends / In light, on the smooth, wet sand."

Choice A is the best answer because it most effectively illustrates the claim that Lowell describes an element of nature as an active participant in the experience of a nighttime scene on a body of water. The quotation presents the image of the moon shining on a body of water. However, instead of describing the moon in passive terms or simply stating that it reflects through the water and onto the sandy shore, the quotation portrays the moon as being engaged in the humanlike action of writing a legend. In other words, the moon is participating actively in the nighttime scene.

Choice B is incorrect. Although the quotation describes a nighttime scene on a body of water, the element of nature in these lines—the waves—isn't portrayed as an active participant in an experience; instead, the waves merely ripple softly against a canoe, as waves would normally do. **Choice C is incorrect** because the quotation doesn't present a nighttime scene on a body of water; instead, it describes petals falling from a rose. **Choice D is incorrect**. Although the quotation presents an image of an element of nature—the moon—it doesn't mention a body of water; moreover, it portrays the moon not as an active participant in a scene but instead as static or unchanging ("ever and always the same").

28 Correct answer **A** Medium ‹ Back to question

A "In *Mother and Child*, a sculpture of two Black figures, Catlett used an ancient Indigenous sculpting technique and combined the visual aesthetic of modern Mexican muralists with that of German artist Kathe Kollwitz."

Choice A is the best answer because it presents a quotation about Elizabeth Catlett that supports the student's claim that this artist had a talent for unifying various traditions and styles in her work. The quotation explains that to create the work, Catlett combined Indigenous sculpture with the visual aesthetic of modern muralists from Mexico as well as that of German artist Kathe Kollwitz. In other words, Catlett was able to unify several artistic traditions and styles within a single sculpture.

Choice B is incorrect because in discussing the technique and subject matter of Catlett's collage, the quotation makes no reference to particular traditions or styles. **Choice C is incorrect** because in describing the sculpture, the quotation doesn't mention any artistic traditions or styles that Catlett may have synthesized to create the work. **Choice D is incorrect** because in discussing Catlett's prints of notable African American women, the quotation doesn't characterize those prints as having fused different traditions or styles.

29 Correct answer **C** Medium ‹ Back to question

C The publishers of the stand-alone volume requested the explanatory notes from the poet in order to make the book attractive to readers who already had a copy of the poem in a journal issue.

Choice C is the best answer because it would most directly support the student's claim about the motivation for including explanatory notes with the stand-alone volume of the poem. The text explains that the poem had previously been published without the notes in a quarterly journal. It stands to reason that readers who had purchased the journal issue containing the poem would be unlikely to purchase an unchanged version of the poem in a stand-alone volume. However, the inclusion of notes in that volume would encourage the purchase of a stand-alone volume, since the later text would differ from the original by including the author's own explanation of the poem. Therefore, if it were true that the publishers of the stand-alone volume had requested the notes to make the book attractive to readers who already had a copy of the journal issue, this fact would support the student's claim that the notes were included primarily as a marketing device.

Choice A is incorrect because the student's claim is about the motivation for including the explanatory notes in the stand-alone volume, not about changes that might have been made to the poem itself for publication in that volume; moreover, the text never suggests that such changes were made. **Choice B is incorrect** because the student's claim is about why the explanatory notes were included in the stand-alone volume, not about how the notes affected readers' and critics' subsequent experience of the poem. **Choice D is incorrect** because the fact that the poet drafted multiple versions of the explanatory notes doesn't directly address the issue of whether the notes were intended as a marketing device, as the student claims; the correspondence would support this claim only if it showed that the poet had revised the notes specifically to make them useful to the marketing of the stand-alone volume.

30 Correct answer **D** Medium ‹ Back to question

D Compared with participants who received negative or neutral feedback, participants who received positive feedback reported greater enjoyment of the activity on average but maintained their heart and pedaling rates for approximately similar durations.

Choice D is the best answer because it presents a finding that, if true, would most strongly suggest that positive feedback had the psychological effect Trewick and her team predicted but not the predicted physical effect. The text explains that Trewick and team predicted positive feedback would, in a virtual reality environment, replicate two real-world results: an enhanced psychological experience (higher enjoyment) and improved physical endurance (longer maintenance of target heart and pedaling rates). If participants who received positive feedback reported greater enjoyment than those who received negative or neutral feedback, that would indicate that the predicted psychological effect occurred. At the same time, if those

participants maintained their heart and pedaling rates for approximately the same durations as participants in the other groups, that would indicate that the predicted physical effect did not occur, since positive feedback didn't produce longer maintenance of target heart and pedaling rates. Together, these results would indicate that positive feedback produced the predicted psychological effect but not the predicted physical effect.

Choice A is incorrect. Reported enjoyment being greater with positive feedback than with neutral feedback would be evidence of the predicted positive effect of positive feedback on participants' psychological experience, but the fact that participants had greater endurance with neutral feedback than with negative feedback wouldn't reveal anything about how endurance was affected by positive feedback, and thus wouldn't show that positive feedback didn't have the predicted physical effect. **Choice B is incorrect**. A finding that participants who received negative feedback reported lower enjoyment than participants who received positive or neutral feedback did would show that enjoyment was lowered by negative feedback but wouldn't confirm that enjoyment was greater with positive feedback than with neutral feedback, which a finding would need to do to demonstrate that positive feedback enhanced enjoyment as predicted. Further, the fact that participants who received negative feedback had greater endurance than those who received positive or neutral feedback wouldn't reveal whether positive feedback had an effect on endurance, either positive or negative. **Choice C is incorrect** because endurance being greater with positive feedback than with neutral feedback would show that positive feedback did have the predicted physical effect (enhancing endurance). Further, reported enjoyment being similar with neutral

feedback and negative feedback wouldn't reveal anything about how enjoyment was affected by positive feedback, and thus wouldn't show that positive feedback had the predicted psychological effect.

31 Correct answer **B** Medium ‹ Back to question

B Attempts to roast green chiles using 50 heliostats yields results in fewer than six minutes.

Choice B is the best answer. Armijo believes that using more heliostats will speed up the roasting process, and this finding shows that with 50 heliostats—more than the number of heliostats already used—the roasting time is indeed reduced.

Choice A is incorrect. The evenness of temperature in the roasting drum doesn't tell us about the speed of the roasting process, which is what Armijo's hypothesis is concerned with. **Choice C is incorrect**. Armijo's hypothesis is focused on the speed of the roasting process, not the flavor of the resulting roasted chiles. **Choice D is incorrect**. Though Armijo's hypothesis mentions a benefit of solar-roasting green chiles (easier peeling), it doesn't address the speed of the roasting process.

32 Correct answer **B** Medium ‹ Back to question

B Waterbird communities at Old Road, a site with a relatively high percentage of shoreline consisting of bulkheads, had lower average IWCI scores than did waterbird communities at Miles, a site with a relatively high percentage of shoreline consisting of riprap.

Choice B is the best answer because it presents a finding that, if true, would most directly illustrate the researchers' finding about waterbird responses to shoreline hardening structures. The text explains that using the IWCI, an index on which higher scores indicate higher community integrity, researchers found that bulkheads are more strongly negatively correlated with waterbird community integrity than riprap is—that is, that bulkheads reduce the integrity of waterbird communities more than riprap does. The finding that waterbird communities at a site with a relatively high percentage of bulkheads along the shoreline (Old Road) had lower average IWCI scores than waterbird communities at a site with a relatively high percentage of riprap along the shoreline (Miles) did would illustrate the researchers' finding, since it would be an example of lower waterbird community integrity in a location with substantial bulkhead presence than in a location with substantial riprap presence.

Choice A is incorrect because a finding of similar waterbird community integrity in two sites predominated by bulkheads wouldn't reveal anything about waterbird community integrity at sites predominated by riprap or how waterbird community integrity compares between the two types of sites. Thus, the finding wouldn't illustrate the discovery of a difference in how bulkheads and riprap correlate with waterbird community integrity. **Choice C is incorrect** because it presents a finding that compares waterbird community integrity at sites with different overall amounts of shoreline hardening but without

distinguishing between bulkheads and riprap. Such a distinction would be necessary to illustrate the researchers' finding of a difference in how bulkheads and riprap each correlate with waterbird community integrity. **Choice D is incorrect** because it presents a finding that addresses a difference in waterbird community integrity between one site with equal percentages of bulkheads and riprap along its shoreline (Curtis) and one site with unequal percentages of bulkheads and riprap (Miles) but without indicating whether bulkheads or riprap were more prevalent at Miles. This finding wouldn't provide any clear information about how bulkheads and riprap each correlate with waterbird community integrity, so it wouldn't illustrate the researchers' finding of a difference between those correlations.

33 Correct answer **A** Medium ‹ Back to question

A In interviews, a number of Latina authors say that *The House on Mango Street* inspired them to write about their own adolescence in their novels.

Choice A is the best answer because it presents a finding that, if true, would most strongly support the claim in the underlined sentence. The text begins by explaining that the portrayal of Mexican American culture in Sandra Cisneros's *The House on Mango Street* inspired later authors to explore their own heritage. Noting that Cisneros's novella was also influential for its depiction of a formative year in a female character's youth, the text then claims that this depiction inspired other Latina authors to use fiction to explore their own experiences of youth. Since this claim addresses how Cisneros encouraged Latina authors specifically to portray their youthful experiences, it would be directly supported by such authors stating that her novella influenced them to write about their own adolescence, or the transitional period between childhood and adulthood.

Choice B is incorrect. The text states that with its portrayal of Mexican American culture, *The House on Mango Street* inspired later authors to explore their own heritage, and since this statement isn't limited to only Latina authors, it can be inferred that authors who aren't Latina were also likely influenced by the novella. But because the claim in the underlined sentence concerns the novella's influence on Latina authors specifically, the finding that the book also influenced authors who weren't Latina would fail to provide support for the claim. **Choice C is incorrect** because the finding that *The House on Mango Street* has sold millions of copies and is widely read among students in the US doesn't relate directly to the text's claim that the novella has influenced Latina authors specifically. **Choice D is incorrect**. While comparisons of new novels about young Latina characters by Latina authors to Cisneros's *The House on Mango Stree*t would likely be founded on similarities between those novels and Cisneros's novella, such similarities wouldn't necessarily be evidence of the novella's influence; such similarities might arise if Cisneros and younger Latina authors alike depicted certain basic cultural and historical features of their communities. Testimony from younger Latina authors about how *The House on Mango Street* had inspired them would be far more persuasive evidence of the novella's influence.

34 Correct answer **D** Medium ‹ Back to question

D Segments of the Missouri River flowing into lakes typically had dominant wavelengths of light above 560 nm, while segments flowing out of lakes typically had dominant wavelengths below 560 nm.

Choice D is the best answer because it presents a finding that, if true, would support Gardner and colleagues' conclusion that segments of the Missouri River flowing into lakes tend to carry more sediment than do segments of the river flowing out of lakes. The text says that rivers appear yellow when they contain a lot of sediment and appear red when they contain a lot of algae. It goes on to explain that Gardner and colleagues measured the wavelengths of light for different segments of rivers in the United States and classified those wavelength measurements into colors: red for wavelengths of 495 nanometers and below, blue for wavelengths between 495 and 560 nanometers, and yellow for wavelengths of 560 nanometers and above. Combined with the earlier information about river colors, this suggests that rivers rich in sediment will have wavelengths of 560 nanometers and above (since such rivers appear yellow). If researchers found that Missouri River segments flowing into lakes tend to have wavelengths above 560 nanometers and segments flowing out of lakes tend to have wavelengths below 560 nanometers, this finding would support Gardner and colleagues' conclusion, since it would suggest that the river tends to carry more sediment when it flows into lakes than when it flows out of lakes.

Choice A is incorrect because finding that sections of the Missouri River with high chlorophyll-a levels have wavelengths between 490 and 560 nanometers would be irrelevant to the researchers' conclusion that segments of the river flowing into lakes are richer in sediment than are segments of the river flowing out of lakes. This finding would not indicate anything about segments flowing into or out of lakes. **Choice B is incorrect** because finding that lakes through which the Missouri River passes have higher wavelengths near their shores than in the center would not support the researchers' conclusion that segments of the river flowing into lakes have more sediment than segments flowing out of lakes. This finding would suggest only that there is more sediment around the edges of lakes than in their centers, which does not have any direct bearing on the researchers' conclusion about river segments flowing into and out of lakes. **Choice C is incorrect** because finding that most segments of the Missouri River have wavelengths significantly higher than 560 nanometers would suggest that most segments of the river are high in sediment, not that segments flowing into lakes are higher in sediment than segments flowing out of lakes. Only a comparison of river segments flowing into lakes with segments flowing out of lakes can support the researchers' conclusion.

35 Correct answer **C** Medium ‹ Back to question

C "Forget not to care for the cat, the birds, and the flowers. Do not eat too quickly nor fan too vigorously now that the weather is warming."

Choice C is the best answer because it presents a quotation that illustrates the claim that Mrs. Spring Fragrance demonstrates concern for what's happening at home while she's in California. By giving reminders to "care for the cat, the birds, and the flowers," "not eat too quickly," and avoid engaging in strenuous activity in the heat, Mrs. Spring Fragrance shows that she's thinking about what's happening at home and wants to ensure everything is taken care of.

Choice A is incorrect because the quotation, while it does suggest that Mrs. Spring Fragrance has made fudge at home before, is focused on preparations for an upcoming festival, not on concerns for anything happening at home while Mrs. Spring Fragrance is away. **Choice B is incorrect** because the quotation has to do with an upcoming event during Mrs. Spring Fragrance's trip—visiting San José and meeting someone new—rather than her concern for what's happening at home. **Choice D is incorrect** because the quotation is focused on how Mrs. Spring Fragrance feels about her trip and the friends she's seeing, not on her concern for what's happening at home.

36 Correct answer **A** Medium ‹ Back to question

A The soil surrounding healthy plants contained significantly higher concentrations of microbes known to inhibit *Ralstonia solanacearum* than the soil surrounding diseased plants did.

Choice A is the best answer. This choice provides evidence that directly links the presence of *R. solanacearum*-inhibiting microbes in the soil to the health of tomato plants.

Choice B is incorrect. This choice would weaken the team's conclusion. It suggests that the presence of the disease-causing bacteria had no effect on the health of the tomato plants. **Choice C is incorrect**. This choice doesn't support the team's conclusion. The conclusion is about microbes, not soil moisture. **Choice D is incorrect**. This choice would weaken the team's conclusion. It suggests that the presence of the bacteria-inhibiting microbe in soil had no effect on the health of the tomato plants.

37 Correct answer **D** Medium ‹ Back to question

D "One experiences a certain sense of detachment from ordinary day and daylight duties that is exhilarating."

Choice D is the best answer because. This quotation specifically describes a "sense of detachment from ordinary day," which matches the claim's focus on "escape from everyday life."

Choice A is incorrect. While this quotation describes new opportunities associated with Whiting's experience, it doesn't frame these opportunities as "an escape," and it doesn't directly compare Whiting's journey with "everyday life." **Choice B is incorrect**. While this quotation includes a positive characterization of Whiting's journey, it doesn't specifically address the idea of an "escape from everyday life," which is the focus of the claim. **Choice C is incorrect**. This quotation focuses on where the journey begins, not on how it feels like an "escape from everyday life."

38 Correct answer **C** Medium Back to question

C "I have had a good deal of journeying in my life, and taken great delight in it, but I have never taken greater delight than in my rides and drives and tramps and voyages within the borders of my native town."

Choice C is the best answer because it most effectively illustrates the claim that the narrator prefers her hometown to other places she has visited. In the quotation, the narrator compares how she feels about places she has traveled to how she feels about the town she's from. The narrator states that although the many journeys she has made in her lifetime have brought her much pleasure, she has gained the most enjoyment from her experiences inside the borders of her hometown.

Choice A is incorrect because it doesn't express that the narrator likes her hometown better than other places she has visited; instead, the quotation describes something unspecified in positive terms, saying it continues to offer new things to explore and remember. **Choice B is incorrect**. Although the quotation praises a landscape surrounding a village, it doesn't specify that this village is the narrator's hometown, nor does it express a preference for this village over other places the narrator has visited. **Choice D is incorrect**. Although the quotation describes enjoyment from getting to know a region, it doesn't compare the narrator's feelings for this region with her feelings for her hometown.

39 Correct answer **D** Medium Back to question

D People would often give their copies of *Gidra* to others once they had finished reading an issue.

Choice D is the best answer. If there were more *Gidra* readers than there were copies of the newsletter, then the newsletter's influence would be much greater than its 4,000 monthly copies.

Choice A is incorrect. Information about the newsletter's initial funding doesn't tell us about the influence that the newsletter eventually had. **Choice B is incorrect**. While the content of *Gidra* was undoubtedly related to the newsletter's influence, this information isn't relevant to the specific hypothesis about monthly circulation numbers. **Choice C is incorrect**. Where the publishers of *Gidra* were initially based doesn't tell us about the newsletter's overall influence.

40 Correct answer **A** Medium Back to question

A "He carried himself always as if he were passing under his own triumphal arch."

Choice A is the best answer. This quote most effectively illustrates the claim. The claim is that the narrator describes Mr. Johnson as arrogant and self-important. This basically says that Mr. Johnson always looks like he's congratulating himself for something, which definitely supports the idea that Mr. Johnson is arrogant! .

Choice B is incorrect. This quote doesn't illustrate the claim. The claim is that the narrator describes Mr. Johnson's appearance as conveying his arrogance. This describes his appearance, but the description doesn't suggest a sense of arrogance. **Choice C is incorrect**. This quote doesn't illustrate the claim. The claim is that the narrator describes Mr. Johnson's appearance as conveying his arrogance. This doesn't describe Mr. Johnson's appearance very much, and it doesn't suggest a sense of arrogance. **Choice D is incorrect**. This quote doesn't effectively illustrate the claim. It describes Mr. Johnson's tone of voice as "large and important," but it doesn't describe his appearance as conveying a sense of self-importance.

41 Correct answer **A** Medium ‹ Back to question

A On average, participants found most of the purple wings and blue wings and far fewer of the iridescent wings.

Choice A is the best answer because it presents the finding that, if true, would most strongly support the research team's idea about the effect of iridescence, or colors that appear to shimmer and change. The text indicates that although some scientists have assumed that iridescence could attract predators, Kjernsmo's team wondered if iridescent insects might be harder for other animals to see. The team tested this idea by asking human participants to look for both iridescent beetle wings and beetle wings that weren't iridescent but that had been painted colors such as purple or blue. If participants located most of the purple or blue wings but far fewer of the iridescent wings, that finding would support the team's idea since it would suggest that noniridescent wings are easier to see than iridescent wings.

Choice B is incorrect because if participants located the iridescent wings more quickly than the purple or blue wings, that finding would weaken the team's idea, not support the team's idea, since it would suggest that the iridescent wings were easier to see than the noniridescent wings. **Choice C is incorrect** because finding that some participants believed that the purple wings were easier to see than the blue wings would be irrelevant to the team's idea. The purple and blue wings were both noniridescent, so any difference in how easy those two colors were to see would have nothing to do with the idea that iridescent insects are harder to see than noniridescent insects. **Choice D is incorrect** because if some participants found all the wings, that wouldn't support the team's idea that iridescent insects may be harder to see than noniridescent insects. If anything, this finding might weaken the team's idea since it could suggest that iridescence had no effect on how difficult the wings were to see.

42 Correct answer **A** Medium ‹ Back to question

A "Joanna was mightily interested in people who had a 'purpose' in life. Otherwise not at all."

Choice A is the best answer because it most effectively presents a quotation from *There Is Confusion* that illustrates the claim that the narrator portrays Joanna as admiring the quality of ambition, or the determination to achieve something, and no other qualities in other people. By describing Joanna as not being interested in people unless they have "a 'purpose' in life"—that is, a goal they are determined to achieve—in which case she is very interested in them, the quotation reveals that Joanna cares only about others' ambition.

Choice B is incorrect because this quotation indicates only that Joanna has a preference for her father, without giving a reason for that preference; therefore, it doesn't illustrate the claim that Joanna cares only about others' ambition. **Choice C is incorrect** because this quotation doesn't illustrate that Joanna greatly admires the quality of ambition in others; it refers to Joanna's similarity to her father "so far as ambition was concerned" but doesn't reveal how she (or her father) views that quality. **Choice D is incorrect** because this quotation describes qualities Joanna possesses—praising her logic, concentration, and memory—instead of Joanna's interest in other people's qualities.

43 Correct answer **C** Medium ‹ Back to question

C "I'll walk where my own nature would be leading: / It vexes me to choose another guide: / Where the grey flocks in ferny glens are feeding; /Where the wild wind blows on the mountain side."

Choice C is the best answer because it presents the quotation that best illustrates the claim that the speaker is determined to experience the countryside around her. In the quotation, the speaker makes it clear that she plans to walk somewhere based on her own wishes ("where my own nature would be leading") rather than follow anything else ("another guide"), and that she'll walk "in ferny glens" alongside the mountain.

Choice A is incorrect because this quotation suggests that the speaker wants to avoid pursuing money and education ("busy chase of wealth and learning") and instead return to some earlier interests (her "first feelings"); the quotation doesn't address

her determination to experience the countryside. **Choice B is incorrect** because the speaker is describing the circumstances under which she won't walk, which doesn't address her determination to experience the countryside. **Choice D is incorrect** because rather than conveying her determination to experience the countryside, the speaker is explaining a particular thing she won't do ("seek not the shadowy region").

44 Correct answer **C** Medium Back to question

C Compared with users who clicked on links in an ad, users who commented on that same ad were significantly more likely to remember seeing the ad when surveyed two days later.

Choice C is the best answer because it details a finding that, if true, would most directly support the researchers' hypothesis about ad recall. According to the text, the researchers found that commenting on an ad that appears as a social media post is more cognitively demanding for users than simply clicking on embedded links in such an ad. The researchers then hypothesized that a high level of cognitive engagement with ad content would result in a high level of ad recall, or memory of ad content. This hypothesis would be supported by the finding that users who had commented on an ad were more likely to recall its content when surveyed two days later than users who had simply clicked on links in the same ad.

Choice A is incorrect. Although the text compares one form of social media user interaction with ads—clicking on the ad's "like" button—with other forms of interaction—commenting on the ad and sharing it through social media—it does so in order to determine which form of interaction is associated with a higher level of ad recall. The text doesn't note whether users were more likely to click on the "like" button than they were to interact with the ad in other ways. **Choice B is incorrect** because the text doesn't indicate that the study attempted to track whether social media users purchased the advertised product or to determine which form of interaction with ad content was more strongly associated with making a purchase. **Choice D is incorrect**. Finding that social media users who shared an ad forgot the content one week later would weaken, not support, the researchers' hypothesis that cognitive engagement is associated with a high level of recall.

45 Correct answer **A** Medium Back to question

A "I needed to buy some cleaning supplies, but they weren't in their regular place. While I was looking for them, I saw this interesting notebook and decided to buy it, too."

Choice A is the best answer because it best supports the researchers' explanation of the results of rearranging a store's layout. According to the text, Sam K. Hui and colleagues found that rearranging a store's layout can encourage customers to make spontaneous purchases. The text states that the researchers explain that a change in layout causes shoppers to hunt for items' new locations, which exposes the shoppers to more products and increases the likelihood that they'll make an unplanned purchase. This quotation from a surveyed shopper indicates that the shopper spontaneously purchased a notebook while looking for cleaning supplies that weren't in their usual place. The quotation therefore supports the researchers' explanation that rearranging a store's layout can lead shoppers to make unanticipated purchases.

Choice B is incorrect because it doesn't support the researchers' explanation that rearranging a store's layout can lead shoppers to make unanticipated purchases. Instead of attributing an unplanned purchase to a change in layout, the quotation notes that the shopper searched for but couldn't find some items, and as a result the shopper purchased less, not more, than what was anticipated. **Choice C is incorrect** because the quotation attributes what was purchased to coupons that the shopper received, not to a new store layout. Thus, the quotation doesn't support the researchers' explanation that rearranging a store's layout can lead shoppers to make unanticipated purchases. **Choice D is incorrect** because the quotation attributes what was purchased to the size and stock of the store, not to a new store layout. The shopper simply purchased products that the shopper wanted in a particular store because other stores didn't carry those products, so the quotation doesn't support the researchers' explanation that rearranging a store's layout can lead shoppers to make spontaneous purchases.

46 Correct answer **A** Medium ‹ Back to question

A "Attend me, *Virtue*, thro' my youthful years! / O leave me not to the false joys of time! / But guide my steps to endless life and bliss."

Choice A is the best answer because it most effectively illustrates the claim that Wheatley addresses her poem "On Virtue" to the quality of virtue, imploring it to assist her in reaching a future goal. In the quotation, Wheatley begs virtue to accompany her, or "attend [her]," through her youth and to "guide [her] steps to" the future goal of "endless life and bliss."

Choice B is incorrect because this quotation suggests the difficulty of fully comprehending virtue. Rather than asking virtue for help, Wheatley presents it as a quality that is impossible to entirely understand because it is so grand and deep. **Choice C is incorrect** because this quotation describes Wheatley's effort to comprehend virtue despite virtue itself declaring that such wisdom is beyond her grasp, or "higher than a fool can reach." **Choice D is incorrect** because rather than asking virtue for help in this quotation, Wheatley urges herself to "sink not into despair" because virtue is always nearby.

47 Correct answer **A** Medium ‹ Back to question

A "When I create playlists or choose songs to listen to, I often pick songs that I think the friends who are following me might be interested in listening to, rather than what I might actually prefer listening to in that moment."

Choice A is the best answer because it directly reflects both aspects of Walsh's finding about the social media dimensions of music streaming platforms: that they make their users more mindful of how their listening activities may be perceived and that self-awareness then influences how users manage those activities. The quotation illustrates this by showing that the user considers the music preferences of their followers when selecting music ("songs that I think the friends who are following me might be interested in"), even if those choices differ from their own preferences ("rather than what I might actually prefer listening to in that moment"). This supports both aspects of Walsh's finding: users have increased social awareness and deliberately change their listening habits based on that awareness.

Choice B is incorrect because it focuses on how the platform's algorithmic recommendation system influences user choice, not on how the imagined opinions of other users might influence that choice. The quotation highlights a user's concern about repetitive music recommendations based on their past listening behavior. It does not suggest that the user is adjusting their listening habits based on how they think others may perceive what they listen to. **Choice C is incorrect** because it focuses on the social connection that can be created by music streaming rather than illustrating how social awareness affects users' management of their listening activities. While this quotation addresses the social dimensions of streaming platforms, it describes how these features create shared experiences rather than demonstrating how concern about others' perceptions influences users' listening choices. **Choice D is incorrect** because it compares streaming platforms to traditional music purchasing methods. This comparison doesn't address the social media dimensions of streaming platforms or how awareness of others' perceptions of music selections influences what users choose to listen to.

48 Correct answer **D** Medium ‹ Back to question

D "I heard a thousand blended notes, / While in a grove I [sat] reclined, / In that sweet mood when pleasant thoughts / Bring sad thoughts to the mind."

Choice D is the best answer because it most effectively illustrates the claim that the speaker has contradictory feelings while experiencing the sights and sounds of spring. This quotation indicates that the speaker is reclined in a grove listening to a thousand sounds. Even though the speaker is in a "sweet mood" and thinking "pleasant thoughts," those pleasant thoughts also bring to mind "sad thoughts." In other words, these lines illustrate the claim that the speaker is having contradictory thoughts while immersed in the sights and sounds of spring.

Choice A is incorrect. Although this quotation refers to several flowers (primroses and periwinkles) and indicates that the speaker is in a "bower," or shady spot among the trees—details which suggest that the speaker is experiencing the sights of

spring—it doesn't suggest that the speaker is having contradictory feelings, only that the speaker believes that the flowers are experiencing enjoyment. **Choice B is incorrect**. Although this quotation focuses on the sights of spring—namely, new leaves on nearby trees appear to be opening up ("The budding twigs spread out their fan") to feel the breeze—the quotation doesn't suggest that the speaker feels conflicted about this: the statement "And I must think, do all I can" suggests the speaker's determination to attribute feelings of pleasure to the trees, not that the speaker is experiencing contradictory feelings. **Choice C is incorrect**. Although this quotation indicates that the speaker isn't certain what the birds are thinking ("Their thoughts I cannot measure"), there's nothing to suggest that the speaker is experiencing contradictory feelings. Rather, the quotation suggests that although the speaker is uncertain about the birds' feelings, the speaker believes that the birds' movements likely suggest their pleasure.

49 Correct answer **C** Medium ‹ Back to question

C Numerous art historians of the late twentieth century and twenty-first century have focused their scholarship on how various artworks were interpreted at the time of their creation.

Choice C is the best answer because it presents a statement that, if true, would most strongly support the underlined claim that Baxandall's period eye has significantly influenced the practice of art history since its introduction. The text explains that the period eye—an approach Baxandall introduced in the early 1970s—directs art historians to understand how artworks were originally understood by viewers from the same historical period in which the works were created. If numerous art historians working in the late twentieth and twenty-first centuries—that is, in the decades after Baxandall's introduction of the approach—have focused on how artworks were interpreted at the time of their creation, their scholarship would correspond to the definition of period eye provided by the text, thereby supporting the claim that the period eye has been significantly influential.

Choice A is incorrect because, as the text explains, Baxandall explicitly recommended examining the social and cultural contexts in which older artworks were produced in order to appreciate the artists' intentions. Thus, a widespread rejection of artistic intention as an interpretive guide would weaken, not support, the claim that Baxandall influenced the practice of art history. **Choice B is incorrect** because this statement considers a limitation in applying the period eye approach—namely, the difficulty of reconstructing original viewers' understanding for some historical periods—instead of addressing whether the approach has influenced the practice of art history. **Choice D is incorrect** because the statement describes the practice of art historians working before the 1970s, prior to Baxandall's introduction of the period eye. Pre-1970s scholarship cannot demonstrate Baxandall's influence on art history; if anything, it would suggest that some elements of his approach predated him, which has no bearing on whether his particular formulation has shaped the field since.

50 Correct answer **B** Medium ‹ Back to question

B "Dark figures start for work; / I watch them sadly shuffle on, / 'Tis dawn, dawn in New York. / But I would be on the island of the sea, / In the heart of the island of the sea."

Choice B is the best answer because it presents a quotation illustrating the claim that the poem conveys McKay's contrasting feelings about New York City and Jamaica. McKay first presents a somewhat negative view of New York City, describing watching "dark figures" who "sadly shuffle" to work at dawn, and then indicates that he would instead like to be "in the heart of the island of the sea."

Choice A is incorrect because the quotation focuses on a description of only one place (New York City, with its "lonely newsboy" and "red streaks" in the sky at dawn) rather than on different feelings about two places. **Choice C is incorrect** because the quotation focuses on a description of only one place (which isn't named) rather than on McKay's different feelings about two places. **Choice D is incorrect** because though McKay presents a negative image of an unnamed place with "tired cars" that grumble, moan, and groan, and "old milk carts" that rumble by under "dull stars," the quotation focuses on McKay's feelings about only one place rather than on different feelings about two places.

51 Correct answer **C**

Medium

Back to question

C "From early morn to the fall of the afternoon he would go from fountain to fountain and from portal to portal, his lean body so accustomed to bending that he never thought of straightening it, his head bowed as if in prayer."

Choice C is the best answer because it most effectively illustrates the claim in the text that John is hard-working and dedicated to his job. In the quotation, John is portrayed as spending "early morn to the fall of the afternoon" working hard as a water carrier. John is also described as "so accustomed to bending" while doing his work "that he never thought of straightening" his body, instead remaining deeply focused on his work. These details portray John as a dedicated worker.

Choice A is incorrect because this quotation portrays John as happy about heading home after being paid. It doesn't showcase John being hard at work. **Choice B is incorrect** because this quotation doesn't pertain to John's commitment to his work; it describes difficulties the traffic in the city causes John in the performance of his work. **Choice D is incorrect** because this quotation doesn't pertain to John's commitment to his work; it discusses what John does with his worn-out water jugs.

52 Correct answer **A**

Medium

Back to question

A "After I came out of the haunted house, I felt very accomplished and less stressed."

Choice A is the best answer. This choice illustrates both "feeling frightened in controlled situations" (the haunted house) and the benefit of a boosted mood ("less stressed") and confidence ("very accomplished").

Choice B is incorrect. This choice isn't the best illustration of the claim. While laughing may indicate a good mood, this choice provides no evidence of "feeling frightened" or boosted confidence. Another choice provides better evidence. **Choice C is incorrect**. This choice isn't the best illustration of the claim. This choice demonstrates "feeling frightened" in a controlled environment, but it doesn't provide strong evidence of boosted mood or confidence. Another choice provides better evidence. **Choice D is incorrect**. This choice isn't the best illustration of the claim. While a "sense of relief" could be interpreted as a boosted mood, this choice doesn't provide direct evidence of "feeling frightened" or of increased confidence. This choice simply suggests that haunted houses and scary movies have a similar effect. Another choice provides better evidence for the researcher's claim.

53 Correct answer **C**

Medium

Back to question

C "When one is shut up in a great French house with a grim sleepy tante and no companions of one's own age, life becomes a dull thing, and one is ready for any new sensation."

Choice C is the best answer because it most effectively uses a quotation from "Odalie" to illustrate the claim that Odalie is eager to escape the monotony, or tedious lack of variety, of her everyday life. In the quotation, Odalie describes feeling "shut up" and complains that she has "no companions" except for her "sleepy tante." Odalie goes on to say that, as a result, her life is "dull" and she is "ready for any new sensation," meaning she wants a change. This suggests that Odalie wishes to get away from her monotonous everyday life.

Choice A is incorrect. Although this quotation includes the word "tiresome," which means dull, it does so to suggest Odalie's negative feelings about Mardi Gras, which is a once-a-year celebration, not her feelings about her everyday life. This quotation therefore doesn't express that Odalie's everyday life is monotonous or that she wishes to escape. **Choice B is incorrect**. Although this quotation ends by saying that Odalie lives in seclusion, or isolation, it doesn't express that Odalie's everyday life is monotonous or that she wishes to escape. Instead, it describes the pleasant qualities of the house Odalie lives in, saying that it has "quaint windows" and a "green and cool" courtyard that is "made musical" by the sounds of a fountain and pet birds. **Choice D is incorrect** because this quotation describes the lively sounds of a Mardi Gras celebration that Odalie hears through her window, not the monotony of Odalie's everyday life or her wish to escape.

54 Correct answer **B**

Medium

‹ Back to question

B Citizen scientists have made many observations of the whales feeding as they migrate to their breeding grounds.

Choice B is the best answer because it presents a finding that, if true, would most directly support Pirotta and her team's claim that East Australian humpback whales may not live only on stored energy during migration. The text explains that it has long been thought that East Australian humpback whales store extra energy during the feeding season and then use that energy to survive while traveling to their breeding grounds. If it were true that citizen scientists have often seen the whales feeding as they migrate to the breeding grounds, that would indicate that the whales sometimes feed and take in additional energy during the journey, meaning that they may not rely only on energy they stored before migrating.

Choice A is incorrect because finding that citizen scientists have observed many different types of marine animals feeding alongside the whales would have no bearing on the team's claim; the behavior of other animals is irrelevant, and without indicating the timing of the observed feeding, the finding wouldn't reveal whether the whales rely only on previously stored energy or ever take in additional energy during migration. **Choice C is incorrect** because finding that citizen scientists have more often observed whales on the way to their breeding grounds than returning to their feeding grounds would have no bearing on the team's claim. Since it would provide information about the timing of observations but not about the whales' observed activities, the finding wouldn't reveal whether the whales rely only on previously stored energy or ever take in additional energy during migration. **Choice D is incorrect** because finding that citizen scientists have recently started seeing the whales migrate to their breeding grounds earlier in the year would have no bearing on the team's claim. Since it would provide information about a change in the timing of migration but not about the whales' observed activities while migrating, the finding wouldn't reveal whether the whales rely only on previously stored energy or ever take in additional energy during migration.

55 Correct answer **B**

Medium

‹ Back to question

B "Oh, flower gathering? That is why your feet seem so glad and your anklets jingle so merrily as you walk."

Choice B is the best answer because it most effectively illustrates the claim that Amal imagines the people he sees are carefree even when engaged in work. In the quotation, Amal observes that the flower seller's daughter is "flower gathering," or working, as the text indicates. Moreover, Amal notes that the daughter's feet "seem so glad" and her "anklets jingle so merrily," suggesting that Amal believes that the flower seller's daughter is cheerful.

Choice A is incorrect because the quotation makes no observation about the cheerful mood of the flower seller's daughter. **Choice C is incorrect** because the quotation discusses how Amal envisions his future, not the feelings of the flower seller's daughter. **Choice D is incorrect** because the quotation discusses Amal's wishes, not the feelings of the flower seller's daughter.

56 Correct answer **A**

Medium

‹ Back to question

A The model with a sail took significantly less time to complete a sharp turn while submerged than the model without a sail did.

Choice A is the best answer. This finding would most strongly support the hypothesis. The hypothesis is that the sail improved the dinosaur's ability to chase quick, evasive prey. This finding suggests that the sail helped the dinosaur make sharp turns more quickly, which supports that hypothesis.

Choice B is incorrect. This finding wouldn't necessarily support the hypothesis. The hypothesis is that the sail improved the dinosaur's ability to chase quick, evasive prey. It's unclear how the sail displacing more water would relate to that hypothesis—it doesn't seem to be relevant. **Choice C is incorrect**. This finding wouldn't necessarily support the hypothesis. The hypothesis is that the sail improved the dinosaur's ability to chase quick, evasive prey. It's unclear how the difference in battery power between the models would relate to that hypothesis—it doesn't seem to be relevant. **Choice D is incorrect**. This finding would

actually weaken the hypothesis. The hypothesis is that the sail improved the dinosaur's ability to chase quick, evasive prey. This finding suggests that the sail slowed the dinosaur down—which would probably make it worse at catching quick, evasive prey.

57 Correct answer **A** Medium Back to question

A "Your true soul and body appear before me."

Choice A is the best answer because it most directly illustrates the text's claim about Whitman's poem, "To You." The text says that in this poem, Whitman suggests that he deeply understands the poem's reader. This quotation says that the reader's "true soul and body appear before" Whitman, thereby asserting that he can see the reader as the reader truly is, suggesting that he deeply understands the reader.

Choice B is incorrect because this quotation describes Whitman making the reader the subject of the poem ("you be my poem"), not Whitman deeply understanding the reader. **Choice C is incorrect** because instead of suggesting that Whitman deeply understands the reader, it emphasizes Whitman's regret at not having addressed the reader sooner. **Choice D is incorrect**. Although this quotation shows Whitman directly addressing the reader and expressing concern about the reader, it doesn't illustrate the idea that Whitman suggests that he deeply understands the reader. The quotation is simply expressing concern about the reader, which doesn't necessarily imply deep understanding of the reader.

58 Correct answer **A** Medium Back to question

A "For one novel, an imagined account of a real person's global travels, Tobar approached his subject like a reporter, interviewing people the man had met along the way and researching the man's own writings."

Choice A is the best answer. The example of Tobar approaching his subject "like a reporter," including conducting "interviews" and "research," shows Tobar applying journalism techniques to his fiction-writing.

Choice B is incorrect. This choice doesn't support the claim. It tells us about Tobar's initial career as a journalist, but it doesn't say anything about him "applying journalism techniques" to his fiction-writing. **Choice C is incorrect**. This choice doesn't support the claim. It tells us that Tobar applied fiction techniques to his nonfiction writing, but we're looking for evidence of the other way around: that Tobar applied journalism techniques to his fiction-writing. **Choice D is incorrect**. This choice doesn't support the claim. It tells us that a character in one of Tobar's novels applied a journalism technique to his fiction-writing, but it doesn't tell us that Tobar did that himself.

59 Correct answer **C** Medium Back to question

C "*Yao Drum* was inspired by a ceremonial dance Dai witnessed during her time performing field research among the Yao people in the province of Guizhou in 1941 or 1942."

Choice C is the best answer. This choice clearly states that *Yao Drum* was inspired by a ceremonial dance of the Yao people. This directly supports the curator's claim that some of Dai's pieces "represent the dances of local communities" she visited.

Choice A is incorrect. This choice discusses the sound and music in *Yao Drum*, but it doesn't connect these elements to "the dances of local communities," which is the focus of the claim. **Choice B is incorrect**. This choice doesn't mention the dances of local communities, but instead discusses how *Yao Drum* is different from some of Dai's earlier works. **Choice D is incorrect**. This choice describes the choreography of *Yao Drum*, but it doesn't connect these elements to "the dances of local communities," which is the focus of the claim.

60 Correct answer **C** Medium ‹ Back to question

C A study using obstructions that created medium-sized vortices in low-visibility conditions found that the wider-headed bristlemouth (*Chaetostoma yurubiense*) bumped into obstructions more often than the narrower-headed dusky smooth-hound (*Mustelus canis*) did.

Choice C is the best answer because it presents a finding that, if true, would most directly support the second research team's hypothesis about how a fish's head shape affects the fish's ability to detect obstructions. The text explains that fish detect obstructions using water vortices and that testing by Yanagisuru, Akanyeti, and Liao showed that fish with wide heads struggle to distinguish medium-sized vortices from general turbulence in the water. Based on this finding, a second research team hypothesized that in low-visibility conditions, wider-headed fish would be less effective at detecting obstructions than narrower-headed fish. The finding that wider-headed bristlemouth fish bumped into obstructions more often than narrower-headed dusky smooth-hound fish did under the specified conditions (low visibility with medium-sized vortices) would directly support the second team's hypothesis.

Choice A is incorrect because it would provide only partial support for the second research team's hypothesis. While this finding shows that wide-headed bristlemouth fish bumped into many obstructions, it provides no comparison with narrow-headed fish. The hypothesis specifically predicts a difference in detection ability between fish with wider heads and those with narrower heads, so supporting evidence would need to include data from both head types to allow for this comparison. **Choice B is incorrect** because it would not support the second research team's hypothesis comparing obstruction detection between fish with wide heads and those with narrow heads. Instead, it examines variation within a single narrow-headed species, which would not address the hypothesis about differences between fish with wider and narrower head shapes. **Choice D is incorrect** because this finding would contradict rather than support the second research team's hypothesis. The hypothesis predicts that wider-headed fish will be less likely to detect obstructions than narrower-headed fish in low-visibility conditions, which would result in wider-headed fish bumping into obstructions more frequently. A finding showing equal bumping rates between fish with the two head shapes would indicate no relationship between head width and detection ability, directly contradicting the hypothesis.

61 Correct answer **C** Medium ‹ Back to question

C "I'm really getting quite fond of the big room, all but that horrid [wall]paper."

Choice C is the best answer because it most effectively illustrates the claim that the narrator of "The Yellow Wallpaper" has mixed feelings about her surroundings. She says she is "really getting quite fond of the big room," a positive sentiment, but also describes the room's wallpaper as "horrid," a negative sentiment. Since some of her feelings about her surroundings are positive and others are negative, they are best described as mixed.

Choice A is incorrect because though the narrator describes the room's wallpaper as "irritating," a negative sentiment, she does not mention a positive sentiment. Thus, the quotation does not effectively illustrate the claim that the narrator has mixed feelings about her surroundings. **Choice B is incorrect** because it describes how the appearance of the room's wallpaper changes at night but does not mention the narrator's feelings about her surroundings. **Choice D is incorrect** because though the narrator describes the room's wallpaper as "repellant," a negative sentiment, she does not mention a positive sentiment. Thus, the quotation does not effectively illustrate the claim that the narrator has mixed feelings about her surroundings.

62 Correct answer **C** Medium ‹ Back to question

C "[Lady Chiltern] does not know what weakness or temptation is. I am of clay like other men. She stands apart as good women do—pitiless in her perfection—cold and stern and without mercy."

Choice C is the best answer because it most effectively uses a quotation to illustrate the claim that Lady Gertrude Chiltern is perceived as "both extremely virtuous and unforgiving." In the quotation, a man describes Lady Chiltern as someone who

"does not know what weakness or temptation is." In other words, the man regards her as someone who is strong and adheres to a strict definition of moral perfection. However, he ironically suggests that this definition excludes mercy and forgiveness—qualities that are also thought of as virtues; according to him, Lady Chiltern is "pitiless in her perfection—cold and stern and without mercy." This description supports the idea that Lady Chiltern is perceived by others as virtuous as well as unforgiving.

Choice A is incorrect. The quotation supports the claim that Lady Chiltern is perceived as virtuous, in that it describes her as "a woman of the very highest principles." However, it doesn't characterize her as unforgiving or being perceived as such. **Choice B is incorrect**. The quotation suggests that Lady Chiltern is concerned with morality, but it suggests that her interest in discussing it is fundamentally hypocritical and functions as a means by which to judge others. However, the quotation doesn't address the question of whether Lady Chiltern is unmerciful to those who seek forgiveness for harm they have caused. **Choice D is incorrect** because it doesn't address either Lady Chiltern's perceived virtuousness or her perceived lack of forgiveness; instead, it expresses the belief that she is sensible.

63 Correct answer **C** Medium Back to question

C "Kelly's grandmother, who would repair clothing when he was a child, frequently added mismatched buttons to the clothes to draw attention away from any flaws in the garments."

Choice C is the best answer. This quotation draws a direct connection between the use of buttons and Kelly's stylish female relatives.

Choice A is incorrect. This choice mentions Kelly's use of buttons, but it doesn't connect that design choice to the influence of women in Kelly's family. **Choice B is incorrect**. This choice discusses how other designers were inspired by Kelly, which doesn't provide evidence that Kelly was inspired by his family. **Choice D is incorrect**. While this choice does refer to fashionable women in Kelly's family, it doesn't connect their influence to Kelly's use of buttons.

64 Correct answer **D** Medium Back to question

D "Although female pilots were typically expected to wear traditional but impractical attire that included dresses or skirts, photographs of Coleman show her wearing pants and leather jackets."

Choice D is the best answer. This choice supports the claim of Coleman's intentional defiance of social norms: female pilots were expected to wear skirts, but Coleman wore pants and leather jackets instead.

Choice A is incorrect. Coleman flew a well-known, common plane, which would not have defied social norms among pilots. **Choice B is incorrect**. Her complicated relationship with managers and staff would not have been a component of Coleman's public persona. This choice also fails to mention any "social norms of the time." **Choice C is incorrect**. While this quotation suggests that Coleman was careful and purposeful about her public image, it doesn't directly mention anything about "social norms of the time."

65 Correct answer **A** Medium Back to question

A Chambi took many commissioned portraits of wealthy Peruvians, but he also produced hundreds of images carefully documenting the peoples, sites, and customs of Indigenous communities of the Andes.

Choice A is the best answer because it presents a finding that, if true, would support the claim about Chambi's photographs. The text describes a student advancing the claim that Chambi's photographs "have considerable ethnographic value"—meaning that they are valuable as records of cultures—and that they "capture diverse elements of Peruvian society" in a respectful way. If it's true that Chambi carefully photographed people from a range of different communities in Peru as well as photographed the customs and sites of different communities, that would lend support to the claim that the photographs have ethnographic value as depictions of diverse elements of society in Peru.

Choice B is incorrect because the student's claim is that Chambi's photographs have considerable ethnographic value because they depict diverse elements of Peruvian society; the student doesn't claim anything about the technical skill demonstrated in the photographs. **Choice C is incorrect** because neither Chambi's reputation nor the locations where his photographs may have been published would be relevant to the student's claim that his photographs are valuable as an ethnographic record of Peru's diverse society. **Choice D is incorrect** because the popularity among other photographers of the people and places that Chambi photographed would be irrelevant to the student's claim that Chambi's photographs are valuable as an ethnographic record of Peru's diverse society.

66 Correct answer **A** Medium ‹ Back to question

A Ancient guinea pigs in Puerto Rico were genetically less similar to ancient guinea pigs in Colombia than to ancient guinea pigs in Peru.

Choice A is the best answer because it presents a finding that, if true, would most directly weaken the underlined claim that guinea pigs in Puerto Rico probably came from Colombia and descended from Colombian guinea pigs. The text makes this claim based on the fact that ancient trade routes connected Puerto Rico with Colombia but not with Peru. However, if it's true that ancient guinea pigs in Puerto Rico were genetically less similar to ancient guinea pigs in Colombia than to ancient guinea pigs in Peru, this would suggest that the Puerto Rican guinea pigs didn't descend from Colombian guinea pigs. Instead, Puerto Rican guinea pigs' greater genetic similarity to Peruvian guinea pigs implies that ancient guinea pigs in Puerto Rico were likely brought to the island from Peru, despite the lack of direct ancient trade routes between the two regions.

Choice B is incorrect. While a finding about how common guinea pig imagery is in ancient Puerto Rican art would indicate the cultural significance of guinea pigs, it wouldn't be relevant to a claim about the geographical origin or descent of the guinea pig population on the island. The guinea pigs depicted in the artwork could have descended from guinea pigs in either Colombia or Peru; therefore, the finding would neither weaken nor strengthen the claim that guinea pigs in Puerto Rico probably came from Colombia and descended from Colombian guinea pigs. **Choice C is incorrect** because the finding that modern breeds of guinea pigs don't look like images of guinea pigs in ancient art from Puerto Rico, Colombia, and Peru wouldn't address the ancestral relationships between ancient guinea pig populations in these three regions. Therefore, the finding would neither weaken nor strengthen the claim that guinea pigs in Puerto Rico probably came from Colombia and descended from Colombian guinea pigs. **Choice D is incorrect** because a finding about the population sizes of guinea pigs in ancient Colombia and ancient Peru wouldn't be relevant to a claim about which population the Puerto Rican guinea pigs likely descended from. The smaller guinea pig population of Peru could still have been the source for the Puerto Rican guinea pig population.

67 Correct answer **D** Medium ‹ Back to question

D Species that build open nests tend to have larger ranges than species that build domed nests.

Choice D is the best answer because it presents a finding that, if true, would challenge the assumption that many ecologists have made about the connection between the building of domed nests and geographic range in songbirds. The text says that many ecologists have assumed that since domed nests provide protection from weather conditions, songbird species that build such nests should be able to have larger geographic ranges than songbird species that build open nests do. If Medina and her colleagues found that species that build open nests tend to have larger geographic ranges than species that build domed nests do, their finding would show the opposite of what the ecologists have assumed. It would therefore challenge the ecologists' assumption.

Choice A is incorrect because nothing in the text suggests that there's a relationship between songbird species' extinction rates and their geographic ranges. The finding that species that build open nests tend to have higher extinction rates than species that build domed nests do would therefore have no clear bearing on the ecologists' assumption that domed nests allow species that build them to have larger geographic ranges than those of species that build open nests. **Choice B is incorrect** because nothing in the text suggests that there's a relationship between songbird species' sizes and their geographic ranges. The finding that species that build open nests tend to be smaller in size than species that build domed nests are would therefore have no clear bearing on the ecologists' assumption that domed nests allow species that build them to have larger

geographic ranges than those of species that build open nests. **Choice C is incorrect** because although the text indicates that many ecologists have assumed that there's a connection between how songbird species build their nests and the species' geographic ranges, the text says that this assumption is based on the shape of the nests—that is, whether the nests are domed or open—not the number of materials used. The finding that species that build open nests tend to use fewer materials to build their nests than species that build domed nests do would therefore have no clear bearing on the ecologists' assumption that domed nests allow species that build them to have larger geographic ranges than those of species that build open nests.

68 Correct answer **B** Medium Back to question

B There's an age difference of about 2 billion years between certain stars in the thick disk.

Choice B is the best answer. A consistent age difference of 2 billion years between certain stars within the thick disk would support the claim that the thick disk formed in two phases instead of one, with the second phase beginning 2 billion years after the first phase.

Choice A is incorrect. This choice doesn't support the claim. The researchers base their claim on their study of stars inside the thick disk of the Milky Way. This choice makes a comparison to stars in other galaxies, which isn't relevant. **Choice C is incorrect**. This choice doesn't support the claim. The researchers base their claim on their study of stars inside the thick disk. This choice makes a comparison to the thin disk, which isn't relevant. **Choice D is incorrect**. This choice doesn't support the claim. It's too general. The claim is specifically about the thick disk.

69 Correct answer **B** Medium Back to question

B "We're lucky to have a few expert gardeners living in the neighborhood. Some volunteers and I have gone to them a few times with questions, and they've been eager to help us and to learn more about the project."

Choice B is the best answer. This choice shows how volunteers have been interacting with nonvolunteer neighbors and benefiting from their gardening expertise: proof of the connections enabled by the garden.

Choice A is incorrect. This volunteer describes the challenges of developing the garden, which isn't connected to the conclusion about the garden fostering connections between volunteers and neighbors. **Choice C is incorrect**. While the volunteer expresses enthusiasm for the garden, they don't mention any interactions with other people, which is what the students need to show for their conclusion. **Choice D is incorrect**. The respondent enjoys and takes pride in the garden, but they don't mention interacting with neighbors or other volunteers.

70 Correct answer **D** Medium Back to question

D "The goal of the BBC was to support British democracy by promoting an informed citizenry, and US legislators believed that ensuring access to high-quality programming could do the same for democracy in the United States."

Choice D is the best answer because this quotation would be the most effective evidence to include in support of the claim that the Corporation for Public Broadcasting and NPR were inspired by the British Broadcasting System (BBC). The quotation states that the goal of the BBC was to support British democracy and that US legislators believed high-quality programming could accomplish the same goal for democracy in the United States. In other words, US legislators looked to the BBC as a model, taking direct inspiration from it when they created the Corporation for Public Broadcasting, which in turn created NPR.

Choice A is incorrect because this quotation provides historical information about the BBC, not information about the inspiration for the creation of the Corporation for Public Broadcasting and NPR. This quotation, therefore, is irrelevant to the student's claim that the BBC inspired the creation of the Corporation for Public Broadcasting, which in turn created NPR. **Choice B is incorrect** because this quotation contrasts the lack of competition faced by the BBC with the substantial competition faced by NPR, which has no bearing on the student's claim that the Corporation for Public Broadcasting and NPR

were inspired by the BBC. **Choice C is incorrect** because this quotation focuses on a common belief among US politicians that inspired Congress's embrace of publicly funded broadcasting. The quotation doesn't say anything about the BBC and therefore doesn't support the claim that the BBC inspired Congress to create the Corporation for Public Broadcasting, which in turn created NPR.

71 Correct answer **B** Medium Back to question

B "I want for once in my life to have power to mould a human destiny."

Choice B is the best answer because it most effectively illustrates the claim in the text that Hedda seeks to influence another character's fate. In the quotation, Hedda says that she wants "to have power to mould a human destiny," or shape a person's fate, just as the text indicates. Additionally, the phrase "for once in my life" suggests that Hedda feels that she has never been able to shape anyone's life, including her own, supporting the text's assertion that she "is unable to freely determine her own future."

Choice A is incorrect because this quotation shows Hedda being uncertain about what to do with her own life, not wanting to influence another person's fate. **Choice C is incorrect** because while this quotation shows Hedda's interest in finding out whether she has any power over another character, it doesn't clearly show that she wants to influence that person's fate. In this quotation, Hedda seems to have inferred or concluded ("then") that she doesn't have any influence over the person to whom she's speaking, and she's asking that person to confirm her lack of influence. **Choice D is incorrect** because this quotation expresses Hedda's belief that a man should be true to his principles, not her desire to influence another person's fate.

72 Correct answer **D** Medium Back to question

D Decorative art discovered at another Neanderthal site in western France primarily features patterns of unevenly spaced parallel lines.

Choice D is the best answer. The archeologist bases their claim on the fact that the hyena bone features unevenly spaced parallel notches. But if unevenly spaced parallel lines were found on "decorative art" at another Neanderthal site, it would suggest that the hyena bone is probably decorative art as well—not a counting tool.

Choice A is incorrect. This choice doesn't weaken the underlined claim. If anything, it might actually strengthen the claim: assuming we can make an inference about Neanderthals using a fact about early humans, it provides more support for the idea that the person who made the notches was counting something. **Choice B is incorrect**. This choice doesn't weaken the underlined claim. The fact that another artifact had parallel notches made with a different stone tool doesn't tell us anything about the use of either artifact. For all we know, they could both have been used for counting. **Choice C is incorrect**. This choice doesn't weaken the underlined claim. The fact that it took effort to make the lines doesn't tell us anything about what the lines were for.

73 Correct answer **D** Medium Back to question

D "And so the years go swiftly by, / Each, coming, brings ambitions high, / And each, departing, leaves a sigh / Linked to the past."

Choice D is the best answer because it presents the quotation that most effectively illustrates the claim that the speaker of the poem describes experiencing an ongoing cycle of anticipation followed by regretful reflection. In this quotation, the speaker notes that as years go by, "Each, coming"—that is, each new year as it comes—"brings ambitions high." In other words, the speaker begins each new year with large goals. But the speaker goes on to say that as each year ends ("each, departing"), it "leaves a sigh / Linked to the past." A sigh is an expression of longing or regret, so in the context of the whole quotation, this portion suggests that at the end of each year, the speaker regretfully reflects on not having achieved the ambitions formed at

the beginning of the year. The phrases "the years go swiftly by," "Each, coming," and "each, departing" indicate that this experience happens over and over again: the speaker experiences a cycle of anticipation followed by regretful reflection.

Choice A is incorrect because this quotation does not describe an ongoing cycle of anticipation followed by regretful reflection. Instead, the speaker describes experiencing a sensation similar to fright as a result of something that has occurred at midnight. Specifically, the speaker has heard a "brazen tongue," a figurative way of saying that the speaker has heard the clang of a bronze bell being rung. **Choice B is incorrect** because although this quotation does convey a sense of anticipation through its reference to "ominous stillness," there is no suggestion of regretful reflection or any indication that the speaker is describing an ongoing cycle of anticipation followed by such reflection. Instead, the speaker is describing a particular moment when a winter storm appears to have momentarily calmed. **Choice C is incorrect** because although this quotation does convey a sense of regret ("many a squandered day"), nothing in the quotation suggests an ongoing cycle of anticipation followed by regret. Instead, the speaker is simply lamenting wasted time and opportunities.

74 Correct answer **D** Hard Back to question

D "During special occasions, curtains were placed inside the temple to minimize reverberation and confine the sound to designated locations."

Choice D is the best answer because it provides a quotation that would most directly support the student's claim that the temple's users were aware of how materials used in the temple affected sound and deliberately applied that knowledge to shape the sonic experience of people in the space. The quotation indicates that curtains would, at times, be installed specifically "to minimize reverberation and confine the sound," thereby illustrating that the users of the temple had knowledge of the acoustic properties of materials within the temple (how curtains dampen sound) and employed this knowledge to affect the experience of sound within the space.

Choice A is incorrect. Although the quotation describes a feature of the temple's structure (the high ceiling), it makes no mention of the materials used, the materials' acoustic properties, or temple users' awareness of how materials impact sound quality. **Choice B is incorrect** because it doesn't address any materials that were used in the temple, let alone their acoustic properties or temple users' awareness of how materials impact sound quality. **Choice C is incorrect** because it doesn't address any materials that were used in the temple, let alone their acoustic properties or temple users' awareness of how materials impact sound quality.

75 Correct answer **A** Hard Back to question

A The LINE transposon in *O. vulgaris* and *O. bimaculoides* genomes is active in an octopus brain structure that functions similarly to the human hippocampus.

Choice A is the best answer. The text says that LINE transposons are important in the human hippocampus, which supports complex cognition. If the LINE transposon found in octopuses is active in a similar part of their brain, that would suggest that LINE transposons support complex cognition in octopuses too, which in turn supports the hypothesis that LINE transposons are linked to advanced cognition in general.

Choice B is incorrect. This choice doesn't support the hypothesis. It doesn't include anything about how LINE transposons function in species other than humans. **Choice C is incorrect**. This choice doesn't support the hypothesis. It doesn't include anything about how the LINE transposon in octopuses might support advanced cognition. **Choice D is incorrect**. This choice doesn't support the hypothesis. It doesn't include anything about how the LINE transposon in octopuses might support advanced cognition.

76 Correct answer **B**

Hard

‹ Back to question

B The fossils found in China and the United States are so poorly preserved that though they cannot be conclusively identified as jellyfish, they cannot be conclusively identified as ctenophores either.

Choice B is the best answer because it presents a statement that, if true, would most directly weaken Caron and colleagues' claim that the apparent tentacles in the Chinese and American fossils are actually ctenophore comb rows. If the fossils are so poorly preserved that they cannot be conclusively identified as either organism, neither the claim that they are jellyfish nor, as Caron claims, that they are ctenophores would be supported.

Choice A is incorrect. Caron's claim is that fossils from the US and China are ctenophores, not jellyfish. These fossils are said to be "of a similar age" to the Cambrian fossils found in the Canadian Rockies. And nothing in the text or this choice suggests that the presence or absence of ctenophores after the Cambrian would have any bearing on whether the Cambrian fossils from the US and China are ctenophores. **Choice C is incorrect**. Caron's claim is that fossils from the US and China are ctenophores, not jellyfish. Nothing in the text suggests that the presence or absence of ctenophores in the Burgess Shale (in Canada) would affect whether the fossils found in the US and China are ctenophores. **Choice D is incorrect**. Caron's claim is that fossils from the US and China are ctenophores, not jellyfish. Although fossil quality is a plausible issue for the research described in the text, nothing in the text or this choice suggests that the fossils from US and China would have been too poorly preserved for proper identification.

77 Correct answer **D**

Hard

‹ Back to question

D Although Plato's writings typically characterize representational art as an inferior reflection of the physical world, Aristotle suggests that mimesis can refer to art's capacity to envision hypothetical conditions that could, but don't yet, exist.

Choice D is the best answer because it presents a statement that would support Halliwell's claim that "imitation" is an overly simplified translation of the word "mimesis" in the context of ancient Greek philosophical discussions of representational art and that, because it suggests a view of art as merely copying things that exist in reality, the translation obscures the fact that Plato, Aristotle, and other ancient Greeks understood the relationship between art and reality in varied ways. If Plato's works tend to treat representational art as an inferior or inadequate reflection of the physical world (consistent with the idea of mere imitation), while Aristotle's works suggest that the term "mimesis" can refer to art's ability to show conditions that don't currently exist but could exist (going beyond imitation into novel creation), that evidence would support the claim that the term "mimesis" means more than just "imitation" and that ancient Greek philosophers held different views of the relationship between art and reality.

Choice A is incorrect because information about the root word *mimos* first being used in drama and the root *mim-* coming to be associated with music and poetry wouldn't indicate anything about the meaning of the specific term "mimesis" as it was used by ancient Greek philosophers in discussions of representational art; thus, the information would have no bearing on Halliwell's claim that a common translation of the specific term is an oversimplification. **Choice B is incorrect** because the issue of art's psychological effects on audiences gets at how people respond to works of art instead of how art itself is related to reality, so the idea that Plato and Aristotle both addressed such effects in their considerations of mimesis wouldn't have any bearing on Halliwell's claim that a common translation of that term oversimplifies the relationship between art and reality. Further, this idea would touch on one general similarity in approaches to mimesis instead of illustrating the multifaceted, or varied, ways Halliwell claims ancient Greek philosophers understood art's relation to reality. **Choice C is incorrect** because the idea that Plato discussed aesthetics in his early works but didn't use the term "mimesis" until later doesn't give any indication of how Plato or any other ancient Greek philosophers understood the relation between art and reality, so it would have no bearing on Halliwell's claim that a common translation of the term "mimesis" is oversimplified and fails to reflect the varied ways the philosophers understood that relationship.

78 Correct answer **B**

Hard

< Back to question

B Novels published after 1880 contain significantly more references to activities occurring after 10 p.m. than do novels from earlier periods.

Choice B is the best answer because it presents a finding that, if true, would most directly support the researchers' conclusion that an observable pattern in time references in novels reflects a shift in human behavior prompted by the spread of electric lighting in the late nineteenth century. If novels published after 1880 contain significantly more references to activities occurring after 10 p.m. than novels from earlier periods do, this would suggest a change in human behavior and daily routines enabled by the availability of electric lighting. Before electric lighting—which provided illumination more easily than other available forms of light—many activities ceased after nightfall, so references to late-night activities would be less common in earlier novels. An increase in such references after 1880 would align with the researchers' conclusion, reflecting an increase in late-night activities made possible by electric lighting.

Choice A is incorrect because a decrease in references to 10 a.m. after the year 1800 would not support the researchers' conclusion involving a shift in human behavior prompted by the spread of electric lighting toward the end of the 1800s. The time of 10 a.m. is in the morning and, in most places, characterized by daylight, so a change in references to that time would not be clearly linked to the impact of electric lighting. **Choice C is incorrect** because while an increase in implied time references relative to clock phrases in nineteenth-century novels could suggest a change in writing style or conventions, it does not directly support the conclusion involving a shift in human behavior prompted by the spread of electric lighting. The text indicates that the researchers' conclusion is based on the content of the time references themselves, not the phrasing used. **Choice D is incorrect**. If references to noon and midnight are used with roughly the same frequency in all the novels analyzed by the researchers, this would reflect a lack of change in human behavior with regard to time and therefore would not support the researchers' conclusion involving a shift in human behavior that occurred in response to the spread of electric lighting.

79 Correct answer **B**

Hard

< Back to question

B When present along the coasts of Northern California and British Columbia, PCFG whales tend to forage in rocky kelp beds at shallow depths inaccessible to whales as large as those in the ENP main group.

Choice B is the best answer because it presents a finding that, if true, would most directly support the researchers' hypothesis that the smaller maximum size of PCFG whales is an adaptation to resource opportunities particular to their foraging range. The text explains that PCFG whales, a subgroup of ENP gray whales, forage along the coasts of Northern California and British Columbia rather than in the Arctic, where the main ENP group forages. The text goes on to state that PCFG whales reach smaller maximum sizes than other ENP gray whales despite having similar pre-maximum growth rates. If PCFG whales tend to forage in shallow, rocky kelp beds that whales as large as those in the main group cannot access, that would indicate that smaller body size confers a direct advantage in this foraging range—namely, access to a food source that larger whales cannot reach.

Choice A is incorrect because a finding describing recent trends in average body size for both groups of whales wouldn't address whether the smaller maximum size of PCFG whales reflects an adaptation to their foraging environment. Recent stability or change in average size doesn't speak to why the size difference between PCFG whales and the main ENP group exists. **Choice C is incorrect** because a finding about PCFG whales' proximity to ports and urban populations wouldn't address the resources available to PCFG whales or the relationship between body size and foraging. Proximity to human activity is irrelevant to a hypothesis about body size being an adaptation to resource opportunities. **Choice D is incorrect**. Although a finding about a certain prey species being available in the PCFG whales' foraging waters but not in the main group of ENP whales' foraging waters would establish that the PCFG foraging range offers distinct prey species, it wouldn't connect the availability of those prey species to body size in a way that would explain the PCFG whales' smaller size. Without indicating that the available prey in the PCFG range favors smaller whales, the finding falls short of supporting the hypothesis that smaller size is an adaptation to resource opportunities.

80 Correct answer **B**

Hard

< Back to question

B In the exhibition *Postwar: Art Between the Pacific and the Atlantic, 1945–1965*, Enwezor and cocurator Katy Siegel brought works by African artists such as Malangatana Ngwenya together with pieces by major figures from other countries, like US artist Andy Warhol and Mexico's David Siqueiros.

Choice B is the best answer because it presents a finding that, if true, would most directly support the arts journalist's claim about Enwezor's work as a curator and art historian. In the text, the arts journalist asserts that Enwezor wished not just to focus on modern African artists but also to show "how their work fits into the larger context of global modern art and art history," or how their work relates to artistic developments and work by other artists elsewhere in the world. The description of *Postwar: Art Between the Pacific and the Atlantic, 1945–1965* indicates that Enwezor and Siegel's exhibition brought works by African artists together with works by artists from other countries, thus supporting the arts journalist's claim that Enwezor sought to show works by African artists in a context of global modern art and art history.

Choice A is incorrect because it describes a retrospective that wouldn't support the arts journalist's claim that Enwezor wanted to show how works by modern African artists fit into the larger context of global modern art and art history. The description of *El Anatsui: Triumphant Scale* indicates that the retrospective focused only on the work of a single African artist, El Anatsui. The description doesn't suggest that the exhibition showed how El Anatsui's works fit into a global artistic context. **Choice C is incorrect** because it describes an exhibition that wouldn't support the arts journalist's claim that Enwezor wanted to show how works by modern African artists relate to the larger context of global modern art and art history. The description of *The Short Century: Independence and Liberation Movements in Africa, 1945–1994* indicates that the exhibition showed how African artists were influenced by movements for independence from European colonial powers following the Second World War. Although this suggests that Enwezor intended the exhibition to place works by African artists in a political context, it doesn't indicate that the works were placed in a global artistic context. **Choice D is incorrect** because it describes an exhibition that wouldn't support the arts journalist's claim that Enwezor wanted to show how works by modern African artists relate to the larger context of global modern art and art history. The description of *In/sight: African Photographers, 1940 to the Present* indicates that the exhibition was intended to reveal the broad range of approaches taken by African photographers, not that the exhibition showed how photography by African artists fits into a global artistic context.

81 Correct answer **C**

Hard

< Back to question

C Several mosasaur fossils have been found in regions known to be near the poles during the Late Cretaceous, while relatively few fossils of nonendothermic marine reptiles have been found in those locations.

Choice C is the best answer because it presents the finding that, if true, would best support Suarez, Pérez-Huerta, and Harrell's claim about mosasaurs. The text states that Suarez, Pérez-Huerta, and Harrell's research on mosasaur tooth enamel led them to conclude that mosasaurs were endothermic, which means that they could live in waters at many different temperatures and still maintain a stable body temperature. The researchers claim that endothermy enabled mosasaurs to live in relatively cold waters near the poles. If several mosasaur fossils have been found in areas that were near the poles during the period when mosasaurs were alive and fossils of nonendothermic marine reptiles are rare in such locations, that would support the researchers' claim: it would show that mosasaurs inhabited polar waters but nonendothermic marine mammals tended not to, suggesting that endothermy may have been the characteristic that enabled mosasaurs to include polar waters in their range.

Choice A is incorrect because finding that it's easier to determine mosasaur body temperatures from tooth enamel data than it is to determine nonendothermic reptile body temperatures wouldn't support the researchers' claim. Whether one research process is more difficult than another indicates nothing about the results of those processes and therefore is irrelevant to the issue of where mosasaurs lived and what enabled them to live in those locations. **Choice B is incorrect** because finding roughly equal numbers of mosasaur and nonendothermic marine reptile fossils in areas that were near the poles in the Late Cretaceous would suggest that endothermy didn't give mosasaurs any particular advantage when it came to expanding their range to include relatively cold polar waters, thereby weakening the researchers' claim rather than supporting it. **Choice D is incorrect** because finding that the temperature of seawater in the Late Cretaceous was warmer than seawater today wouldn't

weaken the researchers' claim. Seawater in the Late Cretaceous could have been warmer than seawater today but still cold enough for endothermy to be advantageous to mosasaurs, so this finding wouldn't provide enough information to either support or weaken the researchers' claim.

82 Correct answer **B** Hard Back to question

B Most of the African countries belonged to international economic unions that set individual foreign-currency accumulation policies for each member, whereas the Asian countries were largely free to set their own policies.

Choice B is the best answer because it presents a finding that, if true, would best account for the discrepancy Etta-Nkwelle observed: Asian countries showed evidence of herding (converging on the same foreign currency accumulation rate as their regional peers), while African countries did not. The text defines herding as individuals converging on the same action by imitating their peers, which implies that the individuals choose to do so rather than being compelled to follow a particular course of action. This choice indicates that most of the African countries belonged to economic unions that dictated such monetary policies, whereas Asian countries were free to choose, and the similarity among the Asian countries suggests that herding can account for that similarity. The finding thus identifies a relevant difference between the two regions that accounts for the discrepancy.

Choice A is incorrect. Although this choice is related to reserves of foreign currency, the fact that African and Asian countries had different mixes of foreign and domestic currency reserves does not address the rate of foreign currency accumulation or whether herding is a contributing factor determining the rate of accumulation. **Choice C is incorrect**. This choice does not address currency accumulation. And although it describes differences in the currency reserves of African and Asian countries shortly after the 1997 financial crisis, it does not address the rate of foreign currency accumulation nor how similar the nations were in this regard to their neighboring countries. **Choice D is incorrect**. Although this choice discusses the variety of foreign currencies accumulated by African countries as compared with Asian countries, it does not discuss the rate of foreign currency accumulation nor whether herding is a factor determining the rate of accumulation.

83 Correct answer **C** Hard Back to question

C On average, participants who watched the panel correctly answered more questions about the issue than those who watched the debate or the single commentator did.

Choice C is the best answer because it presents the finding that, if true, would most strongly support Tannen's hypothesis. According to the text, Tannen's hypothesis is that multiple perspectives presented in a noncompetitive format is more informative than a debate between opposing viewpoints is. If participants who saw a panel of three commentators with various views about an issue answered more questions about the issue correctly than did participants who saw a debate, that would support Tannen's hypothesis since it would show that participants who heard multiple varied perspectives were better informed than were participants who heard a debate between opposing viewpoints.

Choice A is incorrect because finding that participants perceived commentators in the debate as more knowledgeable than commentators in the panel is irrelevant to Tannen's hypothesis, which is that presenting multiple perspectives on an issue is more informative to the audience than presenting opposing views of the issue is. Participants' perception of how knowledgeable panelists are has no bearing on how much participants learn from the panelists. **Choice B is incorrect** because finding that participants perceived commentators in the panel as more knowledgeable than a single commentator is irrelevant to Tannen's hypothesis, which is that presenting multiple perspectives on an issue is more informative to the audience than presenting opposing views of the issue is. Participants' perception of how knowledgeable panelists are has no bearing on how much participants learn from the panelists, and Tannen's hypothesis says nothing about how informative single commentators are. **Choice D is incorrect** because finding that participants who watched a single commentator answered more questions correctly than participants who watched the debate did wouldn't be relevant to Tannen's hypothesis, which is that hearing multiple varying perspectives is more informative than hearing a debate. Tannen's hypothesis says nothing about how informative single commentators are.

84 Correct answer **C**

Hard

< Back to question

C "In 1535, the year before enacting the Dissolution of the Monasteries, Henry commissioned a survey of the value of church holdings in England—the work, performed by sheriffs, bishops, and magistrates, began that January and was swiftly completed by the summer."

Choice C is the best answer. The fact that Henry VIII commissioned a survey of church holdings just before enacting the Dissolution of the Monasteries suggests that he was interested in the potential profits from claiming their assets. This supports the historians' assertion.

Choice A is incorrect. This choice describes a potential effect of the Dissolution of the Monasteries. The decrease in the proportion of monks in England isn't relevant to the question of Henry VIII's motivations. **Choice B is incorrect**. Details about how the monks were treated during the dissolution don't address Henry VIII's motivations for enacting the policy in the first place. That the monks could keep the content of their cells (their rooms) and sell off the timber they'd harvested has no impact on the value of the monasteries' estates—their land holdings. **Choice D is incorrect**. This choice mentions one impact that the Dissolution of the Monasteries contributed to, two years after it happened. But it doesn't help explain why Henry VIII might have wanted to enact the policy in the first place.

85 Correct answer **D**

Hard

< Back to question

D "Alexandra drew her shawl closer about her and stood leaning against the frame of the mill, looking at the stars which glittered so keenly through the frosty autumn air. She always loved to watch them, to think of their vastness and distance, and of their ordered march. It fortified her to reflect upon the great operations of nature, and when she thought of the law that lay behind them, she felt a sense of personal security."

Choice D is the best answer because it most effectively uses a quotation from *O Pioneers!* to illustrate the claim that Alexandra Bergson takes comfort in understanding the world around her. In the quotation, Alexandra is described as enjoying looking at the stars and feeling a "sense of personal security" when she contemplates nature's order and its governing laws. This suggests that Alexandra takes comfort in understanding the world around her.

Choice A is incorrect because the quotation expresses how Alexandra Bergson attempts to meet difficult situations with determination, not how she takes comfort in understanding the world around her. **Choice B is incorrect** because the quotation expresses "how much the country meant to" Alexandra Bergson, not how she takes comfort in understanding the world around her. In detailing some of the wildlife surrounding Alexandra, the quotation conveys that nature is important to her but not necessarily that it gives her comfort. **Choice C is incorrect** because the quotation describes Alexandra driving her wagon down a highway at night; it doesn't describe how she takes comfort in understanding the world around her or address how she's feeling as she drives off.

86 Correct answer **A**

Hard

< Back to question

A The rules that allow for networks to exhibit behaviors like those of grid cells have no equivalent in the function of biological brains.

Choice A is the best answer. While many networks can perform navigation tasks, or even mimic grid cells, it doesn't mean they're actually behaving like biological brains—this finding suggests that the rules that govern neural network behavior are completely unlike the way real brains work.

Choice B is incorrect. Although it mentions the rules that are programmed into the networks, this finding wouldn't clarify whether or not these rules have anything to do with the function of biological brains. **Choice C is incorrect**. This choice suggests that neural networks are modeled after multiple types of brain cells, which sidesteps the question of whether these rule-based networks are genuinely similar to biological brains. **Choice D is incorrect**. This choice doesn't address the key point

of the claim, which is that the apparent similarity between neural networks and biological brains is only due to the rules programmed into the networks. It focuses on training tasks, not the originally programmed rules.

87 Correct answer **B** — Hard — Back to question

B Many demonstrate the stylistic influence of *corrido*, a genre of narrative songs from Mexico that had come to be characterized by political themes in the early 1800s.

Choice B is the best answer because it presents a detail that, if true, would most effectively illustrate the underlined claim that as *nueva canción* spread beyond Chile, the breadth of musical traditions incorporated into its foundation also expanded. The text explains that the movement was initially founded on traditional Chilean folk forms compiled by Parra, so if many *nueva canción* songs demonstrate the stylistic influence of *corrido*—a Mexican narrative song genre—that would show that a musical tradition originating outside Chile became part of the movement's foundation, directly illustrating the text's claim about how the breadth of *nueva canción* expanded.

Choice A is incorrect because the finding addresses lyrical content—political commentary on issues stemming from European colonization—rather than musical traditions. Even if *nueva canción* songs across different countries share political themes, that doesn't indicate that new musical forms or styles were incorporated into the movement's foundation. Thematic content is distinct from the musical traditions that songs draw on stylistically. **Choice C is incorrect** because the *quena* is described as a "traditional flute used across Andean countries, including Chile," meaning it's part of the Chilean folk tradition that underpinned *nueva canción* at its origin. Use of the *quena* therefore wouldn't illustrate the incorporation of musical traditions beyond those that founded the early movement in Chile. **Choice D is incorrect** because the finding establishes only that artists in additional Latin American countries produced *nueva canción* songs, not that those artists incorporated musical traditions from their own countries into the movement. Artists in other countries could still have been drawing on the same Chilean folk forms that originally founded the movement, so geographic spread alone doesn't illustrate an expansion of musical traditions.

88 Correct answer **B** — Hard — Back to question

B NFM attitude has a strong negative effect on political knowledge and interest, and there is known to be a strong positive correlation between political knowledge and interest and the likelihood of voting.

Choice B is the best answer because it presents a finding that, if true, would most directly support the idea advanced by Homero Gil de Zúñiga and Trevor Diehl that NFM ("news finds me") attitude may reduce voting probability through an indirect effect. The text describes NFM as an attitude that has lowered people's interest in actively acquiring news and introduces Gil de Zúñiga and Diehl's study on the effects of NFM on people in the United States' political knowledge and interest. The text goes on to say that despite the fact that the study didn't occur near a major election, Gil de Zúñiga and Diehl still conclude that NFM may reduce voting probability. If the likelihood, or probability, that a person will vote is linked to that person's level of political knowledge and interest, that would suggest that negatively affecting a person's level of political knowledge and interest would also negatively affect how likely that person is to vote. Thus, if NFM attitude has a negative effect on political knowledge and interest, then it would also likely reduce voting probability.

Choice A is incorrect because the finding that NFM attitude increases as major elections approach wouldn't address the effect of NFM on the likelihood of voting, which is the idea advanced by Gil de Zúñiga and Diehl. Moreover, although the text mentions that there were no major elections that occurred near the time of the study, it doesn't discern between major and minor elections when discussing voting probability. **Choice C is incorrect** because finding that NFM attitude shows little correlation with either political knowledge or political interest would undermine, not support, Gil de Zúñiga and Diehl's idea that NFM may reduce voting probability because it suggests that NFM has no effect on political knowledge or political interest. **Choice D is incorrect**. Although Gil de Zúñiga and Diehl's idea would be supported by the finding that the likelihood of voting increases as political knowledge increases, nothing in the text suggests that the researchers' idea hinges on the size of people's social networks.

89 Correct answer **B**

Hard

< Back to question

B It has features suggesting that it once held an ocean that underwent gradual sea-level changes over an extended time.

Choice B is the best answer. This choice provides direct support for the researchers' conclusion. If the basin once held an ocean of liquid water for "an extended time," that supports the "wet and warm scenario" on Mars, which involved a "prolonged" period of temperate conditions (and not just a "brief period of melting").

Choice A is incorrect. This choice doesn't provide support for the researchers' conclusions. The dimensions of the basin have little bearing on whether or not it was filled with liquid water, and for how long, and that's the evidence that would support the "wet and warm" theory. Similarly, whether or not the basin was formed by an asteroid or a comet is irrelevant to the question of whether or not there was water in the basin for a long period. **Choice C is incorrect**. This choice does not provide support for the researchers' conclusions, but rather the opposite. A "massive but short lived influx" of liquid water is not the same as a "prolonged phase of warm, wet conditions." It more reflects the opposing theory, a "brief period of melting." **Choice D is incorrect**. This choice does not support Cardenas and Lamb's conclusion. Both theories about liquid water on Mars ("wet and warm" and "brief period of melting") involve flowing water, but lava isn't mentioned at all in the text. Therefore, this choice doesn't provide exclusive support for either theory.

90 Correct answer **D**

Hard

< Back to question

D Commercial and sport fishers tend to disproportionately remove species at the highest trophic level.

Choice D is the best answer because it provides the finding that, if true, would most directly support Aburto-Oropeza and colleagues' explanation that species composition differs between Alacranes and Bajos del Norte because of a difference in the regulation of fishing at the two reefs. The text explains that isolated oceanic reefs are often unprotected and are increasingly attracting commercial and sport fishing activity. According to the text, when Aburto-Oropeza and colleagues surveyed Alacranes, an isolated reef where fishing is prohibited, and Bajos del Norte, an isolated reef that is unprotected, they found that species at the highest trophic level (that is, top predators) make up a smaller proportion of the total mass of all living organisms at Bajos del Norte (10%) than they do at Alacranes (34%). If it were true that commercial and sport fishers tend to disproportionately remove top predators—that is, that they catch them at a higher rate than they catch other species—this would support the explanation that the allowance of fishing at Bajos del Norte and the prohibition of fishing at Alacranes has led to a lower proportion of top predator species remaining in the total biomass at Bajos del Norte.

Choice A is incorrect. To support the researchers' claim that the role of fishing regulations accounts for Alacranes having a greater proportion of species at the highest trophic level (top predators) than Bajos del Norte does, a finding would need to help explain how fishing affects the presence of top predator species in particular; the finding that the two reefs have similar biomass densities (that is, about the same mass of living organisms per unit) and that Alacranes has a much greater total biomass (total mass of living organisms) wouldn't reveal anything about the species composition at each reef or help explain why the *proportion* of top predators in the total biomass at each reef differs. This finding might simply suggest that Alacranes is a larger reef, with more units at that density. **Choice B is incorrect** because the finding that there are species at the highest trophic level (top predators) at Bajos del Norte that aren't found at Alacranes would reveal only that there are some different species in the reefs' total biomasses (total mass of living organisms) but wouldn't explain why that's the case; this finding wouldn't be clearly connected to the role of fishing regulations, which is what, according to the researchers, accounts for the reefs having different proportions of top predators in their total masses. **Choice C is incorrect**. To support the researchers' claim that the role of fishing regulations accounts for Alacranes having a greater proportion of species at the highest trophic level (top predators) than Bajos del Norte does, a finding would need to help explain how fishing affects the presence of top predator species in particular, but different costs of reaching the two reefs wouldn't affect fishing behavior at all because fishing isn't even allowed on one of the reefs.

91 Correct answer **A**

Hard

< Back to question

A Mbaqanga and quan họ developed independently of each other and have little in common musically.

Choice A is the best answer. Zheng's claim is that the idea of world music "homogenizes" (meaning makes similar) distinct kinds of music by reducing them to one category. In other words, Zheng thinks the concept of world music is a harmful oversimplification of diverse musical forms. To support this claim, we need evidence that these musical traditions are so different from one another that they should not fall into the same category. If it's true that mbaqanga and quan họ developed separately and have little in common musically, then it wouldn't make sense to lump them into the same category.

Choice B is incorrect. If true, this wouldn't affect the claim. To support the claim, we need evidence that these musical traditions are so different from one another that they should not fall into the same category. A difference in popularity doesn't necessarily mean that the two musical traditions shouldn't be categorized together: instead, we need to know if the music itself is similar or different. **Choice C is incorrect**. If true, this wouldn't affect the claim. To support the claim, we need evidence that these musical traditions are so different from each other that they should not fall into the same category. This choice doesn't do that. **Choice D is incorrect**. If true, this would actually weaken the claim. Zheng thinks it's reductive or oversimplifying to put distinct musical traditions into a single category. But if mbaqanga and quan họ are similar to each other, then it would make sense to put them in the same category.

92 Correct answer **C**

Hard

< Back to question

C Securing new cell materials is more expensive than recycling cell materials, and thus more frequent cell replacement entails greater disparity in cumulative costs.

Choice C is the best answer because it presents information that, if true, would coherently and directly account for the researchers' observation about the LCOE differential between plants using new cells and plants using recycled cells. The text explains that the researchers found that the LCOE—a cost-per-unit electricity measure that includes the cost of acquiring the materials—is higher for plants using new cells than for plants using cells recycled three times, with the gap between them growing from 18.8% to 31.3% when the researchers reduced the modeled cell lifetime by two-thirds (that is, from 15 years to 5 years). If obtaining new cell materials were more expensive than recycling preexisting cell materials, then plants using new cells would incur greater materials costs than plants using recycled cells when cells need to be replaced, and the greater frequency of cell replacement entailed by a shorter cell lifetime would force plants using new cells to incur that greater cost more often—widening the gap between those plants and plants using recycled cells.

Choice A is incorrect because the information that efficiencies are similar between new and recycled cells (which the text already establishes) and that frequency of recycling doesn't affect the LCOE for plants using recycled cells wouldn't address the effect of shorter cell lifetimes on the LCOE of plants using new cells. Information about that effect would be needed to account for the observation that the gap between the LCOEs for the two types of plants widens when cell lifetimes are shortened. **Choice B is incorrect**. Although the choice does point to the possibility of a scenario that could explain the growth in the LCOE differential ("potentially less expensive than producing new cells"), it presents that information as a concession ("although") to its central assertion, which is that the cumulative costs would increase if cells had to be replaced more frequently than on the original 15-year timeline. This choice doesn't indicate whether the increased cumulative costs in question are those of recycled-cell plants or both types of plants; either way, an increase in cumulative costs isn't a coherent or direct explanation for why the difference in costs between new-cell plants and recycled-cell plants increases when the cell lifetime is reduced by two-thirds. A coherent and direct explanation for growth in the cost difference between the two types of plants must focus on a disparate effect on the plants' costs; choice B, however, presents information that could be but is not necessarily relevant to a disparate effect and then doesn't draw the relevant conclusion

from it, instead drawing a conclusion about cumulative costs that doesn't entail a growing differential. **Choice D is incorrect** because even if plant operating costs increase as cell lifetime decreases, that would be true for plants using new cells and for plants using recycled cells and thus wouldn't be responsible for a divergence; therefore, the finding wouldn't coherently and

directly explain the observation that the gap between the LCOEs of the two types of plants widens as cell lifetimes are reduced.

93 Correct answer **B** Hard ‹ Back to question

B "Their taste was strikingly alike. The same books, the same passages were idolized by each—or if any difference appeared, any objection arose, it lasted no longer than till the force of her arguments and the brightness of her eyes could be displayed."

Choice B is the best answer. By showing that "any difference" in taste was quickly overcome by "the force of [Marianne's] arguments," this choice effectively demonstrates Marianne's "ability to persuade others."

Choice A is incorrect. This choice doesn't effectively illustrate the claim. This choice shows that Marianne and John share an interest in music and dancing, but it doesn't provide evidence of Marianne's "ability to persuade others." **Choice C is incorrect**. This choice doesn't effectively illustrate the claim. This choice shows that Marianne enjoys talking about her interests, but it doesn't provide evidence of Marianne's "ability to persuade others." **Choice D is incorrect**. This choice doesn't effectively illustrate the claim. This choice shows that Marianne and John share many interests and generally agree on music and dancing, but it doesn't provide evidence of Marianne's "ability to persuade others."

94 Correct answer **A** Hard ‹ Back to question

A Analysis of the animal bones showed that the cattle's diet also consisted of wheat, which humans widely cultivated in China during the Bronze Age.

Choice A is the best answer because it presents a finding that, if true, would most strongly support the team's conclusion that cattle were likely raised closer to human settlements than sheep and goats were. The text explains that Vaiglova, Liu, and their colleagues analyzed the chemical composition of sheep, goat, and cattle bones from the Bronze Age in China in order to investigate the animals' domestication, or their adaptation from a wild state to a state in which they existed in close connection with humans. According to the text, the team's analysis showed that sheep and goats of the era fed largely on wild plants, whereas cattle fed on millet—importantly, a crop cultivated by humans. If analysis of the animal bones shows that the cattle's diet also consisted of wheat, another crop cultivated by humans in China during the Bronze Age, the finding would support the team's conclusion by offering additional evidence that cattle during this era fed on human-grown crops—and, by extension, that humans raised cattle relatively close to the settlements where they grew these crops, leaving goats and sheep to roam farther away in areas with wild vegetation, uncultivated by humans.

Choice B is incorrect because if it were true that sheep's and goats' diets consisted of small portions of millet, which the text states was a crop cultivated by humans, the finding would suggest that sheep and goats were raised relatively close to human settlements, weakening the team's conclusion that cattle were likely raised closer to those settlements than sheep and goats were. **Choice C is incorrect** because the finding that cattle generally require more food and nutrients than do sheep and goats wouldn't support the team's conclusion that cattle were likely raised closer to human settlements than sheep and goats were. Nothing in the text suggests that cattle were incapable of obtaining sufficient food and nutrients without access to human-grown crops. Hence, even if cattle's diets are found to have different requirements than the diets of sheep and goats, the cattle could have met those requirements from food located far from human settlements. **Choice D is incorrect** because if it were true that the diets of sheep, goats, and cattle varied based on what the farmers in each Bronze Age settlement could grow, the finding would weaken the team's conclusion that cattle were likely raised closer to human settlements than sheep and goats were, suggesting instead that all three types of animals were raised close enough to human settlements to feed on those settlements' crops.

95 Correct answer **D**

Hard

< Back to question

D They show shapes consistent with monumental platforms and dense central settlements linked to smaller settlements by a system of canals and roadways.

Choice D is the best answer. This finding, if true, would support the archaeologists' conclusion. Dense central settlements linked to smaller ones would provide evidence of cities and suburbs—in other words, "a form of urbanism."

Choice A is incorrect. This finding, if true, would weaken the archaeologists' conclusion. Widely separated, small settlements with jungle in between would support the long-held belief that the Casarabe culture "was characterized by a sparse, widely distributed population and little intervention in the surrounding wilderness." **Choice B is incorrect**. This choice wouldn't support the researchers' conclusion. These large cities are located outside Casarabe territory, which doesn't show evidence of Casarabe urbanism. **Choice C is incorrect**. This finding wouldn't support the archaeologists' conclusion. Scattered small farms in jungle clearings are not good evidence to support the existence of cities ("a form of urbanism").

96 Correct answer **C**

Hard

< Back to question

C "Lumumba's practical accomplishments can be passed over quickly; it is mainly as the personification of Congolese independence that he warrants scholarly attention."

Choice C is the best answer because it illustrates the student's claim about some historians viewing Lumumba primarily as a symbol. This quotation argues that Lumumba "warrants" (or deserves) "scholarly attention" as a symbol and not for his "practical accomplishments"—that is, his actions as prime minister—which "can be passed over quickly," or dismissed as being of comparatively little importance. Thus, the quotation expresses the view that the student criticizes some historians for holding.

Choice A is incorrect. Although this quotation touches on the difficulty of evaluating Lumumba's legacy, it doesn't address how historians of modern African politics view him as a symbol. **Choice B is incorrect**. While this quotation mentions Lumumba's political beliefs, it doesn't discuss historians viewing him as a symbol. **Choice D is incorrect**. This quotation touches on Lumumba's vision for his country, but it doesn't discuss historians viewing him as a symbol.

97 Correct answer **A**

Hard

< Back to question

A Participants who had been looking at the trees helped the experimenter pick up significantly more pens than did participants who had been looking at the building.

Choice A is the best answer because it presents a finding that, if true, would most strongly support the researchers' claim that they found evidence that experiencing awe can make people feel more connected to others and thus more likely to behave altruistically (with beneficial and unselfish concern for others). According to the text, the researchers tested for this effect by first having participants look at either something known to be awe-inspiring (very tall trees) or something ordinary (a plain building) and then purposely spilling pens near the participants. The finding that participants who had looked at the trees helped pick up significantly more pens than did participants who had looked at the building would support the researchers' claim by demonstrating that the people who had experienced awe behaved more altruistically when the experimenter needed help than the other participants did.

Choice B is incorrect because a finding about helpful participants using positive words to describe the trees and the building after the experiment was over wouldn't have any bearing on the researchers' claim that experiencing awe increases altruistic behavior. The text doesn't address the use of positive words to describe things or suggest any connection between using such words and having experienced awe, so that behavior wouldn't serve as evidence that experiencing awe played a role in promoting helpful behavior. **Choice C is incorrect** because a finding that participants who didn't help the experimenter were significantly more likely than others to report having experienced awe whether they had looked at the building or the trees would weaken the researchers' claim that experiencing awe increases altruistic behavior by suggesting that the opposite might

be true—that experiencing awe is in fact linked to choosing not to act in a way that benefits someone else. **Choice D is incorrect** because a finding about participants noticing that the experimenter had dropped the pens wouldn't have any bearing on the researchers' claim about people behaving altruistically. Being aware of a challenge or problem isn't necessarily beneficial on its own and isn't the same as offering help, so the finding wouldn't support the idea that experiencing awe increases altruistic behavior.

98 Correct answer **B** Hard ‹ Back to question

B Nearly every recipient of an electronic transfer withdrew the entire amount in physical money shortly after receiving the transfer.

Choice B is the best answer. This would weaken the explanation. If the recipients of electronic money immediately withdrew it all as physical money, then both kinds of recipients ended up spending physical money on food. So there must be some other explanation why those who initially received electronic money ate different kinds of food.

Choice A is incorrect. This wouldn't weaken the explanation. If anything, it actually supports it: it demonstrates that recipients of electronic money and recipients of physical money have different spending habits. **Choice C is incorrect**. This wouldn't weaken the explanation. The explanation we're testing this choice against is about the way that people might "conceive of and allocate" physical and electronic funds differently. This choice only focuses on the timing, not what they spend the money on. **Choice D is incorrect**. This would have no impact on the explanation. It doesn't tell us anything about possible differences between the spending habits of those who spend physical money and those who spend money electronically.

99 Correct answer **D** Hard ‹ Back to question

D Blue icebergs and green icebergs contain similarly small traces of dissolved organic carbon.

Choice D is the best answer because it presents a finding that, if true, would weaken the scientists' hypothesis about icebergs that appear to be green. The text indicates that most icebergs are either mostly white or blue in color but that some icebergs in Antarctica appear to be green. The text goes on to say that the scientists hypothesized that this green color occurs when yellow-tinted dissolved organic carbon in ocean waters mixes with blue ice. A finding that both blue icebergs and green icebergs contain similarly small traces of dissolved organic carbon would suggest that something other than yellow-tinted organic carbon causes some icebergs' green color, since the blue icebergs that contain yellow-tinted organic carbon remained blue instead of turning green.

Choice A is incorrect because, according to the text, the scientists' hypothesis was that blue icebergs, not white ones, change color when their ice mixes with yellow-tinted dissolved organic carbon. A finding that white ice, because of its air bubbles, doesn't change color when it's mixed with dissolved organic carbon would therefore have no bearing on the scientists' hypothesis. **Choice B is incorrect** because the text focuses only on Antarctic icebergs that appear to be green. It doesn't indicate that icebergs in locations other than Antarctica have been found to have a green hue. A finding that dissolved organic carbon has a stronger yellow color in Antarctic waters than in other places would therefore have no bearing on the scientists' hypothesis that green color in icebergs in Antarctica is caused by yellow-tinted dissolved organic carbon mixing with blue ice. **Choice C is incorrect** because, according to the text, the scientists' hypothesis was that blue icebergs turn green when their ice mixes with yellow-tinted dissolved organic carbon in the sea around them. If that's correct, one would expect blue icebergs and green icebergs to be located at a distance from each other since all blue icebergs in an area where the waters contain yellow-tinted dissolved organic carbon would take on a green hue. A finding that blue icebergs and green icebergs are rarely found near each other would therefore strengthen, not weaken, the researchers' hypothesis.

100 Correct answer **B**

Hard

‹ Back to question

B "Braschi's eagerness to push boundaries and blend genres within literature invites us to consider how other art forms might also engage with literature."

Choice B is the best answer because it presents the quotation that best supports the student's claim about Braschi. By describing how Braschi's blending of genres invites her audience to think about how other art forms could also engage with literature, the quotation supports the idea that the diversity of responses to Braschi's work reflects Braschi's own approach to creating literature.

Choice A is incorrect because the quotation describes scholars from different countries writing essays about Braschi's use of language in her writings; it doesn't address how Braschi's creation of cross-genre literature inspires diverse types of responses, which is the claim the student makes. **Choice C is incorrect** because the quotation focuses on the fact that Braschi studied in several different cities, which doesn't address the student's claim that Braschi's creation of cross-genre literature inspires diverse types of responses. **Choice D is incorrect** because the quotation lists some of the authors who Braschi has written academic works about, which is irrelevant to the student's claim that Braschi's creation of cross-genre literature inspires diverse types of responses.

101 Correct answer **D**

Hard

‹ Back to question

D Mantle-derived rocks younger than 3.2 billion years contain some material that is not found in older mantle-derived rocks but is found in older and contemporaneous lithospheric rocks.

Choice D is the best answer because it presents a finding that, if true, would most directly support the researchers' conclusion that the transition from a stagnant lid regime to a tectonic plate regime occurred around 3.2 billion years ago. The text explains that early in Earth's history, Earth exhibited a stagnant lid regime in which there's no interaction between the lithosphere and the underlying mantle. The text further explains that, by contrast, once Earth began to exhibit a tectonic plate regime, its lithospheric and mantle material began to mix. If mantle-derived rocks younger than 3.2 billion years contain material not found in older mantle-derived rocks, that material must have originated somewhere other than the mantle. And if this material is found in both older and contemporaneous lithospheric rocks, that would imply that the lithosphere was able to mix with mantle material beginning around 3.2 billion years ago, as the researchers concluded.

Choice A is incorrect. The text gives no basis for comparing the quantities of lithospheric and mantle-derived rocks. **Choice B is incorrect**. The text gives no basis for comparing the material makeup of lithospheric rocks to that of mantle-derived rocks. **Choice C is incorrect**. A positive correlation between the age of lithospheric rocks and these rocks' chemical similarity to mantle-derived rocks would mean that the oldest rocks would be the most similar, which contradicts the text's claim that lithospheric and mantle-derived rocks were completely separate until 3.2 billion years ago. If the researchers' conclusion about the onset of tectonics on Earth is correct, then younger lithospheric rocks would show greater chemical similarity to mantle-derived rocks than older lithospheric rocks do.

102 Correct answer **B**

Hard

‹ Back to question

B "[Dr. Proudie] was comparatively young, and had, as he fondly flattered himself, been selected as possessing such gifts, natural and acquired, as must be sure to recommend him to a yet higher notice."

Choice B is the best answer. In this quotation, Dr. Proudie is described as "fondly flatter[ing] himself" that he has gifts that "must be sure to recommend him to a yet higher notice." In other words, he expects his skills to push him to greater fame and success. This implies an exaggerated sense of his own abilities, which matches the claim we're trying to support.

Choice A is incorrect. This quotation doesn't describe Proudie's view of himself, nor does it paint him in an especially flattering light. Instead, by saying his mental powers and business skill are not "proved," it implies that he is actually dim-witted and bad at business. **Choice C is incorrect**. This choice describes Proudie's closeness to power and importance, but it doesn't show

what Proudie thinks of himself. Proudie is not describing himself or his abilities here. The narrator is. **Choice D is incorrect**. While this quotation offers Proudie very mild praise, it doesn't show what Proudie thinks of himself or his own abilities, which is what the claim focuses on.

103 Correct answer **C** Hard Back to question

C The other known examples of the game dating to the same period have been found along routes that seem to have been used primarily by traders at the time.

Choice C is the best answer because it presents a finding that, if true, would most directly support the scholars' claim about the board game. The text explains that the remains of a 4,000-year-old board game were found in Oman. The text then states that scholars claim this board game was played mostly by traders. If the other known examples of this board game from the same time period were discovered along routes that seem to have been used primarily by traders, this finding would directly support the scholars' claim because it suggests that the game was largely played by traders who brought it with them for entertainment as they traveled.

Choice A is incorrect because this finding would suggest only that a single trader may have possessed examples of the board game, perhaps for the purpose of trading or selling the game to residents of Oman. For this reason, the finding wouldn't directly support the scholars' claim that the majority of the game's players were traders. **Choice B is incorrect** because this finding doesn't mention the board game at all, referring only to similar games found at other sites, and would therefore provide no direct support for the scholars' claim about the board game. **Choice D is incorrect** because this finding doesn't mention the board game at all, referring only to the remains of other goods found at the site in Oman, and would therefore provide no direct support for the scholars' claim about the board game.

104 Correct answer **D** Hard Back to question

D As they complete secondary and higher education, former students of the school experience no loss of fluency or cultural pride.

Choice D is the best answer because it presents a finding that, if true, would support the researchers' prediction about the language nest model of education. The text states that Morcom and Roy studied the effects of the language nest model of education on students at an Anishinaabe school, and they found that the model—which is used with students during pre-K or elementary school—increased students' fluency in the Anishinaabe language and pride in Anishinaabe culture. The researchers predicted that the students' positive early experiences with the Anishinaabe language would lead them to be more likely to later share the language with younger generations. If former students maintain full fluency and cultural pride after finishing secondary and higher education, it follows that they would be both able and motivated to share what they know with others; this would likely result in a higher probability of transmitting the language to younger generations, as the researchers predict.

Choice A is incorrect because finding that Anishinaabe adults who didn't attend the school feel approximately the same degree of cultural pride as those adults who did attend wouldn't support the researchers' prediction that former students will be more likely to share their knowledge with younger generations. This finding would identify a similarity between the groups rather than a factor that might make former students more likely than other adults to transmit the language to younger people. **Choice B is incorrect** because finding that new students experience increased performance in language fluency and academics would suggest that the school has a positive effect on students when they attended but wouldn't reveal anything about those students' later actions as adults (such as their likelihood of sharing their knowledge with younger generations). **Choice C is incorrect** because finding that Anishinaabe adults who attended the school are equally likely to stay in the community as adults who didn't attend the school wouldn't support the researchers' prediction that former students will be more likely to share their knowledge with younger generations. This finding would identify a similarity between the groups rather than a factor that might make former students more likely than other adults to transmit the language to younger people.

105 Correct answer **C**

Hard

< Back to question

C At several sites not included in the study, eelgrass meadows' health correlates negatively with the length of residence and size of otter populations.

Choice C is the best answer because it presents a finding that, if true, would weaken Foster's hypothesis that damage to eelgrass roots improves the health of eelgrass meadows by boosting genetic diversity. The text indicates that sea otters damage eelgrass roots but that eelgrass meadows near Vancouver Island, where there's a large otter population, are comparatively healthy. When Foster and her colleagues compared the Vancouver Island eelgrass meadows to those that don't have established otter populations, the researchers found that the Vancouver Island meadows are more genetically diverse than the other meadows are. This finding led Foster to hypothesize that damage to the eelgrass roots encourages eelgrass reproduction, thereby improving genetic diversity and the health of the meadows. If, however, other meadows not included in the study are less healthy the larger the local otter population is and the longer the otters have been in residence, that would suggest that damage to the eelgrass roots, which would be expected to increase with the size and residential duration of the otter population, isn't leading meadows to be healthier. Such a finding would therefore weaken Foster's hypothesis.

Choice A is incorrect because finding that small, recently introduced otter populations are near other eelgrass meadows in the study wouldn't weaken Foster's hypothesis. If otter populations were small and only recently established, they wouldn't be expected to have caused much damage to eelgrass roots, so even if those eelgrass meadows were less healthy than the Vancouver Island meadows, that wouldn't undermine Foster's hypothesis. In fact, it would be consistent with Foster's hypothesis since it would suggest that the greater damage caused by larger, more established otter populations is associated with healthier meadows. **Choice B is incorrect** because the existence of areas with otters but without eelgrass meadows wouldn't reveal anything about whether the damage that otters cause to eelgrass roots ultimately benefits eelgrass meadows. **Choice D is incorrect** because the health of plants other than eelgrass would have no bearing on Foster's hypothesis that damage to eelgrass roots leads to greater genetic diversity and meadow health. It would be possible for otters to have a negative effect on other plants while nevertheless improving the health of eelgrass meadows by damaging eelgrass roots.

106 Correct answer **B**

Hard

< Back to question

B *E. coli* is frequently found in species preyed on by *C. granosus* and can survive exposure to the digestive juices of *C. granosus*.

Choice B is the best answer because it presents a finding that, if true, would most directly support Dumas Gálvez and colleagues' conclusion that the venom produced by the scorpion species *Centruroides granosus* helps mitigate, or reduce, risk during feeding in addition to enhancing predation success. According to the text, Gálvez and colleagues found that the venom used by *C. granosus* both subdues prey and inhibits the growth of *Escherichia coli*, a pathogen that, if ingested by *C. granosus*, would presumably cause disease unless neutralized in some way. If it were true that *E. coli* is commonly found in species preyed on by *C. granosus* and, moreover, can withstand *C. granosus*'s digestive juices after ingestion, this would suggest that *C. granosus* likely relies on another mechanism to neutralize *E. coli* to make *E. coli*-infected prey safe for consumption by the scorpion species. Given that, as the text states, *C. granosus*'s venom was found to inhibit the pathogen's growth, it therefore follows that the venom provides protection for *C. granosus* against *E. coli* that its digestive system wouldn't otherwise provide, making it reasonable to conclude that the trait may have spread through the species because it mitigates risk during feeding.

Choice A is incorrect because a finding that *E. coli* doesn't appear to be virulent, or dangerous, for *C. granosus* even when venom isn't used would weaken rather than strengthen Gálvez and colleagues' conclusion that a particular form of venom production spread in *C. granosus* in part because it helps reduce risk during feeing, since this finding would suggest that *E. coli* isn't actually a risk to *C. granosus* when consuming prey. **Choice C is incorrect** because a finding that *C. granosus* can detect and avoid consuming *E. coli*-infected prey in the first place would suggest that an ability other than venom production is the primary factor that reduces *C. granosus*'s risk when feeding, which would suggest there has been less evolutionary pressure to develop venom that provides protection; thus, this finding wouldn't clearly support the conclusion that *C. granosus*'s form of venom production spread in the species in part because it helps reduce risk during feeding. **Choice D is**

incorrect because Gálvez and colleagues' conclusion focuses on *C. granosus* venom in relation to the risk of *E. coli*, and a finding that the venom also inhibits nonpathogenic (not disease-causing) bacteria species, which presumably don't pose a risk if consumed, wouldn't be relevant to the conclusion that *C. granosus*'s particular form of venom production spread in the species in part because it helps reduce risk during feeding.

107 Correct answer **A** — Hard — Back to question

A The streams regularly experience portions of their banks collapsing into the water at multiple points upstream of the sampling sites.

Choice A is the best answer. This finding would support the conclusion. If stream banks are collapsing into the water at multiple points, then sediment is getting into the water at those various points. This supports the conclusion that the inflow of sediment is very spread out.

Choice B is incorrect. This finding wouldn't support the conclusion. The conclusion is about the influx of sediment being "spatially diffuse," meaning spread out over a large area. The type of sediment wouldn't have an impact on the conclusions. **Choice C is incorrect**. This finding wouldn't support the conclusion. It doesn't say anything about the influx of sediment being "spatially diffuse" (spread out). **Choice D is incorrect**. This finding wouldn't support the conclusion. Any sediment that enters downstream of the sampling sites wouldn't end up in the samples, so it wouldn't affect the findings or the conclusion.

108 Correct answer **B** — Hard — Back to question

B The average emotionality score of a movie's reviews was a positive predictor of that movie's box office earnings.

Choice B is the best answer. This choice weakens the student's conclusion by suggesting that the emotionality of movie reviews is related to box office success: the higher the emotionality score, the better the movie performs at the box office.

Choice A is incorrect. While this choice does mention emotionality scores, it only connects them to star ratings, not to box office success. **Choice C is incorrect**. The fact that many movies received an average star rating doesn't tell us anything about the relationship between emotionality and box office success. **Choice D is incorrect**. While this choice suggests that star ratings can predict box office success, it doesn't address the issue of emotionality in written reviews, which is the focus of the student's conclusion.

109 Correct answer **C** — Hard — Back to question

C Subjects who voted in a given election held significantly more polarized attitudes toward the winning candidate two years later than did subjects who were not old enough to vote in that election.

Choice C is the best answer because it presents a finding that, if true, would weaken the claim made by people who favor the traditional view of voter behavior. According to the text, people who favor that view believe that voting in an election doesn't change a voter's attitude toward the candidates in that election. If Washington and Mullainathan found that two years after an election, attitudes toward the winning candidate were significantly more polarized among subjects who had voted than among subjects who had been too young to vote, that would suggest that the act of voting did have an effect on the voters' attitudes toward the candidates, which would undermine the claim that voting doesn't change voters' attitudes.

Choice A is incorrect because a finding about links between subjects' attitudes and general political orientation, regardless of age and ability to vote, wouldn't address the presence or absence of changes in attitudes among those subjects who did actually vote. Therefore, the finding wouldn't have any bearing on the claim that voting in an election doesn't change a voter's attitude toward the candidates in that election. **Choice B is incorrect** because a finding that positive attitudes toward a winning candidate significantly increased in the two years after the election among subjects who had been too young to vote would involve only people who didn't vote; therefore, the finding wouldn't have any bearing on the claim that when people do vote,

the act of voting doesn't change their attitudes toward the candidates. **Choice D is incorrect** because the finding that subjects in both groups were more likely to have negative attitudes than positive attitudes toward the winning candidate two years after an election would reflect all subjects' attitudes at one particular time whether they voted or not, rather than the presence or absence of a change in voters' attitudes after voting. Therefore, the finding would neither weaken nor strengthen the claim that voting in an election doesn't change a voter's attitude toward the candidates.

110 Correct answer **D** Hard Back to question

D Analysis of water's molecular structure under high pressure reveals that hydrogen bonds are more stable when TMAO is present than when it is not.

Choice D is the best answer because it presents a finding that, if true, would support the researchers' hypothesis that TMAO reduces water's compressibility. The text explains that at great depths in the ocean, extreme pressure compresses the molecular structure of water by destabilizing the hydrogen bonds between adjacent molecules, thereby allowing water to penetrate proteins and harm the associated organisms. However, deep-sea organisms called piezophiles have adapted to live at these depths and previous studies show a positive correlation between the depth at which a piezophile species lives and the species' level of the compound TMAO. Because this hypothesis links TMAO levels with reduced compressibility of water's tetrahedral molecular structure, a finding that TMAO helps maintain the hydrogen bonds between water molecules under high pressure would strongly support that hypothesis.

Choice A is incorrect. Although the researchers' hypothesis suggests a relationship between TMAO and water molecules' tetrahedral molecular structure, that relationship involves TMAO helping maintain water's tetrahedral molecular structure under high pressure; as presented in the text, the hypothesis doesn't contend that water molecules are impervious to, or incapable of being penetrated by, TMAO. **Choice B is incorrect** because the text discusses how the molecular structure of water, not TMAO, is compressed under extreme pressure and never addresses how TMAO might be affected by such pressure. **Choice C is incorrect** because the researchers' hypothesis holds that water under extreme pressure is more resistant, not less, to being compressed when TMAO concentrations are higher. Moreover, the positive correlation mentioned in the text is between TMAO concentrations and the depths at which piezophiles live, not between concentrations of TMAO and the rate at which water's molecular structure compresses as pressure increases.

111 Correct answer **D** Hard Back to question

D Cownose rays have increased in regional abundance as dusky sharks have decreased in regional abundance.

Choice D is the best answer because it presents a finding that, if true, would most directly support the researchers' hypothesis about the connection between the dusky shark population decline and the eastern oyster population decline. The text indicates that although dusky sharks don't usually eat eastern oysters, they do consume cownose rays, which are the main predators of eastern oysters. An increase in the abundance of cownose rays in the region in response to a decline in the abundance of dusky sharks would directly support the researchers' hypothesis: a higher number of cownose rays would consume more eastern oysters, driving down the oyster population.

Choice A is incorrect because a finding that there's an association between a decline in the regional abundance of some of dusky sharks' prey and the regional abundance of dusky sharks wouldn't directly support the researchers' hypothesis that a decline in dusky sharks has led to a decline in eastern oysters in the region. Although such a finding might help explain why shark abundance has declined, it would reveal nothing about whether the shark decline is related to the oyster decline. **Choice B is incorrect** because a finding that eastern oyster abundance tends to be greater when dusky sharks and cownose rays are present than when only dusky sharks are present wouldn't support the researchers' hypothesis that a decline in dusky sharks has led to a decline in eastern oysters in the region. The text indicates that the sharks prey on the rays, which are the main predators of the oysters; if oyster abundance is found to be greater when rays are present than when rays are absent, that would suggest that rays aren't keeping oyster abundance down, and thus that a decline in rays' predators, which would be expected to lead to an increase in the abundance of rays, wouldn't bring about a decline in oyster abundance as the researchers hypothesize. **Choice C is incorrect** because a finding that consumption of eastern oysters by cownose rays

increased substantially before dusky sharks declined in regional abundance wouldn't support the researchers' hypothesis that the decline in dusky sharks has led to a decline in eastern oysters in the region. Such a finding would suggest that some factor other than shark abundance led to an increase in rays' consumption of oysters and thus to a decrease in oyster abundance, thereby weakening the researchers' hypothesis.

112 Correct answer **C** Hard Back to question

C says to himself while striking his head, "Beat at this gate that let thy folly in / And thy dear judgement out!"

Choice C is the best answer because it most effectively uses a quotation from *King Lear* to illustrate the claim that King Lear expresses regret for his actions. In the quotation, Lear describes striking himself on the head—the same act he's engaged in as he speaks, and one that suggests he's deeply upset with himself. Referring to himself in the second person (with "thy"), the character exclaims "Beat at this gate that let thy folly in /And thy dear judgement out!" Lear refers metaphorically to his own mind as a gate that has allowed folly, or poor judgement, to enter and good judgement to escape. This suggests that Lear regrets his attempts to test his three daughters' devotion to him, regarding those attempts as examples of the folly that has entered the gate of his mind.

Choice A is incorrect because this quotation doesn't express King Lear's sense of regret over his own actions; instead, it expresses his belief that the harm that others have done to him (or the extent to which they have "sinned against" him) outweighs whatever harm he himself has caused by "sinning." **Choice B is incorrect** because this quotation doesn't express King Lear's sense of regret over his own actions; instead, it expresses his thoughts about an approaching storm ("this tempest"), which he believes "will not give [him] leave to ponder," or time to consider, the harm that he will continue to experience ("things" that "would hurt [him] more"). **Choice D is incorrect** because this quotation expresses King Lear's vow to commit terrible actions (or "things" that "shall be / The terrors of the earth") in the future, not his regret over actions that he's already taken.

113 Correct answer **D** Hard Back to question

D Most of the folklore that the ethnographers collected consisted of *corridos*—ballads about history and social life—of a clearly recent origin.

Choice D is the best answer because it presents a finding that, if true, would support Paredes's argument that Mexican-American folklore is mostly the result of cultural interactions in Mexico and the United States rather than an adaptation of Spanish folklore. The text describes a disagreement among scholars about whether Mexican-American folklore mostly derived from the folklore of Spain or originated in Mexico and the United States as cultures there have interacted. The latter view is the argument that Paredes puts forward. If Mexican-American folklore collected in the twentieth century mostly consists of ballads about history and social life that originated recently, then that would support Paredes's argument, since it would suggest that the folklore mostly arose after Spanish rule ended in the early nineteenth century and that the folklore reflects cultural interactions in Mexico and the United States rather than traditions from Spain.

Choice A is incorrect because the inclusion of songs influenced by sixteenth-century Spanish poetry among Mexican-American folklore collected in the twentieth century would not support Paredes's view that the folklore was the result of cultural interactions in Mexico and the United States rather than an offshoot of Spanish folklore. If anything, the presence of such songs among the folklore collected in the twentieth century would weaken Paredes's argument, since it would reflect the influence of Spanish culture on the folklore. **Choice B is incorrect** because the mere presence of similarities in Mexican-American folklore across regions would not be sufficient to draw a conclusion about where the folklore originated, let alone to support Paredes's argument that the folklore reflects cultural interactions in Mexico and the United States. In fact, since Paredes argued that Mexican-American folklore is the product of various cultures interacting in Mexico and the United States, he would likely expect there to be regional variations in folklore as different cultures have interacted in different places. **Choice C is incorrect** because scholars' previous ignorance of the folklore would have no bearing on Paredes's argument that

Mexican-American folklore mostly reflects cultural interactions in Mexico and the United States. The folklore's origins are independent of scholars' knowledge of the folklore.

114 Correct answer **B** Hard Back to question

B Parasites known to feed on species of snakes and frogs in which the *BovB* gene occurs also carry *BovB*.

Choice B is the best answer. If there are parasites that feed on both snakes and frogs, they could carry *BovB* from snakes to frogs. HT could occur "indirectly" through those encounters, which frogs are more likely to survive than snake encounters.

Choice A is incorrect. The team's conclusion specifically argues that *BovB* is transmitted from snakes to frogs via HT, and this choice doesn't mention snakes. **Choice C is incorrect**. The team argues that *BovB* is transmitted from snakes to frogs via HT, and this answer choice discusses a scenario in which the gene is not transmitted. **Choice D is incorrect**. Whether or not frog species with *BovB* are advantaged isn't relevant to the team's conclusion about how the gene is transmitted.

115 Correct answer **B** Hard Back to question

B Over several generations, the sound made by the feathers of migratory male fork-tailed flycatchers grows progressively higher pitched relative to that made by the feathers of nonmigratory males.

Choice B is the best answer because it presents a finding that, if true, would most directly support Gómez-Bahamón and her team's hypothesis about fork-tailed flycatchers. The text indicates that although two subspecies of the birds live in the same region, the tail feathers of the migrating males make a higher-pitched sound than the tail feathers of the nonmigrating males do. Gómez-Bahamón and her team hypothesize that female fork-tailed flycatchers are attracted to the particular sound made by the tail feathers of males of their own subspecies, which will bring about additional "genetic and anatomical divergence" between the two subspecies. If it were found that the pitch generated by the tail feathers of migrating males is getting higher over successive generations, it would indicate that the shape of the migrating subspecies' tail feathers is diverging further from that of the nonmigrating subspecies. And if females continue to prefer the sounds of the males of their own subspecies, the females of the migrating subspecies will become acclimated to increasingly higher pitches over subsequent generations, causing further divergence between the subspecies. Thus, if it were found that migrating males' tail feathers were producing higher pitches over time, that would support the researchers' hypothesis.

Choice A is incorrect because the researchers' hypothesis is that female flycatchers prefer the sounds produced by the tail feathers of males of their own subspecies, which will lead to further divergence between the two subspecies. This finding is about the shape of wing feathers and how that affects long-distance flight, whereas the hypothesis is about the shape of tail feathers and how that relates to female mate preference. **Choice C is incorrect** because the researchers' hypothesis is that female flycatchers prefer the sounds produced by the tail feathers of males of their own subspecies, which will lead to further divergence between the two subspecies. This finding focuses on how the tail feather sounds communicate different messages, which doesn't address differences between the subspecies or female preferences. **Choice D is incorrect** because the researchers' hypothesis is that female flycatchers prefer the sounds produced by the tail feathers of males of their own subspecies, which will lead to further divergence between the two subspecies. The finding that breeding habits haven't changed for either subspecies does not, by itself, suggest anything about female preferences or divergence between the two subspecies.

116 Correct answer **B**

Hard

< Back to question

B Compared with shorter-headed dogs, longer-headed dogs showed a greater difference in brain activity when hearing either Spanish or Hungarian than when hearing the scrambled recording.

Choice B is the best answer because it presents a finding that, if true, would most directly support the research team's conclusion about anatomical features and speech detection in dogs. The text explains that a team of researchers monitored the brain activity of dogs while the dogs listened to three recordings: one of spoken Spanish, one of spoken Hungarian, and one of scrambled fragments that weren't recognizable as human speech. The text then states that the team concluded that differences in dogs' anatomical features may affect their ability to distinguish speech from nonspeech. The finding that longer-headed dogs exhibited a greater difference in brain activity when listening to the speech recordings (in Spanish or Hungarian) versus the nonspeech (scrambled) recording compared with shorter-headed dogs would establish an association between an anatomical feature (head length) and responses (as measured by brain activity) to speech versus nonspeech. This observed relationship between head length and brain activity patterns during exposure to speech and nonspeech would support the team's conclusion.

Choice A is incorrect because it describes a finding about dogs' responses (as indicated by brain activity) to hearing their respective familiar languages rather than dogs' ability to distinguish speech from nonspeech, which is what the team's conclusion specifically addresses. Moreover, this finding pertains to only one anatomical type (long-headed dogs), so it wouldn't support the conclusion that anatomical differences may affect dogs' ability to distinguish speech from nonspeech. **Choice C is incorrect** because it describes a finding involving a comparison between long-headed dogs listening to nonspeech and short-headed dogs listening to speech, which wouldn't provide enough information to support the researchers' conclusion that anatomical differences may affect dogs' ability to distinguish speech from nonspeech. To support that conclusion, the finding would need to show how dogs with different anatomical features (for example, long-headed and short-headed dogs) respond to recordings of speech as well as recordings of nonspeech. **Choice D is incorrect** because it describes a finding about dogs' ability to distinguish between a familiar language and an unfamiliar one, not between speech and nonspeech. While this finding does compare dogs with different anatomical features (longer-headed vs. shorter-headed ones), it focuses on language recognition (Spanish vs. Hungarian) rather than the ability to distinguish speech from nonspeech, which is what the team's conclusion specifically addresses.

117 Correct answer **B**

Hard

< Back to question

B "Alack, why am I sent for to a king, / Before I have shook off the regal thoughts / Wherewith I reign'd? I hardly yet have learn'd / To insinuate, flatter, bow, and bend my knee."

Choice B is the best answer because it most effectively presents a quotation that illustrates the claim that Richard intimates he is not entirely ready to show subservience to Bolingbroke. The quotation conveys that Richard has not yet shaken off "the regal thoughts / Wherewith [he] reign'd"—that is, he still feels like a king—and that he has "hardly yet have learn'd / To insinuate, flatter, bow, and bend [his] knee," directly listing acts of subservience he is not prepared to perform. By stating his unreadiness to behave subserviently while still inhabiting a regal mindset, Richard intimates exactly what the claim describes.

Choice A is incorrect because this quotation centers on Richard's anguish over the loss of his name and title; it expresses confusion about his identity rather than illustrating that he is not yet prepared to show subservience to Bolingbroke. **Choice C is incorrect** because in this quotation Richard claims that his griefs remain his own even after his "glories" and "state" have been deposed; it concerns ownership of his suffering and identity rather than any unreadiness to behave subserviently toward Bolingbroke. **Choice D is incorrect** because the quotation depicts Richard as willing to go along with the assertion of others that Bolingbroke is the rightful king, although God, who in this case serves as an objective arbiter, may have a different opinion on who the rightful king is ("if heaven do think him me"). So the quotation suggests that Richard is willing to behave subserviently even if he thinks he has been wronged; it does not suggest that he is at present unwilling to show subservience.

118 Correct answer **A**

Hard

< Back to question

A "Poetry, which brings together or separates, which fortifies or brings anguish, which shores up or demolishes souls, which gives or robs men of faith and vigor, is more necessary to a people than industry itself, for industry provides them with a means of subsistence, while literature gives them the desire and strength for life."

Choice A is the best answer because it most effectively illustrates the claim that Martí argues that a society's spiritual well-being depends on the character of its literary culture. In the quotation, Martí asserts that poetry is "more necessary to a people than industry itself" and that it has the power to provide people with "faith and vigor." He also adds that literature gives people "the desire and strength for life." Therefore, this quotation shows that Martí believes that literature is a societal necessity because it uplifts people and nourishes their spiritual well-being.

Choice B is incorrect. Although this quotation emphasizes the importance of literature, it focuses on how the nature of a society is reflected in that society's literature rather than on literature's value for people's spiritual well-being. **Choice C is incorrect**. Although this quotation involves an element of spirituality, it doesn't discuss literature. The quotation instead focuses on humanity's actions. **Choice D is incorrect** because this quotation mainly focuses on the importance of Walt Whitman rather than on the value of literature in general.

119 Correct answer **D**

Hard

< Back to question

D Shcherbakova and colleagues' analysis showed a slightly positive correlation between fusion and exotericity and between informativity and exotericity.

Choice D is the best answer because it presents a finding that, if true, would support Shcherbakova and colleagues' claim that the outcome of their study is inconsistent with the linguistic niche hypothesis (LNH). The text explains that the LNH holds that there is an inverse relationship between the prevalence of non-native speakers of a language (exotericity) and the grammatical complexity of that language—that is, that as the number of non-native speakers increases, grammatical complexity decreases, and vice versa. According to the text, Shcherbakova and colleagues focused on two positive indications of grammatical complexity—fusion and informativity—and analyzed their occurrence in over 1,300 languages. If the researchers found a slightly positive correlation between fusion and exotericity and between informativity and exotericity —meaning that to some extent, grammatical complexity increases as the number of non-native speakers of a language increases—their outcome would not be consistent with the assumption that exotericity and grammatical complexity are inversely related (the LNH).

Choice A is incorrect because it wouldn't be possible to say that a finding of a slightly negative correlation between grammatical complexity and both fusion and informativity is inconsistent or consistent with the LNH, since the finding would address only grammatical complexity (given that fusion and informativity are aspects of grammatical complexity) and wouldn't move beyond that factor to address its relationship to the prevalence of non-native speakers of a language (exotericity), which is the relationship the LNH focuses on. **Choice B is incorrect** because a finding of a slightly negative correlation between grammatical complexity and the prevalence of non-native speakers of a language (exotericity)—meaning that as the number of non-native speakers increases, grammatical complexity somewhat decreases, and vice versa—would be consistent, not inconsistent, with the LNH, since the text indicates that according to the LNH, there is an inverse relationship between grammatical complexity and exotericity; a negative correlation reflects an inverse relationship. **Choice C is incorrect** because it wouldn't be possible to say that a finding of a slightly positive correlation between grammatical complexity and fusion is inconsistent or consistent with the LNH, since the finding would address only grammatical complexity (given that fusion is a positive indication of grammatical complexity) and wouldn't move beyond that factor to address its relationship to the prevalence of non-native speakers of a language (exotericity), which is the relationship the LNH focuses on.

120 Correct answer **B**

Hard

Back to question

B "While we waited she took out a little, gold powder-box with a mirror in the lid, shook the poor little puff as though she loathed it, and dabbed her lovely nose."

Choice B is the best answer because it most effectively illustrates the claim in the text that in describing the teenaged girl, Mansfield contrasts the character's pleasant appearance with her unpleasant attitude. In the quotation, Mansfield describes the teenager as having a "lovely nose" (a compliment about her appearance) but also as treating her makeup puff "as though she loathed it" (a judgment suggesting her unpleasant attitude).

Choice A is incorrect because the teenager's reaction to the flowers doesn't make it clear that she has an unpleasant attitude, and nothing in the quotation indicates that any part of her appearance is pleasant. **Choice C is incorrect** because the quotation suggests that the teenager has an unpleasant attitude (being upset with the location and leaving the table before the narrator has paid for the meal) but doesn't give any indication that she has a pleasant appearance. **Choice D is incorrect** because the quotation suggests that the teenager may have an unpleasant attitude (lowering her eyes, wincing, and sitting in silence) but doesn't give any indication that any part of her appearance is pleasant.

121 Correct answer **D**

Hard

Back to question

D "Powers could find only the most superficial historical details about the meeting, so he read extensively about the four individuals and their thinking at the time in an effort to portray what might have happened between them."

Choice D is the best answer because it provides a quotation that effectively supports the student's claim about the film *One Night in Miami...*. The quotation states that in researching the play on which the film was based, Kemp Powers only found superficial details about what actually happened during the 1964 meeting in Miami between four leading Civil Rights leaders, meaning that there is very little information about the meeting in the historical record. In the absence of greater details, it wouldn't have been possible for the film to be a precise retelling of the historical events it depicts. The quotation explains that to compensate for this lack of information about the meeting, Powers did extensive research into the four figures and how they thought at the time in order to speculate in an informed way about what they might have said or what might have occurred between them. Therefore, the quotation effectively supports the claim that the film is best understood not as a precise retelling of a historical event but as a deeply informed imaginative rendering of that event.

Choice A is incorrect. Although the quotation discusses how on learning about the 1964 meeting in Miami, Powers was inspired to write a play and, later, to adapt it into a screenplay, it doesn't discuss Powers's approach to representing what had occurred in the meeting. Instead, it states that Powers didn't initially plan to write a story only "focusing on the meeting itself" but rather had considered writing a "much longer" and more expansive work about the meeting's four participants. **Choice B is incorrect** because the quotation doesn't discuss Powers's approach to representing historical events in his play and in the film; instead, the quotation focuses on the film's positive critical reception by mentioning that it received numerous awards and nominations. **Choice C is incorrect**. Although the quotation references historical events that are discussed directly in the play and film by explaining how the four historical figures featured in the story engage in political debates about contemporary issues, it doesn't specify to what extent Powers's representation of what occurred during the 1964 meeting in Miami is a factual retelling of what happened and how much is an imaginative rendering of what might have happened. Rather, the quotation focuses on Powers's description of the film's basic premise and how the characters engage with the historical context of its setting.

122 Correct answer **D**

Hard

‹ Back to question

D Honey samples from Kerinci bee colonies contained significantly higher concentrations of pollen than honey samples from Kampar bee colonies did.

Choice D is the best answer because it presents a finding that, if true, would most directly support the researchers' conclusion that a lack of crop variety may reduce total pollen collection by *A. dorsata*. The text explains that the researchers compared two sites: Kampar, which is surrounded by farms all growing the same crop, and Kerinci, which is a forest-agriculture site with multiple crops. If honey samples from Kerinci bee colonies contained significantly higher pollen concentrations than honey samples from Kampar bee colonies did, this finding would suggest that bees in the multiple-crop environment collected more pollen overall, thereby supporting the conclusion that the low crop variety at the Kampar site corresponds with reduced total pollen collection.

Choice A is incorrect because this finding addresses the diversity of pollen sources—single species at the Kampar site versus multiple species at the Kerinci site—not the total quantity of pollen collected. **Choice B is incorrect** because this finding compares two colonies within Kerinci rather than comparing the two sites and it concerns whether bees returned with pollen, which doesn't address the total quantity of pollen collected. **Choice C is incorrect** because the finding that fewer bees foraged at Kerinci—the higher-variety site—than at Kampar doesn't address the conclusion about total pollen collected. If anything, a lower number of foraging bees would suggest reduced activity and hence a lower amount of pollen collected in the variety-rich environment, which would undermine rather than support the researchers' conclusion.

123 Correct answer **D**

Hard

‹ Back to question

D The Yok Balum data and the Huagapo data show strongly correlated patterns of high rainfall during the Little Ice Age.

Choice D is the best answer because it presents a finding that, if true, would support Asmerom and colleagues' conclusion that the ITCZ may have expanded northward and southward rather than shifting south during the Little Ice Age. The text indicates that the ITCZ, a band of clouds in the tropics that is a significant rainfall source, can change position. Data from Peru's Huagapo Cave suggest that the ITCZ shifted south during the Little Ice Age. But according to the text, if the ITCZ moved into South America in that way, then Central America should have been drier than climate models suggest it was. In other words, rainfall should have been reduced in Central America because the ITCZ, a significant rainfall source, had shifted into South America, but climate models do not show such a reduction in Central America. The text goes on to say that Asmerom and colleagues tried to resolve this apparent conflict by collecting data from Yok Balum cave in Central America and comparing them with data from Huagapo, which led the researchers to conclude that the ITCZ may have expanded both northward and southward rather than simply shifting south. If it is true that Yok Balum in Central America and Huagapo in South America show strongly correlated patterns of high rainfall during the Little Ice Age, such a finding would support Asmerom and colleagues' conclusion by suggesting that the two areas were affected by the same rainfall source, and thus that the ITCZ may have expanded rather than shifted.

Choice A is incorrect because there is no information in the text about how, if at all, the ITCZ affects temperature in areas where it is located. Rather, the text states that temperature variations across Earth's hemispheres can shift the position of the ITCZ. Finding that neither Yok Balum nor Huagapo data show evidence of significant local variations in temperature during the Little Ice Age would have no clear bearing on Asmerom and colleagues' claim. **Choice B is incorrect** because finding that both Yok Balum and Huagapo experienced prolonged dry conditions during the Little Ice Age would not support Asmerom and colleagues' conclusion that the ITCZ, a major source of rainfall, may have expanded northward and southward rather than simply shifting south. Dry conditions in both locations would suggest that the ITCZ did not cover either location. Additionally, finding that temperatures were elevated in both locations would have no clear bearing on Asmerom and colleagues' conclusion, since there is no information in the text that indicates how, if at all, the ITCZ affects temperature. **Choice C is incorrect** because finding that Yok Balum experienced prolonged dry conditions at the same time that Huagapo experienced

high rainfall would weaken Asmerom and colleagues' conclusion, not strengthen it. Such a finding would suggest that the ITCZ shifted south and left Central America dry rather than expanding both northward and southward.

124 Correct answer **C** Hard ‹ Back to question

C "I know my own passion, it escapes me not; but, seeing that the causes are so dire, will never curb these frenzied plaints, while life is in me."

Choice C is the best answer. Electra states that she "knows her own passion," which shows that she's aware of the intensity of her grief. But she also claims that the "causes are so dire"—meaning the reasons for her grief are so awful—that she can't let it go, which shows that she believes her grief is justified.

Choice A is incorrect. This quotation doesn't show that Electra believes her grief is justified. It shows that Electra is aware of its intensity, but it doesn't suggest that she believes she has a legitimate reason for feeling that way. **Choice B is incorrect**. This quotation doesn't show that Electra believes her grief is justified. It shows that Electra is aware of its intensity, but it doesn't suggest that she believes she has a legitimate reason for feeling that way. **Choice D is incorrect**. This quotation doesn't show that Electra believes her grief is justified. It shows that Electra is aware of the intensity of her grief, but it doesn't suggest that she has a legitimate reason for feeling that way.

125 Correct answer **B** Hard ‹ Back to question

B In the first through third centuries CE, there was a significant migration of people from South Asia to Southeast Asia.

Choice B is the best answer because it presents a finding that, if true, would most directly weaken the conclusion that Wang and colleagues' findings indicate a trade link between Óc Eo and South Asia. The text explains that turmeric (native to South Asia) and footed grinding slabs of a style common in South Asia between roughly 500 BCE and 300 CE were found at Óc Eo, a Southeast Asian port that flourished between the first and sixth centuries CE. From this evidence, the text concludes that these items must have reached Óc Eo through trade. If, however, there was a significant migration of people from South Asia to Southeast Asia during the first through third centuries CE, that would offer an alternative explanation: South Asian people could have brought turmeric and grinding slabs with them when they migrated. Thus, the finding would weaken the conclusion that trade must account for the items' presence at Óc Eo.

Choice A is incorrect. A finding involving spices from a different region—the Maluku Islands, southeast of Óc Eo—wouldn't undermine the conclusion because it wouldn't reveal how the items from South Asia, a region to the west, reached Óc Eo. If anything, such a finding might be further evidence of broad trade networks involving Óc Eo. **Choice C is incorrect**. If it were true that other South Asian artifacts from the period when Óc Eo flourished have been found throughout Southeast Asia, that would suggest only that South Asian items other than turmeric and footed grinding slabs were present in the region at the time; it wouldn't reveal anything about how any of those items reached Southeast Asia from South Asia. If anything, the widespread presence of South Asian artifacts in Southeast Asia during this period could be seen as further support for a trade network connecting the regions. **Choice D is incorrect** because the finding that Óc Eo and some South Asian communities traded with people in another Southeast Asian location (what is now Malaysia) would suggest that this location could have been an intermediary for the movement of items from South Asia to Óc Eo. Such a finding would support, not weaken, the plausibility of an indirect trade link that's presented in the conclusion.

126 Correct answer **C**

Hard

< Back to question

C The roots of *B. tomentosa* and *B. macrantha* carve new entry points into rocks even when cracks in the surface are readily available.

Choice C is the best answer because it presents a finding that, if true, would support the researchers' hypothesis about the plants' dependence on dissolving rock. The text indicates that the roots of the two plant species grow directly into quartzite rock, where hairs on the roots secrete acids that dissolve the rock. The researchers hypothesize that the plants depend on this process because dissolving rock opens spaces for the roots to grow and releases phosphates that provide the plants with phosphorus, a vital nutrient. If the plants carry out this process of dissolving rock even when the rock already has spaces into which the roots could grow, that would support the researchers' hypothesis because it suggests that the plants are getting some advantage—such as access to phosphorus—from the action of dissolving rock. If the plants don't benefit from dissolving rock, they would be expected to grow in the cracks that already exist, as doing so would mean that the plants don't have to spend energy creating and secreting acids; if, however, the plants create new entry points by dissolving rock even when cracks already exist, that would support the hypothesis that they depend on dissolving rock for some benefit.

Choice A is incorrect because the existence of soil-inhabiting members of the Velloziaceae family with similar root structures to those of the two species discussed in the text wouldn't support the researchers' hypothesis that the species discussed in the text depend on dissolving rock. If other such members exist, that might suggest that the root structures can serve more functions than secreting acids to dissolve rock (since dissolving rock may not be necessary for plants living in soil), but that wouldn't suggest anything about whether the species discussed in the text benefit from dissolving rock. **Choice B is incorrect** because differences in the proportions of citric and malic acid secreted by the two species would be irrelevant to the hypothesis that the plants depend on dissolving rock. There's no information in the text to suggest that the proportion of each acid has any bearing on the process of dissolving rock or on any benefits the plants might receive from that process. **Choice D is incorrect** because if the two species thrive on rocks without phosphates, that would weaken the researchers' hypothesis that the plants depend on dissolving rock partly because dissolving rock gives them access to phosphates. If the plants can survive on rocks without getting a vital nutrient by dissolving those rocks, then either the nutrient isn't actually vital for those plants or they can get the nutrient in some way other than by dissolving rocks.

127 Correct answer **C**

Hard

< Back to question

C After a city eliminated left turns at busy intersections, a package-delivery company reports that its drivers have been able to reach more addresses in the city daily, on average, and therefore deliver more packages there annually.

Choice C is the best answer because it presents a finding that, if true, would most directly support Vikash V. Gayah's claim that eliminating the option to turn left at busy intersections would improve traffic flow and reduce overall travel times. The text begins by describing a problem encountered by drivers in countries with right-hand traffic—namely that drivers wanting to make a left turn must wait for either gaps in oncoming traffic or for designated left-turn signals before proceeding. The resulting backup of vehicles causes increased traffic congestion at busy intersections that slows overall travel times. According to Gayah, eliminating left turns from busy intersections in urban areas would ease the congestion caused by vehicles waiting to turn left. If vehicles spend less time waiting at intersections for left turns, faster overall travel times would result even if some drivers would have to drive slightly longer distances to make the desired left turn. Drivers for package-delivery companies, who presumably spend most of the day driving to destinations across the city in which they are based, would likely provide a good indication of overall traffic patterns across the city. A finding that after a city had eliminated left turns at busy intersections, package-delivery companies were able to complete more daily deliveries on average—which implies faster travel times between package destinations—would therefore support the claim that overall travel times would decrease if left turns were eliminated at busy intersections.

Choice A is incorrect because a finding that a majority of survey respondents agreed with the statement that implementing left-turn signals at all busy intersections made navigating streets in their communities easier wouldn't support the claim that eliminating the option to turn left altogether at some busy intersections—both with and without dedicated left-turn signals—

would improve the flow of traffic and overall traffic times. In fact, the text emphasizes that designated left-turn signals contribute to increased congestion because they require drivers to wait to turn left, which results in a backup of vehicles. Installing such signals at all busy intersections would thus potentially compound the problem of congestion, not improve it. Moreover, although making streets easier for drivers to navigate might indicate that left-turn signals are beneficial to drivers, it doesn't indicate that overall travel times would necessarily be reduced. **Choice B is incorrect** because a study concluding that drivers wait longer to make left turns at intersections without dedicated left-turn signals than at intersections with such signals wouldn't support the claim that eliminating the option to turn left altogether would reduce overall travel times. In fact, the finding would merely support the idea that

installing left-turn signals would likely reduce the time drivers spend waiting at busy intersections that didn't previously have left-turn signals, not that overall travel times would be reduced. **Choice D is incorrect** because the finding that after a restriction eliminating left turns at most intersections took effect, school buses took longer to complete their routes than they did before the restriction was implemented would contradict rather than support the researcher's claim that eliminating left turns would reduce overall travel times.

128 Correct answer **A** Hard < Back to question

A "The first collective I joined included many amazingly talented artists, and we enjoyed each other's company, but because we had a hard time sharing credit and responsibility for our work, the collective didn't last."

Choice A is the best answer because it presents the quotation that best illustrates the journalist's claim. By indicating that a collective didn't continue because it was hard to share credit and responsibilities within the group even though the company was enjoyable, the quotation shows that working collaboratively can be difficult for artists who are used to having complete control over their work.

Choice B is incorrect because the quotation indicates that members of a collective are able to collaborate together and have agreed on a fair way to manage their responsibilities; this doesn't demonstrate the challenge of sharing control among members of a collective. **Choice C is incorrect** because the quotation highlights the support and encouragement of individual expression an artist experiences due to working in a collective; these positive aspects don't demonstrate the challenge of sharing control among members of a collective. **Choice D is incorrect** because the quotation doesn't address any challenges of sharing control among members of a collective; it simply indicates that artists sometimes choose to work with collectives without having to be a member. Therefore, the quotation doesn't illustrate the journalist's claim.

129 Correct answer **C** Hard < Back to question

C An ancient Mexican art object is found at a site that dates to the Mississippian period and is close to where the Fairfield Gorget was found.

Choice C is the best answer because it presents a finding that, if true, would most strongly support the underlined explanation that the jaguar imagery on the Fairfield Gorget could have been inspired by art objects brought to Missouri from Mexico. The text describes the Fairfield Gorget as one of the oldest examples of these necklaces, noting that it's similar to other art from the Mississippian period except for its image of a jaguar. The text goes on to explain that this is unusual because the jaguar's range didn't include Missouri. The Fairfield Gorget's artist likely wouldn't have encountered a live jaguar, but since such jaguar images were common in ancient Mexican art (and the jaguar's range did include Mexico), perhaps some of that art inspired the gorget's artist. Therefore, evidence that an ancient Mexican art object had been found at a site that was close to the Fairfield Gorget in both location and time period would strongly support the explanation that long-distance trade from Mexico took place during the Mississippian period and that jaguar imagery could have reached Missouri by those means.

Choice A is incorrect. The underlined explanation indicates that Mexican artistic influence preceded the creation of the Fairfield Gorget. An artifact from Mexico that appeared in Missouri only after the gorget was created cannot support such a claim. **Choice B is incorrect**. The underlined explanation pertains to whether the jaguar image on the Fairfield Gorget was suggested to the Mississippian artist who made it by encounters with depictions of jaguars in Mexican art. The appearance of

jaguars in Missouri after the Mississippian period cannot provide evidence for such a claim. **Choice D is incorrect**. The underlined explanation pertains to influence that Mexican art might have had on Mississippian art, restricted to the period from 900 CE to 1600 CE. The actions of contemporary artists cannot provide evidence for centuries-old networks of artistic influence and exchange.

130 Correct answer **D** Hard ‹ Back to question

D "Reading [poetry], however, with a perfect contempt for it, one discovers that there is in / it after all, a place for the genuine."

Choice D is the best answer because it most effectively uses a quotation from "Poetry" to illustrate the claim that the poem highlights an ambivalence, or a conflicted attitude, toward poetry. In the quotation, the speaker suggests that one might read poetry with "contempt," or disdain, for it, but even with this negative attitude one will find "a place for the genuine." Because the quotation expresses conflicting attitudes toward poetry, it effectively illustrates the speaker's ambivalence in discussing the merits and displeasure of reading poetry.

Choice A is incorrect because it doesn't mention poetry or show ambivalence. **Choice B is incorrect**. Although the idea of "half poets" may seem to relate to ambivalence, the speaker mentions only negative attitudes toward certain works and the quotation therefore lacks a contrasting positive or neutral attitude that would be needed to indicate ambivalence. **Choice C is incorrect** because the speaker mentions only negative attitudes toward certain works and the quotation therefore lacks a contrasting positive or neutral attitude that would be needed to indicate ambivalence.

131 Correct answer **A** Hard ‹ Back to question

A The choy sum planted in the soil without coffee grounds were significantly taller at the end of the experiment than the choy sum planted in the mixture of soil and coffee grounds.

Choice A is the best answer because it describes an experimental outcome that would most directly weaken the student's hypothesis. According to the text, the student hypothesizes that *Brassica rapa parachinensis* (choy sum) will benefit more from acidic soil than it will from neutral soil. The text then explains that the student planted 16 choy sum seeds in potting soil with coffee grounds added to increase acidity and another 16 seeds in soil without coffee grounds as a control (a group identical to the experimental group except for the experimental modification being tested). If the hypothesis were correct, the plants in the more acidic soil-and-coffee-grounds mixture would grow faster than those in the control group. However, choice A proposes a scenario in which the plants in soil without coffee grounds were "significantly taller" than those in the more acidic mixture—an outcome that weakens the hypothesis that higher acidity is beneficial to the plants' growth.

Choice B is incorrect. If the choy sum planted in the neutral soil produced less plant matter and therefore weighed less than the choy sum planted in the acidic soil-and-coffee-grounds mixture, this finding would strengthen the student's hypothesis, not weaken it. **Choice C is incorrect**. If seeds planted in neutral soil (without coffee grounds) sprouted significantly later than seeds planted in the acidic soil-and-coffee-grounds mixture, this finding would strengthen, not weaken, the student's hypothesis that acidic soil benefits choy sum. **Choice D is incorrect**. If seeds planted in the neutral soil (without coffee grounds) sprouted significantly fewer plants than seeds planted in the acidic soil-and-coffee-grounds mixture did, this finding would strengthen, not weaken, the student's hypothesis that choy sum benefits from acidic soil.

132 Correct answer **D**

Hard

‹ Back to question

D Exposure to interstellar cosmic radiation can result in the formation of embedded pockets of hydrogen gas in water ice; moreover, when traveling through the solar system, ‘Oumuamua experienced warming sufficient to alter its icy structure and allow for outgassing.

Choice D is the best answer because it presents findings that, if true, would support the claim made by Bergner and colleagues that the nongravitational acceleration of ‘Oumuamua is due to the expulsion of entrapped hydrogen. The text first introduces the observation of a unique interstellar object named ‘Oumuamua and goes on to explain that the object exhibited nongravitational acceleration that could not be fully attributed to the expected cause: gravitational pull of nearby celestial bodies. The text concludes by stating that Bergner and colleagues claim that the nongravitational acceleration is caused by expulsion of hydrogen gas from ‘Oumuamua’s water-rich icy body. To support this claim requires evidence that hydrogen gas could be present within ‘Oumuamua at all, which this answer choice presents: cosmic radiation can result in embedded pockets of hydrogen gas in water ice. Additionally, evidence that this gas can be released from such a body is required to fully support the claim, which this answer choice goes on to provide: ‘Oumuamua experienced sufficient warming as it traveled through the solar system to alter its icy structure and release the hydrogen gas. Thus, this answer choice provides the best evidence to support Bergner and colleagues’ claim.

Choice A is incorrect because this answer choice concerns faults with previous models of outgassing from ‘Oumuamua of carbon monoxide and nitrogen, which would not support a claim regarding hydrogen outgassing. Furthermore, inconsistencies in other models would not provide evidence in support of a different model or explanation. **Choice B is incorrect**. The evidence presented in this answer choice would weaken the claim proposed by Bergner and colleagues that the nongravitational acceleration of ‘Oumuamua is caused by the expulsion of hydrogen gas because this answer choice suggests that there is evidence that refutes this claim: ‘Oumuamua’s trajectory is inconsistent with a nongravitational acceleration caused by the release of hydrogen gas. Furthermore, the remaining portion of this answer choice is unrelated to the claim. **Choice C is incorrect** because the claim being made by Bergner and colleagues concerns the expulsion of entrapped hydrogen gas, but this answer choice is concerned solely with the differences in magnitude of gravitational and nongravitational acceleration, which would not support Bergner’s claim. Furthermore, this answer choice discusses interstellar objects similar to ‘Oumuamua, but the text states that ‘Oumuamua is the first observed object of its kind in our solar system, so evidence from other, similar bodies would not be available.

133 Correct answer **A**

Hard

‹ Back to question

A “When constructing his argument regarding the characteristics of a well-functioning government, Aristotle asserts that ‘Transgression creeps in unperceived and at last ruins the state,’ illustrating this idea with a comparison to frequent small expenditures slowly and almost imperceptibly chipping away at a fortune until it is ultimately depleted.”

Choice A is the best answer because it presents the quotation that best supports the student’s claim that in *The Politics*, Aristotle gives advice on preserving constitutions—preventing governments from falling and maintaining order—and specifically asserts that in a healthy state, laws must be followed as strictly as possible and infractions should not be overlooked even if they are minor. The philosopher states that when Aristotle builds his argument about the characteristics of a well-functioning government, Aristotle asserts that transgression, or violation of law, will ruin the state if it "creeps in unperceived," or goes unnoticed. The philosopher then adds that Aristotle illustrates this point by comparing the situation to one in which small but frequent expenses diminish a fortune almost unnoticeably until, eventually, the fortune is entirely gone. In other words, the philosopher indicates that Aristotle makes the point that total obedience to law preserves a healthy state while even small violations, if ignored, will undermine the health of the state.

Choice B is incorrect because the philosopher addresses Aristotle’s observation about corruption within the government (in particular, preventing the possibility that members of the government can take bribes), and although corruption can involve infractions, the observation is about a subset of people within the state and isn’t directly connected to the importance of upholding total obedience to the law throughout the state. **Choice C is incorrect** because the philosopher discusses Aristotle’s

point about those who would intentionally destroy a constitution altogether and the need for rulers to remind the populace that it would be dangerous for a constitution to collapse, but neither idea is directly connected to the importance of upholding total obedience to the law. **Choice D is incorrect** because the philosopher explains that Aristotle makes the point that oligarchic leaders may retain power by having members of disenfranchised classes participate in government alongside governing classes, and this point doesn't address the importance of ensuring obedience to the law and addressing even minor violations.

134 Correct answer **A** Hard ‹ Back to question

A "The company presented *actos*, short comedy sketches, that often relied on exaggerated physical humor to groups of agricultural workers, whose reactions—enthusiastic cheers of appreciation and, occasionally, loud boos of disapproval—promoted improvisation."

Choice A is the best answer because it most effectively illustrates the theater historian's claim that El Teatro Campesino's early performances were influenced stylistically by *carpa* theater, vaudeville-style shows with "audience-mediated slapstick comedy." The quotation indicates that El Teatro presented comedic sketches that often featured exaggerated physical humor and that the performers improvised based on the cheers and boos from the audience; thus, it illustrates that El Teatro's performances were similar to *carpa* theater in the physical, slapstick nature of their comedy and in the way the performances were mediated, or shaped, by the audience's reactions.

Choice B is incorrect. Although the quotation refers to El Teatro's use of comedy and mentions audiences, it focuses on the company's use of comedic aspects of reality as a tool to critique society while providing audiences with entertainment and inspiration; it doesn't give any indication that El Teatro's performances featured slapstick, or very physical, comedy or that they were directly shaped by the audience. **Choice C is incorrect**. Although the quotation refers to El Teatro's aesthetic, or style, and mentions comedy, it indicates only that the company relied on satire and humor and had a style that reflected their limited financial means and sociopolitical message; it doesn't give any indication that El Teatro's performances featured slapstick, or very physical, comedy or that they were directly shaped by the audience. **Choice D is incorrect**. Although the quotation refers to El Teatro's performance of comedy, it mentions only that the company performed brief humorous vignettes, or short humorous scenes, in farm fields; it doesn't give any indication that El Teatro's performances featured slapstick, or very physical, comedy or that they were directly shaped by the audience.

135 Correct answer **D** Hard ‹ Back to question

D "While *A History of Mexico* features modernist motifs, it relies primarily on angular human forms in profile—a staple of Maya sculpture—and thus invites classification as Indigenous art."

Choice D is the best answer. This critic challenges the claim by arguing that *A History of Mexico* is not so idiosyncratic (unique) as to resist classification because its use of Maya-style human profiles actually "invites classification as Indigenous art." Therefore, according to this critic, the work can be viewed, at least partially, through a lens of national or cultural identity.

Choice A is incorrect. While it describes the Maya influence on a particular aspect of *A History of Mexico*, this quotation doesn't push back on Medellín's "idiosyncratic" (unique) style, nor does it try to categorize the entire work into a single cultural tradition. **Choice B is incorrect**. This choice doesn't directly challenge the underlined claim, but rather supports it. It suggests that the work effectively blends a variety of artistic products to create a single work that can't be defined by any one tradition. Instead, the work recalls many centuries of history and culture all at once. **Choice C is incorrect**. This choice supports rather than challenges the underlined claim. The quotation argues that other critics focus too much on Indigenous influences on the artwork instead of viewing all of the influences equally—that they should instead be viewing the work as an idiosyncratic whole instead of through one or two narrow cultural lenses.

136 Correct answer **C**

Hard

Back to question

C "Stevens's ambassadorial sandpaintings are best understood not as self-contained objects but as reminders of the public creations of the sandpaintings, during which Stevens conducted appropriate *ikaah* rituals and encouraged viewers to closely track his movements and subtle shifts in the sand throughout the process."

Choice C is the best answer because it most directly supports the text's claim that Stevens strove to convey the ephemeral and dynamic characteristics of *ikaah* as a cultural practice. The text challenges the characterization of Stevens's preserved sandpaintings as mere "static objects" that cannot "authentically represent" a practice defined in part by the absence of an end product; it claims instead that this "overly object-focused" interpretation overlooks how Stevens preserved the essential characteristics of traditional *ikaah* practice. This quotation supports the claim by explaining that Stevens's sandpaintings should be understood "not as self-contained objects but as reminders of the public creations of the sandpaintings," during which Stevens "conducted appropriate *ikaah* rituals and encouraged viewers to closely track his movements and subtle shifts in the sand throughout the process." The fact that Stevens created the sandpaintings in a public setting and invited viewers to attentively engage with this process supports the claim that he sought to portray *ikaah* as a dynamic practice rather than as a static product. Further, the inherently impermanent nature of such a performance evokes the ephemerality that characterizes *ikaah*.

Choice A is incorrect because it contradicts rather than supports the text's claim that Stevens strove to convey the ephemeral and dynamic characteristics of *ikaah* as a cultural practice. This quotation argues that Stevens's preserved sandpaintings "should not be confused with authentic *ikaah*" and emphasizes that authentic *ikaah* "cannot be extricated from a practice that is intentionally and necessarily transitory." This view aligns with the "overly object-focused" perspective that the text argues against, rather than supporting the claim that Stevens successfully conveyed *ikaah*'s ephemeral and dynamic characteristics. **Choice B is incorrect** because it focuses on reconciling the tension between ephemeral and permanent forms rather than supporting the claim that Stevens actively conveyed *ikaah*'s ephemeral and dynamic characteristics. While this quotation acknowledges an apparent contradiction, it suggests that Stevens was accommodating US preferences for permanent artworks; it doesn't demonstrate how he communicated the ephemeral and dynamic nature of traditional *ikaah* practice. **Choice D is incorrect**. Although the quotation mentions Stevens's "temporary and performative role" as a gift-giver, it doesn't address how Stevens conveyed the ephemeral and dynamic characteristics of *ikaah* itself during his ambassadorial activities. The quotation focuses on Stevens's role in transmitting knowledge and representing cultural dynamism but doesn't specifically support the claim about his efforts to communicate the essential characteristics of *ikaah* practice. Further, the quotation incorrectly implies that Stevens shared his knowledge of preservative additives; the text doesn't establish that he revealed how the sandpaintings were preserved.

137 Correct answer **B**

Hard

Back to question

B "Ever since I was a child these songs have stirred me strangely. They came out of the South unknown to me, one by one, and yet at once I knew them as of me and of mine."

Choice B is the best answer because the quotation from *The Souls of Black Folk* illustrates the claim that Du Bois felt a sense of cultural recognition when he heard Black folk songs. In the quotation, Du Bois explains that for his entire life, Black folk songs "stirred [him] strangely." Even though they originated in the South, a region he wasn't familiar with, he knew the songs "as of me and of mine." That is, he identified strongly with them and associated them with his community. Therefore, Du Bois felt an intuitive sense of cultural recognition when he heard Black folk songs.

Choice A is incorrect. Although the quotation considers the cultural and spiritual value of Black folk music, it doesn't establish that this music inspired in Du Bois a sense of cultural recognition. **Choice C is incorrect** because this quotation addresses the cultural survival of Black folk songs despite attempts to caricature, or parody, them, not Du Bois's sense of cultural connection to them. **Choice D is incorrect** because the quotation indicates that the Black folk songs and music are old, "the siftings of centuries," instead of addressing how Du Bois felt when he heard the songs.

138 Correct answer **C**

Hard

< Back to question

C Evidence emerges that the amount of iron in some rocky planets is considerably higher than the amount in their host star.

Choice C is the best answer because it presents a finding that, if true, would weaken the astronomers' claim about the makeup of host stars and their planets. The text explains that because stars and planets begin forming from the same gas and dust, astronomers believe planets should be composed of the same materials as their host stars, but in equal or smaller quantities. The finding that the amount of iron in some rocky planets is much higher than the amount in their host star would weaken the astronomers' claim because it would show that some planets contain the same material as their host star, but in higher quantities.

Choice A is incorrect because a finding only about the makeup of stars, whether they've cooled or not, would provide no information about the makeup of planets. Thus, it wouldn't have any bearing on the claim that planets and their host stars are composed of the same materials in differing quantities. **Choice B is incorrect** because a finding about two host stars having similar proportions of certain materials wouldn't provide any information about the makeup of planets. Thus, it wouldn't be relevant to the claim that planets and their host stars are composed of the same materials in differing quantities. **Choice D is incorrect** because the text indicates that the astronomers' claim is based on a fact—that stars and planets begin forming from the same gas and dust in space—which would remain true regardless of the effectiveness of a method for analysis of compositions. The text does cite analysis of rocky planets in our solar system and the Sun, but only as a single piece of evidence that is consistent with the claim and not as the source of the claim; the finding that the method used for that analysis is less effective in other scenarios wouldn't weaken a claim that's based on knowledge of how stars and planets initially form.

139 Correct answer **A**

Hard

< Back to question

A At Tiffany & Co., participants judged jewelry spaced far apart to be substantially more valuable than jewelry spaced close together, but at Forever 21, participants judged jewelry spaced far apart to be only slightly more valuable than jewelry spaced close together.

Choice A is the best answer because it presents a finding that, if true, would support the text's conclusion about the results of the experiment with Tiffany & Co. and Forever 21. According to the text, Sevilla and Townsend found in several experiments that when products in a generic retail setting are displayed with a low product-to-space ratio (that is, with lots of space between them), consumers view those products as significantly more valuable than when the same products are displayed with a higher product-to-space ratio (less space between them). The text then states that the results of an experiment specifically using the contexts of an inexpensive store (Forever 21) and an upscale one (Tiffany & Co.) suggest that an inexpensive store context may moderate, or lessen, that effect. If Sevilla and Townsend found that participants in the experiment with Tiffany & Co. and Forever 21 judged the same jewelry items as substantially more valuable when there was lots of space between them than when there was little space between them in the upscale store (Tiffany & Co.) but judged the same jewelry items as only slightly more valuable when there was lots of space between them than when there was little space between them in the inexpensive store (Forever 21), that finding would demonstrate that increased space between products was associated with less of an increase in those products' perceived value at the inexpensive store than at the upscale store. Thus, the finding would support the text's conclusion that a store context associated with inexpensive goods moderates the effect Sevilla and Townsend observed in their earlier experiments.

Choice B is incorrect because if Sevilla and Townsend found that at both upscale and inexpensive stores, participants judged jewelry spaced far apart to be less valuable than jewelry spaced close together, that would show the opposite of the effect the researchers observed in their earlier experiments, not show that an inexpensive store context merely moderates, or lessens, that effect. **Choice C is incorrect** because this finding wouldn't show that the effect Sevilla and Townsend observed in their initial experiments (that products spaced far apart were perceived as more valuable than the same products spaced close together) is present but lessened in inexpensive retail contexts, as the text suggests. The conclusion in the text rests on determining the difference in jewelry items' perceived value between two spacing conditions within each store and then

comparing the difference for the inexpensive store (Forever 21) to the difference for the upscale store (Tiffany & Co.); a finding that

compares perceptions of the jewelry items' value between the two stores but for only one type of spacing condition at a time wouldn't provide information about the degree of difference between spacing conditions within each type of store context. **Choice D is incorrect** because this finding wouldn't show that the effect Sevilla and Townsend observed in their initial experiments (that products spaced far apart were perceived as more valuable than the same products spaced close together) is present but lessened in inexpensive retail contexts, as the text suggests. The conclusion in the text rests on determining the difference in jewelry items' perceived value between two spacing conditions within each store and then comparing the difference for the inexpensive store (Forever 21) to the difference for the upscale store (Tiffany & Co.); a finding that compares perceptions of the relative value of jewelry items between the two stores and for only one type of spacing condition at a time wouldn't provide information about the degree of difference between spacing conditions within each type of store context.

140 Correct answer **A** Hard ‹ Back to question

A The percentage of authors published by Random House who were Black rose in the early 1970s and stabilized throughout the decade.

Choice A is the best answer because it presents a finding that, if true, would support the scholar's claim about Toni Morrison's likely goal of strengthening the presence of Black writers on Random House's list of published authors. The text explains that Morrison was the first Black woman to be an editor for Random House and that she was an editor there from 1967 to 1983. If it were true that Random House published a higher percentage of works by Black authors throughout the 1970s—during most of Morrison's time working there—than it had previously published, that would suggest that Morrison may have made a deliberate effort to strengthen the presence of Black authors on the list of Random House's published authors, thus supporting the scholar's claim.

Choice B is incorrect because the scholar's claim is about Morrison's work as an editor at a publishing company and her likely effort to strengthen the presence of Black writers on that company's list of published authors. It might be true that Black authors interviewed in the 1980s and 1990s often cited Morrison's novels as an influence on their work, but that finding would simply suggest something about how those authors approached their work; it wouldn't show that Morrison intended to increase the number of Black writers among the published authors specifically at Random House. **Choice C is incorrect** because the scholar's claim is about Morrison's work as an editor at a publishing company, not about her work as a novelist. Therefore, a finding that Morrison's novels published after 1983 sold more copies and were more widely acclaimed than her earlier novels would have no bearing on the claim that as an editor Morrison made an effort to ensure that more Black writers were present on Random House's list of published authors. **Choice D is incorrect**. Although the text discusses Morrison's work as an editor at Random House, the scholar's claim focuses on Morrison's likely effort in that role to increase the number of Black writers present on Random House's list of published authors, not on the influence she may have had on the content of the works she edited. Without knowing whether Morrison's stylistic influence led to more publications or if Morrison applied her influence specifically to works by Black writers, the finding that works edited by Morrison could be identified by stylistic characteristics would have no bearing on the claim that Morrison intended to strengthen the presence of Black writers among the published authors at Random House.

141 Correct answer **A** Hard ‹ Back to question

A The average percent change in heart rate was lower among *C. helleri* with a companion than among solitary *C. helleri* and *C. helleri* with a rope.

Choice A is the best answer because it presents a finding that, if true, would most directly support the idea that social buffering—the mitigation of stress by the presence of other animals of the same species—occurs among *C. helleri*. According to the text, the researchers quantified the amount of stress in *C. helleri* as the percent change between baseline and peak heart rate, with higher values indicating greater stress. The text also describes the researchers' three treatments: snakes alone, snakes with a rope, and snakes with a companion *C. helleri*. If the average percent change in heart rate was lower among

snakes with a companion than among either solitary snakes or snakes with a rope, that would indicate two things: snakes accompanied by a companion experienced less stress than they did when alone, and the reduction wasn't simply the result of any object being present, since the rope didn't produce the same effect. Together, these results would directly support the conclusion that the companion's presence mitigated stress, as the social buffering hypothesis predicts.

Choice B is incorrect because the finding compares peak heart rates among the three treatments rather than the percent change in heart rates among those treatments. The finding also indicates that snakes with a companion and snakes with a rope showed no differences in peak heart rates. If a rope produced the same effect as a companion did, that would suggest that the effect, whatever its extent, isn't caused specifically by the presence of another individual of the same species and so wouldn't support the social buffering hypothesis. **Choice C is incorrect** because the finding addresses absolute baseline and peak heart rates rather than the percent change between them, which is the measure of stress response the researchers used. Lower absolute heart rates in companion-present snakes could reflect a generally calmer state but wouldn't show that the stress response to the disturbance was reduced and so wouldn't directly demonstrate social buffering as defined in the study. **Choice D is incorrect** because the finding states that the percent change in heart rate was smaller among solitary snakes than among snakes with a companion, which would indicate a smaller stress response when alone. This pattern would directly contradict the social buffering hypothesis rather than support it. Furthermore, a comparison of baseline heart rates would be immaterial for determining whether social buffering occurs among *C. helleri* because the text indicates that a change in heart rate, not average baseline heart rate, indicates a stress response.

142 Correct answer **B** Hard ‹ Back to question

B Fermented beans contained significantly less soluble fiber and raffinose than nonfermented beans, and when cooked, the fermented beans also displayed a significant reduction in trypsin inhibitors and tannins.

Choice B is the best answer because it presents a finding that would best support Granito and Álvarez's claim that fermenting black beans makes them easier to digest and more nutritious. The text indicates that high levels of soluble fiber and raffinose in black beans make the beans hard to digest and that tannins and trypsin inhibitors make it harder for the body to extract nutrients from the beans. If it were found that fermenting the beans significantly reduces their levels of soluble fiber, raffinose, trypsin inhibitors, and tannins when cooked, this would directly support the claim that fermentation improves the digestibility of the beans and makes them more nutritious.

Choice A is incorrect because the text indicates that trypsin inhibitors and tannins interfere with the body's ability to extract nutrients from black beans; if fermentation and cooking were found to increase these antinutrients, fermented beans would likely be less nutritious than unfermented ones, not more nutritious (as Granito and Álvarez claim). **Choice C is incorrect** because the text doesn't address the idea that greater nitrogen absorption in the gut has an effect on a food's digestibility or level of nutrition, so the discovery of the presence of microorganisms that may increase nitrogen absorption wouldn't provide relevant support for the claim that fermentation makes black beans easier to digest and more nutritious. **Choice D is incorrect** because Granito and Álvarez's claim focuses on the effect of fermenting black beans, but the finding that nonfermented black beans also have fewer trypsin inhibitors and tannins when cooked at high pressure would suggest that the role of the cooking method could be significant when it comes to nutrition; further, the finding wouldn't address the beans' digestibility.

143 Correct answer **D** Hard ‹ Back to question

D The cost to rural entrepreneurs to bring their goods to towns with marketplaces is high but largely independent of the number of goods they bring.

Choice D is the best answer because it presents a finding that, if true, would most directly support Barboza and Trejos's claim that rural female entrepreneurs who have received small loans from ALSOL are strategic in selling their goods less frequently than they could, even if it means missing payments. The text explains that borrowers in the ALSOL program use proceeds from their businesses to repay loans in equal weekly payments, with almost no penalty for missed payments. According to the text, Barboza and Trejos found that rural borrowers miss weekly payments in part because they don't sell their goods as often as they could, a move the researchers claim allows the entrepreneurs to help increase profits for the goods they sell. Finding that

the cost of bringing goods to towns with marketplaces is high for rural entrepreneurs but is largely independent of how many goods are brought would support the researchers' claim: traveling to marketplaces less frequently would mean that a rural entrepreneur spends less on travel overall, and taking a large load of goods to a marketplace for essentially the same cost as taking a small load would allow the entrepreneur to more substantially offset the cost of travel with greater overall sales at the marketplace, resulting in more profit per good sold—even if those profits are earned less frequently and don't support weekly loan payments.

Choice A is incorrect because the finding that many marketplaces require entrepreneurs to pay the operators of the marketplace a fixed percentage of proceeds to be able to sell goods there wouldn't explain why rural entrepreneurs strategically choose to sell their goods less frequently than they could in order to increase their profits per unit sold. With a fixed percentage of proceeds due to operators, the amount entrepreneurs have to pay operators would also be fixed regardless of frequency of selling. **Choice B is incorrect** because the finding that rural entrepreneurs can usually sell their goods for higher prices in cities than in their local areas but also face higher competition to sell goods in cities wouldn't explain why rural entrepreneurs strategically choose to sell their goods less frequently than they could in order to increase their profits per unit sold. This is because both the higher prices and higher competition in cities would be stable factors—meaning there would be no clear reason for the rural entrepreneurs not to take every available chance to sell their goods in cities and to instead sell their goods in cities only sometimes. **Choice C is incorrect** because the finding that rural entrepreneurs have lower costs and thus tend to require smaller initial loans than urban entrepreneurs do has no bearing on rural borrowers strategically choosing to sell their goods less frequently than they could specifically to

increase their profits per unit sold. The cost of producing goods doesn't depend on the frequency with which an entrepreneur sells those goods, so lower frequency alone wouldn't affect profits, and the initial loan amount is set and has nothing to do with how much profit is earned from each sale.

144 Correct answer **C** Hard ‹ Back to question

C A survey of archaeologists showed that categorizing pottery fragments limits the amount of time they can dedicate to other important tasks that only human experts can do.

Choice C is the best answer because it presents a finding that, if true, would support the researchers' claim that archaeologists are unlikely to be replaced by certain computer models. The text explains that although archaeologists hold that categorizing pottery fragments relies on both objective criteria and instinct developed through direct experience, researchers have found that a computer model can categorize the fragments with the same degree of accuracy as the humans can—a finding that has caused some archaeologists to worry that their own work won't be needed any longer. If survey results indicate that categorizing pottery fragments limits the amount of time archaeologists can dedicate to other important tasks that only human experts can do, that would mean that computer models aren't able to do all of the important things archaeologists do, thus supporting the researchers' claim that computer models are unlikely to replace human archaeologists.

Choice A is incorrect because if it were true that the computer model could categorize the pottery fragments much more quickly than the archaeologists could, that would weaken the researchers' claim that archaeologists are unlikely to be replaced by certain computer models, since it would demonstrate that the models could conduct the archaeologists' work not only with equal accuracy but also at a faster pace. **Choice B is incorrect** because the inability of both the computer model and the archaeologists to accurately categorize all of the pottery fragments presented wouldn't support the researchers' claim that archaeologists are unlikely to be replaced by certain computer models. The text indicates that some archaeologists are worried because the computer model's accuracy is equal to their own, and that could be the case whether both were perfectly accurate or were unable to achieve complete accuracy. **Choice D is incorrect** because survey results showing that few archaeologists received special training in properly categorizing pottery fragments wouldn't support the researchers' claim that archaeologists are unlikely to be replaced by certain computer models. The amount of special training in categorizing pottery fragments that archaeologists have received has no direct bearing on whether computer models' success at categorizing fragments will lead to the models replacing the archaeologists.

07 Graphs & Tables

Quantitative evidence

From here on, the reading questions stop being about spotting a pattern and start being about whether you understood what you read. The method still narrows the field, but it cannot replace understanding the text. Read more slowly here.

133 questions | 47 Easy | 36 Medium | 50 Hard

FORM 1 · COMPLETE THE STATEMENT

The common one. The text breaks off at a blank and you finish it with data.

FORM 2 · SUPPORT

Someone has drawn a conclusion and you pick the data that backs it. The data has to point the same way the conclusion points.

FORM 3 · WEAKEN

The rare one. Someone has made a claim and you find the number that breaks it.

WHAT THE FIGURE IS FOR

The text and the figure are two halves of one question. The figure holds the numbers and the text tells you which of them matter. Neither is enough on its own, and almost every wrong answer is either a misread number or a true number doing the wrong job.

THE STEPS

1. Read the text. Twice at most.
2. Look through the table or the graph.
3. Cross out any choice that does not match the data.
4. Do the job the sentence asks for, using the data.

WHAT TO TAKE FROM THIS

- Most wrong choices are simply wrong about the figure. Killing those is the fastest elimination anywhere on the test, so do it before you think about anything else.
- A choice can be perfectly true about the figure and still be wrong, because it does not do the job the sentence asks for.
- Read the row and column headings, and the units, before you read a single number. Half the traps live in the units.
- The text names the rows or the series it cares about. Everything else in the figure is there to waste your time.

EASY 47 questions

Sample of Food Items from Gemini Mission Menus

Food item	Day	Meal
Sugar cookie cubes	1	B
Chicken and vegetables	2	B
Shrimp cocktail	4	C
Hot cocoa	3	A

To make sure they got the nutrition they needed while in space, the astronauts of NASA's Gemini missions were given menus for three meals a day (meals A, B, and C) on a four-day rotating schedule. Looking at the sample of food items from these menus, a student notes that on day 1, the menu included _____

ID 75e07a4d

1 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) shrimp cocktail for meal B.

(B) hot cocoa for meal C.

(C) sugar cookie cubes for meal B.

(D) chicken and vegetables for meal A.

Pyramids in Egypt and the Americas

Pyramid	Country	Height (meters)	Age (years before present)
The Great Pyramid	Mexico	33	2,050 to 2,400
The Pyramid of Djoser	Egypt	60	4,600 to 4,700
The Pyramid of Sahure	Egypt	47	4,400 to 4,500
El Castillo	Belize	40	1,100 to 1,400

A student is writing an essay about four pyramids for a history class and wants to note how long ago each pyramid was built and how tall each pyramid is. Consulting the table, the student finds that el Castillo was built 1,100 to 1,400 years ago and is _____

ID 0147b080

2 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the text?

(A) 33 meters tall.

(B) 47 meters tall.

(C) 40 meters tall.

(D) 60 meters tall.

Nucleobase Concentrations from Murchison Meteorite and Soil Samples in Parts per Billion

Nucleobase	Murchison meteorite sample 1	Murchison meteorite sample 2	Murchison soil sample
Isoguanine	0.5	0.04	not detected
Purine	0.2	0.02	not detected
Xanthine	39	3	1
Adenine	15	1	40
Hypoxanthine	24	1	2

Employing high-performance liquid chromatography—a process that uses pressurized water to separate material into its component molecules—astrochemist Yashiro Oba and colleagues analyzed two samples of the Murchison meteorite that landed in Australia as well as soil from the landing zone of the meteorite to determine the concentrations of various organic molecules. By comparing the relative concentrations of types of molecules known as nucleobases in the Murchison meteorite with those in the soil, the team concluded that there is evidence that the nucleobases in the Murchison meteorite formed in space and are not the result of contamination on Earth.

ID 7a1877be

3 Mark for Review Easy Explanation ›

Which choice best describes data from the table that support the team's conclusion?

(A) Isoguanine and purine were detected in both meteorite samples but not in the soil sample.

(B) Adenine and xanthine were detected in both of the meteorite samples and in the soil sample.

(C) Hypoxanthine and purine were detected in both the Murchison meteorite sample 2 and in the soil sample.

(D) Isoguanine and hypoxanthine were detected in the Murchison meteorite sample 1 but not in sample 2.

Four Studies of Food Choices in Various Contexts

Location	Food choices related to...	Study population	Number of participants
Canada	sports	adults	17
United States	school	children	44
India	community	adolescents and adults	94
Ghana and Kenya	food shops	adolescents	142

The table shows information from four studies about food choices people make in different contexts. According to the table, the study with the smallest number of participants involved only adults, and the study with the greatest number of participants involved _____

ID d6e97054

4 Mark for Review Easy Explanation ›

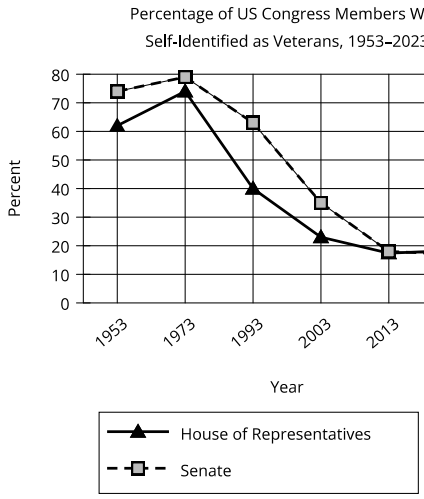
Which choice most effectively uses data from the table to complete the text?

(A) only children.

(B) both adolescents and adults.

(C) only adolescents.

(D) only adults.



Since the nation's earliest days, both houses of the United States Congress have counted many military veterans among their elected officials, including Hiram L. Fong (who served in the US Army Air Force) and Ralph Harold Metcalfe Sr. (who served in the US Army). A research institute gathered historical data about congressional members who have reported past military experience and determined that _____

ID 3dc911d6

5 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the graph to complete the sentence?

(A) from 2003 to 2023, the House of Representatives had a higher percentage of those members than the Senate did.

(B) from 1953 to 2003, those members constituted a majority in both houses of Congress.

(C) the percentage of those members decreased substantially in both houses of Congress from 1973 to 2013.

(D) the percentage of those members remained fairly consistent, regardless of house, from 1993 to 2023.

Video Game Availability by Initial Release Years

Initial release years	Percentage of games still available
1975–1979	0.89
1980–1984	3.65
1985–1989	15.38
1990–1994	19.33
1995–1999	14.22

In a recent study, researchers found that relatively few video games released over the decades remain available today. For example, only 14.22 percent of games are still available that were initially released in _____

ID 6177abc5

6 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) 2000–2004.

(B) 1995–1999.

(C) 1970–1974.

(D) 1985–1989.

Percentage of Bus Shelters with Shade in a County by Areas' Highest Average Summer Surface Temperature

Highest average surface temperature (Fahrenheit)	Percentage of bus stops with shaded shelter
90.2°	15%
97.7°	22%
102.7°	24%
111.2°	28%
125.6°	29%

A student is researching a bus system in a large county where surface temperatures vary by area and are hot in the summer. The student claims that all areas of the county should have more bus stops with shaded shelter, noting that the highest percentage of bus stops with shaded shelter for any area is only _____

ID bc1b8a42

7 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the student's claim?

(A) 50%.

(B) 15%.

(C) 90%.

(D) 29%.

Results of Footprint Analysis for Two Sets of Theropod Tracks

Tracks	Estimated footprint length (centimeters)	Average stride length (meters)	Estimated mean speed (meters per second)
La Torre 6A	32.8	5.23	6.5–10.3
La Torre 6B	28.9	5.57	8.8–12.4

The table shows data from paleontologist Angélica Torices and colleagues' 2021 study of two sets of dinosaur tracks preserved in a fossilized lake bed in Spain. The tracks, referred to as La Torre 6A and La Torre 6B, were left by two individual theropods (dinosaurs that walked on two legs). The team's findings suggest that of the two theropods, the one that left the La Torre 6B tracks had a higher maximum mean speed, _____

ID f452410b

8 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the claim?

(A) a longer footprint, and a longer average stride.

(B) a longer footprint, and a shorter average stride.

(C) a shorter footprint, and a longer average stride.

(D) a shorter footprint, and a shorter average stride.

Recordings of Female Bottlenose Dolphins with Their Calves

Dolphin ID	Recording year
FB07	2012
FB25	1989
FB43	1992
FB79	2018

In a study of bottlenose dolphins, biologist Laela S. Sayigh and a team of researchers analyzed recordings of female bottlenose dolphins interacting with their calves.

ID 0cf13ece

9 Mark for Review Easy Explanation ›

According to the table, in which year was the dolphin with the ID FB43 recorded with her calf?

(A) 1999

(B) 2012

(C) 2020

(D) 1992

Average Temperatures in July in Four Locations in the Navajo Nation

Location	Average highest temperature (Fahrenheit)	Average lowest temperature (Fahrenheit)
Teec Nos Pos	94°	65°
Cameron	99°	65°
Ramah	83°	50°
Tuba City	83°	50°

The Navajo Nation has the largest land area of any tribal nation in the United States: over 27,000 square miles in the Southwest. Because this area is so huge and its communities are located at various elevations, the people of the Navajo Nation can experience different climate conditions depending on where they live. For example, in July, _____

ID 9debe79a

10 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) the lowest temperature for both Cameron and Teec Nos Pos was 65°.

(B) Tuba City's average highest temperature was 94°, while Teec Nos Pos's was 93°.

(C) Ramah's average highest temperature was 83°, while Cameron's was 99°.

(D) the lowest temperature for both Ramah and Tuba City was 50°.

Total Areas and 2022 Populations of Smallest Arabian Peninsula Countries

Country	Total area (square miles)	Population
Kuwait	6,880	4,268,873
Bahrain	304	1,472,233
Qatar	4,471	2,695,122

In terms of area and population, the three smallest Arabian Peninsula countries are Bahrain, Qatar, and Kuwait.

ID b8199d5a

11 Mark for Review Easy Explanation ›

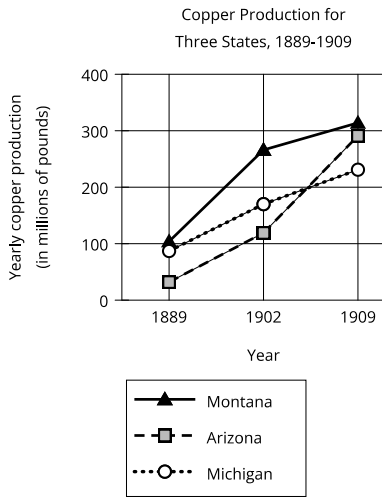
According to the table, what is the total area of Bahrain?

(A) 4,268,873 square miles

(B) 4,471 square miles

(C) 304 square miles

(D) 6,880 square miles



Copper had been mined in the US for thousands of years, but large-scale commercial mining of copper took off starting in the late 1800s. This was due to several factors. Technological advancements in the mining industry led to improvements in the production of copper. This helped the country keep up with the growing number of people wanting to buy copper starting in the 1890s. At the same time, the growth of the railroad system made the transportation of copper in large batches much easier. Several states saw rapid growth in the production of this resource, for example: _____

ID 30c3aa98

12 Mark for Review Easy Explanation ›

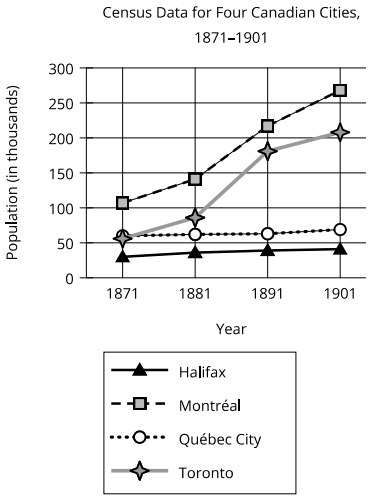
Which choice most effectively uses the data in the graph to complete the example?

(A) The rise in copper production in Michigan slowed from 1902 to 1909.

(B) Montana and Arizona produced more copper than Michigan did in 1909.

(C) Fewer than 100 million pounds of copper were produced in Arizona in 1889.

(D) Copper production rose significantly from 1889 to 1909 for Arizona, Michigan, and Montana.



The first national census in Canada was conducted in 1871. The graph shows the population sizes of some of the largest Canadian cities from each of the first four national censuses, which occurred every ten years.

ID 239d3535

13 Mark for Review Easy Explanation ›

According to the graph, which city had the largest population in 1891?

(A) Toronto

(B) Montréal

(C) Québec City

(D) Halifax

Comfort Ratings and Temperature-Adjustment Preferences from One Survey

Participant	Comfort rating	Preferred temperature adjustment
20	−2	Cooler
1	1	Cooler
21	1	Cooler

Nan Gao and her team conducted multiple surveys to determine participants' levels of comfort in a room where the temperature was regulated by a commercial climate control system. Participants filled out surveys several times a day to indicate their level of comfort on a scale from −3 (very cold) to +3 (very hot), with 0 indicating neutral (neither warm nor cool), and to indicate how they would prefer the temperature to be adjusted. The table shows three participants' responses in one of the surveys. According to the table, all three participants wanted the room to be cooler, _____

ID 4042ff0b

14 Mark for Review Easy Explanation ›

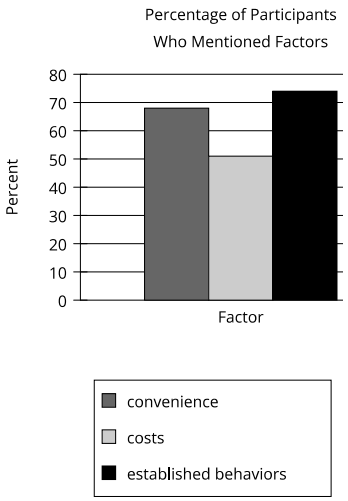
Which choice most effectively uses data from the table to complete the statement?

(A) and they each reported the same level of comfort.

(B) even though each participant's ratings varied throughout the day.

(C) but participant 20 reported feeling significantly colder than the other two participants did.

(D) but participant 1 reported feeling warmer than the other two participants did.



Researcher Judith Hilton and her team interviewed 55 people about which factors would make them switch from using single-use plastic containers to reusable containers. The graph shows three of the factors mentioned in the interviews and the percentage of participants who mentioned them.

ID b71861fc

15 Mark for Review Easy Explanation ›

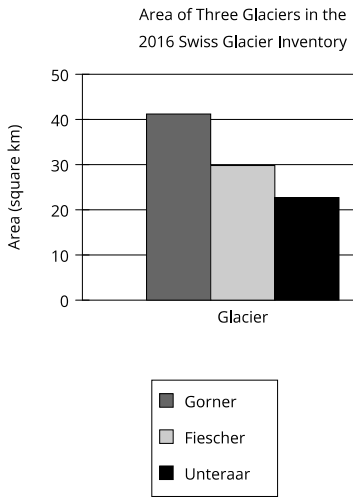
According to the graph, about what percentage of participants mentioned costs in the interviews?

(A) 10%

(B) 95%

(C) 25%

(D) 50%



To monitor changes to glaciers in Switzerland, the government periodically measures them for features like total area of ice and mean ice thickness, which are then reported in the Swiss Glacier Inventory. These measurements can be used to compare the glaciers. For example, the Gorner glacier had _____

ID a9ac31e4

16 Mark for Review Easy Explanation ›

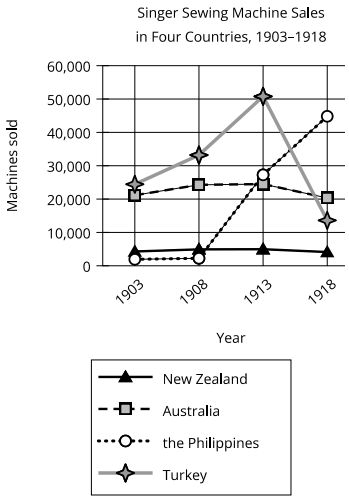
Which choice most effectively uses data from the graph to complete the example?

(A) a larger area than either the Fiescher glacier or the Unteraar glacier.

(B) a smaller area than the Fiescher glacier but a larger area than the Unteraar glacier.

(C) a smaller area than either the Fiescher glacier or the Unteraar glacier.

(D) a larger area than the Fiescher glacier but a smaller area than the Unteraar glacier.



By the early 1900s, the Singer Corporation, a US sewing machine manufacturer founded in 1851, began to see rapidly increasing sales abroad, particularly in Russia, Germany, and the United Kingdom. These markets were responsible for the bulk of Singer's overseas sales, but demand for the company's machines in other countries also grew significantly in the early twentieth century. For instance, sales of their sewing machines in _____

ID df34b586

17 Mark for Review Easy Explanation ›

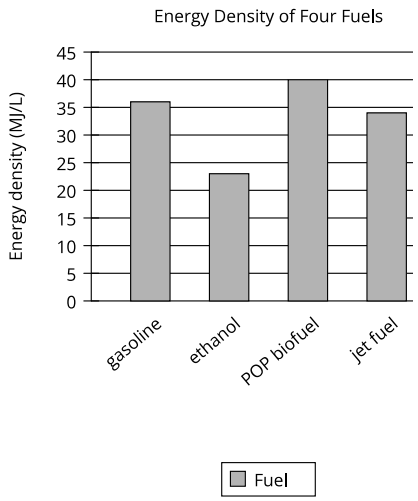
Which choice most effectively uses data from the graph to complete the example?

(A) the Philippines increased dramatically from 1908 to 1918.

(B) New Zealand were largely consistent from 1903 to 1918.

(C) Australia increased steadily from 1903 to 1918.

(D) Turkey declined substantially from 1913 to 1918.



A team of researchers used bacteria to create a biofuel (a renewable fuel produced from plants, algae, or other living materials). The team called the new fuel POP biofuel. To determine how much energy is stored in POP biofuel compared to other fuels, the team calculated the fuels' energy density, in megajoules per liter (MJ/L). The team found that the fuel with the highest energy density is _____

ID b29c520a

18 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the graph to complete the sentence?

(A) jet fuel.

(B) POP biofuel.

(C) ethanol.

(D) gasoline.

Average Prices Received by US Growers for Citrus Fruits, 2020–2021 (dollars per box)

Fruit	June 2020	June 2021	July 2020	July 2021
Grapefruits	$13.80	$23.72	$16.13	$22.98
Oranges	$16.15	$11.09	$15.53	$13.79
Lemons	$19.50	$28.94	$21.01	$31.78

An employee of a citrus grower in the United States is analyzing the prices of several varieties of fruit over the course of a growing season. The employee wishes to know how much a grower could have expected to receive on average for a box of lemons in July 2021. Consulting the table, the employee finds that this amount is _____

ID 81498c6a

19 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) $31.78.

(B) $23.72.

(C) $22.98.

(D) $28.94.

Attendance and Cost of Hosting for Past Four US World's Fairs

World's fairs held in the US	Cost (in US dollars)	Number of visitors
Century 21 Exposition (1962)	$47 million	9.60 million
HemisFair '68	$156 million	6.40 million
1984 World's Fair	$350 million	7.35 million
Expo '74	$78 million	5.60 million

Huge international exhibitions known as world's fairs have been held since 1851, but the United States hasn't hosted one since 1984. Architecture expert Mina Chow argues that this is because some people think the events are too expensive and not popular enough. For example, the 1984 World's Fair cost $350 million and had only _____

ID 38e79659

20 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the example?

(A) 7.35 million visitors.

(B) 9.60 million visitors.

(C) 6.40 million visitors.

(D) 5.60 million visitors.

Effect of Neighboring Species on Pollinator Visits to Target Species

Neighboring species	Target species	Effect value
Virginia spring beauty	star chickweed	0.4853
Himalayan balsam	marsh woundwort	0.7905
common dandelion	cat's ear	−0.6254

Researchers Carolina Laura Morales and Anna Traveset gathered data about flowering plants growing alongside each other in various locations. In each case, the researchers identified one plant as a "target species" and a nearby plant as a "neighboring species." The researchers then calculated a positive or negative value to show how the neighboring species affected pollinator visits to the target species. One example of a neighboring species with a negative effect value is the _____

ID 25b70215

21 Mark for Review Easy Explanation ›

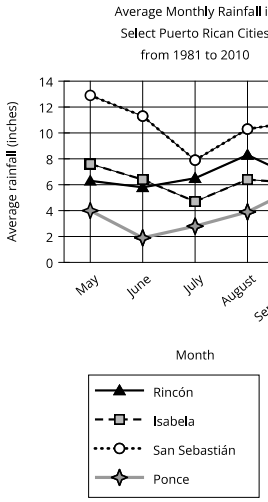
Which choice most effectively uses data from the table to complete the example?

(A) Himalayan balsam.

(B) common dandelion.

(C) star chickweed.

(D) Virginia spring beauty.



A student is presenting average monthly rainfall totals in various Puerto Rican cities for a science class. During the presentation, the student notes that in September _____

ID 1703403b

22 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the graph to complete the statement?

(A) Rincón's average rainfall is greater than that of Isabela, San Sebastián, and Ponce.

(B) Rincón and Ponce have an average rainfall of about 5 inches, and Isabela and San Sebastián have an average rainfall of about 10 inches.

(C) Rincón, Ponce, and Isabela each have an average rainfall below 8 inches, but San Sebastián's average rainfall that month is greater than 8 inches.

(D) Rincón has a similar average rainfall to Isabela, and Ponce has a similar average rainfall to San Sebastián.

Annual Car Production in the United States, 1910–1925

Year	Number of cars produced	Number of companies producing cars
1910	123,990	320
1915	548,139	224
1920	1,651,625	197
1925	3,185,881	80

A student is using the table as part of a social studies class presentation on the US auto industry in the early twentieth century. The student notes that, according to the table, from 1910 to 1925 _____

ID eb775f90

23 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) the number of cars produced increased but the number of companies producing cars decreased.

(B) both the number of cars produced and the number of companies producing cars remained unchanged.

(C) the number of cars produced decreased but the number of companies producing cars remained unchanged.

(D) both the number of cars produced and the number of companies producing cars increased.

Moons of Dwarf Planets

Dwarf planet name	Number of moons	Name of moons
Haumea	2	Hi'iaka, Namaka
Ceres	0	N/A
Makemake	1	MK 2
Eris	1	Dysnomia
Pluto	5	Charon, Nix, Kerberos, Styx, Hydra

Like Earth, some dwarf planets in the solar system have exactly one moon. Two examples of such dwarf planets are _____

ID c4bee178

24 Mark for Review Easy Explanation ›

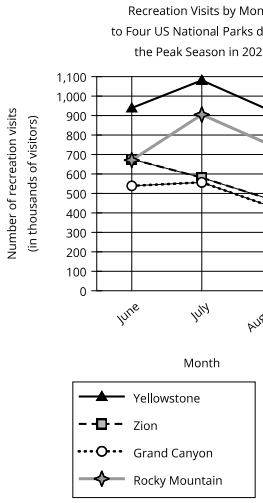
Which choice most effectively uses data from the table to complete the statement?

(A) Eris and Makemake.

(B) Haumea and Eris.

(C) Pluto and Haumea.

(D) Makemake and Ceres.



In 2021, four of the United States national parks that were among the most visited were Grand Canyon National Park, Rocky Mountain National Park, Yellowstone National Park, and Zion National Park. The graph shows the number of visits for recreation to each of these parks during the three-month period with the highest number of visitors. A student notes that among the parks shown in the graph, the park with the highest monthly recreation visits in all three months was _____

ID b470d853

25 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the graph to complete the text?

(A) Zion National Park.

(B) Rocky Mountain National Park.

(C) Yellowstone National Park.

(D) Grand Canyon National Park.

Depths at Which Four Deep-Sea Fish Species Live

Species	Depth below the ocean surface
Footballfish	200–1,000 meters
Southern stoplight loosejaw	500–2,000 meters
Black seadevil	250–2,000 meters
Bollons' rattail	300–800 meters

Some oceanic fish species live very deep underwater. Researchers collected data about the depths at which various species live.

ID e18d75ea

26 Mark for Review Easy Explanation ›

Based on the information in the table, at what depth does the southern stoplight loosejaw live?

(A) More than 2,000 meters below the surface

(B) 150 to 400 meters below the surface

(C) 500 to 2,000 meters below the surface

(D) 250 to 500 meters below the surface

Number of Museum Visits (in Millions) from 2016 to 2019

Museum	2016	2017	2018	2019
National Museum of the American Indian	1.1	1.2	1.1	0.96
National Museum of African American History and Culture	0.73	2.4	1.9	2.0

A student is researching the number of visits each year to two museums, the National Museum of the American Indian and the National Museum of African American History and Culture. Of the four years included in the table, the year when both museums had the highest number of visits was _____

ID a04807d8

27 Mark for Review Easy Explanation ›

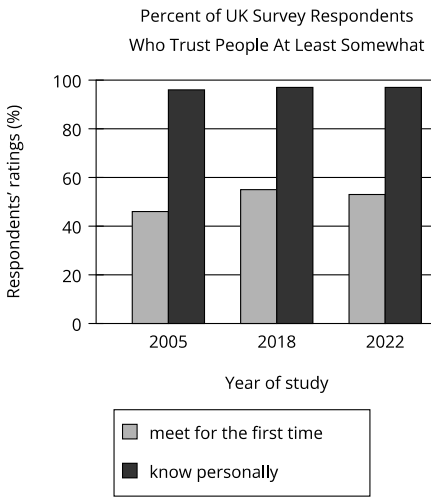
Which choice most effectively uses data from the table to complete the statement?

(A) 2016.

(B) 2018.

(C) 2019.

(D) 2017.



Social scientists distinguish two different categories of social trust: bonding trust and bridging trust. Bonding trust refers to trust within already existing relationships (e.g., within a family), whereas bridging trust refers to trust between different groups, often involving interactions beyond one's immediate social circle (e.g., meeting someone at a networking event). In order to evaluate these two aspects of social trust in the United Kingdom, researchers asked participants in 2005, 2018, and 2022 to rate the level of trust they felt for people they know personally and for people they are meeting for the first time. After analyzing the data from the survey responses, the researchers concluded that the level of bonding trust in the UK

ID 0992bd73

28 Mark for Review Easy Explanation ›

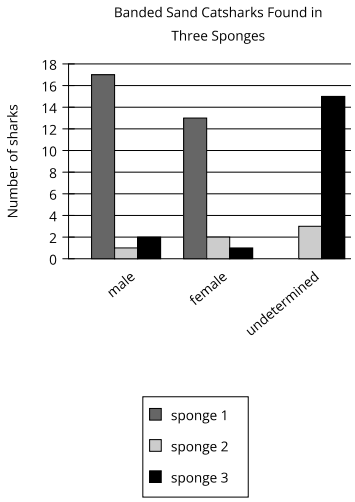
Which choice most effectively uses data from the graph to complete the statement?

(A) remained largely consistent from 2005 to 2022, whereas the level of bridging trust showed more variability from 2005 to 2022.

(B) consistently grew from 2005 to 2022, whereas the level of bridging trust largely declined from 2005 to 2022.

(C) was the same in 2018 as it was in 2022 but remained lower than the level of bridging trust in 2018 and 2022.

(D) declined from 2005 to 2022 but remained higher than the level of bridging trust from 2005 to 2018.



Researcher Helen O'Neill and her team were studying sponges in the family Ircinidae when they discovered that three of the sponges were functioning as microhabitats for banded sand catsharks (*Atelomycterus fasciatus*). Additionally, the team found that male and female *A. fasciatus* share the same sponge (the same microhabitat), a behavior not found among Port Jackson sharks (*Heterodontus portusjacksoni*), another seabed-dwelling species.

ID 6af80ff3

29 Mark for Review Easy Explanation ›

Which choice best describes data from the graph that support the underlined claim?

(A) Each of the three sponges was inhabited by at least one male *A. fasciatus* and at least one undetermined *A. fasciatus*.

(B) Sponge 1 was inhabited by 17 male *A. fasciatus*.

(C) Each of the three sponges was inhabited by at least one male *A. fasciatus* and at least one female *A. fasciatus*.

(D) Sponge 1 was inhabited by 13 female *A. fasciatus*.

Total Electoral College Votes and Popular Votes in the 15th US Presidential Election

Candidate	Total electoral college votes	Total popular votes
James K. Polk	170	1,339,494
Henry Clay	105	1,300,004
James Gillespie Birney	0	62,103

A student is writing a paper on the history of the 15th presidential election in the United States, which was held in 1844. The student needs to determine how many electoral college votes were cast for the winning candidate, James K. Polk. According to the table, James K. Polk received _____

ID 23b5cb59

30 Mark for Review Easy Explanation ›

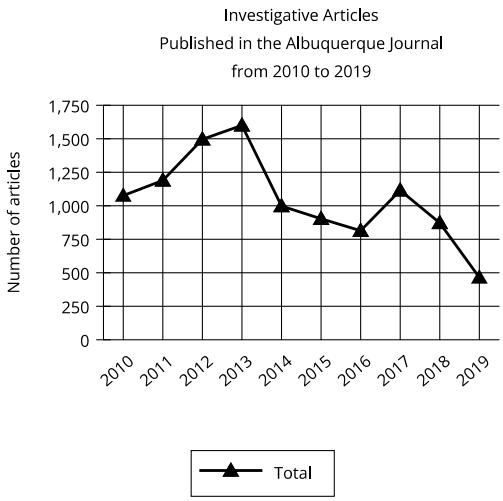
Which choice most effectively uses data from the table to complete the statement?

(A) 170 electoral college votes.

(B) 103 electoral college votes.

(C) 62 electoral college votes.

(D) 44 electoral college votes.



Investigative journalists research and report about fraud, corruption, public hazards, and more. The graph shows the number of investigative articles published in the *Albuquerque Journal* newspaper from 2010 to 2019. According to an analyst, although the number of investigative articles published in this newspaper has varied significantly over the period shown, the number overall has fallen since 2010.

ID e441da80

31 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the graph to justify the underlined claim?

(A) The newspaper published approximately 1,000 investigative articles in 2010 and approximately 500 in 2019.

(B) The smallest annual number of investigative articles published in the newspaper during the period shown is approximately 1,600 in 2013.

(C) The greatest annual number of investigative articles published in the newspaper during the period shown is approximately 1,000 in 2017.

(D) The newspaper published approximately 1,000 investigative articles in 2010 and approximately 1,600 in 2013.

Housing Starts in the US, January–April 2022 (in thousands)

Month	Housing starts
January	1,669
February	1,771
March	1,713
April	1,803

When construction of a single-family house begins, it is called a housing start. In the first four months of 2022, the highest number of housing starts in the United States was in _____.

ID e37f79a7

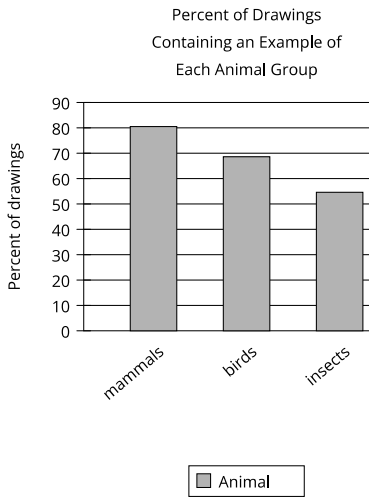
(B) March.

(C) January.

(D) February.



Researchers Kate Howlett and Edgar Turner asked 401 schoolchildren in the United Kingdom to draw and label local wildlife. The researchers suggest that the children may be more aware of mammals than of other animals in their environments.

ID 0b634641

33 Mark for Review Easy Explanation ›

Which choice best describes data from the graph that support the researchers' conclusion?

(A) There were about as many drawings with an example of an insect as there were with an example of a bird.

(B) The fewest number of drawings contained an example of a bird.

(C) More of the drawings had an example of an insect than an example of a mammal.

(D) More of the drawings had an example of a mammal than either an example of a bird or an example of an insect.

Maximum Height of Maple Trees When Fully Grown

Tree type	Maximum height (feet)	Native to North America
Sugar maple	75	yes
Silver maple	70	yes
Red maple	60	yes
Japanese maple	25	no
Norway maple	50	no

For a school project, a forestry student needs to recommend a maple tree that is native to North America and won't grow more than 60 feet in height. Based on the characteristics of five common maple trees, she has decided to select a _____.

Total Areas of Five Tribal Nations in California

Tribal nation	Location	Area (square miles)
Hoopa Valley Tribe	Northern California	141.68
La Jolla Band of Luiseño Indians	Southern California	13.50
Pauma Band of Luiseño Mission Indians	Southern California	9.36
Agua Caliente Band of Cahuilla Indians	Northern California	53.68
Los Coyotes Band of Cahuilla and Cupeño Indians	Southern California	39.21

In what is now the state of California, there are over 100 tribal nations. One of the largest, the Hoopa Valley Tribe, covers 141.68 square miles in the northern part of the state. However, most tribal nations in California are less than 50 square miles in total area. For example, the total area of the Los Coyotes Band of Cahuilla and Cupeño Indians in Southern California is _____

ID ede3f942

38 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to support the statement?

(A) 13.50 square miles.
(B) 53.68 square miles.
(C) 9.36 square miles.
(D) 39.21 square miles.

Daily Distance Traveled by Adult Mountain Lions in Three Seasons

Season	Kilometers per day traveled by adult females	Kilometers per day traveled by adult males
cold-dry	9.28	15.81
monsoon	12.64	18.93
hot-dry	12.48	18.87

Wildlife researcher Dana L. Karelus and her colleagues tracked the movements of female and male adult mountain lions over three seasons: the cold-dry season, the hot-dry season, and the monsoon season. They found that the least amount of travel per day occurred in _____

ID 46e45728

39 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) the cold-dry season for both females and males.

(B) the cold-dry season for females and the hot-dry season for males.

(C) the hot-dry season for females and the monsoon season for males.

(D) the monsoon season for both females and males.

Percent of Residents of City Areas in Favor of Adding More Bike Paths

City Area	Percent of area's residents in favor of adding more bike paths
North East	12%
North Central	26%
North West	46%
South West	88%
South Central	33%

A city's Parks and Recreation department is interested in providing residents with more opportunities for bicycling in their neighborhoods. They're considering adding more bike paths and conducted a survey to understand where demand for more bike paths is highest. The survey indicated the highest level of demand, with 88 percent of the residents interested in adding more bike paths, is in the city's _____

ID faaf484f

40 Mark for Review Easy Explanation ›

(A) South West area.

(B) South Central area.

(C) North East area.

(D) North Central area.

Millions of Metric Tons of Copper Mined in 1995 and 2020

Country	1995	2020
Canada	0.73	0.59
Indonesia	0.44	0.51
Kazakhstan	0.26	0.55
Chile	2.49	5.73

While doing research for a paper about copper mining, a student finds a table with information about four different countries. The student notes that the country that mined 0.55 million metric tons of copper in 2020 had mined _____

ID 94c726fb

41 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) 0.59 million metric tons of copper in 1995.

(B) 0.44 million metric tons of copper in 1995.

(C) 0.26 million metric tons of copper in 1995.

(D) 2.49 million metric tons of copper in 1995.

Total Areas of Five Pueblo Nations in New Mexico

Tribal nation	Area (square miles)
Pueblo de San Ildefonso	47.3
Santa Clara Pueblo	77.1
Taos Pueblo	156.2
Nambé Pueblo	32.4
Pueblo of Acoma	595.7

There are nineteen Pueblo tribal nations in New Mexico. A student in a geography class is a citizen of Taos Pueblo in the northern part of the state. The student wants to compare the total area covered by Taos Pueblo with the total areas of various other Pueblo nations in the state. Looking at the table, the student finds that the total area of Taos Pueblo is 156.2 square miles, while the total area of Nambé Pueblo is _____

ID 0014477f

42 Mark for Review Easy Explanation ›

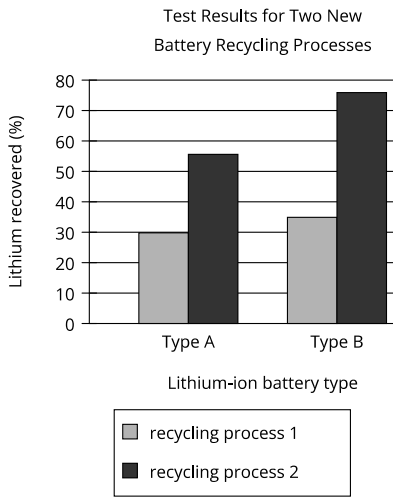
Which choice most effectively uses data from the table to complete the comparison?

(A) 47.3 square miles.

(B) 77.1 square miles.

(C) 32.4 square miles.

(D) 595.7 square miles.



A team of scientists wants to improve the recycling of two of the most common types of lithium-ion batteries used in electronic devices. The team tested two new processes that involve grinding battery materials and aluminum foil together. The highest percentage of lithium recovered in the tests was closest to _____

ID 5c73f0cc

43 Mark for Review Easy Explanation ›

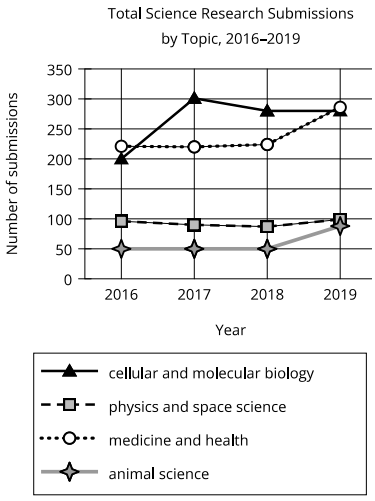
Which choice most effectively uses data from the graph to complete the statement?

(A) 75%.

(B) 10%.

(C) 45%.

(D) 20%.



A student is researching the trends in the topics submitted to a national science fair for high school students. The graph shows the number of submissions by topic that were made each year. Based on the data in the graph, the student claims that there were more medicine and health research topics submitted in 2019 than in any other year.

ID 800771e5

44 Mark for Review Easy Explanation ›

Which choice most effectively uses data from the graph to support the underlined claim?

(A) In 2016, the number of cellular and molecular biology topic submissions was the same as the number of animal science topic submissions.

(B) In 2019, there were more physics and space science topic submissions than there were medicine and health topic submissions.

(C) The lowest number of animal science topic submissions in a year was approximately 95 in 2016.

(D) The highest number of medicine and health topic submissions during the period shown is approximately 285 in 2019.

Estimated Impacts of Invasive Predator Species on Threatened Birds, Mammals, and Reptiles

Invasive predator species	Estimated impact on threatened birds	Estimated impact on threatened mammals	Estimated impact on threatened reptiles
Mongooses	0.66	0.75	0.44
Dogs	0.67	0.57	0.44
Cats	0.74	0.61	0.52

How harmful are invasive predators to threatened species? To find out, researchers assigned values from 0.25 to 1.00 to various harms caused by invasive predators. The researchers then used these values to estimate the extent to which several invasive predator species have harmfully impacted threatened birds, mammals, and reptiles. In the table, higher numbers represent greater impacts. The estimated impact of invasive mongooses on threatened mammals is _____

ID 11c00ab9

45 Mark for Review Easy Explanation >

Which choice most effectively uses data from the table to complete the example?

Number and Origin of Clamshell Tools Found at Different Depths below the Surface in Neanderthal Cave

Depth of tools found below surface in cave (meters)	Clamshells that Neanderthals collected from the beach	Clamshells that Neanderthals harvested from the seafloor
2–3	7	0
3–4	99	33
4–5	2	0
5–6	18	7
6–7	1	0

Two kinds of clamshell tools used by Neanderthals were dug up in a cave on the western coast of Italy. Archaeologist Paola Villa and her colleagues studied the tools and determined that Neanderthals either collected clams that had washed onto the beach or harvested clams from the seafloor and then sharpened the shells to make tools. The highest number of tools made from clamshells that were collected from the beach was found at a depth of _____

ID af125459

46 Mark for Review Easy Explanation >

Which choice most effectively uses data from the table to complete the text?

(A) 5–6 meters below the surface.

(B) 4–5 meters below the surface.

(C) 3–4 meters below the surface.

(D) 6–7 meters below the surface.

Time Participants Spent Reading about Five London Museums

Museum Name	Ranking	Percentage of total time spent reading about museum by participants provided with ranking	Percentage of total time spent reading about museum by participants not provided with ranking
British Museum	1	36	18
National Gallery	2	21	20
Tate Modern	4	16	17
Victoria and Albert Museum	5	14	23
Natural History Museum	3	13	22

Researchers recently conducted an experiment to understand how we use rankings to make decisions. They created a fictitious travel website describing five museums in London. Then, they invited two groups of participants, who had never visited the museums, to review the site and select the museum they would be most likely to visit. Meanwhile, the researchers tracked the amount of time each participant spent reading about each museum. For one group, the website ranked each museum, titling the page "The Top 5 Museums in London." For the other group, the museums and their descriptions were not ranked. The researchers concluded that when reviewing ranked lists, we tend to focus on the top-ranked option.

ID ab94d40a

47 Mark for Review Easy Explanation ›

Which choice best describes data in the table that support the researchers' conclusion?

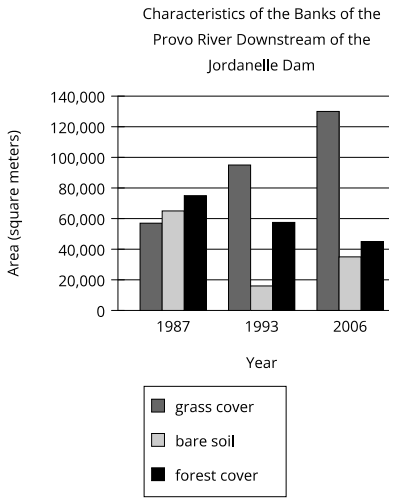
(A) Participants who were not provided with a ranking of the museums spent roughly equal amounts of time reading about each museum.

(B) Participants who were provided with a ranking of the museums spent disproportionately more time reading about the British museum.

(C) Participants who were provided with a ranking of the museums spent the least amount of time reading about the Natural History Museum.

(D) Participants who were not provided with a ranking of the museums spent the most time reading about the Victoria and Albert Museum.

MEDIUM 36 questions



The Jordanelle Dam was built on the Provo River in Utah in 1992. Earth scientist Adriana E. Martinez and colleagues tracked changes to the environment on the banks of the river downstream of the dam, including how much grass and forest cover were present. They concluded that the dam changed the flow of the river in ways that benefited grass plants but didn't benefit trees.

ID d83c3d54

48 Mark for Review Medium Explanation ›

Which choice best describes data from the graph that support Martinez and colleagues' conclusion?

(A) The lowest amount of grass cover was approximately 58,000 square meters, and the highest amount of forest cover was approximately 75,000 square meters.

(B) There was more grass cover than forest cover in 1987, and this difference increased dramatically in 1993 and again in 2006.

(C) There was less grass cover than bare soil in 1987 but more grass cover than bare soil in 1993 and 2006, whereas there was more forest cover than bare soil in all three years.

(D) Grass cover increased from 1987 to 1993 and from 1993 to 2006, whereas forest cover decreased in those periods.

Land Area Covered by Native Flowering Plants at a Site in Antarctica

Species	Area covered in 2009 (in square meters)	Area covered in 2018 (in square meters)	Percent increase in area covered from 2009 to 2018
Deschampsia antarctica	1,230	1,576	28%
Colobanthus quitensis	6.9	10.7	55%

The only flowering plant species native to Antarctica, *Colobanthus quitensis* and *Deschampsia antarctica* grow in places where the earth remains free of ice for much of the year. Botanist Niccoletta Cannone wondered how the warming of Antarctica's climate in recent years had affected these species, so she visited a site in Antarctica, first in 2009 and later in 2018, to count the number of plants growing there. Cannone found that the area of land covered by the two species had significantly expanded during the nine-year period. While both species likely benefited from warming temperatures, *Colobanthus quitensis* _____

ID 95388117

49 Mark for Review Medium Explanation ›

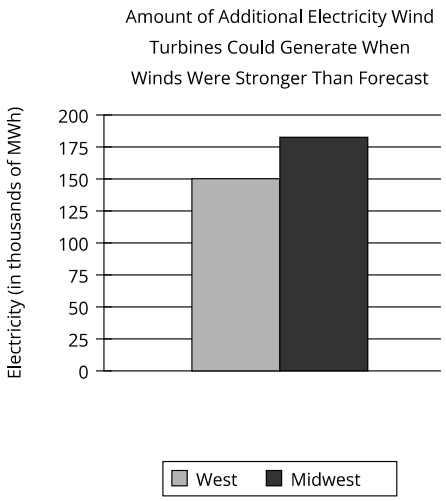
Which choice most effectively uses data from the table to complete the comparison?

(A) suppressed the growth of *Deschampsia antarctica*, which covered a smaller area of land in 2018 than it had in 2009.

(B) saw a greater expansion than *Deschampsia antarctica* did, increasing the area of land it covered by more than half.

(C) showed a greater increase in the average size of individual plants than *Deschampsia antarctica* did.

(D) covered land newly freed from ice at a rate 55% faster than that of *Deschampsia antarctica*.



Electric companies that use wind turbines rely on weather forecasts to predict the maximum amount of power, in megawatt-hours (MWh), they can generate using wind so that they can determine how much they'll need to generate from other sources. When winds are stronger than they were forecast to be, however, the predicted maximum amount of electricity wind turbines could generate will be too low. For example, the graph shows that for the West region, the winds were _____

ID a9040290

50 Mark for Review Medium Explanation ›

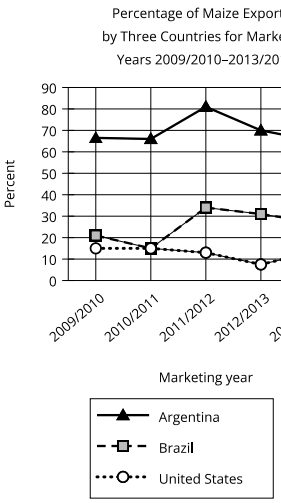
Which choice most effectively uses data from the graph to complete the example?

(A) strong enough to generate about 150 thousand more MWh of electricity from wind turbines.

(B) so weak that the electricity from wind turbines was about 175 thousand MWh less than predicted.

(C) so weak that the electricity from wind turbines was about 150 thousand MWh less than predicted.

(D) strong enough to generate about 175 thousand more MWh of electricity from wind turbines.



Argentina, Brazil, and the United States are among the world's leading producers of maize (corn), and each country exports a certain percentage of maize each marketing year, which runs from March to February in Argentina and Brazil and from September to August in the United States. A student is researching those percentages and finds that for the marketing year 2012/2013, the percentage of maize exported by _____

ID 15873d14

51 Mark for Review Medium Explanation ›

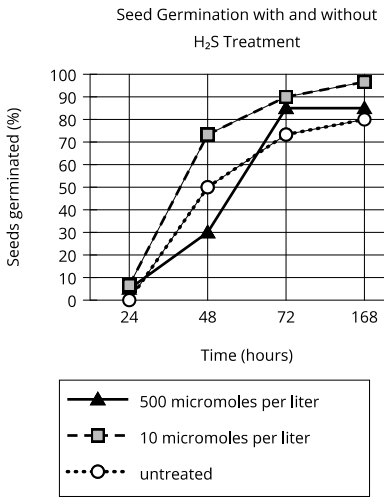
Which choice most effectively uses data from the graph to complete the text?

(A) Brazil increased from the previous marketing year but remained lower than the percentage exported by the United States.

(B) Brazil exceeded the percentage exported by Argentina for the first time.

(C) Argentina decreased from the previous marketing year but remained the highest among the three countries.

(D) the United States reached its highest point during the five marketing years.



In high concentrations, hydrogen sulfide (H_2S) is typically toxic to many plants. Frederick D. Dooley and colleagues wanted to understand what effects low doses of H_2S might have on plant growth. They treated bean, corn, wheat, and pea seeds with various concentrations (measured in micromoles per liter) of H_2S and tracked the germination of those seeds along with the germination of untreated seeds. Treatment with particular concentrations of H_2S was associated with accelerated germination: for example,

ID 8a584241

52 Mark for Review Medium Explanation ›

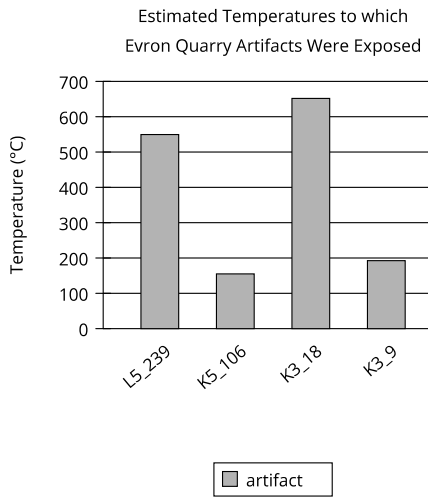
Which choice most effectively uses data from the graph to complete the statement?

(A) at 24 hours, less than 10% of seeds treated with H_2S at a concentration of 10 micromoles per liter had germinated, whereas more than 90% of those seeds had germinated at 168 hours.

(B) at 48 hours, more than 70% of seeds treated with H_2S at a concentration of 10 micromoles per liter had germinated, whereas only approximately 50% of untreated seeds had germinated.

(C) at 168 hours, more than 90% of seeds treated with H_2S at concentrations of 10 or 500 micromoles per liter had germinated, whereas less than 70% of untreated seeds had germinated.

(D) at 48 hours, approximately 50% of seeds treated with H_2S at a concentration of 10 micromoles per liter had germinated, whereas only approximately 30% of untreated seeds had germinated.



Flint artifacts dating to 800,000 to 1,000,000 years ago have been recovered from the Evron Quarry in Israel. Likely created by the hominin *Homo erectus*, the artifacts have no visual features suggesting that they were exposed to fire, leading some scholars to conclude that these hominins had not acquired control of fire. But Zane Stepka and colleagues recently used a new method to determine whether these artifacts had been exposed to temperatures above 400°C (the typical temperature campfires reach) and concluded that the hominins who inhabited the site may have had control of fire.

ID 7edfb2c5

53 Mark for Review Medium Explanation ›

Which choice best describes data in the graph that support the team's conclusion?

(A) Artifacts K5_106 and K3_9 were exposed to temperatures above 400°C.

(B) Artifacts L5_239 and K3_18 were exposed to temperatures of approximately 550°C and 650°C, respectively.

(C) All of the artifacts were exposed to temperatures above 100°C.

(D) Artifact K3_9 was exposed to a higher temperature than was artifact K5_106.

North American Thrasher Mean Bill Size and Habitat Temperature Range

Species	Mean bill surface area (cm^2)	Mean maximum temperature of warmest month (°C)	Mean minimum temperature of coldest month (°C)
Brown thrasher	1.86	30.40	−4.29
Bendire's thrasher	1.98	36.57	0.24
Long-billed thrasher	2.24	35.27	8.82
Cozumel thrasher	2.28	33.27	18.21
Ocellated thrasher	3.26	27.56	5.45

It has been hypothesized that since birds can dissipate excess heat through their bills, bill size should increase with habitat temperature. To evaluate this hypothesis for a 2021 study, Charlotte Probst and colleagues gathered data on mean bill surface area of species of North American thrashers (genus: *Toxostoma*) as well as on climate conditions of the birds' native habitats. Based on their data, Probst and colleagues concluded that the hypothesis was not fully supported.

ID f8244f7c

54 Mark for Review Medium Explanation ›

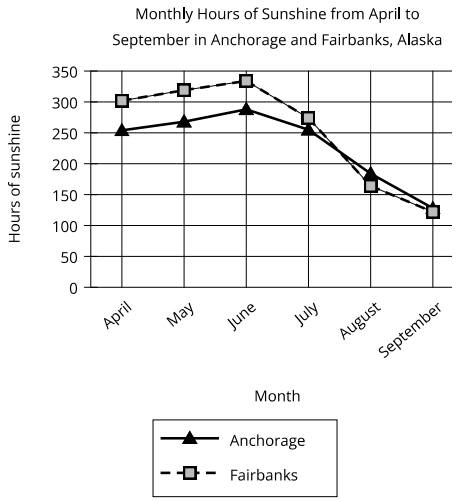
Which choice most effectively uses data from the table to support Probst and colleagues' conclusion?

(A) Although the Bendire's thrasher has one of the smallest mean bill surface areas of the birds included in the table, its habitat has one of the lowest mean maximum temperatures in the warmest month and one of the lowest mean minimum temperatures in the coldest month.

(B) Although the Cozumel thrasher has the second greatest mean bill surface area of the birds included in the table, its habitat's mean temperature in the warmest month is significantly higher than that of the other birds' habitats.

(C) Of the birds included in the table, the brown thrasher has the smallest mean bill surface area and the habitat with the lowest mean minimum temperature in the coldest month, while the long-billed thrasher has the second-largest mean bill surface area and the habitat with the second-highest mean minimum temperature in the coldest month.

(D) Of the birds included in the table, the ocellated thrasher has the largest mean bill surface area and the habitat with the lowest mean maximum temperature in the warmest month, while the Bendire's thrasher has the second smallest mean bill surface area and the habitat with the highest mean maximum temperature in the warmest month.



A student is researching monthly hours of sunshine in different cities in Alaska. When comparing trends in Anchorage and Fairbanks, the student concludes that the two cities show a similar pattern in the monthly hours of sunshine from April to September.

ID 8a668840

55 Mark for Review Medium Explanation ›

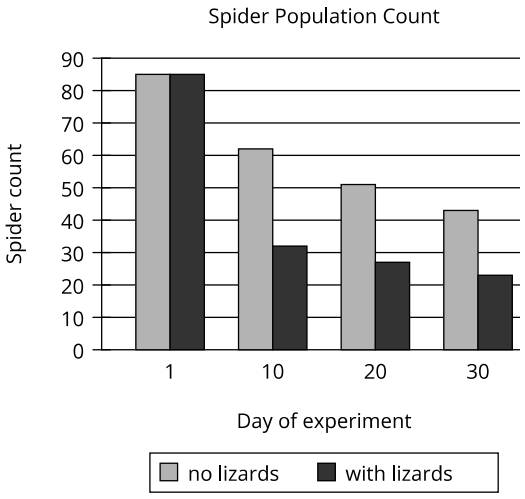
Which choice best describes data from the graph that support the student's conclusion?

(A) The monthly hours of sunshine in both Anchorage and Fairbanks hold steady in June and July before beginning to decline in August.

(B) The monthly hours of sunshine in both Anchorage and Fairbanks increase from April to June and then decrease from June to September.

(C) Anchorage and Fairbanks both have less than 200 monthly hours of sunshine from April to September.

(D) Anchorage and Fairbanks both have more than 300 monthly hours of sunshine from April to June and less than 200 hours from July to September.



To investigate the effect of lizard predation on spider populations, a student in a biology class placed spiders in two enclosures, one with lizards and one without, and tracked the number of spiders in the enclosures for 30 days. The student concluded that the reduction in the spider population count in the enclosure with lizards by day 30 was entirely attributable to the presence of the lizards.

ID b30a2613

56 Mark for Review Medium Explanation ›

Which choice best describes data from the graph that weaken the student's conclusion?

(A) The spider population count was the same in both enclosures on day 1.

(B) The spider population count also substantially declined by day 30 in the enclosure without lizards.

(C) The largest decline in spider population count in the enclosure with lizards occurred from day 1 to day 10.

(D) The spider population count on day 30 was lower in the enclosure with lizards than in the enclosure without lizards.

Mean Ratings for Patients after 21 Days

Measure	Mean rating for participants aware of taking a placebo	Mean rating for participants in the control group
Global improvement	5.0	3.9
Symptom severity reduction	92.00	46.00
Quality of life improvement	11.4	5.4

To test whether a medication is effective, scientists compare outcomes for patients taking it and patients taking a placebo (a medically inactive substance). Patients normally aren't told they're receiving a placebo, but a research team conducted a study to see if there might be a medical benefit to telling them. The team used various measures to evaluate participants, with higher ratings indicating greater well-being in each measure. Compared to the mean ratings after 21 days for participants in the control group, the mean ratings for participants who were aware of taking a placebo _____

ID a95075c5

57 Mark for Review Medium Explanation ›

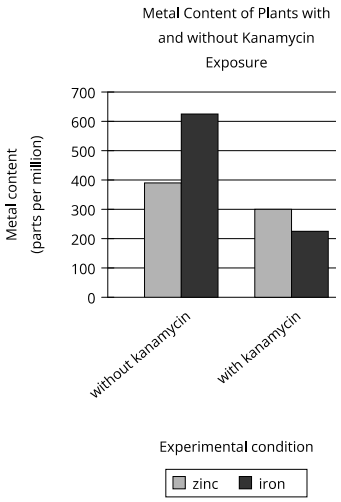
Which choice most effectively uses data from the table to complete the statement?

(A) ranged from 5.0 to 92.00, indicating that well-being varied widely from participant to participant.

(B) were lower for two measures, with the rating for only one measure indicating greater well-being for these participants.

(C) ranged from 3.9 to 46.00, with no rating indicating greater well-being in any measure for these participants.

(D) were higher for all three measures, indicating greater overall well-being for these participants.



Many plants lose their leaf color when exposed to kanamycin, an antibiotic produced by some soil microorganisms. Spelman College biologist Mentewab Ayalew and her colleagues hypothesized that plants' response to kanamycin exposure involves altering their uptake of metals, such as iron and zinc. The researchers grew two groups of seedlings of the plant *Arabidopsis thaliana*, half of which were exposed to kanamycin and half of which were a control group without exposure to kanamycin, and measured the plants' metal content five days after germination.

ID 742fd8ba

58 Mark for Review Medium Explanation ›

Which choice best describes data in the graph that support Ayalew and her colleagues' hypothesis?

(A) The control plants contained higher levels of zinc than iron, but plants exposed to kanamycin contained higher levels of iron than zinc.

(B) Both groups of plants contained more than 200 parts per million of both iron and zinc.

(C) Zinc levels were around 300 parts per million in the control plants but nearly 400 parts per million in the plants exposed to kanamycin.

(D) The plants exposed to kanamycin showed lower levels of iron and zinc than the control plants did.

Survey Results for Two Online Account Sign-in Methods

Sign-in method	Percent of participants in the UK who chose method	Percent of participants in Japan who chose method	Percent of participants in India who chose method
Biometrics (for example, a face scan)	33	29	22
Onetime passcodes	16	8	25

A survey listed methods for signing into online accounts. Participants in different countries were asked to choose the sign-in method they view as most secure. The table presents data for two of the methods. According to the table, onetime passcodes were viewed as most secure by _____.

ID 7c21b4b5

59 Mark for Review Medium Explanation ›

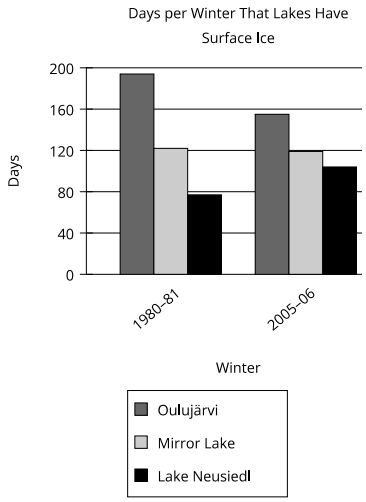
Which choice most effectively uses data from the table to complete the text?

(A) 33 percent of survey participants in the UK.

(B) 22 percent of survey participants in India.

(C) 8 percent of survey participants in Japan.

(D) 16 percent of survey participants in India.



It is common for freshwater lakes near or above a latitude of 45° north of the equator, like Lake Mjøsa in Norway, to accumulate surface ice in winter. The amount and duration of ice depends on many factors, including local weather conditions as well as the lake's depth, volume, and surface area, but a climate researcher claims that some lakes in these latitudes have seen a decline in the duration of ice between the early 1980s and the mid-2000s. She cites as a typical example _____

ID d74b9bc6

60 Mark for Review Medium Explanation ›

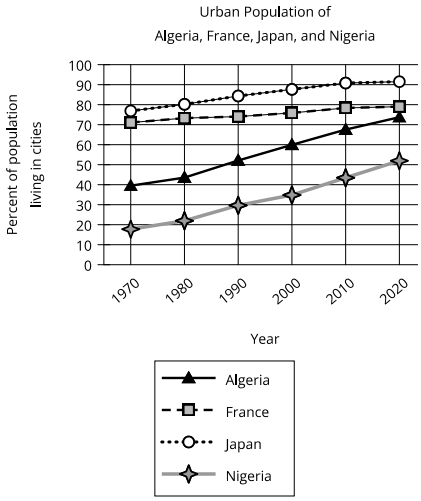
Which choice most effectively uses data from the graph to complete the researcher's example?

(A) both Lake Neusiedl and Oulujärvi, which had fewer than 195 days of ice in the winter of 1980–81.

(B) Lake Neusiedl, which had more days of ice in the winter of 2005–06 than it did in the winter of 1980–81.

(C) Oulujärvi, which had fewer days of ice in the winter of 2005–06 than it did in the winter of 1980–81.

(D) both Lake Neusiedl and Oulujärvi, which had more than 105 days of ice in the winter of 2005–06.



The share of the world's population living in cities has increased dramatically since 1970, but this change has not been uniform. France and Japan, for example, were already heavily urbanized in 1970, with 70% or more of the population living in cities. The main contributors to the world's urbanization since 1970 have been countries like Algeria, whose population went from _____

ID a2b0fc3b

61 Mark for Review Medium Explanation ›

Which choice most effectively uses data from the graph to complete the assertion?

(A) around 50% urban in 1970 to around 90% urban in 2020.

(B) less than 40% urban in 1970 to around 90% urban in 2020.

(C) less than 20% urban in 1970 to more than 50% urban in 2020.

(D) around 40% urban in 1970 to more than 70% urban in 2020.

Body Length, Filter Time, and Lunges per Dive for Four Whale Species

Whale species	Typical adult body length (meters)	Average time to filter all engulfed water (seconds)	Average number of lunges per dive deeper than 50 meters
fin	18–22	31.30	3.95
humpback	11–17	17.12	6.28
minke	7–10	8.88	7.48
blue	24–34	60.27	4.02

Some whale species practice lunge feeding, in which they lunge toward prey with their mouths open at wide angles, collect the prey and the surrounding water, and then filter out the water through baleen plates in their mouths. Although the volume of water engulfed increases with whales' body length, the surface area of whales' baleen plates, which influences the rate at which water can be filtered, does not increase with body length to the same degree, which helps explain why _____

ID cbecb873

62 Mark for Review Medium Explanation ›

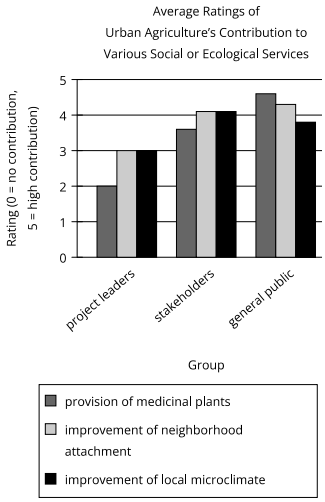
Which choice most effectively uses data from the table to complete the statement?

(A) minke whales and humpback whales show similar average filter times.

(B) humpback whales show an average of 6.28 lunges per dive.

(C) fin whales show a longer average filter time than minke whales do.

(D) blue whales show the longest average filter time and the highest average number of lunges per dive.



Urban agriculture is the practice of growing plant- or animal-based products in urban settings such as community gardens and rooftop farms. Esther Sanyé-Mengual, Kathrin Specht, and their team surveyed three groups of people in Bologna, Italy—leaders of urban agriculture projects, stakeholders in urban agriculture (e.g., food researchers and urban farming associations), and the general public—to compare their views about the extent to which urban agriculture contributes to 25 social or ecological services that the team identified. The survey results show that, on average, project leaders rated urban agriculture as contributing less to _____

ID ff18829b

63 Mark for Review Medium Explanation >

Which choice most effectively uses data from the graph to complete the assertion?

(A) providing medicinal plants than to improving the local microclimate.

(B) improving community members' sense of attachment to the neighborhood than to offering educational opportunities.

(C) improving the local microclimate than to providing medicinal plants.

(D) improving the local microclimate than to providing tourist attractions.

E-book Sales as a Percentage of Total Unit Sales in All Book Formats for a Large US Trade Publisher, by Genre, 2006, 2011, 2016

Genre	2006	2011	2016
science fiction and fantasy	0.6	27.7	36.7
cookbooks	0	2.9	10.5
travel guides	0	5.5	24.6
romance	0.3	40.6	56.2

E-books became an increasingly popular means of reading in the United States in the 2000s and 2010s, though that popularity was concentrated in titles that, like those in most fiction genres, are meant to be read straight through from beginning to end. For books in nonfiction genres that do not tell stories and require the reader to flip back and forth through a volume, e-books were significantly less commercially successful. This can be seen by comparing _____

ID ccf414c9

64 Mark for Review Medium Explanation >

Which choice most effectively uses data from the table to illustrate the claim?

(A) the percentage of 2016 cookbook sales that were e-books with the percentage of 2016 science fiction and fantasy sales that were e-books.

(B) the percentage of 2006 romance sales that were e-books with the percentage of 2016 romance sales that were e-books.

(C) the percentage of 2006 romance sales that were e-books with the 2006 science fiction and fantasy sales that were e-books.

(D) the percentage of 2011 travel guide sales that were e-books with the percentage of 2016 travel guide sales that were e-books.

Annual Spending by International Tourists in Four Countries (in billions of US dollars)

Country	2016	2017	2018
South Korea	$21.0	$17.2	$23.1
Japan	$33.5	$37.0	$45.3
Thailand	$48.5	$57.1	$61.4
Malaysia	$19.7	$20.3	$21.8

One measure of international tourism is how much money visitors from abroad spend in a country. A student writing a report about tourism in several Asian countries notes that among the countries in the table, most had annual increases in international tourism revenue in 2017 and 2018, but that trend wasn't universal. For example, _____

ID a0203977

65 Mark for Review Medium Explanation ›

Which choice most effectively uses data from the table to complete the example?

(A) in each year shown, the revenue from tourism by residents of those countries was greater than the revenue from international tourism.

(B) Japan's international tourism revenue was higher in 2016 than it was in 2018.

(C) South Korea's annual international tourism revenue decreased from 2016 to 2017.

(D) in each year shown, Thailand had higher international tourism income than any of the other countries.

Incorporated and Unincorporated Self-Employment Rates in Four Occupational Fields, 2015

Occupational field	Incorporated self-employment rate	Unincorporated self-employment rate
Construction and resource extraction	4.4%	14.8%
Installation, maintenance, and repair	2.7%	6.2%
Management, business, and financial services	8.9%	9.7%
Sales and related	5.8%	7.8%

Self-employed workers—individuals who are not employees of other individuals or businesses but instead earn their income as business owners, independent contractors, or freelance workers—make up an important part of the US labor force. In order to receive legal and tax benefits enjoyed by corporations, self-employed individuals may choose to incorporate their business. A 2015 survey of incorporated and unincorporated self-employment rates in four occupational fields showed that the highest incorporated self-employment rate occurred among people working in _____

ID 0ec15b5a

66 Mark for Review Medium Explanation ›

Which choice most effectively uses data from the table to complete the text?

(A) sales and related occupations.

(B) installation, maintenance, and repair occupations.

(C) construction and resource extraction occupations.

(D) management, business, and financial services occupations.

Characteristics of Five Recently Discovered Gas Exoplanets

Exoplanet designation	Mass (Jupiters)	Radius (Jupiters)	Orbital period (days)	Distance from the Sun (parsecs)
TOI-640 b	0.88	1.771	5.003	340
TOI-1601 b	0.99	1.239	5.331	336
TOI-628 b	6.33	1.060	3.409	178
TOI-1478 b	0.85	1.060	10.180	153
TOI-1333 b	2.37	1.396	4.720	200

"Hot Jupiters" are gas planets that have a mass of at least 0.25 Jupiters (meaning that their mass is at least 25% of that of Jupiter) and an orbital period of less than 10 days (meaning that they complete one orbit around their star in less than 10 days), while "warm Jupiters" are gas planets that meet the same mass criterion but have orbital periods of more than 10 days. In 2021, Michigan State University astronomer Joseph Rodriguez and colleagues announced the discovery of five new gas exoplanets and asserted that four are hot Jupiters and one is a warm Jupiter.

ID cf7491c1

67 Mark for Review Medium Explanation >

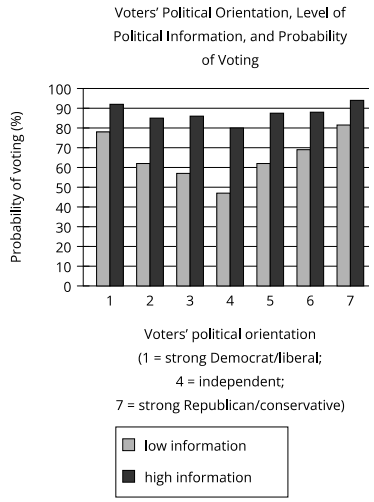
Which choice best describes data from the table that support Rodriguez and colleagues' assertion?

(A) None of the planets have an orbital period of more than 10 days, and TOI-628 b has a mass of 6.33 Jupiters.

(B) TOI-1478 b has an orbital period of 153 days, and the masses of all the planets range from 0.85 to 6.33 Jupiters.

(C) All the planets have a radius between 1.060 and 1.771 Jupiters, and only TOI-1333 b has an orbital period of more than 10 days.

(D) Each of the planets has a mass greater than 0.25 Jupiters, and all except for TOI-1478 b have an orbital period of less than 10 days.



Economists Kerwin Kofi Charles and Melvin Stephens Jr. investigated a variety of factors that influence voter turnout in the United States. Using survey data that revealed whether respondents voted in national elections and how knowledgeable respondents are about politics, Charles and Stephens claim that the likelihood of voting is driven in part by potential voters' confidence in their assessments of candidates—essentially, the more informed voters are about politics, the more confident they are at evaluating whether candidates share their views, and thus the more likely they are to vote.

ID 5d453dcc

68 Mark for Review Medium Explanation ›

Which choice best describes data in the graph that support Charles and Stephens's claim?

(A) At each point on the political orientation scale, high-information voters were more likely than low-information voters to vote.

(B) Only low-information voters who identify as independents had a voting probability below 50%.

(C) The closer that low-information voters are to the ends of the political orientation scale, the more likely they were to vote.

(D) High-information voters were more likely to identify as strong Democrats or strong Republicans than low-information voters were.

Dated Ages of Lunar Samples from Select Missions

Mission name	Year	Landing site	Approximate age of lunar samples (billions of years)
Apollo 11	1969	Mare Tranquillitatis	3.6
Apollo 15	1971	Mare Imbrium	3.3
Apollo 17	1972	Mare Serenitatis	3.8
Chang'e 5	2020	Oceanus Procellarum	2.0

The Apollo program missions were spaceflights to the moon led by the United States during the 1960s and 1970s during which astronauts collected some samples of the moon's surface. More recently, China launched the Chang'e 5 mission, which returned additional lunar surface samples. Researchers have analyzed and dated each of the samples, concluding that the lunar samples collected during the Chang'e 5 mission are significant because

_____

ID cebfb2c6

69 Mark for Review Medium Explanation ›

Which choice most effectively uses data from the table to complete the claim?

(A) they are much younger than the samples brought back from any of the Apollo missions.

(B) they were collected from the same landing site as the Apollo 11 mission.

(C) they are closest in age to the samples brought back by the Apollo 17 mission.

(D) they helped confirm the predicted ages of the lunar samples from the Apollo missions.

Participants' Evaluation of the Likelihood That Robots Can Work Effectively in Different Occupations

Occupation	Somewhat or very unlikely (%)	Neutral (%)	Somewhat or very likely (%)
television news anchor	24	9	67
teacher	37	16	47
firefighter	62	9	30
surgeon	74	9	16
tour guide	10	8	82
Rows in table may not add up to 100 due to rounding.			

Georgia Tech roboticists De'Aira Bryant and Ayanna Howard, along with ethicist Jason Borenstein, were interested in people's perceptions of robots' competence. They recruited participants and asked them how likely they think it is that a robot could do the work required in various occupations. Participants' evaluations varied widely depending on which occupation was being considered; for example, _____

ID dd349efc

70 Mark for Review Medium Explanation ›

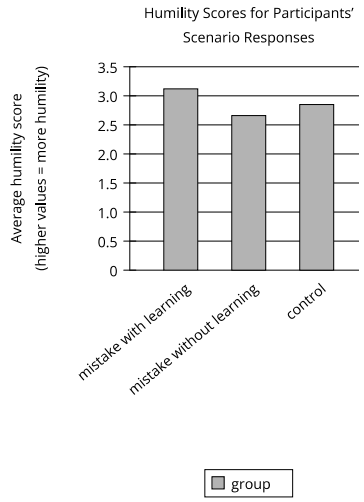
Which choice most effectively uses data from the table to complete the example?

(A) 47% of participants believe that it is somewhat or very likely that a robot could work effectively as a teacher, but 37% of respondents believe that it is somewhat or very unlikely that a robot could do so.

(B) 9% of participants were neutral about whether a robot could work effectively as a television news anchor, which is the same percent of participants who were neutral when asked about a robot working as a surgeon.

(C) 82% of participants believe that it is somewhat or very likely that a robot could work effectively as a tour guide, but only 16% believe that it is somewhat or very likely that a robot could work as a surgeon.

(D) 62% of participants believe that it is somewhat or very unlikely that a robot could work effectively as a firefighter.



Jia Hu and colleagues hypothesized that workplace leaders who reflect on lessons learned from past mistakes are likely to exhibit more humility than leaders who don't engage in such reflection. To test this, the team placed 301 managers in one of three groups. Participants in two experimental groups were asked to reflect on a mistake, one group focusing on a mistake that resulted in learning and the other group focusing on a mistake that didn't result in learning. Participants in a control group were asked to reflect on their daily routine. All the participants then described how they would respond to a workplace scenario. After evaluating the responses for evidence of humility, the researchers concluded that their hypothesis was correct.

ID e99a38ec

71 Mark for Review Medium Explanation ›

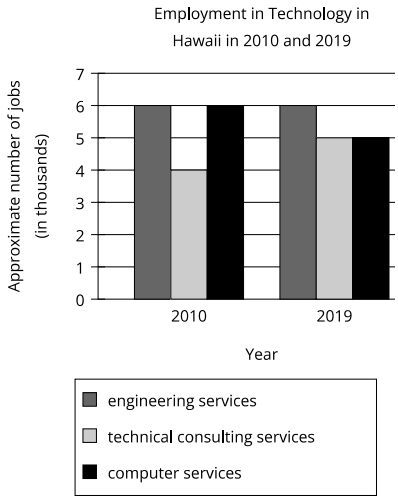
Which choice best describes data in the graph that support the researchers' conclusion?

(A) None of the three groups' average humility scores exceeded 3.5.

(B) The managers in the control group exhibited only slightly less humility on average than the managers in the two experimental groups did.

(C) The managers who reflected on a past mistake that resulted in learning exhibited more humility on average than the managers in the other two groups did.

(D) All three groups exhibited less humility on average than the researchers expected.



A student in Hawaii is interested in pursuing a career in technology and decides to do some research on local trends. The student notices that the number of jobs in computer services in 2010 was _____

ID b074cc05

72 Mark for Review Medium Explanation ›

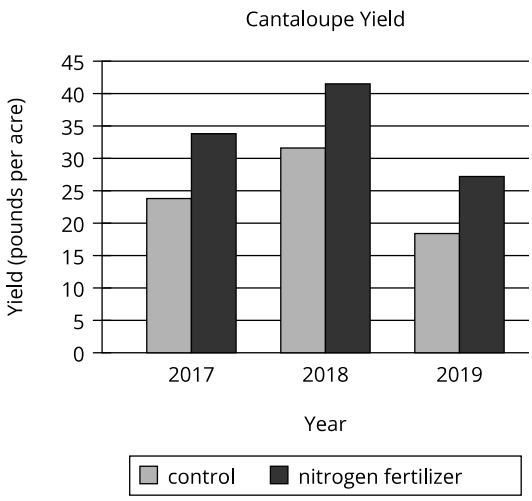
Which choice most effectively uses data from the graph to complete the statement?

(A) higher than the number of jobs in technical consulting services, and in 2019 was about the same as the number of jobs in engineering services.

(B) about the same as the number of jobs in engineering services, and in 2019 was about the same as the number of jobs in technical consulting services.

(C) lower than the number of jobs in engineering services, but in 2019 was higher than the number of jobs in engineering services.

(D) about the same as the number of jobs in technical consulting services, but in 2019 was lower than the number of jobs in technical consulting services.



To test the effects of a nitrogen fertilizer on cantaloupe production, researchers grew cantaloupe plants and harvested their fruit over three years. In each year, half the plants were grown using a nitrogen fertilizer, and the other half were grown using a control fertilizer that contained no nitrogen. The researchers concluded that the nitrogen fertilizer increases cantaloupe yield.

ID 1db1a9a6

73 Mark for Review Medium Explanation ›

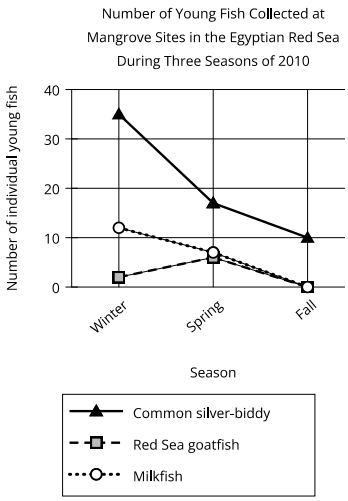
Which choice best describes data in the graph that support the researchers' conclusion?

(A) In every year of the experiment, plants treated with the nitrogen fertilizer had a yield of at least 30 pounds per acre.

(B) In every year of the experiment, plants treated with the nitrogen fertilizer had a greater yield than did plants treated with the control fertilizer.

(C) The 2018 yield for plants treated with the control fertilizer was greater than was the 2019 yield for plants treated with the nitrogen fertilizer.

(D) The yield for plants treated with the nitrogen fertilizer increased from 2017 to 2018.



Mangroves are trees or bushes that grow on the coastlines of seas and rivers. Areas with mangroves are great places for young fish since they help keep these fish fed and protected while they grow. To study the importance of mangroves to young fish, researchers Mohamed A.Abu El-Regal and Nesreen K. Ibrahim collected and identified young fish from three different mangrove sites in the Egyptian Red Sea. They collected fish in the winter, spring, and autumn of 2010, collecting a total of 269 fish from 21 different species. For some species, more fish were collected in the winter than the other two seasons, for instance: _____

ID 37a49687

74 Mark for Review Medium Explanation ›

Which choice most effectively uses the data in the graph to complete the example?

(A) more common silver-biddy and milkfish were collected in the winter than in either of the other two seasons.

(B) the common silver-biddy was collected more frequently than the other two species in all three seasons.

(C) in the spring, researchers collected more Red Sea goldfish than they collected from the other two species.

(D) in the fall, researchers collected 10 common silver-biddy but collected no milkfish or Red Sea goatfish.

Effect of Paywall Introduction on Newspaper Companies' Revenues

Newspaper	Total revenue change ($ in thousands)	Percentage change (%)	Newspaper size
Los Angeles Times	93,966	12.5	large
The New York Times	235,788	20	large
The Denver Post	−3,765	−1	small
Sun Sentinel	−24,899	−11.9	small
Chicago Tribune	94,492	19	large

Digital paywalls restrict access to online content to those with a paid subscription. In an investigation of the effect of paywalls on newspaper company revenues for print and digital subscriptions and advertising, Doug J. Chung and colleagues compared actual outcomes (with a paywall) to control estimates (without a paywall). The researchers concluded that introducing a paywall is generally more beneficial for larger newspapers, which have high circulation and tend to offer a substantial amount of unique online content.

ID 145da981

75 Mark for Review Medium Explanation ›

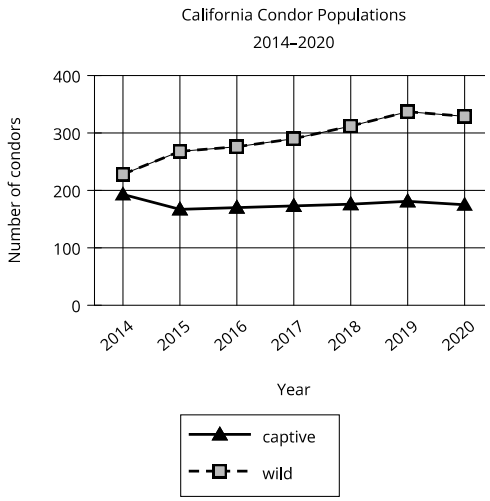
Which choice best describes data from the table that support Chung and colleagues' conclusion?

(A) The *Chicago Tribune* and the *Los Angeles Times* had similar total revenue changes, but the *Los Angeles Times* had a smaller percentage change.

(B) The *Los Angeles Times* had a 12.5% revenue change, while the *Chicago Tribune* had a 19% revenue change.

(C) *The New York Times* had a 20% revenue change, while the *Denver Post* had a −1% revenue change.

(D) *The Denver Post* had only a −1% revenue change, which was the smallest percentage change of the selected companies.



The California Condor Recovery Program is working to protect this large, rare American vulture from extinction. The program captured 27 wild condors in 1987 in order to protect and breed them. Captive birds have been reintroduced into the wild since 1992. Although the California condor is still a rare species, many biologists claim that the program has been reasonably successful.

ID 224428ac

76 Mark for Review Medium Explanation ›

Which choice best describes data from the graph that support the biologists' claim?

(A) The number of captive California condors steadily decreased between 2014 and 2020.

(B) The numbers of California condors living both in captivity and in the wild decreased only slightly from 2019 to 2020.

(C) The difference between the number of captive and wild California condors remained relatively steady between 2014 and 2017.

(D) The number of wild California condors increased overall from 2014 to 2020 and exceeded the number of those living in captivity.

Five of the Responses to Survey about Actions to Conserve Energy

Action	Action category	Percentage of respondents selecting action (%)
Use efficient cars/hybrids	efficiency	2.8
Change thermostat setting	curtailment	6.3
Use bike or public transportation instead of car	curtailment	12.9
Use efficient light bulbs	efficiency	3.6
Turn off lights	curtailment	19.6

In a survey of public perceptions of energy use, researcher Shahzeen Attari and her team asked respondents to name the most effective action ordinary people can take to conserve energy. The team categorized each action as either an efficiency or a curtailment and found that respondents tended to name curtailments more often than they did efficiencies. For example, 19.6% of respondents stated that the most effective way to conserve energy is to turn off the lights, while only _____

ID 84136d69

77 Mark for Review Medium Explanation ›

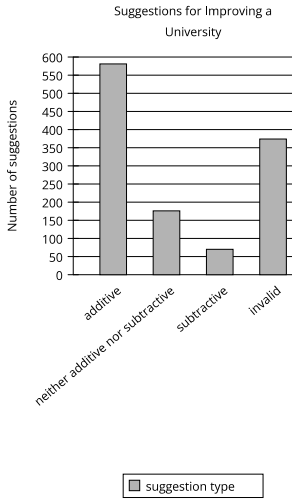
Which choice most effectively uses data from the table to complete the text?

(A) 6.3% of respondents said it was most effective to use efficient cars or hybrids.

(B) 2.8% of respondents said it was most effective to change the thermostat setting.

(C) 12.9% of respondents said it was most effective to use a bike or public transportation.

(D) 3.6% of respondents said it was most effective to use efficient light bulbs.



Gabrielle Adams and colleagues reviewed suggestions for improving a university that had been submitted to the university's president. They coded each suggestion as additive (the idea suggested adding something new to the university), subtractive (the idea suggested removing something from the university), neither additive nor subtractive, or invalid (the idea was not comprehensible). The data illustrated people's tendency to overlook the possibility of removing things to achieve improvements:

_____

ID 23e2421a

78 Mark for Review Medium Explanation ›

Which choice most effectively uses data in the graph to complete the statement?

(A) around 175 suggestions were coded as neither additive nor subtractive, whereas around 575 suggestions were coded as additive.

(B) more than 350 suggestions were coded as invalid, whereas fewer than 100 suggestions were coded as subtractive.

(C) fewer than 100 suggestions were coded as subtractive, whereas more than 550 suggestions were coded as additive.

(D) around 575 suggestions were coded as additive, whereas around 175 suggestions were coded as subtractive.

Partial List of Candidate Species for De-extinction

Common name	Scientific name	Became extinct
Huia	*Heteralocha acutirostris*	1907
Caribbean monk seal	*Monachus tropicalis*	1952
Passenger pigeon	*Ectopistes migratorius*	1914
Saber-toothed cat	*Smilodon*	11,000 years before present
Woolly mammoth	*Mammuthus primigenius*	6,400 years before present

The passage of time is among the many obstacles faced by scientists who are pursuing de-extinction efforts—that is, efforts to use breeding or a mixture of cloning and genetic engineering to bring back extinct species. Specifically, researchers are concerned that the longer a species has been extinct, the less likely it is that a suitable habitat still exists for that species. Among candidate species for de-extinction, this problem would be especially concerning for the _____

ID df8caadd

79 Mark for Review Medium Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) passenger pigeon (*Ectopistes migratorius*), which became extinct only a few years after the huia (*Heteralocha acutirostris*).

(B) saber-toothed cat (*Smilodon*), which became extinct 11,000 years ago.

(C) woolly mammoth (*Mammuthus primigenius*), which became extinct several thousand years before the saber-toothed cat (*Smilodon*).

(D) Caribbean monk seal (*Monachus tropicalis*), which became extinct in 1952.

Guilds in French Cities in the Late Eighteenth Century

City	Date	Inhabitants	Number of guilds	Inhabitants per guild
Paris	1766	600,000	133	4,511
Bordeaux	1762	80,000	49	1,633
Rouen	1775	74,000	112	661
Lyon	1789	143,000	72	1,986

Guilds—local associations of artisans and merchants in the same industry—were widespread in France from the medieval period until the late eighteenth century. But guilds were much more numerous relative to the population in some cities than in others: for example, _____

ID 5ff1ba73

80 Mark for Review Medium Explanation >

Which choice most effectively uses data from the table to complete the statement?

(A) there were 49 guilds in Bordeaux but 72 guilds in Lyon despite the two cities having nearly equal numbers of inhabitants.

(B) Lyon had far fewer inhabitants than Paris did but had many more guilds.

(C) there was one guild for every 661 inhabitants in Rouen but one guild for every 4,511 inhabitants in Paris.

(D) Paris had 133 guilds and 600,000 inhabitants, or one guild for every 4,511 inhabitants.

Approximate Rates of Speech and Information Conveyed for Five Languages

Language	Rate of speech (syllables per second)	Rate of information conveyed (bits per second)
Serbian	7.2	39.1
Spanish	7.7	42.0
Vietnamese	5.3	42.5
Thai	4.7	33.8
Hungarian	5.9	34.6

A group of researchers working in Europe, Asia, and Oceania conducted a study to determine how quickly different Eurasian languages are typically spoken (in syllables per second) and how much information they can effectively convey (in bits per second). They found that, although languages vary widely in the speed at which they are spoken, the amount of information languages can effectively convey tends to vary much less. Thus, they claim that two languages with very different spoken rates can nonetheless convey the same amount of information in a given amount of time.

ID 94978129

81 Mark for Review Medium Explanation >

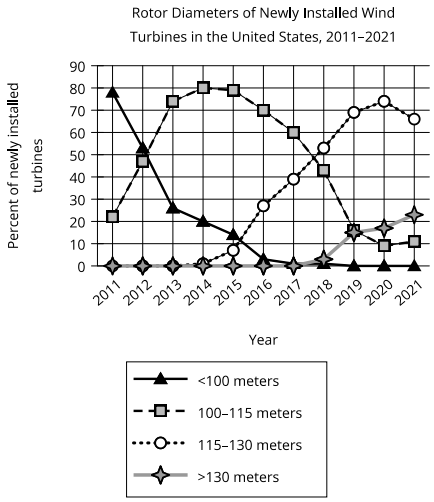
Which choice best describes data from the table that support the researchers' claim?

(A) Among the five languages in the table, Thai and Hungarian have the lowest rates of speech and the lowest rates of information conveyed.

(B) Vietnamese conveys information at approximately the same rate as Spanish despite being spoken at a slower rate.

(C) Among the five languages in the table, the language that is spoken the fastest is also the language that conveys information the fastest.

(D) Serbian and Spanish are spoken at approximately the same rate, but Serbian conveys information faster than Spanish does.



All other things being equal, the larger a wind turbine's rotor diameter (the diameter of the imaginary circle swept by the turbine's rotating blades), the greater amount of energy the turbine can generate. In a research paper on wind power, a student claims that in the United States, the amount of energy generated per newly installed turbine increased substantially between 2011 and 2021.

ID 805bd1d6

82 Mark for Review Medium Explanation ›

Which choice best describes data in the graph that support the student's claim?

(A) No turbines installed in 2011 had rotor diameters greater than 115 meters, whereas the majority of turbines installed in 2021 had rotor diameters greater than 130 meters.

(B) Most turbines installed in 2011 had rotor diameters of less than 100 meters, whereas most turbines installed in 2021 had rotor diameters of at least 115 meters.

(C) In 2011, nearly 80% of turbines installed had rotor diameters of less than 100 meters, whereas only a little more than 20% of turbines installed that year had rotor diameters of 100–115 meters.

(D) The percentage of newly installed turbines with rotor diameters greater than 130 meters increased every year between 2011 and 2021.

Properties of Select Rotating Radio Transients

Name	Right ascension (hours)	Period (seconds)	Frequency (hertz)
J0545-03	5:45	1.074	0.931
J1654-2335	16:54:03	0.545	1.834
J0103+54	1:03:37	0.354	2.822
J0121+53	1:21	2.725	0.367
J0614-03	6:15	0.136	7.353

A student is researching rotating radio transients (RRATs), a subclass of pulsar stars characterized by short pulses of radio waves. The time between consecutive pulses of an RRAT is referred to as a period. Looking at the table, the student determines that _____

ID 6317295c

83 Mark for Review Medium Explanation ›

Which choice most effectively uses data from the table to complete the statement?

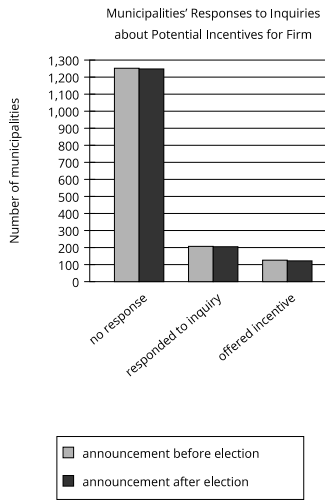
(A) J0614-03 has the shortest amount of time between consecutive pulses of all the RRATs in the table.

(B) J0545-03 and J0121+53 have the same amount of time between consecutive pulses.

(C) J1654-2335 has the longest amount of time between consecutive pulses of all the RRATs in the table.

(D) J0103+54 and J0121+53 both have more than one second of time between consecutive pulses.

HARD 50 questions



In the United States, firms often seek incentives from municipal governments to expand to those municipalities. A team of political scientists hypothesized that municipalities are much more likely to respond to firms and offer incentives if expansions can be announced in time to benefit local elected officials than if they can't. The team contacted officials in thousands of municipalities, inquiring about incentives for a firm looking to expand and indicating that the firm would announce its expansion on a date either just before or just after the next election.

ID a15b3219

84 Mark for Review Hard Explanation ›

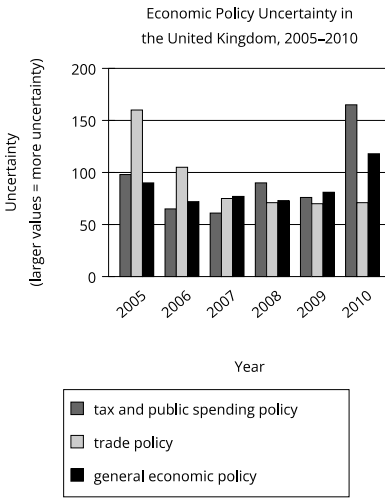
Which choice best describes data from the graph that weaken the team's hypothesis?

(A) A large majority of the municipalities that received an inquiry mentioning plans for an announcement before the next election didn't respond to the inquiry.

(B) The proportion of municipalities that responded to the inquiry or offered incentives didn't substantially differ across the announcement timing conditions.

(C) Only around half the municipalities that responded to inquiries mentioning plans for an announcement before the next election offered incentives.

(D) Of the municipalities that received an inquiry mentioning plans for an announcement date after the next election, more than 1,200 didn't respond and only around 100 offered incentives.



High levels of public uncertainty about which economic policies a country will adopt can make planning difficult for businesses, but measures of such uncertainty have not tended to be very detailed. Recently, however, economist Sandile Hlatshwayo analyzed trends in news reports to derive measures not only for general economic policy uncertainty but also for uncertainty related to specific areas of economic policy, like tax or trade policy. One revelation of her work is that a general measure may not fully reflect uncertainty about specific areas of policy, as in the case of the United Kingdom, where general economic policy uncertainty _____

ID 702eb7e3

85 Mark for Review — Hard — Explanation ›

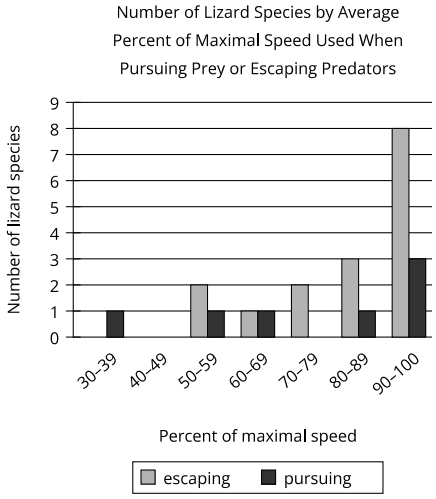
Which choice most effectively uses data from the graph to illustrate the claim?

(A) aligned closely with uncertainty about tax and public spending policy in 2005 but differed from uncertainty about tax and public spending policy by a large amount in 2009.

(B) was substantially lower than uncertainty about tax and public spending policy each year from 2005 to 2010.

(C) reached its highest level between 2005 and 2010 in the same year that uncertainty about trade policy and tax and public spending policy reached their lowest levels.

(D) was substantially lower than uncertainty about trade policy in 2005 and substantially higher than uncertainty about trade policy in 2010.



It may seem that the optimal strategy for an animal pursuing prey or escaping predators is to move at maximal speed, but the energy expense of exploiting full speed capacity can disfavor such a strategy even in escape contexts, as evidenced by the fact that _____

ID 1281dfd5

86 Mark for Review — Hard — Explanation ›

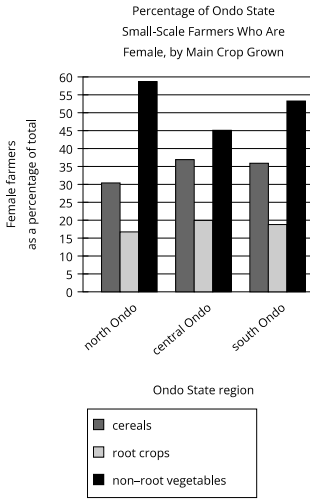
Which choice most effectively uses data from the graph to complete the text?

(A) most lizard species use about the same percentage of their maximal speed when escaping predation as they do when pursuing prey.

(B) multiple lizard species move at an average of less than 90% of their maximal speed while escaping predation.

(C) more lizard species use, on average, 90%–100% of their maximal speed while escaping predation than use any other percentage of their maximal speed.

(D) at least 4 lizard species use, on average, less than 100% of their maximal speed while pursuing prey.



Geographer Adebayo Oluwole Eludoyin and his colleagues surveyed small-scale farmers in three locations in Ondo State, Nigeria—which has mountainous terrain in the north, an urbanized center, and coastal terrain in the south—to learn more about their practices, like the types of crops they mainly cultivated. In some regions, female farmers were found to be especially prominent in the cultivation of specific types of crops and even constituted the majority of farmers who cultivated those crops; for instance, _____

ID 403fb4e4

87 Mark for Review Hard Explanation ›

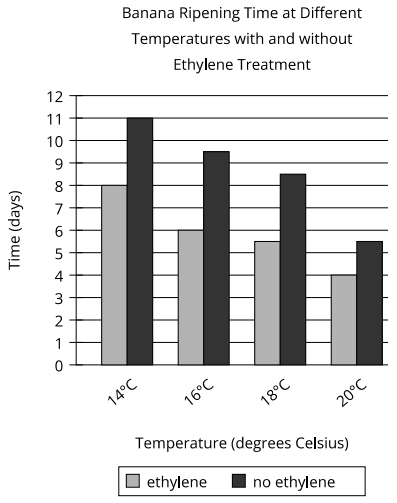
Which choice most effectively uses data from the graph to complete the example?

(A) most of the farmers who mainly cultivated cereals and most of the farmers who mainly cultivated non–root vegetables in south Ondo were women.

(B) more women in central Ondo mainly cultivated root crops than mainly cultivated cereals.

(C) most of the farmers who mainly cultivated non–root vegetables in north and south Ondo were women.

(D) a relatively equal proportion of women across the three regions of Ondo mainly cultivated cereals.



A student is conducting an experiment to test the effect of temperature and ethylene treatment on the ripening speed of bananas. The student treated some bananas with ethylene while leaving others untreated, then allowed both types of bananas to ripen at one of four different temperatures. Comparing the data for bananas with and without ethylene, the student concluded that _____

ID 040583a5

88 Mark for Review Hard Explanation ›

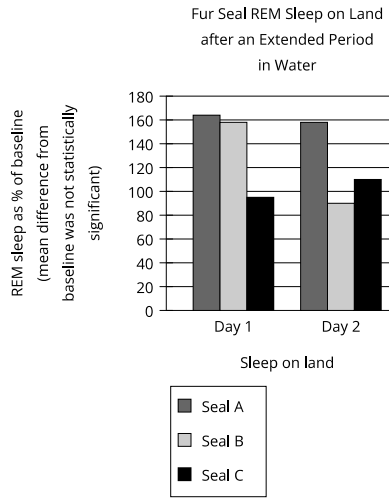
Which choice most effectively uses data from the graph to complete the student's conclusion?

(A) 20°C is the ideal temperature at which to store bananas to slow ripening time.

(B) for those bananas that were not treated with ethylene, differences in temperature were not associated with absolute differences in ripening time.

(C) bananas treated with ethylene ripen faster at 14°C and 16°C than at 18°C and 20°C.

(D) ethylene was associated with a greater absolute change in ripening time at 14°C, 16°C, and 18°C than at 20°C.



Research suggests that REM sleep in animals is homeostatically regulated: animals compensate for periods of REM sleep deprivation by increasing subsequent REM sleep. When on land, fur seals get enough REM sleep, but during the weeks they're in the water, they get almost none. In a study of fur seals' sleep habits, researchers recorded the REM sleep (as a percentage of baseline) of fur seals once they had returned to land. They concluded that REM sleep may not be homeostatically regulated in fur seals, citing as evidence the fact that the seals in the study _____

ID 69d913d1

89 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the graph to complete the text?

(A) didn't consistently demonstrate a significant increase in REM sleep after their period of deprivation in the water.

(B) showed no significant difference between REM sleep after returning to land and REM sleep while in the water.

(C) didn't show significantly less REM sleep during the second day after returning to land than they did during the first day.

(D) showed no significant differences from one another in baseline levels of REM sleep.

Three Studies' Estimated Average Velocity of LMC

Researchers	Study year	Estimated average velocity
Murai and Fujimoto	1980	344 km/s
Kallivayalil and colleagues	2006	378 km/s
Gardiner and colleagues	1994	297 km/s

In 2006, Nitya Kallivayalil and colleagues calculated the most accurate estimate yet of the average velocity (in kilometers per second) of the Large Magellanic Cloud (LMC) galaxy. Before the 2006 study, estimates of the average velocity were low enough for the LMC to maintain an orbit around the Milky Way galaxy, but according to an analysis by Gurtina Besla and colleagues, the estimated velocity from the 2006 study is too high for the LMC to maintain such an orbit. Therefore, if Besla and colleagues are correct, the maximum average velocity for the LMC that would allow it to maintain orbit around the Milky Way is likely _____

ID bc7b1a04

90 Mark for Review Hard Explanation ›

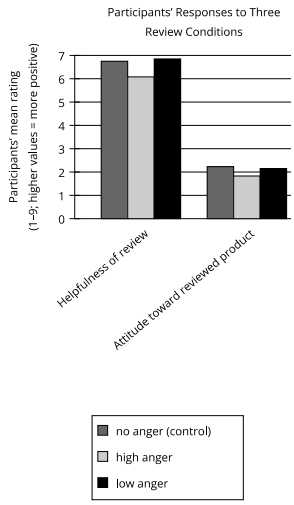
Which choice most effectively uses data from the table to complete the statement?

(A) above 344 km/s but below 378 km/s.

(B) above 297 km/s but below 344 km/s.

(C) above 378 km/s.

(D) below 297 km/s.



To understand how expressions of anger in reviews of products affect readers of those reviews, business scholar Dezhi Yin and colleagues measured study participants' responses to three versions of the same negative review—a control review expressing no anger, a review expressing a high degree of anger, and a review expressing a low degree of anger. Reviewing the data, a student concludes that the mere presence of anger in a review may not negatively affect readers' perceptions of the review, but a high degree of anger in a review does worsen readers' perceptions of the review.

ID d5b9ed0d

91 Mark for Review — Hard — Explanation >

Which choice best describes data from the graph that support the students' conclusion?

(A) On average, participants' ratings of the helpfulness of the review were substantially higher than were participants' ratings of the reviewed product regardless of which type of review participants had seen.

(B) Compared with participants who saw the control review, participants who saw the low-anger review rated the review as slightly more helpful, whereas participants who saw the high-anger review rated the review as less helpful.

(C) Participants who saw the low-anger review rated the review as slightly more helpful than participants who saw the control review did, but participants' attitude toward the reviewed product was slightly worse when participants saw the low-anger review than when they saw the no-anger review.

(D) Compared with participants who saw the low-anger review, participants who saw the high-anger review rated the review as less helpful and had a less positive attitude toward the reviewed product.

Number and Origin of Clamshell Tools Found at Different Levels Below the Surface in Neanderthal Cave

Depth of tools found below surface in cave (meters)	Clamshells that Neanderthals collected from the beach	Clamshells that Neanderthals harvested from the seafloor
3–4	99	33
6–7	1	0
4–5	2	0
2–3	7	0
5–6	18	7

Studying tools unearthed at a cave site on the western coast of Italy, archaeologist Paola Villa and colleagues have determined that prehistoric Neanderthal groups fashioned them from shells of clams that they harvested from the seafloor while wading or diving or that washed up on the beach. Clamshells become thin and eroded as they wash up on the beach, while those on the seafloor are smooth and sturdy, so the research team suspects that Neanderthals prized the tools made with seafloor shells. However, the team also concluded that those tools were likely more challenging to obtain, noting that _____

ID 6a6bbac3

92 Mark for Review Hard Explanation ›

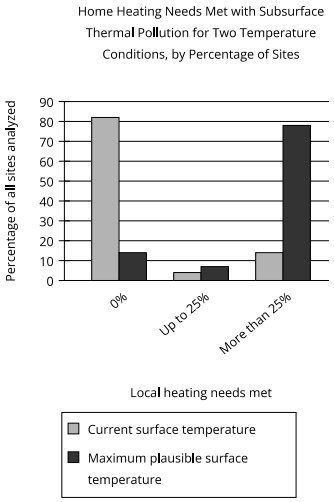
Which choice most effectively uses data from the table to support the research team's conclusion?

(A) at each depth below the surface in the cave, the difference in the numbers of tools of each type suggests that shells were easier to collect from the beach than to harvest from the seafloor.

(B) the highest number of tools were at a depth of 3–4 meters below the surface, which suggests that the Neanderthal population at the site was highest during the related period of time.

(C) at each depth below the surface in the cave, the difference in the numbers of tools of each type suggests that Neanderthals preferred to use clamshells from the beach because of their durability.

(D) the higher number of tools at depths of 5–6 meters below the surface in the cave than at depths of 4–5 meters below the surface suggests that the size of clam populations changed over time.



Urbanization, industrialization, and the warming climate create thermal pollution (excess heat) in the shallow subsurface soil. Susanne A. Benz and colleagues analyzed thousands of sites on three continents under one scenario in which surface temperature remains at the current level and under another in which the surface reaches the maximum plausible temperature. They then categorized each site according to the percentage of local home heating needs that could be met using this excess subsurface heat. The team concluded that if surface temperature approaches the maximum plausible level, the percentage of sites where thermal pollution could feasibly contribute to meeting home heating needs will increase.

ID be19faa1

93 Mark for Review — Hard — Explanation >

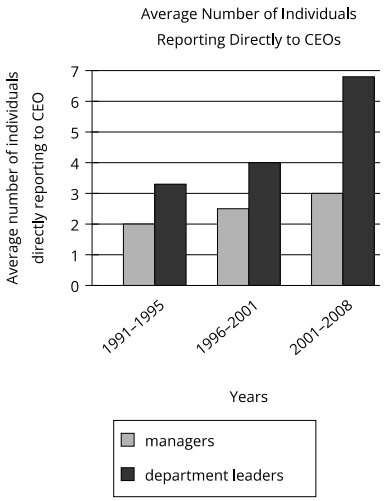
Which choice best describes data in the graph that support Benz and colleagues' conclusion?

(A) Under both temperature conditions, less than 10% of sites were in the up-to-25% group, but at the maximum plausible surface temperature, almost 80% of sites could have all their local heating needs met by thermal pollution.

(B) At current surface temperatures, more than 80% of the sites have no need for supplemental local home heating from subsurface thermal pollution, but at the maximum plausible surface temperature, more than 70% of sites exhibit significantly greater home heating needs.

(C) At current surface temperatures, more than 80% of sites can meet, at most, 25% of local home heating needs with subsurface thermal pollution, but at the maximum plausible surface temperature, more than 80% of sites can meet greater than 25% of local home heating needs.

(D) At current surface temperatures, more than 80% of the sites cannot use subsurface thermal pollution to meet any portion of local home heating needs, but at the maximum plausible surface temperature, that percentage drops below 20%.



Considering a large sample of companies, economics experts Maria Guadalupe, Julie Wulf, and Raghuram Rajan assessed the number of managers and leaders from different departments who reported directly to a chief executive officer (CEO). According to the researchers, the findings suggest that across the years analyzed, there was a growing interest among CEOs in connecting with more departments in their companies.

ID 645fd11a

94 Mark for Review — Hard — Explanation ›

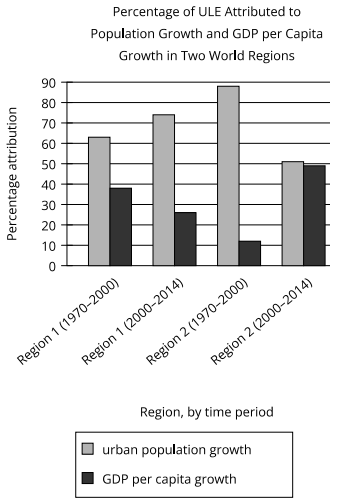
Which choice best describes data from the graph that support the researchers' conclusion?

(A) The average numbers of managers and department leaders reporting directly to their CEO didn't fluctuate from the 1991–1995 period to the 2001–2008 period.

(B) The average number of managers reporting directly to their CEO was highest in the 1996–2001 period.

(C) The average number of department leaders reporting directly to their CEO was greater than the average number of managers reporting directly to their CEO in each of the three periods studied.

(D) The average number of department leaders reporting directly to their CEO rose over the three periods studied.



In a study of urban physical expansion, Richa Mahtta et al. conducted a meta-analysis of more than 300 cities worldwide to determine whether urban land expansion (ULE) was more strongly influenced by urban population growth or by growth in gross domestic product (GDP) per capita, a measure of economic activity. Because efficient national government is necessary to provide urban services and infrastructure that attract economic investment, Mahtta et al. propose that absent other factors, the importance of GDP per capita growth to ULE would likely increase relative to the importance of population growth as governments become more efficient. If true, this suggests the possibility that _____

ID a16128e2

95 Mark for Review Hard Explanation ›

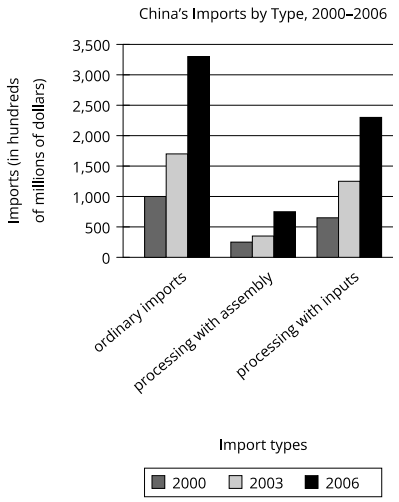
Which choice most effectively uses data from the graph to complete the statement?

(A) national governments of countries in Region 1 experienced declines in efficiency in the period from 2000 to 2014, relative to the period from 1970 to 2000.

(B) countries in Region 1 experienced a slower rate of economic growth in the period from 2000 to 2014 than countries in Region 2 did, despite increasing national government efficiency in Region 1.

(C) national governments of most countries in Region 2 became more efficient in the period from 2000 to 2014 than they had been in the period from 1970 to 2000, but those of several countries in this region did not.

(D) national governments of countries in Region 1 and in Region 2 generally became more efficient in the period from 2000 to 2014 than they had been in the period from 1970 to 2000, but at different rates.



A student is researching the Chinese government's 1992 shift to a market economy that emphasizes trade liberalization. One means of trade liberalization involves expanding from ordinary imports into an emphasis on processing imports, which have two types: processing with assembly (in which a firm obtains raw materials from a foreign trading partner without payment and sells the final goods to that partner, charging for assembly) and processing with inputs (in which a firm expends capital to buy raw materials from a trading partner, processes them into final goods, and sells those goods to whichever trading partner it chooses). The student asserts that while initial efforts at trade liberalization were shaped by Chinese firms' limited capital, this situation resolved during the 2000s.

ID da438257

96 Mark for Review Hard Explanation ›

Which choice best describes data from the graph that support the student's assertion?

(A) Processing imports with inputs were greater than both ordinary imports and processing imports with assembly in 2006.

(B) From 2000 to 2006, processing imports with inputs rose much more sharply than processing imports with assembly did.

(C) From 2000 to 2006, neither processing imports with inputs nor processing imports with assembly were greater than ordinary imports.

(D) Processing imports with assembly were greater in 2006 than processing imports with inputs in 2000.

A sociology student is reading an essay on the median age of first marriage in Western countries throughout the twentieth century. The author of the essay cites factors common to these countries that the author believes caused an increase in the median age of first marriage, such as new technologies that shortened the time needed for domestic chores, making two-person households less necessary and living alone more viable. The student asserts that beyond these factors there must be additional ones specific to particular Western countries that influenced the increase of age at first marriage.

ID 01f19bf3

97 Mark for Review — Hard — Explanation ›

Which choice most effectively uses data from the graph that support the student's assertion?

(A) Between 1970 and 2000, the median age of first marriage rose more sharply for men in England and Wales than it did for men in the United States.

(B) The median age of first marriage for men in England and Wales was lower in 1970 than in 1950 or 1990.

(C) Between 1900 and 2000, the median age of first marriage for women in England and Wales was consistently higher than for women in the United States, as was the case for men.

(D) In England and Wales, the median age of first marriage was consistently higher for men than for women between 1900 and 2000, but this was not always the case in the United States.

Employment by Sector in France and the United States, 1800–2012 (% of total employment)

Year	Agriculture in France	Manufacturing in France	Services in France	Agriculture in US	Manufacturing in US	Services in US
1800	64	22	14	68	18	13
1900	43	29	28	41	28	31
1950	32	33	35	14	33	53
2012	3	21	76	2	18	80

Rows in table may not add up to 100 due to rounding.

Over the past two hundred years, the percentage of the population employed in the agricultural sector has declined in both France and the United States, while employment in the service sector (which includes jobs in retail, consulting, real estate, etc.) has risen. However, this transition happened at very different rates in the two countries. This can be seen most clearly by comparing the employment by sector in both countries in _____

ID 3fc06a91

98 Mark for Review — Hard — Explanation ›

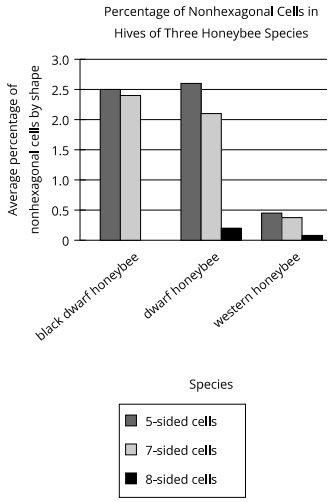
Which choice most effectively uses data from the table to complete the statement?

(A) 1900 with the employment by sector in 1950.

(B) 1800 with the employment by sector in 2012.

(C) 1900 with the employment by sector in 2012.

(D) 1800 with the employment by sector in 1900.



Honeybee hives consist mainly of hexagonal (six-sided) units called cells, in which queens lay eggs. Hexagonal cells for eggs that develop into nonreproductive workers are smaller than those for eggs that develop into reproductive drones, though the size difference varies by species. Difference in cell size results in a construction problem—it's hard to neatly connect sections of small cells to sections of large cells—that worsens as the difference increases. To fill in gaps between the sections when building a hive, bees rely on cells that have more or fewer than six sides. A student studying beehive structure consults data on three species, concluding that _____

ID f71802d6

99 Mark for Review — Hard — Explanation >

Which choice most effectively uses data from the graph to complete the student's conclusion?

(A) cells for worker eggs are probably closer in size to cells for drone eggs in the hives of the western honeybee than in the hives of the dwarf honeybee and the black dwarf honeybee.

(B) both the western honeybee and the black dwarf honeybee probably reserve eight-sided cells for drone eggs, while the dwarf honeybee likely deposits drone eggs in seven-sided cells.

(C) the western honeybee probably relies on many more geometrical shapes when constructing cells than either the dwarf honeybee or the black dwarf honeybee does.

(D) the percentage of hexagonal cells is probably slightly lower in the hives of the western honeybee than in the hives of the dwarf honeybee and the black dwarf honeybee.

Average Nitrate and Phosphate Concentrations in Seawater after Volcanic Eruption

Nutrient	Seawater in lava-affected area, 5–45 meters below surface	Seawater in lava-affected area, 75–125 meters below surface	Seawater outside of lava-affected area, 5–45 meters below surface	Seawater outside of lava-affected area, 75–125 meters below surface
Nitrate (micromoles per liter)	3.1	0.4	≤0.03	≤0.01
Phosphate (micromoles per liter)	0.17	0.09	0.14	0.06

After a volcanic eruption spilled lava into North Pacific Ocean waters, a dramatic increase of diatoms (a kind of phytoplankton) near the surface occurred. Scientists assumed the diatoms were thriving on nutrients such as phosphate from the lava, but analysis showed these nutrients weren't present near the surface in forms diatoms can consume. However, there was an abundance of usable nitrate, a nutrient usually found in much deeper water and almost never found in lava. Microbial oceanographer Sonya Dyhrman and colleagues believe that as the lava plunged nearly 300 meters below the surface it dislodged pockets of this nutrient, releasing it to float upward, given that _____

ID e1546fd6

100 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) at 5–45 meters below the surface, the average concentration of phosphate was about the same in the seawater in the lava-affected area as in the seawater outside of the lava-affected area.

(B) for both depth ranges measured, the average concentrations of nitrate were substantially higher in the seawater in the lava-affected area than in the seawater outside of the lava-affected area.

(C) for both depth ranges measured in the seawater in the lava-affected area, the average concentrations of nitrate were substantially higher than the average concentrations of phosphate.

(D) in the seawater outside of the lava-affected area, there was little change in the average concentration of nitrate from 75–125 meters below the surface to 5–45 meters below the surface.

Effects of Mycorrhizal Fungi on 3 Plant Species

Plant species	Mycorrhizal host	Average mass of plants grown in soil containing mycorrhizal fungi (in grams)	Average mass of plants grown in soil treated to kill fungi (in grams)
Corn	yes	15.1	3.8
Marigold	yes	10.2	2.4
Broccoli	no	7.5	7

Mycorrhizal fungi in soil benefits many plants, substantially increasing the mass of some. A student conducted an experiment to illustrate this effect. The student chose three plant species for the experiment, including two that are mycorrhizal hosts (species known to benefit from mycorrhizal fungi) and one nonmycorrhizal species (a species that doesn't benefit from and may even be harmed by mycorrhizal fungi). The student then grew several plants from each species both in soil containing mycorrhizal fungi and in soil that had been treated to kill mycorrhizal and other fungi. After several weeks, the student measured the plants' average mass and was surprised to discover that _____

ID 9452092c

101 Mark for Review Hard Explanation >

Which choice most effectively uses data from the table to complete the statement?

(A) broccoli grown in soil containing mycorrhizal fungi had a slightly higher average mass than broccoli grown in soil that had been treated to kill fungi.

(B) corn grown in soil containing mycorrhizal fungi had a higher average mass than broccoli grown in soil containing mycorrhizal fungi.

(C) marigolds grown in soil containing mycorrhizal fungi had a much higher average mass than marigolds grown in soil that had been treated to kill fungi.

(D) corn had the highest average mass of all three species grown in soil that had been treated to kill fungi, while marigolds had the lowest.

Data Sources for Neptune Temperature Analysis

Instrument	Observatory	Data type	Observation years
TEXES (Texas Echelon Cross Echelle Spectrograph)	Gemini Observatory	spectroscopy	2007, 2019
T-ReCS (Thermal-Region Camera Spectrograph)	Gemini Observatory	infrared imaging	2007, 2010
LWS (Long Wavelength Spectrometer)	Keck Observatory	infrared imaging	2003
VISIR (VLT Imager and Spectrometer for mid-InfraRed)	European Southern Observatory	spectroscopy	2006

Julianne I. Moses and colleagues have reported that Neptune may have cooled significantly between 2003 and 2020. The team reached this conclusion by analyzing existing infrared imaging and spectroscopy data about the planet obtained from various instruments in different years. Of the team's sources listed in the table, the earliest example of spectroscopy data included in the analysis was obtained in _____.

ID 626a1308

102 Mark for Review — Hard — Explanation ›

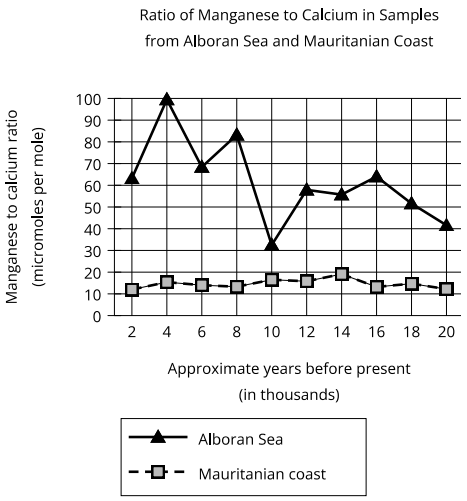
Which choice most effectively uses data from the table to complete the text?

(A) 2007 using TEXES at the Gemini Observatory.

(B) 2007 using T-ReCS at the Gemini Observatory.

(C) 2006 using VISIR at the European Southern Observatory.

(D) 2003 using LWS at the W.M. Keck Observatory.



The population of the coral *Lophelia pertusa* declined significantly around 9,000 years ago in the Alboran Sea and around 11,000 years ago near the Mauritanian coast. Using the ratio of manganese to calcium, which inversely correlates with ocean oxygenation levels, marine scientist Rodrigo da Costa Portilho-Ramos and colleagues evaluated whether oxygenation played a role in the declines of *L. pertusa*. The researchers concluded that oxygenation may have been important in the Alboran Sea but not near the Mauritanian coast, since _____.

ID 3233c162

103 Mark for Review — Hard — Explanation ›

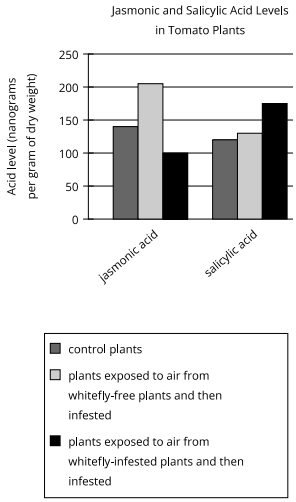
Which choice most effectively uses data from the graph to complete the statement?

(A) a substantial increase in oxygenation in the Alboran Sea corresponded with the local decline in *L. pertusa*, but the opposite relationship between oxygenation and *L. pertusa* was found near the Mauritanian coast.

(B) *L. pertusa* declined in the Alboran Sea during a period of substantial local decline in oxygenation, but *L. pertusa* declined near the Mauritanian coast during a period of little local change in oxygenation.

(C) oxygenation in the Alboran Sea was higher before the decline in *L. pertusa* than after the decline, whereas oxygenation near the Mauritanian coast was relatively low both before and after the decline in *L. pertusa*.

(D) oxygenation in the Alboran Sea tended to be substantially higher than oxygenation near the Mauritanian coast during the period studied.



In tomato plants, herbivory induces defensive production of jasmonic acid, while microbial infection induces defensive production of salicylic acid; plants also emit airborne chemicals to initiate the appropriate defense in nearby tomato plants. Researchers investigated the poor resistance tomato plants show to whitefly herbivory by exposing some plants to airborne chemicals from whitefly-free plants and others to airborne chemicals from whitefly-infested plants, then infesting both groups of plants with whiteflies. The researchers concluded that whiteflies induce tomato plants to emit chemicals that cause other tomato plants to preferentially defend against microbial infection even when under herbivorous attack.

ID d5da74be

104 Mark for Review — Hard — Explanation ›

Which choice best describes data from the graph that support the researchers' conclusion?

(A) When plants exposed to air from whitefly-free plants were infested, they produced more jasmonic acid than did control plants, whereas when plants exposed to air from whitefly-infested plants were infested, they produced less jasmonic acid and more salicylic acid than did control plants.

(B) When plants exposed to air from whitefly-infested plants were infested, they produced less jasmonic acid than salicylic acid, whereas when plants exposed to air from whitefly-free plants were infested, they produced about the same amount of jasmonic acid and salicylic acid.

(C) When plants exposed to air from whitefly-free plants were infested, they produced both jasmonic acid and salicylic acid, whereas when plants exposed to air from whitefly-infested plants were infested, they exclusively produced salicylic acid.

(D) When plants exposed to air from whitefly-infested plants were infested, they produced less jasmonic acid than did control plants, whereas when plants exposed to air from whitefly-free plants were infested, they produced more jasmonic acid and salicylic acid than did control plants.

Fiber Characteristics of Mouflon, Navajo-Churro, and Spanish Merino Sheep

Type of sheep	Diameter of outer coat fibers (in microns)	Diameter of inner coat fibers (in microns)
Spanish Merino	19–24	17–21
Navajo-Churro	35 or higher	10–35
Mouflon	150	15

Domestic sheep's wild ancestor, the mouflon, has a coarse outer coat and an inner coat of wool fiber that is finer in diameter and therefore much softer. In some domestic breeds, such as the Spanish Merino, the outer fiber is only marginally coarser than the inner, and the wool is soft overall. Thus, Merino wool is ideal for delicate garments worn against the skin. Meanwhile, the Navajo-Churro has been selected to retain the marked distinction between outer and inner fiber that the Merino has lost. Being coarser than Merino wool overall, Navajo-Churro wool yields a more durable yarn, which Diné (Navajo) weavers use in their celebrated rugs. Yet a comparison of the fiber characteristics of all three sheep reveals that _____

ID 4411e15b

105 Mark for Review Hard Explanation ›

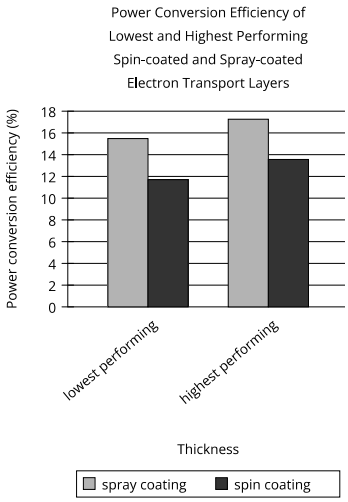
Which choice most effectively uses data from the table to complete the text?

(A) the selection process that enabled the Navajo-Churro to retain its somewhat coarse outer fiber also resulted in inner fiber that, at its softest, is softer than either the mouflon's or the Merino's inner fiber.

(B) the Navajo-Churro more closely resembles its ancestor, the mouflon, in the uniform softness of its inner fiber, while the Merino more closely resembles the mouflon in the variable diameter of its outer fiber.

(C) domestication resulted in a counterintuitive increase in the inner fiber's minimum diameter, making the inner fiber of the Merino and the Navajo-Churro less suitable for delicate garments than the mouflon's inner fiber is.

(D) the domestication of the mouflon and the subsequent selection process that produced the Merino and the Navajo-Churro resulted in greater softness of outer and inner fiber alike.



Perovskite solar cells convert light into electricity more efficiently than earlier kinds of solar cells, and manufacturing advances have recently made them commercially attractive. One limitation of the cells, however, has to do with their electron transport layer (ETL), through which absorbed electrons must pass. Often the ETL is applied through a process called spin coating, but such ETLs are fairly inefficient at converting input power to output power. André Taylor and colleagues tested a novel spray coating method for applying the ETL. The team produced ETLs of various thicknesses and concluded that spray coating holds promise for improving the power conversion efficiency of ETLs in perovskite solar cells.

ID 02848335

106 Mark for Review Hard Explanation ›

Which choice best describes data from the graph that support Taylor and colleagues' conclusion?

(A) Both the ETL applied through spin coating and the ETL applied through spray coating showed a power conversion efficiency greater than 10% at their lowest performing thickness.

(B) The lowest performing ETL applied through spray coating had a higher power conversion efficiency than the highest performing ETL applied through spin coating.

(C) The highest performing ETL applied through spray coating showed a power conversion efficiency of approximately 13%, while the highest performing ETL applied through spin coating showed a power conversion efficiency of approximately 11%.

(D) There was a substantial difference in power conversion efficiency between the lowest and highest performing ETLs applied through spray coating.

Ablation Rates for Three Elements in Cosmic Dust, by Dust Source

Element	SPC	AST	HTC	OCC
iron	20%	28%	90%	98%
potassium	44%	74%	97%	100%
sodium	45%	75%	99%	100%

Earth's atmosphere is bombarded by cosmic dust originating from several sources: short-period comets (SPCs), particles from the asteroid belt (ASTs), Halley-type comets (HTCs), and Oort cloud comets (OCCs). Some of the dust's material vaporizes in the atmosphere in a process called ablation, and the faster the particles move, the higher the rate of ablation. Astrophysicist Juan Diego Carrillo-Sánchez led a team that calculated average ablation rates for elements in the dust (such as iron and potassium) and showed that material in slower-moving SPC or AST dust has a lower rate than the same material in faster-moving HTC or OCC dust. For example, whereas the average ablation rate for iron from AST dust is 28%, the average rate for _____

ID 55df0275

107 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the table to complete the example?

(A) iron from SPC dust is 20%.

(B) sodium from OCC dust is 100%.

(C) iron from HTC dust is 90%.

(D) sodium from AST dust is 75%.

Percentage of Available Eggs Eaten by Cane Toad Tadpoles

Amphibian species (common name)	Percentage of eggs eaten	Native to Australia	Produces bufadienolide
Little red tree frog	1%	yes	no
Cane toad	90%	no	yes
Short-footed frog	7%	yes	no
Striped burrowing frog	10%	yes	no
Dainty green tree frog	1%	yes	no

Native to Latin America, the cane toad was introduced to Australia in the 1930s. In recent decades, tadpoles in the Australian population have been shown to consume eggs of their own species. A 2022 study showed that when presented with cane toad eggs as well as eggs of native Australian amphibians, cane toad tadpoles disproportionately consumed eggs of their own species. This behavior results from their attraction to bufadienolide, a chemical produced by the eggs of cane toads but not by the eggs of native amphibians. However, using data from this study, a student wishes to argue that the presence of bufadienolide doesn't entirely explain the cane toad tadpoles' preference for certain eggs over others.

ID 80fd9454

108 Mark for Review Hard Explanation ›

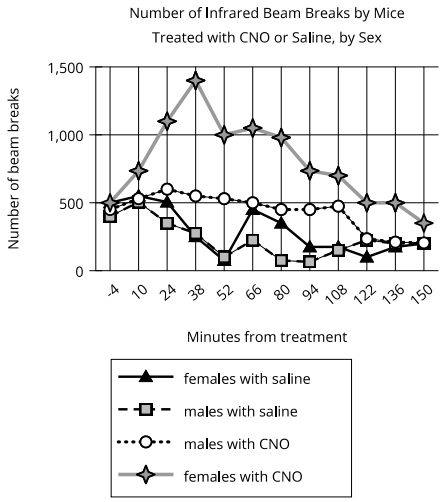
Which choice best describes data from the table that support the student's argument?

(A) The tadpoles consumed a higher percentage of the striped burrowing frog eggs than they did of the eggs of the dainty green tree frog.

(B) The tadpoles left a certain percentage of the eggs of each of the five species unharmed, thus ultimately allowing them to hatch.

(C) The tadpoles consumed a lower percentage of the short-footed frog eggs than they did of the eggs of their own species.

(D) The tadpoles consumed the same percentage of the dainty green tree frog eggs as they did of the little red tree frog eggs.



To investigate the influence of certain estrogen-responsive neurons on energy expenditure, biologist Stephanie Correa et al. treated female and male mice with either saline solution or clozapine-N4-oxide (CNO), which activates the neurons. Monitoring the activity levels of the mice by measuring how frequently the animals broke infrared beams crossing their enclosures, Correa et al. found that the mice in their study showed sex-specific differences in response to neuron activation: _____

ID e2829dd7

109 Mark for Review — Hard — Explanation ›

Which choice most effectively uses data from the graph to complete the assertion?

(A) the four groups of mice differed greatly in their activity levels before treatment but showed identical activity levels at the end of the monitoring period.

(B) saline-treated females showed substantially more activity at certain points in the monitoring period than saline-treated males did.

(C) CNO-treated females showed more activity relative to saline-treated females than CNO-treated males showed relative to saline-treated males.

(D) CNO-treated females showed a substantial increase and then decline in activity over the monitoring period, whereas CNO-treated males showed a substantial decline in activity followed by a steep increase.

Mean Time (in Seconds) Spent per Flower for Four Pollinator Genera

Pollinator genus	Seconds per intact pin flower	Seconds per damaged pin flower	Seconds per intact thrum flower	Seconds per damaged thrum flower
Habropoda	2.7	5.4	4.1	9.5
Osmia	5.2	8.2	7.1	8.3
Pierid	2.6	4.0	2.4	1.9
Xylocopa	2.3	2.8	2.5	2.2

To study how floral damage affects the behavior of pollinators, such as bees, a team of researchers punched holes in the floral tissue of flowers from the vine yellow jessamine (*Gelsemium sempervirens*), a plant that produces flowers that have either a long pistil and a short stamen (pin morphs) or a short pistil and a long stamen (thrum morphs). The researchers then compared the time different insect pollinators spent visiting intact pin and thrum flowers to the time such pollinators spent visiting the artificially damaged pin and thrum flowers. The researchers concluded that the effect of floral damage on time spent per flower varied by both floral morph and the genus of the pollinator.

ID a7c52fa4

110 Mark for Review Hard Explanation ›

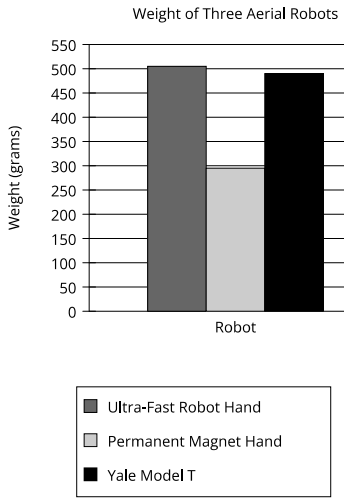
Which choice best describes data from the table that support the researchers' conclusion?

(A) For pin flowers, damage led to longer times per flower in all pollinator genera, whereas for thrum flowers, damage led to longer times per flower only in *Habropoda* and *Osmia*.

(B) Compared with pollinators belonging to the genus *Osmia*, pollinators belonging to the genus *Xylocopa* spent less time on damaged pin flowers but more time on damaged thrum flowers.

(C) Damage led to shorter times per thrum flower in three pollinator genera (*Osmia*, *Pierid*, and *Xylocopa*), whereas it led to longer times per thrum flower in one pollinator genus (*Habropoda*).

(D) Pollinators belonging to the genus *Habropoda* spent 2.7 seconds on intact pin flowers and 4.1 seconds on intact thrum flowers.



Aerial robots vary considerably in their holding force; the Ultra-Fast Robot Hand, for example, has a holding force of 56 newtons, more than twice that of the Permanent Magnet Hand and more than four times that of the Yale Model T. Since an aerial robot must lift its own weight along with its cargo, engineer Jiawei Meng and colleagues used a ratio of each robot's holding force to the robot's weight to calculate payload capacity, with higher ratios corresponding to greater capacity, concluding that the Ultra-Fast Robot Hand has a higher payload capacity than the Yale Model T.

ID df37c087

111 Mark for Review Hard Explanation ›

Which choice best describes data in the graph that support Meng and colleagues' conclusion?

(A) The Ultra-Fast Robot Hand and the Yale Model T each weigh more than 450 grams.

(B) The Ultra-Fast Robot Hand and the Yale Model T each weigh more than the Permanent Magnet Hand does.

(C) The Yale Model T has a lower holding force than the Permanent Magnet Hand despite weighing more.

(D) The Ultra-Fast Robot Hand weighs only slightly more than the Yale Model T does.

Estimates of Tyrannosaurid Bite Force

Study	Year	Estimation method	Approximate bite force (newtons)
Cost et al.	2019	muscular and skeletal modeling	35,000–63,000
Gignac and Erickson	2017	tooth-bone interaction analysis	8,000–34,000
Meers	2002	body-mass scaling	183,000–235,000
Bates and Falkingham	2012	muscular and skeletal modeling	35,000–57,000

The largest tyrannosaurids—the family of carnivorous dinosaurs that includes *Tarbosaurus*, *Albertosaurus*, and, most famously, *Tyrannosaurus rex* —are thought to have had the strongest bites of any land animals in Earth's history. Determining the bite force of extinct animals can be difficult, however, and paleontologists Paul Barrett and Emily Rayfield have suggested that an estimate of dinosaur bite force may be significantly influenced by the methodology used in generating that estimate.

ID d102706f

112 Mark for Review Hard Explanation ›

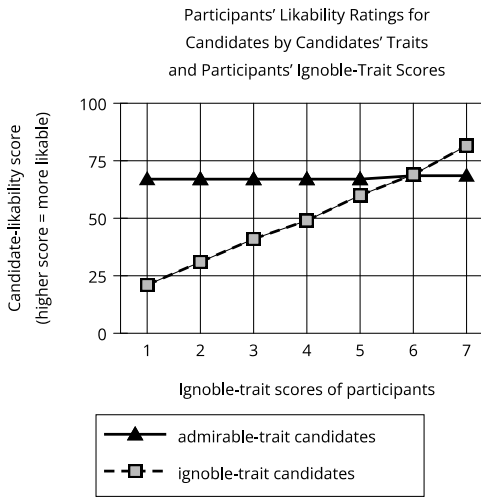
Which choice best describes data from the table that support Barrett and Rayfield's suggestion?

(A) The study by Meers used body-mass scaling and produced the lowest estimated maximum bite force, while the study by Cost et al. used muscular and skeletal modeling and produced the highest estimated maximum.

(B) In their study, Gignac and Erickson used tooth-bone interaction analysis to produce an estimated bite force range with a minimum of 8,000 newtons and a maximum of 34,000 newtons.

(C) The bite force estimates produced by Bates and Falkingham and by Cost et al. were similar to each other, while the estimates produced by Meers and by Gignac and Erickson each differed substantially from any other estimate.

(D) The estimated maximum bite force produced by Cost et al. exceeded the estimated maximum produced by Bates and Falkingham, even though both groups of researchers used the same method to generate their estimates.



Alessandro Nai et al. presented study participants with vignettes about fictive political candidates, portraying them as embodying a personality trait widely considered admirable (e.g., agreeableness) or one considered ignoble (e.g., cynicism). A survey recorded participants' ratings of the candidates' likability and showed that across participants, ignoble-trait candidates were less likable than admirable-trait candidates. However, when the researchers factored in the participants' own personality-trait scores, on a scale of 1 (least ignoble) to 7 (most ignoble), they concluded that this relative ranking of candidates persisted except among the participants with high ignobility scores.

ID 82bdf676

113 Mark for Review Hard Explanation ›

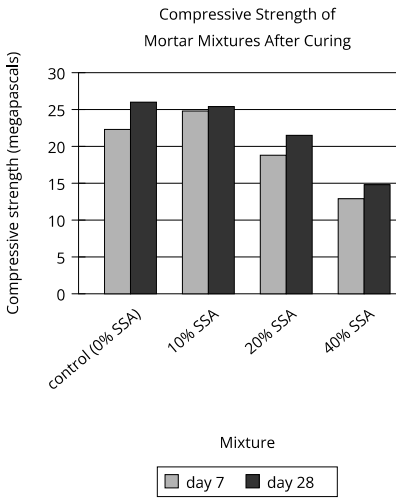
Which choice best describes data from the graph that support the researchers' conclusion?

(A) There was a strong positive correlation between participants' ignobility scores and admirable-trait candidates' likability ratings, but there was no correlation between ignobility scores and ignoble-trait candidates' likability ratings.

(B) Participants with an ignobility score of 5 or less rated admirable-trait candidates as more likable than ignoble-trait candidates, whereas participants with an ignobility score of 6 or more rated ignoble-trait candidates as equally likable as or even more likable than admirable-trait candidates.

(C) Overall, participants rated admirable-trait candidates as quite likable, and that rating was not significantly affected by the participants' ignobility scores.

(D) Unlike participants with an ignobility score of 6, participants with an ignobility score either greater or less than 6 gave admirable-trait candidates and ignoble-trait candidates different likability ratings.



Mollusk shells are mainly composed of calcium carbonate, a chemical compound used in mortar and other construction materials. A research team led by Ariane da Silva Cardoso investigated pulverizing discarded Sururu mussel shells to create a substitute for fine aggregates (such as sand) in mortar mixtures. The team prepared mixtures with Sururu shell aggregate (SSA) replacing varying percentages of sand and then tested the mortars' compressive strength on days 7 and 28 of curing. Based on their findings, the team recommended SSA substitution in relatively small proportions to avoid compromising strength.

ID e35aa99b

114 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the graph to support the researchers' recommendation?

(A) The 10% SSA mixture's compressive strength was greater than or approximately equal to that of the control mixture on day 7 and on day 28, but on both days the 20% and 40% SSA mixtures had less compressive strength than the control mixture did.

(B) The compressive strength of the 10% SSA mixture remained nearly the same from day 7 to day 28, while that of the 20% and 40% SSA mixtures changed substantially.

(C) The 10% SSA mixture's compressive strength was greater than that of the control mixture on day 7, but by day 28 the 10% SSA mixture's compressive strength had decreased while that of the control mixture had increased.

(D) The compressive strength of the 10% SSA mixture never surpassed the compressive strength measured for the control mixture on day 28.

Percentages of New Year's Resolution Makers Who Make Certain Kinds of Resolutions

Type of resolution	Age 18-29	Age 30-49	Age 50-64	Age 65+
Health and exercise	79	80	79	76
Finances	68	63	56	47
Personal relationships	63	53	58	52
Hobbies	65	53	51	45

A Pew Research Center survey conducted in January 2024 found that three out of ten US adults make at least one New Year's resolution (a promise for the year ahead), while half of those who make a resolution make more than one. The survey asked participants what kinds of resolutions they made and separated them into several categories. The table presents percentages of people who make particular kinds of New Year's resolutions among those who choose to make them, indexed by age bracket.

ID 629fb8a9

115 Mark for Review Hard Explanation ›

Which choice best presents a conclusion about the habits of New Year's resolution makers that is best supported by information in the text and the table?

(A) Resolution makers between the ages of 50 and 64 are more likely to make resolutions related to personal relationships and less likely to make resolutions related to finances than resolution makers between the ages of 30 and 49 are.

(B) Resolution makers between the ages of 18 and 29 are more likely to make resolutions about health and exercise than resolution makers between the ages of 30 and 49 are.

(C) The majority of US adults who make resolutions related to health and exercise also make resolutions in multiple additional categories.

(D) Among all US adults, people become less likely to make New Year's resolutions as they age, regardless of the type of resolution.

Baseline concentration of annual precipitation	% change in water entering aquifers	% change in surface water used for irrigation	% change in groundwater used for irrigation
Precipitation is currently somewhat concentrated	4.9	0.4	0.9
Precipitation is currently evenly distributed	11.0	9.0	7.9

Simulated Change in Annual Aquifer Input and Irrigation Output if Precipitation Concentration Increases as Climate Models Predict

Some climate models for the western United States predict that while total annual precipitation may remain unchanged from the present level, precipitation will become concentrated into fewer but more intense rain and snow events. University of Texas climate scientist Geeta Persad and her colleagues simulated how the amount of water entering aquifers and the amount being used for irrigation purposes would change if this were to occur. Persad and her colleagues concluded that concentration of precipitation into fewer events would result in a higher number of dry days, triggering more irrigation, but that this change in irrigation output is highly sensitive to the baseline concentration of precipitation that currently exists in an area.

ID 010fa3f0

116 Mark for Review Hard Explanation ›

Which choice best describes data from the table that support Persad and her colleagues' conclusion?

(A) If baseline precipitation is somewhat concentrated, the amount of water being used for irrigation will increase 0.4% for surface water and 0.9% for groundwater, whereas the amount of water entering aquifers will increase 11.0% if baseline precipitation is evenly distributed.

(B) If baseline precipitation is somewhat concentrated, water use for irrigation will increase only slightly, whereas it will increase 9.0% for surface water and 7.9% for groundwater if baseline precipitation is evenly distributed.

(C) If baseline precipitation is somewhat concentrated, the amount of water entering aquifers will increase 4.9%, while the amount being used for irrigation will increase 0.4% for surface water and 0.9% for groundwater.

(D) If baseline precipitation is somewhat concentrated, water use for irrigation will decline by a small amount, whereas it will increase 11.0% for surface water and 9.0% for groundwater if baseline precipitation is evenly distributed.

Tadpole Body Mass and Toxin Production after Three Weeks in Ponds

Population density	Average tadpole body mass (milligrams)	Average number of distinct bufadienolide toxins per tadpole	Average amount of bufadienolide per tadpole (nanograms)	Average bufadienolide concentration (nanograms per milligram of tadpole body mass)
High	193.87	22.69	5,815.51	374.22
Medium	254.56	21.65	5,525.72	230.10
Low	258.97	22.08	4,664.99	171.43

Ecologist Veronika Bókony and colleagues investigated within-species competition among common toads (*Bufo bufo*), a species that secretes various unpleasant-tasting toxins called bufadienolides in response to threats. The researchers tested *B. bufo* tadpoles' responses to different levels of competition by creating ponds with different tadpole population densities but a fixed amount of food. Based on analysis of the tadpoles after three weeks, the researchers concluded that increased competition drove bufadienolide production at the expense of growth.

ID 2c06139b

117 Mark for Review Hard Explanation ›

Which choice uses data from the table to most effectively support the researchers' conclusion?

(A) The difference in average tadpole body mass was small between the low and medium population density conditions and substantially larger between the low and high population density conditions.

(B) Tadpoles in the low and medium population density conditions had substantially lower average bufadienolide concentrations but had greater average body masses than those in the high population density condition.

(C) Tadpoles in the high population density condition displayed a relatively modest increase in the average amount of bufadienolide but roughly double the average bufadienolide concentration compared to those in the low population density condition.

(D) Tadpoles produced approximately the same number of different bufadienolide toxins per individual across the population density conditions, but average tadpole body mass decreased as population density increased.

Swahili Speakers in Three African Countries

Country	Approximate number of speakers (in millions)	Estimated % of population
Democratic Republic of the Congo	22	25
Kenya	55	100
Tanzania	61	100

Swahili is estimated to be the first language of up to 15 million people worldwide. It's also an officially recognized language in Tanzania, Kenya, and the Democratic Republic of the Congo, which means these countries use Swahili in government documents and proceedings. But even in countries where almost everyone speaks Swahili, for many it isn't their first language but is instead their second, third, or even fourth language.

ID 01c1d9ee

118 Mark for Review — Hard — Explanation ›

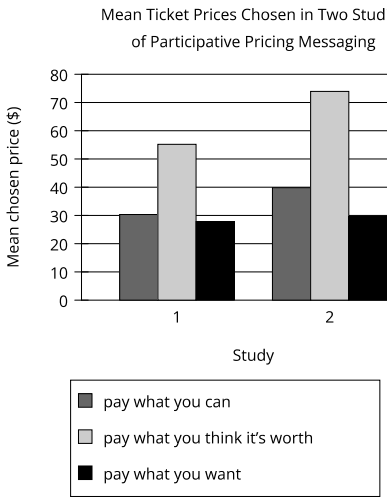
Which choice most effectively uses data from the table to support the underlined claim?

(A) Tanzania has approximately 61 million Swahili speakers, which is much more than the estimated total number of people worldwide for whom Swahili is their first language.

(B) Tanzania is estimated to have at most 15 million Swahili speakers, while the country's total population is approximately 61 million people.

(C) Approximately 100 percent of the people who speak Swahili as their first language live in Kenya, which has a total population of approximately 55 million people.

(D) Approximately 100 percent of Kenya's population speaks Swahili, while only about 25 percent of the Democratic Republic of the Congo's population speaks Swahili.



Participative pricing, in which purchasers choose the prices they pay for products, can enable sellers to capitalize on the heterogeneous values consumers assign to the same goods and services, but doing so requires careful messaging. Annie Peng Cui and Jennifer Wiggins recruited 171 participants (ages 18–60) online for an initial study and 83 students (ages 18–31) at a state university for a second study to test the effect of three different messages—"pay what you can," "pay what you think it's worth," and "pay what you want"—on how much participants would pay for concert tickets. Their results illustrate both the heterogeneity of consumer valuations and how sellers can benefit by prompting consumers to consider their own valuations: _____

ID 3430be35

119 Mark for Review — Hard — Explanation ›

Which choice most effectively uses data from the graph to complete the text?

(A) the students tended to value the concert tickets more highly than did the more age-diverse group recruited online, but when considering what they could afford to pay, the students tended to choose a lower price than did the other group.

(B) in all three messaging conditions, the group of participants recruited online tended to choose lower prices than did the students, but both groups tended to choose prices closest to the actual cost of the tickets when prompted to consider the tickets' value.

(C) the students tended to value the concert tickets more highly than did the more age-diverse group recruited online, but both groups tended to choose a higher price when considering the value of the tickets than when considering what they could afford or wanted to pay.

(D) within each group of participants, there was wide variation in the value that individuals assigned to the concert tickets, but the students tended to assign a higher value to the tickets than did the more age-diverse group recruited online.

Credited Film Output of James Young Deer, Dark Cloud, Edwin Carewe, and Lillian St. Cyr

Individual	Years active	Number of films known and commonly credited
James Young Deer	1909–1924	33 (actor), 35 (director), 10 (writer)
Dark Cloud	1910–1920	35 (actor), 1 (writer)
Edwin Carewe	1912–1934	47 (actor), 58 (director), 20 (producer), 4 (writer)
Lillian St. Cyr (Red Wing)	1908–1921	66 (actor)

Some researchers studying Indigenous actors and filmmakers in the United States have turned their attention to the early days of cinema, particularly the 1910s and 1920s, when people like James Young Deer, Dark Cloud, Edwin Carewe, and Lillian St. Cyr (known professionally as Red Wing) were involved in one way or another with numerous films. In fact, so many films and associated records for this era have been lost that counts of those four figures' output should be taken as bare minimums rather than totals; it's entirely possible, for example, that _____

ID 5cf5c0d3

120 Mark for Review — Hard — Explanation ›

Which choice most effectively uses data from the table to complete the example?

(A) Dark Cloud acted in significantly fewer films than did Lillian St. Cyr, who is credited with 66 performances.

(B) Edwin Carewe's 47 credited acting roles includes only films made after 1934.

(C) Lillian St. Cyr acted in far more than 66 films and Edwin Carewe directed more than 58.

(D) James Young Deer actually directed 33 films and acted in only 10.

Correlations Between Congestion Ratings and Features of the Crowd in Raters' Immediate Vicinity

Crowd feature	Before obstacle	After obstacle	Overall
Density	0.8592	0.7308	0.7447
Velocity	−0.9357	−0.9518	−0.8587

Researcher Xiaolu Jia and colleagues monitored individuals' velocity and the surrounding crowd density as a group of study participants walked through a space and navigated around an obstacle. Participants rated how congested it seemed before the obstacle, after the obstacle, and overall, and the researchers correlated those ratings with velocity and density. (Correlations range from −1 to 1, with greater distance from 0 indicating greater strength). The researchers concluded that the correlations with velocity are stronger than those with density.

ID b2e54b50

121 Mark for Review — Hard — Explanation ›

Which choice best describes data from the table that support the researchers' conclusion?

(A) The correlation between congestion ratings before the obstacle and density is further from 0 than the correlation between overall congestion rating and velocity is.

(B) The correlation between congestion ratings before the obstacle and velocity is further from 0 than the correlation between congestion overall and velocity is.

(C) For each of the three ratings, the correlation with velocity is negative while the correlation with density is positive.

(D) For each of the three ratings, correlations with velocity are further from 0 than the corresponding correlations with density are.

Delta 15-N Values in Seagrass Samples from Four Sites on the Yucatan, 2016–2017

Site	February 2016	October 2016	February 2017	October 2017
Akumal Bay	no data available	3.3	2.0	6.3
Mahahual	0.7	no data available	2.5	3.4
Tulum	6.1	5.9	2.3	5.5
Xahuayxol	0.9	0.3	−0.9	1.4

Because water from natural, uncontaminated sources is less enriched with the stable nitrogen isotope ^{15}N than wastewater from human activities is, the presence of such wastewater in nature can be detected by examining delta 15-N values (a measure of the ratio of ^{15}N to ^{14}N) in plants. Karla A. Camacho-Cruz and colleagues assessed delta 15-N values in the seagrass *Thalassia testudinum* from sites on Mexico's Yucatan peninsula with intermediate tourism development, including Akumal Bay and Tulum, and low tourism development, including Mahahual and Xahuayxol, throughout 2016 and 2017. The data suggest that the intermediate-tourism sites experienced influxes of human wastewater. However, the researchers concluded that this happened intermittently.

ID cca6fae9

122 Mark for Review Hard Explanation ›

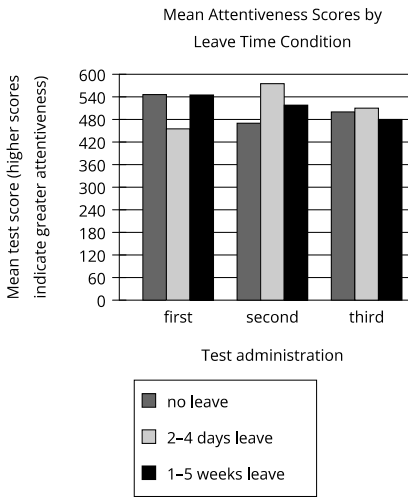
Which choice best describes data from the table that support the underlined conclusion?

(A) Although delta 15-N values were generally higher in Akumal Bay and Tulum than in Mahahual and Xahuayxol, the values were lower in Akumal Bay than in Mahahual and Xahuayxol in February 2017.

(B) Delta 15-N values reached their lowest level in February 2017 in both Akumal Bay and Tulum, but no data were available for Akumal Bay in February 2016, when the values reached their highest level in Tulum.

(C) Although all sites showed considerable variation in delta 15-N values, the values remained relatively constant in Akumal Bay from October 2016 to February 2017 and in Tulum from February 2016 to October 2016.

(D) In Akumal Bay and Tulum, delta 15-N values fluctuated considerably across the three measurements made from October 2016 to October 2017.



To investigate potential cognitive benefits of taking leave from work, psychologist Jan Packer and colleagues conducted a six-month study of Australian university staff members who took no leave from work during the study, took 2–4 days of leave, or took 1–5 weeks of leave. Tests of attentiveness were administered to participants three times during the study: at random for the no-leave staff, and for the rest, one week before their leave, one week following their return to work, and one week after the second test administration. After analyzing the results, the researchers concluded that longer leave times might not confer a greater cognitive benefit than shorter leave times do.

ID 7dab4d5d

123 Mark for Review — Hard — Explanation ›

Which choice best describes data from the graph that support the researchers' conclusion?

(A) In the second test administration, participants who took 2–4 days of leave had higher average attentiveness scores than did those who took no leave, but in the third test administration, those who took no leave had higher average scores than those who took 1–5 weeks of leave.

(B) In the first test administration, participants who took 2–4 days of leave had lower average attentiveness scores than did those who took 1–5 weeks of leave and those who took no leave.

(C) In both the second and third test administrations, participants who took 2–4 days of leave had higher average attentiveness scores than did participants who took 1–5 weeks of leave.

(D) In the second and third test administrations, participants who took 2–4 days of leave had higher average attentiveness scores than did those who took no leave.

Average Number and Duration of Torpor Bouts and Arousal Episodes for Alaska Marmots and Arctic Ground Squirrels, 2008–2011

Feature	Alaska marmots	Arctic ground squirrels
torpor bouts	12	10.5
duration per bout	13.81 days	16.77 days
arousal episodes	11	9.5
duration per episode	21.2 hours	14.2 hours

When hibernating, Alaska marmots and Arctic ground squirrels enter a state called torpor, which minimizes the energy their bodies need to function. Often a hibernating animal will temporarily come out of torpor (called an arousal episode) and its metabolic rate will rise, burning more of the precious energy the animal needs to survive the winter. Alaska marmots hibernate in groups and therefore burn less energy keeping warm during these episodes than they would if they were alone. A researcher hypothesized that because Arctic ground squirrels hibernate alone, they would likely exhibit longer bouts of torpor and shorter arousal episodes than Alaska marmots.

ID 014b3394

124 Mark for Review — Hard — Explanation ›

Which choice best describes data from the table that support the researcher's hypothesis?

(A) The Alaska marmots' arousal episodes lasted for days, while the Arctic ground squirrels' arousal episodes lasted less than a day.

(B) The Alaska marmots and the Arctic ground squirrels both maintained torpor for several consecutive days per bout, on average.

(C) The Alaska marmots had shorter torpor bouts and longer arousal episodes than the Arctic ground squirrels did.

(D) The Alaska marmots had more torpor bouts than arousal episodes, but their arousal episodes were much shorter than their torpor bouts.

Global Strontium Seawater Curve

$^{87}Sr/^{86}Sr$	Age (Ma)
0.708980	6.20
0.709000	5.86
0.709020	5.40
0.709040	4.75
0.709060	3.00

The late Hemphillian (Hh) North American Land Mammal Age includes the subdivisions Hh3, 6.8 million years ago (Ma) to 6 Ma, and Hh4, 6 Ma to 4.75 Ma. While mammalian fossils have indicated that Florida's Montbrook Fossil Site (MFS) and Palmetto Fauna of the Bone Valley Region (PFBV) date to Hh4, a more precise determination of the sites' ages has proved challenging. Stephanie R. Killingsworth et al. compared average ratios of strontium-87 to strontium-86 ($^{87}Sr/^{86}Sr$) in fossil shark teeth from MFS and PFBV—0.709000 and 0.709028, respectively—to $^{87}Sr/^{86}Sr$ ratios in the global strontium seawater curve, a record that shows how $^{87}Sr/^{86}Sr$ ratios in seawater correspond to numerical ages and that is used to date fossils and, by extension, fossil sites. The researchers concluded that _____

ID 43f4013a

125 Mark for Review — Hard — Explanation >

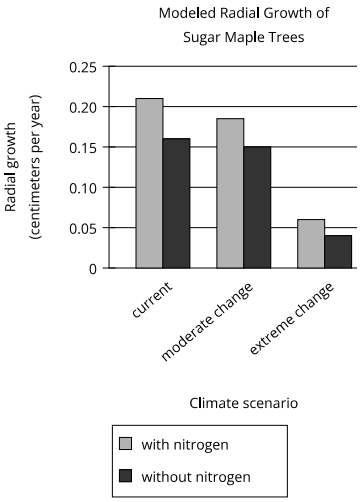
Which choice most effectively uses data from the table to complete the statement?

(A) mammalian fossil evidence offers less dating precision than do $^{87}Sr/^{86}Sr$ ratios in fossil shark teeth and that PFBV likely was deposited closer to the Hh3-Hh4 boundary than was MFS.

(B) the average $^{87}Sr/^{86}Sr$ ratios in the fossil shark teeth from MFS and PFBV only partially support the site age estimates previously established through mammalian fossil evidence.

(C) the average $^{87}Sr/^{86}Sr$ ratios in the fossil shark teeth from MFS and PFBV resolve previous uncertainty about the sites' relative ages by indicating that both sites were deposited contemporaneously during the late Hh.

(D) the average $^{87}Sr/^{86}Sr$ ratios in the fossil shark teeth from MFS and PFBV corroborate that both MFS and PFBV fall within Hh4 but suggest that PFBV was likely deposited more recently than MFS.



Inés Ibáñez and colleagues studied a forest site in which some sugar maple trees receive periodic fertilization with nitrogen to mimic the broader trend of increasing anthropogenic nitrogen deposition in soil. Ibáñez and colleagues modeled the radial growth of the trees with and without nitrogen fertilization under three different climate scenarios (the current climate, moderate change, and extreme change). Although they found that climate change would negatively affect growth, they concluded that anthropogenic nitrogen deposition could more than offset that effect provided that change is moderate rather than extreme.

Which choice best describes data from the graph that support Ibáñez and colleagues' conclusion?

(A) Growth with nitrogen under the current climate exceeded growth with nitrogen under moderate change, but the latter exceeded growth without nitrogen under extreme change.

(B) Growth without nitrogen under the current climate exceeded growth without nitrogen under moderate change, but the latter exceeded growth with nitrogen under extreme change.

(C) Growth with nitrogen under moderate change exceeded growth without nitrogen under moderate change, but the latter exceeded growth without nitrogen under extreme change.

(D) Growth with nitrogen under moderate change exceeded growth without nitrogen under the current climate, but the latter exceeded growth with nitrogen under extreme change.

Juvenile Plants Found Growing on Bare Ground and in Patches of Vegetation for Five Species

Species	Bare ground	Patches of vegetation	Total	Percent found in patches of vegetation
T. moroderi	9	13	22	59.1%
T. libanitis	83	120	203	59.1%
H. syriacim	95	106	201	52.7%
H. squamatum	218	321	539	59.6%
H. stoechas	11	12	23	52.2%

Alicia Montesinos-Navarro, Isabelle Storer, and Rocío Perez-Barrales recently examined several plots within a diverse plant community in southeast Spain. The researchers calculated that if individual plants were randomly distributed on this particular landscape, only about 15% would be with other plants in patches of vegetation. They counted the number of juvenile plants of five species growing in patches of vegetation and the number growing alone on bare ground and compared those numbers to what would be expected if the plants were randomly distributed. Based on these results, they claim that plants of these species that grow in close proximity to other plants gain an advantage at an early developmental stage.

ID df9c5a1d

127 Mark for Review Hard Explanation ›

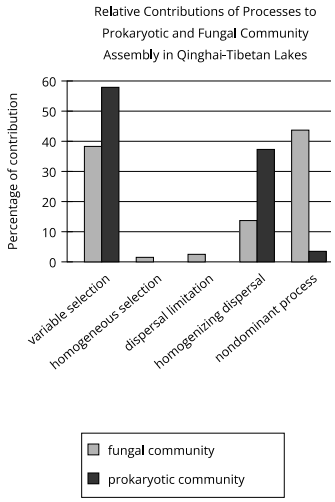
Which choice best describes data from the table that support the researchers' claim?

(A) For all five species, less than 75% of juvenile plants were growing in patches of vegetation.

(B) The species with the greatest number of juvenile plants growing in patches of vegetation was *H. stoechas*.

(C) For *T. libanitis* and *T. moroderi*, the percentage of juvenile plants growing in patches of vegetation was less than what would be expected if plants were randomly distributed.

(D) For each species, the percentage of juvenile plants growing in patches of vegetation was substantially higher than what would be expected if plants were randomly distributed.



In a 2020 study, Jian Yang et al. examined prokaryotic and fungal microbial communities in Qinghai-Tibetan Plateau lake sediment to understand the relative contributions of various factors to community assembly, or formation. They quantified the contributions of environmental pressures (variable and homogeneous selection), dispersal limitation, homogenizing dispersal, and nondominant processes. Tolerance of environmental pressures is known to be higher in fungi than in prokaryotes, which the researchers hypothesize accounts for the finding that _____

ID 46a31ca1

128 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the graph to complete the statement?

(A) homogenizing dispersal contributed substantially less to fungal community assembly than variable selection did.

(B) the total number of factors that contributed to community assembly was greater for prokaryotes than for fungi.

(C) variable selection contributed substantially less to fungal community assembly than to prokaryote community assembly.

(D) the contribution of homogeneous selection to community assembly was negligible for both fungi and prokaryotes.

Corn-Related Vocabulary in Various Southeastern Languages

Language family	Word (language)	English translation	Proposed origin in vocabulary of the Totozoquean language family
Muskogean	tanchi' (Chickasaw); tanchi (Choctaw); vce (Muscogee, pronounced "uh-chi")	corn	no
Iroquoian	se-lu (Cherokee)	corn	no
Caddoan	-k'as- (Caddo)	dried corn	yes
Chitimacha	k'asma (Chitimacha)	corn	yes

In Caddo, a language from what is now the US Southeast, vocabulary pertaining to corn cultivation resembles equivalent vocabulary in the Totozoquean language family in Mexico. This resemblance is perhaps attributable to cultural contact: such words could have entered Caddo through the intermediary of the neighboring but unrelated Chitimacha language, concurrent with the dissemination of corn itself from Mexico into the Southeast after 700 CE. That the vocabulary pertaining to domestic crops accompanies them as they diffuse into new regions is an established phenomenon globally. Crops may also be decoupled from vocabulary altogether: corn cultivation became ubiquitous among the Southeastern tribes, yet _____

ID 35ec767c

129 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the table to complete the statement?

(A) the origins of vocabulary pertaining to the crop vary across languages in the region, with the words for corn in Cherokee and the Muskogean languages showing no demonstrable relationship to Totozoquean vocabulary.

(B) the region is linguistically diverse, being home not only to Chitimacha and Caddo, but also to the Muskogean language family (including Chickasaw, Choctaw, and Muscogee) and to one Iroquoian language (Cherokee).

(C) corn-related vocabulary underwent changes when entering other, unrelated languages, as can be seen by the divergence of the Caddo word from the Chitimacha word it originated in.

(D) words for corn in the languages of the Muskogean family evolved from a common root, with the Muscogee word having lost certain consonant sounds still present in the Chickasaw and Choctaw words.

Percentage Point Changes in US Federal Outlays Relative to GDP by Congressional Status

Period	Congressional status	Change in total outlays	Change in nondefense outlays	Change in defense outlays
1981–1988	divided	−0.4	−1.3	0.9
1975–1976	divided	2.7	3.0	−0.3
1977–1980	undivided	0.3	0.6	−0.3
1964–1968	undivided	1.9	1.4	0.5
1969–1974	divided	−1.8	2.1	−3.9

Economist Steve H. Hanke has shown that divided US Congresses—which occur when one party holds the majority in the House of Representatives and another holds the majority in the Senate—tend to accompany reductions in total federal outlays (spending) relative to gross domestic product (GDP), which Hanke interprets to reflect decreases in government size. Hanke calculated the percentage point change in total outlays (encompassing nondefense and defense outlays) for consecutive US Congresses. Hanke has pointed to his calculations as evidence that a divided Congress may be a "necessary but not sufficient condition" for a decrease in government size to occur.

ID 24c1b7e4

130 Mark for Review Hard Explanation ›

Which choice best describes data from the table that support the underlined claim?

(A) The periods of undivided Congresses were associated with increases in nondefense outlays, whereas all the periods of divided Congresses except one were associated with reductions in defense outlays.

(B) All the periods of divided Congresses were associated with reductions in total outlays, although two periods were also associated with increases in nondefense outlays.

(C) The periods of undivided Congresses were associated with increases in total outlays, whereas all the periods of divided Congresses were associated with reductions in either nondefense outlays or defense outlays.

(D) All the periods of divided Congresses except one were associated with reductions in total outlays, whereas the periods of undivided Congresses were associated with increases in total outlays.

Distribution of Ecosystem Services Affected by Invasive Species by Service Type

Region (Overall)	Provisioning (75%)	Regulating (21%)	Cultural (4%)
West	73%	27%	0%
North	88%	12%	0%
South	79%	14%	7%
East	83%	6%	11%
Central	33%	67%	0%

To assess the impact of invasive species on ecosystems in Africa, Benis N. Egoh and colleagues reviewed government reports from those nations about how invasive species are undermining ecosystem services (aspects of the ecosystem on which residents depend). The services were sorted into three categories: provisioning (material resources from the ecosystem), regulating (natural processes such as cleaning the air or water), and cultural (nonmaterial benefits of ecosystems). Egoh and her team assert that countries in each region reported effects on provisioning services and that provisioning services represent the majority of the reported services.

ID 56f477fb

131 Mark for Review — Hard — Explanation ›

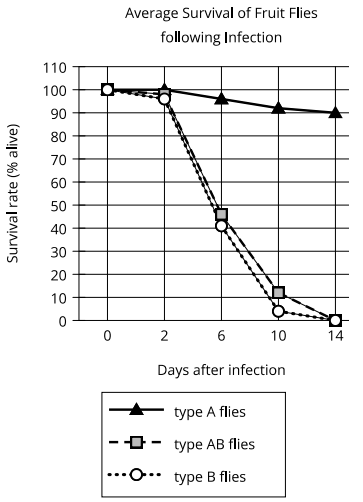
Which choice best describes data from the table that support Egoh and colleagues' assertion?

(A) Provisioning services represent 73% of the services reported for the West region and 33% of those for the Central region, but they represent 75% of the services reported overall.

(B) None of the percentages shown for provisioning services are lower than 33%, and the overall percentage shown for provisioning services is 75%.

(C) Provisioning services are shown for each region, while no cultural services are shown for some regions.

(D) The greatest percentage shown for provisioning services is 88% for the North region, and the least shown for provisioning services is 33% for the Central region.



In a study of the evolution of *DptA* and *DptB*—*Diptericin* genes encoding antimicrobial peptides that combat pathogens and foster beneficial microbes in fruit flies (*Drosophila*)—researchers assessed *Drosophila melanogaster* resistance to pathogenic infections by *Providencia rettgeri* and *Acetobacter sicerae*, bacteria common in the flies' environments. Subjects included flies identified by mutations silencing *DptA*, *DptB*, or both *DptA* and *DptB* (termed types A, B, and AB, respectively). In conjunction with the observation that resistance to *P. rettgeri* correlates with *DptA* activity but is not significantly affected by *DptB* activity, data in the graph of survival rates post–*A. sicerae* infection suggest that _____

ID cbdd5287

132 Mark for Review Hard Explanation ›

Which completion of the text is best supported by data in the graph?

(A) *DptA* confers defense against *A. sicerae* regardless of the presence of *DptB*.

(B) *DptB* protects against only one bacteria species, whereas *DptA* protects against multiple species.

(C) *DptB* may have developed as a specific defense against *A. sicerae*.

(D) defense against *A. sicerae* is strongest when both *DptA* and *DptB* are present.

Properties of TRAPPIST-1 Exoplanets Compared to Earth's Properties

Planet	Orbital period (days)	Planet radius (Earth radii)
Earth	365.26	1
TRAPPIST-1b	1.51	1.09
TRAPPIST-1d	4.05	0.77
TRAPPIST-1e	6.1	0.92
TRAPPIST-1f	9.21	1.04

TRAPPIST-1 is a planetary system with a central red dwarf star and several Earth-sized exoplanets. Each planet in this system is so close in orbit to the star that the gravitational forces acting between the planet and the star cause the planet's rotational period around its axis and orbital period around the star to be equal. For example, the orbital period of TRAPPIST-1e is _____

ID 54be8f96

133 Mark for Review Hard Explanation ›

Which choice most effectively uses data from the table to complete the example?

(A) 1.51 days, which is the shortest rotational period of any of the TRAPPIST planets.

(B) 6.1 days, and its rotational period is also 6.1 days.

(C) 9.21 days, which is the same as the rotational period of TRAPPIST-1f.

(D) 6.1 days, and its rotational period is 0.92 days.

Explanations

1 Correct answer **C** — Easy — ‹ Back to question

C sugar cookie cubes for meal B.

Choice C is the best answer because it most effectively uses data from the table to complete the statement. The table shows that on day 1, the menu for NASA's Gemini missions included sugar cookie cubes for meal B.

Choice A is incorrect because according to the table, shrimp cocktail was served on day 4, not day 1; moreover, the item was served for meal C, not meal B, as this choice claims. **Choice B is incorrect** because according to the table, hot cocoa was served on day 3, not on day 1; moreover, the item was served for meal A, not for meal C, as this choice claims. **Choice D is incorrect** because according to the table, chicken and vegetables were served on day 2, not on day 1; moreover, the item was served for meal B, not for meal A, as this choice claims.

2 Correct answer **C** — Easy — ‹ Back to question

C 40 meters tall.

Choice C is the best answer because it most effectively uses data from the table to complete the text about the el Castillo pyramid. The table presents information for the location, height, and age of four pyramids, and the task is to use the data from the table to complete the text by choosing the correct height for el Castillo, which the table shows is 40 meters.

Choice A is incorrect because, according to the table, el Castillo is 40 meters tall, not 33 meters, which is the height of the Great Pyramid in Mexico. **Choice B is incorrect** because, according to the table, el Castillo is 40 meters tall, not 47 meters, which is the height of the Pyramid of Sahure in Egypt. **Choice D is incorrect** because, according to the table, el Castillo is 40 meters tall, not 60 meters, which is the height of the Pyramid of Djoser in Egypt.

3 Correct answer **A** Easy Back to question

A Isoguanine and purine were detected in both meteorite samples but not in the soil sample.

Choice A is the best answer. The researchers concluded that the meteorite's nucleobases weren't the result of soil contamination. Presence of nucleobases in the meteorite and not in soil provides evidence that those nucleobases likely didn't come from the soil.

Choice B is incorrect. This choice doesn't justify the conclusion. The researchers concluded that the meteorite's nucleobases weren't the result of soil contamination. If the nucleobases are present in both the soil and meteorite, then it's possible that these nucleobases came from the soil. **Choice C is incorrect**. This choice misreads the table. Purine was not detected in the soil sample. **Choice D is incorrect**. This choice misreads the table. Both isoguanine and hypoxanthine were detected in both Murchison meteorite samples.

4 Correct answer **C** Easy Back to question

C only adolescents.

Choice C is the best answer because it most effectively uses data from the table to complete the text's comparison of the studies about food choices. The table shows information from four studies about food choices, including each study's location, the context of the food choices examined, the study population, and the number of participants. According to the table, the study with the greatest number of participants (142) was conducted in Ghana and Kenya and involved only adolescents.

Choice A is incorrect because the table indicates that the study that involved only children was conducted in the United States and had 44 participants—not the greatest number of participants. According to the table, the study with the greatest number of participants (142) involved only adolescents. **Choice B is incorrect** because the table indicates that the study population that consisted of both adolescents and adults was the India study, which had 94 participants—not the greatest number of participants. According to the table, the study with the greatest number of participants (142) involved only adolescents. **Choice D is incorrect** because, according to the table and the text, the study that involved only adults was conducted in Canada and had 17 participants—the smallest, not the greatest, number of participants in the table.

5 Correct answer **C** Easy Back to question

C the percentage of those members decreased substantially in both houses of Congress from 1973 to 2013.

Choice C is the best answer because it accurately uses data from the graph to complete the statement regarding the research institute's findings about veteran representation in Congress. The graph shows that the percentage of veterans in both houses of Congress decreased dramatically from 1973 to 2013. In 1973, the House of Representatives consisted of approximately 74% veterans, and the Senate was made up of

approximately 79% veterans. By 2013, veteran members of both houses had fallen to approximately 17%–18%. This represents a substantial decrease of more than 50% in each house over this 40-year period.

Choice A is incorrect because from 2003 to 2023, the House of Representatives did not consistently have a higher percentage of veterans than the Senate did. According to the graph, in 2003 the Senate was made up of approximately 35% veterans, while the House consisted of approximately 23% veterans. In 2013, the number of veterans in the Senate was still slightly

higher (approximately 18%) than in the House (approximately 17%). Only in 2023 did the House have a marginally higher percentage than the Senate. **Choice B is incorrect** because veterans did not constitute a majority in both houses throughout the entire period shown in the graph from 1953 to 2003. According to the graph, both houses had a majority of veterans in 1953 (approximately 62% in the House and approximately 74% in the Senate) and in 1973 (approximately 74% in the House and approximately 79% in the Senate), but by 1993 the House had fallen below 50% to approximately 40% veterans. By 2003, both houses were well below 50%. **Choice D is incorrect** because the percentage of veterans in Congress did not remain consistent from 1993 to 2023. The graph shows significant changes in the number of members reporting past military service during this period, particularly the continued decline from 1993 to 2003. In 1993, the House had approximately 40% veterans and the Senate had approximately 63% veterans, but by 2003 these percentages had dropped to approximately 23% and 35%, respectively. Furthermore, there was a large gap between the two houses in 1993 that narrowed considerably by 2013, which contradicts the claim that the percentage of veterans across both houses "remained fairly consistent" during this period.

6 Correct answer **B** Easy Back to question

B 1995–1999.

Choice B is the best answer because it most effectively uses data from the table to complete the statement about video game availability. The text states that just a few games released in the past are available today and then indicates that there is a period of years from which only 14.22 percent of the games released are available. The table shows that 14.22 percent of games are still available from the years 1995–1999.

Choice A is incorrect because the years 2000–2004 are not represented in the table. **Choice C is incorrect** because the years 1970–1974 are not represented in the table. **Choice D is incorrect** because the years 1985–1989 correspond to a percentage of games still available of 15.38 percent, not 14.22 percent.

7 Correct answer **D** Easy Back to question

D 29%.

Choice D is the best answer because it effectively uses data from the table to complete the student's claim about the highest percentage of bus stops with shaded shelter in the areas represented. The table shows the highest average surface temperature of five areas and the percentage of bus stops with shaded shelter in each area, and 29% is the highest percentage listed.

Choice A is incorrect because the list of percentages of bus stops with shaded shelter does not include 50%; the highest percentage in the table is 29%. **Choice B is incorrect** because 15% is the lowest value in the listed percentages of bus stops with shaded shelter, not the highest value. **Choice C is incorrect** because the list of percentages of bus stops with shaded shelter does not include 90%; the highest percentage in the table is 29%.

8 Correct answer **C** Easy Back to question

C a shorter footprint, and a longer average stride.

Choice C is the best answer because it most effectively uses data from the table to complete the claim about the tracks left by two therapods. The table indicates that the set of tracks labeled La Torre 6A has an estimated footprint length of 32.8 centimeters, an average stride length of 5.23 meters, and an estimated mean speed of 6.5–10.3 meters per second. For the set of tracks labeled La Torre 6B, on the other hand, the estimated footprint length is 28.9 centimeters, the average stride length is 5.57 meters, and the estimated mean speed is 8.8–12.4 meters per second. Therefore, the therapod that left the La Torre 6B tracks had a shorter footprint and a longer average stride than the one that left the La Torre 6A tracks.

Choice A is incorrect. While it is true that of the two therapods, the one that left the La Torre 6B tracks had a longer average stride, it didn't have a longer footprint: the table shows that its estimated footprint length is 28.9 centimeters, while La Torre 6A's estimated footprint length is 32.8 centimeters. **Choice B is incorrect** because the table shows that of the two therapods, the one that left the La Torre 6B tracks had a footprint length estimated at 28.9 centimeters, which is shorter than the 32.8 centimeters estimated for the other set of tracks. Moreover, the therapod that left the La Torre 6B tracks had a longer average stride, not shorter: 5.57 meters, compared with 5.23 meters for the other set of tracks. **Choice D is incorrect**. While it is true that of the two therapods, the one that left the La Torre 6B tracks had a shorter footprint, it didn't have a shorter average stride: the table shows that its average stride length is 5.57 meters, while La Torre 6A's average stride length is 5.23 meters.

9 Correct answer **D** Easy Back to question

D 1992

Choice D is the best answer because it accurately reflects the data in the table. According to the table, the dolphin with ID FB43 has a recording year of 1992.

Choice A is incorrect. None of the dolphins in the table have a recording year of 1999. **Choice B is incorrect**. The table shows 2012 as the recording year for the dolphin with ID FB07, not ID FB43. **Choice C is incorrect**. None of the dolphins in the table have a recording year of 2020.

10 Correct answer **C** Easy Back to question

C Ramah's average highest temperature was 83°, while Cameron's was 99°.

Choice C is the best answer because it effectively uses data from the table to complete the statement, providing an example of how the people of the Navajo Nation can experience different climate conditions depending on where they live. The table shows the average highest temperatures and average lowest temperatures in four locations in the Navajo Nation in July. According to the table, Ramah's average highest temperature for July was 83°, whereas Cameron's average highest temperature was much higher, at 99°. This difference illustrates the statement that the people of the Navajo Nation can experience different climate conditions depending on where they live.

Choice A is incorrect because it states that Cameron and Teec Nos Pos had the same average lowest temperature (65°) for July, which suggests a similarity in climate conditions in those locations rather than a difference. **Choice B is incorrect** because it misrepresents the data from the table, which shows that the average highest temperature in July for Tuba City was 83°, not 94°, and for Teec Nos Pos it was 94°, not 93°. Even if the cited data accurately reflected the data in the table, the similarity between the two values for average highest temperature would suggest that people in the two locations likely experience similar climate conditions, not different climate conditions. **Choice D is incorrect** because it states that Ramah and Tuba City had the same average lowest temperature (50°) for July, which suggests a similarity in climate conditions in those locations rather than a difference.

11 Correct answer **C** Easy Back to question

C 304 square miles

Choice C is the best answer because it states the total area of Bahrain that is indicated in the table. The table presents the total area (in square miles) and population for Bahrain, Qatar, and Kuwait, and it indicates that the total area of Bahrain is 304 square miles.

Choice A is incorrect because the table indicates that 4,268,873 is the population of Kuwait, not the total area of Bahrain. **Choice B is incorrect** because the table indicates that 4,471 square miles is the total area of Qatar, not of Bahrain. **Choice D is incorrect** because the table indicates that 6,880 square miles is the total area of Kuwait, not of Bahrain.

12 Correct answer **D** Easy Back to question

D Copper production rose significantly from 1889 to 1909 for Arizona, Michigan, and Montana.

Choice D is the best answer. The text asks us to provide examples of several states that saw rapid growth in copper production from the 1890s onward. The graph depicts Arizona, Michigan, and Montana all experiencing such rapid growth during this time period.

Choice A is incorrect. The claim is about states experiencing rapid growth in copper production. This statement only discusses one state and does not provide evidence of rapid growth—in fact, it discusses a slow-down of growth. **Choice B is incorrect**. The claim is about states experiencing rapid growth in copper production, and this statement provides a comparison of production rates between states, rather than an example of rapid growth. **Choice C is incorrect**. The claim is about several states experiencing rapid growth in copper production. This statement only discusses one state and does not provide evidence of growth in copper production.

13 Correct answer **B** Easy Back to question

B Montréal

Choice B is the best answer because the graph shows that Montréal had the largest population in 1891 among the four cities represented. According to the data points in the graph for the year 1891, Montréal's population was approximately 220,000, which is greater than the

respective populations of Toronto (approximately 180,000), Québec City (approximately 60,000), and Halifax (approximately 40,000).

Choice A is incorrect because Toronto's population in 1891 was approximately 180,000, which is the second largest among the four cities shown but still clearly smaller than Montréal's population of approximately 220,000. **Choice C is incorrect** because Québec City had a population of approximately 60,000 in 1891, making it only the third largest of the four cities shown. **Choice D is incorrect** because Halifax had a population of approximately 40,000 people in 1891. Of the four cities shown in the graph, Halifax has the smallest population, not the largest.

14 Correct answer **C** Easy Back to question

C but participant 20 reported feeling significantly colder than the other two participants did.

Choice C is the best answer. The text describes the comfort rating scale: from −3 (very cold) to +3 (very hot), with 0 being neutral. Participant 20 gave a −2 comfort rating, a full three points colder on the scale than the other two participants.

Choice A is incorrect. This choice misreads the table. Participant 1 and participant 21 reported the same level of comfort, but participant 20's comfort level was three points lower. **Choice B is incorrect**. This choice doesn't use data from the table. The table only shows us one survey, so we don't know if the participants' ratings varied throughout the day. **Choice D is incorrect**. This choice misreads the table. Participant 1 and participant 21 reported the same level of comfort.

15 Correct answer **D** Easy ‹ Back to question

D 50%

Choice D is the best answer because it states the percentage of participants who mentioned costs in the interviews conducted by Judith Hilton and her team. The text states that Hilton and her team interviewed participants about factors that would encourage them to switch from single-use plastic containers to reusable containers. The graph presents three factors mentioned in the interviews (convenience, costs, and established

behaviors) and the percentage of participants who mentioned each one. The graph shows that about 50% of participants mentioned costs as a factor.

Choice A is incorrect because the graph shows that about 50% of participants, not 10%, mentioned costs as a factor. **Choice B is incorrect** because the graph shows that about 50% of participants, not 95%, mentioned costs as a factor. **Choice C is incorrect** because the graph shows that about 50% of participants, not 25%, mentioned costs as a factor.

16 Correct answer **A** Easy ‹ Back to question

A a larger area than either the Fiescher glacier or the Unteraar glacier.

Choice A is the best answer. The claim is that measurements such as total area can be used to compare glaciers. The graph shows us the area measurements for three glaciers. Of those, Gorner has the largest area.

Choice B is incorrect. This choice misreads the graph. The graph shows that Gorner has the largest area of the three. **Choice C is incorrect**. This choice misreads the graph. The graph shows that Gorner has the largest area of the three. **Choice D is incorrect**. This choice misreads the graph. The graph shows that Gorner has the largest area of the three.

17 Correct answer **A** Easy ‹ Back to question

A the Philippines increased dramatically from 1908 to 1918.

Choice A is the best answer because it most effectively uses data from the graph to complete the example. According to the graph, fewer than 10,000 sewing machines were sold in the Philippines in both 1903 and 1908, but nearly 30,000 were sold in 1913 and around 45,000 were sold in 1918. This increase illustrates the statement in the text that demand for Singer sewing machines grew significantly in the early twentieth century in overseas countries other than Russia, Germany, and the United Kingdom.

Choice B is incorrect because consistent sales of Singer sewing machines in New Zealand from 1903 to 1918 do not indicate that demand for the product increased but rather that demand remained relatively the same. **Choice C is incorrect** because it does not accurately describe the data in the graph. Although sales in Australia did increase somewhat between 1903 and 1908, there was very little change between 1908 and 1913, and then sales declined between 1913 and 1918. The data for Australia, then, do not show a steady increase from 1903 to 1918. **Choice D is incorrect** because declining sales of Singer sewing machines in Turkey from 1913 to 1918 do not point to an increase in demand for the product but rather to a decline in demand.

18 Correct answer **B** Easy ‹ Back to question

B POP biofuel.

Choice B is the best answer because it most effectively uses data from the graph to complete the sentence about which fuel has the highest energy density. Of the four bars in the graph, the highest (indicating the greatest energy density in MJ/L) is for

POP biofuel. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol.

Choice A is incorrect. The task is to find the fuel in the graph with the highest bar (indicating the greatest energy density in MJ/L), and jet fuel has the third-highest bar in the graph, not the highest. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol. **Choice C is incorrect**. The task is to find the fuel in the graph with the highest bar (indicating the greatest energy density in MJ/L), and ethanol has the lowest bar in the graph, not the highest. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol. **Choice D is incorrect**. The task is to find the fuel in the graph with the highest bar (indicating the greatest energy density in MJ/L), and gasoline has the second-highest bar in the graph, not the highest. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol.

19 Correct answer **A** Easy Back to question

A $31.78.

Choice A is the best answer because it most effectively uses data from the table to complete the text's discussion of how much a grower could have expected to receive on average for a box of lemons in July 2021. The table lists the average prices received by US citrus growers in dollars per box for grapefruits, oranges, and lemons in June 2020, June 2021, July 2020, and July 2021. According to the table, the average price of a box of lemons in July 2021 was $31.78.

Choice B is incorrect because the text indicates that the employee of a citrus grower wishes to know the average price for a box of lemons in July 2021. According to the table, $23.72 was the average price for a box of grapefruits in June 2021, not for a box of lemons in July 2021. **Choice C is incorrect** because the text indicates that the employee of a citrus grower wishes to know the average price for a box of lemons in July 2021. According to the table, $22.98 was the average price for a box of grapefruits in July 2021, not for a box of lemons in July 2021. **Choice D is incorrect** because the text indicates that the employee of a citrus grower wishes to know the average price for a box of lemons in July 2021. According to the table, $28.94 was the average price for a box of lemons in June 2021, not in July 2021.

20 Correct answer **A** Easy Back to question

A 7.35 million visitors.

Choice A is the best answer because it most effectively uses data from the table to complete the example of the high cost and low popularity of world's fairs. The text presents Chow's argument that the United States hasn't hosted a world's fair since 1984 because people think these exhibitions are overly expensive and insufficiently popular. The text then cites the 1984 World's Fair as an example, noting that it cost $350 million. Since the example should illustrate both high cost and insufficient popularity, the best completion of the example is the information from the table that the 1984 World's Fair had 7.35 million visitors.

Choice B is incorrect because it misrepresents data from the table. The table indicates that the 1984 World's Fair, which is the world's fair used as an example in the text, had 7.35 million, not 9.60 million, visitors. **Choice C is incorrect** because it misrepresents data from the table. The table indicates that the 1984 World's Fair, which is the world's fair used as an example in the text, had 7.35 million, not 6.40 million, visitors. **Choice D is incorrect** because it misrepresents data from the table. The table indicates that the 1984 World's Fair, which is the world's fair used as an example in the text, had 7.35 million, not 5.60 million, visitors.

21 Correct answer **B**

Easy

< Back to question

B common dandelion.

Choice B is the best answer because it most effectively uses data from the table to complete the example of a neighboring species that has a negative effect value. The table lists neighboring species, target species, and effect values. The table shows that only one neighboring species, the common dandelion, has a negative effect value (−0.6254).

Choice A is incorrect because the table shows that the neighboring species Himalayan balsam has a positive effect value, 0.7905, so it isn't an example of a neighboring species with a negative effect value. **Choice C is incorrect** because the table shows that star chickweed is a target species, so it isn't an example of a neighboring species with a negative effect value. **Choice D is incorrect** because the table shows that the neighboring species Virginia spring beauty has a positive effect value, 0.4853, so it isn't an example of a neighboring species with a negative effect value.

22 Correct answer **C**

Easy

< Back to question

C Rincón, Ponce, and Isabela each have an average rainfall below 8 inches, but San Sebastián's average rainfall that month is greater than 8 inches.

Choice C is the best answer because it most effectively uses data from the graph to complete the statement about average rainfall in September in select Puerto Rican cities. The graph shows that between 1981 and 2010 Rincón, Ponce, and Isabela all had an average rainfall during the month of September of about 6 inches, and San Sebastián had an average rainfall of nearly 11 inches. Describing the average September rainfall of Rincón, Ponce, and Isabela as below 8 inches and the average September rainfall of San Sebastián as greater than 8 inches therefore offers an accurate description of the data in the graph and most effectively completes the statement.

Choice A is incorrect because it offers an inaccurate interpretation of the data in the graph. The graph shows that in September, Rincón, Isabela, and Ponce all have an average rainfall of about 6 inches, and San Sebastián has an average rainfall of nearly 11 inches. Therefore, Rincón's average rainfall is the same as, not greater than, that of Isabela and Ponce, and it is below, not greater than, that of San Sebastián. **Choice B is incorrect** because it inaccurately describes the data in the graph. In September, Rincón and Ponce have an average rainfall of about 6 inches, not 5 inches; Isabela has an average rainfall of about 6 inches, not 10 inches; and San Sebastián has an average rainfall of nearly 11 inches, not 10 inches. **Choice D is incorrect** because although the graph shows a similar average rainfall (about 6 inches) for Rincón and Isabela in September, it doesn't show that Ponce has a similar average rainfall to San Sebastián during this month. In September, Ponce's average rainfall is about 6 inches, whereas San Sebastián's average rainfall is nearly 11 inches.

23 Correct answer **A**

Easy

< Back to question

A the number of cars produced increased but the number of companies producing cars decreased.

Choice A is the best answer because it most effectively uses data from the table to complete the statement about the US auto industry in the early twentieth century. The table shows the number of cars produced annually and number of companies producing cars in the United States between 1910 and 1925 in increments of five years. According to the table, the number of cars produced consistently increased from one increment to the next, going from 123,990 cars in 1910 to 3,185,881 cars in 1925. At the same time, the table shows that the number of companies producing cars consistently decreased, going from 320 companies in 1910 to only 80 companies in 1925. Thus, the table shows that the number of cars produced increased from 1910 to 1925, even as the number of companies producing cars decreased.

Choice B is incorrect. The table shows that the number of cars produced in the US increased, going from 123,990 in 1910 to 3,185,881 in 1925, instead of remaining unchanged, and the table also shows that the number of companies producing cars decreased from 320 to 80 instead of remaining unchanged. **Choice C is incorrect** because the table indicates that the number

of cars produced consistently increased from 1910 to 1925, going from 123,990 cars to 3,185,881 cars, instead of decreasing; moreover, the table shows that the number of companies producing cars from 1910 to 1925 declined from 320 to 80 instead of remaining unchanged. **Choice D is incorrect** because the table indicates that the number of companies producing cars consistently decreased from 1910 to 1925, going from 320 companies to only 80 companies.

24 Correct answer **A** Easy Back to question

A Eris and Makemake.

Choice A is the best answer because it most effectively uses data from the table to complete the statement about dwarf planets that have exactly one moon. The table lists several dwarf planets in one column and the number of moons that each of those dwarf planets has in another column. The text states that some dwarf planets have exactly one moon and indicates that there are two examples. Only two dwarf planets in the table have exactly one moon: Eris and Makemake.

Choice B is incorrect. According to the table, Eris has exactly one moon, but Haumea has two moons. **Choice C is incorrect**. According to the table, Haumea has two moons, and Pluto has five moons. Thus, they are not examples of dwarf planets with exactly one moon. **Choice D is incorrect** because while the table indicates that Makemake has exactly one moon, the table shows that Ceres has no moons at all.

25 Correct answer **C** Easy Back to question

C Yellowstone National Park.

Choice C is the best answer because it most effectively uses data from the graph to complete the statement about the US national park with the highest number of recreation visits during a three-month period. The line graph shows the number of recreation visits to four US national parks for the months of June, July, and August 2021. According to the graph, the number of recreation visits to Yellowstone National Park in June was approximately 940,000; in July, the number of visits was approximately 1,080,000; and in August, the number of visits was approximately 920,000. In all three months, the number of visits to Yellowstone was higher than the number of visits to any other park in each month.

Choice A is incorrect. According to the graph, the number of recreation visits to Zion National Park was approximately 680,000 in June, about 580,000 in July, and about 470,000 in August, each of which is lower than the number of visits to Yellowstone in the same months. **Choice B is incorrect**. According to the graph, the number of recreation visits to Rocky Mountain National Park was approximately 670,000 in June, about 900,000 in July, and about 750,000 in August, each of which is lower than the number of visits to Yellowstone in the same months. **Choice D is incorrect**. According to the graph, the number of recreation visits to Grand Canyon National Park was approximately 540,000 in June, about 560,000 in July, and about 430,000 in August, each of which is lower than the total visits to Yellowstone in the same months.

26 Correct answer **C** Easy Back to question

C 500 to 2,000 meters below the surface

Choice C is the best answer. The table shows the depths below the ocean surface at which four species of deep-sea fish live. According to the table, the range of depths at which the southern stoplight loosejaw lives is 500–2,000 meters below the surface.

Choice A is incorrect because the table indicates that the southern stoplight loosejaw lives 500–2,000 meters below the ocean surface, not at depths more than 2,000 meters below the surface. **Choice B is incorrect** because the table indicates that the southern stoplight loosejaw lives 500–2,000 meters below the ocean surface, not 150–400 meters below the surface. **Choice D**

is incorrect because the table indicates that the southern stoplight loosejaw lives 500–2,000 meters below the ocean surface, not 250–500 meters below the surface.

27 Correct answer **D**

Easy

< Back to question

D 2017.

Choice D is the best answer because it most effectively uses data from the table to complete the statement about the year when both museums had the highest number of visits. The table shows the number of visits (in millions) from 2016 to 2019 to two museums: the National Museum of the American Indian and the National Museum of African American History and Culture. It indicates that the highest number of visits to the National Museum of the American Indian was 1.2 million in 2017 and that the highest number of visits to the National Museum of African American History and Culture was 2.4 million, also in 2017.

Choice A is incorrect because the table shows that in 2016, the National Museum of the American Indian had 1.1 million visits and that the National Museum of African American History and Culture had 0.73 million visits, both of which are lower than the number of visits these museums had in 2017. **Choice B is incorrect** because the table shows that in 2018, the National Museum of the American Indian had 1.1 million visits and that the National Museum of African American History and Culture had 1.9 million visits, both of which are lower than the number of visits these museums had in 2017. **Choice C is incorrect** because the table shows that in 2019, the National Museum of the American Indian had 0.96 million visits and that the National Museum of African American History and Culture had 2.0 million visits, both of which are lower than the number of visits these museums had in 2017.

28 Correct answer **A**

Easy

< Back to question

A remained largely consistent from 2005 to 2022, whereas the level of bridging trust showed more variability from 2005 to 2022.

Choice A is the best answer because it most effectively uses data from the graph to complete the statement about the level of bonding trust in the UK. The text defines bonding trust as trust within already existing relationships and bridging trust as trust between different groups, often involving interactions beyond one's immediate social circle, giving as an example meeting someone at a networking event, a type of event where people would typically make new acquaintances. The graph presents the percentage of UK survey respondents who indicated that they trust people at least somewhat in two categories—people they know personally (bonding trust) and people they are meeting for the first time (bridging trust)—in 2005, 2018, and 2022. According to the graph, the percentage representing bonding trust remained fairly consistent over the period, at approximately 96% in 2005, 97% in 2018, and 97% in 2022. By contrast, the percentage representing bridging trust showed more variability, rising from approximately 46% in 2005 to approximately 55% in 2018 before falling to approximately 53% in 2022.

Choice B is incorrect because the graph shows that the percentage representing bonding trust didn't consistently grow from 2005 to 2022; rather, it remained largely consistent at approximately 96%, 97%, and 97% in 2005, 2018, and 2022, respectively. Moreover, the graph shows that the percentage representing bridging trust didn't largely decline from 2005 to 2022; rather, it rose from approximately 46% in 2005 to approximately 55% in 2018 before falling slightly to approximately 53% in 2022. **Choice C is incorrect**. While the graph indicates that the percentage representing bonding trust was approximately the same in 2018 and 2022 (approximately 97%), the graph also shows that bonding trust was substantially higher than, not lower than, bridging trust in both 2018 (approximately 55%) and 2022 (approximately 53%). **Choice D is incorrect**. While the graph does indicate that bonding trust remained higher than bridging trust from 2005 to 2018, the claim that bonding trust declined from 2005 to 2022 isn't supported by the graph. The graph shows that the percentage representing bonding trust rose slightly from approximately 96% in 2005 to approximately 97% in both 2018 and 2022.

29 Correct answer **C** Easy ‹ Back to question

C Each of the three sponges was inhabited by at least one male *A. fasciatus* and at least one female *A. fasciatus*.

Choice C is the best answer because it accurately describes data from the graph that support the claim that the team found that male and female *Atelomycterus fasciatus* (banded sand catsharks) share the same sponge. The graph presents the number of male, female, and undetermined banded sand catsharks found in each of three sponges—sponge 1, sponge 2, and sponge 3. The graph shows that approximately 17 male sharks and 13 female sharks were found in sponge 1, approximately 1 male shark and 2 female sharks were found in sponge 2, and approximately 2 male sharks and 1 female shark were found in sponge 3. Thus, the graph shows that male and female sharks were found sharing the same sponges.

Choice A is incorrect because the graph shows that one of the sponges (sponge 1) was *not* inhabited by any undetermined banded sand catsharks. Additionally, this choice doesn't give any information about female sharks, so it can't support the claim that male and female sharks are actually found in the same sponge. **Choice B is incorrect** because it doesn't give any information about female sharks. The graph does show that approximately 17 male banded sand catsharks inhabited sponge 1, but that information alone can't support the claim that male and female sharks are found in the same sponge. **Choice D is incorrect** because it doesn't give any information about male banded sand catsharks. The graph does show that approximately 13 female banded sand catsharks inhabited sponge 1, but that information alone can't support the claim that male and female sharks are found in the same sponge.

30 Correct answer **A** Easy ‹ Back to question

A 170 electoral college votes.

Choice A is the best answer because it most effectively uses data from the table to complete the statement about the 15th US presidential election. The table shows the total number of electoral college votes and the total number of popular votes received by each of three candidates. The table shows that Polk received 170 electoral college votes.

Choice B is incorrect because the table shows that Polk received 170 electoral college votes, not 103. According to the table, none of the candidates received a total of 103 votes of either type (electoral college or popular). **Choice C is incorrect** because the table shows that Polk received 170 electoral college votes, not 62. According to the table, none of the candidates received a total of 62 votes of either type (electoral college or popular). **Choice D is incorrect** because the table shows that Polk received 170 electoral college votes, not 44. According to the table, none of the candidates received a total of 44 votes of either type (electoral college or popular).

31 Correct answer **A** Easy ‹ Back to question

A The newspaper published approximately 1,000 investigative articles in 2010 and approximately 500 in 2019.

Choice A is the best answer. By comparing the number of investigative articles in 2010 to the number in 2019, we can see that the number has fallen overall.

Choice B is incorrect. This choice misreads the graph. The 1,600 articles published in 2013 was the largest annual number of investigative articles published during the period. Also, notice that the claim focuses on an overall change, while this choice just focuses on one year. We can't determine an overall increase or decrease by looking at just one year. **Choice C is incorrect**. The 1,000 articles published in 2017 wasn't the largest number published during the period. Also, notice that the claim focuses on an overall change, while this choice just focuses on one year. We can't determine an overall increase or decrease by looking at just one year. **Choice D is incorrect**. This choice doesn't justify the claim. The claim is about a decrease in articles published between 2010 and 2019. This data shows an increase in articles published over a different period (2010-2013).

32 Correct answer **A**

Easy

< Back to question

A April.

Choice A is the best answer because it effectively uses data from the table to complete the statement, identifying the month in which the United States had the highest number of housing starts in 2022. According to the table, which shows the number of US housing starts from January to April 2022, the highest number of housing starts was 1,803 thousand, which occurred in April.

Choice B is incorrect because March had 1,713 thousand housing starts, which is lower than the number of starts in April and in February. **Choice C is incorrect** because January had 1,669 thousand housing starts, which is the lowest of all the months listed in the table. **Choice D is incorrect** because February had 1,771 thousand housing starts, which is lower than the number of starts in April.

33 Correct answer **D**

Easy

< Back to question

D More of the drawings had an example of a mammal than either an example of a bird or an example of an insect.

Choice D is the best answer because it accurately describes data from the graph that support the researchers' conclusion that children may be more aware of mammals than of other animals. The graph presents the percent of drawings by schoolchildren that contained an example of an animal from a certain group (mammals, birds, or insects). The graph shows that approximately 80% of the drawings contained an example of a mammal, while only approximately 69% contained an example of a bird and only about 55% contained an example of an insect. The fact that

mammals were included in more drawings than either birds or insects were supports the idea that children may be particularly aware of mammals in their environments.

Choice A is incorrect because the graph shows that there were not "about as many" drawings with insects as there were drawings with birds (approximately 69% of the drawings included an example of a bird, while only about 55% included an example of an insect). Further, comparing only the numbers for birds and insects wouldn't indicate anything about the schoolchildren's awareness of mammals. **Choice B is incorrect** because the graph shows that insects, not birds, were the group that appeared in the fewest number of drawings (approximately 69% of the drawings included an example of a bird but only about 55% included an example of an insect). Further, stating that examples from one nonmammal group appeared in the fewest number of drawings would provide no evidence about the schoolchildren's awareness of mammals. **Choice C is incorrect** because the graph shows that more drawings had an example of a mammal than an example of an insect, not the other way around (approximately 80% of the drawings included an example of a mammal, while only about 55% included an example of an insect). Further, examples of a nonmammal group appearing in more drawings than examples of mammals did would actually weaken the claim that schoolchildren may be more aware of mammals than of other animals.

34 Correct answer **C**

Easy

< Back to question

C red maple.

Choice C is the best answer because it most effectively uses data from the table to complete the statement about the forestry student's project. The table shows five types of maple trees, each tree's maximum height, and whether each tree is native to North America. The text indicates that the student needs to recommend a maple tree that's native to North America and won't reach a height greater than 60 feet. The red maple is the only tree listed in the table that meets these criteria: its maximum height is 60 feet—meaning that it won't grow higher than 60 feet—and it's native to North America.

Choice A is incorrect because the text states that the student needs to recommend a tree that's native to North America and won't grow higher than 60 feet, but the table shows that the maximum height of the silver maple is 70 feet. **Choice B is incorrect** because the text states that the student needs to recommend a tree that's native to North America and won't grow

higher than 60 feet, but the table shows that the maximum height of the sugar maple is 75 feet. **Choice D is incorrect** because the text states that the student needs to recommend a tree that's native to North America and won't grow higher than 60 feet, but the table shows that the Norway maple isn't native to North America.

35 Correct answer **B** Easy Back to question

B Pacaya.

Choice B is the best answer. Pacaya had a deformation rate of almost 3.5 centimeters per month, while Sierra Negra had a deformation rate of less than 3 centimeters per month. Therefore, Sierra Negra's deformation rate was lower than Pacaya's.

Choice A is incorrect. Alcedo has a lower rate of deformation than Sierra Negra. **Choice C is incorrect**. Fernandina has a lower rate of deformation than Sierra Negra. **Choice D is incorrect**. Maule has a lower rate of deformation than Sierra Negra.

36 Correct answer **A** Easy Back to question

A Washington had between 600 and 800 organic farms.

Choice A is the best answer because it uses data from the graph to accurately complete the text. The graph shows the number of organic farms located in each of six US states in 2016: between 2,600 and 2,800 in California; between 1,200 and 1,400 in Wisconsin; between 1,000 and 1,200 in New York; approximately 800 in Pennsylvania; and between 600 and 800 in both Iowa and Washington. The last sentence of the text provides information about the number of organic farms in 2016, first describing the number in California. The best completion of the sentence is the choice that accurately describes the number of organic farms in 2016 in another state, which the assertion that Washington had between 600 and 800 organic farms provides.

Choice B is incorrect because it doesn't accurately reflect the data from the graph. The graph indicates that there were between 1,000 and 1,200 organic farms in New York, not fewer than 800 organic farms. **Choice C is incorrect** because it doesn't accurately reflect the data from the graph. While the graph indicates that there were between 1,200 and 1,400 organic farms in Wisconsin in 2016, there were only between 600 and 800 in Iowa. **Choice D is incorrect** because it doesn't accurately reflect the data from the graph. The graph indicates that in 2016 there were approximately 800 organic farms in Pennsylvania, not more than 1,200.

37 Correct answer **D** Easy Back to question

D white-tailed deer.

Choice D is the best answer because it accurately identifies the species with the highest global biomass, the white-tailed deer at approximately 2.7 million metric tons. The graph shows the global biomass for four wild land mammal species with the highest global biomass. The graph indicates that the African bush elephant's global biomass is about 1.3 million metric tons, the eastern gray kangaroo's is about 0.6 million metric tons, and the wild boar's is about 1.9 million metric tons. These values are all lower than the global biomass for the white-tailed deer's approximately 2.7 million metric tons. Thus, the white-tailed deer is the species with the highest global biomass.

Choice A is incorrect because although the graph indicates that the wild boar has a relatively high global biomass of about 1.9 million metric tons, it is not the species with the highest value. The white-tailed deer is the species with the highest global biomass at about 2.7 million metric tons. **Choice B is incorrect** because the eastern gray kangaroo has the lowest global biomass value shown on the graph at about 0.6 million metric tons, not the highest global biomass. The white-tailed deer has the highest at about 2.7 million metric tons. **Choice C is incorrect** because although the African bush elephant has a substantial global biomass of about 1.3 million metric tons, it is not the species with the highest value according to the graph. The white-tailed deer has the highest global biomass at about 2.7 million metric tons.

38 Correct answer **D** Easy ‹ Back to question

D 39.21 square miles.

Choice D is the best answer because it most effectively uses data from the table to support the statement about the tribal nation of Los Coyotes Band of Cahuilla and Cupeño Indians in California. The text states that most tribal nations in California are less than 50 square miles in total area and provides Los Coyotes Band of Cahuilla and Cupeño Indians as an example. According to the table, the tribal nation of Los Coyotes Band of Cahuilla and Cupeño Indians covers 39.21 square miles in Southern California, which is less than 50 square miles.

Choice A is incorrect because it cites the area of La Jolla Band of Luiseño Indians (13.50 square miles), not that of Los Coyotes Band of Cahuilla and Cupeño Indians. **Choice B is incorrect** because it cites the area of the Agua Caliente Band of Cahuilla Indians (53.68 square miles), not that of Los Coyotes Band of Cahuilla and Cupeño Indians. Additionally, this area is greater than 50 square miles and therefore wouldn't be an effective example for illustrating the text's statement that most tribal nations in California are less than 50 square miles in total area. **Choice C is incorrect** because it cites the area of the Pauma Band of Luiseño Mission Indians (9.36 square miles), not that of Los Coyotes Band of Cahuilla and Cupeño Indians.

39 Correct answer **A** Easy ‹ Back to question

A the cold-dry season for both females and males.

Choice A is the best answer. Females only traveled 9.28 km per day in the cold-dry season, versus 12.64 and 12.48 km per day in the monsoon and hot-dry seasons, respectively. Males only traveled 15.81 km per day per day in the cold-dry season, versus 18.93 and 18.87 km per day in the monsoon and hot-dry seasons, respectively. So, the cold-dry season was the season where both males and females had the least daily travel.

Choice B is incorrect. Although females traveled least in the cold-dry season, males didn't travel least in the hot-dry season. Instead, they traveled less per day in the cold-dry season as well. **Choice C is incorrect**. Females had less daily travel in the cold-dry season than in the hot-dry season (9.28 versus 12.48 km per day), and males had less daily travel in the cold-dry season than in the monsoon season (15.81 versus 18.93 km per day). **Choice D is incorrect**. In fact, both females and males traveled the most kilometers per day in the monsoon season.

40 Correct answer **A** Easy ‹ Back to question

A South West area.

Choice A is the best answer because it most effectively uses data from the table to complete the statement about the bike path survey. The table lists five city areas and the percent of residents in each area who are in favor of adding more bike paths. The text ends with the statement that the highest level of demand was in the area with 88% of the residents saying they wanted more bike paths, and the table shows that the South West area is the one where 88% of residents gave that response.

Choice B is incorrect because the table shows that 33%, not 88%, of residents in the South Central area were in favor of more bike paths. **Choice C is incorrect** because the table shows that 12%, not 88%, of residents in the North East area were in favor of more bike paths. **Choice D is incorrect** because the table shows that 26%, not 88%, of residents in the North Central area were in favor of more bike paths.

41 Correct answer **C** Easy Back to question

C 0.26 million metric tons of copper in 1995.

Choice C is the best answer because it most effectively uses data from the table to complete the statement about copper mining. The table shows the amount of copper mined in each of four countries in 1995 and 2020. According to the text, a student who consults the table notes that the country that mined 0.55 million metric tons of copper in 2020 had mined a different amount in 1995. The table indicates that Kazakhstan is the country that mined 0.55 million metric tons of copper in 2020 and 0.26 million metric tons of copper in 1995.

Choice A is incorrect because it doesn't provide the amount of copper mined in 1995 by Kazakhstan, the country that mined 0.55 million metric tons of copper in 2020. According to the table, Canada mined 0.73 million metric tons of copper in 1995 and 0.59 million metric tons in 2020. It didn't mine 0.55 million metric tons in either year. **Choice B is incorrect** because it doesn't provide the amount of copper mined in 1995 by Kazakhstan, the country that mined 0.55 million metric tons of copper in 2020. According to the table, Indonesia mined 0.44 million metric tons of copper in 1995 and 0.51 million metric tons in 2020. It didn't mine 0.55 million metric tons in either year. **Choice D is incorrect** because it doesn't provide the amount of copper mined in 1995 by Kazakhstan, the country that mined 0.55 million metric tons of copper in 2020. According to the table, Chile mined 2.49 million metric tons of copper in 1995 and 5.73 million metric tons in 2020. It didn't mine 0.55 million metric tons in either year.

42 Correct answer **C** Easy Back to question

C 32.4 square miles.

Choice C is the best answer because it most effectively uses data from the table to complete the comparison between Pueblo tribal nations. The student identifies that the total area of Taos Pueblo is 156.2 square miles and needs to complete the comparison with the total area of Nambé Pueblo. According to the table, Nambé Pueblo has a total area of 32.4 square miles.

Choice A is incorrect because according to the table, 47.3 square miles is the area of Pueblo de San Ildefonso, not of Nambé Pueblo. **Choice B is incorrect** because according to the table, 77.1 square miles is the area of Santa Clara Pueblo, not of Nambé Pueblo. **Choice D is incorrect** because according to the table, 595.7 square miles is the area of Pueblo of Acoma, not of Nambé Pueblo.

43 Correct answer **A** Easy Back to question

A 75%.

Choice A is the best answer because it most effectively uses data from the graph to complete the statement. The graph shows test results for two new battery recycling processes used with two types of lithium-ion batteries, type A and type B. According to the graph, recycling process 2 recovered the highest percentage of lithium in the tests: recovering about 75% from lithium-ion battery type B.

Choice B is incorrect because, according to the graph, the highest percentage of lithium recovered in the tests was 75%, not 10%. In fact, none of the tests recovered exactly 10% of lithium from a recycling process. **Choice C is incorrect** because, according to the graph, the highest percentage of lithium recovered in the tests was 75%, not 45%. In fact, none of the tests recovered exactly 45% of lithium from a recycling process. **Choice D is incorrect** because, according to the graph, the highest percentage of lithium recovered in the tests was 75%, not 20%. In fact, none of the tests recovered exactly 20% of lithium from a recycling process.

44 Correct answer **D**

Easy

‹ Back to question

D The highest number of medicine and health topic submissions during the period shown is approximately 285 in 2019.

Choice D is the best answer because it effectively uses data from the graph to support the underlined claim that more medicine and health topics were submitted to a national science fair in 2019 than in any of the other years shown. This choice indicates that the approximately 285 medicine and health topics submitted in 2019 are more than the number of medicine and health submissions in any other year shown—a description that is supported by information in the graph, which shows that medicine and health topic submissions were below 250 in 2016, 2017, and 2018, but above 250 (approximately 285 submissions) in 2019.

Choice A is incorrect because it doesn't support the underlined claim or accurately reflect the information in the graph. This choice refers to 2016 and discusses cellular and molecular biology and animal science, whereas the underlined claim refers to 2019 and discusses medicine and health. Moreover, the claim that in 2016 there were equal numbers of submissions in the cellular and molecular biology category and in the animal science category is contradicted by the graph, which shows approximately 200 submissions and 50 submissions, respectively, for those categories in 2016. **Choice B is incorrect** because it doesn't accurately reflect the information in the graph. This choice claims that in 2019 there were more physics and space submissions than there were medicine and health submissions, but the graph shows that there were approximately 100 space and science submissions that year and approximately 285 medicine and health submissions. **Choice C is incorrect** because it doesn't accurately reflect the information in the graph or support the underlined claim about medicine and health research topics. This choice claims that there were approximately 95 submissions for the animal science category in 2016, but the graph shows that the number was closer to 50 in 2016.

45 Correct answer **C**

Easy

‹ Back to question

C 0.75.

Choice C is the best answer because it effectively uses data from the table to complete the example of the estimated impact of invasive mongooses on threatened mammals. The table shows the values for the estimated harmful impact of three invasive predator species (mongooses, dogs, and cats) on threatened birds, mammals, and reptiles. The text states that the values are on a scale from 0.25 (less impact) to 1.00 (greater impact). The table shows that the value for the estimated impact of invasive mongooses on threatened mammals is 0.75.

Choice A is incorrect because the table shows that the value for the estimated impact of mongooses on threatened mammals is 0.75, not 0.35. The value 0.35 is not assigned to any of the categories in the table. **Choice B is incorrect** because the table shows that 0.61 is the value for the estimated impact of cats, not mongooses, on threatened mammals. **Choice D is incorrect** because the table shows that 0.52 is the value for the estimated impact of cats on threatened reptiles, not of mongooses on threatened mammals.

46 Correct answer **C**

Easy

‹ Back to question

C 3–4 meters below the surface.

Choice C is the best answer because it most effectively uses data from the table to complete the statement about the depth at which the highest number of tools made from clamshells that Neanderthals collected from the beach was found. The table presents the depths at which Neanderthal clamshell tools were found, and, for each depth, the number of those tools made from clamshells that washed up on the beach and the number made from clamshells harvested from the seafloor. The table indicates that the highest number made from clamshells collected from the beach was 99 and that these tools were found at a depth of 3–4 meters.

Choice A is incorrect because the table indicates that 18 tools made from clamshells collected from the beach were found at a depth of 5–6 meters, which is fewer than the 99 tools found at a depth of 3–4 meters. **Choice B is incorrect** because the table indicates that 2 tools made from clamshells collected from the beach were found at a depth of 4–5 meters, which is fewer than the 99 tools found at a depth of 3–4 meters. **Choice D is incorrect** because the table indicates that 1 tool made from clamshells collected from the beach was found at a depth of 6–7 meters, which is fewer than the 99 tools found at a depth of 3–4 meters.

47 Correct answer **B** Easy Back to question

B Participants who were provided with a ranking of the museums spent disproportionately more time reading about the British museum.

Choice B is the best answer. By looking at the top-ranked option, we can see that people provided with ranked lists spent more time reading about the British Museum than reading about other museums (36% of the time versus 21% for the second-ranked option).

Choice A is incorrect. The claim is about people with ranked lists, and these data are about those with unranked lists. **Choice C is incorrect**. The claim is about people with ranked lists looking at the top-ranked option, and these data are about the third-ranked option. **Choice D is incorrect**. The claim is about people with ranked lists, and these data are about those with unranked lists.

48 Correct answer **D** Medium Back to question

D Grass cover increased from 1987 to 1993 and from 1993 to 2006, whereas forest cover decreased in those periods.

Choice D is the best answer because it describes data from the graph that support Martinez and colleagues' conclusion that the Jordanelle Dam led to changes that benefited grass plants but not trees. The graph shows characteristics of the banks of the Provo River downstream of the Jordanelle Dam in three different years—1987, 1993, and 2006. Specifically, the graph shows the amount of grass cover, bare soil, and forest cover in those years. The text indicates that the Jordanelle Dam was built in 1992, meaning that the data from the graph for 1987 reflect conditions before the dam was built, whereas the data for 1993 and 2006 reflect conditions after the dam was built. The data show that grass cover increased substantially from 1987 to 1993 and again from 1993 to 2006. The data also show that forest cover declined over those periods. Together, these data support Martinez and colleagues' conclusion that the dam was beneficial for grass plants but not for trees—grass cover increased significantly after the dam was built, while forest cover declined.

Choice A is incorrect. Although it is true that, in the graph, the lowest value for grass cover is approximately 58,000 square meters and the highest value for forest cover is approximately 75,000 square meters, both values are from 1987, before the Jordanelle Dam was built in 1992. Therefore, this information alone cannot support Martinez and colleagues' conclusion about changes in grass and tree cover following the construction of the dam. **Choice B is incorrect** because it presents an inaccurate description of data from the graph. The graph shows that there was more forest cover than grass cover in 1987, not that there was more grass cover than forest cover that year. **Choice C is incorrect** because, while it accurately reflects data from the graph when it compares grass cover and forest cover to bare soil, these data alone cannot support Martinez and colleagues' conclusion that the dam led to changes that benefited grass plants but not trees. An increase in grass cover relative to bare soil following the construction of the dam might indicate that the dam benefited grass plants, but the fact that there was more forest cover than bare soil in all three years doesn't indicate that the dam failed to benefit trees.

49 Correct answer **B** Medium ‹ Back to question

B saw a greater expansion than *Deschampsia antarctica* did, increasing the area of land it covered by more than half.

Choice B is the best answer because it most effectively uses data from the table to complete the comparison of how *Colobanthus quitensis* benefited from warming temperatures with how *Deschampsia antarctica* benefited from them. The table shows the land area covered by these two plant species at a site in Antarctica. According to the table, *Colobanthus quitensis* increased the area it covered by 55% from 2009 to 2018, whereas *Deschampsia antarctica* increased the area it covered by 28% during the same period. It therefore follows that *Colobanthus quitensis* saw a greater expansion than *Deschampsia antarctica* did and that *Colobanthus quitensis* increased the area of land it covered by more than half.

Choice A is incorrect because according to the table, *Deschampsia antarctica* covered 1,230 square meters of land in 2009 and 1,576 square meters of land in 2018. *Deschampsia antarctica* therefore covered a larger, not a smaller, area of land in 2018 than in 2009. Moreover, there's no information in the text or the table that suggests that one species of the plant suppressed the other. **Choice C is incorrect** because it inaccurately describes the data in the table. The table shows the land area covered by *Colobanthus quitensis* and *Deschampsia antarctica* and the percent increase in area covered by the two species from 2009 to 2018, not the average size of individual plants belonging to the two species. The data in the table therefore can't be used to make a comparison of the increase in individual plants' average size. **Choice D is incorrect** because the table shows the land area covered by *Colobanthus quitensis* and *Deschampsia antarctica* and the percent increase in area covered by the two species from 2009 to 2018, not the rate at which the species increased the area they covered. Moreover, there's nothing in the table or the text that suggests that the areas covered by the two species were newly freed from ice.

50 Correct answer **A** Medium ‹ Back to question

A strong enough to generate about 150 thousand more MWh of electricity from wind turbines.

Choice A is the best answer. The claim is that when winds are stronger than forecasted, wind turbines can generate more energy than predicted. The supporting graph shows the additional amount (above the predicted amount) that the turbines generated under those conditions, with the West generating about 150 thousand additional MWh.

Choice B is incorrect. This choice doesn't complete the example. The graph shows the additional amount of electricity that the wind turbines generated. The West bar is greater than 0, so the West generated more than the predicted amount. **Choice C is incorrect**. This choice doesn't complete the example. The graph shows the additional amount of electricity that the wind turbines generated. The West bar is greater than 0, so the West generated more than the predicted amount. **Choice D is incorrect**. This choice misreads the graph. The graph shows us that the West (the bar on the left) generated about 150 thousand additional MWh.

51 Correct answer **C** Medium ‹ Back to question

C Argentina decreased from the previous marketing year but remained the highest among the three countries.

Choice C is the best answer because it most effectively uses data from the graph to complete the text's discussion of the percentages of maize exported in the marketing year 2012/2013. The graph presents percentages of maize exported by Argentina, Brazil, and the United States in marketing years 2009/2010 to 2013/2014 and indicates that for the marketing year 2012/2013, the percentage of maize exported by Argentina decreased to about 70 percent from about 80 percent in the previous marketing year. The graph also shows that the percentage of maize exported by Argentina remained highest among the three countries in the marketing year 2012/2013, surpassing the percentage exported by Brazil (about 31 percent) and by the United States (about 8 percent).

Choice A is incorrect because for the marketing year 2012/2013, the graph indicates that the percentage of maize exported by Brazil didn't increase from the previous year; rather, it decreased from about 34 percent to about 31 percent. Moreover, the

graph shows that the percentage of maize exported by Brazil remained higher, not lower, than the percentage exported by the United States in the marketing year 2012/2013. **Choice B is incorrect** because the graph indicates that the percentage of maize exported by Brazil never exceeded the percentage exported by Argentina for any of the marketing years represented. **Choice D is incorrect** because the graph indicates that the percentage of maize exported by the United States reached its lowest point, not its highest, during the five marketing years in 2012/2013, with the United States exporting only about 8 percent of its maize in that marketing year.

52 Correct answer **B** Medium Back to question

B at 48 hours, more than 70% of seeds treated with H_2S at a concentration of 10 micromoles per liter had germinated, whereas only approximately 50% of untreated seeds had germinated.

Choice B is the best answer. The claim is that some concentrations of H_2S led to increased germination rates, and this choice accurately shows that seeds treated with 10 micromoles per liter of H_2S tended to germinate faster than untreated seeds.

Choice A is incorrect. This choice doesn't justify the claim. The claim compares the germination rates of seeds exposed to certain concentrations of H_2S to untreated seeds, but this choice only discusses one concentration of H_2S, so it can't support any comparison between treated and untreated groups. **Choice C is incorrect**. This choice misreads the graph. At 168 hours, only about 85% of seeds treated with H_2S at 500 micromoles per liter and well over 70% of untreated seeds had germinated (about 80%). **Choice D is incorrect**. This choice misreads the graph. At 48 hours, about 70% of seeds treated with H_2S at 10 micromoles per liter and about 50% of untreated seeds had germinated.

53 Correct answer **B** Medium Back to question

B Artifacts L5_239 and K3_18 were exposed to temperatures of approximately 550°C and 650°C, respectively.

Choice B is the best answer. Campfires typically reach over 400°C, so human artifacts that were exposed to temperatures higher than this may indicate some human control over fire.

Choice A is incorrect. This choice misreads the graph. Neither artifact K3_9 nor K5_106 was exposed to temperatures above even 200°C. **Choice C is incorrect**. This choice doesn't support the claim. Campfires typically reach over 400°C, so exposure to temperatures of 100°C wouldn't demonstrate exposure to fire. **Choice D is incorrect**. This choice doesn't support the claim. Both artifacts K3_9 and K5_106 were exposed to temperatures of less than 200°C. Since campfires typically reach over 400°C, this wouldn't demonstrate exposure to fire.

54 Correct answer **D** Medium Back to question

D Of the birds included in the table, the ocellated thrasher has the largest mean bill surface area and the habitat with the lowest mean maximum temperature in the warmest month, while the Bendire's thrasher has the second smallest mean bill surface area and the habitat with the highest mean maximum temperature in the warmest month.

Choice D is the best answer because it most effectively uses data from the table to support Probst and colleagues' conclusion about the hypothesis regarding the relationship between birds' bill size and habitat temperature. The text states that although it has been hypothesized that birds' bill size should increase with habitat temperature (an adaptation that reflects the fact that birds can release excess heat through their bills), Probst and colleagues concluded after studying mean bill surface area in North American thrashers that this hypothesis was not fully supported. In other words, Probst and colleagues did not observe the predicted positive relationship between mean bill surface area and habitat temperature in the thrashers they studied. The data in the table about the ocellated thrasher support Probst and colleagues' conclusion because

this species has the greatest mean bill surface area (3.26 cm^2), but its habitat has the lowest mean maximum temperature in the warmest month (27.56°C). If the hypothesis were fully supported, species such as the ocellated thrasher that have colder habitats would likely also have smaller bills. Similarly, the data about the Bendire's thrasher support Probst and colleagues' conclusion because this species has the second-smallest mean bill surface area (1.98 cm^2), yet its habitat has the highest mean maximum temperature in the warmest month (36.57°C). If the hypothesis were fully supported, the Bendire's thrasher and other species with warmer habitats would also have larger bills. Because data in the table show that the ocellated thrasher and the Bendire's thrasher have the opposite or near opposite of the hypothesized relationship between bill size and habitat temperature, these examples support Probst and colleagues' conclusion that this hypothesis isn't fully supported.

Choice A is incorrect because it misrepresents the data in the table. Although the Bendire's thrasher has the second-smallest mean bill surface area of the species that are included in the table and although its habitat has the second-lowest mean minimum temperature in the coldest month, this habitat has the highest (rather than the lowest) mean maximum temperature in the warmest month. Moreover, the data about this species' bill surface area and mean minimum temperature suggest that smaller bills are associated with colder habitats, supporting rather than challenging the hypothesis that bill size increases with habitat temperature. **Choice B is incorrect** because it misrepresents the data in the table. Although the Cozumel thrasher has the second-greatest mean bill surface area of the species that are included in the table, its habitat's mean maximum temperature in the warmest month is not "significantly higher" than the mean maximum temperatures of the other habitats. On the contrary, the mean maximum temperature of the Cozumel thrasher's habitat is lower than that observed for the habitats of both the Bendire's thrasher and the long-billed thrasher. **Choice C is incorrect** because it misrepresents the data in the table. Although this choice accurately describes the brown thrasher's mean bill surface area and habitat temperature, it incorrectly states that the long-billed thrasher has the second-largest (rather than the third-largest) mean bill surface area of the species included. In addition, instead of revealing a lack of support for the hypothesis that bill size increases with habitat temperature, the data in this choice broadly reflect the hypothesized relationship.

55 Correct answer **B** Medium Back to question

B The monthly hours of sunshine in both Anchorage and Fairbanks increase from April to June and then decrease from June to September.

Choice B is the best answer because it best describes data from the graph that support the student's conclusion about weather patterns in Anchorage and Fairbanks. According to the graph, the amount of sunshine increases in both cities from April to June: in Anchorage, the number

of monthly hours increases from about 250 to just under 300, and in Fairbanks the number of monthly hours increases from about 300 to just under 350. Also according to the graph, the amount of sunshine decreases in both cities from June to September: in Anchorage the number of monthly hours decreases from just under 300 to about 125, and in Fairbanks the number of monthly hours decreases from just under 350 to about 125. Thus, the monthly hours of sunshine in both cities follow a similar pattern, increasing from April to June and then decreasing from June to September.

Choice A is incorrect because, according to the graph, the monthly hours of sunshine in both Anchorage and Fairbanks decrease from June to July. They don't hold steady. In June there are slightly less than 300 hours of sunshine in Anchorage and slightly less than 350 hours in Fairbanks. Then, in July there are approximately 250 hours of sunshine in both cities. **Choice C is incorrect** because the graph shows that Anchorage and Fairbanks have less than 200 monthly hours of sunshine only in August and September. For the rest of the months represented in the graph, both cities have more than 200 monthly hours of sunshine. **Choice D is incorrect** because, according to the graph, Anchorage doesn't have more than 300 monthly hours of sunshine from April to June. In addition, both cities have more than 200 hours of sunshine in July, although the amount of sunshine does decrease to less than 200 monthly hours in August and September.

56 Correct answer **B**

Medium

‹ Back to question

B The spider population count also substantially declined by day 30 in the enclosure without lizards.

Choice B is the best answer because it describes data from the graph that weaken the student's conclusion about the reduction in the spider population in the enclosure with lizards. The graph shows that the enclosure with lizards and the enclosure without lizards each began with about 85 spiders, and that the number of spiders in each enclosure fell over the 30 days of the study. The student's claim is that the reduction in spiders in the enclosure with lizards is "entirely attributable to the presence of the lizards," meaning that the spider population wouldn't have declined except for the presence of the lizards. This claim is weakened, however, by the fact that the enclosure without lizards also saw a substantial reduction in the number of spiders. Since the number of spiders fell in the enclosure without lizards as well as in the enclosure with lizards, there must be some other factor than just the presence of the lizards that contributed to the reduction in the spider population.

Choice A is incorrect because the fact that the two enclosures started with the same number of spiders is irrelevant to the claim that the reduction in spider population by day 30 in the enclosure with lizards can be entirely attributed to the lizards. **Choice C is incorrect** because the fact that the spider population in the enclosure with lizards fell more between days 1 and 10 than in other periods has nothing to do with the student's claim that the reduction in spiders in that enclosure by day 30 can be entirely attributed to the lizards. **Choice D is incorrect**. Although it's true that on day 30 the spider population was lower in the enclosure with lizards than in the enclosure without lizards, this fact doesn't weaken the student's claim that the reduction in the spider population in the enclosure with lizards can be entirely attributed to the lizards. Indeed, the lower spider population in the enclosure with lizards suggests that the lizards are contributing to the reduction in the spider population, though the fact that the spider population also fell substantially in the other enclosure means that the lizards aren't the only cause of the reduction.

57 Correct answer **D**

Medium

‹ Back to question

D were higher for all three measures, indicating greater overall well-being for these participants.

Choice D is the best answer because it most effectively uses data from the table to complete the statement comparing the mean ratings for two different groups of participants in a study. The text explains that a research team evaluated the study's participants using various measures in order to learn whether there might be a medical benefit to telling patients they're receiving a placebo. The table shows the team's mean ratings for participants after 21 days for three of the measures: global improvement, symptom severity reduction, and quality of life improvement. According to the table, the mean ratings were higher for all three measures for participants aware of taking a placebo than for participants in the control group. Given that higher ratings indicate greater well-being, as the text states, the mean ratings in the table indicate greater overall well-being for participants aware of taking a placebo than for participants in the control group.

Choice A is incorrect because the table doesn't include data about individual participants; rather, it presents means, or mathematical averages, of ratings. For this reason, no conclusions can be drawn from data in the table about the extent to which well-being may have varied from participant to participant. **Choice B is incorrect** because according to the table, the mean ratings for participants aware of taking a placebo were higher for all three measures than for participants in the control group, not lower for two of the measures. **Choice C is incorrect** because it cites data from the table related to participants in the control group, not to participants aware of taking a placebo. Additionally, the mean ratings in the table for participants aware of taking a placebo are higher for all three measures than for participants in the control group. Given that higher ratings indicate greater well-being, as the text states, the ratings in the table for participants aware of taking a placebo indicate greater well-being for these participants in all three measures.

58 Correct answer **D** Medium < Back to question

D The plants exposed to kanamycin showed lower levels of iron and zinc than the control plants did.

Choice D is the best answer because it best describes data in the graph supporting Ayalew and her colleagues' hypothesis that plants' response to kanamycin exposure involves altering their uptake of metals. The graph compares the metal content of two groups of plants, one with kanamycin exposure and a control group without such exposure. The amount of zinc in plants without kanamycin exposure is around 400 parts per million, while the amount of zinc in plants with kanamycin exposure is lower, at around 300 parts per million. Similarly, the amount of iron in plants without kanamycin exposure is a little over 600 parts per million, while the amount of iron in plants with kanamycin exposure is lower, at a little over 200 parts per million. Thus, the graph shows that plants with kanamycin exposure have significantly lower levels of both iron and zinc than the plants without kanamycin exposure. This is evidence supporting the hypothesis that kanamycin exposure results in plants altering their uptake of metals.

Choice A is incorrect because the graph shows that control plants contained higher levels of iron than zinc, not higher levels of zinc than iron; similarly, the plants exposed to kanamycin contained higher levels of zinc than iron, not higher levels of iron than zinc. **Choice B is incorrect**. Though the claim that both groups of plants contained more than 200 parts per million of both iron and zinc is supported by the graph, this alone does not state whether plants with kanamycin exposure have a different metal content than plants without kanamycin exposure. **Choice C is incorrect**. The graph shows that the zinc levels for the control plants (those without kanamycin exposure) were around 400 parts per million, not 300 parts per million, and that the zinc levels for plants with kanamycin exposure were around 300 parts per million, not 400 parts per million.

59 Correct answer **C** Medium < Back to question

C 8 percent of survey participants in Japan.

Choice C is the best answer because it most effectively uses data from the table to complete the text about survey results for online account sign-in methods. According to the table, 8 percent of participants in Japan viewed onetime passcodes as the most secure sign-in method. This is the only choice that correctly represents data in the table.

Choice A is incorrect because according to the table, 33 percent of participants in the UK viewed biometrics, not onetime passcodes, as the most secure sign-in method; onetime passcodes were viewed as the most secure method by 16 percent of these participants. **Choice B is incorrect** because according to the table, 22 percent of participants in India viewed biometrics, not onetime passcodes, as the most secure sign-in method; onetime passcodes were viewed as the most secure method by 25 percent of these participants. **Choice D is incorrect** because according to the table, the country in which 16 percent of participants viewed onetime passcodes as the most secure sign-in method was the UK, not India; of participants in India, 25 percent viewed such passcodes as the most secure method.

60 Correct answer **C** Medium < Back to question

C Oulujärvi, which had fewer days of ice in the winter of 2005–06 than it did in the winter of 1980–81.

Choice C is the best answer because it most effectively uses data from the graph to exemplify the researcher's claim—namely, that the duration of ice on some lakes has declined between the early 1980s and the mid-2000s. According to the graph, Oulujärvi had surface ice for nearly 200 days in the winter of 1980–81 but only about 160 days of ice in the more recent winter of 2005–06, evidence of a clear decline in the duration of surface ice between these time periods.

Choice A is incorrect because it focuses on only one period of time (the early 1980s). Thus, the data it cites don't support the researcher's claim, which compares the duration of surface ice across two specific periods of time (the early 1980s and the mid-2000s). **Choice B is incorrect** because although it accurately describes data from the graph, it contradicts the researcher's claim about declining surface ice duration. It describes an increase, not a decline, in the duration of surface ice on

Lake Neusiedl between the early 1980s and the mid-2000s (from about 80 days in 1980–81 to about 100 days in 2005–06). Therefore, the example of Lake Neusiedl wouldn't logically support the claim that some lakes have seen a decline in the duration of surface ice. **Choice D is incorrect** because it provides information that doesn't support the researcher's claim about declining ice duration. The graph could indicate that both Lake Neusiedl and Oulujärvi had more than 105 days of ice in the winter of 2005–06, but on its own, this information doesn't demonstrate a decline in ice duration between the early 1980s and the mid-2000s.

61 Correct answer **D** — Medium — Back to question

D around 40% urban in 1970 to more than 70% urban in 2020.

Choice D is the best answer. This choice effectively uses data from the graph to complete the example. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020.

Choice A is incorrect. This choice misreads the graph. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020. **Choice B is incorrect**. This choice misreads the graph. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020. **Choice C is incorrect**. This choice misreads the graph. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020.

62 Correct answer **C** — Medium — Back to question

C fin whales show a longer average filter time than minke whales do.

Choice C is the best answer. To support the claim, we need to show that longer whales take more time to filter all the water they engulf than shorter whales do. This choice accurately reflects that a longer whale (the fin whale) takes more time to filter engulfed water (31.30 seconds on average) compared to a shorter whale (the minke whale, which only took 8.88 seconds on average).

Choice A is incorrect. The table shows that minke whales take an average of 8.88 seconds to filter engulfed water, while humpback whales take an average of 17.12 seconds to complete the same task. **Choice B is incorrect**. This choice doesn't reflect the claim about baleen plates. The claim explains why whales of differing lengths take different amounts of time to filter engulfed water. This choice doesn't compare whales of different lengths, and it focuses on the number of lunges, which isn't shown to be relevant to filter time. **Choice D is incorrect**. The table shows that blue whales average 4.02 lunges per dive, which is not the highest average among the whales in the table.

63 Correct answer **A** — Medium — Back to question

A providing medicinal plants than to improving the local microclimate.

Choice A is the best answer because it most effectively uses data from the graph to complete the assertion about urban agriculture. The graph shows the average survey ratings, on a scale of 0 to 5, from three groups of people—project leaders, stakeholders, and the general public—concerning the contributions of urban agriculture. According to the graph, project leaders gave an average rating of approximately 2 to urban agriculture's contributions to the provision of medicinal plants, which is lower than the average rating of approximately 3 that project leaders gave to urban agriculture's contributions to both improving the local microclimate and improving a sense of attachment to the neighborhood. This shows that project leaders rated urban agriculture as contributing less to providing medicinal plants than to improving the local microclimate.

Choice B is incorrect because the graph doesn't provide data about urban agriculture's contribution to educational opportunities; therefore, this comparison can't be made. **Choice C is incorrect** because it contradicts the data shown in the graph. On average, project leaders gave a rating of approximately 3 to urban agriculture's contributions to improving the local microclimate, which is higher, not lower, than the average rating of approximately 2 that they gave to its contributions to providing medicinal plants. **Choice D is incorrect** because the graph doesn't provide data about urban agriculture's contribution to providing tourist attractions; therefore, this comparison can't be made.

64 Correct answer **A** Medium ‹ Back to question

A the percentage of 2016 cookbook sales that were e-books with the percentage of 2016 science fiction and fantasy sales that were e-books.

Choice A is the best answer because it uses data from the table to effectively support the claim that book genres that typically require the reader to start at the beginning of the story and read straight through are more commercially successful as e-books than other genres. For each of three years, the table presents four book genres and the percentage of total sales for each genre in e-book format. Cookbooks, a nonfiction genre, do not require the reader to read straight through. According to the table, 10.5 percent of total cookbook sales in 2016 were in the e-book format. The 2016 percentage of e-book sales was 36.7 percent in the science fiction and fantasy genre, which are typically stories read straight through from start to finish. The higher percentage of total sales of the story-based e-books in 2016 supports the claim in the text.

Choice B is incorrect because it compares the e-book sales of romance books in 2006 to those in 2016. Romance books are meant to be read straight through from start to finish. The text claims that books that are not stories and do not require reading straight through are not as commercially successful in e-book format as those that do. As this choice is only comparing e-book sales for one genre, it does not support the claim. **Choice C is incorrect** because both science fiction and fantasy and romance novels are fiction books meant to be read straight through from beginning to end. The text claims that books that are not stories and do not require reading straight through are less commercially successful in e-book format than those that do. As this choice does not compare e-book sales of story genres to e-book sales in genres that are not stories, it does not support the claim. **Choice D is incorrect**. Although the data in the table show that the travel guide e-books made up a

greater percentage of total sales in 2016 than in 2011, this doesn't illustrate the claim in the text that e-books in nonfiction genres not meant to be read straight through are less commercially successful. The claim cannot be supported without comparing the percentage of e-book sales between fiction and nonfiction book genres from the table.

65 Correct answer **C** Medium ‹ Back to question

C South Korea's annual international tourism revenue decreased from 2016 to 2017.

Choice C is the best answer because it most effectively uses data from the table to complete the text, providing an example that illustrates that the annual increases in international tourism revenue in 2017 and 2018 weren't universal. The table shows the annual spending by international tourists (which indicates annual international tourism revenue) in 2016–2018 in four Asian countries. According to the table, annual spending by international tourists in South Korea was $21.0 billion in 2016 and then decreased to $17.2 billion in 2017. This decrease shows that not all of the countries included in the table saw increases in annual international tourism revenue in 2017.

Choice A is incorrect because the table doesn't provide any data regarding revenue from tourism by residents of those countries. Even if that data were provided, it wouldn't be relevant to the claim that the trend of annual increases in international tourism revenue in 2017 and 2018 was not universal. **Choice B is incorrect** because the data in the table do not support the statement that Japan's international tourism revenue was higher in 2016 than it was in 2018: the table indicates that Japan's annual international tourism revenue was $33.5 billion in 2016, which is less than Japan's annual international tourism revenue of $45.3 billion in 2018. **Choice D is incorrect**. Although the table does indicate that Thailand's revenue from international tourism was higher than that of the other three Asian countries in 2016, 2017, and 2018, this information has no direct bearing

on the text's claim that not all the Asian countries represented in the table saw an increase in revenue from international tourism.

66 Correct answer **D** Medium Back to question

D management, business, and financial services occupations.

Choice D is the best answer because it most effectively uses data from the table to complete the text. The text discusses self-employed workers in the US, and the table shows the US incorporated and unincorporated self-employment rates in four occupational fields in 2015. According to the table, the incorporated self-employment rate was 8.9% for the management, business, and financial services occupational field, which is higher than the incorporated self-employment rate shown for any other occupational field.

Choice A is incorrect because according to the table, the incorporated self-employment rate was 5.8% for the sales and related occupational field, which is lower than the 8.9% for the management, business, and financial services occupational field. **Choice B is incorrect** because according to the table, the incorporated self-employment rate was 2.7% for the installation, maintenance, and repair occupational field, which is lower than the 8.9% for the management, business, and financial services occupational field. **Choice C is incorrect** because according to the table, the incorporated self-employment rate was 4.4% for the construction and resource extraction occupational field, which is lower than the 8.9% for the management, business, and financial services occupational field.

67 Correct answer **D** Medium Back to question

D Each of the planets has a mass greater than 0.25 Jupiters, and all except for TOI-1478 b have an orbital period of less than 10 days.

Choice D is the best answer because it accurately describes data from the table that support Rodriguez and colleagues' assertion about the classifications of the five new gas exoplanets. The text describes two categories of gas planets: hot Jupiters, which have a mass of at least 0.25 Jupiters and an orbital period of less than 10 days, and warm Jupiters, which have the same mass characteristic but have orbital periods of more than 10 days. According to the table, four of the gas exoplanets discovered by Rodriguez and colleagues have a mass of at least 0.25 Jupiters and an orbital period of less than 10 days, while one of the planets has a mass of at least 0.25 Jupiters and an orbital period of more than 10 days. These data therefore support Rodriguez and colleagues' assertion that four of the new exoplanets are hot Jupiters and one is a warm Jupiter.

Choice A is incorrect because it doesn't accurately describe the data from the table. Although the table shows that TOI-628 b has a mass equivalent to 6.33 Jupiters, the table also shows that one of the planets—TOI-1478 b—does indeed have an orbital period of more than 10 days. **Choice B is incorrect** because it doesn't accurately describe the data from the table. Although the table does show that the masses of the five planets range from 0.85 to 6.33 Jupiters, the table also shows that TOI-1478 b has an orbital period of 10.180 days, not 153 days. **Choice C is incorrect**. According to the table, TOI-1333 b has an orbital period of only 4.720 days, not more than 10 days. Additionally, although the table does show that all the planets have a radius between 1.060 and 1.771 Jupiters, the text indicates that a planet may be classified as a hot Jupiter

or a warm Jupiter based on its mass and orbital period, not on its radius, making the information about the range of the five planets' radius values irrelevant.

68 Correct answer **A** Medium ‹ Back to question

A At each point on the political orientation scale, high-information voters were more likely than low-information voters to vote.

Choice A is the best answer because it uses data from the graph to effectively support Charles and Stephens's claim about how level of information affects voters. The graph shows the probability of voting for both high- and low-information voters in seven categories of political orientation. Charles and Stephens claim that "the more informed voters are about politics...the more likely they are to vote." This statement correctly asserts that the graph shows a higher probability of voting for high-information voters than for low-information voters at each of the seven political orientations. Thus, this statement accurately cites data from the graph that support Charles and Stephens's claim about how level of information affects voters.

Choice B is incorrect. Although this statement is correct that the only probability in the graph below 50% is for low-information voters categorized as independent (orientation 4), the claim in question is about the relative likelihood that low- and high-information voters will vote, and without some reference to high-information voters, this statement cannot help support such a comparison. **Choice C is incorrect**. Although this statement is correct that the highest probabilities of voting for low-information voters are at the ends of the orientation scale (1 and 7), the claim in question is about the relative likelihood that low- and high-information voters will vote, and without some reference to high-information voters, this statement cannot help support such a comparison. **Choice D is incorrect** because the graph does not give any information about how many people are represented in any of the categories, so this statement is not based on data from the graph. Furthermore, even if we did have this information, the claim is about how level of information affects voters' probability of voting, not whether they're likely to strongly identify with a particular political party.

69 Correct answer **A** Medium ‹ Back to question

A they are much younger than the samples brought back from any of the Apollo missions.

Choice A is the best answer because it effectively uses data from the table to complete the claim about the significance of the Chang'e 5 lunar samples. The table shows the approximate ages of lunar samples from four different missions: three Apollo missions and the Chang'e 5 mission. The Chang'e 5 samples are said to be approximately 2 billion years old, while the Apollo samples are each said to be more than 3 billion years old. In other words, based on the data in the table, the Chang'e 5 samples are much younger than those from the Apollo missions.

Choice B is incorrect because the table shows that the Chang'e 5 samples were taken from a landing site at Oceanus Procellarum, which none of the Apollo missions are shown to have visited. **Choice C is incorrect** because the table shows the Apollo 17 samples as approximately 3.8 billion years old, the Apollo 15 samples as approximately 3.3 billion years old, and the Chang'e 5 samples as approximately 2 billion years old, and therefore, the Chang'e samples are closer in age to the Apollo 15 samples than they are to the Apollo 17 samples. **Choice D is incorrect** because nothing in the text or table suggests that the Chang'e 5 samples were used to confirm the ages of the Apollo samples.

70 Correct answer **C** Medium ‹ Back to question

C 82% of participants believe that it is somewhat or very likely that a robot could work effectively as a tour guide, but only 16% believe that it is somewhat or very likely that a robot could work as a surgeon.

Choice C is the best answer because it effectively uses data from the table to complete the example of variations in participants' evaluations. The table shows participants' evaluations of the likelihood that robots could work effectively in different occupations. The text asserts that participants' evaluations varied widely depending on the occupation being considered and introduces an example supporting that assertion. The data from the table showing that 82% of participants believe that it is somewhat or very likely that a robot could work effectively as a tour guide but only 16% of participants believe

that it is somewhat or very likely that a robot could work effectively as a surgeon illustrate this assertion: those data show participants' views changing substantially with the occupation being considered.

Choice A is incorrect because it does not describe data that illustrate the assertion that participants' evaluations varied widely depending on which occupation was being considered. Although this choice accurately describes data in the table, data about participants' responses when considering a single occupation—teaching—could not be an example of people's views changing substantially depending on the occupation being considered. **Choice B is incorrect** because it identifies a similarity in participants' responses when considering two different occupations,

but the assertion that the example is intended to illustrate is that participants' evaluations varied widely depending on the occupation being considered. Although this choice accurately describes data in the table, those data do not illustrate the assertion in the text. **Choice D is incorrect** because it does not describe data that illustrate the assertion that participants' evaluations varied widely depending on which occupation was being considered. Although this choice accurately describes data in the table, data showing participants' evaluation of just one occupation could not be an example of participants' evaluations changing depending on the occupation under evaluation.

71 Correct answer **C** Medium ‹ Back to question

C The managers who reflected on a past mistake that resulted in learning exhibited more humility on average than the managers in the other two groups did.

Choice C is the best answer because it describes data in the graph that support the researchers' conclusion that their hypothesis about workplace leaders and humility was correct. According to the text, Jia Hu and colleagues "hypothesized that workplace leaders who reflect on lessons learned from past mistakes are likely to exhibit more humility than leaders who don't engage in such reflection." The bar graph shows the humility scores for managers who participated in Jia Hu and colleagues' study. It shows average humility scores for managers who reflected on a past mistake that they learned from, managers who reflected on a past mistake that they didn't learn from, and managers who were in the control group that, according to the text, simply reflected on their daily routines. The graph shows that managers who reflected on a past mistake they learned from received an average humility score between 3.0 and 3.5. Both the control group and managers who reflected on a mistake they didn't learn from received a lower average humility score of between 2.5 and 3.0. Thus, the managers who reflected on a past mistake that resulted in learning exhibited more humility on average than the managers in the other two groups did. This supports the researchers' conclusion that their initial hypothesis that workplace leaders who reflect on past mistakes they learned from exercise greater humility was correct.

Choice A is incorrect. Although according to the graph it's true that none of the group's humility scores exceeded 3.5, this idea does not support the researchers' conclusion that their initial hypothesis was correct. The statement that none of the three groups' average humility scores exceeded 3.5 does not distinguish between those leaders who reflected on lessons learned from past mistakes and those who didn't, so it would not support Hu and colleagues' hypothesis that workplace leaders who reflect on past mistakes they learned from exercise greater humility. **Choice B is incorrect**. While the graph shows that managers in the control group did exhibit less humility than the experimental group of managers who reflected on a mistake they learned from, the graph also shows that the control group exhibited more (not less) humility than the experimental group that reflected on a mistake they didn't learn from. Furthermore, the idea that the managers in the control group exhibited only slightly less humility on average than the managers in the two experimental groups did would not support the researchers' conclusion that their initial hypothesis that workplace leaders who reflect on past mistakes they learned from exercise greater humility was correct. **Choice D is incorrect** because there is no indication in the graph that all three groups of participants exhibited less humility on average than the researchers expected. The graph and text don't cite any specific expectations that the researchers had with regard to the humility scores for each group.

72 Correct answer **B** Medium ‹ Back to question

B about the same as the number of jobs in engineering services, and in 2019 was about the same as the number of jobs in technical consulting services.

Choice B is the best answer because it uses data from the graph to effectively complete the statement regarding what the student notices about the number of jobs in computer services in 2010. The graph shows that in 2010, the number of computer services jobs was approximately 6,000, which is the same approximate number of jobs in engineering services. Additionally, the graph shows that in 2019, the number of jobs in technical consulting services and the number of jobs in computer services were about the same, at approximately 5,000.

Choice A is incorrect. While the graph shows that in 2010 the number of computer services jobs (about 6,000) was higher than the number of technical consulting services jobs (about 4,000), in 2019 the number of computer services jobs (about 5,000) was not about the same as the number of engineering services jobs (about 6,000). **Choice C is incorrect** because according to the graph, the number of jobs in computer services was lower than the number of jobs in engineering services in 2019, not 2010. Additionally, the graph shows that in 2019, the number of computer services jobs (about 5,000) was not higher than the number of jobs in engineering services (about 6,000). **Choice D is incorrect** because the graph shows that the number of computer services jobs was about the same as the number of technical consulting services jobs in 2019, not 2010. This also means the number of computer services jobs could not have been lower than the technical consulting services jobs in 2019 if they were about the same.

73 Correct answer **B** Medium ‹ Back to question

B In every year of the experiment, plants treated with the nitrogen fertilizer had a greater yield than did plants treated with the control fertilizer.

Choice B is the best answer because it describes data from the graph that support the researchers' conclusion that using nitrogen fertilizer increases cantaloupe production. The bar graph shows the cantaloupe yield for plants grown with nitrogen fertilizer and for those grown with a control fertilizer (without nitrogen) for three consecutive years (2017–2019). For each year in the graph, the yield for the nitrogen group is greater than the yield for the control group. In pounds per acre, the value in 2017 for the nitrogen-group yield is greater than 30 while the control-group yield is less than 25; in 2018 the nitrogen-group yield is greater than 40 while the control-group yield is less than 35; and in 2019 the nitrogen-group yield is greater than 25 while the control-group yield is less than 20. Thus, these data from the graph strongly support the conclusion that using nitrogen fertilizer increases cantaloupe yield.

Choice A is incorrect because the bar graph shows that in 2019 the nitrogen group had a yield below 30 pounds per acre. **Choice C is incorrect**. Although this choice accurately describes data in the bar graph—in 2018, the control-group yield is greater than 30 pounds per acre, and in 2019 the nitrogen-group yield is less than 30 pounds per acre—a claim that the control-group yield exceeds that of the nitrogen group strongly conflicts with the researchers' conclusion that nitrogen fertilizer produces larger yields. **Choice D is incorrect**. Although it is true that the bar graph shows a higher yield for the nitrogen group in 2018 than in 2017, without the control to compare against, it is impossible to know whether the increase is due to the fertilizer and not, for example, more favorable weather in 2018 than in 2017.

74 Correct answer **A** Medium ‹ Back to question

A more common silver-biddy and milkfish were collected in the winter than in either of the other two seasons.

Choice A is the best answer. The claim is about which fish were collected more in winter than in other seasons. By comparing the number of common silver-biddy and milkfish collected in each season, we can see that more of these fish were collected in winter than in any other season.

Choice B is incorrect. The claim is about which fish were collected more in winter than in other seasons. This statement compares collections across the three species of fish, rather than comparing collections of individual types of fish across seasons. **Choice C is incorrect**. The claim is about which fish were collected more in winter than in other seasons. This statement is about spring, rather than winter. **Choice D is incorrect**. The claim is about which fish were collected more in winter than in other seasons. This statement is about fall, rather than winter, fish collections.

75 Correct answer **C** Medium Back to question

C *The New York Times* had a 20% revenue change, while the *Denver Post* had a −1% revenue change.

Choice C is the best answer. The conclusion is that paywalls are more beneficial for large newspapers. This data supports that conclusion by comparing the revenue increase of a large newspaper to the revenue decrease of a small newspaper.

Choice A is incorrect. This choice doesn't support the conclusion. It doesn't include any small newspapers for comparison.
Choice B is incorrect. This choice doesn't support the conclusion. It doesn't include any small newspapers for comparison.
Choice D is incorrect. This choice doesn't support the conclusion. It doesn't include any large newspapers for comparison.

76 Correct answer **D** Medium Back to question

D The number of wild California condors increased overall from 2014 to 2020 and exceeded the number of those living in captivity.

Choice D is the best answer because it best describes data from the graph that support the biologists' claim. The text accompanying the graph describes the efforts of the California Condor Recovery Program, which is working to protect the condor from extinction. The program captured some condors in 1987 in order to breed them and has been reintroducing captive birds into the wild since 1992. Many biologists claim the

program has been a success, as the text explains, and it is reasonable to infer that an indication of the program's success would be an increase in the wild condor population compared to the captive condor population. The graph shows the wild and captive condor populations in California between 2014 and 2020. In 2014 there were slightly more than 200 wild condors in California, but by 2020 there were more than 300. Meanwhile, over the same period the captive condor population remained under 200. Thus, the biologists' claim about the program's success is supported by data from the graph showing that the number of wild California condors increased overall from 2014 to 2020 and exceeded the number of those living in captivity.

Choice A is incorrect because it does not accurately describe data from the graph. The number of captive California condors did not steadily decrease between 2014 and 2020: rather, it increased slightly during some years and decreased slightly during others, generally remaining at slightly less than 200. **Choice B is incorrect**. Even though the graph does show a slight decrease in both the captive and wild condor populations from 2019 to 2020, such a decrease during a particular year would not demonstrate the program's success. **Choice C is incorrect** because it does not accurately describe data from the graph. The difference between the number of captive and wild California condors did not remain relatively steady between 2014 and 2017. While the number of captive condors remained roughly the same during that period, the number of wild condors increased, so the difference between the number of captive and wild condors increased as well.

77 Correct answer **D** Medium Back to question

D 3.6% of respondents said it was most effective to use efficient light bulbs.

Choice D is the best answer because it most effectively uses data from the table to complete the text's discussion of Attari and her team's survey results. The text states that the team asked respondents to identify the most effective action people can take to save energy, with the team classifying each action as either an efficiency or a curtailment. According to the text, respondents named curtailments more often than they did efficiencies. The text then offers an example that begins by citing a

curtailment, turning off the lights, that was selected by a relatively high percentage of respondents (19.6%). Given that the example is presented in support of the idea that more respondents selected curtailments than efficiencies, the most effective way to complete the example is by citing an efficiency, using efficient light bulbs, that was selected by a relatively low percentage of respondents (only 3.6%).

Choice A is incorrect because it inaccurately describes data in the table. The data indicate that 6.3% of respondents said the most effective action was to change the thermostat setting, not to use efficient cars or hybrids. **Choice B is incorrect** because it inaccurately describes data in the table. The data indicate that 2.8% of respondents said the most effective action was to use efficient cars/hybrids, not to change the thermostat setting. **Choice C is incorrect** because it mentions a curtailment (using a bike or public transportation) and not an efficiency. The text states that a research team asked respondents to identify the most effective action people can take to save energy, with the team classifying each action as either an efficiency or a curtailment. According to the text, respondents named curtailments more often than they did efficiencies. The text then offers an example that begins by citing a curtailment, turning off the lights, that was selected by a relatively high percentage of respondents (19.6%). Given that the example is presented in support of the idea that more people selected curtailments than efficiencies, the most effective way to complete the example is not by referring to another curtailment but rather by referring to an efficiency that was selected by a relatively low percentage of respondents.

78 Correct answer **C** Medium Back to question

C fewer than 100 suggestions were coded as subtractive, whereas more than 550 suggestions were coded as additive.

Choice C is the best answer. This choice shows that people suggested removing things to achieve improvements a lot less often than they suggested adding things, which supports the claim that people tend not to think of removing things as a likely way to improve the university.

Choice A is incorrect. This choice doesn't support the claim. We are looking to prove that people suggested subtractive means of achieving improvements less often than other means, but this choice doesn't address how often people made subtractive suggestions. **Choice B is incorrect**. This choice doesn't support the claim. Invalid responses were incomprehensible, so we can't compare what they were suggesting to what was being suggested in subtractive responses. **Choice D is incorrect**. This choice misreads the graph. Fewer than 100 suggestions were coded as subtractive. 175 is the approximate number of suggestions coded as "neither additive or subtractive."

79 Correct answer **B** Medium Back to question

B saber-toothed cat (*Smilodon*), which became extinct 11,000 years ago.

Choice B is the best answer because it uses data from the table to complete the statement regarding a species for which the problem of finding a suitable habitat would be especially concerning. For each candidate species, the table lists its common name, scientific name, and when the species became extinct. The text explains that scientists pursuing de-extinction for the candidate species also consider the length of time that has passed since the species' extinction, noting that the longer the animal has been extinct, the less likely it is that a suitable habitat would exist for the species today. The possibility of not having a suitable habitat would be especially concerning for the candidate species for which the most time has passed since its extinction. According to the table this species would be the saber-toothed cat, which became extinct 11,000 years before present.

Choice A is incorrect because it compares the time since the extinction of the passenger pigeon to the time since the extinction of the huia instead of citing the species listed in the table that has been extinct the longest (the saber-toothed cat). The text indicates that the longer a species has been extinct, the lower the chances are that a suitable habitat exists for it today. Neither the table nor the text supports the claim that the passenger pigeon is especially vulnerable to this problem. **Choice C is incorrect** because the text states that the longer a species has been extinct, the less likely it is that there would be a suitable habitat available for the species today. So, the problem would be especially concerning for the saber-toothed cat, which became extinct several thousand years before the woolly mammoth did—not the other way around. **Choice D is**

incorrect because the text states that the longer a species has been extinct, the lower the chances are that a suitable habitat would

be available for that species today. According to the table, the Caribbean monk seal became extinct in 1952, which is the most recent extinction listed for a candidate species in the table.

80 Correct answer **C** Medium Back to question

C there was one guild for every 661 inhabitants in Rouen but one guild for every 4,511 inhabitants in Paris.

Choice C is the best answer. The claim we're trying to prove is that guilds were much more numerous relative to population in some cities than others. This choice describes the guilds per number of inhabitants in two cities (Rouen and Paris), showing significant differences between guilds relative to population in these cities.

Choice A is incorrect. This choice misreads the table. Bordeaux had 80,000 inhabitants, according to the table, while Lyon had 143,000, so it isn't correct to say that they had "nearly equal numbers of inhabitants." Lyon had almost twice as many inhabitants. **Choice B is incorrect**. This choice misreads the table. Although Lyon did have fewer inhabitants than Paris, it didn't have more guilds—Paris had 133 guilds versus Lyon's 72. **Choice D is incorrect**. This choice doesn't support the claim. To show that guilds were more numerous relative to population in some cities than others, we would need to compare at least two cities, and this choice only mentions one.

81 Correct answer **B** Medium Back to question

B Vietnamese conveys information at approximately the same rate as Spanish despite being spoken at a slower rate.

Choice B is the best answer because it provides the most direct support from the table for the claim that two languages can convey similar amounts of information even if they're spoken at different rates. The table shows the approximate rates at which five languages are spoken and the rates at which those five languages convey information. Vietnamese is spoken at around 5.3 syllables per second, whereas Spanish is spoken at around 7.7 syllables per second, but the two languages convey information at very similar rates: Vietnamese at a rate of around 42.5 bits per second and Spanish at a rate of around 42.0 bits per second. Thus, the description of Vietnamese conveying information at around the same rate that Spanish does despite being spoken more slowly supports the claim in the text that languages can convey the same amount of information even if spoken at different rates.

Choice A is incorrect because it isn't true that Thai and Hungarian have the lowest rates of speech of the five languages shown. According to the table, Hungarian is spoken at around 5.9 syllables per second, which is faster than Vietnamese (5.3 syllables per second). Additionally, even if this statement were true, the assertion that two languages are spoken the slowest and convey information the slowest wouldn't support the claim that languages can convey the same amount of information even if they're spoken at different rates. **Choice C is incorrect** because it isn't true that the fastest-spoken language (Spanish, at 7.7 syllables per second) also conveys information the fastest: Spanish conveys information at 42.0 bits per second, which is slower than the 42.5 bits-per-second rate at which Vietnamese conveys information. Additionally, even if this

statement were true, the assertion that the language spoken the fastest also conveys information the fastest has no bearing on the claim that languages can convey the same amount of information even if they're spoken at different rates. **Choice D is incorrect** because it isn't true that Serbian conveys information faster than Spanish does. According to the table, Serbian conveys information at a rate of around 39.1 bits per second, which is slower than the 42.0 bits-per-second rate at which Spanish conveys information.

82 Correct answer **B**

Medium

< Back to question

B Most turbines installed in 2011 had rotor diameters of less than 100 meters, whereas most turbines installed in 2021 had rotor diameters of at least 115 meters.

Choice B is the best answer. The text tells us that turbines with larger rotor diameters produce more energy, so if rotor diameters have generally gotten larger between 2011 and 2021, then turbines created in 2021 should produce more energy than those created in 2011.

Choice A is incorrect. This choice misreads the graph. In 2021, only about 25% of turbines installed in 2021 had rotor diameters greater than 130 meters. **Choice C is incorrect**. This choice doesn't justify the claim. The claim is about increasing energy output from 2011 to 2021, but this choice only discusses 2011, so it can't show evidence of change over time. **Choice D is incorrect**. This choice misreads the graph. The percentage of newly installed turbines with rotor diameters greater than 130 meters didn't show any visible increase until 2018.

83 Correct answer **A**

Medium

< Back to question

A J0614-03 has the shortest amount of time between consecutive pulses of all the RRATs in the table.

Choice A is the best answer because it most accurately uses data from the table to complete the statement about certain rotating radio transients (RRATs). The table contains information about the right ascensions, periods, and frequencies of various pulsar stars called RRATs. According to the text, the period of an RRAT is defined as the time between consecutive pulses. The table shows that the period of RRAT J0614-03 is 0.136 seconds, which is the lowest number of all the periods of the RRATs listed in the table. If the period is the time between consecutive pulses, and J0614-03 has the shortest period, then J0614-03 has the shortest amount of time between consecutive pulses of all the RRATs in the table.

Choice B is incorrect because according to the table, J0545-03 has a period of 1.074 seconds and J0121+53 has a period of 2.725 seconds. According to the text, the period of an RRAT is the time between consecutive pulses. Therefore, since J0545-03 and J0121+53 have different periods, they do not have the same amount of time between consecutive pulses. **Choice C is incorrect** because according to the table, J1654-2335 has a period of 0.545 seconds, which is not the longest period of all the RRATs listed in the table. According to the text, the period of an RRAT is the time between consecutive pulses, and both J0545-03 and J0121+53 have longer periods than J1654-2335, so J1654-2335 does not have the longest time between consecutive pulses of all the RRATs in the table. **Choice D is incorrect** because according to the table, J0103+54 has a period of 0.354 seconds, and J0121+53 has a period of 2.725 seconds. According to the text, the period of an RRAT is the time between consecutive pulses, and only J0121+53 has more than one second of time between consecutive pulses, not J0103+54.

84 Correct answer **B**

Hard

< Back to question

B The proportion of municipalities that responded to the inquiry or offered incentives didn't substantially differ across the announcement timing conditions.

Choice B is the best answer. The text explains that firms in the United States often look to municipal governments (local governing bodies) for incentives to expand the firms into those areas. The text then indicates that a team of political scientists hypothesized that those governing bodies are much more likely to respond and offer incentives when the expansion (if there's going to be one) can be announced before an election, since announcing a firm coming to their area can benefit local elected officials. However, the graph—which presents the results of the political scientists' inquiries to municipalities about incentives for a firm in two timing scenarios—shows that the proportion of municipalities that responded to the inquiry or offered incentives didn't substantially differ based on timing. According to the graph, about 200 municipalities responded to the inquiry and about 100 offered an incentive when the announcement could be made before an election (represented by the gray bars) and about 200 municipalities responded to the inquiry and about 100 offered an incentive when the announcement would be made after an election (represented by the black bars). These data weaken the team's hypothesis by demonstrating that

municipalities are *not* much more likely to respond and offer incentives when the timing means they could announce an expansion before an election.

Choice A is incorrect. Although the graph does show that a large number of municipalities didn't respond to inquiries in the scenario in which an expansion announcement could be made before an election (represented by the gray bars), the text indicates that the team hypothesized that there would be a substantial difference in municipalities' actions based on timing, and information about only one timing scenario doesn't reveal anything about whether such a difference occurred. **Choice C is incorrect**. The graph does show that in the scenario in which an expansion announcement could be made before an election (represented by the gray bars), about 200 municipalities responded to inquiries and about 100 offered an incentive, but the text indicates that the team hypothesized that there would be a substantial difference in municipalities' actions based on timing, and information about only one timing scenario doesn't reveal anything about whether such a difference occurred. **Choice D is incorrect**. Although this choice accurately describes data from the graph for the scenario in which an expansion announcement would be made after an election (represented by the black bars), the text indicates that the team hypothesized that there would be a substantial difference in municipalities' actions based on timing, and information about only one timing scenario doesn't reveal anything about whether such a difference occurred.

85 Correct answer **D** — Hard — ‹ Back to question

D was substantially lower than uncertainty about trade policy in 2005 and substantially higher than uncertainty about trade policy in 2010.

Choice D is the best answer because it uses data from the graph to effectively illustrate the text's claim about general economic policy uncertainty in the United Kingdom. The graph presents values for economic policy uncertainty in tax and public spending policy, trade policy, and general economic policy in the UK from 2005 to 2010. The graph shows that in 2005, the value for general economic policy uncertainty (approximately 90) was substantially lower than the value for uncertainty about trade policy specifically (approximately 160). It also shows that in 2010, the value for general economic policy uncertainty (approximately 120) was substantially higher than the value for uncertainty about trade policy (approximately 70). The substantial differences between these values in 2005 and 2010 support the claim that a general measure may not fully reflect uncertainty about specific areas of policy.

Choice A is incorrect because the graph shows that the level of general economic policy uncertainty was similar to the level of uncertainty about tax and public spending policy in both 2005 (with values of approximately 90 and 100, respectively) and 2009 (with values of approximately 80 and 75, respectively). **Choice B is incorrect** because the graph shows that general economic policy uncertainty was higher than uncertainty about tax and public spending policy in 2006, 2007, and 2009, not that it was lower each year from 2005 to 2010. **Choice C is incorrect** because the graph shows that general economic policy uncertainty reached its highest level in 2010, which was when uncertainty about tax and public spending policy also reached its highest level, not its lowest level.

86 Correct answer **B** — Hard — ‹ Back to question

B multiple lizard species move at an average of less than 90% of their maximal speed while escaping predation.

Choice B is the best answer because it describes data from the graph that complete the text's discussion of lizard species' use of maximal speed when escaping predators. According to the text, moving at maximal speed (the highest speed possible) requires so much energy that it is not always an effective strategy for animals, even when they are escaping predators. The graph displays data on the average percent of maximal

speed used by lizard species while either escaping predators or pursuing prey. The graph categorizes the data for both pursuing and escaping by the number of species using 30%–39% of maximal speed, 40%–49% of maximal speed, 50%–59% of maximal speed, 60%–69% of maximal speed, 70%–79% of maximal speed, 80%–89% of maximal speed, and 90%–100% of maximal speed, respectively. In the graph, there is at least one species in each of the following percent categories for maximal

speed while escaping predators: 50%–59%, 60%–69%, 70%–79%, and 80%–89%. Thus, the data in the graph show that multiple lizard species move at an average of less than 90% of their maximal speed while escaping predation.

Choice A is incorrect because the data in the graph isn't organized in such a way that a comparison of the percentage of maximal speed used when escaping predation with the percentage used when pursuing prey is possible at the level of individual species. **Choice C is incorrect**. It is true that in the graph, the percent category with the largest number of species using maximal speed while escaping predators is 90%–100% (8 species total). However, these data don't complete the text, which is concerned instead with how animals are discouraged from using maximal speed even when escaping predators because of the amount of energy required to use it. **Choice D is incorrect** because these data from the graph pertain to maximal speed while pursuing prey and therefore don't complete the text's discussion of lizard species' use of maximal speed when escaping predators.

87 Correct answer **C** Hard ‹ Back to question

C most of the farmers who mainly cultivated non–root vegetables in north and south Ondo were women.

Choice C is the best answer because it uses data from the graph to effectively complete the example of Eludoyin and his colleagues' findings concerning female farmers in some regions of Ondo State, Nigeria. The graph presents values for the percentage of Ondo State small-scale farmers who are female, by type of crop and region. The graph shows that of the farmers mainly cultivating non-root vegetables, approximately 57% in north Ondo and approximately 54% in south Ondo are female; in other words, most of those farmers are female, which exemplifies the idea that female farmers make up the majority (more than half) of the farmers cultivating specific types of crops in some regions.

Choice A is incorrect because it inaccurately cites data from the graph: the graph shows that in south Ondo, most of the farmers mainly cultivating non-root vegetables are women (approximately 54%), but that only about 35% (less than half) of the farmers mainly cultivating cereals are women. **Choice B is incorrect** because it inaccurately cites data from the graph: the graph shows that more women in central Ondo mainly cultivate cereals than mainly cultivate root crops (approximately 36% and 20%, respectively). Additionally, it doesn't effectively complete the example because the graph shows that female farmers don't make up the majority (more than half) of the farmers for any type of crop in central Ondo. **Choice D is incorrect** because it doesn't effectively complete the example; it simply states that a relatively equal proportion of women across the three regions mainly cultivate cereals, which doesn't address the value for that proportion and thus doesn't show that a majority (more than half) of the farmers cultivating certain crops are female.

88 Correct answer **D** Hard ‹ Back to question

D ethylene was associated with a greater absolute change in ripening time at 14°C, 16°C, and 18°C than at 20°C.

Choice D is the best answer because it most effectively uses data from the graph to complete the student's conclusion about banana ripening time with and without ethylene at different temperatures. The graph shows that at 20°C, the gap between the two bars showing ripening times for ethylene-treated bananas and untreated bananas crosses fewer than 2 gridlines (from about 4 days for ethylene-treated bananas to about 5.5 days for untreated bananas). Meanwhile, the graph shows that at 14°C, 16°C, and 18°C, the gap between the bars crosses more than 2 gridlines (from about 8 days for treated bananas to about 11 days for untreated bananas at 14°C; from about 6 days for treated bananas to about 9.5 days for untreated bananas at 16°C; and from about 5.5 days for treated bananas to about 8.5 days for untreated bananas at 18°C). Since the gap between the bars at each of these temperatures crosses more than 2 gridlines, and since each of these gaps is larger than the gap between the bars at 20°C, it can be concluded that ethylene was associated with a greater absolute change in ripening time at 14°C, 16°C, and 18°C than at 20°C.

Choice A is incorrect because the graph shows that ethylene-treated bananas stored at 20°C ripen more quickly than ethylene-treated bananas stored at the other temperatures do (about 4 days at 20°C vs. about 5.5, 6, and 8 days at 18°C, 16°C, and 14°C, respectively) and that untreated bananas stored at 20°C ripen more quickly than untreated bananas stored at the other temperatures do (about 5.5 days at 20°C vs. about 8.5, 9.5, and 11 days at 18°C, 16°C, and 14°C, respectively). The

information in the graph therefore indicates that storing bananas at 20°C speeds up ripening time relative to storing bananas at the other temperatures shown, not that this storage temperature slows ripening time. **Choice B is incorrect** because the graph shows that as temperature increases, the ripening time of untreated bananas decreases, from about 11 days at 14°C to about 5.5 days at 20°C, with no exceptions to this trend. The graph therefore shows that differences in temperature were associated with absolute differences in ripening time, not that there was no association between differences in temperature and differences in ripening time. **Choice C is incorrect** because the graph shows that ripening times of ethylene-treated bananas at 14°C and 16°C were about 8 and 6 days, respectively, which is greater than, not less than, ripening times of ethylene-treated bananas at 18°C and 20°C, which were about 5.5 and 4 days, respectively. In other words, bananas treated with ethylene ripen more slowly, not faster, at 14°C and 16°C than at 18°C and 20°C.

89 Correct answer **A** — Hard — Back to question

A didn't consistently demonstrate a significant increase in REM sleep after their period of deprivation in the water.

Choice A is the best answer. If REM sleep were homeostatically regulated in fur seals, then all the seals would compensate with REM levels significantly over baseline after going weeks without REM. We'd also expect the seals to maintain those elevated REM levels for some time. Since seals B and C return very quickly to baseline REM levels, this suggests that REM sleep in fur seals may not be regulated homeostatically.

Choice B is incorrect. The graph doesn't depict REM sleep while in the water for the seals in the study. Additionally, we're told fur seals get no REM sleep while in the water, which is significantly different to the values shown in the graph for after they return to land. **Choice C is incorrect**. This doesn't support the conclusion. If REM sleep were homeostatically regulated in fur seals, then we'd suspect the seals to sustain REM levels well above baseline for a prolonged period in order to compensate for weeks of REM deprivation while in the water. Whether or not there's a reduction in REM sleep from day 1 to day 2 doesn't tell us how REM sleep on those days relates to baseline, which is where our focus should be. **Choice D is incorrect**. The y-axis of this graph doesn't depict baseline levels of REM sleep, but rather shows REM sleep as a percent of baseline.

90 Correct answer **A** — Hard — Back to question

A above 344 km/s but below 378 km/s.

Choice A is the best answer because it uses data from the table to give the range of velocities for the LMC from the 1980 value (344 km/s) to the 2006 value (378 km/s), thereby effectively completing the text. The text indicates that before 2006, all the estimated velocities of the LMC were within the range necessary to maintain orbit around the Milky Way galaxy. It then indicates that, according to Besla and colleagues, the 2006 estimate of 378 km/s is too high to maintain that orbit. This strongly implies that if the 1980 value (344 km/s) is below the orbital threshold, and if Besla and colleagues are correct that the 2006 value (378 km/s) is above that threshold, the maximum orbital velocity for the LMC must be somewhere in the range from above 344 km/s to below 378 km/s.

Choice B is incorrect. The text indicates that the 2006 velocity estimate for the LMC (378 km/s) was the first estimate that exceeded the velocity needed to maintain orbit around the Milky Way. Thus, the 1980 estimate of 344 km/s and the 1994 estimate of 297 km/s must both be below the maximum possible orbital velocity for the LMC. **Choice C is incorrect**. The text states that Besla and colleagues' analysis found that the velocity from the 2006 study (378 km/s) was too high for the LMC to maintain orbit around the Milky Way. Therefore, if a velocity of 378 km/s is too high, an even higher velocity will also be too high. **Choice D is incorrect**. The text indicates that the 2006 velocity estimate for the LMC (378 km/s) was the first to exceed the velocity range required to maintain orbit around the Milky Way. Thus, the 1994 estimate of 297 km/s must be below the maximum possible orbital velocity for the LMC.

91 Correct answer **B**

Hard

< Back to question

B Compared with participants who saw the control review, participants who saw the low-anger review rated the review as slightly more helpful, whereas participants who saw the high-anger review rated the review as less helpful.

Choice B is the best answer. The claim is that low anger does not negatively affect readers' perceptions of the review, while high anger does negatively affect readers' perceptions of the review. This choice accurately expresses the supporting data from the "helpfulness of review" part of the graph: that low-anger reviews were rated as slightly more helpful than no-anger reviews, while high-anger reviews were rated as less helpful than no-anger reviews.

Choice A is incorrect. This choice does not support the conclusion. The conclusion is only about how participants feel about the review itself—the participants' ratings of the reviewed product are not relevant. **Choice C is incorrect**. This choice does not support the conclusion. The conclusion is only about how participants feel about the review itself—the participants' attitude towards the reviewed product is not relevant. **Choice D is incorrect**. This choice does not support the conclusion. The conclusion is only about how participants feel about the review itself—the participants' attitude towards the reviewed product is not relevant.

92 Correct answer **A**

Hard

< Back to question

A at each depth below the surface in the cave, the difference in the numbers of tools of each type suggests that shells were easier to collect from the beach than to harvest from the seafloor.

Choice A is the best answer because it most effectively uses data from the table to support the researchers' conclusion about the harvesting of clamshells by Neanderthals for use as tools. The text explains that Neanderthals used clamshells to make tools and that the sturdiest, and therefore the most desirable, shells for this purpose are found on the seafloor, not on the beach. However, the researchers also concluded that the clamshell tools made from shells from the seafloor are rarer than those made from shells from the beach. Meanwhile the table shows that at each depth, the number of tools made from shells from the beach exceeds the number made from the more desirable shells from the seafloor. The fact that the more desirable shells are less common suggests that it was significantly more difficult to harvest shells from the seafloor than from the beach.

Choice B is incorrect because knowing which depth represents the period of time with the highest Neanderthal population does not help answer the question of why the Neanderthals consistently made more tools from the less desirable shells from the beach than they made from the more desirable shells from the seafloor. **Choice C is incorrect** because it claims that the beach shells are more durable than the seafloor shells, which contradicts the text's description of shells from the seafloor as smoother and sturdier than shells from the beach. **Choice D is incorrect** because knowing which depth has the most artifacts or whether the clam population fluctuated does not help explain why tools made from the less desirable shells from the beach outnumber tools made from the more desirable shells from the seafloor.

93 Correct answer **D**

Hard

< Back to question

D At current surface temperatures, more than 80% of the sites cannot use subsurface thermal pollution to meet any portion of local home heating needs, but at the maximum plausible surface temperature, that percentage drops below 20%.

Choice D is the best answer. The researchers concluded that as we approach maximum plausible surface temperatures, there will be a larger percentage of sites where thermal pollution could contribute to meeting home heating needs. By showing that only a small percentage of homes can currently use thermal pollution for home heating, and that this percentage would grow much larger at maximum plausible surface temperatures, this choice supports the researchers' conclusion.

Choice A is incorrect. We do not know how many sites could have all (i.e., 100%) of their local heating needs met by thermal pollution, as the graph only classifies sites by whether "0%," "Up to 25%," and "More than 25%" of heating needs could be

met. **Choice B is incorrect**. The graph is not depicting need for supplemental heating from thermal pollution, but rather potential to use thermal pollution for supplemental heating. **Choice C is incorrect**. The graph indicates that, at current surface temperatures, less than 10% of sites can meet 25% of local home heating needs and that more than 80% of sites cannot meet any local home heating needs.

94 Correct answer **D** Hard ‹ Back to question

D The average number of department leaders reporting directly to their CEO rose over the three periods studied.

Choice D is the best answer because it describes data from the graph that support the researchers' conclusion that there is a growing interest among CEOs in connecting with more departments in their companies. The graph shows the average number of individuals reporting directly to CEOs during three different time periods: the individuals are divided into managers and department leaders. The average number of department leaders directly reporting to their CEO during the 1991–1995 period was slightly more than three, during the 1996–2001 period it was four, and during the 2001–2008 period it was almost seven. Thus, the average number of department leaders reporting directly to their CEO rose over the three periods studied, which suggests that CEOs were connecting with more departments.

Choice A is incorrect because the average number of managers and department leaders reporting directly to their CEO rose for both categories between the 1991–1995 and 2001–2008 periods; thus, it isn't true that the average numbers didn't fluctuate. **Choice B is incorrect** because the average number of managers reporting directly to their CEO was highest in the 2001–2008 period, not in the 1996–2001 period. **Choice C is incorrect**. Although it correctly describes a feature of the graph, the observation that more department leaders than managers are reporting to CEOs does not by itself address the question of whether CEOs are connecting with more departments over time—to address that question, one needs to know whether the number of department leaders reporting to CEOs is increasing over time.

95 Correct answer **A** Hard ‹ Back to question

A national governments of countries in Region 1 experienced declines in efficiency in the period from 2000 to 2014, relative to the period from 1970 to 2000.

Choice A is the best answer because it most effectively uses data from the graph to complete the statement about Mahtta et al.'s proposal regarding factors that affect urban land expansion (ULE). According to the text, ULE is influenced by urban population growth and by gross domestic product (GDP) growth per capita. Reasoning that efficient national governments provide urban services and infrastructure needed to attract economic investment, Mahtta et al. suggest that, as governments become more efficient at providing urban services and infrastructure, GDP growth per capita will account for more ULE and urban population growth will account for less. But according to the graph, Region 1 saw an increase in the percentage attributed to urban population growth from 1970–2000 (between 60 and 65%) to 2000–2014 (between 70 and 75%) and a decrease in the percentage attributed to GDP growth per capita from 1970–2000 (between 35 and 40%) to 2000–2014 (about 25%). Because the percentage attributed to GDP growth per capita decreased (the opposite of what Mahtta et al. claimed would happen if the governments had become more efficient), the data suggest that the governments of Region 1 became less efficient at providing urban services and infrastructure over that period.

Choice B is incorrect. Neither the graph nor the text gives the regions' relative levels of economic growth or what effect Mahtta et al. would expect such growth to have. Furthermore, Mahtta et al.'s proposal suggests that Region 1's decline in the percentage of ULE attributed to GDP growth per capita from 1970–2000 (between 35 and 40%) to 2000–2014 (about 25%) would suggest decreasing, not increasing, government efficiency over this time. **Choice C is incorrect**. Neither the text nor the graph provides information about the relative efficiencies of different governments in Region 2. **Choice D is incorrect**. Mahtta et al.'s proposal suggests that more efficient governments will have a higher percentage of their ULE driven by GDP growth per capita and a lower percentage driven by urban population growth. For Region 2, the percentage of ULE attributed to GDP growth per capita increased from 1970–2000 (between 10 and 15%) to 2000–2014 (between 45 and 50%), but the opposite is true for Region 1, which saw the percentage of ULE attributed to GDP growth per capita decline over the same period. Thus,

whereas the data suggest governments in Region 2 became more efficient, the data for Region 1 suggest that those governments became less efficient, not more.

96 Correct answer **B** Hard ‹ Back to question

B From 2000 to 2006, processing imports with inputs rose much more sharply than processing imports with assembly did.

Choice B is the best answer because it describes data from the graph that best support the student's assertion that initial efforts at trade liberalization in China were shaped by firms having limited capital (assets available for use) and that this situation resolved during the 2000s. The text explains that an approach to trade liberalization involves engaging in processing imports, one type of which doesn't require payment to a trade partner (processing with assembly) and one type of which requires upfront payment to a trade partner for raw materials (processing with inputs). The graph, which presents China's imports for ordinary imports and both types of processing imports in the years 2000, 2003, and 2006, shows that while processing imports with assembly rose from about 250 hundred million dollars in 2000 to about 750 hundred million dollars in 2006, processing imports with inputs rose much more sharply, increasing from approximately 650 hundred million dollars in 2000 to about 2,300 hundred million dollars in 2006. Because processing with inputs requires firms to pay for materials (expending capital) and processing with assembly doesn't, the sharper rise in processing imports with inputs suggests that Chinese firms' assets—and thus their ability to engage in that type of processing imports—were relatively limited in (and before) 2000 and then substantially increased from 2000 to 2006. In other words, the data suggest that the situation of having limited capital resolved during the 2000s.

Choice A is incorrect because the graph indicates that ordinary imports were greater than both types of processing imports in 2006, not that processing imports with inputs were greater than ordinary imports and processing imports with assembly that year. **Choice C is incorrect** because the observation that ordinary imports were greater than both types of processing imports in 2000, 2003, and 2006 doesn't address a change within any type of imports from 2000 to 2006, and an indication of a change in that period that might be related to the availability of assets is needed to support the assertion that the situation of having limited capital resolved during the 2000s. **Choice D is incorrect** because the fact that processing imports with assembly were greater at the end of the period from 2000 to 2006 than processing imports with inputs were at the start of the same period doesn't address a change within either type of imports during the period, and an indication of such a change that might be related to the availability of assets is needed to support the assertion that the situation of having limited capital resolved during the 2000s.

97 Correct answer **A** Hard ‹ Back to question

A Between 1970 and 2000, the median age of first marriage rose more sharply for men in England and Wales than it did for men in the United States.

Choice A is the best answer. The student concluded that country-specific factors influence changes to median age of first marriage. This choice describes a time period when the rate of change differed between countries, suggesting that country-specific factors may have played a role in these changes.

Choice B is incorrect. The student concluded that country-specific factors influence changes to median age of first marriage. However, this choice doesn't provide any contrasts between countries and thus doesn't support the idea of country-specific factors influencing median age of first marriage. **Choice C is incorrect**. The students' conclusion is about changes that occurred during the 20th century. This choice provides broad information about the century as a whole, so it doesn't give insight into how median age at first marriage changed over time. **Choice D is incorrect**. This choice misreads the graph. The median age of first marriage was consistently higher for men than for women in the United States during the time period depicted.

98 Correct answer **A**

Hard

< Back to question

A 1900 with the employment by sector in 1950.

Choice A is the best answer because it presents data from the table that most effectively complete the statement about the rates at which employment shifted in France and the United States. The text states that over the last two hundred years employment in the agricultural sector has declined while employment in the service sector has risen in both France and the US, and the data from the table reflect these trends. The text asserts, however, that the transition from agriculture to services "happened at very different rates in the two countries." This assertion is best supported by a comparison of data from 1900 and 1950: the table shows that in those years, employment in agriculture went from 43% to 32% in France (a decline of 11 percentage points) and from 41% to 14% in the US (a decline of 27 percentage points), and that employment in services went from 28% to 35% in France (an increase of 7 percentage points) and from 31% to 53% in the US (an increase of 22 percentage points). In other words, the rate of change was greater in the US than in France for both sectors.

Choice B is incorrect because comparing the data for 1800 and 2012 would suggest a similar rate of change in the two countries, not very different rates: employment in agriculture went from 64% in 1800 to 3% in 2012 in France, which is close to the change from 68% in 1800 to 2% in 2012 in the US, while employment in services went from 14% in 1800 to 76% in 2012 in France, which is close to the change from 13% in 1800 to 80% in 2012 in the US. **Choice C is incorrect** because comparing the data for 1900 and 2012 would suggest a similar rate of change in the two countries rather than very different rates: employment in agriculture went from 43% in 1900 to 3% in 2012 in France, which is close to the change from 41% in 1900 to 2% in 2012 in the US, while employment in services went from 28% in 1900 to 76% in 2012 in France, which is close to the

change from 31% in 1900 to 80% in 2012 in the US. **Choice D is incorrect** because comparing the data for 1800 and 1900 would suggest a similar rate of change in the two countries, not very different rates: employment in agriculture went from 64% in 1800 to 43% in 1900 in France, which is fairly close to the change from 68% in 1800 to 41% in 1900 in the US, while employment in services went from 14% in 1800 to 28% in 1900 in France, which is close to the change from 13% in 1800 to 31% in 1900 in the US.

99 Correct answer **A**

Hard

< Back to question

A cells for worker eggs are probably closer in size to cells for drone eggs in the hives of the western honeybee than in the hives of the dwarf honeybee and the black dwarf honeybee.

Choice A is the best answer because it most effectively uses data from the graph to complete the student's conclusion about beehive structure. The text explains that in the hives of honeybees, the hexagonal cells housing drone eggs are larger than the hexagonal cells housing worker eggs, and that this size difference results in a construction problem that the bees address by using nonhexagonal cells to fill gaps between sections of drone-egg cells and worker-egg cells. The text also states that the size difference between drone-egg cells and worker-egg cells varies by species of honeybee. The graph displays data on the percentage of nonhexagonal cells in the hives of three species. In the hives of the western honeybee, the percentages of five-sided, seven-sided, and eight-sided cells are all less than 0.5%. But in the hives of the black dwarf honeybee, the percentages of five-sided and seven-sided cells are higher than those for the western honeybee: about 2.5% for both. And for the dwarf honeybee, the percentages of five-sided and seven-sided cells are also higher than those for the western honeybee: slightly over 2.5% and slightly over 2.0%, respectively; additionally, the dwarf honeybee possesses a higher percentage of eight-sided cells than the western honeybee does. Taken altogether, the graph shows that the hives of the western honeybee consist of a smaller percentage of nonhexagonal cells than the hives of the two other species do. Since the nonhexagonal cells exist only to solve the construction problem arising from the difference in size between drone-egg cells and worker-egg cells, a smaller percentage of nonhexagonal cells would be associated with a smaller size difference between the two types of cells. Therefore, it can be concluded from the data that worker-egg cells are probably closer in size to drone-egg cells in the hives of the western honeybee than in the hives of the other two species.

Choice B is incorrect because, as the text states, honeybee species deposit their eggs in hexagonal cells, not in nonhexagonal ones. Thus, the western honeybee and black dwarf honeybee wouldn't deposit drone eggs in eight-sided cells, and the dwarf honeybee wouldn't deposit drone eggs in seven-sided cells. **Choice C is incorrect**. The text explains that honeybees rely

mainly on one geometric shape, the hexagon, when constructing their hives, and the graph shows that the western honeybee relies on the same nonhexagonal shapes as the dwarf honeybee does: five-sided, seven-sided, and eight-sided cells. In other words, the western honeybee and dwarf honeybee rely on the same number of geometric shapes. For the black dwarf honeybee, the graph displays data only for five-sided and seven-sided cells, which suggests a total absence of eight-sided cells. Yet this would be only one less nonhexagonal shape than is seen in the western honeybee. Thus, based on the graph, it would be inaccurate to say that the western honeybee relies on "many more" geometrical shapes than the other two species do. **Choice D is incorrect**. As the text explains, honeybee hives consist mainly of hexagonal cells, and sections of nonhexagonal cells are used to connect sections of hexagonal cells of different sizes. Since the graph indicates that the percentage of nonhexagonal cells is lower for the western honeybee than it is for the dwarf honeybee or black dwarf honeybee, the western honeybee would conversely have a *higher* percentage of hexagonal cells than the either the dwarf honeybee or black dwarf honeybee does, not a lower percentage.

100 Correct answer **B** Hard ‹ Back to question

B for both depth ranges measured, the average concentrations of nitrate were substantially higher in the seawater in the lava-affected area than in the seawater outside of the lava-affected area.

Choice B is the best answer. The claim is that the lava freed the deep nitrate, allowing it to float upward. The table supports this by showing that there was more nitrate in the lava-affected seawater at various depths above 300 meters (the depth to which the lava plunged) than in unaffected seawater.

Choice A is incorrect. This choice doesn't complete the statement in a way that supports the claim. The claim is about nitrate, not phosphate. **Choice C is incorrect**. This choice doesn't complete the statement in a way that supports the claim. The claim is only about nitrate—the concentrations of phosphate aren't relevant. **Choice D is incorrect**. This choice doesn't complete the statement in a way that supports the claim. It doesn't say anything about the seawater inside the lava-affected area.

101 Correct answer **A** Hard ‹ Back to question

A broccoli grown in soil containing mycorrhizal fungi had a slightly higher average mass than broccoli grown in soil that had been treated to kill fungi.

Choice A is the best answer because it most effectively uses data from the table to complete the statement. The text explains that mycorrhizal hosts are plants that benefit from the presence of mycorrhizal fungi in the soil and that some such plants produce more mass when grown in the presence of these fungi, while for nonmycorrhizal species the fungi either have no effect or may be harmful. The experiment included two mycorrhizal hosts (corn and marigold) and one nonmycorrhizal species (broccoli). Given the claim in the text that nonmycorrhizal species will see either no difference or a decrease in mass when exposed to mycorrhizal fungi, the student would likely have been surprised by the higher average mass for broccoli grown in the presence of the fungi than the broccoli grown in the soil treated to kill fungi.

Choice B is incorrect. Although this choice accurately describes the corn data from the table, the fact that the mycorrhizal host corn is more massive in the presence of the fungi likely fits with what the student expected and would therefore not be surprising. **Choice C is incorrect**. Although this choice accurately describes the marigold data from the table, the fact that the mycorrhizal host marigold is more massive in the presence of the fungi is likely what the student expected and thus would not be surprising. **Choice D is incorrect** because it does not accurately represent the data in the table—when grown in soil treated to kill fungi, corn had an average mass of 3.8 g while broccoli had an average mass of 7g—and because making comparisons among the plants in the no-fungi condition, by itself, does not provide a basis to compare the average mass of mycorrhizal hosts and nonmycorrhizal species grown in the presence of the fungi with those grown in the soil treated to kill fungi.

102 Correct answer **C**

Hard

‹ Back to question

C 2006 using VISIR at the European Southern Observatory.

Choice C is the best answer because it effectively completes the text's discussion of Moses and colleagues' analysis of changes in Neptune's temperature by using data from the table to identify the source of the earliest example of spectroscopy data included in this analysis. The text indicates that Moses and colleagues analyzed infrared imaging and spectroscopy data about Neptune obtained in different years by various instruments. The table lists the observatories where these instruments are housed, the type of data each instrument collected (infrared imaging or spectroscopy), and the years in which the instruments' observations were made. According to the table, only two of these instruments obtained spectroscopy data: VISIR at the European Southern Observatory, which made its observations in 2006, and TEXES at the Gemini Observatory, which made its observations in later years (2007 and 2019). Although two other instruments are also included in the table, they obtained infrared imaging data, not spectroscopy data. Therefore, the earliest example of spectroscopy data included in the researchers' analysis is the data obtained by VISIR at the European Southern Observatory in 2006.

Choice A is incorrect. Although the table indicates that TEXES at the Gemini Observatory collected spectroscopy data in 2007 and 2019, the table also indicates that this type of data was collected in 2006 by VISIR at the European Southern Observatory. Because the VISIR data were collected in the previous year, the data obtained in 2007 by TEXES are not the earliest example of spectroscopy data included in Moses and team's analysis of Neptune's temperature. **Choice B is incorrect** because the table indicates that T-ReCS at the Gemini Observatory collected infrared imaging data, not spectroscopy data. T-ReCS therefore cannot be the source of the earliest example of spectroscopy data that is included in Moses and colleagues' analysis of Neptune's temperature. Additionally, the T-ReCS data were collected in 2007, meaning that these data were obtained later than any type of data collected in 2006. **Choice D is incorrect**. Although the table indicates that data from LWS at the W.M. Keck

Observatory were obtained in 2003, making these data the earliest example of any type of data included in the analysis, the table also indicates that LWS collected infrared imaging data, not spectroscopy data. LWS therefore cannot be the source of the earliest example of spectroscopy data included in Moses and team's analysis of Neptune's temperature.

103 Correct answer **B**

Hard

‹ Back to question

B *L. pertusa* declined in the Alboran Sea during a period of substantial local decline in oxygenation, but *L. pertusa* declined near the Mauritanian coast during a period of little local change in oxygenation.

Choice B is the best answer because it effectively uses data from the graph to complete the statement about Rodrigo da Costa Portilho-Ramos and colleagues' conclusion. The graph shows the ratio of manganese to calcium in *L. pertusa* coral samples from the Alboran Sea and the Mauritanian coast. The graph reflects time in approximate years before present: in other words, the greater the number in years noted on the graph's horizontal axis, the farther that moment is in the past. The text indicates that the researchers tested the samples to determine whether oxygenation played a role in the decline of *L. pertusa*. The text goes on to note that a change in the ratio of manganese to calcium would signal an inverse, or opposite, change in oxygenation. According to the graph, the ratio of manganese to calcium in samples from the Alboran Sea increased from about 30 micromoles per mole 10,000 years ago to about 80 micromoles per mole 8,000 years ago, which means that oxygenation decreased between 10,000 and 8,000 years ago. Meanwhile, there was almost no discernible change in the ratio of manganese to calcium in samples from the Mauritanian coast between 12,000 and 10,000 years ago. According to the text, the population of *L. pertusa* declined significantly around 9,000 years ago in the Alboran Sea and around 11,000 years ago near the Mauritanian coast. Thus, the increase in the ratio of manganese to calcium around 9,000 years ago in the Alboran Sea coincides with the decline in the *L. pertusa* population, suggesting an association between the decrease in oxygenation and the decline in population of the coral. No such relationship is suggested around 11,000 years ago near the Mauritanian coast. So, oxygenation likely played a role in the *L. pertusa* decline in the Alboran Sea but not in the coral's decline near the Mauritanian coast.

Choice A is incorrect because it asserts the opposite of what the graph indicates regarding oxygenation in the Alboran Sea, and it misrepresents what the graph indicates about oxygenation near the Mauritanian coast. The graph indicates that at the time of the decline in *L. pertusa* (approximately 9,000 years ago), the samples from the Alboran Sea contained a ratio of

manganese to calcium that was increasing. According to the text, this ratio inversely correlates with ocean oxygenation levels, so if the ratio was increasing, oxygenation was decreasing, not substantially increasing. Furthermore, the graph shows that the ratio of manganese to calcium remained relatively stable in coral samples from the Mauritanian coast during the period studied, which suggests that there was no discernible relationship between oxygenation and the coral's population decline in that location, not that there was a substantial decrease in oxygenation corresponding to the coral's decline. **Choice C is incorrect**. Although the graph suggests that the level of oxygenation in the Alboran Sea was higher before the decline in *L. pertusa* than after—because the ratio of manganese to calcium inversely correlates with ocean oxygenation levels and this ratio was lower before the decline than after—the graph doesn't support the claim that oxygenation near the Mauritanian coast was consistently low before and after the coral's decline there. Rather, the graph indicates that relative to coral samples from the Alboran Sea, the ratio of manganese to calcium in samples from near the Mauritanian coast was consistently low, which suggests that oxygenation levels were relatively high both before and after the decline of *L. pertusa*. **Choice D is incorrect** because it states the opposite of what the graph indicates: the graph shows that throughout the period studied, the ratio of manganese to calcium was higher in coral samples from the Alboran Sea than it was in samples from near the Mauritanian coast. Since the text indicates that the ratio of manganese to calcium inversely correlates with ocean oxygenation levels, oxygenation in the Alboran Sea was therefore lower than, not higher than, oxygenation near the Mauritanian coast during the period studied. Moreover, even if choice D did accurately represent the graph, it wouldn't effectively complete the statement since a comparison of the ocean oxygenation levels at the two locations is not relevant to the claim that a decline in oxygenation levels was associated with the decline of *L. pertusa* in the Alboran Sea but not near the Mauritanian coast.

104 Correct answer **A** Hard ‹ Back to question

A When plants exposed to air from whitefly-free plants were infested, they produced more jasmonic acid than did control plants, whereas when plants exposed to air from whitefly-infested plants were infested, they produced less jasmonic acid and more salicylic acid than did control plants.

Choice A is the best answer because it best describes data from the graph that support the researchers' conclusion about whitefly-induced defenses in tomato plants. According to the text, tomato plants produce airborne chemicals that prompt nearby tomato plants to increase their production of appropriate defensive chemicals, such as jasmonic acid in response to herbivory and salicylic acid in response to microbial infection. The text goes on to indicate that researchers concluded that whiteflies induce tomato plants to emit chemicals that cause nearby plants to defend against microbial infection instead of herbivory from whiteflies. The graph shows that control tomato plants (plants that weren't exposed to any chemicals from nearby tomato plants and weren't subsequently infested with whiteflies) produced about 140 nanograms of jasmonic acid per gram of dry weight and about 120 nanograms of salicylic acid per gram of dry weight, which indicates the baseline levels of these defensive chemicals in tomato plants. The graph also shows that plants exposed to air from whitefly-free plants produced about 205 nanograms of jasmonic acid per gram of dry weight when subsequently infested by whiteflies, which is more than the amount produced by the control plants. This suggests that when infested with whiteflies, tomato plants that weren't previously exposed to air from nearby whitefly-infested plants begin producing higher levels of jasmonic acid to defend against the infestation. Finally, the graph also shows that plants exposed to air from whitefly-infested plants and then subsequently infested by whiteflies produced approximately 100 nanograms of jasmonic acid per gram of dry weight (which is less than control plants did) and approximately 175 nanograms of salicylic acid per gram of dry weight (which is more than control plants did). This suggests that whiteflies cause tomato plants to emit chemical signals that decrease nearby plants' defenses against whitefly herbivory relative to baseline levels and redirect their defenses toward microbial infection, thereby supporting the researchers' conclusion that whiteflies cause tomato plants to emit airborne chemical signals that induce nearby plants to preferentially defend against microbes even when experiencing herbivory from whiteflies.

Choice B is incorrect. Although the graph shows that tomato plants exposed to whitefly-infested plants produced less jasmonic acid than salicylic acid (about 100 nanograms of jasmonic acid per gram of dry weight vs. about 175 nanograms of salicylic acid per gram of dry weight), and although this might suggest that those plants are therefore better defended against microbial attack than against herbivory, this wouldn't be sufficient to conclude that this is the case: without reference to the relative levels of defensive chemicals produced by the plants in the other experimental conditions, it would be impossible to conclude that exposure to air from whitefly-infested plants either induces or diminishes these plants' defenses to different kinds of threats. Furthermore, the graph shows that plants exposed to air from whitefly-free plants produced about 205 nanograms of jasmonic acid per gram of dry weight and about 130 nanograms of salicylic acid per gram of dry weight, not that

they produced the same amount of the two acids. **Choice C is incorrect** because it inaccurately describes the data in the graph. The graph shows that plants in all three conditions produced both jasmonic and salicylic acid, not that plants exposed to air from whitefly-infested plants produce no jasmonic acid at all. **Choice D is incorrect**. Although the graph shows that plants exposed to air from whitefly-infested plants produced about 100 nanograms of jasmonic acid per gram of dry weight when infested, which is less than the amount produced by control plants (about 140 nanograms per gram of dry weight), and although the graph shows that plants exposed to air from whitefly-free plants produced about 205 nanograms of jasmonic acid per gram of dry weight when infested (which is more than the amount produced by control plants) and about 130 nanograms of salicylic acid per gram of dry weight (which is more than the approximately 120 nanograms per gram of dry weight produced by control plants), this wouldn't support the researchers' conclusion that plants exposed to air from whitefly-infested plants preferentially defend against microbial infection—that is, that they increase their levels of salicylic acid and decrease their levels of jasmonic acid relative to control plants. Rather, the data would suggest that exposure to air from whitefly-infested plants reduces plants' defenses against herbivory, but these data wouldn't indicate that whiteflies induce plants to redirect their defenses to guard against microbial infection. Furthermore, the data concerning plants exposed to air from whitefly-free plants merely indicate that these plants increase their defenses against both herbivory and microbial infection when infested by whiteflies.

105 Correct answer **A** Hard Back to question

A the selection process that enabled the Navajo-Churro to retain its somewhat coarse outer fiber also resulted in inner fiber that, at its softest, is softer than either the mouflon's or the Merino's inner fiber.

Choice A is the best answer because it accurately uses data from the table to complete the statement about the fibers of three types of sheep. The text discusses some qualities of outer and inner fibers of mouflons, Spanish Merino sheep, and Navajo-Churro sheep and indicates that sheep fibers with finer, or smaller, diameters are softer than fibers with larger diameters. The text then sets up a conclusion that can be made by comparing the fibers of all three sheep types. The table shows that the minimum diameter of the Navajo-Churro's inner fibers is 10 microns, which is smaller than the minimum diameters of the inner fibers of both the mouflon (15 microns) and the Spanish Merino (17 microns). Thus, comparing the fiber characteristics of all three sheep reveals that at its softest, the inner fiber of the Navajo-Churro is softer than either the mouflon's or the Merino's inner fiber.

Choice B is incorrect because it doesn't accurately describe the data in the table. The table shows that the softness of Navajo-Churro inner fiber isn't uniform (since the diameter of Navajo-Churro inner fiber ranges from 10 microns to 35 microns) and that the diameter of the outer fiber of the mouflon isn't variable (rather, it is a uniform 150 microns). **Choice C is incorrect** because it doesn't accurately describe the data in the table. The text indicates that both Spanish Merino sheep and Navajo-Churro sheep were domesticated from mouflon sheep. The table doesn't show

that domestication increased the minimum diameter of inner fibers for both Spanish Merino sheep and Navajo-Churro sheep from the 15-micron diameter of mouflon inner fibers: the minimum diameter of Spanish Merino increased to 17 microns, but the minimum diameter of Navajo-Churro inner fibers *decreased* to 10 microns. **Choice D is incorrect** because it doesn't accurately describe the data in the table. The text explains that sheep fibers with finer, or smaller, diameters are softer than fibers with larger diameters. The table does show that Spanish Merino outer fibers are finer, and thus softer, than mouflon outer fibers and that at their finest, Navajo-Churro outer fibers are softer than mouflon outer fibers, but it also shows that Spanish Merino inner fibers are less soft than mouflon inner fibers, since their minimum diameter is greater than 15 microns, and that Navajo-Churro inner fibers can be less soft than mouflon inner fibers, since the diameter ranges up to 35 microns.

106 Correct answer **B** Hard Back to question

B The lowest performing ETL applied through spray coating had a higher power conversion efficiency than the highest performing ETL applied through spin coating.

Choice B is the best answer because it describes data from the graph that support Taylor and colleagues' conclusion that spray coating holds promise for improving the power conversion efficiency of ETLs in perovskite solar cells. The text explains

that perovskite solar cells' efficiency at converting light into electricity is diminished by their electron transport layer (ETL), which is applied through spin coating, but that Taylor's team devised a new spray coating method for applying the ETL that improves its power conversion efficiency. The graph displays data on the power conversion efficiency of solar cells in tests conducted by Taylor's team, with bars for both the highest- and lowest-performing ETLs in two data categories: spray coating and spin coating. According to the graph, the lowest-performing ETL applied through spray coating had a power conversion efficiency of between 14% and 16%, while the highest-performing ETL applied through spin coating had a power conversion efficiency of less than 14%. These data confirm that ETLs applied through novel spray coating are more efficient than those applied though traditional spin coating. Thus, the data support Taylor and colleagues' conclusion about spray coating's potential value.

Choice A is incorrect. Although this claim correctly describes the data in the graph by stating that both the lowest-performing ETL applied through spin coating and the lowest-performing ETL applied through spray coating had a power conversion efficiency greater than 10%, this relationship in the data doesn't support or relate to Taylor and colleagues' conclusion that spray coating promises greater efficiency for solar cells than traditional spin coating does. **Choice C is incorrect**. This claim does address the greater power conversion efficiency of the highest-performing ETL applied through spray coating, compared with the highest-performing ETL applied through spin coating. However, it also incorrectly cites the value for the efficiency of the highest-performing ETL applied through spray coating as approximately 13%, instead of a value between 14% and 16%, and the value for the efficiency of the highest-performing ETL applied through spin coating as approximately 11%, instead of a value between 12% and 14%, as shown in the graph. **Choice D is incorrect** because Taylor and colleagues' conclusion is based on the difference in the power conversion efficiency of ETLs applied through spray coating and that of ETLs applied through spin coating, not on the difference between the highest- and lowest-performing ETLs applied through just spray coating.

107 Correct answer **C** Hard ‹ Back to question

C iron from HTC dust is 90%.

Choice C is the best answer because it most effectively completes the example regarding the ablation rate of iron. The table shows the ablation rates for three elements—iron, potassium, and sodium—found in cosmic dust that comes from one of four sources. The text says that the ablation rate for a given element in slower-moving SPC and AST dust was lower than the ablation rate for that same element in faster-moving HTC or OCC dust. The text then presents the first part of an example of this pattern, describing an ablation rate of 28% for iron in AST dust. The information that iron from HTC dust had an ablation rate of 90% is therefore the most effective way to complete this example—the comparison of a relatively low ablation rate for iron in slower-moving AST dust with a relatively high ablation rate for iron in faster-moving HTC dust illustrates the tendency of ablation rates for a given element to be lower in slower-moving dust than in faster-moving dust.

Choice A is incorrect because the text indicates that SPC dust, like AST dust, moves relatively slowly; a comparison of the ablation rates of iron from two slower-moving dust sources could not be an example of the difference between ablation rates in slower-moving dust and faster-moving dust, which is the pattern that the example is supposed to illustrate. **Choice B is incorrect** because the example in the text is supposed to illustrate the difference in the ablation rates of the same element from slower-moving dust and faster-moving dust, and the first part of the example provides data about the ablation rate of iron, which means the second part of the example must also be about the ablation rate of iron, not the ablation rate of sodium. **Choice D is incorrect** because the example in the text is supposed to illustrate the difference in the ablation rates of the same element from slower-moving dust and faster-moving dust, and the first part of the example provides data about the ablation rate of

iron, which means the second part of the example must also be about the ablation rate of iron, not the ablation rate of sodium. Additionally, any ablation rate from AST dust would be ineffective in this example since AST dust is referenced in the first part of the example and thus additional data focused on AST dust would not illustrate a variation across dust types.

108 Correct answer **A**

Hard

< Back to question

A The tadpoles consumed a higher percentage of the striped burrowing frog eggs than they did of the eggs of the dainty green tree frog.

Choice A is the best answer because it most effectively uses data from the table to support the student's argument about the role of bufadienolide in the egg preferences of cane toad tadpoles. For each of five amphibian species included in the 2022 study, the table gives the percentage of available eggs that the cane toad tadpoles ate. According to the table, the tadpoles ate 10% of striped burrowing frog eggs and 1% of dainty green tree frog eggs, which suggests a preference for striped burrowing frog eggs over dainty green tree frog eggs. The table also indicates that neither of these species' eggs produces bufadienolide. Thus, these data suggest that something other than the presence or absence of bufadienolide is needed to adequately explain the tadpoles' egg preferences.

Choice B is incorrect. Although the table shows that for each of the five amphibian species, the cane toad tadpoles ate less than 100% of that species' eggs, which demonstrates that the tadpoles did indeed leave some eggs for each species unharmed, this fact alone is irrelevant to the tadpoles' preferences for some species' eggs over other species' eggs. **Choice C is incorrect**. Although the table indicates that the cane toad tadpoles ate 90% of the cane toad eggs and 7% of the short-footed frog eggs, which suggests that they prefer cane toad eggs over short-footed frog eggs, the table also indicates that cane toad eggs produce bufadienolide, whereas short-footed frog eggs do not. Therefore, these data are not sufficient to exclude that bufadienolide alone could explain the tadpoles' preference for some species' eggs over other species' eggs. Choice

D is incorrect. Although the table shows that for both dainty green tree frog eggs and little red tree frog eggs, the cane toad tadpoles ate 1% of those species' eggs, it also indicates that neither produces bufadienolide. Thus, these data alone don't indicate bufadienolide's role in the tadpoles' egg preferences.

109 Correct answer **C**

Hard

< Back to question

C CNO-treated females showed more activity relative to saline-treated females than CNO-treated males showed relative to saline-treated males.

Choice C is the best answer. The graph shows that the CNO-treated females were way more active than the CNO-treated males, while the saline-treated males and females (the control groups) had very similar activity levels. This supports the claim that there were sex-specific differences in the mice's response to neuron activation.

Choice A is incorrect. This choice misreads the graph. All four groups of mice started at nearly the same activity level before treatment (see how all four points are very close together at -4 minutes, meaning four minutes before treatment). **Choice B is incorrect**. This choice doesn't complete the assertion. The assertion is about the mice's response to neuron activation, so we need to include the data about the CNO-treated females and males. **Choice D is incorrect**. This choice misreads the graph. The line for the CNO-treated males does not show a "substantial decline" until around 122 minutes, and there is no "steep increase" afterward.

110 Correct answer **A**

Hard

< Back to question

A For pin flowers, damage led to longer times per flower in all pollinator genera, whereas for thrum flowers, damage led to longer times per flower only in *Habropoda* and *Osmia*.

Choice A is the best answer because it describes data from the table that support the researchers' conclusion that the effect of floral damage on time spent per flower varied by both floral morph and the genus of the pollinator. The table presents the average time pollinators spent per floral morph. The data in the table shows that for pin flowers, the average time spent per flower by all pollinator genera was higher for flowers that had been artificially damaged than for intact flowers. By contrast, for thrum flowers, the difference in time spent on intact and damaged flowers is seen for only some pollinator genera. This

supports the researchers' conclusion that both floral morph and the genus of the pollinator are factors involved in the effect that floral damage has on time pollinators spend per flower.

Choice B is incorrect. The table shows that pollinators belonging to the genus *Xylocopa* spent less time on both damaged pin flowers and damaged thrum flowers than pollinators belonging to the genus *Osmia* did. **Choice C is incorrect**. The table shows that the artificial damage to the thrum flowers led to shorter average times spent by pollinators on those flowers for only two of the four pollinator genera represented in the table, not three. Furthermore, this choice doesn't address the effect the artificial damage had on pin flowers; thus, even if accurate, this evidence
